**Have Music at Home.**—A writer in *Appleton's Journal* advocates a more general and thorough musical education. He says:—"The frequently adopted plan of waiting to see whether children have any taste or show any love for music, is a wrong one. No child would prefer practising scales to playing ball; and few boys, if the cultivation of their tastes depended upon the whims of their ever-flying fancies, would turn into educated men. But all parents should first give their children the opportunity of forming a taste, and for its development trust to the æsthetic element of their nature."

**The Wives of Eminent Men.**—The wives of men of sentiment are not always the most appreciative of women. Jean Paul represents Siebenkas as reading one of his beautiful imaginings to his wife, who listened with eyelids cast down and bated breath. As

he closed, the sharer of his joys beamed forth with, "Don't put on your left stocking to-morrow, dear; I must mend that hole in it." So, when Sir Walter and Lady Scott were rambling about their estate, and came upon some playful lambs frisking in the meadow—"Ah," said Sir Walter, "'tis no wonder that poets from the earliest ages have made the lamb the emblem of peace and innocence." "They are, indeed, delightful animals," answered her ladyship, "especially with mint sauce."

In announcing the amount of funds raised for a church festival, a Hoboken deacon said—"and blank \$2, and a friend \$2, and fifty cents from a cross-eyed woman."

**"Very Happy."**—A good story is told of General Sherman. One winter he was making a call upon a foreign lady, who had learned to say in very good English, "Vary happy, vary." General Sherman had a fall just as he ascended the steps of her residence. As soon as the first greeting was over, General Sherman told how he had hurt himself outside her door. The lady smiled sweetly and graciously said, "Vary happy, vary happy." The bluff soldier stared and said aloud, "D—— it, is the woman a fool, or is she crazy?" "Vary happy, vary happy," was the still smiling response to his last remark. The General abruptly left, and the lady wondered why she had failed to interest him sufficiently to induce him to prolong his call.

THE AMATEUR PHOTOGRAPHER.

A few years ago a hungry crowd sat down at the well-spread supper-table of a Sound steamer, upon which one of the dishes contained a trout of moderate size. A serious-looking individual drew this fish toward him, saying apologetically, "This is a fast day with me." His next neighbor, an Irish gentleman, immediately inserted his knife into the fish, and transferred it to his own plate, remarking, "Sir, do you suppose nobody has a soul to be saved but yourself?"

A Rochester flirt had an offer of marriage the other evening, and rushing to the hall, she called upstairs: "Mother! am I engaged to anybody now?"

country houses, will cast its cheery light over everything.

"I'm going where I won't have to cook beans!" was the farewell sentence of an Ohio woman who left this vale of tears a few days since.

When his wife discovered a bottle of it in his coat-tail pocket, he said it was Sozodont. She said it was all right, "Sozodont take too much of it."

A Maryland man, whose wife dropped dead last fall, had the funeral put off one day longer to get the balance of his corn husked. He said it wouldn't make any difference to her, as she was always good-natured.

The New York *Times* draws an attractive picture of an interior furnished according to the new fashion now prevailing in Europe, and beginning to be adopted in this country. Heavy rugs will partly cover the polished floors. Paper of some neutral tint, free from glaring figures, will stretch from the richly-colored dado at the bottom to the gay border at the top. The picture-rod will not be of the eternal gilt that wearies us now. It will be painted some decided color that will harmonize with the prevailing shade of the whole room. Before the windows and before the doors, which open outward, curtains, heavy in texture and subdued in tone, edged with strong lace, will hang from wooden rings which move freely on a slender wooden rod fastened to the sheathing. Rings and rod will be of the hue of the picture-rod above. The single curtain before each opening will be looped to one side; low book-cases, not over three feet high, of dark wood, relieved by a few chiseled designs picked out in color, will line the wall; no glass doors will disfigure them. One general pattern, varied in each piece, will stamp the furniture. Last and greatest, an open wood fire, either in a fireplace, or in one of the Franklin stoves which still lurk in the garrets of the old

## Housekeeping.

## HOUSEKEEPING.

The first thing necessary is, of course, a house to keep, and the second thing needful, is—experience. Not that young people cannot acquit themselves creditably in this line, but an experienced housekeeper can do her work in a quiet, systematic way, which is not near so wearying as the anxious, nervous manner that is habitual with most young persons. Many a girl, in the absence of servants, has been compelled to get a dinner. At first she is fired with ambition; she puts on the proverbial "checked apron," which has been allotted to those unhappy beings whose domain is the kitchen, in a most ecstatic frame of mind. She has repeatedly heard her father tell how his "mother used to cook so and so," and she determines that her materials shall be prepared that very way. But alas! she finds out that "things are not what they seem," and by noon she agrees perfectly with the old housekeeper who said "housekeeping ain't no joke!"

A very good piece of advice to amateurs, in this line, is, not to undertake too much. Of course it would be a grand triumph, when father, brothers and sisters come home hungry, to place before them a steaming soup, a savory roast, well prepared vegetables, and a most delectable pudding. But, alas! "there is many a slip twixt the cup and the lip!" Most likely, instead of triumphing in such a brilliant success, we will, if we attempt too much, have the mortification of seeing our beloved "paterfamilias" sitting at the head of the table, patiently eating with his fork a very mushy substance, which came out of the soup tureen, while your less considerate brothers openly avow their disapproval of the "browned and roasted, black and burned" viands. If ever a woman is tempted to commit suicide, it is at such a crisis! I can think of nothing that would comfort me in such dire calamity, unless it were a fresh FLORAL CABINET, or a good "dig" in the flower garden.

An experienced housekeeper can prepare "goodies" out of materials which might be accounted almost nothing. I know of a housekeeper, who, when the cake box is empty, will go into the pantry and mix together a lump of butter, several eggs, a little milk, flour, sugar, and soda, slap it in the stove, and when it again emerges, it is a beautiful, light brown cake. If she has company for tea, the cake is much admired both by word and deed, and if asked the name of it, she confesses that she manufactured it impromptu. A young cook must needs get the receipt book, read the cake receipt carefully over, take exactly the amount of every thing called for, and perhaps the cake is not presentable in the end.

One great help in keeping a nice table is fruit; it ought to be on the dinner and supper table, through the season, for in the heat of summer one scarcely wants anything else. Then a good supply of canned fruit, jelly, and preserves, will give the finishing touch to the table throughout the long winter.

A table should always be neatly set. Preserve me from a table whose soiled cloth looks as though it had been slung on, without the slinger's caring whether it fell straight or not! Put on a clean cloth nicely, place the covered dishes with some regularity, and whether there is anything in them or not, is of secondary importance.

DOROTHEA.

**White Pound Cake.**—One pound of sugar, one pound of flour, three-quarters of a pound of butter, and one-third of a teaspoonful of saleratus.

**Furmity.**—This very healthy and palatable dish is made by boiling wheat in water until soft, which will require five or six hours. I think nice winter wheat the best, it requires a good deal of water to begin with, a bit of salt, and close watching toward the last, that it does not burn. When it is done and the water boiled out as near as it can be with safety, turn it in a pan or crock to be used as you want. It is very good to eat while hot with a little butter, or sugar, or in a bowl of milk. But for a breakfast dish the children used to like it the best with thickened milk made the usual way; an egg stirred with the flour makes it rich. For a dish that holds a gallon, fill it half full of the cold boiled wheat, a teacupful of sugar, the same of raisins, and some nutmeg grated, chop it up a little, and when the thickened milk is ready, turn on the wheat enough to fill the dish, and mix it a little. Then you will have a dish for the little folks they will like very much. The wheat will keep several days in cold weather.

**Sponge Cake.**—Two cups of sugar, two cups of flour, three eggs, one teaspoonful cream tartar, half teaspoonful of soda, dissolved in small half cup of water, lemon; do not beat the eggs separate.

**Rice Muffins.**—One half cup of boiled rice, boiled soft, add to this three spoonfuls of sugar, bit of butter the size of an egg, one pint of sweet milk, one-half cup of yeast, two quarts of flour and a pinch of salt; let it rise over night, if necessary; add in the morning a little soda.

**Nice Omelet.**—Beat six eggs, whites and yolks separately, add six tablespoonfuls of milk, and a little salt, and beat all well together. Place in the frying pan a piece of butter the size of an egg, pour in the mixture and cook over a slow fire; when firm at the edges turn half over and cook a moment longer. It will be found very delicate and nice.

**Snow Pudding.**—Dissolve three tablespoonfuls of corn starch in a little cold water, and add to it one pint of boiling water and the whites of three eggs beaten to a froth, put into an earthen pudding dish, place in your steamer and steam ten minutes.

Sauce for the above, beat the yolks of the three eggs, add one cup of sugar, one of milk, a bit of butter, size of a walnut; boil a few minutes.

**To Andiron Lovers.**—If any of our friends enjoy a blazing wood fire, and with it shining brass andirons, we recommend the following method for polishing until the gilded ball on every one will present many phases: First use a cotton cloth saturated with vinegar to rub off the tarnished stains, and then wipe dry; after this is done take a flannel cloth and polish them with dry whiting; and the result will be a white glittering appearance calling forth the admiration of every one who enters the apartment they adorn.

**Stewed Cabbage.**—Many persons are fond of cabbage, but are not at all fond of the unpleasant fumes which penetrate the entire house during the process of boiling. Therefore we recommend a manner of cooking that renders the vegetable so pleasant to the taste as to obliterate all prejudice against its free use. Reduce the cabbage to small pieces nearly fine enough for slaw, then stew for a half hour in a covered saucepan with not enough water to cover it; when done, drain off the water and season with salt, pepper and a liberal quantity of butter, using vinegar on the table. Served in this way you have a nice vegetable, much more delicate than boiled cabbage, and suitable to eat with any kind of meat you may chance to have on hand.

**A Perfect Cure for Diphtheria.**—The ravages of diphtheria in Australia have been so extensive, within the last few years, that the government offered a large reward for any certain method of cure; and among other responses to this was one from a person who at first kept it secret, but afterwards communicated it freely to the public. It is simply the use of sulphuric acid, of which four drops are diluted in three-fourths of a tumbler of water, to be administered to a grown person, and a smaller dose to children, at intervals. The result is said to be a coagulation of the diphtheria membrane, and its ready removal by coughing. It is asserted that, when the case thus treated has not advanced to a nearly fatal termination, the patient recovered in almost every instance. The same remedy is used by the Board of Health of New York City, and found the most efficient yet known. Thousands in the country may be saved from untimely death by simple notice and memory of this little paragraph.

**A Good Hint.**—Take a sheet of writing paper, cover one side with gum arabic or the white of an egg, let it dry; it can then be laid away until wanted for use. Strips cut off are very convenient to label bottles or mark dishes that are taken to a festival, or similar purposes, writing on the plain side, and pasting on as you would a postage stamp, simply wetting the mucilage side.

**Lemon Pie.**—The juice and grated rind of one lemon, one cup of water, one tablespoonful of corn starch, one cup of sugar, one egg and a piece of butter the size of a small egg. Boil the water, wet the corn starch with a little cold water and stir it in; when it boils up pour on it the sugar and butter; after it is cool, add the egg and lemon, bake with an under and upper crust.

**Dessert.**—Here is a delicious dessert to be eaten with cake. Take two quarts of thick cream, whip to a stiff froth, one ounce of gelatine, dissolved in one pint of water; when milk warm stir in the cream, and sweeten to taste.

**Coffee Cake.**—This very much resembles black cake, and is very nice indeed. Two cups of sugar, one of butter, one of coffee, one tablespoonful of cinnamon, one of cloves, one of soda, one nutmeg, and one pound of raisins. You can use either sugar or molasses. Prepare the coffee as for the table, no eggs, three and a half cups of flour. Let it remain in the pan in which it baked, to cool.

**Bread Pudding.**—One pint of grated bread crumbs, one quart of sweet milk, yolks of four eggs, one cup of sugar, grated rind of one lemon, butter size of one egg. Bake nearly an hour. Beat the whites of four eggs to a stiff froth, stir in nearly a cup of white sugar and the juice of a lemon. After the pudding is baked, spread jelly over the top, then the frosting, and bake until it is brown. If you have not the jelly, it will yet be excellent.

**Apple Float.**—Take one pint of green or dried apple sauce, made smooth by passing through a sieve or colander, the whites of three eggs beaten to a stiff froth, sugar and lemon to suit the taste; beat all well together, then send to table, dish out, and eat with rich cold cream.

**Johnny Cake.**—Two cups of corn meal, two cups of wheat flour, two and a half cups of milk, one cup of molasses, one teaspoonful of saleratus and salt.

**Graham Gems.**—Two eggs, one pint sweet milk, two tablespoonfuls sugar, butter size of an egg, soda and cream of tartar, one cup white flower, three cups graham.

## LADIES READ THIS!

AND BEFORE YOU ORDER YOUR PLANTS AND SEEDS,

Enclose a Letter Stamp and send for our Illustrated Catalogue for 1875. We offer

12 Choice Roses for \$2. 12 Choice Carnations, including La Belle, for \$2. 12 Choice Pelargoniums, and one of the finest collections in the world to select from, for \$2.

Companion to "Silver Threads among the Gold."

# WHILE THE SILVER TINTS THE GOLD.

## SONG AND CHORUS.

Words by ARTHUR FRENCH.

Music by CHARLES D. BLAKE.

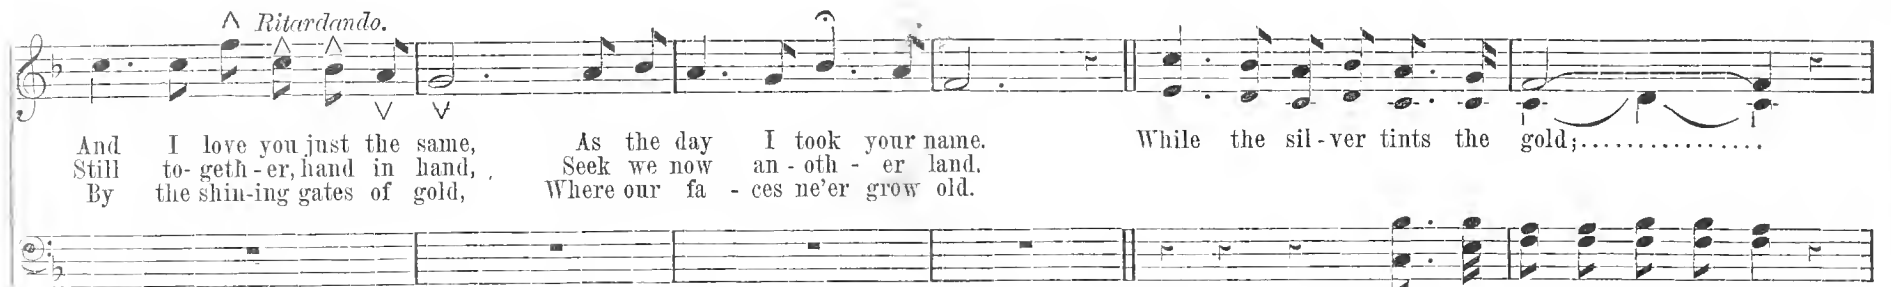

*Con Espressione.*

1. While the sil-ver tints the gold, And to-geth-er we grow old, I will lin-ger ev-er near,  
 2. Yes, our locks may lose their gold, And our fa-ces too, grow old, But our hearts will be the same,  
 3. Let us down life's sun-ny slope, Wan-der with the bliss-ful hope, That when shadows round us creep,

Speak-ing words of hope and cheer; For to me you seem as young, As when first my praise you sung,  
 Naught can dim love's ho-ly flame. We have journey'd on in life Side by side, thro' storm and strife  
 And we lay us down to sleep, Sleep to know no pain or care, We shall meet just o-ver there,

### Chorus.

*^ Ritardando.*  
 And I love you just the same, As the day I took your name. While the sil-ver tints the gold;.....  
 Still to-geth-er, hand in hand, Seek we now an-oth-er land.  
 By the shin-ing gates of gold, Where our fa-ces ne'er grow old.

*ff Ritardando.*  
 While the sil-ver tints the gold,

And to-geth-er we grow old, I will love you just the same, As the day I took your name.

VOL. IV.

NEW YORK, MAY, 1875.

No. 41.

PRICE 12 CENTS.

## PEONIES.

It would seem as if so hardy a plant as the Chinese Peony might be cultivated by any one who had ever possessed flowers, without requiring any further information. Yet behold me, an earnest inquirer! I have all my old-fashioned Red Peonies placed singly on the lawn and elsewhere in the grass, where they increase yearly, with no care except a mulching of dressing in the fall. When I bought some of the new kinds, Pink, Fringed, &c., I placed them likewise in the grass, hoping they would do equally well. I am not sure but that they are doing as well as they could do anywhere, but the growth is not so strong as in the red kind, and I am afraid they are not in the most desirable place. I wish to know if it would be better to have them removed to the flower border; or whether, with care in enriching, and a little scratching about each spring, they will eventually form strong stools as they stand in the grass?

*Ans.*—The Peonies will grow as well as the old-fashioned variety. When established, if the soil is rich enough, the light-colored varieties do not usually grow so strong as the red ones, although they will flower from each shoot when strong enough.

**Lilium Auratum.**—Last spring I purchased two bulbs of this Lily, and was much disappointed that early in August they did not appear above ground. On looking for them, I found one wholly decayed and dried—a little of both. The other had gone, and in its place were three little bulbs, the size of corns. I replanted them about four inches apart, in a triangle, and three inches below the surface. I have not disturbed them since, and now one little leaf, an inch long, is all that has come up. I have tried this Lily once before. Of four bulbs, two bloomed the first year, one the second, and all disappeared the third summer. I thought then a worm which was

in the stalk destroyed the root also. And I begin to fear it is some fault in the care of them, and

young bulbs decaying after flowering. Are they planted deep enough? They should be six inches deep; and if the soil is wet, cover the bulbs with some sand or light soil. There should be no fresh manure used in planting Lily bulbs.

**Lilium Candidum.**—I purchased one of these also, last spring. It was planted six inches deep. As it had made no show in July, I searched it out, and found it thrifty and well started; at least the bud or crown was swollen. I covered it again and waited. I am waiting still. How long before patience will cease to be a virtue? Is the bulb planted too deep?

*Ans.*—In some soils the *Lilium Candidum* becomes diseased, which may be the case in this instance. Plant as recommended for *Auratum*, and we know no reason for failure.

**Day Lily.**—Please inform me also if the common Day Lily, or *Funkia*, will do well in the grass, and if it requires deep planting wherever placed?

*Ans.*—The bud of *Funkia* should be level with the surface; it is best in a border, but would succeed planted in the grass.

**Laurestinus.**—I would like to ask, through your columns, some of the wise ones what treatment I should give the *Laurestinus* to make it bloom? It grows well, but there it stops. Also, why *Hyacinths* bloom so close to the earth, instead of growing up tall? Half of the buds do not get a chance to bloom; have followed the most approved method of planting.

SUBSCRIBER.

Madison, Wis.

*Answer.*—Plant out the *Laurestinus* in the open ground for the summer; you probably grow it too much in the shade. Your *Hyacinth* bulbs are either poor, or you plant too late; the bulbs should be planted in October.

BOUQUET OF SPRING FLOWERS AND GRASSES.

would like more information before purchasing again. *Ans.*—Fresh imported bulbs of *Lilium Auratum* are liable to decay, but there must be another reason for the

## Floral Contributions.

## PELARGONIUMS.

When properly cultivated, nothing can excel the Pelargonium for the decoration of the window-garden or conservatory. Mr. Henderson, in his "Practical Floriculture," gives it his first choice. I agree with Mr. Henderson—(in short, I think we have excellent taste). What is more lovely than the Pelargonium, Pet of Cambridge, covered with its magnificent clusters till the green leaves are nearly hidden in blossoms, and in pleasing contrast with the dark-spotted and brilliant scarlet and crimson varieties? Since the introduction of the double tri-color and new Zonale Geraniums, their lovely cousin, the Pelargonium, has been quite neglected; but for late winter and early spring blooming, nothing can equal it in beauty. It is one of my pet plants, but before telling my manner of treatment let me say this is not for those who have hot-houses and conservatories, so they may pass it by without reading it; for, be it known, I belong to what Mr. Vick calls "that highly respectable class who have more taste than money to gratify it." Now, my more favored sisters, please don't pity me, for I have a bay-window, and am happy.

But to business, beginning with the cuttings: About the middle of July I cut back all my old Pelargoniums to about three or four inches in height, selecting from the branches cut away such slips as look well-hardened or ripened, starting them in two-inch pots. They will root in saucers of sand, but I am quite successful rooting them in the soil in which they are to grow. When new shoots have started on the old plants that were cut back, to about two inches in length, I repot those that I wish to keep for winter in pots one size smaller than those which contained them before, shaking off all the old soil, and putting them into pots clean inside and out. These old plants, if well trimmed and the ends of the branches occasionally pinched off, will make fine, showy, bushy plants when the blooming season arrives. By old plants I mean those one year old that have bloomed one season. Last year they were magnificent, and kept in bloom a long time.

For soil I use two parts good loam, one part sand, and two parts good rich leaf mold, the latter being two years old, well rotted, upon which had been turned washing suds, slops, etc. I always bake my earth to kill the worms, insects, and larvæ. Some persons think best to start their Pelargoniums in September, but I like best to do it in July. It is so much gained, for they get well rooted with side branches formed by September. I put my slips in two-inch pots in the above-named soil, and place them in warm, sunny windows, close to the glass, being careful not to keep them too moist, as it causes them to damp off. After the cuttings are well rooted I pinch out the centre at the fourth leaf, which induces side shoots to form. As soon as these two-inch pots are full of roots I repot into those from three to four inches across, according to the size and vigor of the plant. I use nice, well-cleaned pots, and after the usual piece of crock at the bottom put in sufficient earth to lift the plant the desired height, putting in the ball of earth entire, after first picking out the old piece of crock which has become tangled with the roots. Do not disturb these white, working roots, but fill in carefully around the sides with a potting stick; give a few smart raps on the bench or table with the pot, which will settle the earth. It is best to leave a space of half an inch at top unfilled to facilitate watering.

As the side shoots continue to grow pinch off the ends, which will cause two to come in place of one. When these pots become filled with roots, I shift again in those five or six inches across, in which they are allowed to bloom. When the buds are well formed, and never before, I water the plants once a week with liquid manure. If used before they show buds it will stimulate to growth of foliage, and not to blossoms, and has the same effect as over-potting has upon them. This is why so many fail with their Pelargoniums, getting few if any blossoms.

It is best to keep them rather dry through November and December; after, give more moisture, but not enough to saturate the roots, as it causes them to decay. They do not like a warm, dry atmosphere, but do best if kept about 50 to 55 degrees in a warm, sunny window. I keep mine in south windows in a chamber which is warmed slightly by means of a register in the floor, through which passes the warm air from the sitting-room. I kept some of my plants there all last winter. It seems just suited to Pelargoniums, Verbenas, and plants of like nature.

As fast as my Pelargoniums in the chamber window show buds I begin to give them liquid manure, and bring them down to the sitting-room and place in the sunny bay-window, a few at a time, so as to prolong the blooming season (for I like to make the most of all my pretty things). I give them air on mild, pleasant days, but never in such a manner as to place them in a draught or let the air directly upon them.

They are seldom troubled with insects; a good smoking with tobacco in the fall and a weekly washing and sprinkling keep them under subjection. Some of my friends have given up the culture of the Pelargonium, and I very nearly did so during my early acquaintance with it. The first one I ever possessed was years ago. I was in the city shopping, had spent most of my money, had a little more than enough to pay my fare home, when I spied a splendid Pelargonium for sale, in full bloom, in a shop window. I said to myself, "I want that plant" (at the same time giving my porte-monnaie a slight squeeze, for I knew there wasn't much in it). I went in and asked the price; it was very dear. I thought I could not afford it. I went out, but soon returned, feeling that I must have that plant, even though I had to do as a friend of mine once did. She, too, had been shopping; had just ten cents left for her fare home in the horse cars (it was when silver ten cent pieces were more plenty than they are now). It was new and clean. She put it in her mouth for a minute while she adjusted her bundles, and accidentally swallowed it, and had to walk home!

Excuse me, Mr. Editor, I know it is a great jump from Pelargoniums to swallowing ten cent pieces. I fear you'll think me something like the old man's minister "who was a long time coming to the point, and when he did he didn't stick to it worth a cent."

Well, about that Pelargonium: I bought it and enjoyed it amazingly for awhile. At length it ceased to bloom, and I thought something must be the matter with it. Perhaps its shoes were too tight, and its feet all cramped up in that little pot, and so in my good-natured "greenness," I gave it a pot about four times too large, then wondered why it did not bloom again; but it never did. At about the same time I took a cutting from it, and to insure success, as I thought, I put it at once in a six-inch pot, and it grew, and grew, and grew, till it was nearly as tall as I am, with never a side branch or bud, but leaves most as large as a hollyhock's.

I had not then paid much attention to floriculture, but I loved flowers, and that was all I knew about it. I had read nearly nothing on the subject, and when some one advised pinching back my Pelargoniums, I was simply astonished. I should almost as soon have thought of pinching off my children's arms and legs for their benefit as of doing good to my window pets by pinching off their branches. But, suffice it to say, I never got so much as a bud on my first Pelargoniums; and what wonder, with such treatment! At last, "hope deferred" made my "heart sick," and I let the great overgrown things go, thinking "their room better than their company." I did not indulge in Pelargoniums for several years; but at length, reading and learning my mistake, I again renewed my acquaintance with them, much to my enjoyment and their profit, for their pansy-like blossoms seem like so many faces crowded together to smile upon me in gratitude for my kind care and attention; and with their smiling faces peeping out amid the scarlet Geraniums, drooping, graceful Fuchsias, and bright-flowering bulbs, make my bay-window a "bower of beauty."

Well, I've told my experience, and "what I know" about Pelargoniums; and as I never talk after I've nothing more to say (which does not happen very often), I'll make my most graceful bow, and bid you all a very good-morning.

MRS. POLYANTHUS PERIWINKLE.

Weston, Mass.

## LILY OF THE VALLEY.

I see by Mr. Vick's catalogue that he recommends imported bulbs of the Lily of the Valley for winter bloom, and as there are many who would like to have the blossoms, but feel unable to be at the expense of purchasing imported bulbs, I will send you an account of my experience this winter, that you may use it, if you choose, for their benefit.

Two weeks and a half before Christmas I had a clump of frozen earth containing the bulbs that blossom yearly in the garden, chopped out of the ground with an axe. They were left in a warm place to thaw, and the next day I selected some of the largest bulbs, with some of the little roots left on, although not all that belonged to each bulb, and potted in rich, warm, moist earth. I kept them on the warm water tank attached to the cooking stove during the day, and kept them very wet with warm water. Sometimes they got very hot. At night I removed them to a warm spot near some stove, my only care being to keep them very wet and warm, regardless of light. On Christmas morning one bud opened, and there were a number of spikes of buds formed that opened gradually, with all the fragrance of summer, though not quite as vigorous in growth. I have had a succession of blossoms, and have some now, coming on nicely, that have not been forced, cut out of the ground since New Years. After the blossoms came, I removed the pots to the light and window gradually, not subjecting them to a sudden change of temperature.

I would like to ask, through your columns, advice as to the best treatment for the English Ivy in summer, whether to keep it in the house in a darkened room, or to remove out of doors; whether to sink the pot in the garden or not, or if it is still better to put the root into the ground, and how to treat it in the autumn if kept out of doors in the summer.

M. G. P.

Keeseville, N. Y.

## Gossip with Correspondents.

**A Remarkable Vine.**—I wish to tell of a remarkable vine of last summer's growth—at least I think so. I planted seeds of the Goose Egg Gourd; I know that, because I took them from the egg myself, and put them directly in the ground. In due time one plant made its appearance, and I watched its wonderful growth. It branched off in a dozen ways, and ran as if for life, or to see all that there was to be seen in a single summer. It seemed to have not only an inclination to spread itself as much as possible over the ground and across the walks, on an investigating tour, but evinced an ambition to get up in the world, and, accordingly, made its way over the errant bushes, over the asparagus, and along and over the fence, to get a peep outside. After a time the blossoms, and then the gourds, showed themselves, and I was congratulating myself upon my success, when I discovered the eggs were not egg-shaped in the least, but perfectly round. While watching and wondering at this, still believing they would prove themselves in the end genuine egg gourds, some of them had become as large as a medium-sized apple, and I discovered they were all turning yellow instead of white, as a well-behaved egg should do. I was disgusted, supposing in some way I had been deceived into giving all that care and thought to a common pumpkin vine. It received no more attention from me until quite late in the fall, some time after we had severe frosts, and when there was little in the border or garden to attract, I noticed my pumpkins, or whatever they are. There were twenty of them on the one vine, besides some that had not fully grown. The twenty were from sixteen to eighteen inches in circumference, evidently having stopped growing because they had attained full size. I had them taken in, and commenced experimenting, and am prepared to say from the evidence of my own taste, and that of others, that pies made from them are most excellent—far more delicate than the ordinary pumpkin. The rind is very thin and tender, the texture and grain of the meat fine, and the seed small. Can you tell me what they are? The hot weather did not affect it in the least, and when other vines in the vicinity were dried out and dead, this was as fresh and green as ever, as indeed it was when finally cut down by the frost king. It is decidedly a novelty to me, and I shall give it a place in my garden in the future. I saved all the seeds, and can supply them to others, if any wish.

MRS. SARAH S. WINSLOW.

Waterloo, Ind.

**Fuchsias.**—In January No. of CABINET, C. R. S. says he has grown slips from single and double white Fuchsias. Now, as I have never been able to find a white Fuchsia, and have been told by many florists that such a thing did not exist, you cannot wonder that I am anxious to know if he really possesses one, and would ask him to please inform us where he procured his treasure. I make Fuchsias and Carnations a specialty, and have had them in profusion since the first of December. Speciosa, Carl Halt, Gem and Serratifolia are all winter blooming, and form a desirable collection. I repot all plants in May, and place Fuchsias on the north side of the house, in their pots, giving but little water. During summer they drop most of their leaves; so much the better; bring them in before frost, and water freely, giving liquid manure about once a month; soot-tea is excellent, as it sweetens the earth. Do this and your plants will repay you by blooming all winter; they

will grow so rapidly after a season of rest as to astonish you. Carnations do equally well by keeping them in the ground in summer in their pots, and pinching off the buds until August. All Carnations do not bloom in winter; the three varieties of La Purite, with Edwardsi and President Degraw, I find good winter bloomers, and are truly splendid. I was a subscriber to the first No. of the CABINET, and hail it with pleasure; it is a much needed work, and is doing much good in many households.

S. E. R.

East Saginaw.

**African Lily.**—I have several so-called in my garden. They grow four feet high; have bright yellow flowers, with black spots on them; are very showy and present a fine appearance. I will send some bulbs to any one in exchange for Calla Lily or Amaryllis. I also have a blue Lily, which is considered beautiful. Where can I get a Rhododendron, and is it hardy? I also would like to get a root of the Passion Vine. I got some slips of double Geraniums in October, and put them in a box; they have grown finely, one fourteen inches high. I don't know when to pot them. I have two of the finest of old-fashioned white Roses, one very double, the other half double.

Rockport, Ind.

MRS. C. P. LAIRD.

**Answer.**—Pot your Geraniums in new pots every other month while they grow so vigorously. Pots should not be smaller in width than one-third the height of the plant.

**Calla Lily.**—I have had very good success growing the Calla, but not much prosperity in having them blossom. Will some one tell me if I can do anything to make them blossom?

A. B. S.

**Answer.**—Your Callas will no doubt flower in spring; if not, in July. Place them for two months in full sun; after that shake them clean out and repot; grow on as usual, and they will flower well next year.

**Hanging Basket.**—Mrs N. W. wants to know if her hanging basket will be over-burdened as it contains three Tropæolums, one Canary Bird Flower, five Nolana, five Abronia, two Portulacas, one Convolvulus Minor, one Sweet Alyssum, two Lobelias. The basket is large, but a few leaves are turning yellow on the Tropæolums, which are about ten inches high; all the plants look well and were started from seed. As they grow shall she pull up some, or let them all grow? The baskets are lined with paper muslin, instead of moss, and many like it better, as it gives more room, and does not let the dirt sift out of wire baskets.

**Answer.**—Yes, your basket is very full; better thin out one-third the number.

**Begonia.**—1. How is the beautiful, large variegated leaf Begonia Rex propagated; what treatment does it require? 2. How large a pot should a medium size Calla have? 3. How are seeds of Begonia raised? 4. What is to be done with Begonia Rex when the leaves begin to decay at the edges, and finally die? Mine does so. I am sure it is not too wet.

ANNIE.

**Answer.**—1. Begonia Rex is propagated from single leaves. 2. A six or seven inch pot will grow a moderate sized Calla well. 3. See note on raising Begonia seed in December CABINET. 4. Keep the Begonia dry until spring; it will then make new leaves.

**Green Fly.**—My plants are lovely! I have a beautiful white Heath, a double Chinese Primrose, and a Carnation in full bloom, and a Calla nearly out. My Roses were troubled with the green fly, so I procured

some waste tobacco at a cigar manufactory, for which I paid the small sum of "thank you, sir." I then put my Rose bushes under the sink, took a red-hot stove cover and placed it on a pan of earth, and sprinkled some tobacco on it and closed the door and left them about twenty minutes, when I took a look at them, and the green flies were in their last agonies on the earth in the pots. Fearing they might rise again I gave them a dose of tobacco tea, which soon put an end to them, and now my Roses bid fair to have some blossoms.

**Roses.**—Are the Prairie Roses, Baltimore Belle and the Gem of the Prairies, hardy? Do they need any protection in northern Vermont, and what height do they grow in one season? How long does it take them to bloom?

R. F. M.

**Answer.**—The Prairie Roses are hardy, but need protection in Vermont. They grow three to four feet each season, and will bloom freely the second and third year. In middle States they will do better still. The charcoal used for plants is wood charcoal.

**Immortelles.**—Can any one tell me where I can get seed of the Immortelles? I have often seen notices of the flower in catalogues, but no seed has ever been offered. I have seen the flower, and would like very much to obtain seed, or a plant or plants.

MAGGIE.

**Answer.**—Ask any florist.

**Window Plants.**—Will the CABINET please tell me what plants will do well in east and south windows, partially shaded? The Chinese Primrose is the only thing that blossoms freely for me in a north window.

JULIA.

**Answer.**—1. Flowering plants—Camellias, Cinerarias, Calceolarias, Calla Lilies, Fuchsias, Hyacinths and Tulips. 2. Foliage plants—European Ivy of many varieties, to the green and variegated Smilax; many varieties of Ferns and European Myrtle. The second list would prove most satisfactory if kept free from dust, and the air of the room is not too dry.

**Parlor Ivy.**—I enclose a leaf of what we call Parlor Ivy. Can you tell the right name by the leaf? It is a strong grower, about fifteen feet long; near the centre of the vine, for a space of about four feet, the leaves have dropped off. What is the cause of it? The leaves at both ends look strong and vigorous.

A. E. C.

**Answer.**—Your Ivy is known as the German Ivy (Senecio scandens.) Leaves drop off either from too much water, heat or cold.

**Lily.**—Aunt Carrie asks the name of a Lily. I think it must be Funkia Japonica, or August Day Lily. If Paul De Verges will forward me address and stamps I will send him roots of the Water Lily (Nymphaea Odorata.) They can be sent during November or December. I raised the Lilies in the yard in a barrel set in the ground in the summer. They were planted too thick, and did not blossom well. What variety of old-fashioned White Rose does R. H. Blake want? I have one variety that is as handsome as any Tea Rose; indeed it has a creamy look—is full and perfect. Another that is rather single (white) has coarse leaves, and after the season for blooming is over, large red seed-vessels form. Another is Calla Magnolia, or Lamarque Rose. The last is a monthly.

Delmar, Del.

GEORGIA B. CARVER.

**Ever Blooming Geraniums.**—Will Lady Cullum please inform me where one can obtain the Ever Blooming Geranium described by her in February No. of CABINET?

M. B. T.

## Flower Gardening.

## MY FLOWER GARDEN.

Ladies, do you love flowers? I do; and I think if I have been successful in my attempts at floriculture, any of you who have a reasonable share of health and the control of a few feet of earth, can, in time, be the possessor of a few flowers. Shall I tell you some of the difficulties I have surmounted in order that I may have a flower garden? In the first place my husband does not care for flowers, and I clearly understand that I must not look for his assistance in their culture. I determined to see what I could do myself. In the upper part of the garden was a large plot of ground which was not used, and this I concluded should be the home of my pets. But it was stiff clay soil, full of stones, and had an inclination to the east. I had it dug at the same time the vegetable garden was, and then, with line in hand, proceeded to lay out the beds. On one side was a path leading from a gate to the lower part of the garden, so that I did not make a path (as I otherwise should have done) through the middle of my plot. In the centre I made a large round bed, with a path three feet wide extending all around. Above this I formed an oval bed, and a similar one below the central bed. On the north side a bed, half-moon in shape, and its counterpart on the south side. At each corner I formed a bed, right angle in shape, and around the whole a border three feet in width. I had paths around all the beds three feet wide. Next I took a spade and a basket, went to the orchard, cut sod in narrow strips, filled the basket, and by going several times every day I had time, I bordered all my beds. I watered the borders in the evenings until the sod was well rooted. The autumn previous I commenced preparations for enriching the soil. My husband kept a horse, and I could have manure, provided I could get it to the garden. I took the basket and shovel, filled the basket with manure, and carried it to the garden myself. This I did several times a day for a long time, when I had a great quantity of manure. To this I added sods dug here and there in leisure moments, and sand obtained from a small brook near by. On wet days I would convey bushels of leaves from the orchard, and over all threw a quantity of lime that I found in an old barrel. Every wash-day I threw the sods—frequently boiling hot—on this compost heap, stirring it up every day or so until it was decomposed. In the spring I spread this a foot deep over the flower beds, dug this under and covered the surface again a foot deep. When I transplanted my plants to the beds I would go to the woods, a fourth of a mile distant, and get a basketful of leaf-mold, using a small quantity to each plant. I made a hot bed the last week of

March. I nailed four boards together for a frame, dug a place a foot deep the size of frame, filled it with fresh horse manure, put a few inches of good soil on top, and placed an old window sash over the top. I let it sweat a few days, then sowed seeds in rows, placing a label with name of seed at the top of each row. I then covered with several thicknesses of news-

TRELLIS FOR POT PLANTS.

papers, watering well, closed frame, and kept paper wet until seed sprouted, then removed paper and kept the soil moist; protected the tiny plants from the noon sun; on warm days let air in by placing a board between frame and sash; covered with boards and old carpet at night. I commenced transplanting the second week of May, covering each plant with a burdock

One half-moon bed had Japan Pinks, the other Asters. The four right-angle beds had respectively Scarlet Phlox, Snapdragons, Candytuft, mixed Phlox, with a Tuberose in the centre of each bed. In the other beds were Balsams, Four-o'cloaks, Zinnias, Dahlias, Tigridias, Petunias, Gladiolus, and others. Some commenced blooming in June, and a continual bloom of flowers until I gathered my last bouquet of Pansies on the 13th of December.

Such flowers! It would do your eyes good to see them. And, my lady friends, one word in conclusion: It only cost me five dollars for seeds and bulbs. Wilt thou not go and do likewise?

## A CHEESE-BOX FERNERY.

I see a great many delightful plans broached in the FLORAL CABINET for decorating the yard and garden, but so many of these require the stalwart aid of a "John" in order to execute them in a proper manner, that it is enough to fill the hearts of the "lone women" with despair. For the benefit of those, who constitute so large a proportion of the flower-lovers in our country, I wish to give the plan of a pretty fernery I once made. Some time in April I procured a cheese-box, about a foot in height, and after boring some holes in the bottom, placed it in the center of a grass-plot where it was somewhat shaded by the trees and shrubs. I filled it to the top with good rich earth, but I did not stop to weigh the ingredients of which it was composed. In order to conceal the outside of the box I put a few shovelfuls of dirt about it, and gathering all the nice-looking stones I could find, heaped them around it, filling the interstices with earth. Now that the mere prosy drudgery was accomplished, the

poetry came in, which consisted in scouring the wood near by for Ferns, Partridge Berries, and the wild Columbine (*Aquilegia Canadensis*), with which to adorn it. These I strove to arrange as tastefully as possible between the stones. In the centre of the box I placed an earthen basin containing a few Lycopodiums, and around the edges were planted small clumps of the Lady Fern and Maiden's Hair, interspersed with Kenilworth Ivy and Lobelia Erinus. As I was careful to give the woodland plants a generous supply of their rich native soil, as well as to water them thoroughly, they soon grew and flourished; and before the summer was over the trailing vines had quite hidden the edges of the box and crept over the stones. But it was not until the second summer that it began to look like a real bit of the woods. Try it.

THYME.

VICTORIA REGIA, THE MAMMOTH FLOWER OF BRAZIL.

leaf for a few days. In the central bed I planted Verbenas with a border of thirty-two pansies. One oval bed had in it foliage plants, Camas, the seed of which I sprouted by pouring boiling water over them; Amaranthus, tri-color and bi-color ruber, and Coxcombs.

**Complimentary.**—I am delighted with the CABINET. It is one of the handsomest papers published, and the information it gives about flowers is worth many times the price of subscription. O. P. A. Palmer, Mass.

## The Flower Garden.

### HINTS ON HOUSE PLANTS.

There is no greater source of enjoyment to me than properly caring for my little flock of the vegetable kingdom. My collection comprises, mostly, the more easily grown varieties—Begonias being special favorites. Any success that falls to my lot is attributed in a high degree to the *almost daily showering* my plants get. Not enough to drown them, or to leave the earth soggy and unfit for the delicate roots, but enough to keep the surface of the leaves clean, and thus the pores open. A fine healthy growth follows. It is a sad fact that a very large number kill their plants by neglecting to remove the filth that is sure to collect on the leaves, especially in a living-room. How unpleasant a Calla leaf looks all covered with dust; seems as if you wanted to scrape it off every time you see it; that is my experience. The same is so with those covered with lice. I almost itch, in the presence of such, to take them up and run to the nearest sink, subject the disagreeable objects to a drowning, and thus relieve the sufferers. Now ladies (and gentlemen too, if there be any like me), do keep your plants clean, and it can only be done by a daily, or almost daily, sprinkling.

The vaporizer is a handy instrument, and may be had at the shops, or one may have a home-made one, if he is handy in making such things. This can be used where one is afraid of soiling the carpet, as it projects the water in the form of the finest mist.

If I mistake not, the Vallota Purpurea is the same as is grown here very commonly. A friend has the sawed halves of a barrel so full it is difficult to remove the bulbs. In August they are a fine sight. I saw one budded last spring, although it is said they flower only in, or not before, the above-named month.

The Dracæna and its companion, Aspidistra Variegata, are suitable, I find, for hot rooms. A Palm or two would find its way into my collection if (ah, that little word,) they did not cost so much. The Tradescantia is a fine trailing plant, and with me succeeds better than the Ivy, to twine about picture-frames. A very beautiful variety may now be had, with leaves striped with white. Mahernia Odorata has bloomed finely for me this winter, scenting the rooms almost like the Tuberose. Try it, you who have it not. Mine rested all summer in a shady place.

The Onion Lily is probably Squills; the flower is greenish white, star-shaped. If one wants an easily grown plant, and one that will bloom, let him get a Crab Cactus. Don't confound this variety with the one you saw, or perhaps have in your own possession, and have looked in vain to find a flower upon. It is not the kind; get, if possible, one well started, for they are slow to root. I have a nice Wax Plant, but

do not find it, as some catalogues term it, a free grower.

Last summer was found, out in our vegetable garden, a variegated Clover Plant. The leaves are very prettily striped with yellow. Some said they were partly blasted, but the variegation continued all summer. Is it a common plant? I cannot close before speaking of my fernery and aquarium, both of my own manufacture. Do your readers know how easily a fernery may be made?

Determine the length, and let the width be more than one-half. Construct a neat box four inches deep, with a projection inside, two inches from the top, for the glass to rest upon; the box is for holding the earth; timber over and varnish. The glass must just fit inside this box. In cutting the glasses, make the end pieces a little higher than the width; mine has a

some other colored paper. The box to be used should be lined with zinc, or tea-lead may do. A Dracæna looks well for a centre-piece. Ferns may be had in the woods, but take care and select judiciously. The Partridge Vine, with its red berries, is very acceptable; also the Polypody Fern, found so common on rocks. The greenhouse will, perhaps, afford the richest selection, and by all means select a Fittonia; it has leaves veined with carmine, and is truly beautiful. Lycopodiums, Peperomias, and the Acorus Variegatus (a pretty little upright grass), are desirable. I cannot advise flowering plants for our plant-case.

For the aquarium nothing seems to grow as well as Vallineria Espiralis. While other water plants die and have to be removed, this one continues to thrive and be both ornamental and useful. Neither do I recommend the Calla for a water purifier.

Westerly, R. I.

H. P. SPICER.

### ACHIMENES.

In the August No of the CABINET, H. speaks of having Achimenes in a hanging-basket, and of their being finer than those grown in greenhouses. I was also so fortunate last summer as to have the finest pot of Achimenes I had ever seen. There were three bulbs in a five-inch pot, and for two weeks certainly thirty-four blossoms were expanded every morning. Of course it commenced more moderately, and was blooming at least two months. This unusual thriftiness we thought was caused by their being home-raised bulbs—that is, bulbs wintered in some warm room, and started in a hot-bed in spring, instead of making a long journey from some florist's, which seems to impair their vitality. Achimenes are so beautiful, however, that one had better have them on any terms than do without them. I have repeatedly tried to keep the bulbs in a cellar, and invariably found them reduced to powder in the spring—a kind of dry-rot, apparently. The best way to keep them, after gradually drying off in the fall, is to set the pot into some drawer or closet (near the chimney, too,) in a room that is

never allowed to become real cold. I have found them very satisfactory plants for the adornment of my flower-stand on a covered piazza; they will not bear sun; one must be especially careful not to let the sun strike the pots when starting them in the hot-bed. Mine are a lovely blue. If H. has any other color, I should be delighted to exchange with her, and hope she will write me at once on the subject.

Washington Heights, Ill. MRS. J. H. BIGGS.

**Black-Eyed Susans.**—Answer to F. C. M., in February No. of CABINET. Black-Eyed Susans are the seed of a sea-plant. It is the name given them by sailors. They are also called West India beans, and are very pretty for ornamental work. There are three sizes or varieties. Should be soaked in hot water until they sprout—then plant and water plentifully.

L. E. S.

AVIARY IN FAIRMOUNT PARK, PHILADELPHIA, PA.

sloping roof, and looks much better than simply a flat one. It may be a little troublesome to find the exact shape of the four pieces for the top, and if you cannot calculate it yourself, ask some one who can, remembering that the top should be about one-third the height of the whole glass portion; of course the slope would be more. To fasten the pieces together use braid and good paste. The sides should be laid flat, upon some smooth surface, with the proper edges not touching each other by some three-eighths of an inch. After you have pasted three of the corners, let the work stand till it dries; then lift the whole and place in proper position. Proceed in the same way with the sloping part. Have care that the glass is so cut that the parts may fit well; a pattern is, probably, best to work from. The work may be made more substantial by fastening the braid over the inner edges, and finally covering the outside with brown or

## Stories.

## ELLEN GOODWIN'S TRIAL.

BY S. ANNIE FROST.

"Going out again?"

Ella Goodwin spoke in a fretful tone, and her pretty face was puckered up into a most dismal frown.

"I promised Charley I would step round for an hour or two, and have a game of dominos."

"Anything to get away from home!"

But Will Goodwin was already out of hearing. His wife, after a fretful remark, addressed to the walls, to the effect that she was a fool for ever getting married, took a novel from under the sofa cushion and was soon reading with an air of absorbed interest, when there came a tap at the door, and an elderly lady with a sweet, fair face, came in.

"Alone?" she said, as Ella eagerly welcomed her and took off her wraps.

"I am always alone! Will gets his meals here!" was the bitter reply. "He goes to the store as soon as he swallows his breakfast, and he is always out in the evening. Now he is with his brother, playing dominos."

"Don't you play dominos?"

"Yes."

"I'd keep him at home to play."

"He would not care to stay. I suppose all young married men tire of home, Aunt Mary?"

"Not all! But you speak in a bitter tone that pains me, Ella. It is not like you."

"I feel bitter! I have no one to talk to but you, and I never complained before, but I am tired of being alone all the time."

"Ella, since you have spoken to me, will you let me give you a word of advice?"

"You know you may."

"Look in the mirror, dear, then look round the room!" Ella obeyed. In the mirror she saw a slender figure robed in a morning wrapper, without any collar or cuffs, and not precisely clean; a face pretty and expressive, with a wreath of golden hair loosely knotted in a comb and decidedly untidy. The room, a handsomely furnished sitting-room, was begging for a broom as eloquently as a dusty carpet could beg. Harry's cradle in one corner balanced a disordered work-table in another. The center-table was piled with miscellaneous articles.

A crimson flush rose on the young wife's cheek.

"What is the use of having things nice when nobody sees them but me, or dressing, when Will is never at home?"

"He might be at home more if things were nice and you were dressed."

There was silence for a few moments. Then Ella spoke.

"I'll try it, auntie. I suppose it is partly my fault. Before Harry was born he was at home more, but I have been careless since then."

"You are not strong, I know," Aunt Mary said, very kindly, "and baby is a care, but I would try to be dressed in the evening, and have the room cheerful. Your piano looks as if it was never opened! Don't you have time to practice?"

"I can't plead want of time, auntie. Jane is one of the best of servants, and time hangs upon my hands. I am glad you came in. I believe I want a moral shaking."

Then they talked of other matters, of Harry's first tooth and baby accomplishments, of the winter fashions, of feminine interests of all kinds. The innate

sweetness of Ella's temper made her take her aunt's gentle reproof in the spirit of love that dictated it, and when the parting caress was given, she whispered:

"I'll try, auntie, to make home more attractive for Will."

She was fast asleep with Harry nestled in her arms when Will came home, but the touch of his lips upon her cheek aroused her.

"Did you have a pleasant evening?" she asked. "Aunt Mary was here and left her love for you."

"Charley and I played awhile, and then Mira Creighton dropped in and sang for us."

"She seems to drop in pretty often."

"She is so intimate with the girls."

"I never thought her singing very wonderful."

"You sing far better. But when I can't get any better, I like hers."

It was not the first time Will had told the same story; and strong in her new resolutions, Ella determined upon a good hour of practice, early in the morning.

Jane was rather amazed at the cleaning the sitting-room received at the hands of herself and her mistress. The cradle was banished into an adjoining bed-room, where baby could be heard if he awakened; the fire-shovel assumed its legitimate place at the hearth. It rather astonished Ella herself to find how many useless articles were about, and how universally everything was in the wrong place.

The six o'clock dinner brought Will. Ella was in the hall as he entered, and led the way to the dining-room, where a cheery brightness reigned.

"Company, Nell?" queried Will, his eyes resting upon his wife.

"No company," said Ella, "but ourselves, unless you count Harry. I have made you some of the bread-sauce you are so fond of, Will!"

"You're a jewel. Only don't make yourself sick in the hot kitchen, Nell! You are not very strong, you know."

Nell blushed at that, for it reminded her of many a neglected duty, many a lazy hour for which the plea had been offered in excuse.

"That did not hurt me," said she, "for I was in the kitchen making some lemon pies."

"Lemon pies! You make my mouth water. Nobody else can make them to taste like yours!"

Dinner over, Will in great good humor went to the sitting-room. The open grate threw a ruddy glow upon the bright surroundings, and his face lighted with pleasure. But the large eyes fairly danced as he cried: "The Piano open! I began to think it was buried for ever!"

"Not quite," said Ella, laughing, and yet blushing, brightly. "I thought from what you said last night, you would like to hear me sing again!"

"You bet I would!" was the emphatic if not very elegant response.

"Let's play dominos then till I can sing. It is too soon after dinner now. Be merciful, for I am out of practice, remember."

Here Jane came in with Master Harry, ready for bed, and after soft kisses he was taken into the next room and put into his cradle.

"You will come up if he cries, Jane," Ella said, and took down the domino box. "I think Harry is old enough now to spare me in the evening," she added in explanation.

"Little monkey, how he grows!" was the reply. "Come, what is your highest?"

Cunningly Ella kept up the interest of the game till nearly nine o'clock, when Will certainly would not go out. Then she sang for him. Her voice,

clear and sweet, had been highly cultivated, and she was surprised to find how much pleasure she felt herself in once more exercising it.

Eleven o'clock chimed from the little mantel clock when Will was pleading for 'just one more' song, and Ella sang the "Good night," in answer.

"By Jove!" cried Will, "I was to meet Charley at the club-room at eight. Where has the evening gone?"

"Never mind! Any other evening will do as well," said Ella.

The next day was stormy. Ella appeared at breakfast with the neatest of collars and cuffs, hair in a knot like burnished gold, and a face like a sunbeam. Will, who had eaten in solitary state for more mornings than his wife cared to count, was as attentive as a lover. His parting kiss accompanied the words:

"Take a nap, Nell, this morning. We must keep you well, you know! I haven't enjoyed my breakfast so much for a year."

"Don't forget the new songs, Will. If you will send them round, I will try them over before you come home."

"I'll send them then as I go down town."

Wet and dimly muddy, Will came in from a February storm of rain upon melting snow. Ella was waiting for him, and drew him into the bedroom. Before the fire hung a dressing-gown of bright cashmere, with blue silk, while under the dry, warm socks, a pair of gorgeous slippers were toasting.

"Good gracious, Nell, where did those come from?" said Will, hastily, drawing off his soaked boots.

"It is your birthday. Have you forgotten? I bought those to-day for you."

"Out in all this rain?"

"I did not walk much. Try them on, Will?"

"Fine as a Turk!" said Will, twisting before a mirror to see how the dressing gown fitted.

"Now, come have some hot soup; I made it."

"See here, Nell, ain't you doing too much?"

"Not a bit. I needed a good roasting over the fire after being out, and I took it over soup and pudding in the kitchen, instead of a novel here. That is all the difference."

Again eleven o'clock struck before Will knew the evening was half gone.

"Charley will think I have deserted him," he said, "but slippers and dressing-gowns are too comfortable to be easily resigned."

Ella softly stroked the hair of a head resting upon the back of the great arm chair, as Will spoke. A strong arm encircled her, and she was drawn to her husband's knee.

"Little woman," he said tenderly, "I cannot tell you how glad I am you are well again. It was awfully dismal seeing you always in that direful wrapper. But —" and, man like, he hesitated, "I suppose I ought to have stayed at home more!"

"You will now?" she said, anxiously.

"Where can I find so pleasant a place," he said, with loving fervor, "or so precious a companion?"

It was nearly a month later that Aunt Mary, spending an evening with Will's mother, heard Charley grumblingly declare:

"There is no getting Will to go anywhere nowadays. He sticks at home in the evening as if he were glued there. I went round there Saturday; Jane was out, Nell lying on the lounge with a headache, and Will reading to her, while he rocked the cradle with one foot."

"Can't leave," he told me; "Nell requires all my attention, for I can't possibly afford to have her sick again!"

## THE BEST PAINT IN THE WORLD.

Any shade from Pure White to Jet Black, and as it is mixed ready for use, every man can be his own painter.

The incorporation of Rubber in our Paint makes it unequalled by any other paint. It is unaffected by change of temperature, and is perfectly waterproof. It presents the finest possible finish, will not crack or peel off, is in every way the Best Paint, for either inside or outside painting, and is from one-fourth to one-third cheaper, and lasts three times as long as the best lead and oil paints. The almost unanimous verdict of the many thousands who have used our paint is, that it is far superior to any other paint in use.

Be sure that our Trade Mark (a fac-simile of which is given above) is on every package.

The great popularity of, and demand for our paint, has necessitated the establishing of Branch Factories as follows: No. 596 West St., New York City; No. 83 West Van Buren St., Chicago, Ill.; No. 210 South Third St., St. Louis, Mo.; and a Wholesale Depot at Wm. King & Bro., No. 2 North Liberty St., Baltimore, Md.

NEW YORK, MAY, 1875.

## OUT-DOOR GARDENING.

In marking off your beds, do not make them so large as to be obliged to walk over them in order to weed them. A nice plan is to have a large grass plot for the centre, interspersed with small beds of brilliant flowers, edged with wire-work, shells, or brick, to keep the grass out; is but little work, and I think very beautiful. A border around the whole garden is very desirable, and I find it will give abundance of work for "idle hands to do."

Large beds with broad, close-shaven grass walks are lovely where you have large grounds. Walks of gravel are the best, but if of brick, strew with common salt, and you will find it will save much time and labor in weeding. When my beds are all laid out and the grass plot sodded, the beds are spaded quite deep, and good well-decayed compost forked in, and sand added if the earth is stiff. When the beds are all ready, I set out bulbs—roots for fall planting. Tulips, Crocuses and Hyacinths make beautiful beds. I then cover with coarse manure. In the spring I rake it all off and sow Phlox Drummondii, Portulaca, and plant Verbenas (previously started in the hot-bed) as soon as the bulbs are through blooming. In this way you have a succession of bloom; by the time these plants are well started the leaves of the bulbs will have withered, and may be cut down with safety. Amaranthus and Geraniums for beds are very fine, and make rapid growth; also Asters, Balsams, Pinks, Perennial Phlox and Gladiolus; Oxalis for bordering and other plants, of which every one has favorites. For climbers I would advise Madeira Vine, Cypress, Convolvulus Major, Virginia Creeper, and ornamental Gourds as the most rapid. If you have a shady corner, a little rock-work would not be amiss; and if you are careful and save all the clinkers from stove and furnace during the winter, a little mound of earth, with these tastefully arranged in ledges and fissures, is very pretty, and can scarcely be told from the real article. It may be either whitewashed or washed with gray, at the discretion of the owner. Mosses and Ferns, German Ivy, Amaranthus, Nolana, Myrtle, Wandering Jew,

Lobelia, &c., are all suitable, and make a rapid growth, provided plenty of water is given, and they are not exposed to the sun too much.

In August and September take cuttings for next season's bedding; after rooting in saucers of sand, cigar boxes of good rich earth will hold from six to eight slips, and give abundance of room. Deep cigar boxes, half filled with earth, with a piece of glass to cover, make excellent seed-beds, and are within the reach of every one. In September, from the first to the last, according to the climate, cut into the ground around the roots of such plants as you wish for the window and for winter blooming, and in two days pot in inch soil; place in a cool room for two or three days; give a thorough smoking and watering, and then remove to winter quarters. Pull up all useless stalks of annuals; give protection to such as need it; rake the beds; give a layer of manure, and we rest from our labors till another joyous springtime. As I grow in experience you will hear from me again. Perhaps I may give a description of some of our public gardens.

A. F. PETERSON.

Washington, D. C.

**Flower Beggars.**—Was it Violet who gave your readers, not long ago, some very good advice about raising Roses from slips? She also told them, if I remember rightly, how to obtain the slips in the first place, namely, by begging them of some generous florist. Having found by experience that the class of slips, seed and flower beggars is very large already, I am sorry to see them receiving aid and encouragement from any contributor to the CABINET. Florists

RUSTIC SEAT.

BOAT HOUSE.

SCENES IN CENTRAL PARK, N. Y.

may sometimes have slips to give away; but it is my opinion that, if they were to tell just how they feel when applied to for these things, most of them would

say, "It is an imposition; our slips, seeds and flowers are our stock in trade, and the person who asks for them asks for money, or the same thing." I think they would also say that the people who do these things are generally those who can afford to pay for them. A man in this place was applied to, not long ago, for slips, and his answer was this, "What, do you suppose I heat up this place and spend my time taking care of these plants, to give them away? No, madam; I sell plants." A long article might be written on this subject without exhausting it, and I hope somebody competent to write it will take hold of the matter.

M. P. G.

## PUBLISHER'S ANNOUNCEMENTS.

**New Book.**—**Ornamental Designs for Fret Work, Fancy Carving and Home Decorations.**—This new book, just issued from our office, contains over 150 designs of fancy articles which can be made by the use of the Bracket and Fret Saw, for home ornaments. These are designs for Brackets, Picture Frames, Card Baskets, Letters, Figures, Ladies' Work Baskets, Wall Pockets, Fruit Dishes, Crosses, Match Boxes, Caskets, &c. These designs are accompanied with explanations for use. Readers will find the Book (price, 60 cents,) and the Bracket Saw (price, \$1.25,) advertised in another page. Thousands of ladies who have purchased this saw, have found in it a fascinating recreation for themselves and their children; have added many beautiful ornaments to their parlors, &c., at very little cost, and some have even made a great deal of money by selling the articles they make to their friends.

**Parlor Organs.**—The readers of THE FLORAL CABINET are informed that a beautiful Parlor Organ can be obtained from Geo. A. Prince & Co., Buffalo, N. Y., at wholesale price, (which is about one-third less than the retail price,) for any sum from \$50 upwards. Their offer is a special one, will last but a short time, and readers will do well to send to them at once for circulars and price lists.

**Advertisements.**—As our space for advertisements is limited we take pains to insert cards only of reliable people. Readers in answering advertisements, should always say they noticed them in THE LADIES' FLORAL CABINET.

**The Averill Paint.**—We are asked our opinion of this. We can only answer that we have used it for over 5 years, and have found it always a splendid article, doing all that is reasonably claimed for it.

**Agents Wanted.**—To agents who will canvass the coming spring and summer, we will give extra good commissions. Canvassing is now more easy than during the past winter, and all agents will find more easy the work of getting subscribers. We want at least 5,000 more before the close of the year.

## WILLIAMS' ILLUSTRATED PUBLICATIONS.

**The "Ladies' Floral Cabinet and Pictorial Home Companion."**—Devoted to Housekeeping, Household Elegances, Fashions, Music, Ladies' Fancy Work, Social Amusements, Home Pets, Flowers, Window Gardening, Cottages, Garden Decorations, and Illustrated Home Literature. Price, \$1.30 per year, including chromo, "My Window Garden," for 1875; for club of 10, extra copy of paper and chromo to agent.

**The "Little Gem and Young Folks' Favorite,"** also Successor to "What Next?"—A beautifully illustrated journal, published monthly, devoted to the amusement, improvement, and instruction of children at home and at school; specially adapted to the needs of the schoolboys and girls of America. Subscription terms, 60 cents per year, including chromo "In Mischief." For a club of ten one year, extra copy of paper and chromo free to agent. *Premium Lists free to any address.*

**Williams' Illustrated Catalogue of Rural and Household Books, Social Games and Home Amusements.**—The prettiest catalogue ever issued. Full of attractions to the young folks, and invaluable to every family. 64 pages, beautifully illustrated. Over 500 books and games fully described. Every family that likes games will find hundreds of the best here described. Price, 10 cents.

**Window Gardening.**—A new book, with 200 fine engravings and 300 pages, containing practical information about plants and flowers for the Parlor, Conservatory, Wardian Case, Fernery, or Window Garden. Tells all about Bulbs, Geraniums, Hanging Baskets, &c. Price, \$1.50, by mail postpaid.

**Every Woman Her Own Flower-Gardener.**—By Daisy Eyebright. A delightful little Treatise on out-door Gardening for Ladies—practical, timely, charmingly written. Price, 50 cents, postpaid. Bound in cloth, \$1.00.

## Flowers.

### SUMMER FLOWERS.

As M. M. says, I think every correspondent should state their locality, as it has much to do with the selection and treatment of flowers. Here in Van Buren Co., Mich., several years in succession, the summers have been very dry. I was quite discouraged the past season, as ten to twenty pails of water a day, on a space twenty feet square, was of little avail; though some of the hardest, such as Balsams, Portulacas, Verbenas, Phlox Drummondii and Sweet Alyssum, outlived the drouth and flourished till frost took them. I think every year I will discard some of my annuals, but don't know what ones to leave out. There are some that I cannot give up, if I keep them in boxes, which is best here for Pansies, Tuberoses and Gladiolus. I have twelve choice varieties of the latter, which I derived little satisfaction from the past two seasons. Planted in the border, the hot sun withered the flowers as soon as opened. A neighbor puts hers in deep boxes of rich earth on the north side of the house, where they bloom beautifully. I shall adopt this plan in future. I had some very lovely Pansies after cool weather began and until after snow came; raised in a box. Double and single Petunias

are both very desirable for summer and also for winter blooming. I have kept them even the second winter. Select the choicest; cut off all or nearly all the old flowering stems—a few young shoots will usually be found. The ground should be thoroughly wet. Re-

a week or two; as winter approaches expose to the full sunshine, as it is very essential. A gentleman once, driving by our house, thought I had a beautiful collection of roses. Verbenas are especial favorites. I keep some of the choicest through the winter by cut-

ting or taking up the old roots, which are not always reliable. In March I plant seed in shallow boxes; cover with glass; when up, give plenty of sunshine; in May transplant out in the border or boxes. They should be transplanted earlier into larger boxes if the seed comes up thick; care should be taken not to get seeds too thick at any time. Balsams are favorites, too, so exquisitely lovely and delicate. But my especial favorites are too numerous to mention separately. The Tuberoses deserve a place in every collection. It contains the most exquisite sweetness condensed into the smallest possible space of anything I have yet seen. Select some that will bloom, and plant in a deep box of the richest old chip and cow manure. I learned years ago that it was unsafe to sow flower seeds in the ground. I sow all mine in very shallow boxes in April, and when warm enough transplant out; be sure the earth is rich and mellow, and don't cover too deep. If this is considered worthy a place in the CABINET, I may, at some future date, give

L. M. B.

A BUDDHIST GARDEN AT CEYLON, INDIA.

## Ladies' Boudoir.

## THE ENTERTAINMENT OF GUESTS.

Visitors seem to be a great trial to many housekeepers, and when ladies announce as a reason for many social omissions the fact that they have been entertaining company, every one seems to be expected to condole and sympathize with them.

"You have so much company," said Mrs. H. to Aunt Rachel, one day, "it must be a great care to you!"

"Not a care, but a pleasure," replied Aunt Rachel; "we give our visitors a hearty welcome, and try to make them feel perfectly at home with us, but make no difference in our mode of life."

"I don't see how you do that," replied Mrs. H.; "it disarranges my whole house if I have company for a week. I wish you would tell me how you manage to entertain your friends so easily."

"In the first place," said Aunt Rachel, "we have our meals at regular hours. In winter we say to our guests in the evening, at seven o'clock you will hear a rising bell, and at half-past seven the breakfast-bell will ring; then we have prayers and breakfast. I always try to have healthy food, and make it a rule to prepare nothing for the table that is really unhealthy. I have more regard to the health and comfort of my friends than to treat them to the indigestible dishes most of our preparations for company are. We always have unbolted bread, not 'bran bread,' as I have heard it called in derision, but bread of unbolted flour. Dr. Dio Lewis says, 'Wheat eaten in its natural condition, without bolting, would supply all the needed elements in the human body, and would sustain life for an indefinite period; but in the process of bolting a large proportion of the nitrates and phosphates is removed, so that bread made of superfine flour will sustain life only a few weeks.' As the nitrates supply muscle, and the phosphates brain power, I think there are very few of us who can afford to dispense with their use. Unbolted bread is a valuable remedy in cases of dyspepsia; we have had it in constant use for four years, and during that time I have been entirely cured of sick headache, from which I had suffered every week for many years. Nine out of ten of our visitors prefer unbolted to bolted bread—it is so much sweeter, and so nourishing."

"Do tell me how you make it, Aunt Rachel; if it cures sick headache I'll have some baked to-morrow, for no one knows how I suffer in that way."

"Set your sponge with bolted flour; then add a little molasses and unbolted flour, until your dough is stiff enough to mould into loaves; make your loaves a medium size; let them raise again; bake an hour in a hot oven; let it be a day old before you eat, and your bread will cure sick headache better than any medical panacea."

"Thank you, Aunt Rachel; now tell me, please, what you have for breakfast? It is so hard for me to know what to get for every meal, you don't know how I worry about it."

"For breakfast," replied Aunt Rachel, "we have beef or mutton steak, broiled; you know I am too much of an English woman not to be a firm believer in the virtues of beef and mutton; fish, eggs (scrambled, poached, or in omelet), potatoes, mush, cracked wheat, and sometimes hash."

"Hash!" exclaimed Mrs. H., "our people won't touch hash. I always feel that it is wrong to waste so much cold meat, but they won't eat hash; do tell how you make it?"

"I take the bones and a little water and boil them for an hour, or longer; chop my meat fine; boil that with the bones and gravy about ten minutes, adding a little flour, and seasoning well; then I lay pieces of toasted white bread in the bottom of a sauce-dish, pour the meat and gravy over it, garnish it with a hard-boiled egg, finely chopped, and it is fit for a king's table. We use no lard. We buy fresh meat suet, render it carefully, and use that for frying fish and potatoes; and we do not believe in calling mush hasty-pudding, for we boil it at least four hours before we consider it ready for the table, or to fry. We give our visitors the freedom of the house, liberty to go where they please, and do as they please; walk out with them, if possible; if not, give them music, pictures and books, wherewith to entertain themselves. For dinner, we have beef, mutton, or poultry; never pork or veal; plenty of vegetables and fruit, and usually no dessert."

"No dessert for company!" exclaimed Mrs. H., in horror. "Why, aunt Rachel, I wouldn't dare to ask my visitors to sit down to table without it."

"My dear," replied Aunt Rachel, "your husband is a great admirer of Mr. Emerson; listen to what he says: 'I pray you, excellent wife, not to cumber yourself and me to get a rich dinner for this man or this woman who has alighted at our gate, nor a bed-chamber be made ready at too great a cost. Those things, if they are curious in, they can get for a dollar in any village. But let this stranger see, if he will, in your looks, in your accent and behavior, your heart and earnestness, your thought and will, that which he cannot buy at any price, at any village or city, and which he may well travel fifty miles, and dine sparsely, and sleep bad, in order to behold. Certainly, let the board be spread, and let the bed be dressed for the traveller; but let not the emphasis of hospitality lie in these things.'"

Physicians say that to eat a second time, after the appetite has been already satisfied, is a very pernicious custom, and the cause of half of the dyspepsia of the day. Although we often have guests whom we would gladly feast upon nectar and ambrosia, if nectar and ambrosia were obtainable in our town, yet if we cannot give them nectar in their fruit, we believe that the custom of having dessert is "more honored by the breach than the observance." The truth of the matter is, most persons in America, when they have visitors, change their style of living, and go to much extra trouble and expense, not so much to gratify their visitors as to satisfy their pride, so that I do not wonder that visitors are dreaded in many families. If we did this your uncle and I could not afford to have visitors at all; but we always enjoy having our friends with us. We always have light supper—stewed oysters, dried beef, cracked wheat, gems, or biscuit of unbolted bread, and always fish. Of course, we try to study the tastes of our visitors if they have favorite dishes; it is a great pleasure to prepare them for them; but if guests come unexpectedly, we do not hesitate to ask them to sit down to very plain fare. "Is not the life more than bread?" Kindness and sympathy, and cordiality, are more to our guests than tables laden with luxuries. Very often, instead of being able to enjoy the society of those we visit, out of mistaken kindness and compliment to us, they expend their time in the kitchen preparing dishes we would not touch, except out of compliment to them; and when they leave their kitchens they are too much fatigued by their unaccustomed labor, too tired to visit or to talk with us. If housekeepers would only be sensible about these things, would put this foolish, I should have said wicked, pride of appearances away

from them; live strictly in accordance with their incomes when they are alone, and when they have company, I believe the pleasure and happiness they would gain from the society of their friends would amply repay them for the sacrifice of their pride.

As Aunt Rachel's advice is so contrary to the practice of most housekeepers, I thought perhaps some of the readers of the CABINET would like to try her plan, and see if they could not entertain their friends with more ease and pleasure than they have ever done before.

MARGUERITE.

## FASHION NOTES AND GOSSIP.

**A Combination Fan.**—Says a Paris fashion writer: "A novelty is a fan, the handle of which forms a pocket handkerchief holder. The idea is ingenious. Of course, the handkerchief which issues from the holder must be rich with lace and delicately scented. Some fans have also a tiny scent-bottle inserted in the bottom of the fan-handle. And thus a fan becomes a handkerchief, scent-bottle and fan, in one." Just in this latitude, according to the present state of the weather, fans will be rather unsaleable articles for some time to come.

**A Rose-Bud Dinner Party.**—On Christmas Eve, a lady of Knickerbocker lineage, and of prominence among the exclusive fashionables of New York, gave a "rose-bud dinner-party." A rose-bud dinner party is a comparatively novel entertainment here, and was introduced at Newport, three summers ago, by Madame De Noailles, wife of the French ambassador at Washington. The title of the affair is derived from the fact that the dinner is given in honor of two or more young ladies who have not made their *debut* in society. It is something of a "coming-out party," only instead of the guests dancing they eat. On the occasion of which we write, four *demoiselles* were honored—four of the prettiest in all this great city, according to rumor. Eighteen sat down to dinner—nine ladies (four of them "rose-buds") and nine gentlemen. Delmonico provided the meal. It was an elaborate one, and Jenkins, who hired himself to Delmonico as waiter in order to get an account of the party, swears the bill of his employer was seventy-five hundred dollars and odd cents. The dining-room was transformed into a veritable bower of roses, and the whole house was redolent with perfume. There was music by Lauder, and the *menu* was engraved on blue velvet in letters of gold. The four "heroines of the hour" were beautifully attired, and were the recipients of compliments innumerable. The dinner was a great success.

**The Emperor and Empress of Russia** wear pretty good clothes. The latter has a red velvet mantle lined with two hundred and twenty-eight sable skins, and valued at \$20,000. The Emperor has a cloak of blue fox skin worth \$24,000.

**At the late wedding of Senator Jones**, one of the most noticeable gifts was an ivory statue of Ariadne, about twelve inches in height, standing on a base of solid silver. At each corner, supporting the base, stood a silver bear on its hind feet. Around the edges of the base was arranged highly polished quartz specimens from all the mines in which Senator Jones is interested. In the centre of the front of the base was a raised circle composed of spades, hammers and other mining implements, in the middle of which was the bride's monogram, the whole piece being about eighteen inches in height.

**In France** widows wear mourning only eighteen months.

## Household Elegancies.

## HOUSEHOLD ART IN THE PARLOR.

BY A LITTLE BOY'S MAMMA.

Let us have parlors! Not those stereotyped rooms, common in America, stiff and formal, with the traditional Brussels carpet and hair-cloth furniture, so suggestive of cheap boarding-houses and second-rate hotels. There is never any change in these rooms. They are shut up, cold and dreary in winter, and shut up, hot and dreary in summer. Oh, my sisters! these are not *parlors*. A parlor is an apartment devoted to social and family life; the daily gathering and resting place of the household for intellectual enjoyment, for conversation; literally, a room to *parler* in, as its derivation implies. It should, in a manner, respond to and sympathize with our æsthetic and physical wants; and to do this its aspect should be changed with the seasons; that is, we should have a winter and a summer parlor. Nor need this involve a large house or much expense. The same room may be made, with a little art and taste, to assume an appearance appropriate to the season.

For instance, we are going to furnish our parlor for the winter. We will choose a small-figured carpet, in which the prevailing color shall be a warm, glowing crimson, to brighten our room in the dull days coming. This carpet may be cheap or expensive, as we please, any quality from Ingrain up to Wilton, but must be small figured and so tinted as to give an impression of warmth. Our furniture shall be crimson to match the carpet, though some other colors are admissible, and we will have plenty of easy chairs. There is an air of luxurious comfort about them which is very tempting, especially in winter. If, unfortunately, our furniture is the chilly, slippery hair-cloth, we will buy a few yards of crimson rep or plush, some furniture gimp and buttons, and an upholsterers' needle, and cover it ourselves. We will not be discouraged; for what woman *has* done, woman *can* do. This needle is about four inches long, and pointed at both ends. Its use is easily understood after once seeing it. Even cane or willow-seated chairs can be upholstered at home, first stuffing with curled hair or "Excelsior."

We will have an open fire of wood or coal, and above all things, our room shall have a southern or western exposure, that it may receive the direct rays of the sun nearly all day. No art of furnishing, no bright fire, can give the charm which the sunshine so freely bestows.

For pictures we will have a few good engravings and one or two richly tinted oil paintings or chromos. Of vases, and hanging baskets, and rustic stands, all filled with cut flowers, and running vines and blooming plants, we can hardly have too many. And there shall be plenty of autumn leaves to grace a picture or brighten a dull corner.

The curtains should either match the carpet in color or be white. If the latter, we will add lambrequins the color of the carpet or furniture. Then we will put here and there little home-made ornaments, and pretty fancies that any woman's fingers can fashion, and our work is complete. And we shall find that with the warmth and luxury of colors repeated in the crimson carpet and furniture, the rich tints of leaves, and flowers and pictures, the bright fire and brighter sunshine, our little room will fairly glow with cheery comfort. Then, when all is dull and dreary without, when colorless Nature, with her naked trees and brown fields stripped of their gay drapery, is waiting for her cold,

white robe, we will turn to this cosy nest where are gathered the leaves and flowers—Nature's lost treasures—and find *there* all for which we sought in vain without. But, nestled in this pretty parlor paradise, winter will quickly pass away, and we must already be making our plans for the coming summer.

When we take up our carpet in the spring we will put it away and buy sufficient straw matting to cover the floor. This will be no added expense, for it can be bought as low as thirty cents a yard; and will not the more expensive woolen carpet last just twice as long? Next make or buy two or three green rugs. If we have some old woolen rags of two or three shades of green, we can make "drawn-in mats," clipping the ends carefully after they are drawn through. If these are properly done they will resemble green moss, and we will place them here and there, before a sofa or near a door. We will need a few yards of green "Holland" (cambric will do), and from this an upholsterer shall cut us some furniture covers. After these are made they must be neatly fastened on with narrow green ribbon, catching them here and there with a needle and thread. This will protect the nicer rep, or plush, or brocatelle, and is much cooler than the warm woolen material, so comfortable in winter. Then a yard of Nottingham curtain lace—the very coarsest, only twenty-five cents a yard—will furnish us with a dozen little tidies, finished either with a broad hem or a fringe of thread. These are very simple, and cost almost nothing, and can scarcely be told from the elaborately knitted and darned tidies which represent so much labor or expense—the figures of the lace showing to perfection against the dark green of chairs and sofas.

If the mantel-piece is not marble, it can be covered with green enamelled cloth and finished with fringe. If any pieces are left, we will cover little triangular and semi-circular pieces of wood, finishing with fringe, and put up about the room for bracket shelves. On one of these we will place a statuette with an ivy growing around it; on the next a rustic basket, filled with ferns and drooping vines; on another a vase of flowers, and on the mantel baskets filled with the various ferns, and mosses and vines.

Observe one thing in the arrangement of a summer parlor: There should be *very few blooming plants*, but rather mosses and ferns, not only because these grow better in darkened, shaded rooms, but because there is a dewy coolness and freshness about them which brings suggestions of green forest depths and shadowy, mossy glens, and makes them most appropriate for our summer sitting-room.

But to many of us, the few dollars needed to carry out these suggestions will be an obstacle. "Ah," you say, "John works so hard, I do not like to ask him." Well, *don't* ask him, then. Think a moment. If you have leisure you might earn it yourself; and he has to find so *many* dollars. Had I space I could tell of many who have thus lifted their husband's burdens, and made home beautiful, and were none the less wifely, and motherly, and *womanly* for so doing. How one gave music lessons to a neighbor's children; another obtained copying from a law office; another brought home sewing from a hurried dressmaker; another wrote articles for a popular periodical; another wrought embroidery for a variety store; and still another, boarding in the country for a few weeks, took herself and two children into the "berry field," and thereby not only "put money in her purse," but also roses in her own and her children's cheeks, and health and strength in every muscle.

Now when you have succeeded—and you will if you try—and that tired husband comes home to dinner

some scorching summer day, from the parched field or the dusty street, lead him into this shaded bower, with its cool, white matting and mossy green mats, its windows shaded by green blinds and draped with white, its furniture in its green and white uniform, its vines, and mosses, and ferns, all in Nature's own fresh livery, and as he sinks into the green depths of an easy chair he will almost think he is on some mossy bank deep in the heart of a forest. And as he looks around this little paradise, once an empty room with four blank walls, will not his heart grow warmer towards the new, fair Eve, whose deft and willing hands have thus transformed it?

## BRACKETS—FRET SAWING.

Ladies can make a great many things which are both fanciful and useful out of wood in making brackets. They might begin on cigar boxes, which work very easy. Take any desired pattern and mark it on the wood; make little holes so that the saw can go through, then have a vise fastened on a bench or table, put the board you design to saw into it, then you can get a key-hole saw, or if you can get a frame to hold the little saws with, begin to saw, following the lines. By the time you have sawed out two or three it will become quite easy, so that you can begin on black walnut and make them any style or size you wish. In putting them together use small screws, which hold much better than to glue them. Of course you would know that rubbing them with sandpaper and oiling them is indispensable in order to have them look well. Then there are sofas, and chairs, and bedsteads for children. Look at a large sofa, and draw a pattern to suit you; mark it on your board and saw it; saw out where it is to be upholstered in the back; then for the ends take a square piece of board the size you want; then take another strip and glue on the side close to the edge for the rolling part; whittle it round, then with a screw fasten these ends to the back. Then saw out your front piece with the legs and all on. Make your pattern so that the ends will fit round the rolling part; then glue it on. When you glue it put it in a vise, squeeze it up tight, and let it remain till morning. To upholster it you can get pretty shades of velveteen. Fix the back first. Fasten it at the top first with glue, hold it rather full, then fasten it at the bottom; then put in curled hair or cotton enough to make it set out full, then take a piece of loose board and cut it the shape of the hole and put it in, and glue a piece of black alpaca, or something of the kind, over it. Then fasten some pieces at the top of the ends, put a little cotton under it and fasten at the bottom; then take a piece of board the size of the bottom and make your cushion on it and put it in, and it is done.

It may look formidable to some, but a little mother gumption and a good deal of perseverance will accomplish it. I have made a great many for children, and never saw anything on the subject, nor saw anyone do anything, but I set my wits to work. Many a mother and sister might make young hearts glad in making these things. Then there is the big chair upholstered in the back and sides to match the sofa. Then other chairs with a fanciful back and a cushioned bottom; also little bedsteads can be made by looking at larger ones and drawing a pattern. Begin on plain ones, and you will soon get in the elaborate little cradles and picture-frames. In short, there will be an innumerable number of things that you can make when you once get into it, and then if you like the business well enough you can get the Fleetwood Scroll Saw, which works like a sewing-machine, and then you can do very nice work and very quickly.

Oneida, N. Y.

W. B. H. FOLTS.

## Household Elegancies.

## LADIES' NEEDLE-BOOK.

No. 1 shows the Needle-book closed; No. 2, open. The leaves for holding the pins and needles are of fine cashmere, edged with buttonhole stitch. The outer part has a foundation of cardboard, covered and lined with silk; over this are little frills of silk, finely pinked, pleated and ornamented with a bead in each pleat. A bow of ribbon finishes the needle-book.

## No. 3.—BOX FOR POUDRE DE RIZ.

Materials: A round box of cardboard, measur-

No. 1.—NEEDLE-BOOK, CLOSED.

ing  $4\frac{1}{2}$  inches across, and  $2\frac{3}{4}$  inches high; blue glacé silk; blue silk ribbon, three-fifths of an inch wide; some cardboard.

This box is made of cardboard of the above mentioned size; it is covered with blue silk, pleated

No. 2.—NEEDLE-BOOK, OPEN.

as seen in illustration. The silk covering of the top of the box is drawn together in the centre; the sewing on at the lower edge of the cover is hidden under a ruche of blue silk ribbon three-quarters of an inch wide. In the middle of the cover fasten a knot made of cardboard three-quarters of an inch wide and covered with blue silk. The ends of the strip are pointed off

No. 3.—BOX FOR POUDRE DE RIZ.

and fastened on the cover by means of small blue silk knots. The edge of the bag is covered with a narrow cross-strip of silk; the lower edge is covered with a ruche.

## No. 4.—WORK-BASKET.

This Ladies' Work-basket is made of wood frame stained black, rests on curved feet, and has a worked medallion in the middle of each long side. This can

No. 4.—WORK-BASKET.

be embroidered either with initial letters on white cloth, in gold braid, or a small embroidery can be devised in colored silk. The inside is lined on both sides with

No. 5.—STRAW PICTURE FRAME.

pieces of cardboard of exact fit, covered first with green sarcenet, then slipped in and seamed to the side edges, also sewn lightly to the cardboard bottom, which had previously been laid in, trimmed on the outside with black, and the inner side with green silk. For the quilting in the inside and the bows on the handle, use green sarcenet ribbon one inch wide. Tassels of green purse silk, each one and a half inches long, complete the basket.

## No. 5.—STRAW PICTURE FRAME.

Pick out from a bundle of straws those without flaws. It takes five for each part of the frame. Arrange them thus: put one long straw in the centre, a shorter one on each side, and a shorter again on each side of these; sew them together at the back with some strong cotton. When you have the top, bottom, and sides ready, fasten them together at the corners in the form of an Oxford frame, placing the top and bottom ones in front of the sides. Then make four small pieces of three straws in each, the centre one the longest, and fasten them crosswise to each corner by means of a

piece of ribbon tied round; the ribbon is to hide where the parts of the frame are joined together. The picture is fastened in with narrow ribbon, crossed over at the back, and brought through between the straws on each side of the frame, then passed over the centre straw through to the back, and firmly sewn; this ribbon has a very pretty effect. The frame is supported by three straws, which should be sewn to the back of the top; the straws should be bound at the bottom with ribbon to keep them firmly together. If the frame is to be hung up, a loop of ribbon should be sewn upon the top.

## No. 6.—SACHET EMBROIDERY.

This pretty sachet is suitable for evening or dinner dress. It may be made of silk of two shades or colors. The form will be easily copied

No. 6.—SACHET EMBROIDERY.

from design. The top has a double slide at the ends, in which strong elastic is run. Bows of ribbon ornament the ends, and the sachet is suspended by ribbon, with pearl buckles for ornaments. The outer part of the medallion is in buttonhole stitch. The whole of the embroidery is in purse silk.

## No. 7.—BASKET FOR WOOD, ORNAMENTED WITH DRAPES.

No. 7 shows the finished basket, of strong wicker-work, painted black or brown, according to taste. It is then ornamented with drapes in cloth, applique, and braid; chain-stitch or machine-work will answer perfectly well for the purpose. Cloth or reps is suitable for the foundation. The narrow stripes and centre pattern of broad stripe are an applique of cloth or

No. 7.—BASKET FOR WOOD.

velvet. The colors of the ground and ornamentation should be chosen to suit the drapery of the room. When the drapes are finished, each point is ornamented with a woollen tassel.

## Fireside Readings.

### THE TWO NEWSBOYS.

A gentleman, writing from one of our large cities, says:

While passing along a street one evening my attention was arrested by a little newsboy, who said to his companion:

"Say, Charlie, how much money have you made to-day?"

"Twenty-five cents."

"Jolly, is that so? Don't tell your mother how much you made; keep part of it yourself."

The little fellow straightened up, and with great earnestness exclaimed:

"Do you think I would tell my mother a lie?"

Turning to the little fellow with an approving smile, I said, "That is right, my boy, always tell the truth."

Noble little fellow! If he abides by that principle of truth, he may rise from his humble position to one of usefulness and honor.

Honest boys make honest men, and honest men make happy homes, good citizens, fair dealers, true Christians, and just legislators; while dishonesty fills the land with suffering and wickedness, and peoples jails and prisons.

**Miss Slippery.**—A certain lady, not unknown in Boston, was lately trying to navigate the icy sidewalks of Chicago. Suddenly she "missed stays," in nautical parlance, and came down to a level very suddenly, hat flying in one direction, and muff in another. While she sat there, waiting for some one to come along and help her to do justice to the occasion, a ragged "gutter-suipe" picked up and presented her traps with the laconic remark, "Here, Miss Slippery, here's yer duds!"

**Happy Every Day.**—Sidney Smith cut the following from a newspaper and preserved it for himself: "When you rise in the morning, form the resolution to make the day a happy one to a fellow-creature. It is easily done; a left-off garment to the man who needs it; a kind word to the sorrowful; an encouraging expression to the striving—trifles in themselves as light as air—will do at least for the twenty-four hours. And if you are young, depend upon it, it will tell when you are old; and if you are old, rest assured it will send you gently and happily down the stream of time to eternity. By the most simple arithmetical sum, look at the result. If you send one person only happily through the day, that is three

hundred and sixty-five during the course of a year. And suppose you live forty years only after you commence that course of medicine, you have made 14,600 persons happy—at all events for a time."

**The Little Hamburg Girl.**—Mrs. Mary Clemmer, nee Ames, says that Carl Schurz has always been his wife's hero. "When a little girl in Hamburg she worshipped the pictured image of the man whom she had never seen. After leaving school she visited

didn't admire me at all—not then.' He must have managed to do so soon after, however, for they were married within a year, before he was twenty-one or she seventeen. They came to this country to begin their united fortune. 'You will hand me the bricks,' he said, 'and I will build.' If he has often 'built better than he knew,' has it not been because of the sympathetic intelligence, the loving heart, the gentle, unfaltering hands which have never for an instant failed him in his life-service?"

**Fate of Modest Men.**—The world generally takes men at their own apparent estimate of themselves. Hence, modest men never attain the same consideration which bustling,

forward men do. It has not time or patience to inquire rigidly, and it is partly imposed upon and carried away by the man who vigorously claims its regards. The world, also, never has two leading ideas about any man. There is always a remarkable unity in its conceptions of the characters of individuals. If an historical person has been cruel in a single degree, he is set down as cruel and nothing else, although he may have had many good qualities, all not equally conspicuous. If a literary man is industrious in a remarkable degree, the world speaks of him as only industrious, though he may be also very ingenious.—*Chambers' Journal.*

**No Songs Heard There.**—A recent traveller says: "What always impresses more than anything else in Egypt and Palestine has been the entire absence of cheerful and exhilarating music, especially from the children. You never hear them singing in the huts. I never heard a song that deserves the name in the streets or houses of Jerusalem. One heavy burden of voiceless sadness rests upon the forsaken land. The daughters of music have been brought low. The mirth of the tablet ceaseth, the noise of them that rejoice endeth; the joy of the harp ceaseth!"

TEACHING PUSSY.

London, and a friend said, 'You must come to my house this evening and see the wonderful Carl Schurz.' The maiden came, and in a remote corner worshipped from afar the young lion of the occasion. The friend said to Carl, 'There is a little Hamburg girl here who adores you as a far-off hero. You must know her.' 'He was introduced,' said the sweet voice, 'and what do you think he said of me? When my friend asked, 'What do you think of her?' why all he thought was, 'She seems a good, healthy girl.' He

which are embodied in the literature of the world are ideals of self-denial and self-sacrifice. It is so in history, in fiction, in poetry, and in art. Let the novelist or the poet depict self-culture, and we are not quickened by the creation; but let them introduce us to the character apt to self-surrender, and our gratitude is awakened, and we are filled with pure desires. It is no wonder, therefore, that in the artful romance the words of self-sacrifice far transcend the words of self-culture.

## Housekeeping.

## HOUSEKEEPING—SOME OF ITS TRIALS AND PLEASURES.

The September number of the *Agriculturist* contains what a correspondent claims to be the last annual report of the Board of Health of Massachusetts, and the result of their inquiries among farmers, in regard to their diet, is that good bread is very scarce. I wonder if poor bread is ever found on any other tables but farmers' wives'. My children say to me, "Mother, we don't find such good bread as yours anywhere," and I am a farmer's wife. My children are away from home a good share of the time, and eat at very many different tables in the course of a year, so I think they are capable of judging. Still, I must confess that I feel more dissatisfaction with my bread than any other part of my cooking, because I cannot make my wheat bread quite so nice as that I can buy of a baker. I cannot get quite that spongy lightness; nor have I seen any woman that could. When seated at the table of my city friends I do not find any better bread than I can make, unless they buy of the baker. But I mean to keep trying, and, when I arrive at perfection, shall invite that poor, disappointed correspondent of the *Agriculturist* to spend a week with me in the country. How he does slander us farmers' wives! I, for one, am indignant. It seems to me that he went into the country to get something nice to eat, which not happening to find in that particular place, he went back to the city disgusted. Let him spend a few days with us on the top of our glorious hills, and he will find the prospect so grand and the air so invigorating that he will almost forget to eat at all. Again, he says the overwork of farmers' wives is, therefore, in a great part responsible for the inferiority of farmers' diet; and if that is true, we are not so much to blame. I think many housekeepers fail for want of system and order in their households. I have been surprised to see how loosely everything goes on in some families; the breakfast dishes stand unwashed till noon; the beds unmade, and chamber-work not done till afternoon. Every child should be taught, as soon as it is dressed in the morning, before leaving its room, to open the windows, spread back the clothes from the bed, so that while eating its breakfast the room and bed is being nicely aired. I have always insisted on this in my family. It is absolutely necessary that the air and beds in a sleeping-room be kept pure and sweet. Immediately after breakfast, I insist that the slops should be emptied, beds made, rooms swept and dusted. It will not take any more time in the morning than afternoon.

Secondly, the report says there is too little variety in food on farmers' tables. Now a farmer can have a great variety of fruits and vegetables on his table almost the whole year; but in fresh meats he cannot, in hot weather, always have what he likes to have if he is situated like us, and many others, six miles from market. Now, what shall I do if, on a hot July morning, I get a line from some of my city friends saying, I am coming to see you to-day; meet me at the depot at nine this morning. Depot three miles north of us; market six miles south, in exactly opposite direction; one horse to use, which father must harness into the two-seated carriage, for there will be a host of them; and the girls must drive to the cars, while mother and the remaining help at home must make the extra preparation for the dinner. The horse has gone north, remember; no horse to go to market; no time to kill and dress chicken; plenty of salt meats, such

as ham, dried beef, dry salt fish and fish in brine. The correspondent of the *Agriculturist*, when he went into the country, wanted a juicy roast or a tender steak, and blamed the family he boarded with because he did not get it; but don't you see it is impossible in this case, as it might have been in his. Now, I would like to set my friends down to the best in the market, but it cannot be done to-day, so we will have some broiled ham, nicely fried eggs, boiled potatoes, with one of the many steamed puddings that all housekeepers have plenty of receipts for making; for dessert, a dish of strawberries with cream and sugar. That you see is as well as I can do by them to-day. I can give them a hearty welcome. What if I am in my calico morning dress; it is whole and clean! I will wear it like a queen—better than a silk for my business.

I have brought up my family to think that there are things more desirable in this life than rich food. My eldest daughter said to me, "Mother, if father has any money to spend for me, let him give me a good education," and he gave her her choice. After graduating at the academy, she has entered the best female seminary in New England. When she is home, if I am sick a day or a week, she can take my place in the family, and I can rest, knowing that everything will be in exact order. She can cook and wash dishes if necessary, which all daughters should be able to do. Said a friend to me, not long ago, "Mrs. B., you are teaching your two daughters to work; it is not fashionable." Most young ladies that play on the piano think they cannot put their hands in dish-water, because it will make them black, and they will not look well on the keys. I wonder if their mothers ever told them that dish-water will not make their hands black if they are careful to rinse all the soapy water off when they get through. My daughters wash dishes, but their hands are soft and white; look as well on the piano keys as the young ladies who visit them. I like to see girls take care of their hands. Mothers should teach their daughters to cultivate the beautiful in everything. God might have placed us in a world without any beauty; instead he has placed us in a world full of beautiful things. We should strive to make ourselves and our homes beautiful; and we cannot do it without good housekeeping. Mothers, educate your daughters to be good cooks and good housekeepers, or you neglect an important duty.

Stafford, Ct.

B. A. E.

**Sponge Cake.**—Six eggs, four cups flour, three cups sugar, one cup water, salt, one teaspoonful soda, two teaspoonfuls cream of tartar; flavor with lemon. Beat the eggs and sugar together until very light, then add the soda dissolved in the water, and the cream of tartar mixed thoroughly with the flour.

**Frosting.**—When eggs are expensive and hard to find, as often during winter season, the following recipe for excellent frosting will be found valuable: Dissolve in one-third of a cup of boiling water one teaspoonful of gelatine; make the mixture stiff with sugar, flavor and apply to the cake; the cake being cold, but little beating is necessary.

**An excellent food for birds,** much better than what is generally sold under the name of German Paste, may be made as follows: Take four fresh eggs and boil very hard, a quarter of a pound of white peas meal, and about a tablespoonful of good salad oil; if the least rancid, it will not do. The eggs must be grated down very fine, and mixed with the meal and olive oil. The whole is then passed through a thin colander, to form it into grains, like small shot, then placed in a frying-pan over a gentle fire, and gradually

stirred with a broad knife, till it be partially wasted and dried, the test of which will be its fine yellowish brown color.

**New York Buns.**—Five cups flour, two cups sugar, one cup butter, one egg, four tablespoons of milk, small teaspoon of soda, any spice that is agreeable; nutmeg is as good as any; roll like cookies and bake quick. Will keep several months and grow better if kept in a close jar.

**To Clean a Looking-Glass.**—First wash the glass all over with lukewarm soapsuds and a sponge; when dry, rub it bright with a buckskin or chamois, and a little prepared chalk finely powdered.

**To Remove Rust from Knives.**—Cover the knives with sweet oil well rubbed on, and after two days take a lump of fresh lime and rub till the rust disappears.

**How to Make Meat Tender.**—Cut the steaks the day before into slices about two inches thick; rub them over with a small quantity of carbonate of soda; wash off next morning clean; cut into suitable thickness and cook as you choose. The same process will answer for fowl, legs of mutton, &c.

**The question** is often asked by careful mothers, "What will remove grass stains from children's clothing?" An exchange says that simply wetting and rubbing the stained cloth in cold water will remove all traces of the grass. Fruit stains will disappear on the application of boiling hot water. No salt should be used in either case.

**Keeping the Hands Smooth.**—A writer in the *American Grocer* says that glycerine is not used in the right way. She asserts that to preserve the smoothness and softness of the hands, keep a small bottle of glycerine near the place where you habitually wash them, and whenever you have finished washing, and before wiping them, put one or two drops of the glycerine on the wet palm and rub the hands thoroughly with it as if it were soap; then dry lightly with the towel. Household work and bad weather will not prevent your skin from being smooth and soft if this plan of using glycerine is followed.

**Salt Water for the Eyes.**—Many persons are suffering pain from weakness of the eyes. This, sometimes, proceeds from local inflammation, and sometimes from other causes. Several persons who have been thus afflicted inform us that they have derived almost immediate, and, in some cases, permanent relief from the application of salt water as a bath; and where the pain has been aggravated, form a compress saturated with salt water laid on the eyes, and renewed at frequent intervals. Opening the eyes and submerging them in clean salt water has been found beneficial to those whose eyesight begins to fail.

**How to Clean Silver.**—According to Dr. Elsner, water in which potatoes have been boiled exercises a remarkable cleaning influence, especially on spoons that have become blackened by eggs. Even delicately chased and engraved articles can, it is said, be made bright by this method.

**Borax Used in Washing.**—Quarter of a pound of refined borax to five gallons water; powder the borax; dissolve it in boiling water in the above proportion, and use. It is an excellent bleacher, and may be used for the most delicate laces even; it also saves soap. A little pipe-clay dissolved in hot water cleans very dirty linen with half the soap required without it.

**Soapstone** hearths are first washed in pure water and then rubbed with powdered marble or soapstone, put on with a piece of the same stone.

# ♦♦ Now I lay me Down to Sleep. ♦♦

Words by Miss HATTIE A. FOX.

Music by ARTHUR D. WALBRIDGE.

*Moderato.*

1. "Now I lay me down to sleep," And the blue eyes, dark and deep, Let their snow - y cur - tains down,  
2. Tan - gled ring - lets, all smooth now, Loop'd back from the wax - en brow; Lit - tle hands so dim - pl'd, white,

Edged with frin - ges gold - en brown. "All day long the an - gels fair, I've been watching o - ver there; Heav'n's not far, 'tis  
Clasp'd to - geth - er cold to - night. Where the mos - sy, dai - sies sod, Brought sweet mes - sa - ges from God, Two pale lips with

just in sight, Now they're call - ing me, good night; Kiss me, moth - er, do not weep, Now I lay me down to sleep."  
kiss - es press'd, There we left her to her rest, And the dew of ev' - ning weep, Now I lay me down to sleep.

## CHORUS.

"O - ver there, just o - ver there, I shall say my morning pray'r; Kiss me, mother, do not weep, Now I lay me down to sleep."  
O - ver there, just o - ver there, List the angel's morning pray'r; Lisps low thro' fan - cy creep, Now I lay me down to sleep.

# THE LADIES' FLORAL CABINET

BY HENRY T. WILLIAMS.

VOL. IV.

NEW YORK, JUNE, 1875.

No. 42.

PRICE 12 CENTS.

## SUCCESSFUL EXPERIMENTS.

I wonder if my flower-loving sisters watch for the coming of the FLORAL CABINET with as much interest as my unworthy self. It is the first one of my papers that I peruse, and it gets read and re-read before the others get any attention whatever. The questions and answers are my especial delight, and I have wondered if my small experience would be of help to any one.

I commenced keeping house-plants, entirely ignorant of their wants, because I loved them, and here let me say I believe a person can no more raise them successfully without genuine love than they can raise a loving family of children with the rod alone. I have tried to inform myself all I could by reading, (and I find there are hardly two that agree); but I have learned the most by experimenting with them. It may seem like boasting when I say I hardly ever lose a plant or have a sickly one. This summer, however, I had a General Grant Geranium that did

not do well. It became affected with a scab on the under side of the leaves and would crack in two. I picked off the diseased leaves, leaving it nearly bare, as no new ones grew. I took some water just warm, put in a few drops of ammonia, then took the plant from the jar, shook all the dirt from the roots, put it in the water until I washed the jar and got new dirt, then put it back, and since that it has grown and blossomed as well as any I have. I have the best success in changing the dirt in the fall, and always get

the softest I can find, then it can be enriched as thought best. The best fertilizer I have used is a gallon of well-rotted manure and a quart of pounded charcoal put into two gallons of water. This can be kept in some convenient place, and once a week put in a pint of the liquid in a gallon of water and give your plants a good watering with it. I have found that if plants are kept in the dark two or three days

must not water from the top. I always water mine that way, and always use water a little warm to the hand, as I think they are sensitive to sudden changes of cold. Ladies frequently say to me, "Oh, I can't keep house plants, they are so much trouble." Now I do not think them trouble, nor do I mind the work. I take them a few at a time and hardly think it work; and when I am lonesome or downhearted or discouraged I always

find a panacea in my plants, and I think every woman would be a truer wife and a better mother if she cultivated a few plants.

MRS. T. E. H. MORRIS, Ill.

## Onion Lily.—

Having seen several inquiries in the FLORAL CABINET respecting the name of plant by some called Onion Lily, I write a line to inform you what I know about it.

Over twenty years ago a neighbor gave me a plant which she called "Squills." It was exactly like the Onion Lily described by Isabel Bethel, in

February number, 1874. Star of Bethlehem, the name Isabel Bethel gives for this plant, I don't think at all applicable; and, as for that matter, I don't know as the name of Squills is any more so; but I have thought that the syrup of squills might be prepared from the bulb, which resembles an onion from which a syrup is made for the same medicinal purposes. Hence the names. Yours truly,

S. J.

Easton Mass.

SCENE IN A GERMAN CHERRY ORCHARD.

after transplanting they will not wilt and drop their leaves. I always keep an old table-fork handy, and once or twice a week work the dirt all up loose. I believe a great many lose their plants by not watering them properly, and I think that too much is worse than not enough. I let mine get pretty dry, as I think a good drink will do them good, and let it be any time of day they need it, taking care that the dishes have good drainage so water shall not stand in them, as they cannot stand wet feet. Some say you

## Floral Contributions.

## RECONSTRUCTION IN IOWA.

Rather an ambitious sounding title; but then my garden, shut in on every side by forest trees, is a little world to me, and its affairs of great importance, so I'll let it stand.

Expecting to remove to a distant part of the State, my leisure, last autumn, was spent in laying waste my loved flower-garden, and scattering the treasures I had been seven years in gathering. At the last moment everything was reversed, but my flower-beds were, mainly, a series of excavations, and a few common shrubs and perennials, and a few choice ones preserved in a neighbor's garden, were all that remained.

However, kind friends promised contributions, and I determined to thoroughly renovate and remake, with the experience of past years to guide me. First of all, I had all the beds spaded early in the spring, and raked them well every few days, to destroy weed-seeds and mellow the soil. Each had received a good dressing of ashes at first, and, just before planting, of leaf-mould from the woods.

To save space and labor in tending paths, I made the beds quite large. The road is at the east of the house, and the ground is level, but so poor and clayey that I have only had a narrow border on that side. This spring, however, this border proved the most mellow of all, owing partly, I think, to the action of plant-roots, and partly to a yearly dressing of ashes.

I used this bed for a seed-bed, and such Pansies as I had, and nice plants of many kinds—some which had failed in other years and localities—such as Cardinal Flower, Fox Glove, Lythrum, and Perennial Pea. The drying winds of Iowa make sad havoc with tender seedlings, but, shaded by the house and a beautiful young oak, from all but the morning sun, this had kept mellow and moist.

South of the house is a sunny slope of good ground, just the place for flowers. A path goes southward, and on each side of it, lying east and west, are two beds, about 4x25 feet. The two nearest the house are appropriated to the showiest and longest-blooming perennials, excepting a group of shrubs at the ends farthest from the house, and a square next the path, filled some years with Verbenas; this, with Gladioli, and other summer bulbs.

The two other large beds are for annuals. I have thought of dividing them into squares or compartments, with cross-rows of some low-growing flower, filling these squares either with one flower alone, as Phloxes, Verbenas, &c., or with combinations of different kinds. One of mine had a splendid Ricinus, with a carpet of Sweet Alyssum at its feet. I think some bright flower might have looked better, however. My cross-rows were of Mignonette and Sweet Basil, but the former occupied too much space and the latter dried up too soon. I think Sweet Alyssum, or Gilia, would look better. The central square of one bed was occupied by a pyramid of Ipomeas, the other by a similar pyramid of Cypress Vine.

For several years I have planted my dwarf peas next to the flower-beds, making long, narrow beds, just wide enough for two rows, and, when these are in bloom, set between them my plants of Asters and Balsams. When the peas are ripe I pull carefully, dress up the beds nicely, give them a coating of leaf-mould or manure, and set Portulaca on both edges, to brighten up the space until the Asters bloom. The

roots, too, bind the edges of the beds, and keep them from crumbling or washing.

If ever a flower deserved the name of "useful" I think it is the Portulaca. Gay, yet delicate, such a free and persistent bloomer, and so tenacious of life. I like best, however, our pretty western name, "Rose Moss"—that is, when people don't call it "Moss Rose," as many do. I had a few plants last year of double, scarlet, and yellow; I used to shake the pollen from them over my single ones, and this year I think nearly a third were double, and of many beautiful shades, some finely striped.

The summer has been so dry, that all newly-set plants needed mulching. I used, chiefly, half-decayed leaves from the woods. My bulb-beds received, first, a coat of manure, and then of leaves, and, thus protected from baking in the scorching sun, I drenched them twice a week with suds. I never saw such Gladioli and Tigridias, and my little Atamasee Lilies bloomed three or four times each.

All unoccupied bits of ground I sieze upon as "waifs and strays." In this way I have become the possessor of a strip of ground, west of the beds already mentioned, which will make two new beds, about 5x10, and a narrow strip which I shall use for a rose border. It will run north and south, and I think the sun will shine well on the roses, without drying the ground. I shall give it a liberal dressing of ashes and manure, and think my roses will do better than if scattered among other things. I shall make here a new Lily-bed, enriching it with leaves alone. I raked up great heaps last spring, and they are now thoroughly decayed. My other bulb-beds will receive both leaf-mould and manure. All these beds will be finished in October.

There are a few trees in the yard—little saplings, whose lives I begged when the house was built—and a few shrubs. As these stand now, they will hide the Tulip-beds somewhat from the house, but, approaching from the south, every bed, and shrub, and tree, is visible at one view, and "everything is beautiful in its season."

This, then, has been my summer's pastime. To be sure, I have had my failures; for instance, the Asters I supposed to be extra fine, and promoted to a place of honor, proved to be "poor things." To those who love flowers only when "bedded out" by rule, I suppose the whole would seem a failure; but I cannot think so, in the light of the enjoyment it has afforded, nor yet when I think of the flowers, and seeds, and plants, that have gone out thence in this and other years, to gladden other hearts and eyes.

MRS. F. E. BRIGGS.

## WHAT I LEARNED ABOUT THE CARE OF PLANTS.

My one harmless mania for several years has been the cultivation of plants; and I have encountered about as many obstacles in the carrying out of my wishes and theories concerning them as did Columbus in his voyage to the new world. The first obstacle is the inability to procure, or find room for, or time to cultivate, every attractive plant that the numerous catalogues bewitch me about. Next, I have some feathered pets—some black Spanish hens and chickens, that have been so long in the family that they, too, have a "taste for flowers"—and the more choice the plant, the more "taste" for it they manifest—until I have been compelled to have a high shelf put up under the porch to protect the plants both from chickies and from noontide sun.

But, alas for the fallacy of human hopes! The pillar to the porch is such a nice ladder for pretty Kitty to climb to the chamber window by; and no amount of argument has ever made her believe that those flower-pots were not put there expressly to accommodate her dainty feet in ascending and descending; and many a fine plant and pot has been sacrificed to this hallucination of hers.

My next, and perhaps greatest trouble, has been the soil. I have read all the advice I could find by all accessible authorities, and have faithfully endeavored to follow it. But, always, something was lacking, until, in sheer despair, I went to a practical florist, and obtained from him such simple and definite instructions, added to the why and wherefore thereof, that, from gratitude, I determined to impart the same to any readers of the CABINET who, like myself, might need them.

I took to him a basketful of choice plants, which had grown very little all summer, owing, evidently, to uncongenial soil. He removed them gently, one by one, from the pots, telling me that the pots ought to be washed thoroughly when plants were repotted. Then he placed broken bits of pots (stone, of course, is equally good, but not very plenty here) in the bottom for drainage, to the depth of say one-sixth of the pot. Over that some matted roots from decayed turf, a half-inch deep, to keep the roots from drawing up the broken bits among themselves, as they always do. Finally, he put in the earth and plant.

I then asked him if he would please show me where he obtained, and how he prepared, the soil. He went with me across the street and showed me, beside the road, some sod turned over by a plough a year or more ago. Taking some up, he crumbled it in his hand to show me that it was mellow. He said that, for winter, he only added a little thoroughly rotted old manure, and, I thought, about half as much sand as turf. He mixed in much of the roots to the turf, and it was quite coarse. I had read that the earth should be sifted, so I made mine nearly as fine as flour. He told me that the roots could not penetrate easily through such soil.

I had read very often that leaf-mould was excellent for nearly all plants, and had used a good deal of it this summer. He said that it needed to be exposed to the air for some months, and frequently turned, like manure, to be suitable for use. I had gathered chips of dry cow dung by the side of the road (to the intense disgust of the children) and shall use it for manure water once or twice a week during the winter—about the amount of my two hands full to a watering-pot of water, he said. Before it is too late, I shall also prepare a quantity of earth for occasional winter use.

I was troubled very much last winter by the small green plant-louse on the plants in my Wardian case. I had frequently read that fumigating the plants with tobacco smoke would destroy them. It wouldn't kill all of the lice, but it did the plants, some of them. I am very successful in getting rid of them by turning pot, plant and earth over on the side in a tub or boiler of tepid, or cold suds, after washing.

I would like to recommend as a hanging-basket, plant, the *Artemisia Stellariana*—a hardy, quick-growing, spreading, white-leaved plant, which I seldom have seen mentioned.

With me, *Smilax* is easily started from seed, and as easily grown as a German Ivy. I have had no plants so universally admired as the variegated Ivy-leaved *Geranium L'elegante*, and the flat-stemmed *Coccoloba*, unless it is the pink double *Geranium*, *Marie Lemoine*, or the *Tuberosa*.

## Gossip with Correspondents.

**Black-Eyed Susan.**—I hasten to relieve the mind of F. C. M. by telling you that Black-Eyed Susan is the common, old-fashioned name for *Thunbergia*. Why, I never understood.

Ridiculous as these names seem, are they not better than such jaw-breakers as *Mesembryanthemum*, *Ec-cremocarpus scaber*, etc.?

Can you tell me what causes the leaves of my Wax plant (*Hoya carnosa*, I think,) to wither? Does it require a rich or light soil? Mine has a mixture of leaf mould and sand.

If any one wants a free bloomer for the window, let them try the *Browallia*. I have four that have been in bloom all winter. One of them is two and a half feet high; the others the usual size, one and a half feet. Its cheerful blue flower is sure to give pleasure.

L. H. H.

**Begonia Rex.**—I would like to ask a question or two: How to propagate the *Begonia Rex*? I have a *Passiflora*; it has grown about two feet this season; no signs of blossoming; what shall I do with it this winter?

L. COBB.

**Answer.**—*Begonia Rex* is propagated from seed and also from leaves. The species of *Passiflora* is not mentioned. Some are hothouse, some greenhouse, and one or two hardy, and many of them grow to a large size before flowering.

**Asphodela, &c.**—1. Is there such a flower, tuberous-rooted, as the *Asphodela* grown in this country? 2. Why is it not put in the catalogues? 3. If suited to out-door culture, where can they be obtained? 4. What do you suppose is the real name of the bulb called *Hyacinth Lily*? There is a blue one grown commonly in Mississippi called "*Prairie Lily*" by the people. 5. Is there a blue *Jonquil*, or a yellow one with a deep red edge?

JENNIE E. SHEPHERD.

**Answer.**—1. The *Asphodela* are natives of Europe, but probably there are some in cultivation in this country. 2. Probably because it is not asked for. 3. Dealers should advertise. 4. No idea, but probably some weed. 5. No, neither. Why do you not select from the list of some respectable dealer instead of giving encouragement to a lot of scamps?

**"Susan wanted. Who is she?"**—From my childhood I have heard the *Thunbergia* called Black-eyed Susan, and if F. C. M. is fond of flowers, he or she will find it a delicate vine and a bright little blossom.

If the readers of the *CABINET* would save themselves much trouble in making coral frames, brackets, etc., they can do so by using Irish Moss as a substitute for wire, hoop-skirts, and candle-wick. Soak it a half-hour in cold water, until you can pick the little branches apart with a hair-pin, dry it, and dip in the solution, and you will find it a better imitation of coral than any other. I speak from experience.

ANNIE.

**A Little Greenhouse.**—I saw in one of your papers, some time ago, an inquiry about how to build a greenhouse. I have one that is much admired by every one that sees it. It is built at the end of my house, around the chimney, and looks something like a large bay window. It is twenty feet wide (the width of my room), and ten feet from the chimney out, has seven corners and seven windows in it; the size of the glass is eighteen by twenty inches, and ten panes in a window; it is walled up three feet with brick; it is twelve feet high, ceiled over head and covered with

tin. It is built as near air-tight as could be done. The only heat it has in the winter is from the chimney of my sitting-room, where there is fire all the winter. There is a window on each side of the fireplace; one is in a door that opens into it. Sometimes when it is very cold I have a lamp in it at night, and then it looks perfectly beautiful from the outside. I have four shelves that extend around the chimney for my flowers, and one that extends around just at the top of the brick wall where the window-sash rests on; and then I have seven brackets, one between each window, to set flower-pots on. I tell you I would not give it for any two rooms in my house; it is so much comfort and pleasure to me. I can sit by the fire in the winter and look out at my flowers blooming and growing all the winter. I have three *Orange trees* in it that bear; they had about fifty on them this season.

ELLEN.

**German Ivy.**—We had, last summer, growing in our porch a basket of German Ivy. In October we cut it down, in order to carry it into the house, leaving the vine still hanging. In a short time after cutting, at each joint of the vine there appeared a bud, and at Christmas it was in full bloom, although it had no root and was exposed to some very cold weather. We had a *Rose Geranium*, a cutting in February, which was transplanted to the garden in May, and the first of September it measured thirteen feet in circumference. Can any of you equal that?

MISS BESSIE W. MORRIS.

**Ricinus Seed.**—I have a quantity of *Ricinus* seed from last summer's plants. I do not know the variety. They grew five or six feet high, and had blood-red stalks. I should like to exchange with any subscriber of the *CABINET*.

MRS. J. P. LLOYD.

Orange, N. J.

**Answer to "Fern Leaf."**—I see you are wanting some information concerning the *Rat-tail Cactus*. I have one that has four sprouts that measure about four feet, and two or three short ones. I kept mine seven years, and was almost discouraged with it, and had a notion to leave it out to freeze, but, having seen the *Cactus* in bloom, thought I would try another summer, and then I gave it all the sun it could get in a south window, and plenty of water, and pretty soon small pink spots, about the size of a pin-head, began to show themselves to the number of fifteen, and how I watched them until they came to perfection—but only half came to perfection, through some mismanagement of my own—but it has bloomed every year since, and even now has five buds on it; keep all of your *Cactus*. The *Rat-tail* has a bloom very much like the flat-leaved pink flowering *Cactus*, only it is a little smaller; it is worth keeping; give it plenty of sun and water; the soil is not so particular.

MRS. H.

**A Beautiful Basket of Flowers.**—Many times during the three years I have taken the *CABINET*, when I have been reading what some of your lady correspondents have written about their success in the cultivation of flowers, more particularly window gardening, I have thought I would write you about my flowers. I have come to the conclusion, however, that the best way was for my flowers to speak for themselves. Please accept the contents of this box as a specimen of my skill in window gardening; that they are lovely, you cannot but admit; also, that it requires management somewhat different from most plants grown in the house, to have *Pelargoniums* flower well; any one can grow them, but the difficulty is to have them flower. This is the fifth box full that has been cut from my plants already this spring; from the

quantities of buds left, will be enough to fill a dozen or more. Last spring I sent flowers to Rutland, Ludlow, Woodstock, Albany, New Haven, Windsor, and last but not least, to Daisy Eyebright, Bath, N. H. The winter has been very severe, but for all that I have had flowers all winter—*Heliotropes*, *Primroses*, *Begonias*, a *Eupatorium* that was one mass of flowers, and different varieties of *Oxalis*. My yellow *Oxalis* at one time had one hundred and twenty-three flowers—a perfect gem. Our ladies cultivate flowers because they love them, and it is not an uncommon thing for strangers, as they pass through our little village, to speak of the beautiful flowers they see.

MRS. C. S. REYWOOD.

Bridgewater, Vt.

**Answer.**—The *Pelargoniums* were perfect treasures—the prettiest we have ever seen. When we hear of the difficulties in growing them, we think you have done exceedingly well.

**Bleaching Ferns.**—Can any person tell me how to prepare the rough-looking brown paint seen on rustic chairs, etc., out of doors. I wish some one who has had experience would give me the exact process of bleaching ferns, leaves, etc., for phantom bouquets, which is used, chloride of soda or lime? Do they bleach while in the solution, and how long do they remain in it? Please give all the particulars. Dore Hamilton, in describing *Easter Cross*, speaks of "white frosting." Will she be so kind as to tell me what it is? Can some of the sisterhood inform me what will set the color when blue ink is used in spatter work.

BERTHA.

**An Easy Chair.**—Will Mary M. Morris be kind enough to tell me, through the columns of the *CABINET*, how to make an easy chair out of a barrel, as I wish to make one?

LUCINDA R. HOW.

**Hoya, or Wax Plant.**—Among all the talks with correspondents of the *CABINET* about their rare and beautiful plants and flowers, I have never seen anything about the *Hoya*, or *Wax Plant*. So I propose to tell them something of one that I have. I had a slip of five leaves ten years ago, and now it is the admiration of all who see it. It is in a pot of large size, reaching from a stand to the ceiling, then back again, and rooting many times, filling the entire window, then branching so much that we don't think of counting them. It is impossible to measure the branches, but there must be several hundred feet in length—long enough to reach round the room many times. The leaves are large, thick and glossy, spotted with white, and without the flower are very beautiful. My slip was a long time in rooting, and grew very slowly for several months, not budding till it was five years old. Then had seven clusters of blossoms. The next year about forty; and has kept increasing every year, till last year it had two hundred. It had one cluster in February, then they came along all the time, such lovely blossoms and so fragrant, filling the room with perfume. Sometimes there would be thirty of the pinkest, waxy bells in a cluster, and a few had forty-five. After being in blossom a week or two, there would be a drop of honey, real honey, sweet and clear, on each bell. When the flower would drop out and bud in the same place, three times in succession. The plant is hardy and needs very little care, and, owing to the thickness of the leaves, is not troubled by insects. If any lady, having rare plants, would like to exchange slips, I would do so very willingly.

MRS. JOSEPH SAUNDERS.

Orland, Me.

## Flower Gardening.

### HINTS ON AQUARIA.

BY AN AMATEUR.

An Aquarium gives a lovely and picturesque appearance to a collection of flowers, either in a bay window or conservatory. The constant evaporation of the water will also help keep the air moist and pleasant, for luxurious "Flora" to revel in.

They are rapidly coming into favor with all lovers of nature, and, I think, deservedly, for there is nothing more pleasant than to study the habits of the finny and amphibious tribes. The beautiful golden carp proudly gliding 'round their pretty home; the voracious little newts fighting as for dear life for some morsel of food; or the sun-fish darting at some reckless fly, or playing "hide and seek" among the plants and rocks, will entertain old and young for hours.

Popular error terms a tank of water, containing fish, etc., an aquarium. In Europe it is called aqua-vivarium, which is really the correct name, as aqua signifies water, and vivarium animal life. The ancient Romans called a tank of water, kept for household purposes, an aquarium.

The principle of an aquarium is this: Plants, when submerged in water and exposed to the action of light, emit the oxygen necessary for the maintenance of animal life, and the fish return to the plants the carbon also necessary for their welfare. Thus, you see, if you get plants enough to supply the fish with oxygen, and fish enough to supply the plants with carbon, the aquarium will be perfectly self-sustaining, the water will become as clear and sparkling as if filtered, and will never require changing, except to replace that which evaporates. If it is cloudy, and the fish continually come to the surface for air, there is either too much or too little vegetation or animal life. The only remedy is to change the water, and experiment until the forces are equalized. But it is not alone necessary that the two forces should be equal; you may have too much of both; in this case animal life is again jeopardised. You may ask, "How are we to know when we get enough of either, or both, in the tank?" This is altogether a matter of experience. No rule can be given, for some species of fish exhaust more oxygen, and supply more carbon, than others. So, too, with plants, some liberate more oxygen and take up more carbon than others. I average one fish to about two gallons of water, which I think is about right.

Gold-fish will live for months without food, but their stomachs become concave, which gives them a deformed appearance; therefore, always feed them with fish-wafer, cracker crumbs, or the white of an egg, boiled hard, but never allow any to remain, for it has

the same fragrance to them that anything decayed has to you.

If you arrange your rock work into an arch, under which the fish can pass, it will have a charming effect, and if crowned with an old mill, with a large wheel, it will be still prettier. It can easily be made out of mossy bark. Some persons place an aquarium against a window, for the purpose of better viewing it, but it is a mistake; to see it to advantage, you should look with the light, not against it. Besides, it will cause a small microscopic plant—the spores of which are in all water fit for aquaria—to grow on the glass next the window; and, if not soon removed with a sponge swab, will be difficult to get off. This small plant, which resembles green tissue paper spread on the glass, will bother us in spite of all we can do, sometimes, no matter where the aquarium is placed; if it does, procure a few water-snails, and they will keep it off.

Florists, also, usually keep a good selection. In my tank I have cyperus alternifolius, calla, the ornamental grasses, acorus var., and isolepis, with some common water-cress, and a swamp fern. A Japanese

DESIGN FOR A SUMMER HOUSE.

aquatic, called valisneria spiralis, is said to give off more oxygen than any other plant, but I have never succeeded in obtaining it. In a collection of fish, gold-fish should predominate, as they have a rich, sparkling appearance. Newts or lizards, turtles, etc., should be in the collection for variety; but the rock-work should project above the water, to give these amphibia a breathing and resting-place.

A. M. K.

### STIMULANTS FOR PLANTS.

Your correspondent, Mrs. M. J. S., in this month's CABINET, thinks me somewhat obscure on the subject of stimulants. The sentence she refers to, in the article on hanging baskets, has, or should have, quotation marks, as I quoted it from an article in the CABINET of March, 1873. "Liquid manure, about the color of weak coffee, is a good stimulant, but rather strong for Roses and Verbenas; very good for Ivies, Geraniums and Heliotropes." Stable manure is here specified; hen manure is considered much stronger, I believe; probably the lady referred to used it too strong. Again,

in the CABINET of August, 1872, it is stated that "Heliotropes are high liverers, and delight in frequent watering with liquid manure." A correspondent in a late number recommends for a Heliotrope, affected as Mrs. L.'s is, to pour boiling water on soot (proportions not stated), let it stand twenty-four hours, then apply to the plant once a week.

I have been thus particular to quote my authority for these statements, because I have had no experience myself with Heliotrope; indeed, my entire floral experience dates back only a few months; consequently, I feel a little hesitation about making any statement of the kind entirely on my own authority, particularly as most of your correspondents have had an experience of many years. All that I do know, I have learned from the CABINET and from "Window Gardening." Indeed, I have pored over the volume for 1873 so much that almost every page, notwithstanding the great care that I have taken of them, is in two pieces. I was very much disappointed in Henderson's book on Floriculture, almost all of it being taken up with accounts of his greenhouse operations, the amount of money he

made, etc.; but Window Gardening I consider perfect; also, "Daisy Eyebright's" book, which contains a good deal of information in small compass. I was delighted to find directions for treatment of Amaranthus Salicifolius in a late number of your paper, as I have several seedlings which I should like to bring to perfection. The only specimens that I have seen were in the Zoological

Garden, Philadelphia, last summer. Vick mentions in one of his catalogues, a specimen raised by one of his customers upon poor soil, which grew to the height of nine feet nine inches, and measured twelve feet in circumference, near the ground, raised in Baltimore. Perhaps the Amara - thus flourishes best

in poor soil. Can you, or the correspondent above referred to, tell me what kind of soil best suits it? Since writing the above, I find the following, also in Vick's catalogue: "A subscriber used her manure water on Geraniums and Heliotropes, and, instead of forcing them to flower, it caused the leaves to turn brown. The liquid must have been too strong. Care must be used in giving manure water to pot plants, because all is confined near the roots; while with plants in the garden, this is not the case. Rich food and rapid growth is not always favorable to the production of flowers." MRS. W. J. TAYLOR.

**Plants Wanted for Fernery.**—Will some of our "band" have the kindness to send Ground Nut and Golden Thread for a fernery; haven't seen any since my childhood; as they were then two of my loves, think they would greatly enhance amiability. Have nearly all kinds of Geraniums, Yellow and Pink Oxalis, Single White Oleander, which I will exchange for these.

MRS. JOHN MARSHALL.

Wellesley, Mass.

## The Flower Garden.

### OUR NEW DEPARTURE.

There were two of us, and both were fond of flowers. As we understood the matter, it was a good foundation upon which to attempt a garden of our own. Hitherto our experience had been limited to a window in winter, and a small balcony in summer; now we would have a real garden.

The cottage we had engaged for our summer home stood near the centre of an acre or rather more of land. Scattered around, without much regularity, but with some pretensions to beauty and variety, were various elms, firs, a few apple trees, three hawthorns, a tulip tree, and a catalpa. Only the elms and apples could boast of much size, with the exception of a large cherry, which made a delightful shade for us, and furnished a home for a large colony of birds.

What had formerly been used for the flower-garden, contained the remains of various perennials and shrubs. Beyond it was a large arbor covered with a grapevine—a native variety—making a charming walk, from its great length, and giving promise of a tempting seat in summer, as well as a good yield of fruit.

It was early spring when we took possession of our new home, almost too early to commence out-door work, for the season was very backward. Only a few brave Daffodils turned their golden petals toward the sun, and one cluster of delicate Blue-bells.

We laid out our garden in the form of a wheel, about forty feet in diameter. The walks extended from the outer circle to the hub, in a manner to form six oval and six triangular beds. The centre bed is a small circle; this we elevated about eighteen inches, and grassed over, leaving a small space in the middle for flowers, should we feel disposed to use it.

As the season progressed we found many annuals, which had sowed themselves the previous autumn, and now pushed out from under the old leaves, looking strong and handsome. These we removed in clusters to different parts of our circle, and soon had fine stools of Golden Coreopsis, Candy-tuft, Borage, Larkspur, Mignonette, and some other unknown varieties, which we trusted in the future would present us charming flowers. Some of them did turn out to be nettles and purslane, but we consoled ourselves with the thought that more experienced gardeners than we did not always avoid mistakes. Be assured we did not nurture them long. On one side of the walk leading to the arbor we found a "Southernwood bush." For the sake of "auld lang syne" we favored the sweet-scented shrub, and made it the centre of a bed which we devoted to old-fashioned plants. Transplanting and uprooting whenever we found anything appropriate, we placed it near the Southernwood. Thus, we soon had in our corner Goose's Tongue, Sweet-brier, Tiger-lily, and a balm. As everything seemed precious in our eyes, we spaded

and pruned up a quince-tree for a back-ground to the bed, and then planted underneath the common myrtle, which gives such beautiful blue flowers in early spring, and the foliage of which makes lovely trimming for dresses in summer evenings. In due time the large pink flowers of the quince made it a most charming shrub, while even as I write the rich golden fruit, which afterward adorned its branches, is being prepared for a sweetmeat fit for the palate of a king. Outside of our circle we devoted a large space in crescent form for a rose bed, the walk which formed the outside limits extended on by the flower plot and through the arbor. To this we removed all the roses we found on the grounds, and bought a dozen varieties,

the flower-stand, hid our Smilax pots in a shady corner, and devoted ourselves to our new garden. The package of flower-seeds in which we invested, turned out a gorgeous array of blooms from the Morning Glory, which climbed mountains high, to the starry Nemophila, which charmed us till heavy frosts had come—everything repaid us for our toil. Our shrubs vied with each other in growth and beauty, beginning with the Hawthorns and Double Flowering Peach in May, and ending with the Hydrangea, Panicleata, and Althea, in September and October. A dozen Verbenas, purchased of a florist, kindly did their share toward the general success.

And now, as we look at our array of pots all filled and ready for our winter's pleasure, and walk around gathering handfuls of the late-blooming flowers scattered everywhere about, we feel glad at heart for the happiness afforded and the experience learned. With the start now obtained and the knowledge gained, we hope another year to have equal if not better results. Meantime, we shall devote ourselves with renewed pleasure to our "window garden."

AMATEUR.

SCENE IN FAIRMOUNT PARK, PHILADELPHIA.

mostly Perpetuals, which we scattered around with due regard to color and size. It was this crescent Rose-bed which proved the trial of our patience that we trust will be purifying. Beginning with that charming creature, the gage-bug, and progressing step by step through all the known and unknown species of insects and worms, to the minutest of spiders, we waged "perpetual" warfare. At length the right weapon was found, and victory crowned our efforts with wreaths of roses.

By the first of June we ventured to transplant our house-plants, and as we had successfully started many cuttings we found our beds well filled with most of the well known bedding plants. We laid our Calla under the Syringa for its summer's rest, piled our Cacti on

plants are up.

If Aunt Minerva will darn her table and all other linen with threads the size used for weaving the cloth to be mended, she will have a more sightly job than if done with knitting cotton. Darn in a thread for every one in the linen and weave carefully. If contributors would tell us when their successes were achieved, we should learn more from them. It makes a decided difference to a beginner whether the suggestions she tries to follow are suited to Florida or to Maine. A lady gave me some Coreopsis when I was a child. She called them "Black-eyed Susans," an expressive and appropriate title.

CYNTHIA.

PEABODY, KANSAS.

## Stories.

## THE JASMINE AND THE WALLFLOWER.

AMID the foliage of a bower  
 Concealed, there twined a Jasmine-flower,  
 From tiny blossoms purely white  
 Breathing out odors day and night;  
 And close beside, in stately pride,  
 Arose a Wallflower brightly dyed,  
 Which, vain of vulgar beauty, oft  
 At plainer flowers around it scoffed,  
 And to the Jasmine, mid the rest,  
 One day its taunting speech addressed:  
 "O thou neglected, worthless weed,  
 'Tis well thou hidest thee, indeed!  
 Pray, how presume to me so near  
 A simple form like thine to rear?—  
 To me, in matchless mantle dight,  
 With gold and purple richly bright?  
 Behold a maiden hither hies!  
 Afar my beauty she espies,  
 And comes at once to gather me,  
 Whom to desire is but to see.  
 By her shall I be culled and prized;  
 But thou, unnoticed or despised,  
 Wilt wither in obscurity."  
 Thus spake the vain flower haughtily;  
 The other still more sweetly shed  
 Its fragrance round, but nothing said.  
 The maiden came: a zephyr sweet  
 Betrayed the gentle flower's retreat.  
 Aside the tangled leaves she drew,  
 Until the Jasmine met her view;  
 And, raptured with its sweetness rare,  
 The blossoms culled to grace her hair;  
 Then in her glee quick turning round,  
 She trod the Wallflower to the ground,  
 Which first had gazed in wrath and scorn,  
 But now disfigured lay, and torn.

The vain, at modest worth who rail,  
 May learn a lesson from this tale.

W.R.E.

## HAPPY THOUGHT.

That was the name of our society. "A strange one?" May be, but after hearing the particulars relating to its christening, you perhaps will not consider it a misnomer.

Harold Thurston, Will Lynn and his sister Kate had dropped in to spend the evening, and for our mutual entertainment Nell had read a story aloud. As she expressed it, "she had been in a rummaging mood that afternoon," and, while sorting over books and papers to her heart's content, had come across this story in MS. It told of an old lady who was always having happy thoughts conducive of much pleasure and good to those about her. Many were the sick, sorrowing and troubled to whom she gave comfort and relief; most especially the little children had reason to bless her happy thoughts.

It was a simple little Christmas tale, yet it had put us all in a pleasant mood, and we chatted merrily over the old lady's ways and doings while eating our grapes.

As our guests rose to leave, Harold exclaimed:

"What a pleasant evening we have had! I wish we might often meet."

"Why not organize a literary society, to meet in turn at our different homes?" cried Nell.

"Happy thought," exclaimed Will, and Kate panted with her hat and shawl on her arm, while Harold tossed his cap on the table and took the seat he had just vacated.

"Let us organize to-night," said Kate, "and next week meet at our house. In the meantime we can mention the subject to the acquaintances we meet, and invite them to join with us. We will need officers, I suppose?"

"No," replied Nell. "At each meeting elect some one to take charge of the succeeding one. It will be their business to see that appropriate entertainment is provided. We can have select readings, essays, criticism, debates, or anything that will be for our mutual profit and interest."

"It will be best to have an admittance fee, and consequently we will need a treasurer," said Harold. "I nominate Nell Winters for the office; all those in favor signify it by the usual sign of the order."

Harold had been a Good Templar; there was a laugh at his expense, but an unanimous yea.

"But I don't want—" began Nell, but Harold interrupted, "You are elected, and each member is bound to do their best for the good of their order."

"What shall be done with the cash?" queried Kate.

"We will have no room rent, neither light nor fuel to provide."

"Start a library connected with our society," replied Nell.

"Happy thought," again cried Will. "We will not be able to purchase many books at first, but each year will add to our number."

"But who will select them?"

"Why not ask some one whom we consider competent to advise, to give us a list from which to choose?" proposed Harold.

"There is Dr. Day, and Mrs. Neal," answered Will, "and Uncle Hathaway."

So it was settled, and Will agreed to take Nell the next day to call upon them, tell them our plan, and ask their assistance in our choice.

"Will you take charge of our first meeting, Kate?" asked Harold, and on her assent continued, "Then I think this is all that will be necessary to do to-night."

"But the name?"

"Sure enough. I had forgotten that; we want something striking, something that will take."

Several were proposed, but none suited. Presently mother glanced up from her work; "I think it has been already named," she said.

"What?" asked Will.

"Happy Thought," she said, with a smile.

"Good!" exclaimed Harold.

"Just the thing!" cried Will, and we parted with many pleasant anticipations of the future.

According to agreement, Will and Nell on the next day called on Dr. Day and Mrs. Neal. Uncle Hathaway was away from home, but aunt promised to present the matter to him on his return. The lists were made out during the week, and Will presented them at our first meeting. There were ten present, and, owing to Kate's happy arrangement, our first evening passed very satisfactorily to all. Uncle Hathaway sent a letter requesting that the library might be open to those not members of the society, on the purchase of a ticket; also that books suitable for children might be found among the number. If we were suited with the plan, he offered five dollars towards it, and pledged himself to procure a like amount from several of his acquaintances.

This arrangement was complied with, and we started with fifteen volumes, besides subscribing for two magazines, which were to come to our treasurer's address—selections read from them at the meeting, and then circulated in town among the members.

All this happened five years ago. The society still flourishes, although the founders have long since been scattered widely. Will Lynn is studying in a distant city, Kate is teacher in an academy, and Harold and Nell have found a new home on a farm at the West. The influence of their happy thought is still felt in the old neighborhood, and the library is a pleasure and a profit to the whole community, and if my recital of what we accomplished will induce anyone to go and do likewise, will it not have been a happy thought?

HOPE WINTERS.

**The Fair Mexicans.**—A writer in *Lippincott's* says: "The Mexican women look their best in a ball-room. Their black eyes, black hair, and white teeth glisten in the light; they are dressed in the gayest of gay colors ponderous ornaments of gold, strongly relieved by their dusk complexions, shed around them a rich barbaric lustre. Not that they eschew adventitious means to blanch their sun-shadowed tints. For days some of the senoras or señoritas have worn a mask of a white clayey mixture to give them an ephemeral whiteness for this occasion. Those who could procure nothing else have worn a pasty vizard kneaded of common clay to effect in some degree a like result by protecting their faces from the sun and wind. Should you visit New Mexico, and as you ride along slowly in the heat of mid-day meet a senorita who gazes at you with a pair of jet-black eyes through a hideous, ghastly mask of mud and mortar, do not be frightened from your accustomed propriety. The senorita is preparing her *toilette de bal*. The New Mexican women cannot be considered pretty, generally speaking. In artistic symmetry of feature, in purity of complexion, they are not to be compared with our countrywomen. These can bear the searching light of day, when delicacy of detail can be distinguished and appreciated. Those look their best in the artificial light of the ball-room. There the blue-black hair, the brilliant black eyes, the well-traced eyebrows, the magnificently white and regular teeth, the richly-developed forms, produce a general effect before which our blonde and delicate beauties seem pale and faded. But the Mexican's coarser skin—her *teint basané*—is too plainly visible in the light of the sun; you should see her only by the light of the lamps. It is, doubtless, rather from an instinct of coquetry than from any other feeling that in the daytime the Mexican women shroud their dusky traits in the fold of their *robosas*, leaving only one pilot eye to look upon the outer world."

**The Wife of the Secretary of the Navy.**—The Washington correspondent of the *Cincinnati Gazette* writes: "Mrs. Robeson seems to possess the fountain of eternal youth, bubbling in its pristine freshness, concealed somewhere within the generous curves of her fine portly person. She enjoys the society of young persons in the most thorough manner, and what is rarer still, the young people heartily reciprocate the sentiment by being completely fascinated with her. Her hair is 'silvered o'er' with the frosts which come to all in the autumn of life, but the frosts have mellowed and ripened, not shrivelled or pinched or hardened any feature or feeling. Her name might well be attached to the list of those illustrious women whose fascination grew with increasing years, like Mme. Recamier, Cleopatra, Helen of Troy, and dozens of others. Secretary Robeson was long and deeply in love with the widow, Mrs. Aulick. The young girls tried in vain to catch an encouraging glance from the rotund bachelor Cabinet officer, and thereby build many exquisite *chateaux en Espagne*, through which they might move in queenly grace as the Naval Secretary's bride. But the gentleman in question had eyes for but one woman, and that woman a widow, with dawning streaks of gray in her hair, evincing that the mild twilight of life had commenced. After a perseverance worthy the cause, Mrs. Aulick consented to become Mrs. Robeson, and has filled her position of Mrs. Secretary with rare dignity and satisfaction. When first married, the husband and wife seemed as delighted and jubilant as persons many years younger. I have seen them walking in the early morning, somewhere in the vicinity of their residence, hand-in-hand like two children, and laughing with an infectious merriment."

NEW YORK, JUNE, 1875.

## ILLUSTRATIONS.

The scene, on first page, of a German Cherry Orchard, is one a little curious to American eyes. The old trees and tumble-down house, are picturesque indeed, but strange as compared with American trim, neatly planted fruit grounds. In many parts of Germany the streets are lined with rows of cherry trees for miles, and the cherry harvest everywhere is one of great interest and profit to little folks as well as the big ones.

Page 84 has a sketch of a pretty Summer House for the lawn or garden ; on right side is a pretty box for a window garden, and within are curtains for protection against sun or air.

Page 85 has a sketch of the Bear Pits in Fairmount Park, Philadelphia. This and the Aviary, published last month, (and for both we are indebted to J. M. Wade of Philadelphia,) keep up our interest in the new and beautiful plans for park ornament which Philadelphia is providing for the enjoyment of the numerous visitors to her Centennial exhibition next year.

Page 88 introduces a sketch scene of a pretty Rustic House in Central Park, N. Y.

SCENE IN A CHINESE GARDEN.—On page 89 is a sketch of a Chinese garden, odd, yet pleasing. The Chinese are great lovers of the grotesque—and the introduction of animals of hideous appearance, in the midst of garden scenery, is but a perfect characteristic of their nature. This picture is one where a lake is spanned with curious artificial bridges, surmounted with temples or summer houses; a waterfall flowing from the lake is bordered with a massive staircase, at each turn of which is a curious piece of statuary or a vase.

Page 92 introduces, among the other illustrations, a sketch of a Floral Cross for table decoration—it needs little explanation. The base is a little platform of prettily earved wood, which is surmounted with a wicker basket of moss, holding both cut flowers and sprays of Ferns, Ivy, and Myrtle. From its centre, rises the cross, easily made of wood.

A Parlor Fernery, also sketched on same page, gives any amateur an idea of how to construct a

Wardian case; it is about three feet long, and one and a half wide; the box within consists of a zinc pan, ten inches deep, to hold the earth; in the bottom should be strewn for two inches, pieces of charcoal and bits of broken flower pots, to secure perfect drainage. In it can be placed any of the smaller growing window plants, the prettiest of which are the Gloxinias, and low growing Ferns.

“Our Little Rogue,” see page 93, is so sweet, yet with such a roguish eye, we have to watch her, for every moment we expect a bit of new mischief, or a piece of merry nonsense.

COMPLIMENTARY.

We are pleasantly surprised with the beauty and elegance of THE LADIES' FLORAL CABINET. I do not see how you can afford it so cheaply, and a chronometer also. The charming new music in each number is not the least of its attractions, and so many pictures too; some of them are as fine as the so-called steel engravings in some of the popular magazines.

MRS. MATTIE A. GRANT.

The CABINET lying on my table attracts much attention—the nice tinted paper is beautiful. My husband thinks the music is just splendid. I like every part of it.

MRS. WM. E. CALIGAN.

MRS. WM. E. CALIGAN.

The more I read the CABINET, the nearer it comes to my *ideal*, or standard of a *practical woman's paper*. I have read many papers, but none so nearly suit me as this one—a perfect ladies' paper has long been looked for, and I trust at last seen.

LOUISE A. SEYMOUR.

Black-Eyed  
Susan.—

Along our roadsides and byways there grows a wild flower universally known by that name. Last year I purchased seed of Vick, under the name of *Africanus Hibiscus*, which produced the same plant. From that I supposed our native was the producer of that sent out by florists.

Fair Haven, Ohio.

BLACK-EYED SUE.

## GET UP A CLUB FOR SIX MONTHS

FOI

The Ladies' Floral Cabinet,

The Handsomest of all Ladies' Journals.

Our subscribers have hundreds of friends who would take the CABINET for six months, if it is only shown to them. To encourage all to make a special effort to extend our circulation, and thus help the purpose and success of the paper, we will take subscriptions as follows, to begin with the July number:

For Six Months.

Price	65 cents for 6 months, postage prepaid, but without chromo.

## PUBLISHER'S ANNOUNCEMENTS.

**Six Months Subscriptions.**--With a little effort each subscriber can send us the name of some friend, or a club, for the rest of the year. We hope all will try. Prices have been fixed as low as possible. So beautiful a journal, on so costly paper, with so many expensive and charming illustrations, cannot be offered as low as other cheap papers, which are not worth keeping. The music alone for six months is worth \$2 at least, and the paper, with chromos, \$1 more—a total of \$3 for only 70 cents.

**Plants for Sale.**—We have several lots of plants, seeds, &c., owing us by florists, which we will sell at 25 per cent. discount from usual catalogue prices. Any one wishing to buy may choose a list from any floral catalogue, deduct 25 per cent. from price, send the order to us, and we will have good plants and seeds sent for the money. As soon as we have traded out these accounts our offer will be withdrawn. Persons not wishing to buy now, but next fall, may purchase from us an order now, at this discount, good for any time it may be presented.

**Fine Music.**—The song, now so popular, "Silver Threads Among the Gold," has reached a sale of over 100,000 copies, and has produced a score or more of "Answers" by popular composers. We have printed one of them, "While the Silver Tints the Gold," but the author of the original song has written a companion so sweet and delicious ("When Silver Threads are Gold again"), that we shall soon reprint it, by permission of the publisher, Charles W. Harris. We ought to say, by way of commendation, all the songs issued by Mr. Harris are so pure, and have such beautiful sentiment and choice melodies, his name is always a guarantee of "good things."

**Household Elegancies.** We shall issue, Oct. 15, a new book, about the size of "Window Gardening," full of fancy work, home decorations, household art, and elegant ways of adorning a home, with so many exquisite illustrations, that every lady will be fairly crazy with delight when she sees it. We regard it as the most desirable ladies' book ever published, and it will be true *the grand Gift Book of the season.* Our readers know that anything we issue so splendid in style and superior in merit, that, when we make an announcement, it is received with confidence and the most ready response. "Household Elegancies" is the finest work we have yet issued, and as a special offer to any one who will obtain 15 subscribers to the CABINET for six months, before August 1st, we will sent a copy of this new book free, as soon as issued. Price will be 50, and will be ready Oct. 15.

## Out-Door Topics.

### A FEW HINTS AT RUSTIC WORK.

There are many beautiful things made in rustic work, but they are sold at such high prices by florists, and others, that persons with slender purses cannot afford to buy them, so they look at the lovely urns and baskets in the yards of their more fortunate neighbors with envious eyes, and sigh for the things they think they cannot have—but they can have them, if they will only take the trouble of making them.

Should any one be desirous of a rustic hanging basket, let them get their John or William to saw them out eight pieces of pine board, and then cut an eight-square piece for the bottom, nail these firmly together, and you will have the foundation for your rustic work. The next thing in order is to go to the woods and dig up some of the roots of the common laurel, take them home, wash them, and then call on John again, and get him to saw them into pieces of a suitable size to nail on the basket—take a knife and scrape off part (not all) the outside bark. The wood must be used while new, for if left laying a few days it becomes so hard it is impossible to get a nail through it. After getting several pieces prepared, nail them to the basket, in any way fancy dictates; the rougher and more twisted the roots the better they look. For a handle, arrowwood makes very pretty ones; but where this cannot be found

pictures of rustic work in floral guides one can gain many ideas of how to make handles, etc. After the wood work is finished give the basket a good coat of shellac varnish, plant in the centre a Fern or some foliage plant, at the side an Ivy, with some trailing vine at the edges, and you will have something as

on, split them in two so that one side will be flat, cut them so they will be a little longer than your box is deep—wind them, at the ends, and nail them on your box letting them project about an inch at the top and bottom; it is pretty to make them of two kinds of wood—bright and dark. White birch and the tops of

laurel look very pretty together—by putting them on, two of laurel and one of birch, then make a trellis of grapevine to reach to the top of your window, fill your box with good rich earth, plant in each end a German Ivy or some other climbing vine, in the centre a Carl Hatt Fuchsia, put Myrtle at the edges to droop down, and fill in between these with Sweet Alyssum and bright foliage plants and you will have something that will delight you all winter with its beauty—do all this and you will envy no longer your rich neighbors, for you will have things as pretty as they, and they have cost you nothing—but work.

RUSTIC.

**To kill lice on** canary birds, give your birds new cages, not wooden ones, but those made entirely of metal. The sticks of elder with the

pith removed, and perforated with holes, for the birds to sit upon; the lice will go into these sticks, which should be cleaned out every few days. But the main remedy is to attend to the health of your birds; if they are perfectly healthy, provided with plenty of good food, kept in clean cages, exposed to light and fresh air, they will never be troubled with vermin. It is with birds as with men, the sickly, the poor, the unclean, or those suffering from insufficient nourishment especially, will be subjected to the plague.

**How to Treat Gold Fish.**—They should always be kept in a vessel sufficiently large, and be given fresh water every day. Wash the inside of the vessel with a cloth. The fresh water ought to be perfectly clean, and not too hard. It is not good to feed them, as the food will only serve to render the water unfit for their existence, and if renewed every day, the water itself furnishes them with enough material for their sustenance. Green leaves of living plants may be strewn among them when convenient, as they absorb the oxygen, which is in turn taken up by the fish, and reconverted into carbonic acid.

SCENE IN A CHINESE GARDEN.

pretty as those of your rich neighbors, that will cost you nothing but your work.

Beautiful brackets can be made by cutting a piece of pine board in the shape of a half circle, put a piece under for a support, and to fasten to the wall; take some of the straight pieces of laurel root and nail them on the under side close enough to hide the board; take rougher pieces for the edge, and nail them on so they will project at least an inch above and below the board; give this also a coat of varnish, fasten it to the wall, set upon it a rustic cross, with bright autumn leaves, either wax or natural ones pressed (the wax ones are prettiest) trailing over it, and—well, I think you will feel repaid for all your trouble.

Beautiful window gardens can be made of the same wood and in the same way; or very pretty ones can be made (with less trouble) by taking a box to fit your window, then take straight pieces of wood, with the bark left

## Indies' Boudoir.

## GRECIAN PAINTING.

## No. 3.

Having made the engraving perfectly transparent, the next step is to place the frame upon an open or transparent easel, which is made with two standards instead of one, in order to prevent any shadow from falling across the picture.

Our difficulty now is, that I cannot tell what particular picture you have to color, and can only, by giving general directions or describing some popular engraving of the day, give such an idea of the coloring of various parts as will enable you to apply them to some particular picture you have chased ready for further directions.

Here I would pause a moment, to say that, as a preparatory step, it would be wise to paint only a small picture, and also that in painting any picture, whether large or small, you will find it necessary, in many instances, to exercise your own taste and judgment.

There are some engravings popular at present that can be obtained at any picture store, and as our first lesson, we will describe a few of these small and inexpensive engravings, which will not require any vast amount of skill and yet will form very beautiful pictures. One pair of these—the “*Ecce Homo*” and “*Mater Dolorosa*” are known to every one, also the “*Madonna Della Scala*” and “*Holy Family*.” These are each 16 by 22 inches, and can be purchased for from fifty cents to one dollar, according to finish and the prices of different dealers.

“*ECCE HOMO*.”

Paint the flesh with a tint made of white, a very little vermilion and Naples yellow rubbed together, adding a speck of permanent blue; touch the lips with vermilion mixed with white, and while the flesh color is still wet touch a dot of vermilion to the cheeks and rub through with the tip of the finger, watching the outside constantly to see the effect and using the utmost care not to let it spread too near the nose and eyes. Under the eye, the chin, and forehead the light flesh color must be carefully preserved. (This paint is all applied to the wrong side of the engraving; touches on the right will be hereafter described.)

In making the flesh color, be guided by its appearances, and add or change the color as desired; use first more white, with about equal parts vermilion and Naples yellow, and a mere speck of blue; if necessary, more Naples yellow or vermilion may be added, but the tint must not be roseate, bearing in mind the age and that sallowness or pallor which would naturally be produced by suffering.

The eyes: pupils, burnt sienna; whites, touch lightly with a speck of raw sienna and white. Hair: burnt umber, shaded slightly with white on the light parts. The crown of the head: paint yellow ochre mixed with burnt sienna, with white mixed where the light strikes. The background: paint after the rest is dry, with yellow ochre, with chrome green until an olive tint is formed, which paint on the back, rubbing through a little white on the lights with the tip of the finger, touching up on the front side with the same. On the outside: touch up also on the lips with vermilion, and on the high lights of each part with light shades of the color used on the back, mixed with Megilp or clear Demar varnish.

“*MATER DOLOROSA*.”

The face: same as the former, with rather more vermilion and the roseate hue rubbed through upon the

cheeks rather deeper; (indeed, upon the face of our Lord it should be scarcely perceptible.) Lips: same, and touch on outside with madder. The eyes are not perceptible; the lids must be much lighter than the rest of the face. Touch the chin with a dot of vermilion and rub through as before described for the cheeks. Hair: paint with Vandyke brown and raw sienna lighted with white upon the light parts. The scarf over the head paint white, with touches of same upon the right side. The dress: paint a purple, made from blue, crimson, lake, or madder and blue, touching on the front with light shades of the same. The hand holding the dress: color with flesh tints, adding more yellow. The background is the same as the first piece.

“*MADONNA DELLA SCALA*”

is very similar. The veil: paint a delicate blue, touched on the lighter parts in front. The dress: vermilion on the back side and madder on the front. Paint the hair of the infant Saviour with more raw sienna than in the mother's. The eyes: light blue on the pupils, and the whites tint with white and a particle blue. The dress: white.

“*THE HOLY FAMILY*.”

The mother's dress: a delicate violet, very light, with white on the high lights, touched on the outside with same; border of lake crimson, touched with lines of chrome. The cloak or shawl-like scarf over the shoulder: vermilion on the back, touched carefully in the light parts on the front side with rose madder; the dark parts behind will be sufficiently shaded with the darkness of the engraving; paint the border with a little orange chrome; the figures lighter, touching with fine brush on the right side. The face: make a light, youthful one, (with white, a little vermilion, and the least particle each of Naples yellow and permanent blue,) after having painted the lips vermilion, mixed with white, rubbing a dot of vermilion into the cheeks, as previously explained. The hair: make a golden brown, using Vandyke brown and raw sienna, and touching it lightly on the right side with the same. The veil must be white, rubbing it in through certain parts to produce a soft, fleecy appearance, touching fine lines on the right side, like lace. The flesh of the children must be more roseate; the eyes light blue on the pupils, mixed with white for the whites. The hair of the child (St. John): paint with raw sienna and umber mixed; the scarf, permanent blue and white; the girdle of camel's hair is painted with yellow ochre and raw sienna mixed, touched with lighter shades upon the right side; the cross-staff, raw umber and a little yellow ochre. The halo around the head of each paint with deep yellow chrome, touching with white upon the right side. The end of the scarf upon the Christ-child color with crimson lake touched with vermilion and white mixed upon the right side. His hair paint with yellow ochre, touching with same on right side. Add more Naples yellow for the feet of the Virgin Mother.

The background in the far distance paint in very light shades. Foliage, yellow ochre, chrome, Antwerp blue, and Venetian red. Distant mountains, permanent blue, Naples yellow, and Venetian red. Near mountains, yellow ochre and Naples yellow. Mid-distance, use terra verte in the foliage; grays made of ivory black, and white and Naples yellow; permanent blue and yellow on the houses of the city, rubbing through the distant mountains with the finger. The tropical growth in the foreground of leaves and flowers must be painted with emerald green, touched up on the outside with Naples yellow, yellow ochre, and permanent blue; also, deep chrome, antique blue, raw

sienna, using a variety of shades, giving the whole a rich, deep, warm color, not a cold, blue shade; make light parts yellow and bright. The several trees paint deep green, with touches of black, and light shades upon the outside. Bright flowers make with vermilion, chrome, crimson lake, blue and white. A lovely flower is made by taking several clean brushes and loading the point of each with lake, permanent blue and yellow chrome; put a dot of yellow, around it dots of white, another in the same way with lake, another with blue, etc., making clusters of each and giving a fine effect. Drooping sprays of vermilion have also a beautiful appearance shooting from a cluster of large, rich, green leaves.

In touching up the right side always mix the color with Megilp, and if still higher effects are desired, use a very little opaque color also. We will in our next give some directions for painting landscapes and also some general directions in regard to coloring that will always be useful.

C. S. J.

## FASHION NOTES AND GOSSIP.

**Why Lace is Costly.**—Many people wonder why lace for trimming is so costly. The following paragraph explains:

The manufacture of lace is carried to its highest perfection in Belgium. The finest specimens of Brussels lace are so complicated as to require the labor of seven persons on one piece, and each operator is employed at distinct features of the work. The thread used is of exquisite fineness, which is spun in dark, underground rooms, where it is sufficiently moist to keep the thread from separating. It is so delicate as scarcely to be seen, and the room is so arranged that all the light admitted shall fall upon the work. It is such material that renders the genuine Brussels ground so costly. On a piece of Valenciennes not two inches wide, two hundred to three hundred bobbins are sometimes used, and for the larger width, as many as eight hundred on the same pillow. The most valuable Valenciennes is determined by the number of times the bobbins have been twisted in making the ground; the more frequent the twists the clearer and more beautiful will be the lace. Belgium sells of this lace alone to the value of over \$4,000,000. Chantilly lace is always black, and is used chiefly for veils and flounces. It is very fine and extensively worn. Mechlin lace is made at Mechlin, Antwerp, and other localities.

**Jet is** still all “the rage,” but is not likely to last through another season. Let a thing be never so pretty, if everybody takes to wearing it, the “upper ten” discard it immediately.

**Quilted Skirts** of black, blue, or scarlet silk, are much worn by young ladies of fashion, and are extremely pretty on a slightly muddy day, when the dress skirt must be held from the ground.

**Very stylish** costumes are made up in plaid goods this season. Some in blue and green are extremely pretty, but the varieties in soft shades of light and dark brown seem to be newer and more generally liked.

**White illusion**, edged with lace, is “the latest” in the way of veils, and is very becoming.

**A Lady** was seen at a ball not long ago, with the apron embroidered in purple, with an elaborate monogram in the center. This last was done in a very delicate way, but seemed entirely out of taste.

## Household Elegancies.

## A ROOM IN A BOARDING-SCHOOL.

It was Wednesday afternoon—a half-holiday for the girls at Mrs. Lovett's boarding-school—a few weeks before Christmas, and nearly all the girls were gathered in the room occupied by Gerty and Minnie Faust, engaged in making Christmas presents for the friends at home. They always chose this room on such occasions, and why was it? Because it was adorned with all sorts of pretty things, which made it more home-like than the more elegant ones, and the sisters were always glad to show how to make these pretty things.

In one corner was a bracket made from an old cigar-box, which first had been soaked in hot water and then cut into the desired shape. The front side of the wall part was neatly covered with white paper, and then, with white glue, was thickly sprinkled with rice. Over this were arranged in a graceful manner raisin stems dipped in red sealing-wax dissolved in boiling alcohol. The shelf, and a piece of pasteboard about an inch wide, fastened on the edge of the shelf, were also covered with paper and rice, but only the pasteboard with the mock coral. On the shelf were arranged natural pebbles and stones, most of them obtained from places which the girls had visited, and shells, among which pieces of the coral and different kinds of sea mosses were placed.

Opposite this bracket was another of nicer material, on the edge of which was tacked a piece of white cotton velvet cut in large scallops at the bottom, with a gracefully-arranged bunch of ferns and trailing vines done in spatter-work on it. The velvet was a quarter of a yard deep and as long as the edge of the shelf. The tacking on was hidden by a piece of chenille. On this shelf was a flower-pot containing two kinds of wild ferns, and the earth covered by moss, in which partridge-berry vine was growing. The pot and its saucer were hidden by a four-sided box, larger at top than bottom, made from a cigar box. On the centre of each side was arranged a design with split peach, plum, and prune stones, date and cherry stones, small cones and the scales of larger cones, and acorns. The rest was covered by the gray moss which grows on rocks, with a border of cone scales overlapping each other.

Over each of these brackets hung a picture, with a wide-mouthed bottle filled with water fastened at the back of the picture, with sprays of such vines as grow well in water growing in the bottles and brought round to the front of the pictures.

There were two ottomans made of square wooden boxes obtained at the grocers, lined with paper, and having covers fastened on with hinges. The sides were covered with a box-plaiting of drab linen, such as is used for summer furniture coverings, bound at the bottom with scarlet braid, and tacked with a piece of the braid around the top of the box. The lids were covered with thick cloth, stuffed out so as to form a cushion, and then covered with the linen. The edges of the lids were finished with a two-inch box-plaiting of the linen, both edges bound with braid. Four bows of braid at the upper corners and a loop on one side finished it. One was used as a slipper box, the other for soiled cuffs, collars and handkerchiefs.

On one side of the bureau hung a letter-case made of four four-inch squares of tinted cardboard, used as diamonds instead of squares—that is, having a point instead of a side for the top. The second piece was lapped over the first, so that the top point of the

second came just a little above the centre and directly under the top point of the first. The third lapped over the second, and the fourth over the third, in the same manner. They were fastened together at the sides with little bows of ribbon; also, the lower point of the first, second and third was fastened, so as not to show, on to the diamond which overlapped it, to prevent the letters from slipping out, the overlapping points forming the pockets for the letters. The whole was decorated with decalcomanie pictures. These are pretty made of perforated card with worked figures.

A very ornamental as well as useful toilet article was on the bureau. It consisted of three small cornucopias made of silver eardboard, each having a worked pattern. One was lined with blue paper and finished with blue quilled ribbon; this was for hair combings. Another was stuffed with curled hair, and the top covered with a piece of canvas work; this for a pin-cushion. The third was also stuffed with curled hair, and covered with thin looped crochet work, such as is used for basket hair-pin cushions. These two were finished with quilled ribbon, and the three fastened to a small upright pole about eight inches high, fastened to a round stand at the bottom. The long side of the cornucopias was against the pole, being fastened to it with bows at the top and bottom points. There was also on the bureau a box for clean collars and cuffs, made from a round pasteboard box such as grapes come in, covered inside and out with blue paper. The outside was also covered with a box-plaiting of rather thick muslin, as deep as the sides of the box, finished with lace at the bottom and fastened to the top of the box. On each plait was spattered a tiny fern. The cover was also covered with blue paper and the muslin, and a wreath of small ferns and vines spattered on it. The sides of the cover, which came down over the top of the box, was covered by a box-plaiting of blue ribbon.

Among the writing materials was a pen-wiper, consisting of two black pieces and one blue, plucked at the edge. On the top one was fastened a little long bag made of unbleached cotton cloth, stuffed out and tied at one end, and on it the word "malt" written. On the black piece, and also on the bag, were fastened apple seeds, with brown thread, so as to represent the legs of mice, and another piece for the tail. If scattered about nicely, a few as if eating the malt, it makes a real cute pen-wiper.

These were only a few of the things, but the space allowed me will not permit more.

BESSIE.

## HOUSEHOLD FANCY WORK.

I think it is a great duty, as well as a great pleasure, for us to brighten up and beautify our homes as much as we can with things useful and ornamental. Now I think I hear some one saying, "It is all well enough for those with plenty of money to say that; as for me, I have other ways to spend mine, although I like to see pretty things as well as anyone, if I could only afford them." Now just stop a minute and think. Just think how a few simple things, that cost next to nothing except the time, and a very little time too, it takes to fix them. Just think how they brighten even the dullest room and cheer and shorten the darkest winter days. In the bright, pleasant days how little trouble it is to gather some bright leaves and select some perfect specimens from them. Woodbine, sumach, blackberry, rose, rock maple, and many others are lovely. Then take a warm—not too hot—flatiron and on it rub some resin, and iron out the leaves, and I think the result will satisfy you if you have any taste for the beautiful. Another excellent way is to oil the leaves in linseed oil and let them dry.

They are so pretty for vases and to put over pictures. They are very pretty to arrange in bouquet form on bristol board; then take a piece of glass—say six inches long and five wide—and place the leaves under the glass, and cut the cardboard the size of the glass, then fasten the corners with mucilage the same as you fastened the leaves on the card. Then cut a strip of dark brown or gilt paper about an inch wide and bind it over both edges to look like a frame, and you have some pretty mantel or bracket ornaments. Another way to make pretty frames for photographs or pictures cut from magazines is this: Take some cigar-lighters as they are called, dampen them slightly, and cut them the required length, and sew a row of them on the pictures around the edge, letting about two inches of the sticks project from the corners; then sew on another row, leaving just space enough between the two rows of sticks to see the paper; then cut two pieces of the lighters for the corners and sew on and cross; cut the ends off in notches, and sew on either black or steel beads in little stars or crosses on the corners to hide the stitches, and at intervals at the sides and top and bottom. There are all colors, but the dark and light are prettiest. The white ones cost ten cents a bunch and the dark twenty. They make very pretty frames. Shell work is easy too and pretty. Take some pasteboard (an old box is best, as it does not warp) and cut from it a cross, cover it with shells, and you have a handsome ornament. I have a nice recipe for cement that does not crack or peel off, but remains firm. Take 1 lb. white lead, 1 lb. whiting; mix in linseed oil to a soft putty, add one-third flour and two tablespoonfuls japan; have it soft enough to spread. It takes several days to dry it. When you go to the beach in summer, gather all the shells you can, and, if you can, get some foreign ones to put with them. Have a bracket made without sides, and cover with shells, and it will be very handsome. Even the common shells look very nicely when varnished with white varnish. I made myself one, and it is very much admired, and I have had two customers for me to make them each one. I had some pink foreign shells and arranged them in the form of roses, and some of our native shells, called silver shells, which are yellow, and they look very handsome. At the back of your pictures place some wide-necked bottles filled with water. Have a cord fastened round the neck of the bottle long enough to let the bottle down so it will not be seen, and put the cord over the same knob as the picture is hung on; then put some water-ivy in the bottle, and let it run over the picture; it grows very fast in water, and looks so pretty. Take some pieces of straw braid, and sew two or three rows around some small pictures; they make odd little frames; finish at the corners with rosettes made of straw. Little baskets are pretty made of pasteboard and covered with gray moss and filled with evergreen and bright berries or autumn leaves; or they are very pretty ornaments to cover the baskets with shells and fill with the same or pretty little stones. If you want a pretty and useful match-lighter, take a piece of pasteboard and cut it any pretty shape you like, and then cut a piece of sandpaper the same shape and glue it on; finish it with a narrow ribbon and loop to hang it up. Cut some perforated card five inches long by four wide, work a pretty pattern on each side, make a little bag, and fill with heliotrope or any perfume powder, and place between the cardboard; plait some ribbon the same color as the pattern on the board (about an inch-wide lustrous ribbon, bright red or blue, is pretty), and sew the ribbon on one side; place the two pieces of card together, and leave a loop to hang it up; this is very pretty indeed.

## Household Elegancies.

## AN ARTIFICIAL WOOD FIRE.

One of the most striking household novelties of the day is an artificial wood fire ingeniously devised to take the place of the comparatively cheerless stove, or still more dreary furnace-register. The apparatus consists of a pile of artificial logs, with perforations for the escape of gas, which, being lit, burns around shreds of asbestos fastened about on the logs. The asbestos cannot be consumed, but being heated, it glows with a ruddy color, while the multitude of flames unite, thus forming a beautiful, cheery fire. The idea is a delightful one.

## CASE FOR CALLING CARDS.

Take two plates of perforated paper, the size being made according to the cards it is intended to hold; decorate with colored silk and small Venetian shells. The silk lining of the plates, and the straps to hold the ends of the cover, put on in the usual manner, must match the lining.

To take impressions of plants, leaves, etc., take half a sheet of fine wove paper, and oil it well with sweet oil. After it has stood two minutes, to let it soak through, rub off all the superfluous oil with a piece of paper, and let it hang in the air to dry. After the oil is pretty well dried in, take a lighted candle and move the paper over it, in a horizontal direction, so as to touch the flame, till it is perfectly black. When you wish to take off impressions of plants, lay your plant carefully on the oiled paper, lay a piece of clean paper over it, and rub it with your fingers equally in all parts for half a minute; then take up your plant, and be careful not to disturb the order of the leaves, and place it on the paper on which you wish to have the impression; then cover it with a piece of blotting-paper, and rub it with your finger for a short time, and you will have an impression superior to the finest engraving. The same piece of black paper, should you wish to be economical, will serve to take off a number of impressions. The principal excellence of this method is, that the paper receives the impression of the most minute veins and hairs, so that you obtain the general character of most flowers. The impressions may afterwards be colored.

AN ARTIFICIAL WOOD FIRE.

To wash Chintz, take two pounds of rice and boil it in eight quarts of water till soft. When done, pour the whole into a tub; let it stand till about the warmth

used for colored linens, then put the chintz in, and use the rice instead of soap; wash it in this till the dirt is out; then boil a second quantity as above, but strain the rice from the water, and mix it in warm water;

CROSS FOR TABLE DECORATION.

wash in this till clean; afterwards rinse it in the water the rice has been boiled in, and this will answer the end of starch, and no dew will affect it, as it will be stiff so long as you wear it. If a gown, it should be taken to pieces; and when dried, be careful to hang it

CASE FOR CALLING CARDS.

as smooth as possible. After it is dry, rub it with a sleek stone, but use no iron.

**Feather Flowers.**—I never use paints or dyes, except for green leaves, and have made handsome wreaths and bouquets without a single feather except the natural colors. For white, use goose feathers. For yellow, the feathers from the

breast of the meadow lark. For scarlet, peel off the red from the blackbird's wing and press it out flat until it dries and you will have a fine double flower, which only needs a wire stem. Prairie chicken and Guinea fowl feathers make nice mottled flowers. Pea fowl feathers answer nicely for green, and some of the feathers on his body make beautiful velvety flowers.

Use two sizes of wire; the coarser for stems and the finer to wind the stem of each petal of such flowers as roses, before they are formed into flowers. Get the natural

flowers you wish to imitate and pick them to pieces for patterns. Wind the stems with green tissue paper and form into wreaths or bouquets.

**Wheat Ears.**—A little city girl writing to the *Young Folks' News*, says that last Summer she visited in the country. "We picked some ears of wheat, tied them in a small bundle, and laid them by till six weeks before Christmas. We then placed them in a deep basin of water, and let them steep for twelve hours. We filled a large hyacinth-glass with water, put the stalks of the wheat in it, and put it in a dark cupboard till the green began to spring up.

"We then put the glass in papa's conservatory, and it has sprouted up into a very pretty thing, and has been very much admired all Winter." Perhaps some other little ones would like to try the experiment next season. We think they would be pleased with the result.

**Skeleton Leaves.**—Many of our readers who have admired the exquisite tracery of leaf structure displayed in the denuded skeletons of plants may be glad to know how to make such preparations for themselves. The following method has been communicated to the Botanical Society of Edinburgh, by Dr. G. Dickson: "A solution of caustic soda is made by dissolving three ounces of washing soda in two pints of boiling water, and adding one and a half ounces of quicklime, previously slaked; boil for ten minutes, decant the clear solution and bring it to the boil. During the ebullition add the leaves and boil briskly for some time, say an hour, occasionally adding hot water to supply the place of that lost by evaporation. Take out a leaf, put it into a vessel of water, and rub it between the fingers under the water. If the epidermis and paranchyma separate easily, the rest of the leaf may be removed from the solution and treated in the same way; but if not, then the boiling must be continued for some time longer. To bleach the skeletons, mix about a drachm of chloride of lime with a pint of water, adding sufficient acetic acid to liberate the chlorine. Steep the leaves in this until they are whitened (about ten minutes), taking care not to let the leaves stay in too long, otherwise they are apt to become brittle. Put them in clean water, and float them out on pieces of paper. Lastly, remove them from the paper before they are quite dry, and place them in a book or botanical press. Afterwards arrange in bouquets, with a background of black, or under a glass for protection. They form beautiful ornaments for a mantel or table.

To make silk which has been wrinkled appear like

PARLOR FERNERY.

new, sponge on the surface with a weak solution of gum arabic on white glue, and iron on the wrong side.

## Fireside Readings.

### THE BEAUTY OF JEWISH LADIES.

It is related that Chateaubriand, on returning from his Eastern travels, was asked if he could assign a reason why the women of the Jewish race were so much handsomer than the men, when he gave the following: "Jewesses," he said, "have escaped the curse which alighted upon their husbands, fathers and sons. Not a Jewess was to be seen among the crowd of priests and rabble who insulted the Son of God, scourged Him, crowned Him with thorns, and subjected Him to infamy and the agony of the cross. The women of Judea believed in the Saviour, and assisted and soothed Him under affliction. A woman of Bethany poured on His head precious ointment, which she kept in alabaster vases. The sinner anointed His feet with perfumed oil, and wiped them with her hair; Christ, on his part, extended mercy to the Jewesses. He raised from the dead the son of the widow of Nain, and Martha's brother, Lazarus. He cured Simon's mother-in-law and the woman who touched His garment. To the Samaritan woman he was a spring of living water, and a compassionate judge to the woman of adultery. The daughters of Jerusalem wept over him; the holy women accompanied Him to Calvary—brought Him balm and spices—weeping, saw Him at the sepulchre. 'Woman! why weepest thou?' His first appearance after the resurrection was to Mary Magdalene. He said to her, 'Mary!' At the sound of His voice Mary Magdalene's eyes were opened, and she answered, 'Master!' The reflection of some beautiful ray must have rested on the brow of Jewesses!"

**Tit for Tat.**—Some time since, on one of the North River boats, a lady who had attracted much attention from the masculine turn of her manners and conversation, was seated at the table opposite a gentleman, who, in taking some butter in the absence of the usual knife, used his own, which the lady observing, called aloud to the waiter, "Waiter, bring another plate of butter! That man," pointing to the gentleman, "had his knife in this." The unfortunate wight almost sunk under the curious gaze of all the company, but said nothing, determined to watch his opportunity to return, for the cruel mortifica-

tion, change in her own coin. He waited but a moment, when a plate of dried beef was handed to the lady, who unceremoniously took some in her fingers, and placed it on her plate. "Wait-er!" exclaimed the gentleman, in turn, "bring another plate of beef. That woman has had her fingers in this." A most ungallant roar from all the company fairly turned the tables against the lady, and she had the good sense to acknowledge its desert, and join heartily in the mirth it had created.

Dick, who neither understood fully, nor heard the question, quickly interrupted:

"I've ordered some, but they haven't come yet!"

**Endurance of the Scotch Girls.**—The average Scotch girl is full of spirit, life, and sunshine. She can do a fair amount of dancing during the season, row a boat, tramp over a Highland road, or get up a picnic party during the summer months, without the slightest injury to her complexion or her health. Up

to a certain age, as Dr. Clarke says, the life of a Scottish girl is calm and peaceful. When she enters upon the business of life she is no longer a child. When she marries she is fitted to enter upon that holy step, not a shattered spectre with a pulseless soul, but as a woman, strong in mind and body, and of mature judgment. It may be said that our countrywomen in the rural districts are somewhat coarse and masculine. It is true that their hands are often hard from daily toil, and their arms and fingers are scarcely in accordance with the Grecian line of beauty. Yet there are many comely maidens among them for all that; bonnie lasses with wonderful complexions, and dazzling eyes. But what matters it to sensible men, who have brains enough to appreciate the difference between a delicate doll and a healthy helpmeet. There are volumes of common sense in their honest noodles, and oceans of love in their warm and constant hearts.

**Flowers as a help to Housekeeping.**—A woman, in every sense the best housekeeper we ever knew, said to us, pointing to a garden gay with flowers: "That is one of the best helps in housekeeping. The children take care of the flowers with only a little assistance from me, and we have a fresh bouquet each day for the table, and I am often surprised at the effect they have upon me; such a restfulness when I am weary with household care. They

are like the oaks that shelter our dwelling. I run out under them when the sunlight glimmers through the leaves, when each quivering twig casts dancing shadows on the grass, or the fresh breeze stirs through the branches; and they are even an inspiration to right living, and I go on with my labors refreshed and strengthened.

"Please cum aroun and talk me to the spelin mach this evning," wrote an Oshkosh girl to her beau.

OUR LITTLE ROGUE.

**Dick Hark** is the proprietor of a variety store in Jersey. He is hard of hearing, and don't like to be bothered by canvassers who try to sell him new articles, and his usual reply is:

"I have ordered some of those, but they haven't come yet."

Lately a drummer entered his store with a patent toy, and addressed him thus:

"Have you any little children whom you can amuse?"

## Housekeeping.

## AUNT LEISURELY'S CHATS WITH HER FRIENDS.

## MARYLAND BISCUITS.

One of the advantages of reading and visiting is the opportunity it gives one of becoming acquainted with articles of cookery new to them. I believe there is no neighborhood but has some edible for the table peculiar to it, and I think it a pleasant duty to sow our grains of knowledge broadcast, and aid each other to obtain that variety so conducive to appetite.

I do not pretend to say that the biscuits of which I set out to give you the recipe are anything new or rare. I don't know but they may be manufactured in every State in the Union, but, never having seen a recipe for them in any book or paper, nor met with them in my travels through other States, either in hotels or private houses, I have come to the conclusion they are indigenous to our State, and are Maryland biscuits and nothing else.

I do not speak of them as possessing all the virtues, neither would I wish them as a standby, for I think nothing should take the place of sweet, wholesome, light bread, raised with yeast; but they are certainly nice for a change, convenient—being good either warm or cold—invaluable for sandwiches for lunch, travelling, picnics, &c., and will keep fresh a long time.

But the trouble was, I could not obtain a correct receipt for making them; everybody said they were easily made; the main thing was to pound them well, as that was what made them light; but they could not give the exact proportions for mixing. In despair, I applied to an old colored woman, who made them to perfection, and, *en passant*, I will give you the result of our conference:

"Aunt Dinah, will you please tell me how you make your biscuit? Yours are so nice that I want the recipe."

"Wy, bless yer heart, honey, dey's nuffin to make; ole Diner don't have no 'eeit nor nuffin, and her bixits is allus good."

"Yes, I know, Aunt; but there are some people have such a genius for cooking that, no matter how they mix anything, it always comes out right; but I'm not one of that kind, and I know I won't get them right, unless you tell me exactly how much of everything to put in."

"Well, honey, jest yer take a pan of flour—and it must be good flour, too—and a clever-sized lump o' shortnin' and a smart pinch o' salt, and some water, and tote it to de bixit bloek, and poun' it as if ole Niek hisself was in it, make dem out de size of a cake o' sassage, hab yer stove 'jis so, shove 'em in, and when dey's done take 'em out, and dat's all."

I was disappointed; but, after all, her recipe was as definite as that "ob de white folks," for all had told me to take a *pan* of flour and a *lump* of lard.

Grammar informs us that "a" or "an" are the only indefinite articles we have, but I have found out another, and that is "lump;" for, after wavering between one the size of a walnut and one the size of your fist, you are in a miserable state of indecision whether, after all, one the size of your head was not intended. So, in our recipes, dear friends, don't let us have any *lumps*, please, for some of us are so stupid we don't know how much it is.

So, having exhausted all available sources of information, with about the same result, I set to work to find out by myself, and, by dint of measuring, and

weighing, and experimenting, and spoiling, I can at last make them as good as Aunt Diner's, and if any lady tries my recipe and succeeds, I shall be gratified.

To two pounds of flour add two ounces of lard, well rubbed in, one table-spoonful of salt, and enough of cold water to make a dry dough, (it takes about a pint), put the water in a little at a time, so as to be sure not to get it too moist. Then work the dough until in shape, lay it on a solid place, like a meat-block, and pound with the back of an axe, for half an hour or more; if it cuts through the dough at every stroke, so much the better. When it is flattened by the blows, fold it up and pound again, but don't add a sprinkle of flour after it is first mixed. After being pounded awhile it will blister, and, if you pull off a piece, will snap, which shows it is getting light. When ready to mould, do not cut them, but pull off pieces about the size of an egg, mould them in round balls, and flatten them with your hand, stick with a fork, and bake in a quick oven about half an hour. Some persons are careful not to brown them, but I do not object to seeing them a little browned, and they must be thoroughly baked to be good.

The biscuit-block and pounder are as necessary to a Maryland kitchen, in any county below Cecil, as the coffee-mill; many have pounders for that particular purpose, made of a short bar of iron, with a long wooden handle; but many use an axe, and it answers just as well.

I cannot say that pounding biscuits is a sovereign remedy for back-ache or weak wrists, but I think they are worth a little toil, and if I happen to see any that I consider better than my own, I will try to capture the recipe, and if it has no *lumps*, nor *pans*, nor *pinches* in it, I will share it with my CABINET friends.

**English Muffins.**—I have tried several times to make English muffins, but have not succeeded very well. If any of our CABINET friends could tell me, they would greatly oblige,  
S. J. B.

**Salt in Sickness.**—Dr. Scudder remarks: "I am satisfied that I have seen patients die from deprivation of common salt during a protracted illness. It is a common impression that the food for the sick should not be seasoned, and whatever slop may be given, it is almost innocent of this essential of life. In the milk diet that I recommend in sickness, common salt is used freely, the milk being boiled and given hot. And if the patient cannot take the usual quantity in his food, I have it given in his drink. This matter is so important that it cannot be repeated too often, or dwelt upon too long. The most marked example of this want of common salt I have ever noticed has been in surgical disease, especially in open wounds. Without a supply of salt the tongue would become broad, pallid, puffy, with a tenacious, pasty coat, the secretions arrested, the circulation feeble, the effusion at the point of injury serious, with an unpleasant watery pus, which at last becomes a mere sanies or ichor. A few days of a free allowance of salt would change all this, and the patient get along well."

**Cottage Pudding.**—Two eggs, half cup sugar, well beaten together, add five tablespoonfuls melted butter, stir well, then add cup of sweet milk, teaspoon of soda, two of cream of tartar, two and one-half cups of flour; bake in square tins and serve with sauce made as follows, which is nice for almost any pudding: teacup of sugar, teacup of vinegar, teacup of water; set over the fire and when it boils add a tablespoonful of flour and butter rubbed together.

**Borax used in Washing.**—Quarter of a pound of refined borax to five gallons of water; powder the borax; dissolve it in boiling water, in the above proportion, and use. It is an excellent bleacher, and may be used for the most delicate laes even; it also saves soap. A little pipe-clay dissolved in the hot water cleans very dirty linen with half the soap required without it.

**To remove Ironmoulds.**—Wet the spot; lay it over a hot-water plate, or strain it over a basin with hot water in it; put a little salts of lemon on the spot; wash it as soon as the spot is removed.

**To take out Mildew.**—Mix soft-soap, powdered starch, half as much salt, and the juice of a lemon. Paint both sides of the linen with a brush; put it out on the grass till the stain comes out.

**Cleaning Coat Collars.**—Mrs. C. Montrose writes: "For cleaning coat collars and all woolen goods, I recommend the Soap-tree bark (*Quillaya saponaria*), which can be procured at the drug stores. Break a piece about two inches square, into small bits, and pour over it a half pint of boiling water; let it stand an hour or two, then sponge the collar well with the liquor; a second sponging with clear water will clean it nicely. Both washing and rinsing water should be as warm as for flannel. We have, by using this bark, washed black and blue Empress cloths successfully and have cleaned hair-cloth chairs, which had been soiled by contact with the head.

**Fruit Pudding.**—One bowlful of nice thick cream, two eggs, teaspoon saleratus; mix and roll it nearly an inch thick, then spread with fruit and roll up and boil or steam in a sack for two hours. Eat with cream and sugar.

**Tapioca Pudding.**—Put eight large spoonfuls of tapioca to three pints of milk and let it become milk-warm and soak till it becomes soft, then mix with it two spoonfuls of butter, three eggs, well beaten, half cup of sugar, half a nutmeg, and bake immediately. Excellent, hot or cold.

**For a Cough** roast a large lemon very carefully without burning it; when it is thoroughly hot, cut and squeeze it into a cup upon three ounces of pulverized sugar; take a teaspoonful whenever your cough troubles you. It is as good as it is pleasant.

**Two ounces** of common tobacco boiled in a gallon of water is used by the Chatham street dealers for renovating old clothes. The stuff is rubbed on with a stiff brush. The goods are nicely cleaned, and, strange to add, no tobacco smell remains.

**Unslaked Lime** is excellent for cleaning small steel articles, such as jewelry, buckles, and the like.

**Baked Indian Pudding.**—Boil one quart of milk, and while boiling stir in corn meal till quite thick and well scalded; sweeten with molasses to taste, say one cup. Put in a baking dish, pour on one quart of cold milk, drop several pieces of butter on as many points, add salt, and put in the oven and bake from one and a half to two hours. A little experience will get it just right. This pudding has the merit of cheapness as well as ease of making, and great excellence; eaten without sauce, and cold or hot.

**Before washing** almost any colored fabrics, soak them in water, to each gallon of which a spoonful of oxgall has been added. A teacupful of lye in a pail of water is said to improve the color of black goods. A strong tea of common hay will improve the color of French linens. Vinegar in the rinsing water, for pink and green, will brighten those colors; and soda answers the same end for both purple and blue.

THE RUBBER PAINT CO., OF CLEVELAND, OHIO,

MANUFACTURE

## The Best Paint in the World.

As evidence of which, the necessity of their establishing the following Branch Factories will abundantly testify:

## WINTER BLOOMING ROSES.

There is no flower that will give greater pleasure to the amateur florist than winter blooming roses. But these cannot be had by lifting old plants that have bloomed during the summer, or by slips planted a few months before they are wanted to bloom. They must have a year's growth, and good care during the summer months. In the first place, you want a good supply, and of the best kinds. I often see the question asked, "What are the best roses for winter bloom?" and then comes a long list, and a good one, perhaps, but rather puzzling to one who has had no experience in the matter. I have found the White Daily to bloom more freely in winter than any other rose, and a Hermosa will repay you for your trouble, with its fresh, pink flowers; then you want a red one, and the Agrippina is the best; and I never can dispense with the Safrano's lovely copper-colored buds. If you want a still greater variety, the Isabella Sprunt is a beautiful Tea Rose, of a pale Canary yellow. All these require the same treatment. Plant the slips in the fall, either in a saucer of wet sand placed in the sun, or a box of damp earth, whichever you succeed best with. When well rooted, pot, using small pots at first, and as roots appear through the opening in the bottom, re-pot, using always one size larger pot and good, rich earth. Soil taken from an old hot-bed mixed with sand and street-sweepings I find the best. If you have not the hot bed to fall back upon any good loamy soil will do, provided it is free of worms, for their presence checks the growth of these young roses very soon, and makes the earth hard and sour. They should be kept during spring, summer and fall, on a stand where they would have morning sun without danger of being dried up by the heat at mid-day. Their first winter should be spent in a like situation, only in-doors. Wash frequently in warm water, to keep off dust and insects. Pinch off any buds that make their appearance too soon. When the time

comes for taking in house-plants, which in the Middle States is about the middle of October, good exposure they fore when they Force gently with or warm water ammonia in it, once sure you will be rewarded with bloom

quantity before, but only an occasional bud here and there. Treated in this way, they cannot help blooming. To be sure it takes a little time, and not a little patience, and if you begin now you will not have flowers this winter. So while your slips are coming on, you cannot do better than to enclose to some florist as I did, one dollar, and receive in return by mail five beautiful little winter blooming roses, with their buds peeping out now, as if they could not wait till winter. You would find it a satisfactory transaction, I think. But I must not crowd anything more into this talk, for ideas, like plants, are the better for plenty of air and room.

E. L. S.

DESIGNS FOR RUSTIC HOUSE AND BRIDGE.

**Laurestinus for Rooms.**—This is an evergreen Viburnum, and a charming plant. It is the winter belle of English house-grounds, blooming almost alone, but gaily and profusely, from soon after Christmas till the flowers of May come trooping in. It is so well endowed with vigor and versatility as to bear without any faltering even so great a change as that from the foggy air of an English winter, or from the warm rocks of its native Mediterranean, to the dry air of an American living room. It is not unlike our own Kalmias in its appearance, but is more trim in its carriage and more good humored in its nature. Its dark green leaves are wavy, hairy, and borne on red petioles. The heads of white flowers open at first with a soft tinge of rose-color, becoming pure white, showing beautifully on the deep green and purplish red. No other plant in the collection before me so laces the eye so pleasantly. The individual blossoms resemble those of the elder. The plants are easily increased by cuttings or offsets, and they bloom after one summer's growth. Set out again in the spring, either in sunshine or in partial shade. It requires no special care until it is taken up in September and put in a well drained pot, to be sheltered from the severe autumn frosts. In January, if taken into a warm room, and watered well, it will continue issuing new shoots.

## Floral Contributions.

## FLORIDA, THE LAND OF FLOWERS.

While Florida is celebrated as the queen-palace of Flora, and is termed the Italy of America for climate, it has other features, which make it a very remarkable country. The country is filled with lakes, the most remarkable of which we have visited. There is a vast plain where the general level gradually descends into an oblong basin with irregular upheavals upon one side. This is approached through the "Hammoek," (so called, I suppose, from the pendant moss of which beds are made,) where the fertility produced by the wash of the water causes the densest growth of tree and shrub, whose every branch and twig is so heavily draped in long gray moss, amidst whose swaying fringes the serpent-like Muscadine writhes and twists from the Jessamine-carpeted earth to the at once budding and bearing tree tops, that the view is entirely obstructed; till suddenly emerging from this chaos of tropical growth, the astonished vision is greeted by one silvery expanse of tranquil water fifteen miles in extent and bordered by moss-clad trees, which, seen in the distance beneath the oblique rays of a white morning sun, look like marshaled hosts of mermaids emerging from the sea to flaunt and air their dripping garments and ringleted tresses mid the glistening sheen of water and sunshine.

A visitor at Gainesville will wonder at the thousands of opaque, milk and cream-colored bottles, so numerous everywhere that, in scarcity of stone, they are much used for bordering flower-beds. These, in all the fanciful designs of stars, hearts, diamonds, crosses, circles, semi-circles, triangles and other geometrical figures, are beautifully defined by the milk-white bottoms of these bottles driven, mouth downward, into the sand up to the light shade. These contrast beautifully as a dividing line between the verdure and bloom of the beds and the silvery sand of the yards which never have a sprig of grass. This idea of barrenness will not be so appalling to the verdure-loving when they learn that the designs are so artistically arranged as to include all space save that left for walks, which are all the better for being dry and sandy, instead of grassy, muddy and dewy. Here, as a background to these petite parterres, luxuriates perpetual-blooming Oleanders, Cape-Jessamine and Japonicas of enormous size, budding and blooming Orange and Lemon trees, still laden with the golden burden of last year's bearing; and the grand old Century plant actually becomes a nuisance, so wonderfully does it increase in this genial clime. The leafless trunks of immense Crape-Myrtle and Pomegranate trees stand living witnesses of the fuller gayety of spring and summer.

I never lose an opportunity of adding to my stock of tropical plants and Florida curiosities, and perhaps my mode of securing and preserving will benefit others similarly situated. I politely beg cuttings (or offer to exchange seed for them through the mail after my return home), wrap each in cotton sufficient to prevent evaporation from the bottles (colored glass or opaque, to exclude light), two-thirds full of rain water. Allow the slips to touch the water, and hang by a cord in a southern window. When they have thrown out roots an inch long, transfer them to oyster cans punctured at the bottom, drained by pieces of charcoal and moss, filled with sandy loam. To lessen weight I shall shake off the dirt, wrap in damp cotton, pack in boxes in my trunk, and transfer to my Virginia home, where I shall place the shrubs in boxes convenient for wintering in the pit, and set the Geraniums in pots to be

sunk for the summer in a rustic basket; to make which obtain twelve long Grape vines, about an inch thick at the base, drive a foot deep 15 stakes 3 feet long equidistant in a circumference of 16½ feet, causing them to lean out sufficiently to produce a circumference at the top of 18 feet. Stand inside, take a vine, and place the large end inside a stake, then wind out and in till the vine is used up, when splice in another, and so on to the top, drawing the vine tightly and pressing down with the foot; wrap the last round closely with the small off-shoots, and twist three large vines together, sharpen the different ends, stick them into the apertures beside the stakes at opposite sides for a handle; fill with two bushels stable manure, two bushels ashes (throw in old shoes and bones among the ashes), two bushels hen manure, two bushels sand, two bushels leaf mold, with a top dressing of rich garden soil; sink the pots, beginning with tallest and gayest in centre, then a circle of Rose, Lemon, Oak and Pennyroyal Geraniums, another of Phlox, another of Zonale Geraniums, finishing with Verbenas, and Petunias to trail down the sides, with parlor Ivy, Smilax, or running Cypress at opposite sides to run over the handle.

The mosses brought from the lake, after being pressed according to directions in November number of FLORAL CABINET, I shall glue around an oblong strip of mirror (representing a lake) on the lower margin of sky-blue paper, with split twigs bearing graceful bunches of the pendant moss protruding from under the upper corners of a deep frame ornamented with the skulls of birds, fish-jaws and shells found upon the margin of the lake. The tree foliage I shall frame with the cones, burs and nuts which they bear, thus causing picture and frame to harmonize in a natural manner, and secure my curiosities from danger of being injured or misplaced by handling. With the pieces of melted glass picked up on the site of Judge King's burnt house, I shall represent an ice-bound scene, by gluing these pendants to a foundation, sprinkled with white cinder. Miniature caves might be constructed of stalactites from celebrated caverns. At any rate, a miniature Florida will brighten some nook in my Virginia home next summer.

MRS. M. L. SAYERS.

## SMILAX.

Seeing in the CABINET a communication from one of your contributors, in reference to her failure to get the Smilax to bloom, I have thought that a simple statement of my mode of culture might assist some lover of flowers to be as successful as myself.

I received from Mr. Henderson, in the winter of '72, a small seedling of about 3 inches high, which I planted in a small tub about 4 inches wide and of same depth, in fresh earth from the woods, sifted, with a little coarse earth at the bottom, just over the broken china which covered the hole in the tub. In the early autumn it put up half a dozen little shoots (very similar to small Asparagus at that stage of its growth) which, when a foot high, began to put out leaves. I trained it to a frame about 2½ feet high and 1½ wide, all around the frame and then over it, not knowing when it would attain its growth, so that it became a fan of bright glossy green. About the end of February very small green balls began to appear under the little leaves, generally three, but sometimes four, which, by March, opened into very fragrant little white flowers, which, fading and falling, left the seed vessels to grow to the size of an English pea, just one shade lighter green than the leaves, and by August, when ripe, to become a pinkish red.

By that time the tuberous roots had entirely filled the

tub, so I cut it down, turned the roots out, took off some of the smaller clusters of tubers (as you divide Asparagus) just as an experiment, and this summer these tubers have put up shoots longer than the seedling, but not better. I sowed the seed (from the seed vessels described above) the same day on which I planted the tubers, which promise to do as well as the original plant. The original plant, which had grown as described and was then cut down, was re-potted (the roots) in a 6-inch pot, and was put on the south piazza every bright day. It has grown luxuriantly, and, having been trained for convenience, is now an arch 3 feet high, 1½ wide, and about 1 foot thick through, of the glossiest green, with forty-four clusters of flowers, three or four in a cluster, with a delicious orange-flower perfume. During the winter my treatment was, in very cold weather, to keep it in my own room, warmed by a wood fire, to syringe the leaves once a week with rain-water, also, to water it whenever the surface looked at all dry. While growing it requires watering at least once a week, and I used, say, five drops ammonia to a half-pint of water, taking care that the mixture should not touch the leaves, but be poured on the earth, as even that dilution will destroy the foliage. Its culture seems of the easiest, and it is peculiarly desirable for ornamentation, as it takes the light as well by night as day. Every seed planted has germinated, and I have now half a dozen seedlings, each making a little bush about 6 inches high.

NATALIA.

## COBEA SCANDENS AND CALAMPELIS SCABRA.

## HOW TO MAKE THE SEEDS COME UP.

We had tried all sorts of ways we could devise to get the seeds of these most desirable climbers to germinate, but without avail, until this last, which we learned from a practical florist.

We had thought we must begin early; that was our mistake. Warmth was needed, and we could command any amount of it in February. Warm, fresh air, circulating freely, was essential. For that we have to wait until June.

A rough box, slanting at top toward the south, covered—not tightly—with a small old window sash, and set in a sunny angle of the house wall, where the shade of a Larch tree fell at the warmest hour of the day, answered for a cold frame.

The seeds were sown in shallow boxes, filled with light rich earth, and these set on the sand, with which the frame was half filled, to raise them up near the glass. In due time the minute seedlings of the Calampelis, and, a little later, the broad cotyledons of the Cobea broke the soil, and when the third leaves appeared were pricked out into small pots and left in these, in the uncovered frame, on purpose to keep them dwarf, until time to bring them into the house in the autumn.

They were admirable for their fresh foliage and graceful sprays and exquisite tendrils in winter, on a light wire trellis, framing a library bay window, and blossomed freely towards spring.

The next summer the Calampelis mingled its pale green fine-cut leaves and clusters of orange-colored flowers with a dozen other vines—Clematis, Tweedia, Cereus, Adumia, Cirrhosa, Chinese Yarn, Ivy, Sweet Pea, etc., to make a verandah screen; and the Cobea mounted in the snug, sunny angle of a two-story bay window to the eaves, and hung out its large purple bells as bravely and reached out its long purple green tendrils as tender and perfect on the 12th of November as in midsummer.

F. B. J.

## Gossip with Correspondents.

**Ever-blooming Geranium.**—I know of no plants of the ever-blooming Geranium excepting those from my own plant and the friends from whom that was obtained, although, I presume, some florists keep it for sale. The first one I ever heard of was about a year or two ago, and they said the plant had been covered with buds and blossoms continually for five years. If M. B. S. will send me her name and address through the CABINET, I will send her a slip by mail.

LADY CULLUM.

**California Squash.**—I think Mrs. Sarah S. Winslow's "remarkable vine" is what we call the California Squash, and not a pumpkin. I think, in fineness of flavor and texture, they surpass every other variety of the Squash family.

M. S. G.

**Poinsettia.**—In answer to F., who writes on the Poinsettia in the March number of this year, I would state that by pinching back the Poinsettia in August more flower heads are produced and the plant kept in better shape. It is apt to grow too tall for window culture if not checked, and this is done by simply pinching off the end of each shoot that becomes ungainly.

ANNA GRISCOM.

**Agave.**—I wish to know how to make an Agave bloom. I have one which was given to me as a Cactus, and was told it would bloom when it was seven years old. I have since learned it is an Agave, and as it is as much as seven or eight years old, I would like to make it bloom another summer. I have heard the Cactus thrives best on neglect or poor fare; is it the same with the Agave? I have never repotted it (it is in a large pot); is it best to do so?

A. L. MOODY.

**Answer.**—Plant it out during summer, but we do not expect you will make it flower until it is a much larger size than you will find it convenient to have house room for.

**Salvias.**—1. Will someone please tell me through the CABINET what treatment the Salvia Argentea needs? I have one nearly a year old; how long before I may look for blossoms? 2. Does the sweet-scented Geranium ever blossom; if so, what can I do to make mine—a very fine one, two years old—blossom? 3. Can some one tell me what makes the leaves drop off my double Geranium?

LORONA BURNHAM.

**Answers.**—The foliage is the best part of Salvia Argentea, but it will probably flower in the summer. 2. Scented geraniums usually flower very free; plant it out in a dry poor piece of ground. 3. The double Geraniums are probably starved.

**Carnations.**—I would like to ask how to treat Carnations in summer that have bloomed all winter. I have a Begonia Gibsonii with double flowers. It came last spring, from John Sauls, Washington. It had three small leaves close to the pot; since then it has grown about eight inches in height and increased in size, but still has three leaves and no more; the old ones drop as the new ones come. The leaves are a bright glossy green and hairy. What shall be done to it? I have a window garden (one of Whittemore's patent) at a west window, where I have the sun less than three hours, should it chance to be pleasant. There is a zinc pan filled with sand, which I keep moist, and on this I keep my pots. Half way up I have a walnut shelf; at each end I have an Ivy—Irish one side and Palmate the other. A hanging-basket of

Begonia suspends from a hook in the centre. I have kept a record of the flowers I have had so far. In November I had a scarlet Bouvardia all the month, twenty-two clusters in full blossom or just opening at one time; a pink Begonia all the month, fairly loaded down on the end of each branch; Heliotrope all the month; Tropæolum nearly all the month; one Tea-Rose Pink; Petunias. December, Bouvardia fading; Begonia kept in flower until the last of the month; Heliotrope gone; Carnation (La Purite) in full bloom; Chinese Primrose (pink, single), full of bloom; Cyclamen (rosy purple) just beginning; Roman Hyacinths. January, Roman Hyacinths still continue; Primrose, Cyclamen, Carnation, Petunias and Bouvardia in bloom again; Heliotrope in bud; Verbena in bud; Hyacinths and Lily of the Valley coming on fast.

M. J. P.

**Answers.**—Carnations which have flowered all the winter are worth nothing; they might be planted in open ground, and would possibly give a few strong flowers during the summer. The bulbous-rooted Begonias are often uncertain and unsatisfactory plants; plant them in the open ground during summer, it would give them a start, unless the bulb is decayed, which is not unlikely.

**Libonia.**—The March number of the FLORAL CABINET came in due time, and I was quite distressed to find that the printer had made me give my opinion of the Poinsettia "after three months' experience." I am sure I wrote "after three winters," which would make sense, while no one could judge of anything (except that the plant was alive or dead) in three months. Can some one tell me how to treat the Libonia? I had one that looked thrifty and began to bloom, but by the time four or five buds were well expanded, and I thought it was going to be very fine, the leaves began to wilt, and the whole plant looked sick and ready to die. There was no worm at the roots. I cut it back and re-potted—sorry enough to lose a blooming plant.

E. E. R.

**Answer.**—The Libonia is a rather tender plant, and probably received a check from cold.

**Smilax.**—Are the leaves I enclose you of the true Smilax? The vine, when I purchased it last spring, was quite small, and hadn't a sign of a bulbous root; it is now so luxuriant, and the little buds appearing under the leaves are almost in blossom. I fear I may mar its beauty to disturb the roots.

LIZZIE RAINES.

**Answer.**—Yes.

**Cacti.**—I am greatly interested in the genus Cacti, and greatly perplexed too, as to the true names of them. I have what is vulgarly known as the Sword, the Snake or Caterpillar (Creeping Cereus), the Cob, the Tobacco Worm, Pope's Head, Lace, two species of Turk's Head or Crown (have heard both names applied), two different species sent me as Crab's Claw—the one from Texas is perfectly round, the size of a pipe-stem, with scattered spines,—the other is the veritable Crab's Claw, I fancy; it is thin and flat, and the shoots are red when they first appear. I have also a tricorned species, and a native species from Kansas, covered, after blooming, with bright scarlet berries. I should be greatly pleased if some of your readers could give the correct names of those I have mentioned, the color of the flowers, time of blooming, etc. I am forming a collection of Cacti, and would like to exchange varieties with any one who, like myself, is an amateur cultivator of these grotesque but interesting plants. Can you tell me of a work that treats exhaustively the genus Cacti? Like many

others, I should like to know the botanical name of the Onion Lily. Never heard of it before.

Streator, Ill.

KATE SHERMAN.

**Answers.**—No doubt your Crab Claws or Epiphyllum is correct. We are not aware of any book treating extensively on Cacti; such a book would be of much service, and, if well got up, very expensive. Dr. Engelman, of St. Louis, is the best authority on the subject, but, we, believe, has not published any work on it. No doubt there are many varieties of bulbs called Onion Lilies.

**Camellia Japonica.**—Will some one tell me the best method of treatment? Is the Camellia, and also the yellow and the white Jessamine, raised from seeds or cuttings?

SUBSCRIBER.

**Answer.**—Any florist can supply Camellias from \$1 upwards. Never let the plant become very dry; wash the leaves frequently, and do not keep it too hot in winter. The Camellia is propagated by grafting; the Jessamine by cuttings.

**Dry Heat.**—I wish, in your paper, you would give us a list of some plants that we could have in winter that would blossom in a dry heat of hard coal fire. I wash my plants at least once a week, and I think I give them water enough and take good care of them; yet I am discouraged, because they will not blossom like my-neighbors'. I have seen the Geraniums blossom when the dirt looked poor and dry and hard, while mine is rich and soft, and I don't know what the matter is; will you tell me? Mine have grown well, but the leaves looked curled. Can you tell me where I can get a Lobster Cactus?

Sandwich, Ill.

M. A. HOPKINS.

**Answer.**—Any of the plants grown by your neighbors would bloom if you dispense with your dry heat; it might be, perhaps, improved by a vessel of water on the stove; no plants will bloom satisfactorily in a dry room. Any florist should be able to supply you with a Lobster Cactus.

**Tritomas.**—Will the Tritoma bloom the first year; will they stand it out door in winter, and can I have more than one plant in a box and do well? 1. Will the Potentilla and Cobea Scandens bloom from seed the first year? 2. Also the Ipomœa, Bryonopsis, and Laciniata, will they bloom the first year from seed?

Briscoe Run, W. Va.

MRS. J. P. JOHNSON.

**Answers.**—The Tritoma should flower the first year planted out; it is hardy with you. 1. Will flower the second year from seed. 2. The first.

**Achyranthus.**—How shall I proceed to raise Achyranthus from seed; also Coleus and Cineraria? I have searched all the authorities I possess, but cannot find whether they can be propagated in hot beds or in pots. I failed to save but few Coleus over the winter, and my Achyranthus are not fit for new bedders for this season.

H. I. RIEL.

**Answer.**—Propagate from cuttings in a hot bed.

**English Ivy.**—I should be very much obliged if I could ascertain through your columns a statement of the treatment that your correspondent, B. C. Priest, of Hillsboro', N. H., employed to produce such a rampant growth in his English Ivy. The soil used, the position of the plant as to light and heat, condition as to moisture, what stimulants were used, and whether the plant remained in the house during the summer; if in the house, was the room darkened, as we usually darken rooms through the hot days? If put out of doors, was the plant left in pot or put into the earth?

MRS. G. S. POTTER.

## Flower Gardening.

## GOSSIP ABOUT WINDOW GARDENING.

I have some hints on window gardening which will probably prove of some value to those that are always trying to find out different ways of growing and arranging flowers. First, procure a wooden box, quite shallow, and about twelve inches long and eight inches wide, and if convenient line it through the inside with zinc, and punch about four holes in the bottom of the box for drainage. Then proceed as follows: Fill the box with rich dirt—I think what is called chip dirt is very good, as I have used it for growing plants and they seemed to thrive splendidly—then mix with this chip dirt some leaf mould, if it can be procured, and if not, just a little sand and dirt will do; now you have your box ready to plant your flowers; so you may choose just what flowers you like. I have a box in which is planted Coleus, Ivy, Verbenas, Portulaca, Wandering Jew, and thus they form a miniature window garden. I think that if one would plant in a box a row of Hyacinths, a row of Tulips and a row of Crocuses, and have them all bloom at the same time, it would be a beautiful sight, and in winter who would not enjoy them? I think it is so cheerful to see flowers in winter—even green leaves are pretty in winter. I would advise every one to grow the Green Wandering Jew, and keep it through the winter, as it is quite easily kept; if watered occasionally with ammonia water it will keep green and grow luxuriantly through the winter. We have some growing in a hanging basket that has grown to the length of six feet and nine inches, and every one that sees it admires it; it is the longest one I have ever seen. When you have your box all filled with plants you can ornament it on the outside by covering it with rough bark, which can be procured by taking a walk in the country around the woods, and then when it is covered, varnish it with Damar varnish and it will be quite pretty. Another pretty ornament is to take a bowl of water and put in it two sweet potatoes, and in several weeks they will sprout and throw out their green leaves, and it will be a beautiful vine, and can be trained in any manner which the taste of the person may desire.

And still another beautiful window ornament is to have a Wardian case filled with Calla Lilies and Water Lilies and Lycopodium. A good way to make a Wardian case is to procure a common table and then to take off the top and turn it up (the wrong side up) and line it with zinc; then get four window sashes, one for each side and one for each end, and also one for the top, and it makes a very cheap ward case; and as ward cases are very expensive this will not exceed, I do not think, more than five dollars, if it does that much; and you cannot get one all ready made for less than twenty-five or thirty dollars; so I think this information will be prized very highly. Another ornament is to get a large white sponge and plant in it wheat, grass, flaxseed or rice, and place it in a saucer or plate filled with water and immerse it daily, and in a week or two it will become green, and then it can be suspended in a window with a picture or common cord run through it.

LELIA S. CAMPBELL.

## VERBENA; OR, HOW I RAISE THEM FROM SEED.

There is no plant that repays one so well, or gives greater satisfaction for very little care, as the Verbena. Only plant them in a rich soil in a sunny spot and they will repay you, from the beginning of summer until killed by the frost, with a greater wealth of bloom than almost any other plant one can cultivate; and, as they are one of my favorite flowers, I want to speak a few words of praise for them, and give some hints about how to raise them from the seed. Some few years ago we used to buy our Verbenas from the greenhouses, as we never succeeded in keeping more

the stove. It must not be kept very close or it will kill the seed. I sprinkled them every day to keep the ground moist, and in three weeks they began to come up. They all had the seed sticking to them, making them look like little sky-rockets. When the seed began to come up I took my box and set it by the window in the sun, and soon the little leaves began to grow, and I had as fine plants as I would wish to see. Every few days I would turn the box so as to keep them from growing crooked. If they are very thick some of the biggest plants can be transplanted in small pots. About the middle of May I planted them out in the beds, setting them about two feet apart. I had the soil made rich, and in a little while they covered the whole bed. I planted near one hundred plants that spring, and never would wish for better success than I had that summer. We had almost every shade and color that there is of Verbenas, and more than half of them were sweet-scented ones. No one, until they have tried it, can realize the pleasure it gives in watching them and seeing some new color or shade opening every day, and wondering what the next one that opens will be; for when we buy them we know just what colors they are, therefore there is no surprise awaiting us, as there is every day if we have a bed of seedlings. Verbenas! The more flowers you cut from them the more they bloom! Every spring since this time I have raised my Verbenas in this same way, and have had as many as I have wanted, and have given a great many to my friends. At one time they were one of the commonest flowers we had, for we had so many of them. I would not think of buying them as long as I can raise them from seed. Perhaps every one will not think as I do, as every one does not think alike; but I think if they try it once and succeed as well as I did they will think as I do about it.

M. M.

**Pretended Flower Lovers.**—Frequently lady friends will call to see me who will declare themselves passionately fond of flowers—go into ecstasies over a Rose, a Lily or a Hyacinth, and wish they had flowers like them; but let me be engaged in forming a club for such, or bulbs, and ask them to join me, then comes the cry of want of time to attend them, scarcity of money, ignorance as to their culture, all of which are trifling excuses, when, at the same time, they are keeping pace with extravagant fashions and reading all the light literature of the day. If I give them

plants they stick them in the ground, where they will die for want of water or proper care, or perhaps a hen and chickens take up their quarters in their midst. To such I shall deal sparingly, but to the true lover I am willing to divide. I am a genuine admirer of Flora's offerings. I have a relish for them stronger than the inebriate for his bowl. What are the delights a new bonnet affords compared to a bed of beautiful flowers? Why, if I should have to economize in dress to gratify my love for flowers I would wear a bonnet out of date forever.

Ah! my idols,

"You are the brightest things which earth  
On her broad bosom loves to cherish."

M. A. LINE.

A SPRAY OF ROSES.

"Cull we straight the inviting Rose,  
Shielded by the thorn it grows;  
Cull the rose! what boots the smart!  
Countless sweets regale the heart."

than four or five through the winter; and as they were never very healthy-looking plants it would take them a long while to get growth enough to bloom worth anything. I gathered the seed of some five or six different colors, marked them and put them away, and the middle of February I took a box about one foot deep and about two feet long to plant my seeds in; first I had it taken to the horse stable and had the bottom covered with manure, then I filled it up with fine, rich dirt that I had saved to plant seeds in; then I planted my seed quite thick and set it behind

## The Flower Garden.

### THE WINDOW GARDEN BOX.

Owing to the superior advantages of the garden box over the long-used and troublesome flower pots, it is destined to become more and more popular every season. It is a true case of "love at first sight." Sixteen different parties have had boxes made and filled within the last three weeks after seeing ours. The gentlemen universally admire them, which is not always the case with a stand of flower pots. This fact alone is enough to recommend them. Pots and vases are not to be entirely discarded, for we must have our specimen plants, such as the English Ivy, which few can do without, the larger ferns, and now and then a cactus; but for the general collection the pots are not desirable, having a dirty, soiled appearance not pleasing to the eye; the smaller ones dry up too soon, causing buds to droop and leaves to turn yellow. Pots cramp the roots, which accelerates the bloom, but at the expense of a vigorous, healthy plant.

The garden box gives plenty of root room, does not readily suffer from drought, is more effectually watered, from one to two quarts a day being sufficient, thus giving the leaves their much needed bath, tending to prevent insects by the moisture, and clean leaves. The earth, being in one body, keeps a more even temperature, greatly facilitating plant growth. Broken leaves and handling pots are done away with.

The box or stand can be constructed by any carpenter, costing from two to ten dollars, lasting several years, and will amply repay all outlay in the pleasure afforded the family and friends. If expensively made it can be lined with zinc to preserve the wood, but plants do not do as well—it is air-tight and too cold. Always have a hole in the bottom for drainage. Plants soon dump off with their roots saturated with water, unless water plants. The outside of the box can be ornamented with mouldings and scrolls of different kinds of wood. A box made twenty inches wide, seven inches deep and four feet long, will do nicely for most windows. It can be varied to suit taste and convenience. Raised to the height of the window sill, always have castors on the legs. Fill with soil made of one bushel leaf mould from beech and maple wood, oak leaves are too acid; one bushel well-rotted sod or pure loam, one-half bushel sharp plaster sand, one-half peck fine charcoal; it adds deeper green to the foliage and sweetens the soil; one quart air slacked lime, for worms. If winter blooming plants be selected, according to the location the more so the better, an abundance of bloom can be had the entire winter.

For centre of group select a blooming Calla, it is unsurpassed; a Coleus one side—a Coleus Verchaffelti is one of the best—a Rose Geranium on the other, a good Madeira Vine in each end, Carnations and China Pinks next the glass, Primroses on the opposite side, filling in here and there with Oxalis, Smilax, Sweet Alyssum, Cyclamen, Centaurea, fern, mosses and many other plants fancied by the possessor, either for beauty of leaf or flower, as a winter plant. Hanging baskets suspended above are a decided improvement. A tenfoot wire rod fastened at each end, for the Madeira Vines to climb over, completes the picture.

PENSEE.

LILIUM LANCIFOLIUM RUBRUM.

### MY FLOWER GARDEN.

This spring, my place being new, the front yard had to be filled up to the height of two feet. The soil being so poor I was obliged to take three or four inches of the poor soil out of my beds and carry dirt in a bucket or a wheelbarrow where I could find it. I even went to the woods and got leaf mould. My son, twelve years of age, being a great lover of flowers, like myself, assisted me in my wonderful work. My neighbors would say, "Her labor is in vain." My husband having made me a hot-bed, I purchased seeds from two or three florists. Nearly every seed came up. By

the time my plants were ready to set out, my beds were ready for the plants. My son laid out my garden, which was neatly done—a long bed each side of the walk, at each end a round bed, with four three-cornered beds, and the centre was laid out as given in the April number of the FLORAL CABINET. One bed was filled with Asters, which is now a beauty to behold. My Balsams were as large as roses, nearly all of them double, twenty-five different colors, seven and eight inches in circumference. My Candytuft is in bloom for the second time. When it is nearly through blooming I cut all the seed pods off and it will continue in bloom a long time. The Brunhecome, or

Swan River Daisy, is a beautiful bordering plant, and is a constant bloomer; there is a number of colors. The Double Portulaca is another. They look so much like roses I would name it Rose Moss. Gaila is a grand bordering plant. The Convolvus is another worthy of cultivation, and the fragrant Mignonette, which perfumes the whole air, and delightful Alyssum. Every one is so well acquainted with Phlox Drumondi, we could not dispense with that glorious plant in our gardens. Mine was a perfect beauty. My Verbena bed also made a grand display, and were noticed by all who passed by. They more than pay any one for their labor, especially the bright-eyed ones. The Petunia is another plant that thrives, and doubly pays any one to see the beautiful colors. These bright colors make such a beautiful display for fall flowers. The fragrant Mirabilis Peru. How we welcome their greeting at evening and morning, and bid them adieu at midnight. There is the beautiful Cassia plant, a native of our Western prairies; its habit is like that of the Sensitive plant; it has a bright golden flower with dark centre. Those who never cultivated it I think would be pleased with it. There is another, the Silene or Catchfly, a beauty for bouquets, and Phacelia Ageratum is a perfect gem of beauty. Cacalia, or Flora's Paint Brush, makes a grand display on account of its brilliancy. I think my pinks are as beautiful as any in cultivation. I purchased seeds last

spring and to-day I have counted forty different colors. They are mostly double. They are as serviceable as any flower, and are very nice for button-hole bouquets, which most of the gentlemen are fond of. What is nicer for a bouquet than the beautiful Pinks? The Calliopsis is another showy plant, a constant bloomer until Jack Frost lays his deathly hands on it. The Foxglove, Day Lily or Funkia, and Forget-Me-Not, the Dahlias, Gladiolus and Campanula, these we hardly know how to get along without.

MRS. MARY J. STUMPFER.

Binghamton, N. Y.

## Stories.

## DOMESTIC DIPLOMACY.

"I think you are very hasty, Mr. Parsons; very hasty, indeed."

And the little woman became erect at once in her chair, her hands snapped together like a pair of scissors, and her lips shut down firmly over her teeth.

Mr. Amos Parsons elevated his eyebrows, assumed a gruff look of superiority, and cleared his throat with a senatorial air.

"Miranda, be kind enough to remember that that girl is *my* daughter—"

"I suppose ma has *some* claim to me, hasn't she?" interposed May.

"Be silent, Miss. I want no more of your impertinence," retorted Amos, throwing back his head and drawing down his brows. "As I was about to say—her welfare is my first consideration, and as she shows such a lamentable lack of foresight and common sense in choosing a husband, I must choose one for her."

"You may choose a hundred if you want to; I'll never look at one of them!" cried May, bursting into tears.

"Hey day, young woman, so you're getting above your father, are you? Ahem! Mrs. Parsons be kind enough to take that rebellious girl out of my sight. Then return to me and we will continue our conversation." And locking his hands under his coat-tails, he strutted to the other end of the room and gazed out upon the garden.

"I'll run away with Fred—that's what I'll do!" exclaimed May, stamping her foot.

"I would, my dear," said her mother, with a doleful shake of her head. "Make me all the misery you can."

The husband and father, lord and master of this happy family, now retraced his steps, and, pausing before his wife, folded his arms very deliberately and twisted his face into one grand scowl.

"I thought I asked you to remove our daughter, Mrs. Parsons. Are my wishes to be disregarded in everything? If so, the sooner I know it the better. Am I the head of this family, or am I a useless member?"

"Such conundrums are very stupid," said May, wiping a tear out of one eye and smiling out of the other.

The wife and mother could not restrain a laugh. Instantly Amos' cheeks flushed red, his eyes gleamed, his forehead looked like a map of the Rocky Mountains.

"So I am to be ridiculed, jeered at, scoffed at, and I?" he roared, thrashing his hands together. "I am to be treated first as a child and coaxed with sweet words, then as a tyrant, and reproached most bitterly, and then as a clown and haw-hawed at! Fire and blazes, do you suppose I'll stand all this quietly? Five minutes ago I would have given you a hearing; I would have tried to see something decent in this noodle of a Morton—"

"He isn't a noodle!" broke in May, spiritedly.

"Shut up, I tell you!" howled Amos, jumping at least ten inches from the floor, and swinging his arms violently. "I won't hear a word; I've heard enough. He is a noodle—ay, he's more, he's an ass—he's anything I may please to call him. As I said, five minutes ago, I would have tried to see something sensible in the fool—"

"He's not a fool, Amos!" interrupted Mrs. Parsons.

"Sulphur and lightning, madam, will you be quiet; will you give me a chance to speak? I say he is a

fool, and always was, and always will be! I won't be contradicted; I won't be argued with! Once for all, I tell you, girl, that you shall never marry him; and I tell you, madam, that if you ever speak his name again, or give that daughter of mine one ounce of sympathy, I'll leave you both! I'll go to the ends of the earth! I'll—I'll—hang it, madam, if you look at me so, I shall lose my patience—I know I shall."

And, with a succession of grimaces and contortions, he flung himself into a chair, and began mopping his brow with his handkerchief.

Mrs. Miranda Parsons at once twisted her chair round, facing her lord, lover and protector. There was more fire than water in her eyes now, and though pale, she was by no means faint.

"M-i-s-t-e-r Parsons, you have chosen to get angry with me, your wedded wife."

A solemn, impressive pause now ensued, and the lady looked volumes of reproach upon poor Amos. To add to the effectiveness of the scene, May began to cry and sob hysterically.

"But, sir," again the matron's voice broke forth and clear, "you cannot trample on my feelings with impunity. I may be a woman—"

"Now, Miranda, be reasonable."

"Be reasonable! He asks me to be reasonable, as if I had not put the case altogether too mildly! Oh, man—man, how little you know of woman's charity! Why, I have not shown up your severity, your violence, in one-fourth of its real strength."

"That's true, mother," sobbed May.

Amos groaned and locked his hands over his head.

"No, indeed; and yet you accuse me of being unreasonable, as if I had hurled reproaches and epithets upon you!" continued Mrs. Parsons, beginning to weep. "But I am used to unjust accusations, and I can bear them; yes, I can bear them, until the final day comes that shall remove me from all my troubles! Then, Amos Parsons, you will think of my love and my kindness, and the bitter things you have said to me to-night will all come back to you—yes, all of them—and you will wish your lips had withered before you ever uttered them! And you will call my name, but I shan't answer—my voice will be still—"

"I wish 'twas still now," thought Amos, growing very restless under this steady fire.

"And you will look back to the days when we were happy together, and—and—oh, my heart will break! How can you sit there unmoved, you callous man? How can you think of this and not tremble? But why do I ask? Why am I fool enough to wonder at your indifference, when you have threatened to leave me and go to the ends of the earth? When with uplifted fist you have sworn horrible oaths—"

"I didn't swear—I never do—it's a mistake."

"Oh, yes, you did, pa. You said sulphur and lightning," interposed May.

"Yes, sworn horrible oaths, and forbade me to speak to my own child, or to give her consolation in her grief! Oh, I never dreamed I should see such misery as this!"

"Nor I either," mumbled Amos, wiping the perspiration from his brow.

"What do you mean by that, sir?"

"The same as you did, my dear; exactly the same as you did," he hastened to reply.

"You don't—you mean that I make you miserable!"

"I don't! I don't!"

"Yes, you do; words can deceive me no longer!" she ejaculated, wringing her hands and sobbing hysterically. "Oh, no, I see their hollowness—I feel the falseness of everything! Oh, that I could have died before this canker entered my soul!"

"Oh, father, she's going to fall!" cried May, springing up and running toward her mother.

"Grape-shot and camister, she's fainted sure," said Amos, as he caught his wife in his arms. "Run, May, get camphor—water—brandy—ammonia—wine—anything. Oh, gracious goodness, why didn't I hold my tongue? Now she'll have a sick spell. Minnie, Minnie, dear, how do you feel? Can't you speak to Amos, your own Amos?"

She could, but she wouldn't. It was rather interesting to hear his fond, anxious words, and to open one eye just a little, when he wasn't looking, and see his expression of mingled solicitude and perplexity. Presently May returned with a bottle of Madeira in one hand, a basin of water in the other, and a phial of camphor under her arm. Amos bathed his wife's face and hands, and forced a little of the wine between her lips. At length he had the gratification of seeing her revive.

"I feel very ill, Amos," she whispered. "I must retire at once, and you must send for the doctor."

Amos clutched his hat and made one gigantic leap for the door. As he reached it it flew open suddenly, and the lord and master of the Parsons household staggered backward, holding his nose with both hands. At the same instant there entered a handsome fellow, with bright, blue eyes and light, curly hair.

"My dear Mr. Parsons, I beg your pardon."

"Don't dear me, sir; don't attempt your arts on me, sir. I'm not a fool if the rest of my—"

"Amos! Amos! the camphor, quick, I'm in such pain! Oh, how can you neglect me so?" cried the invalid, with a succession of moans.

"Yes, my dear, yes," stammered Amos, turning from Morton and bending over his wife. "Don't say neglect, don't; who ever loved you as I do? It makes me miserable to think of your being sick. Oh, dear Minnie, I can't stand it, nohow! But what is this Morton here for?"

"Don't speak of him, it excites me so, I'm feverish. Let him stay; if you have trouble with him I shall die—I know I shall."

In the meantime Fred and May were holding a little conference at the other end of the room.

"Is he still against us, darling?" queried the lover, stealing his arm around her waist.

At that moment Amos looked around and the young people separated. The old gentleman was about to vent his wrath upon Fred, when Mrs. Miranda was suddenly afflicted with a terrible pain in her head, and demanded cold cloths immediately.

Three days passed. Amos sat alone in his back parlor, looking pale and troubled.

"I am the remnant of Amos Parsons," he exclaimed, lugubriously. "Look at me—behold me, an animated domestic ruin—a creature forlorn and desolate. For three days I've lived on beans and muddy coffee; for three days I've wandered around this house lonely and wretched. My wife mustn't see me; the doctor says her trouble is mental—caused by excitement. Oh, gracious, how terrible is the responsibility of a husband! And yet that fool of a Morton wants to put himself in the yoke! I have a mind to let him."

"Oh, do, papa," said a sweet, pleading voice.

"Eh, you rogne, you're willing enough? Well, he may have you, for all I care."

"Oh, thank you, my dear Amos," and Mrs. Miranda appeared.

"Receive my gratitude, my dear sir," and Fred. Morton came in at the other door.

Amos stared, and began to suspect that his wife had a purpose in her illness.

**E. C. ABBEY, Buffalo, N. Y.**

NEW YORK, JULY, 1875.

**WAXEN HOYA.**

I have a long and familiar acquaintance with this plant, having raised one from a slip twenty-five years ago, and at the present writing this no longer youthful vine has a dozen clusters of blossoms and as many as fifty clusters of buds, fresh and beautiful as the first buds and flowers that gave me such exquisite delight.

The plant itself has been cut back once, because it got frozen. At that time it had runners eight yards long, and was trained from a low stool around a window, completely shading it, and across two sides of a room sixteen by eighteen feet. Now, it stands on a window shelf and forms a compression at top, first climbing up the side of the window, then twines around a picture, and makes a less luxuriant drapery above another window, then creeps on to the corner of room.

The leaf of the Hoya is of a dark green color, and has a smooth, glossy surface, blade oblong, base slightly tapering, apex acute, margin entire. It is feather veined, and thicker than any other leaf I know, save those belonging to the cactus family. The framework of veins and veinlets support a pulp of green matter, quite moist, and for this reason a leaf rarely turns yellow. One perfectly grown is from four to five inches in length, and two in width, and somewhat resembles the Laurel; stem round, and the end of a fresh tendril looks like a mouse's tail, and one needs to be careful not to break it, as it will not sprout again, and it sometimes grows three-quarters of a yard without leaves. The plant itself is very beautiful, of slow growth the first year, likes a soil of decayed wood or chip dirt, has few roots, needs warmth and moisture, especially when in bloom. But the flowers are its crowning glory, being spicily fragrant, and looking more like our northern Arbutus than any

other flower I can compare it with, yet are unlike that save in color and form. They grow in clusters of from twenty to twenty-five, the woody stem and receptacle appearing the year before and producing flowers often six times in a season, buds forming while flowers still hang on the stems, and continuing to flower year after year, I do not know but through an infinite series. The blossoms look as if made of flesh colored velvet, corolla star shaped, with five points not separated into petals, a waxen inner star, also five pointed, of a yellowish color, part next the pistil, dark orange. I think the inner star answers to the stamens. The cluster is in botany termed an unoped, the flower stems or pedicles being nearly of equal length, having no rachis. It naturally begins to flower in February, continuing until July, the buds growing very rapidly. It is much more beautiful than the English Ivy for a window, or for festooning around the top of the ceiling of a room, but does not twine round pictures quite so gracefully, and needs a frame, or to be fastened to the wall by ribbons and tacks, as it does not cling and is heavy. Should be washed with a sponge or cloth, leaf by leaf, to keep off dust, in luke warm water with a little soft soap in it, now and then.

M. J. ALLEN.

**ILLUSTRATIONS.**

The beautiful designs of rustic work on the first page and page 104, are taken from the originals as made by O'Brien Bros., of Yonkers, N. Y., and are exceedingly tasteful. Their diameter is from 15 to 20 feet. Page 100 brings before us a charming spray of Roses, of which we are now enjoying so many, and gathering such fine specimens. This month the lovely Lilium Lancifolium Rubrum will begin to bloom, which, to our fancy, is with the Auratum fully deserving the title of Queen of the Lilies. Pages 105 and 109 are sketches of sweet home life, needing no help of description for full appreciation. On page 108 are

DESIGN FOR RUSTIC SUMMER HOUSE.

several pretty devices showing how our parlors may be ornamented with tasteful floral designs, for which the gardens are now giving us such an abundance to fill them.

**GET UP A CLUB FOR SIX MONTHS**

FOR

**The Ladies' Floral Cabinet,**

The Handsomest of all Ladies' Journals.

Our subscribers have hundreds of friends who would take the CABINET for six months, if it is only shown to them. To encourage all to make a special effort to extend our circulation, and thus help the purpose and success of the paper, we will take subscriptions as follows, to begin with the July number:

**For Six Months.**

Price	65 cents for 6 months, postage prepaid, but without chromo.
" 75 "	With choice also of either chromo—Gems of "The Flower Garden," or, "My Window Garden."
" 90 "	with both chromos.
" \$3 00 for club of 5 without chromo.	
" 6 00 "	" 10 " but extra paper free.
" 3 50 "	" 5 with 1 "
" 7 00 "	" 10 " 1 " and extra copy paper free.

**Premiums for Clubs for Six Months.**

1. Ivory Paper Cutter and Folder,	club of 8
2. Book. Every Woman Her own Flower Gardener,	" 5
3. " Window Gardening,	" 15
4. Box Initial Note Paper,	" 5
5. 1 Dozen Fine Gladiolus, worth \$3 00,	" 10
6. 100 " 25 00,	" 30
7. 1 Fine named Bulb Gladiolus, worth \$1 50	" 5
8. Lovejoy Weather House,	" 15
9. Any Game in our Premium List, worth 50 to 75 cents,	" 5
10. Bracket and Fret Saw, worth \$1 25,	" 12

**Special Premiums.**

39. One Goodrich Tucker for Sewing Machines, price \$3 00, for club of 10.
40. One Johnston Ruffler for Sewing Machines, price \$3 00, for club of 15.
41. One set Goodrich Hemmer and Binder, price \$1 50, club of 5.
42. One set Metropolitan Hemmer and Binder, price \$1 50, club of 5.
43. One Bottle Payson's Indelible Ink, price 75c, club of 7.

**PUBLISHER'S ANNOUNCEMENTS.**

**Six Months Subscriptions.**—With a little effort each subscriber can send us the name of some friend, or a club, for the rest of the year. We hope all will try. Prices have been fixed as low as possible. So beautiful a journal, on so costly paper, with so many expensive and charming illustrations, cannot be offered as low as other cheap papers, which are not worth keeping. The music alone for six months is worth \$2 at least, and the paper, with chromos, \$1 more—a total of \$3 for only 70 cents.

**Plants for Sale.**—We have several lots of plants, seeds, &c., owing us by florists, which we will sell at 25 per cent. discount from usual catalogue prices. Any one wishing to buy may choose a list from any floral catalogue, deduct 25 per cent. from price, send the order to us, and we will have good plants and seeds sent for the money. As soon as we have traded out these accounts our offer will be withdrawn. Persons not wishing to buy now, but next fall, may purchase from us an order now, at this discount, good for any time it may be presented.

**Household Elegancies.**—We shall issue, Oct. 15, a new book, about the size of "Window Gardening," full of fancy work, home decorations, household art, and elegant ways of adorning a home, with so many exquisite illustrations, that every lady will be fairly crazy with delight when she sees it. We regard it as the most desirable ladies' book ever published, and it will be truly the grand Gift Book of the season. Our readers know that anything we issue

is so splendid in style and superior in merit, that, when we make an announcement, it is received with confidence and the most ready patronage. "Household Elegancies" is the finest work we have yet originated, and as a special offer to any one who will obtain 15 subscribers to the CABINET for six months, before August 1st, we will present a copy of this new book free, as soon as issued. Price will be \$1.50, and will be ready Oct. 15.

## Home Pets.

### CANARIES.

Let me tell you of my household pets—my sweet canaries: I have for them a beautiful home—a cage resembling a Chinese Pagoda. I had left them with a friend for the winter. A few days ago I came to spend the spring months with my friend. I looked around for something to make my

watching, with pleasure, and much interest, for a day or two, I concluded that the bucket was not fit for my Queen's palace. I looked again among the children's toys, hoping to find a little basket. I only found a doll's china basin; I thought at once that would look pretty if covered with silk, or bright worsted, and suspended in birdie's temple. I tried it, but did not like it. Then the happy thought occurred to me, why not imitate nature more closely? I flew to the cedar tree, broke off a bunch with drooping sprays, twisted it around, and exclaimed with delight, "Lou, look at

woven the pink worsted threads and the delicate grasses in and out among the cedars. I could but exclaim, "How beautiful!" I am seated in my rocking-chair, watching her to-day, with renewed interest. Would you believe it, she can tie knots, she tucks the pink thread in and out around the cedar, then, to be quite sure that it is tied safely, takes the other end of the beautiful pink crewel—which contrasts beautifully with her soft, yellow feathers—in her mouth and jumps off the nest, suspending her whole weight upon the thread, which draws the knot tightly—a regular Gor-

A MOTHER'S JOY.

birdies a nest. I found a toy bucket of little Mattie's. This I suspended from the roof of the pagoda, and seated myself to watch my Queen build her nest—I have named my birds Prince Albert and Queen Victoria—I supplied her with grass, twigs, and a bit of cotton. She at once began to carry the cotton and deposit it in the tiny bucket. But, after waiting and

my hanging basket?" I remembered I had some rose-colored velvet ribbon in my trunk, up stairs; with it I suspended my artistic hanging basket in birdie's cage. Then I supplied her with rose-colored crewel, broken into pieces as long as your hand, and delicate grasses from the lawn. I went out to dine with a friend. When I came back, my birdie Queen had

dian knot—which cannot be untied, but must be cut.

I wish you could see her now, as she nestles in her rose-colored home. It is said, to be happy, we must have a stock of small pleasures. But this has given me so much delight, I can scarcely call it a *small pleasure*.

E. R. C.

## Ladies' Boudoir.

## SOME ONE TO LOVE.

"So weary, so sad to night!"  
A quick step at the door;  
O'er your face a sudden light,  
As you bound 'cross the floor.

One glimpse of the loved face,  
All sorrow is forgot;  
You're clasped in a close embrace,  
Lip to lip, heart to heart.

"Some one to love"—you feel, then,  
That making one life bright  
Is your mission here; ne'er again  
Will you be sad at night.

No toil seems hard, no sadness  
Hath power the heart to blight,  
Or cheat the life of gladness—  
One cometh home "at night."

To whom you know you're dearer  
Than all the world beside,  
And who to you is nearer  
Than e'er, whate'er betide.

"Some one to love," when weary,  
Making glad, like light above;  
Shining in desert dreary—  
"Some one to love—to love."

## OUR SITTING-ROOM.

BY CALLA D. ONIA.

In this room of ours we will, in the first place, look at the paper, which is a neutral tint, and well calculated to bring out the warm colors of the oil paintings and chronos. The windows should have buff shades (not thick, dark yellow), for the buff will give a sunshiny look to the room the bleakest winter day. Over this, if you wish, you can hang curtains of either muslin or lace, which will bring out beautifully the delicate tracery of vines which may form the cornice. Under each of the windows can be placed shelves, supported by iron brackets, for plants. The shelves can be made of pine and simply painted white, or they may be stained to imitate walnut, with a preparation which any painter can mix at a trifling cost. In each of the windows, of which I have four, can be suspended hanging baskets. If you have not wire baskets a box that will hold earth enough to sustain the roots will do. Plant something around the edge that will droop over the sides; Ivy, Joint-plant or Money-wort are good for this purpose; in the centre put a Geranium, Verbena, or any plant you wish, and, at no expense, you have a pretty ornament. Here, in this corner between the windows, can stand my Ivy box; above it hangs a Swiss scene, in oil colors. A pretty support for the Ivy can be made of rustic work in the form of a cross, for then there can be suspended from the arms hanging baskets of cocoanut shells, or any other simple designs. Between this window and door is just the place for the hanging book-shelves. These, like the shelves for the window, can be stained and supported by brackets, or they may be trimmed with short lambrequins on each shelf, which can be made of black cloth, and brightened by little bits of bright velvet, cut in fancy shapes and stitched on with silk of a brighter shade, or of a contrasting color. Under the shelves can be placed the lamp-stand; and this we will convert from a stiff, square-topped one, into a pretty centre-table, by sawing boards to form a round top for it, which a few screws will fasten in place. Over this may be tacked black cloth, ornamented with *applique* work in bright colors, and the edge trimmed with lambrequins to match; or, if preferred, cloth of one color, crimson or green, may be put on and the edge finished with heavy woolen fringe, tacked on with gilt-headed nails. Next comes the paper-holder; and of these a pretty and inexpensive one may be made of Java canvass, either black, buff, brown or gray, em-

broidered with some simple pattern, or an initial in the centre. Mine is of black, with my initial formed of bright flowers and green leaves; the front and back are tied together with bows of green satin ribbon, and bows of the same ornament the top and bottom. One side of the room is ornamented with arches formed of pressed ferns and clusters of autumn leaves; in the centre arch hangs the "Gems of the Flower Garden," framed with autumn leaves and dried grasses. This frame is easily made by taking a thin board, about an inch larger than the picture, and upon this arrange the leaves, having the largest ones come at the corners and in the centre; then fasten them with small-sized pins, which will not show unless closely examined. A pretty background for picture cords may be formed of rose leaves of different shades pressed, and when dry pinned behind the cords. Something pretty for holding bouquets of dried grasses and ferns are cornucopias of perforated board, or of the silvered or gilt cardboard one can buy. I have a white one, embroidered with tiny acorns in two shades of brown, which is very pretty.

**Parlor Chairs.**—The Rev. Mr. Murray, of Adirondack fame, does not put an over-high estimate on parlor chairs. In his new lecture he says: "I have had experience with such chairs, and speak feelingly on the subject. They know me and I know them. We hate each other. Whenever I meet such a chair I approach it suspiciously. The four little legs grin a malicious welcome at me; the slender back fairly laughs in impish anticipation; the little seat, about as large as an old-fashioned pancake, defies me: O-ho, you great big fellow, you murderer of my companions, I know you. Sit down in me if you dare. But what can I do? The sofa is occupied; the piano stool is under the instrument. I must take my chances. Covering my venture with a joke, I sit down timidly; before half my weight is on it, it begins to crack and threaten. The lady of the house begins to look alarmed. I get off another joke and draw my legs up under me to be ready when the crash comes, and there I sit like the Irishman's frog, who sat down when he stood up, and stood up when he sat down, in deadly terror lest the pesky thing will give out under me, and no man under heaven can have a chair break down under him in a parlor before the lady of the house and not wish he were dead. It is bad enough for a man of short stature and nimble, but for a long, clumsy fellow to have a little chair go down under him with a crash is death. There is such a short distance to fall and so much length of limb and body to dispose of that it is impossible to do it gracefully, and the most pitiable sight in the world to me is to see a long-legged man lumbering up from a parlor floor before the company after such a catastrophe.

**Arrangement of a Drawing Room.**—Morning visitors are generally received in the drawing room. To preserve the apartment neat and to exhibit good taste in its decorations and the arrangement of its furniture, is of some importance to the young mistress of a family. From these, strangers are apt to form an opinion of the character of its proprietor. The drawing room is that part of a private house in which decorations and embellishments are most in place. It is there the graces of social intercourse are chiefly displayed. Everything, therefore, in the drawing room, should be light and elegant; mirrors are here in character, and bouquets and flowering-plants. The drawing room should not be converted into a fancy bazaar or toy shop for the display of a thousand fanciful ornaments, as old china, glass baskets, Spanish toys, flowers made of rice and wax, and other trifles. A more

rational source of amusement, both for the visitants and inmates of the drawing room, may be derived from selections of literature of the day, or from the works of some of the best authors. In the arrangement of the drawing room the lounges and chairs should be placed so as to facilitate intercourse of the visitors without the necessity of a servant entering the room to place them. Ease, not carelessness, should predominate. Plants and flowers are pleasing ornaments in a drawing room, and give an exercise for taste in their choice and arrangement. Occupations of drawing, music, and reading, should be suspended on the entrance of morning visitors. But if a lady be engaged in little needle-work—and none other is appropriate in the drawing room—it promotes ease, and it is not inconsistent with good manners to continue it during conversation, particularly if the visit be protracted, or the visitors be gentlemen. It was formerly the custom to see visitors to the door on taking leave, but this is now out of fashion. Neither is it necessary for a lady to advance to the door to receive her company, who are expected to make their way to her, unless, indeed, great age, or marked superiority of rank require, according to the usages of society, a greater degree of attention.

**Card Etiquette for 1875.**—Informal afternoon and evening entertainments or receptions promise to become frequent this season. The invitations to these unceremonious parties are on cards instead of note sheets. For instance, for kettle-drums or afternoon teas, "Tea at five o'clock," on the lower left corner of the visiting card; the address in the lower right hand corner. For other afternoon receptions cards are also used, with merely the day, and "From three to five o'clock," in the left corner. For informal evening receptions, the invitation is usually a card, with "Thursday evenings," for instance, in the left corner. These receptions continue even through Lent. English papers, both white and tinted, and without lines, are now universally used for social correspondence, and should be of the finest quality, either highly finished or mill finished. Note papers with lines, or fancy French papers, are not considered "correct," and are restricted by etiquette to correspondents who are on terms of great intimacy. A new and beautiful paper is introduced this season termed the "Gray Mot." It is a first-class paper, of a delicate and agreeable gray tint, slightly mottled. The double rep paper is a novelty, and will be used this season. The royal Irish linen paper is still popular, and will remain so for some time. The sizes most in use are the long sheet, folding once into square envelopes and twice into oblong envelopes, and the square sheet folding once into a very long envelope. A variety of other shapes are used, which are made to order according to fancy.

**A Certain New York clergyman**, when he marries a couple, after the ceremony is over, steps up to the bride and presents her with the prayer-book out of which he read the wedding services. The names of the bride and groom, and the date of the wedding, are written on the fly-leaf of the book.

**The Latest New York fashion**, imported from Berlin, is that of early parties. We read that the cards for one of the "swell" affairs of the season have been recently issued, with from "Four to eleven P. M." engraved on the corner. According to the system the blinds are closed and the gas lighted at four o'clock in the afternoon; the dancing begins by five or six, and the ball is over by eleven o'clock. Still another foreign custom imported into New York, which is said to have been started by the Prince of Wales, is for gentlemen to appear without gloves on full dress occasions.

## Household Elegancies.

### HINTS ON THE ART OF MAKING WAX FLOWERS.

Flowers are becoming indispensable as ornaments. No lady thinks her parlor complete without flowers; and when we cannot have natural ones, wax flowers are a very pretty substitute. Handsome ones are costly, but may come within the reach of any lady of taste, with a trifling expense, by exercising patience and ingenuity.

I do not propose to go into a detailed description of the art, but, as my title indicates, give a few hints to the lovers of fancy work, such as I think will give them an insight into the matter.

As a preliminary let us enumerate the materials necessary. By experience I have learned with how few one may obtain satisfactory results. For instance, the number of colors. Dry powders are put up for this purpose by the dealers in artists' materials. For any one having a good idea of the combination of colors the following list will suffice: Ivory Black, Zinc White, Carmine, Chrome Yellow and Prussian Blue; for from these one may procure any tint needed; white wax in sheets (both single and double, as they are styled, the latter being double the thickness of the former, and is used for flowers having thick petals); green wax is to be preferred for foliage, thus saving the trouble of coloring, but for flowers it is better to color each petal separately; wire, of three sizes, very fine thread wire, some as coarse as bonnet wire, and a medium size; steel pins with glass heads, known as moulding pins, two sizes; some arrow-root or corn starch, a little dissolved Gum Arabic, and about a pound of good Plaster of Paris complete the list.

The best way to imitate nature is to have two specimens of the blossom you desire to copy; one to pick to pieces and cut paper patterns from the petals, the other for your model when putting your flower together. If two cannot be obtained, remove very carefully one petal of each size and shape, leaving the flower as nearly perfect as possible. Always have your stem prepared before you begin your flower. This is done by winding a narrow strip of green wax around a piece of wire and rolling it between the thumb and forefinger until smooth. Always fold over the end of the stem, otherwise your flower may slip off just as you finish it.

For the first attempt take a very simple flower, an orange blossom, for instance. This, you see, has five petals encircling a number of stamens. Cut a strip of double white wax three-fourths of an inch long and one-half an inch wide. With a small pair of scissors slit it like a fringe, wind it around the end of the stem, dip in Gum Arabic, then in Chrome Yellow powder, and with the point of the pin separate any that may stick together. Next cut five petals of double wax from your paper pattern; rub these with corn starch on both sides to remove the waxy appearance, always leaving the end clear which is to be fastened to the stem, otherwise it will not stick. Now, lay them one at a time in the hollow of the hand and roll the head of the pin over them lengthwise until they are moulded into shape like your model. Now stick them around the stamens, keeping your natural blossom in view as a guide, and cut the calyx of green wax, arrange it in place and your flower is complete.

For a full blown rose, make a tuft of white thread and fasten on your stem; dip in the gum and then in yellow powder; cut your petals from the paper patterns, and color by rubbing on the dry powder with the thumb and fingers. Some persons mix the powder

with water and apply with a brush, but I prefer the powder dry, except for fine flowers, such as Heliotrope and Mignonette, which I color after they are formed. The dry powder, of course, must be very thoroughly pulverized, and mixed with a palette knife, else streaks will appear on your work. For a Salmon Rose use chrome yellow, white, and a few grains of carmine; for a red rose, carmine; and for the different shades of pink, carmine mixed with more or less of white. After all are colored, mould them into shape with the ball of the small pin, press your thumb into their centres and curl over the edges of some, until the whole reminds you of a rose that has just dropped to pieces. Now arrange these on the wire; stick each one fast as you place it, occasionally giving one a pinch or curl, until your flower is as nearly perfect as the first attempt can be. Lastly, cut the calyx of green wax, and arrange it in place.

If you desire a bud or half-blown rose, mould scraps of wax into the form of a small bud and place your petals around it. Of course you must cover the mould with one or more of the petals.

In making the long stamens for such flowers as Lilies and Fuchsias, wind white wax around coarse thread, in the same manner as you prepare the wire for stems. If they are to be colored, use a brush dipped in wet paint.

To make green leaves, mix Plaster of Paris into a smooth paste and into it press a well developed leaf; when dry, remove your leaf and you have a mould that will last for years. Lay on this mould a piece of green wax, and along the centre of this the end of the wire for the stem; over this lay another piece of wax, press all firmly and gently into the mould; remove, and you have a perfect impression; cut out with small scissors, observing all the points, &c., then twist or curl it over to give it a natural shape. If the leaf is shaded, the color is best applied with a brush, as to rub it with the finger would be apt to spoil the veins moulded in it.

Of course your first attempt will not entirely satisfy you, but "practice makes perfect;" so do not be discouraged if you make half a dozen failures. With Nature for your model, patience and perseverance will bring you off victorious.

C. H. P.

**Pretty Wall Pockets.** or paper cases, may be made as follows: Take stiff pasteboard and cut two pieces for back and front; the back should be considerably the highest; cut long, narrow, triangular pieces for the sides. Now cover all the pieces with rep, velvet, merino, or any nice material; green or crimson will be most likely to harmonize best with walls, furniture, etc. Green paper will do, which must be pasted smoothly on, with the edges all folded over. If the other materials are used they must be nicely fastened with needles and thread. For a border around all the edges, smooth leather cut in strips and pinked or scalloped. There will be a variety of ways to suggest themselves of elaborating upon the description here given, and really elegant articles may be formed. These paper cases may either be suspended by cords or hung upon a nail driven in the wall.

**To Make Straw Picture Frames.**—Pick out from a bundle of straws those without flaws. It takes five for each part of the frame. Arrange them thus: Put one long straw in the centre, a short one on each side, and a shorter again on each side of these; sew them together at the back with some strong cotton. When you have the top, bottom and sides ready, fasten them together at the corners in the form of an Oxford frame, placing the top and bottom ones in front of the sides. Then make four small pieces of three straws in each,

the centre one the longest, and fasten them crosswise to each corner by means of a piece of ribbon tied round; the ribbon is to hide where the parts of the frame are joined together. The picture is fastened in with narrow ribbon, crossed over at the back and brought through between the straws on each side of the frame, then passed over the centre straw through to the back, and firmly sewn; this ribbon has a very pretty effect. A loop of ribbon should be sewn on to the top, by which to hang the frame.

**A Method** employed in Germany to keep rose-buds fresh consists in first covering the end of the recently cut stem with wax, and then placing each one in a closed paper cap or cone, so that the leaves do not touch the paper. The cap is then coated with glue to exclude air, dust and moisture, and when dry it is placed in a cool place. When wanted for use the bud is taken out of the cap and placed in water, after cutting off the end, when the rose will bloom in a few hours.

**Alum Baskets.**—The framework of alum baskets is usually made of thin wire woven in and out, and wound over with worsted in every part, to produce a rough surface. Dissolve the alum in rather more than twice the quantity of water that will cover the basket, handle included. Put in as much alum as the water will dissolve, and when it will take no more, filter it through a piece of brown paper into a saucepan. If you wish the basket to be colored, the dye must be added before the process of filtering. To produce crimson, use an infusion of cochineal and madder: for bright yellow, boil gamboge, muriate of iron, or turmeric in the solution. Blue crystals may be obtained by preparing sulphate of copper, commonly called blue vitriol, in the same manner that alum is prepared. For pale blue, equal portions of blue vitriol and alum; and for green, add to these last ingredients a few drops of muriate of iron. The solution being filtered, boil it gently until it is reduced to half the quantity; put it in a vessel large enough to admit of the basket; suspend the latter from a stick laid across the top, so that both basket and handle are entirely immersed. It must then be put in a cool place where there will not be the slightest motion to disturb the formation of the crystals. It is well to bear in mind that the colored baskets should be kept quite out of the reach of children, as they look very tempting, like sugar-candy, but are decidedly poisonous.

**To Cover Small Tables.**—Small, round tables of plain wood may be made very handsome by covering them with black cloth, velvet, velveteen or satin. A fall of yak lace, four or five inches deep, being an exceedingly rich finish. A strip of the material used for covering the top of the table ought to be put around the edge as a lining to the lace, being careful not to stretch too tightly. If gilt nails are not easily procured, the lace may be simply stitched on.

**Monogram for Horse Cloth or Lap Robe.**—Perhaps the neatest monograms are made of light blue kid, and should be cut out of the kid, and sewn on neatly by the saddler; or, if the preference be given to a monogram in worsted, the braid used for binding can be made into the design required, and sewn on by a handy woman. Those cut out in colored cloth are very neat, and can either be worked in applique of colored cloths worked round in chainstitch, or be done in outline only in chainstitch, or braid. Gentlemen are so particular about their monograms that it is better to get one of the right size printed on paper for approval first, and if either of the letters can be formed by a whip, or a spur be introduced in some curve of another letter, they have a good effect for this purpose.

## Household Elegancies.

## TO ORNAMENT COMMON FLOWER POTS.

BY MRS. C. S. JONES.

It has become so common to ornament the rooms and tables with specimens of living plants, that any mode of adorning the ordinary red pot, in which they are apt to be growing and blooming, becomes at once valuable. There are ways innumerable of accomplishing this, a few of which I have found so beautiful and effective that I feel constrained to describe them to my friends of the FLORAL CABINET.

## BRONZING.

Bronze-powder is to be purchased in many different shades, such as green, olive, rose, silver, etc. To apply any one of these powders to the surface of the pot, paint it with a color made by rubbing up in linseed oil, Prussian-blue, sprual ochre and verditer. While this is still a little "sticky," dust on the bronze powder, dry with heat, and polish with a soft woollen pad, using constant heat, and adding more powder after each rubbing. Another mode is to rub with graphite, a sort of brilliant black lead, polishing with the rubber and varnishing.

## IMITATION WEDGEWOOD.

The color of genuine old Wedgewood is that peculiar blue-gray or gray-green, which we see in some of the old-time pieces of crockery. This ware is very popular in this day for Jardiniere vases, and other like adornments, but is, of course, expensive. A very pretty imitation for the common flower-pot may, however, be made thus: Make some paint of the proper shade, with which cover the entire pot and saucer. When dry, give a second coat, with either enamel paint or the same as used before, afterwards varnishing it. Let this become perfectly dry, then, having obtained a number of sheets of the white embossed paper sold for valentines, or which comes on the inner edge of lace-edged paper; cut out carefully the various devices wanted, such as medallions, containing cupids, gods and goddesses, or figures, also garlands and clusters of flowers. Use great care to keep these perfectly white. When all are cut out, take up each one with fine Gum Arabic mucilage, fill each figure in with bits of tissue paper to keep them from being pressed flat, as the great beauty consists in their fullness and deep projecting rotundity. These layers finished, commence applying the figures in proper groups; for instance, for the centre there is the figure of a maiden, led on by two cupids; roses grow at her feet, and an Acacia spray almost embowers her. An oval border of flowers forms this into a medallion; above and below, at four points, a few inches distant, is a young prince, in mediæval costume, standing by a high-born maiden seated beneath a tree with a lute; a lace border encircles this, and again a border of roses, beyond which is another of Forget-Me-Nots; above and below are classical figures, a hunter and maiden, bearing on their shoulders the infant Hymen, who waves his lighted torch above their heads, etc. Such figures are found on these sheets of lace paper, and when properly applied, are extremely fine. This upon each side of the pot, and a border of flowers, or the lace, will be taken for genuine Wedgewood, or Pelissy, according to the shade used.

## IMITATION SEVRES CHINA.

Another beautiful imitation is that of Sevres.

For this, that lovely shade of turquoise blue is the prettiest, and this obtained in paint, must be varnished with Demar, and polished with a wet pad and powdered pumice-stone, repeating the varnishing, drying

DESIGN FOR FLOWER STAND.

and polishing over and over, until one solid, glassy surface is obtained. Then with clear mucilage apply the lovely figures (sold in the fancy stores, upon fine thin paper), or, better still, procure some fine Decalcomania pictures; figures, flowers, birds, butterflies, &c., in fine, rich colors. If Du Barry, a pale rose-pink ground must be made in the same way as in the

PALM FOR TABLE OR ROOM DECORATION.

Sevres. The centres must be filled with white glossy paint (in ovals), then around and joining this white to the blue or pink, must be garlands of gay flowers.

Upon each side a medallion of different shape, also in white, is arranged in the same manner, introducing a few little Cupids, birds, butterflies, &c., among the roses, the centres filled with groups of Watteau figures. These vases are truly exquisite, and I would urge our ladies to try them.

## IMITATION INDIAN DECORATION.

Paint the pot black, varnish, and obtain a highly polished surface. Upon this arrange small, bright flowers, either those cut from pictures or the Decalcomania; intersperse some gold among them, arrange a large centre piece with the sprigs around it, a vine top and bottom; varnish with Demar. These, too, are elegant, and contrast finely with the foregoing.

## IMITATION OF THE EGYPTIAN VASE.

Obtain some of the bright red lead paint of the common kind, and with it applied several times make a solid, even surface, which varnish and polish as before described, or else, better still, use the sealing-wax paint (made by dissolving sealing-wax in alcohol). This dry, cut from thin black paper or silk a number of grotesque figures and devices, such as we find in books of Eastern travel, and with mucilage fasten them flatly and smoothly upon the scarlet ground, forming also an odd-looking border of triangular or half-circular pieces.

## IMITATION CHINESE WORK.

Paint the surface a dull yellow, or nankeen color, cut from chintz, or the pictures used for Potichomania work, a number of figures—scenes and devices such as we see upon Chinese work—when entirely covered (filling in with tiny bees, flies, leaves and odd devices), varnish with Demar varnish. Another beautiful mode to imitate the Chinese style is to paint the ground black, and, obtaining the gold and black figures used in Potichomania, fasten them upon the surface in the manner before described. A large piece, such as a Pagoda, with boat, figures, houses, &c. Then scatter over the surface the small separate figures, with a border around the upper and lower edge.

## IMITATION OF JAPANESE INLAID WORK.

Still another method of ornamenting common pots, and one within the power of every one to accomplish, is by means of various colored Autumn leaves, with a few gilt ornaments and some strips of plain gilded paper, such as is sold by the yard. The surface is painted ebony-black and varnished, polished with pumice-stone and revarnished, until smooth and even. The leaves, which should have been pressed perfectly flat, are then covered with mucilage (or very thin white glue), and pressed upon the surface in the place designed, using care to arrange the colors and sizes so as to form a pleasing and tasteful combination. Put two or more rows along the upper edge, then a garland of tiny leaves, then another band of gold. This forms a beautiful border for the top. Have a soft napkin to hold and press each piece in place, until firmly fixed. When finished, paint with a coat of isinglass size. When dry, varnish with copal. The appearance of this work, when completed, is exceedingly fine.

**Rice Baskets.** — The foundations are of pasteboard, sewed together in any shape desired, and covered with hot sealing wax. While the wax is still soft, grains of rice may be distributed over it, and the contrast of colors thus obtained is quite pleasing.

## Fireside Reading.

In olden times it was the fashion for a suitor to go down on his knees to a lady when he asked her to become his wife, which, with very stout gentlemen, was an uncomfortable proceeding. The way in which Daniel Webster proposed to Miss Fletcher was more modern, being at the same time neat and poetic. Like many other lovers, he was caught holding a skein of thread or wool which the lady had been unraveling. "Gracie," said he, "we have been untying knots. Let us see if we cannot tie one which will not untie in a lifetime." With a piece of tape he fashioned half a true lover's knot. Miss Fletcher perfected it, and a kiss put the seal to the symbolical bargain. Most men, when they "pop" by writing, are more straightforward and matter-of-fact. Richard Steele wrote to the lady of his heart: "Dear Mrs. Shurloek (there was no misses in those days). I am tired of calling you by that name; therefore, say a day when you will take that of madaun. Your devoted humble servant, Richard Steele." She fixed the day accordingly, and Steele her name instead of her heart to the suitor.

**Hint to Tattlers.**—Fuseli, the painter, had a great dislike to the species of conversation known as "tattle." Once, while sitting in his room among some trifling visitors who were discussing the weather and such like interesting subjects, he burst forth with a—"We had pork for dinner to-day!" "Dear! Mr. Fuseli, what an odd remark!" exclaimed one. "Why," replied he, "it's as good as anything you've been saying for the last hour."

**Her First Kiss.**—It is a singular fact that the custom of kissing is altogether unknown in China. The Chinese, indeed, have no word expressing love as we understand the passion. An American navy officer, voyaging Chinawards, narrates an amusing experience of the ignorance of the Chinese maidens of the science of kissing. Wishing to complete a conquest he had made of a young mei jin (beautiful lady), he invited her—using the English words—to give him a kiss. Finding her comprehension of his request somewhat obscure, he suited the action to the word and took a delicious kiss. The girl ran away into another room, thoroughly alarmed, exclaiming, "Terrible man-eater; I shall be devoured." But in a moment, finding herself uninjured by the salute, she returned to his side, saying, "I would learn more of your strange rite. Ke-e-es me." He knew it wasn't "right," but he kept on instructing her in the rite of "ke-e-es me" until she knew how to do it like a native Yankee girl, and, after all that, she suggested a second course by remarking, "Ke-e-es me some more *seen jine* Mee-lee-

kee!" (Anglice American), and the lesson went on until her mamma's voice rudely awakened them from their delicious dream.

A three-year old boy of a Pittsfield clergyman, watching his mother making biscuit one Sunday for tea, asked her if it was not wicked to work on Sunday. Of course she said it was, and the logical little chap continued, "'Oo'll catch it when 'oo get to Heaven."

A Missourian who attended prayer meeting with his daughter, felt compelled to rise up and remark: "I want to be good and go to heaven, but if those fellows don't stop winking at Mary, there will be a

the passengers on a Detroit street car the other day, and presently the little miss observed a man take out his handkerchief, flourish it around, and then wipe his nose. The child leaned over to her mother and whispered: "Mamma, that gentleman is trying to flirt with me, but I shall give him the handkerchief signal that I distrust his motives."

A short time since, a noble savage came to a certain agent in the northern part of Iowa to procure some whiskey for a younger warrior who had been bitten by a rattlesnake. "Four quarts!" repeated the agent, with surprise; "as much as that?" "Yes," replied the Indian, "four quarts—snake very big."

"Bub, did you ever stop to think," said a Michigan avenue grocer, as he measured out half a peck of potatoes, "that these potatoes contain sugar, water and starch?" "Noa, I didn't," replied the boy, "but I heard mother say you put peas and beans in your coffee, and about a pint of water in every quart of milk you sold." The subject of natural philosophy was dropped right there.

### Fight It Out Like Pa and Ma

**Do.**—A story is told of a daughter of a prominent person now in the lecture field, which is peculiarly interesting and suggestive of unconscious wisdom. A gentleman was invited to the lecturer's house to tea. Immediately on being seated at the table the little girl astonished the family circle and the guests by the abrupt question: "Where is your wife?"

Now, the gentleman having been recently separated from the partner of his life, was taken so completely by surprise that he stammered forth the truth:

"I don't know."

"Don't know," replied the *enfant terrible*, "why don't you know?"

Finding that the child persisted in her interrogatories despite the mild reproof of her parents, he concluded to make a clean breast of the matter and have it over at once. So he said, with a calmness which was the result of inward expletives:

"Well, we don't live together; we think as we can't agree, we'd better not."

He stifled a groan as the child began again, and darted an exasperated look at her parents. But the little torment would not be quieted until she exclaimed:

"Can't agree! Then why don't you fight it out as pa and ma do?"

"Vengeance is mine," laughingly retorted the visitor, after "pa" and "ma" exchanged looks of holy horror, followed by the inevitable roar.

Some naughty person has said that Lot's wife wouldn't have looked back, but a woman with a new dress passed her, and she wanted to see if the back breadth was ruffled.

THE INTERESTING BOOK.

good deal of praneing around here the fust thing they know."

Two boys were standing before a cigar store, when one asked the other: Have you got three cents? "Yes." "Well, I have got two cents; give me the three cents, and I will buy a five center." All right," says No. 2, handing out his money. No 1 enters the store, lights it and puffs with a good deal of satisfaction. "Come, now, give us a pull," says No. 2. "I furnished more than half the money." "I know that," says the smoker; "but then I'm the president, and you being only a stockholder, you can spit."

A lady and her eight year old daughter were among

## Housekeeping.

## HOUSEKEEPING.

Every true lady aspires (or ought to) to be an adept in the science of housekeeping. A well ordered house is a blessing to all who dwell beneath its roof. If the lady of the house is mistress of the situation, and fully understands her work, then happiness and content reign supreme. While, on the other hand, if she is not versed in the necessary qualifications, chaos and confusion hold unlimited sway. In the first place, then, *system* should take a prominent rank in a well-regulated home. Order is said to be "Heaven's first law,"—a truth if always observed in families would do much towards making more heavenly places on earth. This is the keystone which regulates the complicated machinery of household care and perplexity. "A place for everything, and everything in its place." is an important rule to follow, if we would make home an inviting resort from life's cares and turmoils. It is passing strange how little of this material some families seem to possess; and they are always in a hurry, and accomplish but little, on account of this very evil. Every woman should look "well to the ways of her household," and possess a thorough understanding of all the details which make up the minutia of housekeeping. So that if servants leave her to her own resources, she can herself prepare a comfortable meal for the family, and not be compelled to sit down in despair because the *cook* has taken her departure. How much unhappiness results from not being competent to take the helm in such unforeseen cases. The science of housekeeping is an art which has been sadly neglected. Mothers have trained their daughters to the greatest perfection in almost every other art, while this most useful and important one has received no attention in many families. And to-day daughters are filling homes without the slightest knowledge of the most essential element of making that home one of enjoyment and lasting happiness. Wholly dependent upon servants, are they truly fitted for life's responsible duties? Wealth is uncertain; "Riches may take wings and fly away," and leave us to our own devices. How important, then, that our daughters should have a thorough education in the culinary department, so that when they go out to homes of their own, they can be the presiding genius which controls all the wheels of action, and causes everything to move on quietly and harmoniously, regardless of financial panics and the melting away of fortunes. Is it not wise to be able thus to act well our part in life? I would call upon all the daughters of our land to awake to this subject, as one of vital importance, with which they have to do. Let them now so thoroughly learn these important lessons of household ability as to leave no cause for future regrets. Then shall their "own works praise them," and they receive the benediction of those to whom they have ministered.

M. P. H.

**Curing Bee-Stings.**—As the season for the stinging of bees is at hand, all should remember that common wood ashes, made in a paste and applied soon, will neutralize the poison, as will tobacco when moistened and applied. Moist clay will also be found beneficial.

**Reliable Essences.**—A great portion of the essences of peppermint, wintergreen, etc., palmed off on the public is not of the proper or desired strength. The druggists' rule for compounding them is, to one quart of alcohol add one ounce of oil. The better

way is to buy that quantity of each, and if you conclude the strength is right by adding one-half or three-quarters of the alcohol, then stop at that, having in mind quality instead of quantity. L. D. S.

**Rugs.**—For common use are very pretty made on the fine coffee-sacking, worked in cross-stitch in the same style that Java canvass tidies are made. Any of the borders in the little French pattern books are nice. Work over two or three threads; the border or center either is larger, according to the number of threads you work over. For the center a bunch of flowers, or some animal, is pretty, patterns for which may be found in many of the magazines. The edge may be fringed out a couple of inches, or bound with braid if preferred. One sack makes two rugs. Another style is to take the course sacking, draw a border and centre piece with chalk after it is fastened in a frame as a quilt. Take bright colored rags, torn in strips one-half inch wide, insert a bone-hook from the upper side, draw up a loop three-fourths of an inch high every three or four threads, until your border is done. Fill in your centre same way, and, lastly, fill in the background with grey, brown or black; any kind of rags will answer. When done, shear all over with a pair of shears (not too close), and it will look like plush, and last a lifetime. Are nice to put beside a bed or dressing bureau. M.

**Potatoe Puffs.**—Take some cold meat—either beef or mutton, veal or ham—clear it from gristle, cut it small, and season with pepper, salt and cut pickles; boil and mash some potatoes, and make them into a paste with one or two eggs; roll it out with a dust of flour; cut it round with a saucer; put some of your seasoned meat on one half, and fold it over like a puff; pinch or nick it neatly round, and fry to a light brown.

**Washington Pudding.**—Pick and wash clean half a pound of currants; drain them, and wipe them in a towel, and then spread them out on a flat dish, and place them before the fire to dry thoroughly. Prepare about a quarter of a pound, or half a pint, of finely grated bread crumbs. Have ready a good teaspoonful of powdered mace, cinnamon, and nutmeg mixed. When the currants are dry, dredge them thickly on all sides with flour, to prevent their sinking or clodding in the pudding while baking. Cut up in a deep pan half a pound of the best fresh butter, and add to it half a pound of fine white sugar powdered. Stir the butter and sugar together with a wooden spaddle till they are very light and creamy. Then add a table-spoonful of wine and a table-spoonful of brandy. Beat in a shallow pan eight eggs till perfectly light, and as thick as a good boiled custard. Afterwards, mix with them gradually a pint of rich milk and the grated bread crumbs, stirred in alternately. Next, stir this mixture, by degrees, into the pan of beaten butter and sugar, and add the currants, a few at a time. Finish with a table-spoonful of strong rose-water; or a wineglassful, if it is not very strong. Stir the whole very hard. Butter a large deep white dish, or two of soup-plate size; put in the batter; set it directly into a brisk oven, and bake it well. When cold, dredge the surface with powdered sugar. Serve it up in the dish in which it was baked. You may ornament the tops with bits of citron cut into leaves and forming a wreath, or with circles of preserved strawberries. This will be found a very fine pudding. It must be baked in time to become quite cold before dinner.

**Apple Pudding.**—Fill a well-buttered pudding dish with alternate layers of bread crumbs from a stale loaf and tart, juicy apples. Sprinkle the apples

thickly with sugar, to which add a flavoring of nutmeg. Over each layer of bread crumbs throw small bits of fresh butter. The under layer should be bread crumbs, the top layer apples. Bake half to three-quarters of an hour. Just before it is done, whisk the whites of three eggs to froth, with two tablespoons of powdered sugar and a bit of lemon. Spread it lightly over the whole, and return to the oven to set.

**Breakfast Rolls.**—Take a coffee-cupful of new milk, two beaten eggs, half a cup of fresh yeast, a teaspoonful of salt, a tablespoonful of sugar, two tablespoonfuls of butter or sweet lard; stir in briskly enough sifted flour to make a stiff batter. They should be mixed in this way at tea-time, and covered up to rise. Late in the evening, when the dough is light, mould it out on the board and put back in the pan and cover again. In the morning tear off, but do not cut, in pieces of sufficient size to twist up into rolls, working it as little as possible. When they puff up, bake in a quick oven, and eat them while hot.

**French Cream Cake.**—Beat three eggs and one cup of sugar together thoroughly; add two table-spoonfuls of cold water; stir a teaspoonful of baking powder into a cup and a half of flour, sift the flour in, stirring all the time in one direction. Bake in two thin cakes, split the cakes while hot, and fill in with cream prepared in the following manner: To a pint of new milk add two table-spoonfuls of corn starch, one beaten egg, one-half cup of sugar; stir while cooking, and when hot put in a piece of butter the size of an egg; flavor the cream slightly with lemon, vanilla, or pineapple.

**Recipe for Cream Pie.**—Beat the whites of three eggs to a stiff froth, mix with a teacupful of cream and a heaping table-spoonful of sugar; flavor to suit the taste, and bake in a moderately-heated oven. The yolks can be used for pudding and custards.

I wish also to tell my way of scouring knives, viz: I use the Sapolio soap altogether; I like it the best of anything I ever tried. It is also nice for scouring tinware, glassware, stoneware, and porcelain kettles.

WAYNESVILLE, Ohio.

KATE.

**Coloring Cotton.**—Orange and yellow—For five pounds of rags, twelve ounces of sugar of lead, six ounces of bichromate of potash. Dissolve each in separate pans in warm water, and then pour it in separate tubs. Then wet the rags in the sugar of lead, then in the potash; dip the rags in each three times, wringing them out each time. When you want orange, dip into scalding hot lime water, rather strong. Blue and green—For three pounds of rags, eight ounces of copperas; soak the rags in the copperas water one hour, then rinse in clear water; two ounces of prussiate of potash, two table-spoonfuls of oil of vitrol in water enough to cover the rags. For green, dip the blue rags into the yellow dye.

**Remedy for Neuralgia.**—A friend of ours who suffered severe pains from neuralgia, hearing of a noted physician in Germany who invariably cured the disease, crossed the ocean and visited Germany for treatment. He was permanently cured after a short sojourn, and the doctor freely gave him the simple remedy used, which was nothing but a poultice and tea made from our common field thistle. The leaves are macerated and used on the part affected as a poultice, while a small quantity of the leaves are boiled down to the proportion of a quart to a pint and a small wine-glass of the decoction drank before each meal. Our friend says he has never known it to fail of relief, while in almost every case it has effected a cure.

COMPANION TO "SILVER THREADS AMONG THE GOLD."

# When Silver Threads are Gold Again.

Words by EBEN. E. REXFORD.

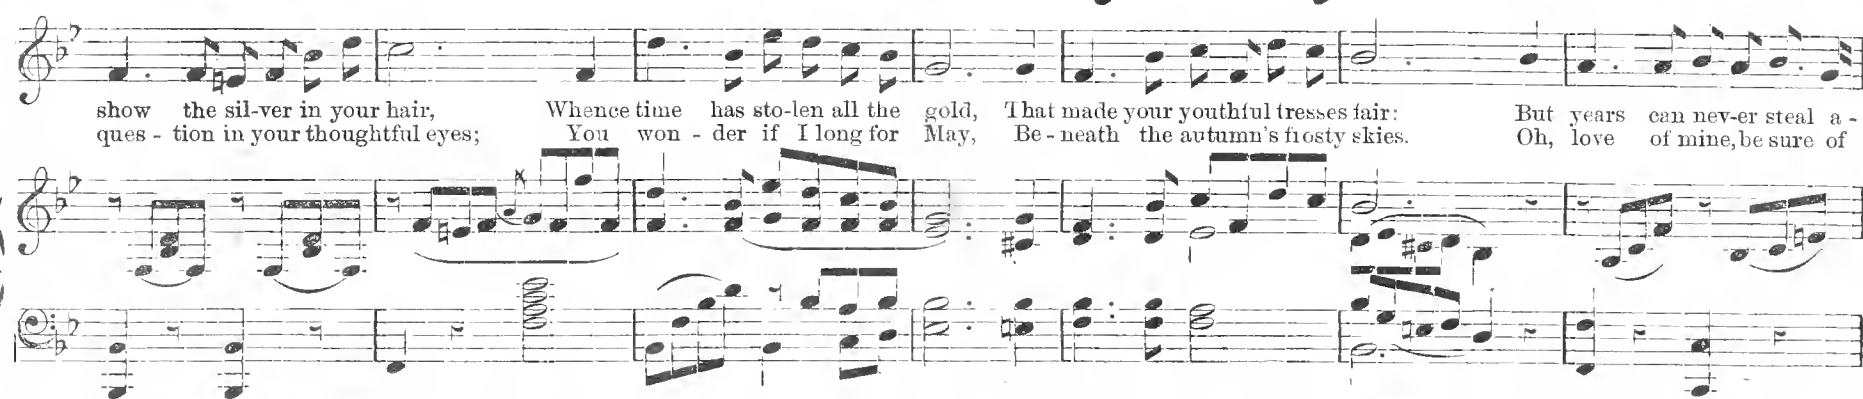

SONG AND CHORUS.

Music by H. P. DANKS.

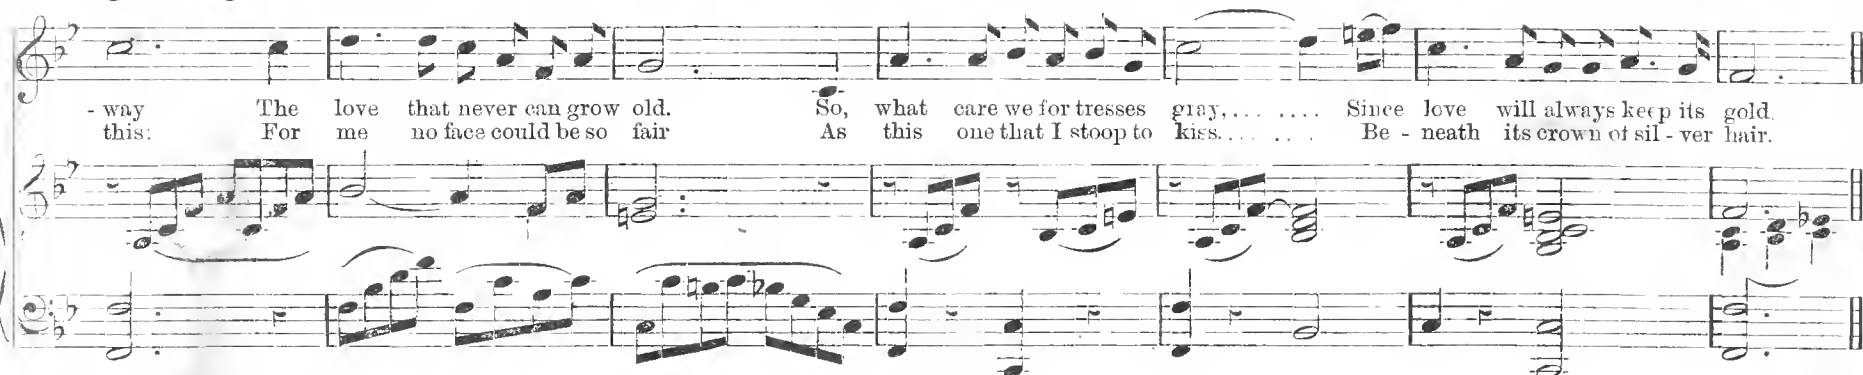

*Andante con espress.*

1. You tell me we are grow-ing old, And  
2. Oh, dar - ling, I can read to - day, The

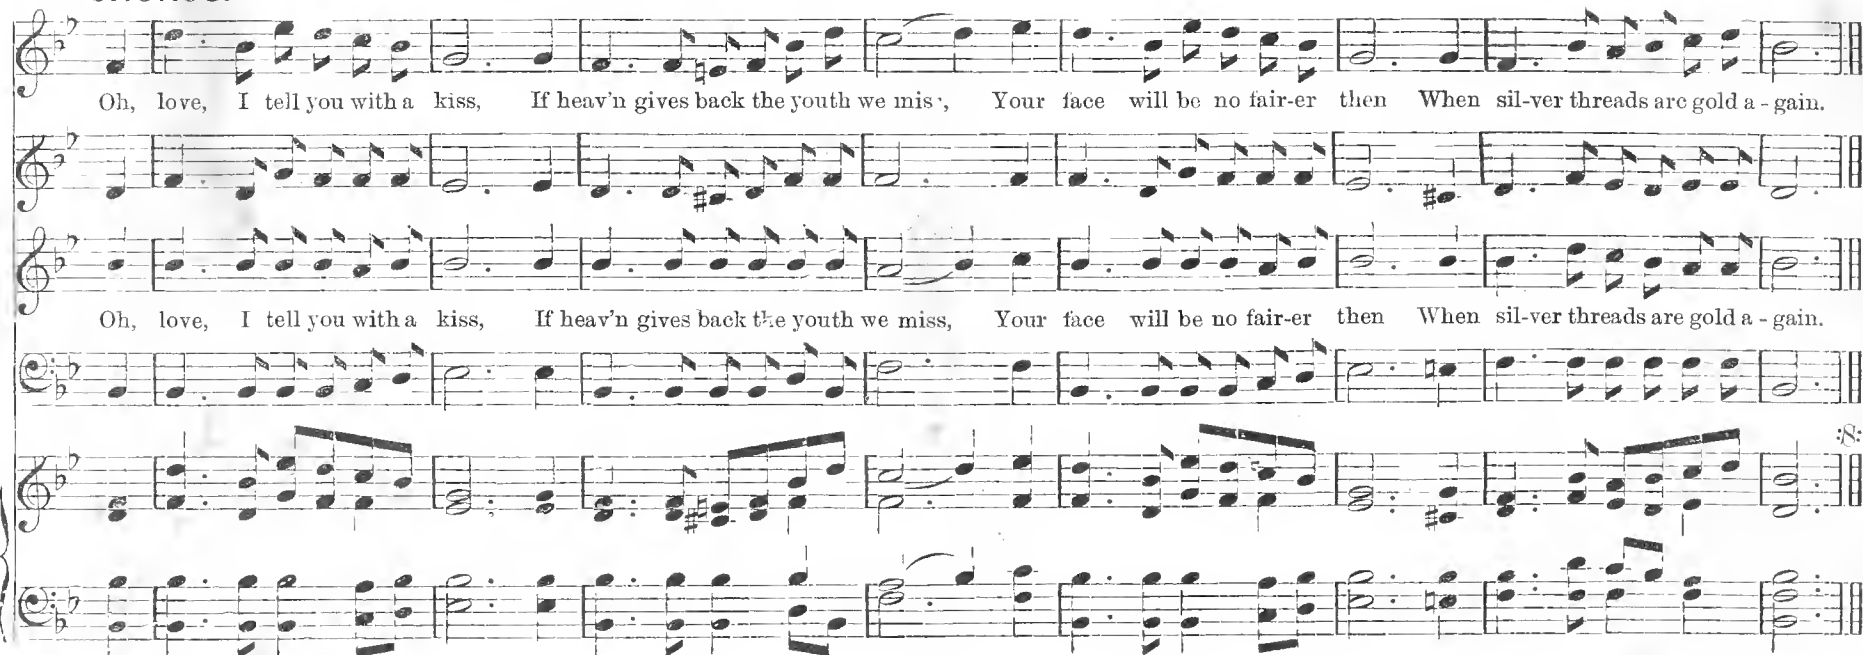

show the sil-ver in your hair, Whence time has sto-len all the gold, That made your youthful tresses fair: But years can nev-er steal a -  
ques - tion in your thoughtful eyes; You won - der if I long for May, Be - neath the autumn's frosty skies. Oh, love of mine, be sure of

- way The love that never can grow old. So, what care we for tresses gray, . . . . . Since love will always keep its gold.  
this: For me no face could be so fair As this one that I stoop to kiss. . . . . Be - neath its crown of sil - ver hair.

## CHORUS.

Oh, love, I tell you with a kiss, If heav'n gives back the youth we mis', Your face will be no fair-er then When sil-ver threads are gold a - gain.  
Oh, love, I tell you with a kiss, If heav'n gives back the youth we miss, Your face will be no fair-er then When sil-ver threads are gold a - gain.

3 Oh, darling, though your step grows slow,  
And time has furrow'd well your brow,  
And all June's roses hide in snow,  
You never were so dear as now.  
Oh, truest, tend'rest heart of all,  
Lean on me when you weary grow,  
As days, like leaves of autumn fall  
About the feet that falter so.—*Cho.*

4 Oh, darling, with your hand in mine,  
We'll journey all life's pathway through;  
With happy tears your dear eyes shine  
Like sweet blue blossoms in the dew.  
The sorrows of the passing years  
Have made us love each other more.  
And ev'ry day that disappears,  
I count you dearer than before.—*Cho.*

# THE LADIES' DOMESTIC ECONOMIST

BY HENRY T. WILLIAMS. VOL. IV. NEW YORK, AUGUST, 1875. No. 44. PRICE 12 CENTS.

## A FEW HINTS ABOUT PLANTS.

When rain water cannot be had for watering plants some sort of a fertilizer is needful to their thrifty and perfect growth. If two ounces of nitrate of potash and four ounces of nitrate of ammonia be dissolved in

festes with aphides, or insects of any sort, the free use of quassia tea will remove them, as well as multiply the blooms and invigorate the plant.

If abundance and richness of blossoms is needed be careful to use medium sized pots. It is also of great importance to keep the soil loose about the roots by

ing about a quart, and find it much easier and nicer than my old method of sprinkling by hand.

Fresh air and sunshine are both very necessary to the health and beauty of plants, as well as people, therefore a southern window is the best the year round; and the windows should be raised to let in

DESIGN FOR A RUSTIC HOUSE.

a pint of water you have as good a preparation for promoting the health and beauty of your plants as could be wished. Keep the solution tightly corked in a bottle. Once a week take a tablespoonful of it for three quarts of water, or in that proportion, and sprinkle your plants well with it.

Should your plants be so unfortunate as to be in-

stirring it up frequently, and an old table fork is about as good an implement as one can use for this purpose. Use once or twice a week, just before watering.

Give your plants plenty of water, especially through the heat of summer, and if kept in a dry hot atmosphere through the winter. Water by sprinkling instead of pouring. I use a small tin water pot, hold-

air by day and dew by night, when the weather is warm enough.

In making your selection of plants choose beauty of foliage as much, or more, than blossoms, as the latter can delight you only occasionally, while the former is a constant pleasure.

MRS. MARY I. HERRON.

## Floral Contributions.

## SUCCESSFUL WINDOW GARDENING.

The first inquiry of every lover of flowers, or at least of every window gardener, is, "How can I get plants to blossom during the dreary months of winter? and what shall they be?" It requires very little effort on our part to have a garden gay with bright hues and sweet with fragrance all the summer months. After the seeds are sown or plants are transplanted from hot-bed or cold frame, nature assumes, in great part, the care of watering, washing, and feeding. There is no changing about to give the stinted amount of sunshine, no gaseous vapors, no furnace heats, no want of air, and if kept free from weeds that would take their food, they are sure to grow, and what is better, to blossom. But when we take these out-of-door children into the house, we make them prisoners, and must minister to their wants, or they pine away and die; or mayhap drag out a sickly existence that is more deplorable even than death. Then the first requisite to success is a proper knowledge of their wants, and this requires study as well as experience. There are certain rules that apply to all members of the vegetable kingdom. They must have air, moisture, and food. This is true of the animal kingdom, and it would be just as sensible to give a bird and a fish the same cage, and feed them from the same dish, as to give a Cactus and a Calla the same treatment. In the garden the plants send out their roots in all direction and find their own food, but when potted, we cut off all their "visible means of support," and when they have taken up the limited amount of plant food afforded by the little earth given, how discouraged they must get when every little rootlet in search of food reaches the bare walls of its prison house and finds it can go no farther.

This shows the necessity of furnishing as much food as possible in a small compass, and leads me to speak of the soil. Leaf-mold, garden loam, and a sprinkling of sand, make a good soil for most plants; but I find an excellent compost under an old cow stable. A few loose stones in the foundation are an "open sesame" to a perfect treasure house, filled with rich soil that has been collecting for fifty years. It is as mellow as ashes, and mixed with loam and sand baked, to rid it of insect and weed germs, is food fit for the king—of plants. For Roses, Fuchsias, Heliotropes, Carnations, Lantanas, and Geraniums, I use two parts compost with one of garden soil and a little sand. The double Geraniums must be starved to blossom well, if overfed they will grow fat, but will not blossom. For Pansies and Callas the compost alone lightened with sand. Primroses, Salvias, Camelias, and that class, have two parts loam, one part compost, and one part sand. Even with all your care in preparing soil, many plants will after awhile need artificial feeding, particularly when making the rapid growth preparatory to coming into bloom. I prepare a fertilizer in this way: one part cow manure, one part chicken manure, and one part charcoal, put into a keg, cover with boiling water and let settle. I use this very differently on different plants. Of course drainage must be perfect.

Now, what shall we have that will blossom without fail in winter? The catalogues are filled with lists of winter-blooming plants, but how many of us have learned, by the experience of disappointment, how uncertain they are. Last winter I was not for a day without flowers enough to have made a respectable bouquet. First, I class Chinese Primula. I raise my single ones from seed. I sowed seed in July in jars

filled an inch at the bottom with charcoal, an inch with coarse soil, and then filled within an inch of the top with fine soil, covered lightly, placed in a warm shady place, with glass laid over the jar, moistened by setting the jars in a dish of warm water. In two weeks the plants were up; when they had three leaves I transplanted to two-inch pots, and when the roots filled these, potted for blossoming in five-inch pots, mixing charcoal dust with the light soil. After a few days, gave all the sunshine I could, and how they grew. They began to blossom in December, and blossomed continuously till July, when I forbade their blooming any longer, and compelled them to take a rest, dividing them and rooting the offshoots. There is no failure with the Primula. Cyclamen Persicum is another sure to blossom if kept dry during the summer and started the first of September. Begonia is another sure to blossom all winter. B. Jasmynoides, B. Saundersonii, and B. nitida alba have blossomed profusely with me, and what is convenient, they care very little for the sun. Abutilon, too, if kept poorly, will hang out its cheerful bells all winter. It should be cut back in spring, repotted with plenty of root room, and kept shaded till taken within. Every one loves the Fuchsia, and craves its graceful bloom, but excepting Speciosa, I have never succeeded in getting the Fuchsia to blossom in winter. Avalanche begins in March, and Carl Holt and Van Quer de Puebla in April. Geraniums are freaky, but last winter I had a large Gen. Grant that blossomed beautifully from the first of January till taken out in May. Enormous trusses kept perfect, hardly dropping a petal for two months. As soon as it was in full blossom, I had it removed to a cool parlor, where it filled a whole window, and as the lace curtains fell over it, it was a thing of beauty, and attracted much attention from passers-by. It had been kept shaded and pinched out through the summer. Petunias, both double and single, are fine for parlor culture. Sow seed in July, pot when small, taken in in September, will blossom beautifully for two months or more. Old plants cut back and taken up in September will begin to blossom in March: only two months without Petunias. Ten weeks stock treated in the same way will give satisfaction. Let me add what I meant to have said, Petunias must have the sun.

Carnations rooted in sand in June, will blossom finely in winter; but I must not forget Chrysanthemums. I have one now that has stood all summer on an eastern piazza, and has been bountifully supplied with suds from the wash every week. It has eighty branches loaded with buds, from two to four buds on each branch. It is nearly three feet in diameter—a perfect oval; and, I think, must come nearly up to those exhibition plants that Shirley Hibbard tells of in the *Horticulturist*. The Pompones are beautiful, and offer a charming variety. Now, with a supply of Hyacinths and other bulbs, to fill up January and February, we have flowers all winter. I have mentioned only those common plants that will, and have with me, blossomed in a sitting-room, warmed with a coal stove. Of course, if one has a green-house or conservatory, we might add many others. One word of the drawbacks. First, insects. Aphis is the most common. The eggs are deposited on the uneven surface of the bark, or on the leaves during summer, and lie torpid all winter, unless taken to a warm room, then the larvae appear and the minute envelope falls. Have you never seen a white, filmy dust on your plant-stand, and wondered whence it came? Be sure a host of aphides are shaking off their shackles, preparatory to making a deadly on-

slaught upon your treasures. You must prepare for war, and that to the death of every green foe, or your pets are doomed. Naturalists tell us that a good healthy mother aphid will produce twenty-five young aphides daily, so be vigilant. Tobacco is your most efficient weapon. The mealy bug resembles a small scale; the larvae are a reddish brown, flat, and on many plants are not discovered without close inspection. They take up the juices of the plant, and at once arrest its growth and eventually kill it, unless ousted. They fix themselves, from time to time, in order to change their skin, and in their modesty, cover themselves with a white powdery substance, which gives them their common name. A wash of strong suds, or a weak solution of soda will remove and destroy them. Rinse in clear water. The infinitesimal red spider, though a *mite*, is a *mighty* foe. You must watch for him and drown him. This means labor. If plants are sprinkled two or three times a week, this insidious enemy will seldom appear. For mites in the earth, I cover the dirt with a sprinkling of cheap, fine tobacco and then pour on warm water, and it has proved very successful. Keep your plants in a vigorous growth, and these pests not only will seldom appear, but will be more easily overcome.

MRS. H. M. BARKER.

## HANGING BASKETS.

Baskets of living plants may easily be had in perfection; select such kinds as will stand in rooms. As regards the baskets themselves, I like to see the wire-work painted dark green. Some paint it with bright colors, which quite spoils the effect of the flowers, which should be gay enough as regards colors, without any addition in the way of paint. Inside the wire-work put a thick layer of green moss, so as to prevent the soil from dropping through; over this put some broken crocks, and then fill up with whatever compost is best suited to the requirements of the plants with which the baskets are to be filled. For summer decoration there are numberless plants that can be grown in baskets; but, for winter blooming, nothing is better, or looks more showy, than Rollisson's unique Geranium, or scarlet Tropaeolum, both of which will continue in flower all through the winter, and droop down gracefully all around the basket. A basket, indeed, never looks well unless it is furnished with some drooping plant round the edge, as, for instance, with the variegated ivy-leaved Pelargonium, called *Elegante*, while in the centre should be a nicely grown plant of Fuchsia. Pretty baskets may also be made of silver variegated Geranium, Lady Plymouth and bright blue Lobelia, or of blue Convolvulus, with Christine Geranium in the centre; in fact, any flower that suits, and if put in with good taste, will look well. For large baskets suited for lobbies, mixed foliage plants, such as variegated Sedums, Echeverias, Fesmes, and Centaureas have an effective appearance. A window box made of wood and lined with zinc, suspended by four cords or wires, up which can be trained creepers, also makes a pretty room ornament. The great point as regards keeping plants in baskets or boxes fresh and in good health, is to give plenty of water during the growing season, but more sparingly in winter, and to keep the leaves clean. If baskets are hung high there should be some means of lowering them, as it is troublesome getting up to them every morning with steps. If the baskets are small, the best way is to carry them away and water them outside; but in the case of large baskets this cannot be done, so a tea-tray or something of the kind should be placed under them to catch the drip.

## Gossip with Correspondents.

**Worms.**—What will destroy a large black, or rather brownish, worm, which, in spite of all my efforts, destroys all the buds of one of my honeysuckles? I can't tell the name of the vine. It is an annual, blooming out in the spring. I have had it about six years, and it has never had a chance to bloom but once. It blooms in clusters at the joints of the stems. The flowers are pink, or rather whitish rose color when they first open, then turn to a buff color, and are very fragrant. It is very provoking to see the ugly things destroy all this beauty and sweetness.

Merion, Ind.

MAGGIE HAYS.

**Answer.**—You might try dusting with fresh lime or hellebore powder, but probably hand picking would be the only remedy.

**Parlor Ivy.**—What is the matter with my Parlor Ivy? I had a hanging basket filled with it; it was very thrifty, hanging down some two yards in length. In the Fall I transplanted it, taking it out of the basket (an old tin bucket covered with moss), and put it in a new wooden bucket, one of the common sort, painted inside. I did not disturb the roots much, but the leaves soon began to drop off, leaving the branches bare; I then cut the branches off, leaving them about a foot in length. About the holidays the Ivy began to sprout and grow about half a yard in length, and then withered and died. I examined the roots and found them rotted; I think the paint had something to do with it.

L. B.

**Answer.**—Did you make holes for the escape of water? The plant probably became too wet when first transferred to the new basket; it would have been best to transfer the plant in the spring.

**Cutting Back.**—Will you kindly inform me through the columns of the CABINET when is the best time to cut back the plants that have been blossoming all winter? Hitherto, I have been in the habit of cutting them back in the spring, when I set them out doors under some tree for the summer. I see by the book "Window Gardening" that it is recommended to repot and prune Geraniums closely in August or September, and so I want to know if I shall leave my Geraniums alone till then? My plants blossom most abundantly all winter, though I keep them in a room with a coal fire, but by spring the leaves are apt to turn yellow and fall off, giving the plant a bare and most distressed appearance. These same plants, if trimmed back and left out doors all summer, recover, put out fresh leaves, and get ready for blossoming again the next winter. One reason for pruning in the spring was that my plants (Fuchsias and Geraniums, in particular) grow to such a height in the course of the winter that I could not keep them from blowing over when the pots stand out doors. I have three Fuchsias now that are over fifty inches in height, with leaves four inches in length and three and a half in width, and they are covered with blossoms. My Lady Washington was a slip last year, but it blossomed finely. This year the buds have blasted as fast as they appeared; the leaves turn yellow and fall, leaving only a thick cluster of leaves at the end of each branch. What is the matter? It has not been in a very warm room. My Chinese Primroses have been very small, and presented a pinched appearance, though the plant looked in every way healthy. Can any one tell me the secret of the large blossoms seen on some plants of this kind? I have tried the red pepper treatment recommended in "Window Gardening," and have found it a certain cure for red spider.

I shower the plant, then holding it upside down I dust the red pepper on to the under side of the leaves, and covering the earth of the pot with a cloth, to prevent the pepper from falling upon it, I leave the plant alone for twenty-four hours, then wash off the pepper, and the spiders will not trouble any more. A friend of mine had a Lantana covered with buds in December and January, but none ever came to anything. They would fall to pieces at the least touch, and there seemed a sort of black mildew at the root of each embryo flower of the cluster. The plant looked perfectly healthy, and I would like to know why it did not blossom; it was kept in a room adjoining one where the stove was. Her Abutilon, which blossomed winter before last, has not had a single blossom upon it this last winter, though the plant looked thrifty and had a few buds. I have found pieces of apple laid upon the earth a help in getting rid of the white mites; they will collect on the pieces of apple, and can be easily shaken off from it into the fire every morning.

C. L.

**Answer.**—Treat plants as directed in "Window Gardening." By cutting back later in the season the plants will not become so tall by spring, but nothing will prevent room plants in general from becoming lanky by the end of season; the plants lose their leaves from exhaustion of the soil. The Lady Washington has probably been frozen. The soil used for Chinese Primroses was perhaps too poor; these plants require a tolerably rich soil. The Lantanas were perhaps grown in a cold or dark place; these plants require warmth to flower well in the winter.

**Geraniums.**—I have tried for some years past to raise plants in the house and, being obliged by my limited facilities for their culture, to give all about the same temperature and treatment, I have not succeeded very well, and I have thought it would be best to cultivate only plants of one family, and direct my efforts toward getting the greatest variety and the best possible specimens of that one. Would you advise me to make such a specialty of Geraniums; and, will you kindly give some information about the proper soil and treatment for them?

WYOMING.

**Answer.**—You will probably obtain as much satisfaction from the plant named as from any one class of plants. Any light and moderately rich soil will grow these plants well. Strike cuttings late in spring for winter flowering, and in the fall for spring and summer blooming; if the plants get too large, plant out in the summer, and you will obtain plants of good cuttings, and also flowers.

**Cobaea Scandens.**—In the March number of last year, you speak of the Cobaea Scandens being easily propagated by cuttings. I've been told so before. Now I have a fine one, three or four years old, in my greenhouse (not a very large greenhouse); it grows rapidly, blooms all the time, but I never have had one flower go to seed yet, and as to cuttings rooting, I can't make them. To be sure the plant itself was from a cutting. Having one from seed, I accidentally rooted one cutting out of a quantity. The plant from seed died, and this is the cutting, the stalk being two and a half inches in size at the ground and for half a yard up; but of, I have no doubt, a hundred cuttings I've tried since, not one has rooted; I have tried them every way a cutting could be supposed to root. Have good success with other things, but none with that. I wish I knew why I got no seeds, and what is the trouble in rooting the slips. A friend told me she had as ill luck as I, notwithstanding the gardener said it would root easily, when

he gave it to her. In the last number, the piece on Cyclamens met my eye. I've had some growing three years. They do well, with but little attention aside from watering, have pink and white, both in blossom for a long time. "H. H.," in her "Bits of Travel," speaks of them as growing wild in Italy, and called by the Italians, Mad Violets, and she thinks herself they are very like a vicious horse with two ears thrown back. "They always amuse me, and do any one who chances to see them." I notice one woman (Mrs. L. M. Hinman), says the slugs bother her on her Rose bushes. They did me four years ago, but I got white hellebore, made a wash of some of it (rule is half pound to half barrel of water), syringed my bushes just as the leaves were coming out, and then sprinkled some of the dry powder over them. Believe I did it twice the first year, but only once the next, and last year, merely went out one morning after a heavy dew, and sprinkled them with dry powder (I use an old pepper box for sprinkling), I have not seen a slug since I first used the hellebore. The Rose bugs are a nuisance, but as they pay no attention to washes of any kind, or anything but my fingers, I use the latter to put them in their place, which is not on my roses. I've a large Safrano bush in the greenhouse five and a half feet high, and is full of buds and blossoms all winter and spring. I let it rest the last of summer, so as to have winter roses to sell. Have also a Chinese Primrose that blossoms the year round, or two of them rather, a pink and a white one. Those black-eyed Susans, my cousin says, are called Licorice seeds. She and her parents brought me a quantity from Jamaica some years ago.

S. M. BARBER.

Foxboro', Mass.

**Answer.**—Turn some of the Cobæ shoots outside in summer, and they will probably ripen seed; the cuttings root tolerable easily in a hot-bed, but seedlings are the most vigorous plants. Your Safrano Rose has flowered well. If your plant were a Tigridia and remained in the ground during winter, it was killed by the frost.

**Worms.**—What will kill a little worm or bug that has troubled my choicest flowers this winter? It is about as large as the small red ant, pure white, with four tiny feet on each side and two horns half as long as its body. When I water my plants they rise on the surface by the hundreds, and they soon kill my plants. I have used ammonia and potato water, which did no good.

HANNAH OWEN.

**Answer.**—Skake the soil away from the roots and wash the roots clean and pot in fresh soil, being careful to select such as is free from insects.

**Oleander.**—We have been told that if we break off the flowers from the Oleander with the stems on, they will not bloom again, but that they bloom on the same stems year after year. Is it so? It is so with the wax plant—Ligustrum lucidum.

**Answer.**—Yes; but the plant will flower from the points of fresh shoots.

**Nigella.**—Will some one please inform me through the FLORAL CABINET how to treat the Nigella, what kind of soil it requires, and whether it thrives in sunny or shady places?

VICKIE BLUE.

**Answer.**—Any light vegetable soil will grow these plants well, with abundance of water when in growth, and keep in a dry warm place when at rest, but not watered over the foliage. A slight shade from bright sun is necessary, in order that their growth may be successful.

## Flower Gardening.

### THE HYBRIDIZING OF PLANTS.

Flowers, from the florist's hands, and as we find them in "pastures green," or along the banks of running streams, are indeed beautiful. But did you never, my reader, long for some plant which would owe its peculiar attractions to your own adaptation of nature's laws? Watching each returning season for some tint or marking hitherto unknown to my garden, and meeting with frequent disappointments, I resolved to trust no longer to the media of winds and insects to produce an interchange of colors. I sought and found an article on the subject, and after careful study, behold! my trials and their success. Petunias being easier handled than aught else in my collection, my first attempt was with them. They open in the morning, and rarely unfold the receptacles containing the pollen until nine, or even ten o'clock. Before that time I visit the flower-bed, and selecting two plants, for instance, one of white the other of pink, prepare the blossoms for the final work a few hours later. As an example, I take a small pair of pointed scissors and cut from all the white blossoms every stamen I can detect. I next visit the pink variety, and destroy the pistil belonging to each; thus every flower is dependent upon another to become fertilized in order to produce seed. For about two hours I find the receptacles at the ends of the uncut stamens have opened, and the pollen ready to be removed. Taking one flower at a time, (of the pink), I cut it from the plant, and removing every portion of the corolla I may without injury to the stamens, I gently brush the latter over the pistil of the white variety until a quantity of the pollen is transferred from them to the said pistil. Taking each flower in turn, I continue the operation until all are fertilized, when time alone is wanting to complete the work. A small thread may be tied to the stem of each flower, to distinguish it from others, in order that the seed may be gathered separately. And to prevent other colors being introduced with those already mixed, tie a piece of net or gauze over each blossom to prevent their being disturbed by insects. Fair weather is desirable, as moisture would hinder, in a degree, the removal of the pollen, and also prove detrimental to the formation of seed. When once the practice is acquired, taste may be exercised in the arrangement of colors, and our efforts extended to an infinite number and kinds of plants. A writer says: "Any two plants of the same order can be made to form a union," i. e., a Cypress Vine and Morning Glory, both being of the natural order Convolvulaceæ, will unite. Of this, I have no experience of my own as proof, but any one can make the attempt who has at hand a catalogue containing the botanical order of flowers. What a field of pleasure is opened to us in the study of the affinity of plants! Sister flower-lovers, shall we not compete with the florist in producing new and unknown varieties? For not only are changes effected in the coloring and markings of flowers, but their natures and wants may be transformed. We can endow them with qualities best suited to our climes, while in no degree lessening their pleasing attributes. The Dahlia will partake of the fragrance of some sweet sister-rose, while the latter

will exchange for it the quality of a perpetual bloomer. Then, too, a plant will learn the lesson of endurance from some hardy cousin, and be none the less delightful to our homes for the nicety of perfume it in gratitude bestows upon its benefactor. Our care should be taken that no ill-assorted unions be made among our plants. Dame Nature has done much to prevent misalliance in her own particular province; nevertheless, most unaccountable marriages take place in the plant kingdom as well as in our own. In conclusion, I hope many readers will peruse this with interest, for who knows how endless the pleasure and instruction it will afford to inquiring minds?

JENNIE.

VERANDA COVERED WITH VINES.

### FLOWER GARDENS.

To those who have a choice in land, I would say, choose a light rich loam, to which, once a year, I would apply well-rotted cow manure and leaf-mold from the woods, if attainable. It is my plan to collect all the leaves, pieces of turf, young weeds, etc., and pile them up in an obscure corner. As you add to this pile, stir it up, and in this way you will keep on hand

A GARDEN SUMMER-HOUSE.

a compost that is as invaluable for pot plants as it is for applying to your beds. The more you stir the pile, the quicker it will decay. It will take about two summers for it to fully decompose. The ground should be laid out according to taste, and the varieties you intend to cultivate. If you have but little space, and wish to cultivate as many varieties as possible, the best way is to take the turf all off and arrange in straight beds, with a walk between. These beds should not be so wide but that you can weed them without stepping among the plants. Where there is

plenty of room, fancy shaped beds, cut in the green turf, are much prettier. The grass needs to be cut close and even to give the best appearance. Beds like these should be filled with something that will blossom all the season, or sometimes two varieties can be planted in one bed so as to produce the effect. This is an excellent way to plant spring flowering bulbs. The annuals sown between the rows do not injure the bulbs, but grow so quickly that they cover the bed with flowers almost as soon as the bulbs are gone.

Planting in fancy beds brings the necessity of a bed similar to the one first described, for such varieties as bloom and die quickly, and also for cut flowers.

Having prepared your ground, you must next sow your seeds and plant roots of perennials, shrubs, etc. Seeds should not be sown in the New England States until after the first of May. If you sow them in a seed-bed, it is well to prepare it in the most sheltered spot you have. By so doing, you can plant them a few days earlier. Those kinds that have long roots should always be sown where they are to stand, for many plants will be lost in transplanting, and those that live will become stunted. Do not neglect transplanting until they have become drawn or slender. When they are putting forth their second and

third leaves is the time, for they will soon need more room. You can obtain flowering plants much earlier by planting in a hot-bed. Those who have no hot-bed can plant them in pots, or even rough wooden boxes in the house. After your plants are transplanted, nothing remains except to keep the weeds down. Some plants may need to be tied up to stakes to prevent breaking by wind or rain. Roots of perennials do best if planted in the autumn. They can be planted in the spring, but will not do as well the first summer. Always make a plan of your garden or lawn in the spring, and select your seeds, etc., according to space and situation. I will say a few words about making selections, which may be a help to amateurs. If you want tall, showy flowers, select Zinnias, Balsams, Poppies, Marigolds, etc. These are not my favorites, however. For masses of medium height, plant Phlox Drummondii, Candytuft, Petunias, Verbenas, etc. Portulacas make showy masses in the early part of the day, but as they close soon after noon, should not be planted in a very conspicuous place. Try a bed of foliage plants. If you have never had them, you will be surprised at their magnificence. Amaranthus, Ricinus, Celosia Huttonii, Coleus, Cannas, and Caladiums are all good for this purpose. But do not forget the fragrant flowers. I would sooner do without a great many of my beautiful blossoms than some that are less showy but more fragrant. What can be sweeter than the little Mignonette, Sweet

Alyssum, Sweet Peas, and Heliotropes. When more than one variety is planted in the same bed, be sure to plant the tallest in the centre or backside, and the lowest on the edge or in front of the beds. Ribbon beds are pretty if well taken care of, but they need a great deal of pruning to keep them in shape. They may be planted of different colors of the same flower, or altogether different plants may be used. It requires some care to select plants of the proper height and color. By all means have a bed of bulbs. Hyacinths and Tulips planted in the ribbon style are truly beautiful.

MYRTLE.

## Ornamental Cottages.

### A RIVER COTTAGE.

This cottage, designed by Mr. R. G. Hatfield, architect, of New York, is intended to be located upon a sharp declivity where a fine view, either upon a river or extended valley, is to be had from the lower side.

It has, therefore, a road front and a river front—the former having the entrance porch extended out beyond the line of the house, to answer the purpose of a porte-cochere, and the latter provided with an ample veranda connected with the lower lawns by a flight of steps.

On the principal story floor the entrance is on the south side of the central gable, into a large stairway hall, 15 x 16 feet, from which doors open into all the rooms. At the center is the parlor, which extends out on the river front, and by its end and side windows affords a view either up, down or across the water; the size of this room is 16 x 22 feet.

The parlor opens at the left into the library, which is 14 x 16 feet, and has a bay window at the south end; and at the right into the dining room. This room is 15 x 18 feet, and opens in front into a pantry, 10 x 16 feet, containing a dumb waiter descending into the basement, a private stairs leading down to basement and up to second story, cupboard, shelves, etc. All the windows opening on the veranda should descend to the floor.

The second story contains six rooms. Over the parlor is the principal chamber, which is 16 x 22 feet, and has three corner closets. This opens into a small child's room, on the left, which is 7 x 9 feet. The three other small bedrooms are 8 x 14, 8.6 x 15, and 8.6 x 9 feet, respectively. The bath room is in the stairway hall, and is 6 x 11 feet; it contains the bath and water closet.

The basement contains, on the right, the kitchen, 14.6 x 17.6, provided with pantry, closet and store-room in front; at the centre the laundry, with wash trays, closet, stove, etc.; on the left, the cellar for fuel, etc.; and in front, a passage containing a water closet, the furnace, etc. There are two exterior doors, one opening from the cellar, and one from the kitchen.

The side of the basement towards the river is entirely above ground. The height of basement is 8 feet; of first story, 10 feet; and second floor, 8½ feet in the clear when finished. The walls of the basement, where against the ground, should be built of stone, and the side where above ground, towards the river, may be of brick. Above the basement the building is of wood, but should be filled in with brick to the roof, as its position is evidently one of great exposure in winter, and it could scarcely be made comfortable without. The detail of the finish, both on the exterior and interior, is intended to be plain, leaving the good effect to depend rather upon good proportion than embellishment. The cost would depend upon local advantages, and would average \$5,000.

### KEEPING PINKS, ETC., THROUGH THE WINTER.

In reply to Hannah Owens, in the March CABINET, I would say, that I have successfully kept all kinds of Pinks, including the Heddewigii varieties, by driving three or four shingles into the ground close to the plants, letting them meet or nearly so, at the top, throwing coarse manure, which has more or less straw in it, over them. This plan answers also for Canterbury Bells, Digitalis, and in fact, all perennials that keep their leaves through the winter; the shingles keep the manure from rotting the foliage that ought to live through the cold weather, and the commonest Pinks are the better for such protection. Then in the spring they can be uncovered gradually; first making a hole in the top of the mound, then removing the covering by degrees, as the weather permits. Carnations should be treated as biennials, that is, raised from seed every year, for it does not pay to keep them but one winter. The most tender varieties will live out of doors, the first winter, if raised from seed, and blossom beauti-

out, no matter how small, is placed a strip of stout brown paper, pinned together to form a ring; they should be two inches high, and just pushed into the ground enough to keep them steady, and the circles should be as small as the plant will allow, for fear the worms should come up within the enclosure which rarely happens. Double the paper, unless very strong, and use large pins; they keep the circles in shape when it rains. By this method the cut worms became so hungry in my garden last year, that they were actually driven to eat weeds, a very unusual occurrence, that must have seriously wounded their feelings. As the Lilies and Gladiolus come up, we protect them in the same way. This paper plan is not infallible, but will save ninety plants out of a hundred; which is better than the wholesale destruction the pests have caused in this vicinity for the last three years. Early one morning, last June, I did find a large worm setting up on the top of one of my paper circles, placidly eating into a Gladiolus stalk, but it was the only case of the kind, and he must have been an uncommonly intelligent specimen, almost worthy of a better fate than the cremation he received in my kitchen stove.

MRS. F. N. B.

**Pelargoniums.**—I am a great admirer of the Pelargoniums, but do not succeed as I desire in cultivating them. 1. Which is the proper season for rooting them from cuttings? 2. Do they branch, or are they inclined to be slender? 3. When should Ice Plant seed be sown for a summer basket? 4. What is the name of the Ivy, a leaf of which I enclose? I have a very handsome and large one trained over a rustic frame, and it is much admired. 5. Why is it that my Coleus plants die in the winter, they are kept in a pot under ground, but get sun and light? 6. Can any one tell me how to treat the Artillery plant, to prevent its rotting or drying up? Mine was the admiration of many observers, when suddenly I found one rotting, and the other wilting. I removed them both, gave the former very little water, while the latter, as I thought, required much, but they both soon died.

S. W. E.

**Answer.**—In the spring in hot-beds, and autumn in cold frames. 2. The plants will branch if pinched, and cut down in the autumn. 3. In April. 4. No leaf came to hand. 5. Damp and cold. 6. The same cause; these plants require a temperature of not less than fifty at all times.

**Cypripedium Insignis.**—Permit me to inquire through the CABINET how to treat the above Orchid. I bought one last fall in bud, the buds fell off, and the plant does not grow. I filled a six-inch pot two-thirds full of charcoal, and set the plant in leaf mould and sand. Also can Euphorbia Splendens be propagated by cuttings, and is spring the proper time? PANSY.

**Answer.**—Pot the plant in loam, and as the roots are probably dead, give but little water until fresh roots are made. Euphorbia can be propagated from cuttings, at any time.

RIVER COTTAGE.

fully in their second summer, but if they do survive a second winter's cold, they bloom at the end of long straggling branches, and are shiftless looking plants, such as make an orderly woman's eyes ache; it is better to have young plants every year. Every one who cares enough for flowers to raise Verbenas and Phloxes, should raise Carnations and Picotees, they grow more easily from the seed, can be transplanted between flowering plants, and will take up but little room the first season, and bloom beautifully the second. As to Monthly Roses, placing them in the cellar in pots, late in the fall, and bringing them up stairs early in April to start, seems to be the best way to keep them, and it is not a very satisfactory method either, for before the leaves come out, they are not handsome parlor plants. I have tried Daisy Eyebright's plan, of covering them with sods, out of doors, but the weight of the sods broke the shoots off, and they were ruined.

I should like to tell E. R. Allen, of Chicopee Falls, Mass., of my plan for preventing the destruction of plants by cut worms. Around every plant that is set

## Stories.

## SCHOOLING A HUSBAND.

Mrs. Center was jealous. She was one of those discontented women who are never satisfied unless something goes wrong. When the sky is bright and pleasant, they are annoyed because there is nothing to grumble at. The trouble is not with the outward world, but with the heart, the mind; and every one who wishes to grumble will find a subject.

Mrs. Center was jealous. Her husband was a very good sort of person, though he probably had his peculiarities. At any rate, he had a cousin, whose name was Sophia Smithers, and who was very pretty, very intelligent, and very amiable and kind-hearted. I dare say he occasionally made her a social call, to which his wife solemnly and seriously objected, for the reason that Sophia was pretty, intelligent, amiable and kind-hearted. These were the sum total of her sins.

Center and his wife boarded in a private establishment at the South end of Boston. At the same house also boarded Center's particular, intimate, and confidential friend Wallis, with his wife. Their rooms might almost be said to be common ground, for the two men and the two women were constantly together.

Wallis could not help observing that Mrs. Center watched her husband very closely, and Center at last confessed that there had been some difficulty. So they talked the matter over together, and came to the conclusion that it was very stupid for any one to be jealous, most of all for Mrs. Center to be jealous. What they did I don't know, but one evening Center entered the room and found Mrs. Wallis there.

"My dear, I am obliged to go out a few moments to call upon a friend," said Center.

"To call upon a friend!" sneered Mrs. Center.

"Yes, my dear, I shall be back presently," and Mr. Center left the room.

"The old story," said she, when he had gone.

"If it was my husband I would follow him," said Mrs. Wallis.

"I will!" and she immediately put on her bonnet and shawl. "Sophia Smithers lives very near, and I am sure he is going there."

Center had gone up stairs to put on his hat and overcoat, and in a moment she saw him on the stairs. She could not mistake him, for there was no other gentleman in the house who wore such a peculiar shaped Kossuth as he wore.

He passed out, and Mrs. Center passed out after him. She followed the queer shaped Kossuth of her husband, and it led her to C— street, where she had suspected it would lead her. And further, it led her to the house of Smithers, the father of Sophia, where she suspected also it would lead her.

Mrs. Center was very unhappy. Her husband had ceased to love her; he loved another; he loved Sophia Smithers. She could have torn the pretty, intelligent, amiable and kind-hearted cousin of her husband in pieces at that moment; but she had the fortitude to curb her belligerent tendencies, and ring the door-bell.

She was shown into the sitting-room, where the beautiful girl of many virtues was engaged in sewing.

"Is my husband here?" she demanded.

"Mr. Center? Bless you, no! He hasn't been here for a month."

Gracious! What a whopper! Was it true that she whose multitudinous qualities had been so often rehearsed to her could tell a lie? Hadn't she seen the peculiar Kossuth of her husband enter that door?

Hadn't she followed that unmistakable hat to the house?

She was amazed at the coolness of her husband's fair cousin. Before, she had believed it was only a flirtation. Now, she was sure it was something infinitely worse, and she thought about a divorce, or at least a separation.

She was astounded, and asked no more questions. Did the guilty pair hope to deceive her—her, the argus-eyed wife? She had some shrewdness, and she had the cunning to conceal her purpose by refraining from any appearance of distrust. After a few words upon commonplace topics she took her leave.

When she reached the sidewalk, there she planted herself, determined to wait till Center came out. For more than an hour she stood there, nursing the yellow demons of jealousy. He came not. While she, the true, faithful and legal wife of Center, was waiting on the cold pavement, shivering in the cold blast of autumn, he was folded in the arms of the black-hearted Sophia, before a comfortable coal fire.

She was catching her death a-cold. What did he care—the brute! He was bestowing his affections upon her who had no legal right to them.

The wind blew, and it began to rain. She could stand it no longer. She should die before she got the divorce, and that was just what the inhuman Center would wish her to do. She must preserve her precious life for the present, and she reluctantly concluded to go home. Center had not come out, and it required a struggle for her to forego the exposure of the nefarious scheme.

She rushed into the house, into her room. Mrs. Wallis was there still. Throwing herself upon the sofa, she wept like a great baby. Her friend tried to comfort her, but was firmly resolved not to be comforted. In vain Mrs. Wallis tried to assure her of the fidelity of her husband. She would not listen to the words. But while she was thus weeping, Mr. Center entered the room, looking just as though nothing had happened.

"You wretch!" sobbed the lady.

"What is the matter, my dear?" coolly inquired the gentleman, for he had not passed through the battle and storm of matrimonial warfare without being able to "stand fire."

"You wretch!" repeated the lady, with compound unctious.

"What has happened?"

"You insult me, abuse me, and then ask me what the matter is!" cried the lady. "Haven't I been waiting in C— street for two hours, for you to come out of Smithers' house?"

"Have you?"

"I have, you wretch!"

"And I did not come out?"

"No! You know you didn't!"

"There was an excellent reason for that, my dear. I wasn't there," said Center, calmly.

"You wasn't there, you wretch! How dare you tell me such an abominable lie! But I have found you out. You go there every day, yes, twice, three times a day! I know your amiable cousin, now! She can lie, as well as you."

"Sophia tell a lie! O no, my dear!"

"But she did. She said you were not there."

"That was very true; I was not."

"How dare you tell me such a lie! You have been with Sophia all the evening. She is a nasty baggage!"

"Nay, Mrs. Center; you are mistaken," interposed Mrs. Wallis. "Mr. Center has been with me in this room all the evening."

"What? Didn't I see him go out and follow him to C— street?"

"No, my dear, I haven't been out this evening. I changed my mind."

Just then Wallis entered the room with that peculiar Kossuth on his head, and the mystery was explained. Mrs. Center was not a little confused, and very much ashamed of herself.

Wallis had been in Smithers' library smoking a cigar, and had not seen Sophia. Her statement that she had not seen Center for a month was strictly true, and Mrs. Center was obliged to acknowledge that she had been jealous without a cause, though she was not "let into" the plot of Wallis.

But Center should have known better than to tell his wife what a pretty, intelligent, amiable and kind-hearted girl Sophia was. No husband should speak well of any lady but his wife.

## ANECDOTE OF WASHINGTON.

This anecdote of General Washington appeared in an English magazine in 1823:

During his administration as President of the United States, a gentleman, a friend of the President throughout the whole course of the Revolutionary war, applied for a lucrative and responsible office. The gentleman was at all times welcome to Washington's table. He had been to a certain degree necessary to the domestic repose of a man who had for seven years fought the battles of his country, and who had now undertaken the task of wielding her political energies. At all times and in all places Washington regarded his Revolutionary associate with an eye of evident partiality and confidence.

He was a jovial, pleasant, and unobtrusive companion. In applying for the office it was in the full confidence of success, and his friends already cheered him in the prospect of his arrival at competency and ease.

The opponent of this gentleman was known to be decidedly hostile to the politics of Washington. He had even made himself conspicuous among the ranks of the opposition. He had, however, the temerity to stand as a candidate for the office to which the friend and favorite of Washington aspired. He had nothing to urge in favor of his pretensions but strong integrity, promptitude and fidelity in business, and every quality which, if called into exercise, would render service to the State.

Every one considered the appointment of this man hopeless. No flattering testimonial of merit had he to present to the eye of Washington. He was known to be his political enemy. He was opposed by a favorite of the General; and yet with such fearful odds he dared to stand as a candidate. What was the result? The enemy of Washington was appointed to the office, and his table companion left destitute and rejected.

A mutual friend, who interested himself in the affair, ventured to remonstrate with the President for the injustice of his appointment. "My friend," said he, "I receive with a cordial welcome. He is welcome to my house and welcome to my heart. But, with all his good qualities, he is not a man of business. His opponent is, with all his political hostility to me, a man of business. My private feelings have nothing to do in this case. I am not George Washington, but President of the United States. As George Washington I would do this man any kindness in my power; but as the President of the United States I can do nothing."

HENRY T. WILLIAMS, 46 Beekman Street, N. Y.

NEW YORK, AUGUST, 1875.

## CHURCH FLOWERS.

I must confess with some shame that mine have undergone a sort of deterioration in these last years, and my flower beds show it very plainly to the initiated eye. If my seeds find a home in the genial hot-bed still, or are nursed into vitality by the kitchen fire, it is less on account of their tender nature than because I long for early blossoms. Long ago I gave up the charming Fenzlia, and that delightful but most exasperating Abronia, which is the first temptation in all the catalogues, with the rest of the coy beauties; and now my cry is for more Phlox, for plenty of Candytuft, for Zinnias and Petunias in quantity. Do you ask why?

Briefly, it is my business to provide the church bouquets—not a lucrative office, and certainly no sinecure. Not that I was regularly appointed thereto; I work on the principle easily recognized by all “society people,” that those who will work may. Nevertheless, I have heard too many words of appreciation from minister and people to call it a thankless task; and my humble service in adorning the sanctuary has taken on a sacredness all its own. The last gift to our new church, years ago, was a set of large vases, of the dark lava variety, and the most approved classical pattern. One stands on the table in front of the pulpit, one at each end of the platform, and one on a bracket at the side of the organ. And I fill them, and (to come back to my first confession) grow flowers for that purpose. I have looked vainly through the CABINET for the last two years in search of suggestions to aid me in this particular branch of floriculture; so I now proceed to make my own.

I think I hear some inexperienced reader say, contemptuously, “Why, any flowers will do!” Excuse me, you were never more mistaken. A costly greenhouse bouquet, with its close masses of color, becomes an indiscriminate muddle, seen across a church; delicate sprays and spikes of blossom are as if they were not. Generally, the more pains you take (in this business) the less it shows; yet time and thought and

taste are imperative. In the first place, consider that your bouquet must be made to show from a distance; its colors must be distinct and not mingled, as in a smaller collection. As it will probably face but one way you will save material by making it flat rather than round; and, if you are wise, you will make it on a strong foundation, for a “trotty” bouquet is an abomination, not to be atoned for by the greatest display of color. A Gladiolus stalk, with its last flowers at the top, is as good a support as you can find, and has the merit of looking well if it chances to show. Two colors look better than more; and I find that the green and white bouquets, which are provided for funeral occasions and for the sacramental feast, are always most admired. Of course the large, coarse flowers answer our purpose better than the finer kinds. Geraniums are indeed superb, but you will seldom care to cut these, and Dahlias do very well instead, or even Zinnias, though I greatly prefer the former, as richer in look and having a more accommodating stem. The little bouquet Dahlia is particularly pretty, and (by the way) a desirable pot plant. Among the reds I count the Cockscorn very effective, and the Amaranthus candelatus is almost indispensable, its crimson tassels fringing the edges of the bouquet, and inviting the imagination to magnify its size. One can also use great quantities of Verbenas and Petunias and Nasturtiums, though the brittle stems of the latter are against them. Only white (and plenty of it) should be placed with these shades of red. For this I know of nothing better than the double Feverfew (Pyrethrum) and the perennial Phlox, or Rocket, which will blossom all the season if constantly cut. Petunias do very well, and are easy to raise. A flower garden seldom has enough of white in it, and mine has never had too much, even when I have gathered half a bushel of Candytuft at once. Yellows and blues are harder to find, though Canterbury Bell and Chrysanthemum are generally at hand; but the green is the

SKETCH OF ITALIAN GARDEN.

most unattainable. It must be reasonably stiff; it must not wilt easily; it must not cover the flowers too much (as Box does); it must be bright and graceful and easily raised. Who will supply me with this desideratum?

MITCHELLA REPENS.

## GET UP A CLUB FOR SIX MONTHS

FOR

## The Ladies' Floral Cabinet,

The Handsomest of all Ladies' Journals.

Our subscribers have hundreds of friends who would take the CABINET for six months, if it is only shown to them. To encourage all to make a special effort to extend our circulation, and thus help the purpose and success of the paper, we will take subscriptions as follows, to begin with the July number:

## For Six Months.

Price	65 cents for 6 months, postage prepaid, but without chromo.
“ 75 “	“ With choice also of either chromo—Gems of “The Flower Garden,” or, “My Window Garden.”
“ 90 “	“ with both chromos.
“ \$3 00 for club of 5	without chromo.
“ 6 00 “ 10	but extra paper free.
“ 3 50 “ 5 with 1	“
“ 7 00 “ 10 “ 1	and extra copy paper free.

## Premiums for Clubs for Six Months.

1. Ivory Paper Cutter and Folder,	club of 8
2. Book. Every Woman Her own Flower Gardener,	“ 5
3. Window Gardening,	“ 15
4. Box Initial Note Paper,	“ 5
5. 1 Dozen Fine Gladiolus, worth \$3 00,	“ 10
6. 100 “ “ 25 00,	“ 30
7. 1 Fine named Bulb Gladiolus, worth \$1 50	“ 5
8. Lovejoy Weather House,	“ 15
9. Any Game in our Premium List, worth 5 to 75 cents,	“ 5
10. Bracket and Fret Saw, worth \$1 25,	“ 12
11. The Acrobats, worth \$1 15,	“ 10
12. Box Decalcomanie,	“ 7
13. Pocket Microscope, worth \$1 50	“ 10
14. Package Visiting Cards,	“ 6
15. Ivory Breast-Pin,	“ 10
16. Two Fancy Carved Napkin Rings,	“ 8

 40. One Johnston Ruffler for Sewing Machines, price \$3 00, for club of 15.  
 41. One set Goodrich Hemmer and Binder, price \$1 50, club of 5.  
 42. One set Metropolitan Hemmer and Binder, price \$1 50, club of 5.  
 43. One Bottle Payson's Indelible Ink, price 75c. club of 7.

## PUBLISHER'S ANNOUNCEMENTS

**Six Months Subscriptions.**—With a little effort each subscriber can send us the name of some friend, or a club, for the rest of the year. We hope all will try. Prices have been fixed as low as possible. So beautiful a journal, on so costly paper, with so many expensive and charming illustrations, cannot be offered as low as other cheap papers, which are not worth keeping. The music alone for six months is worth \$2 at least, and the paper, with chromos, \$1 more—a total of \$3 for only 70 cents.

**Plants for Sale.**—We have several lots of plants, seeds, &c., owing us by florists, which we will sell at 25 per cent. discount from usual catalogue prices. Any one wishing to buy may choose a list from any floral catalogue, deduct 25 per cent. from price, send the order to us and we will have good plants and seeds sent for the money. As soon as we have traded out these accounts our offer will be withdrawn. Persons not wishing to buy now, but next fall, may purchase from us an order now, at this discount, good for any time it may be presented.

**Household Elegancies.**—We shall issue, Oct. 15, a new book, about the size of “Window Gardening,” full of fancy work, home decorations, household art, and elegant ways of adorning a home, with so many exquisite illustrations, that every lady will be fairly crazy with delight when she sees it. We regard it as the most desirable ladies' book ever published, and it will be truly the grand *Gift Book of the season*. Our readers know that anything we issue is so splendid in style and superior in merit, that, when we make an announcement, it is received with confidence and the most ready patronage. “Household Elegancies” is the finest work we have yet originated, and as a special offer to any one who will obtain 15 subscribers to the CABINET for six months, before August 1st, we will present a copy of this new book free, as soon as issued. Price will be \$1.50, and will be ready Oct. 15.

## Home Pets.

### HOME PETS.

"And these are your pets," said a dear friend to me one day, while looking at and admiring some very choice plants. "Well, yes; a portion of them," I replied; "I plant and water, wait and watch, and when it shows life I am glad; and I think it is mine to watch, water, and train; yes, they are pets; but I have others; you saw that woolly dog as you came in; he too comes in for a share of petting, and he appreciates it; those great human eyes, that look so intelligent, only tell of the great loving heart within the shaggy covering, and how he saved the life of that child when drowning, and laid her at her mother's feet, and how, a short time since, he watched the corn-field and kept the cattle from mischief, and went without his dinner, and how, every morning, he likes to lay his face against mine, just a minute.

"I like him, he knows so much; and my kitten comes along for a pat, and the mischief expects a game of ball, and a romp over my shoulders, and a game of hide-and-seek over the house; and all the mice she catches brings them to me, and I pet her to her satisfaction; and my horse, I pet him after a sort; he knows when I drive him, and takes all manner of liberties, stopping to talk with people whether we are acquainted or not; turning up at gate-posts; stopping under shade trees, and taking his own time for travel, until within

about a mile of home, and then he seems to think there is a light in the window for him in the shape of a good meal of oats or corn; I like him too."

"Well, what has become of your bird?"

"I gave him away; it would have been my pleasure to have opened his cage, and let him fly away; but certain death would have been the consequence. I cannot keep birds, poor harmless creatures; it makes

"Yes," says my friend, "Bergh is doing much toward that."

"Yes, I know. I feel just like giving that man a God-speed in the shape of a hug and a kiss; success to his humane efforts.

"I once saw a large oil painting, Adam and Eve in the garden; Adam caressing and petting Eve, with one arm around her, while at his side was a noble

lion, Adam's hand resting upon his head; the animals God had made and given to Adam were at home around him, knowing no fear, looking so kind and trustful, except the serpent, the deceitful sneak, he dared not come out boldly to be petted. The scene was too graceful, too much trust, love, and security for him to enter, half hiding; his evil eyes snapping, and taking in the scene, seemed to say, I will spoil all this; your joy shall be sorrow; your rest shall be toil; your safety peril; your pets shall learn to fear you; and how effectually he petted Eve we all know, and she in turn beguiled Adam; and woe came to all, both man and beast. It is fit and becoming for man and the

SOME OF HER PETS.

my heart ache continually to hear their cries to each other; to see them fluttering, and beating against the wires, it seems like an effort to break jail. It was a cruel thing to bring them here. Canaries and negroes were not made for such a life. This is not their country nor their home. I wonder if the time will ever come when the wrongs of our domestic animals will ever be made right?"

race to restore the brute creation to confidence and trust."

"Well," says my friend, "do you let that enormous spider live with you?"

"Verily, I do. I let him live and thrive, and grow, and a curious thing it is. Many a lesson I have learned of the cunning, wary old worker. As long as he keeps his present quarters, he is welcome; but here comes my dearest best pets, my husband and children." J. T.

## Ladies' Boudoir.

JENNIE.

BY HELEN A. RAINS.

Oh! shall I not, Jennie,  
Be one of the many,  
To render thee homage wherever thou art;  
Not wilfully, blindly,  
But carefully, kindly,  
The purest, and truest that wells in the heart.

Tho' others may bless thee,  
And often caress thee,  
With words of endearment more precious to thee,  
From all I can offer,  
From Love's brimming coffers,  
Be pleased to acknowledge a tribute from me.

Then shall I not, Jennie,  
Be one of the many,  
To join in thy converse, and bask in thy smile,  
Till Friendships shall wither,  
And we have gone hither,  
To dwell in the light of Eternity's Isle.

## "THE LITTLE ONE IS GONE."

BY HELEN A. RAINS.

I watch to see a little face,  
Sly peeping thro' the door,  
And stop to hear a wonted step,  
That comes within no more.  
I wait to catch a laughing tone,  
And watch and wait in vain,  
For undisturbed I may work on,  
'Twill never come again.

I hear the tread of other feet,  
And other tones of glee,  
And listen for another voice,  
That comes no more to me.  
I sit and mark in silent grief,  
The solemn hours move on;  
Oh! what will give my heart relief,  
The little one is gone.

## HOUSE FURNISHING.

I promised to tell you something about Mary Hatch's house. I will begin with the spare chamber, as I was much pleased with it. To begin, then, at the foundation (for I mean to go into details), the walls are covered with plain paper—French gray in color. At the top of the ceiling was a gilt moulding about two inches wide, to hang pictures from; below this a bordering, gray ground-work, with pink roses in long sprays; this was finished with a very narrow gilt moulding. The paint was white. The panels of the doors and the moulding of the base-board were tinted to match the paper. Carpet of white matting. Chamber-set of white pine, painted and varnished to match the paper on the walls. The French bedstead had bouquets of roses on the head and foot-boards, a scroll-work of gilt and white outlined the edges; the dressing-case, commode and chairs matched. At the windows were plain white shades with drab tassels; over these, full curtains of white Swiss muslin, open in the centre; at the top of the window was a board, about an inch in width and slightly rounded, from which was fastened a lambrequin made of pink cambric, cut in two scollops and covered with Swiss muslin, and edged with an imitation of Guipure lace; to finish the top was a box-plaiting, made of lengthwise muslin, doubled and plaited in the middle, and tacked on with small silver-headed tacks; the curtains were looped up with pink ribbon. On the dressing-case was a pink ground glass toilet-set; mats made of white wash canvas embroidered with pink worsted, a pincushion, pattern of gray beads filled in with pink floss silk; on one side of the glass hung a hair receiver, made of perforated eard-board, worked with the same silk; on the other side, a hair-pin receiver made of a collar-box filled with wool wadding covered with a crocheted cover made of pink worsted; a strip of eard-board worked with worsted

and bound on each edge with pink ribbon, was fastened around the outside; over the commode was a towel rack, a pattern of gray beads, filled in with the same floss silk; on each side of this was a tiny bracket made of whitewood carved, with a little Parian marble bust on it. On the mantle-shelf (a marble slab with bronze brackets) was a pair of white ground-glass vases with a bunch of roses in "Decalcomanie" on them—they were filled with pressed ferns; above them hung one of Prang's beautiful chromos of flowers, in a whitewood frame; each side of the dressing-case were pictures of Prang's autumn leaves in passe-partout frames, with drab mats and finish. The pillow-shams were made of white Swiss muslin, with a deep hem, and trimmed with the same lace as the lambrequins, and lined with pink cambric. The toilet quilt was pink and white, and the cover on the table the same. I noticed several handsome books on it. At one window hung a goblet, minus the bottom; it was filled with Moneywort growing; it was encased in a white crocheted cover and a tassel on the bottom. In one corner was a large comfortable looking chair which, on inquiring, I learned was made from an old worn-out "Boston rocker" which came from mother's garret. With the aid of an old quilt, some cotton batting and a few tacks, it made a nice chair. It was covered with French cretonne, a gray ground with garlands of roses. An old band-box was converted into a footstool by cutting a piece from the top to make it shallower, and covering the same as the chair. In one corner was a pine bracket covered with mosses and lichens; there was a large shell on it filled with autumn leaves. A very handsome mat, in front of the bed, was made from a remnant of velvet carpet, bought for a trifle, with a piece of bordering that matched the carpet sewed around; it had a gray ground-work, with clusters of roses and buds, and made as handsome a mat as one that cost a good deal more money. Now, I think I have told you all about this charming room, and one great beauty of it is its moderate cost; in these days of panic this is quite a consideration. Most of the things, beside the furniture and carpet, Mary made herself, or they were given her when she was married.

I forgot, in my last letter, to tell you about the funnel to use when you can fruit. I got the tinman to make mine. It is just like a common funnel, only the tube is the same size all the length of it, and it just fits the inside of the mouth of jar and prevents all spilling.

While I think of it, I will tell you of a nice way to keep lard in summer. In the spring, when I have a lot of empty Mason jars, I fry out my lard, strain it into a tin pan, let it stand a little while to cool, wring a towel from hot water, lay it folded on the table, put the jars on it, dip in the lard carefully, put on the rubbers and screw on the caps as soon as you can; your lard will keep as long as you want it, and have the advantage of being in small quantities.

M. J. P.

**Learn to Sing Ballads.**—A contributor to *Home and School* has some beautiful thoughts about singing. He bids every one to cultivate his or her voice, even if it is not remarkable for strength or sweetness. A woman who cannot sing is as a flower without perfume, a butterfly without wings. I do not mean you must sing scales and trills by the hour; those notions have left me long ago. Learn operatic wonders, if you like, only be sure to learn them correctly; but they are easily forgotten, rest assured. Learn a hun-

dred or more beautiful little ballads. Not the kind that take a town by storm and die out in one season, but real songs that never grow old, whose tunes are melody and whose words are poetry. You will find happiness, when your lover bends over you eager to whisper a secret you are ready to hear, that your joy and your love, your modesty and your pride blend more sweetly when you sing "Annie Laurie" or "Within a Mile of Edinboro' Town," than in executing the most wonderful gymnastics with your vocal organs. In sorrow, some such song, with all the sweet memories of the past clinging about its tender notes, will call forth tears to ease an aching heart.

Then there comes to every blessed woman a time when a weary little head lies on her bosom, little eyelids are drooping, twilight is drawing about her—too early for a lamp, too early for any but little folks to sleep; then it is that all the accomplishments of her girlhood are as nothing compared to one simple song that lulls a tired baby to sleep. There is something soothing to the child in the mother's voice at any time, and it instinctively loves the melody of a song; so, girls, while you can, think of the mine of wealth you can lay up for the children that will come by and by with their smiles and their kisses to brighten the way.

**Save a Mother's Tears.**—Not long ago, two friends were sitting together, engaged in letter writing. One was a young man from India, the other was a female friend, part of whose family resides in that far-off land. The former was writing to his mother in India. When the letter was finished, his friend offered to enclose it in hers, to save postage. This he politely declined, saying, "If it be sent separately, it will reach her sooner than if sent through a friend; and perhaps it may save her a tear." His friend was touched with his tender regard for his mother's feelings, and felt with him, that it was worth paying the postage to save his mother a tear.

**Peep into an Old Earl's Household.**—The niceties of ancient Roman luxury doubtless often surpassed any of modern times; but the rule of our remote ancestors in their victualling was rather coarse, and plenty of it. Queen Elizabeth being without tea, had to content herself with beer and beef; and the noblemen of her time certainly boarded and lodged themselves in a fashion more substantial than elegant. The ancient mode of living may be somewhat understood by reference to an old book—precious in the sight of antiquarians—the household book of the Earl of Northumberland. It appears that the old earl had a large family. It consisted of six hundred and sixty-six persons, masters and servants. Fifty was the average number of daily guests. There was a precise sumptuary code and given out in parcels and by rule. From midsummer to Michaelmas fresh meat was allowed; for the rest of the year salted provisions were alone admissible. Mustard was in great demand. One hundred and sixty gallons a year were used at the table; no doubt the character of the fresh and salted meat required a potent stimulus to make it go down. One bottle and a third of beer was given to each person daily. No sheets for the beds were used. The tablecloths were few; they were changed but once a month, and washing days were rare. Ninety-one dozen candles served the family for a year. The family rose at six in the morning, dined at ten, and supped at four. The earl and his lady had at their breakfast something better than the rest—a quart of beer, a quart of wine, two pieces of salt fish, six red herrings, and a dish of sprats.

## Household Elegancies.

## ITALIAN CHROMOTYPE PAINTING.

This kind of painting, or rather of transferring, pictures on to glass or wood, is done by two different methods. The first was furnished me by a "practical painter," who often did it for amusement, and is the most simple; but I will give both the methods known to me.

Clean your glass very carefully, and dry it thoroughly. Then, with a flat camel's-hair brush lay a thin coat of the best copal varnish all over the surface. When it feels "tasky," i. e., a little sticky—which will be in an hour or two, according to the atmosphere—lay the engraving down evenly upon it, and smooth carefully with a soft cloth. Let it stand until next day. Then take some cold water, and with a sponge or soft cloth damp the paper thoroughly. When wet through it can be easily removed, and every particle of ink will be found adhering to the varnished surface. Fill in the picture with oil colors if you wish, but if preferred plain, a coat of good white paint is all the "backing" necessary. Should your varnish grow too thick at any time, thin it with a little spirits of turpentine.

In transferring the pictures by the second method, you clean the glass and dry thoroughly as before; then lay it away in a place free from dust for several hours. Varnish the same side again, then, if your picture is an engraving, dip it into clear water, letting it remain until wet through; if colored, dip in a solution of one quart of water, one tablespoonful vinegar, and one half a tablespoonful of salt. Then lift the picture from the water and let the superfluous moisture dry from its face. By the time this is all done the varnish has dried its requisite twenty or thirty minutes; now lay the picture face down on the varnished glass, press it firmly and carefully, excluding every particle of air or water. Should air bubbles appear, place a sheet of thick smooth paper over it, and press from the centre outwardly until it is free from them and perfectly smooth. Rub the paper gently, from the centre towards the edges, until only a very thin film, of uniform thickness, covers the surface, and the picture is plainly visible in all parts. Next apply a coat of "finishing varnish." Should any spots appear while varnishing, saturate the paper and lay aside to dry. Then add three or four coats of the varnish, and your "Chromotype" is done. If you wish to color an engraving yourself, paint on the back in oil colors before the finishing varnish is applied. The varnish used in the first stage of this painting is composed of one ounce of balsam fir, and one ounce spirits turpentine; the finishing varnish, of one ounce balsam fir, one ounce spirits turpentine, and one ounce of alcohol.

The pictures may be transferred on to light-colored and very smooth wood. The work is very pretty for decorating fancy box covers.

MRS. MARY I. HERRON.

**Everlasting Flowers.**—A word as to arranging Everlastings for winter adornment. The best way that I have ever tried is to cut pasteboard and make the shape that I desired, either crowns, crosses, or wreaths of it, then sew green moss on the edges, and fill in with the flowers by sewing these on. It has proved the most satisfactory way that I have ever tried. Our common sumac berries are splendid to put with the flowers. They grow in tiny clusters, and by breaking them off from the large clump, they can be

woven in beautifully, as they retain their color for at least one year. I have some that were gathered last fall, and are as bright as new at the present time.

M. C. A.

**Crystallizing Grasses.**—To every quart of soft clear water, add eighteen ounces of pure alum. Boil it slowly in a close tin vessel, stirring occasionally with a clean stick, until the alum is all dissolved. When the liquor is almost cold, suspend the object to be crystallized by a string from a stick laid across the mouth of a glass or earthen jar, into which pour the solution. The article should remain in the solution twenty-four hours, then be hung in the shade until perfectly dry. If the solution is quite cold, the crystals will form too large; if too hot, they will be too small. The best temperature is ninety-five degrees Fahrenheit.

M. M. SAGE.

**New Way of Framing Pictures.**—We see in your paper a great many directions for making home ornaments, such as what-nots, picture frames, etc., and as we generally want a picture for a frame which we make, and as we have never seen the following directions in any number of the CABINET for obtaining one, we will give them, and if you deem them worthy a place in your paper you may give them to your readers: Take a pretty, showy picture from any paper, magazine, or book; cut the form all out, and then cut a piece of thick black cloth in a circular oblong shape; lay your picture in the centre, (the cloth must be larger than the picture of course,) and the whole on a piece of white paper the size of your glass, and you have a very showy picture. We placed "Our Bessie" in a frame after having placed her on a piece of black cloth as a background, and she looks very beautiful indeed.

S. R. V. Mc.

Bucyrus, Ohio.

**Statue Pictures.** Often in the pictorial papers are pictures of statuary which are nice for this work. Cut carefully away all the paper close to the picture, which paste on to black velvet. Put it in a deep frame with an oval or arched mat next the glass, and you will have a picture which cannot fail to please you. If you have a talent for pencil drawing, a head or bouquet or wreath of flowers drawn on thin card-board, cut out, put on black cloth or velvet, makes a fine picture, which, when framed, will well repay your labor.

MARY I. HERRON.

**Leaf and Flower Impressions.**—Oil a piece of white paper on one side, and hold it over the smoke of a lamp until coated thickly with smoke. Place the leaf on this black surface, with the under side down, as it is most plainly marked and shows the veining more distinctly. Place under a press for a short time, then lift the leaf, and placing it on a piece of card-board or white paper press it down with the fingers; upon raising it the fern or other leaf will be found upon the paper in clear and perfect distinctness, every vein, mark and fibre plainly outlined. Flowers may be impressed in the same manner, and a basket formed of strips of paper interlaced, smoked and impressed, then filled with leaves and flowers, forms an exquisite object when framed and hung.

MRS. C. S. J.

**Grecian Painting.**—Mrs. C. S. J. furnishes a lesson on Grecian Painting in the February number, and she does not state what she does with the oils or what she mixes the paints with—varnish or oils. I painted some oil paintings and oriental, and the lady I took lessons from mixed her paints in Demar varnish, and the cold freezing weather ruined them. Was it the cause of the paints being mixed in varnish? Please give the names of the oils used.

EMMA A. SCHENCK.

All colors used for the back of the picture must be opaque and thinned with oil (for Grecian painting). The opaque colors used are white, black, raw and burnt umber; the chromes, Naples yellow, Indian red and vermillion. The transparent colors are, both siennas, crimson lake, rose madder, Italian pink, Prussian or Antwerp blue, Vandyke brown and verdigris. As an ordinary rule the transparent color that is used with white for the back color is the one that must be used to touch up on the front, mixed with megilp to proper shade. This does not hold good with yellows, which must be mixed with burnt sienna and megilp. For foliage use Italian pink and a touch of Antwerp blue. When after standing a painting breaks into fissures or cracks, it is caused by the varnish not being of good quality; or that it has been put on so thickly or has not dried properly. To remedy it, coat over again at a later stage with fine varnish. The oils are drying and nut oils; the varnishes Grecian and mastic. How did your ruined pictures appear? As if full of crystallized radiations? or as if the colors had floated off or cracked away.

MRS. C. S. J.

**Morning Glory Mats.**—These are similar in style to Pansy mats, but more showy and less troublesome. Make the centre as large as you wish of single crochet; for toilet mats eleven rows are sufficient; for lamps, sixteen or eighteen. This can be either red, pink, or blue zephyr. Then with white zephyr (single) put three double crochets in each stitch for the first round, one double crochet of white in each stitch for the second round, then two double crochets of red (or color of centre) for the last round. Catch every thirteen double stitches together with repeated stitches of white zephyr, making little white flakes of a quarter or third of an inch in size. You have then two rows of Convolvulus, which appear as if they had been caught out in a snow storm. I think these flowers might be classed under the head of "bizarre;" doubtless some of our enterprising florists will imitate them in reality after awhile. I must add a word in favor of these "old-fashioned flowers." I have some of the finest I ever saw, every variety, from pure white with delicate pink veinings, to deep magenta, a royal purple; they are called blue, but I think only the little wild ones are really blue. They have escaped from the borders and hedges, and lavish their beauty with prodigal splendor over everything which seems to need adornment. Even the tall weeds put in an apology for their presence by waving aloft tri-colored banners. But the only fault one can find with these radiant treasures is one which applies to all terrestrial beauty and delight. "You seize the flower, the bloom is shed," or if not exactly shed, it doubles up its fist in a pugnacious and threatening manner; or, as the peasant poet continues to say:

"Like the snow-fall in the river,  
A moment white, then lost forever;  
Or like the borealis race,  
Which flit ere you can point their place;  
Or like the rainbow's lovely form,  
Evanishing amid the storm."

ISIDORA CONVULVULINE.

**Bible Autograph Albums.**—Every one has in store some sort of pictures, if only those which may be found in the illustrated papers now so common. And many of you are probably the happy owners of nice steel engravings. Procure a pretty scrap-book, paste your pictures nicely in it, and get your friends to exercise their scriptural knowledge by writing an appropriate verse under each, accompanied by their autograph.

If gilt frames are varnished with copal varnish, they can be washed with cold water without the slightest injury.

## Household Elegancies.

## FANCY WORK.

Our Father shows His great love for the beautiful, in the rich green fields and meadows brightly embroidered with flowers; in mossy rocks and glens; the deep blue sky and ever-changing clouds; the gay plumaged birds; the rippling stream; the silvery moon; the golden sunlight, which tints even the homeliest objects with a glorious beauty; the grand old ocean; the lofty mountain, and gorgeous autumn forests, decked in beauty far outrivalling the grandest works of a Raphael or Michael Angelo!

As He so evidently loves everything fair and bright to look upon, our efforts to copy, as far as we can, His beautiful works can but please and draw us up nearer to Him.

There exists some germ in every human mind which might develop itself into some sort of artistic beauty, were it not left to perish from neglect or lie overgrown with rubbish. But there are many people who go stalking along through this life, with hard or sour visages, roughly thrusting aside from their path everything beautiful, sweet and tender, growling as they go, from hearts filled only with self, or greed of gain, "This life's a wofully practical race, and you silly ones who stop to pluck flowers by the way will find the gate at the end closed upon you!"

An old lady in Philadelphia once said to me, as she looked reprovingly over her spectacles, "Why, how can you imagine you're a Christian, when you waste a part of your time in teachin' young gals fancy work? I don't see, for my part, how anybody can feel that it's right to be teachin' 'em such nonsense! Why not teach 'em to do plain sewin'? There'd be some sense in that." The learning of "plain sewing" is all right, and a duty which should precede "fancy work," but let that have its place also.

All should cultivate a taste for the beautiful in nature and art, and thus have one oasis, at least, toward which to turn for rest and refreshment, from the heat and weariness of life's too often desert-way.

Little does one realize, until the experiment is made, what beautiful and useful ornaments can be made, with but little or no expense, and the spending of a few moments daily, for the adornment of our own and the homes of dear ones.

It is not always overwork that kills, but oftener monotonous work, performing the same duties week after week and year after year. Therefore we all absolutely need, for the prolonging of life, some recreation for mind as well as body—something that gives us real pleasure and yet suggests no thought of work, that we may keep the heart green and fresh, the mind from stagnating, and kindly, generous emotions from growing dormant.

O, how many sad hours might be gladdened by engaging, for a few moments even, in some beautiful little work for a dear or suffering one! How many cares might be lightened! How many sweet, dreamy imaginings, tender benedictions, precious remembrances, kind wishes, and pleasant thoughts are woven in with the skillful needle, lie nestling among soft mosses and pearly shells, and are worked in even among coarse-wires, rustic vines and twigs, or glow under the touch of pencil or brush!

Many long years of painful invalidism has given me opportunity for learning many, and inventing some, kinds of fancy work, about which, with the approval of our kind editor, I will occasionally talk with the members of the FLORAL CABINET.

## SPATTER WORK.

The name of this art does not impress one with an idea of anything beautiful or useful, but the work itself is really very pretty, and can be applied to various uses. Among these are beautiful bouquets of

paper, rub the brush gently back and forth across the upper side of the comb teeth (very near the ends), that no large blots may disfigure your work. When the spatters become very fine, hold your comb about six or seven inches above your work, and carefully rub the brush back and forth over it until the background is dark enough. Sometimes it needs spattering over two or three times. It is slow work and requires care, as everything does, to be done nicely.

After the spattering is done, let it dry two or three minutes, then remove the pins or needles; take the decorated article up and turning it quickly over shake off your ferns and leaves. They will do to use many times over, if put away between the leaves of an old book to prevent their curling.

People usually consider the work now done, but I have found that it is much improved by taking a fine pen and delicately veining all the leaves. It has a less glaring look. It is wise to try first on a small card, to be sure that your brush and comb are right, and to learn the right way for holding them, etc.

As it is not very clean work it is well to spread a newspaper or piece of wrapping paper in your lap if you sit to do it, or some old apron to cover your dress if you stand at a table; also, as the fingers holding the comb will get stained, it is well to wear an old kid glove on the left hand. Of course the larger and heavier ferns should be placed at the bottom, and light, delicate leaves at the top and edges.

Wishing to make a wedding gift during the past winter, of an album of water-colored flower paintings, I racked my brain for several days in search of some suitable covers. At last I decided to get some of Holly-wood. But when I got them they looked so plain and bare that I decided to decorate them with "spatter work." Accordingly, I arranged a wreath on the front cover, (inclosing the title) the fancy letters for which I drew on

A PARLOR SETTEE SURROUNDED WITH FLOWERS.

ferns and leaves, and crosses wreathed with the same, for framing; letter-cases, card-cases, shaving-cases, blotting-paper cases, needle-book covers, and book-marks—all made of white or buff card-board.

For doing the work handsomely, it is necessary to save and press nicely many tiny leaves, as you will need these with small fern fronds to "fill in" with, and for making your work light and graceful looking.

Take whatever article you intend decorating, place your ferns and leaves as you wish them to be, then fasten them in position with very fine needles or small pins, as the work will be spoiled if they are disturbed after you commence "spattering." Now pour some black ink into a little dish (a glass sauce-plate is nice), have ready a pretty fine but moderately stiff tooth-brush, and a fine-tooth comb (I find the rubber ones better than ivory, unless the latter is very fine). Dip your tooth-brush into the ink, covering the bristles but slightly with it; shake off the superfluous ink back into the dish, hold your comb between the thumb and two first fingers of your left hand, then, over a news-

paper, cut them carefully out, pinned them on the cover (as I do the leaves, etc.), entwined and surrounded them with the tiniest leaves and ferns I could find. On the back cover I made a bouquet, and inside each cover a single, beautifully-shaped "Feather Fern." The album was pronounced "exceedingly beautiful," and indeed it well repaid for the labor and care expended on it.

Chair-tidies and pin-cushion covers are often made of white muslin, spattered with India ink.

It is said that birch bark looks nicely thus ornamented. I cannot tell from personal experience, but think the lines and dots put on it by nature must be prettier than any artificial ones.

Mottoes made on cardboard and framed are sometimes very beautiful. The letters can be cut from the headings of newspapers, or be drawn on paper and carefully cut out. Pin them on to the cardboard, decorate with ferns, very small leaves and sprays, and spatter the whole.

MRS. MARY I. HERRON.

## Fireside Reading.

### HUMORS OF HYMNS.

An English clergyman in a recent lecture on Congregational Psalmody gave some amusing instances of the incongruities that used to occur by the awkward divisions in repetition lines. For instances, "Love thee better than before," was divided "Love thee bet-"; "My poor polluted heart" became "My poor pol-"; "We'll catch the fleeting hour" was sung "We'll catch the flee-"; "And take thy pilgrim home" became "And take thy pil-"; "And in the pious he delights" was sung "And in the pi and in the pi"; and "Send down salvation from on high" became "Send down sal-". A soprano in one case sang "Oh for a man," and the chorus responded "Oh for a man-sion in the skies." In one case the soprano modestly sang "Teach me to kiss"; the alto took up the strain, "Teach me to kiss," while the base rendered it quite prosaic by singing "Teach me to kiss the rod."

**Rather Hot.**—At a dinner party in London last August, there were two sisters present, one a widow who had just emerged from her weeds, the other not long married, whose husband had lately gone to India for a short time. A young barrister present was deputed to take the widow into dinner. Unfortunately he was under the impression that his partner was the married lady whose husband had just arrived in India. The conversation between them commenced by the lady's remarking how extremely hot it was; "Yes, it is very hot," returned the young barrister. Then a happy thought suggested itself to him, and he added with a cheerful smile, "But not so hot as the place to which your husband has gone." The look with which the lady answered this "happy thought" will haunt that unhappy youth till his death.

**Episcopalians.**—Bishop Talbot, of Indiana, tells a good story on himself, when he resided in Kentucky, before he became Bishop. He was travelling in the southern part of the State, on horseback, and stopped at a hotel over the night. At the supper table he silently asked a blessing before he began to eat. The landlord, observing this, said to him, "Stranger, you are a preacher, are you not?" "Yes," said the stranger. "What church do you belong to?" asked mine host. "Episcopalian," said Mr. Talbot. "The what?" said the astonished landlord. "The Episcopalian church," repeated Mr. Talbot. "Well, stranger," said the host, "I thought I knowed all the churches that are around in these parts, but hang me if I ever heard tell of the *Episcopalian* church before." "Oh," said a man at the table, "That is the church that worships its bishops, ain't it?"

**Hash.**—A young man from the interior who had been visiting abroad came home recently, and at breakfast remarked, as he reached his plate over: "Father, a little of the mixture in the brown dish, if you please, and a small piece of the prepared meat."

The old gentleman, who is a plain, matter-of-fact man, replied, as he loaded up the outstretched plate: "We like to have you come a visitin' us, John, but just remember that while you're eatin' here, if you want hash, say so; and if you want sassage, call for sassage, and not go to spreadin' on an Brooklyn misery at my table."

**The Cullud Folks** of Cincinnati have had a spelling match, in which, among others, a good old aunty participated. The climax was reached when Rev. James Johnson, being invited to spell "nosegay," started off with a "N-o-u-s," then, seeing the fog horn uplifted to blow him down, suddenly corrected himself to "N-o-u-g-h-s-d-a-y," and stepped down and out amid tremendous rounds of "Hi, dar!" and applause.

IN THE WOODS.

**A Milwaukee Chap** kissed his girl about forty times right straight along, and when he stopped the tears came into her eyes, and she said in a sad tone of voice: "Ah! John, I feel you have ceased to love me." "No, I haven't," replied John, but I must breathe."

**A Colored congregation** in Dayton have decided to forgive their clergyman for betting on three-card monte and losing \$90 of festival money. One of the deacons remarked: "We is all human, and de game is werry exciting."

**A Boy** about twelve years old, knocked at the door of a house in Detroit, and when the lady appeared he said: "There'll be a boy around here pretty soon to

clean your walk, but don't give him the job. His name's Jim; he's cross-eyed and he blows up cats with powder snaps. I'll be here with my partner pretty soon. We go to Sunday-school, never sass our mothers, and we are going to give half the money to the grasshoppers." The job was saved for him.

**Intellectual Culture.**—A cultivated mind may be said to have infinite stores of innocent gratification. Everything may be made interesting to it, by becoming a subject of thought or inquiry. Books, regarded merely as a gratification, are worth more than all the luxuries on earth. A taste for literature secures cheerful occupation for the unemployed and languid hours of life; and how many persons in these hours, for want of innocent resources, are now impelled to coarse pleasures! How many young men can be found, who, unaccustomed to find a companion in a book, and strangers to intellectual activity, are almost driven, in the long dull evenings of winter, to haunts of intemperance and vice!

**The Rothschild Women.**—We take pleasure in referring to the merits of the Rothschild family, not because they are wealthy, but for the simple reason that in spite of their wealth they strive to be useful to their kind. The men are immersed in business; they are charitable; but the people will say that it is easy to be charitable if you are rich. The women are public-spirited, intelligent, and warm-hearted, founding hospitals, reformatories, children's homes, endowing scholastic institutions, encouraging struggling professionals, and taking a personal interest in the doings of the poor. Baroness Lionel makes weekly visits in the meanest portions of London, brightening the home of the Jewish artisan, giving her good counsel to the earnest teachers of the free schools, the matrons and assistants of the various charities. The daughter of Alphonse, of Paris, teaches a good lesson to her sisters in faith, and to rich young ladies of every creed, by receiving a well deserved diploma as teacher. Anselm's daughter, in Vienna, is prominent in music, not only composing songs that attain popularity, but aiding struggling musicians by pen and purse.

**Too Reserved by Half.**—True, actions speak louder than words; yet it will do no harm to occasionally say to your friend, "I esteem you." Evi-

dently four year-old Nilie was of that opinion. He had been my favorite play-fellow all the summer. But one day he sat by my side for a long time, unusually thoughtful. At last he turned and said: "A—, do you love me?" "Why, Nilie," said I, "of course I love you. What made you think I did not?" He answered: "Well, I didn't know; I never heard you say much about it." There's a whole sermon for you. Profit by it as did Nilie's friend.

**A Bashful young man** escorted an equally bashful young lady home. As they approached the dwelling of the damsel, she said, "Mr. MacSnuff, don't tell anybody you beau'd me home." Miss Angelina Stirrup, said he, "I am as much ashamed of it as you are."

## Housekeeping.

## HOUSEHOLD SUGGESTIONS.

Next month I shall begin to can fruit, and make jelly; as it seems uppermost in my mind just now, I will give you some ideas about it if I can. First, in regard to fruit jars. I have tried several kinds of glass (I have never used tin, thinking them unhealthy), and have decided that I like the Mason one quart jar with rubber and porcelain lined top the best.

I can my pears this way: I put on my porcelain kettle (on the stove of course), take a tea cup of water to a pound of sugar (I use coffee sugar A), fill the kettle half full; let it boil; skim until clear. Put a tin pan on the back of the stove; put a tin plate in the bottom to prevent the jars from cracking; put in as many jars as convenient, a little water in each, fill the pan half way up with cold water; while these are heating, pare, core, and quarter your fruit, put it into an earthen dish with a little cold water in it to prevent the fruit changing color; as soon as the syrup is clear, put in the pears and simmer gently until clear; turn the water from one of the cans; put the funnel into it (I will tell you how it is made presently); skim out the pears into the can, fill full, shake gently, to get the air bubbles out; fill in a little syrup; take the can from the pan to the table; stand it on a folded towel wrung from hot water to prevent its breaking; see that no draft of air falls on it; put on the rubber, wipe the mouth of the jar dry; screw on the cover as tight as possible; in a little while try it to see if it cannot be made tighter; repeat this operation until all are done; when they are cold put them in a dry cool place. I put mine up stairs in the store-room until the first of January, then remove to the cellar. It is a good plan to slip a paper bag over each can to exclude the light, the fruit looks better. Strawberries, blueberries, peaches, I do the same way; tomatoes I peel, cut up, put in the kettle without water (look out or they will burn); cook until soft, and salt, pepper, a little sugar, put them in the cans hot just as you do the pears. I make a good deal of Chili sauce, it is nice to eat with meat and to put into soups. This is my rule: one peck of ripe tomatoes, peel, cut up, add three good sized onions, three green peppers, chopped fine, boil until soft, then add three cups cider vinegar, two cups sugar, salt to flavor; boil until reduced one third. I put it up in Mason jars as I do canned fruit, but you can use horse radish bottles. Green Tomato pickles I make this way: one half bushel tomatoes, one dozen small sized silver-skin onions, one dozen green peppers, all chopped fine, and one pint of salt; let them stand all night; next morning drain them through a cullender; put them in the porcelain kettle; cover with good cider vinegar; let it cook slowly an hour; take two pounds of sugar, one table spoon of ground cloves, half a cup of whole mustard, a cup of celery seed, vinegar enough to mix them, let it come to a boil, then add to the tomatoes; put them in gallon stone jars; when cold tie or paste a piece of stout brown paper over the top; put on the cover, and set in a cool dry cellar.

This is my recipe for grape jelly: pick the grapes from the stem, wash them, put them in the porcelain kettle without any water; set it on the back of the stove to prevent burning; when they are cooked soft, dip off the clear juice into the jelly bag (made of double flannel), have an earthen dish to catch the juice (tin will blacken it) when all has drained through that will, measure the juice in a quart bowl,

measure an equal quantity of sugar (coffee sugar A is best), put it in the porcelain kettle; let it boil twenty minutes after it begins; if it looks thin and watery, boil three minutes more; set it off the stove; stand your tumblers on a towel wrung from hot water to prevent breaking, dip in the jelly carefully, let it stand until cool, then put on a waiter; set them in the sun three days, where they will be free from dust; get some white paper, such as the apothecary uses, cut a piece to fit the inside of the tumbler, dip it in the white of an egg, lay upon the jelly; cut another large enough to cover the outside over the rim, dip this in the egg and fasten it tight; when this is dry it will be almost air-tight. The portion of the grapes that is left, I rub through the cullender to free it from skins and seeds, then measure quart for quart of sugar put in the kettle and simmer gently half an hour, then put it up the same as you do the jelly. You will find this nice for jelly cake. I will give you a recipe for corn meal griddle cakes, and then will stop, for I imagine you are tired by this time.

Two cups indian meal, one cup of flower, three eggs, and enough sour milk to make a batter that will just drop from the spoon, add a pinch of salt, a tablespoon soda, sifted in dry, bake on a griddle slowly as they burn quick; if your milk is very sour you may have to add more soda. M. J. P.

**Perpetual Paste.**—Dissolve a teaspoonful of alum in a quart of water. When cold, stir in as much flour as will give it the consistency of thick cream, being particular to beat up all the lumps; stir in as much powdered resin as will lay on an old-fashioned dime, and throw in half a dozen cloves to give it a pleasant odor. Have on the fire a teacup of boiling water, pour the flour mixture into it, stirring well at the time. In a few minutes it will be of the consistency of mush. Pour it into an earthen vessel; let it cool; lay a cover on, and put it in a cool place. When needed for use take out a portion and soften it with warm water. Paste thus made will keep twelve months. It is better than gum, as it does not gloss the paper, and can be written on.

**Good Recipes.**—**Bakers' Gingerbread.**—Take one cup of molasses, one cup of sour cream, one tablespoonful of soda, one tablespoonful of ginger, one egg, and flour enough to make a thick batter. **Feather Cake.**—Take one cup of white sugar, two cups of flour, one tablespoonful of butter, two-thirds of a cup of sour milk or cream, and one-half teaspoonful of soda. **Egg Omelets.**—Take four eggs, one cup of sweet milk, one large tablespoonful of flour, with a little salt and pepper, butter the frying pan and pour in four large spoonfuls, when hot, and fry, then roll it up, or make into spears. They are very nice for breakfast. A. F. R.

**Brown Bread,** as made by a minister's wife for years: Three cups corn meal, one cup graham flour, two cups sweet milk, one cup sour milk, two-thirds of a cup molasses, one teaspoonful of soda. Steam four or five hours, then bake twenty minutes.

**Soda Crackers.**—Stir fourteen cups of flour with two teaspoonfuls of soda and four of cream of tartar, after which rub in two cups of shortening—lard or butter; mix with cold water, mold and pound half an hour. Bake in a quick oven.

**To Remove Putty.**—You can use either of the following, as found most convenient, viz.: Soft soap mixed with a solution of potash or caustic soda, or pearl ash and slackened lime mixed with sufficient

water to form a paste. Lay on with brush or rag and let remain a few hours, when the putty can be readily removed. This same preparation will remove paint of any color from wood, iron or glass with the same facility.

**Chillblains.**—The common kerosene, now to be found in every household, is a cheap cure for chillblains; a cloth being moderately saturated with it and wrapped about the feet before retiring.

**Syrup Sauce.**—Take the syrup of any fruit most convenient, melt some butter in it, and season with brandy and nutmeg, or other flavor.

**Corn Bread.**—I first put a tablespoonful of lard in the dripping-pan, and set it on the hearth to melt. Then beat three or four eggs, add one quart of buttermilk, one teaspoonful of soda and one of salt. Stir in enough sifted meal to make a thin batter. Now add the lard and stir it well; have the pan on the stove, it is already greased; sprinkle a little meal over it to keep the bread from sticking. Now pour in the mixture, and bake it in a quick oven. MRS. S. J. R.

**Boston Brown Bread.**—Three pints of yellow corn meal; one pint of rye flour; one cup of molasses; two teaspoonfuls of saleratus; two teaspoonfuls of salt; one teacup of good yeast; mix thin with lukewarm water and let it stand in a warm place to rise, which will take about two hours; wet the top of the loaf with warm water, and bake in a slow oven about two hours. A deep pan is best. MRS. A. E. S.

**Cement for Aquariums.**—The best cement for an aquarium is as follows: Sift together one gill of litharge; one gill of calcined plaster of paris; one gill of dry white sand, and one-third of a gill of finely powdered rosin. Bottle, keep corked tightly, and use as needed, by mixing into a putty with boiled linseed oil, adding a little patent dryer. Mix each lot at least fifteen hours before using. After applying, let it dry a few hours before letting on the water. This is equally as good in salt as in fresh water, it does not effect the water at all. H. K. S.

**Corn Cake.**—The following recipe we know is an excellent one: Take one quart of corn meal, half a teaspoonful of salt, and half a teacup of molasses; pour boiling water upon the meal until a thick batter is formed, then bake in a very hot oven.

**Steamed Pudding.**—Take about a quart of buttermilk, add one teaspoonful of salt, one of soda, and if in the season of berries I add nearly a teacupful, if not I slice and pare one or two apples into my dish, then thicken with either flour or corn meal as thick as it will stir easily with a spoon; then I put it in a dish and set in the steamer over my boiling dinner to cook. It wants to cook from one to two hours. Eat with sweetened cream or butter and sugar, whichever is preferred.

**To Extract Ink** from cotton, silk and woolen goods, saturate the spots with spirits of turpentine, and let it remain several hours; then rub it between the hands. It will crumble away without injuring either the color or texture of the article.

**For a Hacking Cough at Night.**—Place beside your bed five or six lumps of cut loaf sugar, with six drops of paregoric poured upon each, and take one whenever a coughing fit comes on. It will soon stop the paroxysms and permit sleep.

**Never put** a particle of soap about your silver if you would have it retain its original luster. When it wants polishing, take a piece of soft leather and whiting and rub hard. Housekeepers ruin their silver by washing it in soapsuds, as it makes it look like pewter.

Durant's Parlor and Counter Fountains,

SEND FOR A CIRCULAR TO  
The RACINE HARDWARE MANUFACTURING CO., Racine, Wis.

OR TO  
G. WEBSTER PECK, Agent, No. 110 Chambers Street, New York.

(PATENT APPLIED FOR.)

The most tasteful and cheapest self-acting Fountains yet made, will run from 2 to 2½ hours.

**Every Lady Wants One  
FOR HER SEWING MACHINE.**

FACSIMILE OF WORK PERFORMED BY THEM

- A GOODRICH TUCKER,  
Price \$3.00.
- A JOHNSTON RUFFLER,  
Price \$3.00.
- A Goodrich Hemmer and Binder,  
Price \$1.50.

**WILL FIT ANY MACHINE.**

Any of them sent by mail on receipt of  
price, or all three for \$5.  
In writing, please state name of your machine.

**TERMS AS PREMIUMS.**

- No. 1 is given free for club of 10 to CABINET  
six months, or 8 for one year.
- No. 2 is given free for club of 15 to CABINET  
six months, or 10 for one year.
- No. 3 is given free for club of 5 to CABINET  
six months, or 3 for one year.

ADDRESS,

**HENRY T. WILLIAMS,**

46 Beekman Street, New York.

Three Thousand Miles Away, in another hemisphere, sparkles the Seltzer Spring. In every drug store in America you may obtain its equivalent; put it in your pocket and carry it with you to the world's end, if you choose.

**Tarrant's Effervescent Seltzer Aperient**

is simply the living fountain of health, in the form of a powder capable of being converted into a bubbling, flashing *fontaine de vie* of the liquid product of nature in one minute. Armed with this antidote, all climates and every atmospheric change may be faced without fear. As a remedy in malarious fevers, stomach complaints, irregularities of the bowels, nervous disorders, mental depression, headache, an overflow of bile, dropsical ailments, nausea and constipation, it has no equal. Sold by all druggists.

**CROQUET OR LAWN SETTEE,  
WITH FOLDING TENT.**

Manufactured by RACINE HARDWARE MFG. CO., Racine, Wis.

The back of the Settee reverses like a car seat. The canopy can be thrown backward or forward, as desired, as easily as a carriage top. Length, 4 feet, 3 inches; height of canopy, 6 feet 6 inches; width of canopy, 4 feet. The top folds up like a pocket rule, and can be removed at pleasure.

## CHORUS.

When the bu - sy day has left us, And the wea - ry hours have fled,  
 When the bu - sy day, the bu - sy day has left us, And the wea - ry hours, the wea - ry hours have fled,  
 have fled,

There is hap - pi - ness in kiss - - - ing Lit - - - tle face a - bove the spread.  
 There is hap - pi - ness in kiss - ing, yes, in kiss - ing Lit - tle face a - bove the spread, a - bove the spread.

# THE LADIES' *Floral Cabinet*

By HENRY T. WILLIAMS.

VOL. IV.

NEW YORK, SEPTEMBER, 1875.

No. 45.

PRICE 12 CENTS.

## AN AMATEUR'S GARDEN.

I was so much pleased with the design for a flower garden which I saw in the April number of the *CABINET* last year, that I concluded that I would have one just like it; so the first thing to be done was to select a spot suitable for my garden. I could think of no place that suited so well as a bed in which mamma had cucumbers the year before; but when I suggested the idea to mamma, she said: "Where shall I plant my early cucumbers?" But I was not to be outdone; a flower garden I must and would have; so at last I came off conqueror, and with the aid of an old negro man, who spaded and raked my ground nicely, I think I succeeded in getting a tolerably fair specimen. I sowed my seed in hot-beds, but some of the plants came up rather delicate, and their constitutions were too frail to be transplanted to a cooler clime, in consequence of which, some of the poor little things drooped and died.

But I think my Verbenas, Petunias and Balsams alone amply repaid me for my trouble. They bloomed beautifully until bleak winter, with its chilling blasts, came and nipped them in their beauty; and even then they seemed loth to yield to the icy touch of the frost king. The varieties of colors, all blended

together, made them the admiration of all who saw them. I must not forget to mention my Salvia, although its beauty was transient and its history rather a sad one. A lady friend of mine sent me the seed the first of June, and as they didn't bloom until late in the fall, I took them up and transplanted in boxes for the winter; I carelessly left them out on the portico one night, and imagine my grief when, the next morn-

Bros. for six Monthly Roses—Bou Silene, Marechal Niel, La Reine, Devoniensis, Agrippa and La Sylphide. The first two died; the others bloomed beautifully until late in the fall, and the La Sylphide had a bud on it until nearly Christmas; I think they would have bloomed all winter but I did not get my pit ready until late. Please inform me the best time for transplanting them in the open ground. EVA H.

FERNERY.

ing, I found them all frozen. I removed them to a dark room, but they did not revive. Will some correspondent of the *CABINET* please give me some instructions for budding Roses. I saw an article from Daisy Eyebright telling how to bud Geraniums, and she said Roses were budded in the same way; but as I am rather dull of comprehension, I would like her to be a little more explicit. I sent, last May, to Harford

The other, L'Elegante, is a favorite among our floral treasures. It is three years old, has branches six feet in length, and, instead of being occasionally tinged with carmine, the creamy white margins of the leaves are often completely suffused with bright carmine, and the whole under side of the leaf is of the same beautiful shade. The vine is a delicately bright bouquet of itself, without a blossom. FANNIE J. S.

**Home Gardening.**—I must tell you of my successes. Most of our plants stand in a sunny south window. A thrifty English Ivy twines here and there on two sides of the room, wreathing pictures and windows with its dark green foliage. Two Ivy Geraniums stand one on each side of the window, and climbing on a light home-made trellis, twine their branches together across the top. One of them has thick, waxy, green leaves with a slightly marked dark zone and clusters of delicate rose-colored flowers marked with crimson.

## Floral Contributions.

### AN AMATEUR'S SUCCESS WITH FLOWERS.

All my life I have been an ardent lover of flowers, but most of the time so circumstanced that it was impossible for me to cultivate them. But after my marriage I determined to have a few window plants, at least. Unfortunately for me, my husband characterized plants as "useless weeds," and the time devoted to their culture as "misspent time." This damped my enthusiasm, but did not prevent me trying to have some of "Flora's treasures." But I was very ignorant of the treatment necessary for the healthy growth of tender plants. All I thought essential for successful window-gardening was to place the plants in soil of some kind, give water occasionally, and keep from freezing. I commenced with some plants obtained from a greenhouse, which did only tolerably well until winter, when I took them into the house. I have no south or east window, save an east one in kitchen and a south one in pantry. So I, not then knowing how necessary the sun's rays are to have window plants bloom, placed them on a table near a north window of the sitting-room, and awoke one cold winter's morning to find my pets all frozen. My husband rejoiced at this, I know, though he endeavored to conceal his pleasure under the mask of assumed sympathy for my loss. When I look back, with the light I have obtained from experience and authorities on flower-culture, I wonder my plants lived any length of time, they were subjected to such bad treatment. I watered them often with ice-cold water, kept them sometimes in a tropical temperature, again at almost freezing point. My Fuchsias were, I know, pot-bound, and the Geraniums in such large boxes that it would require months ere they would fill them with roots sufficient to produce blooms. I was somewhat discouraged, but determined to *try again*. I subscribed for the FLORAL CABINET, and it is the best investment I ever made; for, from its contents I derived a great deal of information in relation to the treatment of my pets. I purchased some more plants and cuttings, and began to study the nature of each kind, and made the discovery that, as children differ in character and disposition, each one requiring a somewhat different training, so do plants; and what may be proper treatment and food for one will not do for all others. Now, as to results. I have some sixty plants—Geraniums, single and double, Fuchsias, single and double, Heliotropes, Dwarf Pomegranates, Tritomas, Lily Auratum, Calla, variegated and scented Geraniums, Smilax, and Ivies of all kinds, Verbenas, and a great many others. If you could see my Smilax—yards and yards of it!

I pot all my plants in a compost, one-third sand, one-third leaf-mold, and one-third well rotted sods. Some plants that I keep for foliage, as scented Geraniums, I pot in richer soil, in which there is well rotted manure. The exception is foliage plants, which I find do better in poorer soil and have brighter foliage. When I start cuttings of Geraniums, which I do in leaf-mold and sand, I put them in *rich* soil, in *small* pots, until they look strong and thrifty, then re-pot in somewhat larger pots and not as rich soil; result, less foliage, more blooms. I believe in cutting back Roses and Fuchsias after blooming, and giving them, and all other plants, a season of rest. I always fill my pots with bits of broken pots about one-fourth, place a little moss or manure over this to give good drainage, then

fill up with soil. In summer place plants on tables out of doors, under trees, so that they get the morning sun. All my plants bloom that are kept for that purpose, and so determined are they to continue to do so that when I cut them back a great many have buds on. In winter I keep them all on two tables, one before an east window in the kitchen, the other before a south window in the pantry. When company comes, those that are in bloom go into the parlor for the time being. On very cold nights I carry the most tender ones into the dining-room; but as there is fire in the kitchen stove all night, and the room small, the thermometer seldom goes below 50°—that is the temperature I keep them at night, and 65° through the day. In this way I manage to have flowers in cold weather. One General Grant Geranium had nine large clusters at one time, a double scarlet seven, and a double Fuchsia one hundred and ten buds. Sprinkle with water three times a week; water whenever needed. Sometimes, on cold mornings, pour hot water in saucers and on sides of pots; use stimulants seldom, sometimes a little carbonate of ammonia, or "barn-yard coffee." Not troubled often with aphids, or any insect; if ever, wash plants in soapsuds or weak tobacco water. My plants are more healthy-looking than any I see in greenhouses, and when my friends exclaim, "How do you make them grow so?" I always answer, "By taking care of them." Now, if I have succeeded so well in such narrow quarters, what wonderful things I would do if I had a bay-window. My husband has promised me one next year. What blissful visions of flowers my imagination revels in! How many times I picture to myself how I will have my plants arranged therein! When that much-wished-for event occurs, Mr. Editor, I will send you a photograph of it.

CARRIE CLIFFORD.

### HOW TO MANAGE A FLOWER GARDEN.

I feel it to be my duty to say a few words, through that matchless little sheet, the CABINET, to its numerous lovers and patrons. Not that I am quite sure of being able to tell any one that which they do not know; but the liberality which enables the readers of the CABINET to communicate their experiences in flower culture, and the rapidly-growing interest in the subject, awakens a desire to give any information that I can. There is a numerous class of ladies who love flowers, and who would delight in cultivating them, but are denied this pleasure, because they feel that they have not the time to spare. I am ready to acknowledge that the prospect is a dark one to the farmer's wife or daughter, who has to serve in the separate places of cook, chambermaid, dairymaid, and laundress. I was going to remark, that "I know how it is myself," but as that is regarded as slang, I will add that I have had some experience in such life. And yet I confidently assert, that, while you may not be able to make the entire "wilderness blossom," you need not be without these home ornaments; and this is the way in which I would have you manage it: In the fall, after farm labor has ceased to be pressing, tell the hired man, "big brother," papa, or any other man who is blest with a desire to please the ladies (and here I wish to remark that a man who cares nothing for pleasing the ladies seems to me to serve the same purpose in life that the Canadian thistle, or cockle-bur, does on a farm), that you want his assistance for one hour. This you are sure to get, if you ask for it pleasantly, and if you do not do so, you don't deserve it. Then, having previously laid out your plan, have him spade up your beds, after having brought a wheelbarrow load of sand

(if your ground is not sandy), and twice as much leaf-mold from the woods. Leave your beds in this condition until spring. About the last of April manage to take another spare hour, and with garden-fork go over your beds again. You will find the ground in admirable condition, and the work so light as not to tire you. After raking smoothly, plant your flower seeds, being careful to arrange them tastefully in regard to color and habit of growth. Those requiring to be massed look well planted in rings, squares, or diamonds. In selecting your seeds you should select those which are hardy, as they will grow with the little attention which your limited time will permit you to give. When your plants are well up, pull out the weeds and loosen the ground around the flower stalks with a small hoe, or a knife. This will require, perhaps, a half-hour, and in two or three weeks, if you can spend another half-hour in the same way, you will be amply rewarded. Thus you may have an abundance of beautiful flowers, with comparatively little labor, and the whole amount of time required not exceeding three-and-a-half hours, which you will never miss; and your home will be made so much more beautiful. And the admiration expressed for your flowers by the neighbors, as well as by papa and the boys, will amply repay you for time and toil.

COUNTRY GIRL.

### HINTS ON GROWING FLOWERS.

There is scarcely a family which has not some place that can be devoted to the culture of flowers.

They may not be able to furnish a large, commodious garden; but there will be a little corner somewhere which will be just the place to make a flower-bed. If it is small it will furnish as nice flowers, and give great pleasure.

To be successful in growing these gems of the floral world we must first put the soil in a proper condition. Well rotted turf and leaf-mold are excellent. Procure a quantity of these, and in some handy place make a compost by adding stable manure, charcoal, sand, and some good garden soil; upon this turn all the waste water from the kitchen, and the suds of washing-days, and when well decayed work it till pulverized fine, and you have the best soil for the flower garden that can be had. Next get your seeds of the most reliable seedsman in the country. Those best adapted to the climate will flourish with less care than the more tender plants. Constant bloomers generally give good satisfaction, and are preferred by many. Asters, Petunias, Verbenas, Pansies, Pinks in all varieties, Dahlias, Lilies, Tulips, and Gladioli, are indispensable, and many more might be mentioned that would delight every eye.

After planting the seeds, care must be taken lest they should be burnt by the scorching rays of the sun.

Superphosphate of lime costs but a trifle, and if hoed in around little plants will give them an early start; after which, water occasionally with liquid manure.

When buds make their appearance the soil should not be disturbed, as you would be in danger of injuring the little fibrous roots, which might blast the buds of some species. In season of blooming pick all the flowers you please. The more you cut the more blossoms you will have. Let ripen only what you wish for seed another year. All the old stalks should be cut and cleared away as soon as frost has killed the leaves; manure the roots, cover up the less hardy ones, and they are ready for the snows of winter; and many dreary days must elapse before you can again watch the little sprouts of your floral beauties.

CLARINDA E. WILLCUTT.

## Gossip with Correspondents.

**Rain Plant.**—Will you please tell me something of the Rain Plant and its treatment? I have some fine double Hyacinth bulbs which I would like to exchange with some of the CABINET correspondents.

Kittrell, N. C.

MISS L. FOSTER.

*Answer.*—If our correspondent will inform us the botanical name of the so-called Rain Plant, we will try to assist her.

**Hydrangea.**—1. Would it be any safer to put Hydrangea Grandiflora in the cellar through the winter? 2. Are all Moss Roses hardy enough to endure a southern Wisconsin winter? I have just received some and am anxious to give them the best possible care, and dare not trust them in the garden, though the catalogues do say they are hardy.

Footville, Wis.

MRS. BELVA STEVENS.

*Answer.*—1. If Hydrangea Paniculata Grandiflora is meant, it is hardy in the Middle States, but would winter well in a cold cellar. 2. It is doubtful if any Roses would live in your latitude such a winter as last.

**Plants from Seed.**—Can Fuchsias, Rhododendrons, Gloxinia, Begonias, Cyclamen and Achimenes be grown from seed? I have tried Fuchsias and Rhododendrons several years in succession, bought seed from different seedsmen, and never had a plant. The others I have mentioned, I have tried also without success. I planted them every way I could think of, some under glass, some without glass, all with the same result; so I begin to think they can't be raised from seed. I am very anxious to have some of those flowers, but I suppose I will have to give them up. I live so far from the railroad that if I have the plants brought by mail they die before I get them. I received a box by last mail, but they were nearly all dead when they arrived.

Flatwoods, Ga.

MRS. DR. VERDIL.

*Answer.*—All the plants named can be raised from seeds, but a few plants by mail would give better results. Plants are sent to Texas and California by mail, and a large percentage arrive in fair condition. We see no reason why, if properly packed, they should not reach Georgia. The plants named are among the best to travel if sent when at rest.

**Primroses.**—Last year I had a young plant of double white Chinese Primrose, which grew finely, until all at once it wilted. On examination, I found the stems decayed at the root, also the root. It was gone beyond hope of recovery. One of my friends lost one (a single pink had bloomed) in the same way. It was during the very hot weather of last summer. Did they die from that, or was there some other reason for it? Should Primrose seedlings be picked out in thumb-pots, and shifted until large enough to bloom, or may they be placed at once in the pots they are designed to remain in; and, are three or four-inch pots large enough for them?

*Answer.*—The hot weather and water lodging in the heart killed the Primroses. Seedlings should be potted into small pots, and larger ones as they grow; it depends on the size of plants; we flower them in six-inch pots.

**Begonia Seeds.**—I have purchased seeds of the Camellia, Begonia Sedeni and Bocconia Japonica, and would be glad to receive information as to their seedling and culture in the gossip corner.

S.

*Answer.*—The Begonia must be sown on the surface in a warm frame, but it does not come true from seed, and the Camellia seed will produce single flowers.

**Double Fuchsia.**—1. I have a double Fuchsia that I have kept all winter; it had but few leaves on, and now I think it should improve in appearance, yet it seems to be dying. I examined the roots carefully and found no worms, and have watered it moderately. What can the trouble be? 2. Can the root of a Chinese Primrose be divided; if so, what season is best? 3. I have sown some small seeds in saucers, they come up nicely and then the two leaves turn yellow and die.

NANCE MULLER.

*Answer.*—1. If it is not growing, it was probably frozen in the winter. 2. Yes; any time during summer. 3. Probably too wet and cold.

**Pots.**—Will you please tell me if it is better, in setting out house plants in the summer, to sink the pots or set the plants out in open ground, such plants as Geraniums, Fuchsias, Roses, etc.

EMMA.

*Answer.*—Sink the pot in the ground, but prevent worms from entering.

**Hydrangea.**—I have some difficulty in getting a tender woody Hydrangea to grow. Wintered in the cellar, nicely repotted and put in the bay window, but instead of growing it began to fail, and although not dead it does not grow. What kind of soil suits it best? I do not know the specific name of this Hydrangea. Please tell me what peat is; I see it recommended for potting nearly all plants. What is the best substitute for it when it cannot be obtained? How many kinds of plants should be put in a hanging basket? I have a Dracena, Smilax, Alyssum, Partridge Berry, Verbenas, Ice Plant and Ivies. Out of this collection, what would be the most suitable for a basket. I have a basket filled with two kinds of Tradescantias, Smilax and variegated Ivy, that is the admiration of all who see it.

MRS. LUCIE A. SCHROCK.

*Answer.*—Plant the Hydrangea out in open ground; if any life remains it will make a good growth during summer. The plant was no doubt dry. These plants require a large quantity of water if grown in pots. Peat is the top sod from places where Ferns and Kal-mias grow; it is composed, principally, of the live roots of trees, plants and decayed leaves. Decayed leaves from dry woods is the best substitute. All the plants mentioned are suitable, the number required depends on the size of basket, but it is a mistake to crowd too many plants in one basket; the basket you describe would be a good guide in filling others.

**Honey Dew.**—What is the cause of a sweet gummy substance, that apparently exudes from the leaves of plants, that we call "honey dew"? We find it on our Ivies and a few other plants with leaves of similar nature. It seems to injure the plants.

DOVER.

*Answer.*—It is often caused by insects, is easily removed with a sponge and soapy water. All broad-leaved plants require frequent washing in a room to remove dust, when the substance you mention will be removed at the same time.

**Hyacinths.**—What do you think of transplanting Hyacinths immediately after they are through blooming? At what period in the life of the Hyacinth bulb is the germ of the flower formed? I supposed it to be between the time of flowering and the beginning of the summer rest, and consequently thought that during that season they should not be disturbed; but a lady friend, with whom I was making some exchanges recently, says she takes up her Hyacinths at any time and they never fail to bloom the next season. I know there are some winter flowering bulbs that refuse to display their flower stalks after being

transplanted in the spring, but am not prepared to answer for my pet Hyacinths. Will not you or some of the CABINET readers enlighten me?

ESTELLE F.

*Answer.*—It is best not to disturb bulbs until growth is finished; if transplanted when growing the next year's flowers will not be so fine.

**Poinsettia.**—Will Anna Griscom or some of your many correspondents tell me what I shall do with my Poinsettia. It has grown in one straight stalk, two feet high, and blossomed once (being only one year old). I want it to branch, but if I cut it I fear it will die. It has neither leaf nor branch now.

Earl, Ill.

MRS. C. B. CLARK.

*Answer.*—Cut it down to about three buds from the pot.

**Why Plants do not Blossom.**—Mrs. Sarah Martin, of Barre Centre, N. Y., is desirous of knowing why her plants grow so very high, do not branch out, run to leaves and have no blossoms on them.

*Answer.*—Growing in a dark place; give more light and air and keep cooler.

**Wandering Jew.**—At what age does the Wandering Jew bloom? Is there more than one kind?

N. H.

*Answer.*—We do not recognize the plant by the name given.

**Wistaria.**—We have a thrifty growing Wistaria which never blooms. What is the matter with it?

BERTHA.

*Answer.*—If the plant is healthy and the rank shoots are pruned each year, there is no reason why it should not flower.

**Yucca Filamentosa.**—Does it blossom every year or every third? Mine has not bloomed for two years, and I have been told it did not bloom every year.

*Answer.*—Every year.

**Lemon Tree.**—What shall I do to our Lemon Tree to make it bloom? It grows very fast but will not blossom. We have no greenhouse and keep it in our sitting-room.

*Answer.*—It is probably a seedling and requires grafting.

**Calla.**—Should a Calla be re-potted; if so, how often during the year? What kind of soil, and when should it rest for winter bloom?

MRS. W. H. WOOD.

*Answer.*—Yes; once; loam and manure; from June until September.

**Sweet Peas.**—Why do not my Sweet Peas blossom? I have tried for two years; the vines grow luxuriantly but will not bloom.

H. W. M.

*Answer.*—Never heard of Sweet Peas not blooming. Are you sure you have Sweet Peas?

**Cape Jessamine.**—Will you give plain directions for caring for a Cape Jessamine. It has been about two years from a hot-house, seems to be thriving and green until it begins to bud, preparatory to blooming, when the leaves on the outer ends of the branches turn to a pale yellow and the buds all drop off; after which the leaves gradually resume their green appearance and proceed through the same formula again and again, about twice a year. Any information concerning it will be thankfully received. I should have said the yellow leaves drop off, giving place to new ones.

E. M. WILLIAMS.

*Answer.*—The plant probably becomes very dry. It requires a large quantity of water, if in good health, when growing in a pot; plant it out in the open ground during summer.

## Flower Gardening.

THE NEW WINTER GARDEN  
AT EDINBURGH.

An elegant structure has been recently erected at Edinburgh, Scotland, for the purpose of a Winter Garden and Public Conservatory, concerning which the horticultural world of Great Britain have exhibited a worthy enthusiasm; public interest in its successful establishment has very generally been elicited. We are glad of the opportunity to present a fine engraving of it, which appears on this page. The construction, detail, plans, and idea of it are well worth copying by some of the public-spirited citizens and horticulturists of this country.

The structure has been admirably planned and adapted to the purpose intended.

hall, and is carried along the transept to the back door.

This walk will consist of two feet of iron grating, with hot-water pipes under; and on each side of that, two feet in width, will be laid in encaustic tiles.

The ventilators are so arranged that large groups of them open with one handle; and they are so finely balanced that a child could open or shut them. The frontage of the structure is one hundred and thirty-six feet. To the rear of this building there is a hot-house, about fifty feet long from east to west, and twenty-eight feet broad, for tropical and warm-climate ferns. At the east end of this fernery commences a long structure of two floors. The ground flat, which is of brickwork, will be used as boiler, potting, packing and counting rooms, and a soil store. The upper flat is of wood and glass, and will be used to prepare plants for the palace.

spring—a kind of dry-rot, apparently. The best way to keep them, after gradually drying off in the fall, is to set the pot into some drawer or closet (near the chimney, too) in a room that is never allowed to become really cold. I have found them very satisfactory plants for the adornment of my flower-stand on a covered piazza—they will not bear sun. One must be especially careful not to let the sun strike the pots, when starting them in the hot-bed. Mine are a lovely blue. If H. has any other color I should be delighted to exchange with her, and hope she will write me at once on the subject.

MRS. J. H. BIGGS.

Washington Heights.

## SOMETHING CHEAP AND GOOD.

We cannot all have the costly and highly ornamented fernery, Wardian cases, and propagating boxes, but no lover of flowers is so reduced in circum-

NEW WINTER GARDEN AT EDINBURGH.

In the front there are four massive stone pillars, surmounted by five clay naves. The building is in three stages, the upper roofs being convex glass roofs. Each stage of the roof is finished with elegant iron cresting, with finials on the points, which are seven in number.

The roof is supported on iron pillars, connected by light ornamental iron-bronzed girders.

The structure consists, internally, of a large hall, with a kind of transept, and a door leading out to the nursery behind. On the east side of this, the main part of the structure, are two smaller apartments, one to be used as a "small flowering plant" room; on the west side will be a waiting-room. The large hall, however, will be a real winter garden. It is surmounted by a fine dome, forty-five feet high. Under the dome will be a fire-clay fountain, seventeen feet high. The building has tables for flowers, about two-and-a-half feet wide, running along the walls. Inside of these a walk, six feet wide, goes all round the

## ACHIMENES.

In a previous number of the CABINET, H. speaks of having Achimenes in a hanging basket, and of their being finer than those grown in greenhouses. I was also so fortunate last summer as to have the finest pot of Achimenes I had ever seen. There were three bulbs in a five-inch pot, and, for two weeks certainly, thirty-four blossoms were expanded every morning. Of course it commenced more moderately, and was blooming at least two months. This unusual thriftiness we thought was caused by their being home-raised bulbs; that is, bulbs wintered in some warm room, and started in a hot-bed in spring, instead of making a long journey from some florist's, which seems to impair their vitality. Achimenes are so beautiful, however, that one had better have them on any terms than do without them.

I have repeatedly tried to keep the bulbs in a cellar, and invariably found them reduced to powder in the

stances as not to be able to possess the following plain (yet extremely serviceable) combination, yes, and make it, too: Procure two sheets of window glass, 9 by 12 inches, and two 12 by 16, and one 9 by 16; next obtain, or make, four nicely planed sticks, a foot long and a half-inch square; place the four pieces of glass in the form of a box, and with glue or paste unite one stick at each inside corner; when dry, paste a one-inch ribbon up the seam at each corner, then, when all is dry, unite the 9 by 16 inch glass to the top with ribbon, in the same manner as the corners. Thus, at an outlay of not more than 75 cents, and about two hours' labor, you have something that is equally as serviceable and looks as well (if you have used gay-colored ribbons) as a bell-glass costing three times the amount.

The size need not be confined to the dimensions here given, but can be made larger or smaller, as circumstances will admit.

L. D. SNOOK.

## Window Gardening.

### WINDOW GARDENING.

When stern winter frowns without it is charming to have a mimic summer smiling within, and this consummation can be successfully accomplished by making our windows gardens of sweet plants and fragrant flowers. To the uninitiated it seems a portentous undertaking to furnish a window like those often represented in the pages of the FLORAL CABINET and works of similar import. After admiringly contemplating the winning picture, they lay down the book or paper with a sigh of regret that they cannot possess one like it, and try to remain content with the customary pots of Geranium, a Calla, etc., that are arranged on a table or plant-stand in front of the window. My experience is, that there is nothing more easily done in the way of drawing-room flower culture than in furnishing and keeping green a window garden. Several things are imperatively required, and they are good soil to begin with, equable and not too warm temperature, prudent watering and a thorough sprinkling occasionally, say once a week.

I think a mistake is frequently made in selecting for the window garden too many choice and unfamiliar plants from greenhouses; we see them thrifty and attractive there, and hope by transplanting them to a very different atmosphere and surroundings, to perpetuate their beauties. By selecting more hardy and familiar ones, we are rewarded by a greater luxuriance of foliage and larger number of flowers; these can be interspersed with such as *will* bear the translation from the humid air of the conservatory to the often unequal temperature of our generally over-heated dwellings. I believe that I cannot do better than describe here my window garden of the past season, and my simple manner of treating it; it boasted of no remarkably rare plants, and yet elicited the admiration of all my friends. In the first place, I availed myself of every ray of sunlight that was afforded me, and concentrated it on my plants, and gave them fresh air on every suitable occasion.

My sitting-room possessed two windows, one a single one facing the south and a double one with an eastern aspect. On each side of this large window I placed ornamental bronze brackets, which supported, on one side, a pot of Smilax, and on the other one of blooming Oxalis—the Smilax I trained on fine cords around the windows; attached to the brackets were eggshells, encased in a net-work of scarlet worsted, filled with water, from which Tradescantia hung in graceful plenty; from each division of the window I suspended a hanging basket containing, as trailers, the inimitable Tradescantia (both green and striped), Ivies and Periwinkle; ornamental grasses fringed the edge of the baskets, which were otherwise filled with Ferns, Oxalis, Begonias, etc.; immediately under these, and in front of the window, a large wire plant-stand held pots of

the following named plants: A Calla graced each side of the lower tier; Diadem Pinks (taken from the garden after blooming all summer) were their neighbors, while Zonale Geraniums, Fuchsias, Heliotropes, Mignonette, Candytuft and Monthly Roses mingled their sweet offerings together. The stand was finally crowned by a white Jessamine whose graceful sprays and pearly fragrant flowers gave enchantment to the view. The trailing plants, from the hanging baskets above, mingled with the foliage below forming a perfect bower about the window. My front window, which came nearly to the floor, was furnished with a

remains to me to my method of managing my window garden, which can be told in a few words: The soil used was leaf-mold fresh from the woods, prepared with a slight sprinkling of sand and a little manure added to the mixture; I watered them freely with warm water and transported them always once a week to the kitchen sink, where I showered them plentifully with tepid water, adding ammonia during the latter part of the winter; and once a week I also gave them, in lieu of their usual drink, a good dose of liquid manure; when the weather was very mild I opened the window and let them breathe for a few moments.

When insects appeared, as they will do "in the best regulated families," I picked or washed them off; if any plants drooped, I removed them to a cooler room and they rallied. A number of plants that are regarded rather as ordinary and only suitable for our summer gardens, frequently furnish the most suitable blossoms for our winter ones. I tried Petunias, Candytuft and Sweet Alyssum, and this season shall add Phlox and Dicentra; and as the same Diadem Pinks, that I transplanted from my garden, still look thrifty, I shall again take them up and crown my window garden with them.

VIOLET VANE.

DESIGNS FOR RUSTIC WORK.

shelf which held Tye's Hyacinth glasses full of the richest flowers, and above them hung a luxuriant hanging basket; near both windows, on corner and side brackets, were glasses and vases of Tradescantia, simply growing in water, whose graceful festoons nearly reached the floor, adding greatly to the green and cheerful aspect of the room.

The appointed space will not permit me to dwell on the beauty of the rustic stand, which was a pyramid of greenness and bloom, nor to particularize more freely than I have done, so I will devote the little that

Middle of May; 5. Echeveria, sow on top of soil as soon as ripe. The time of germination depends on the heat given; sow in the shade and keep them moist.

**Wiggletails.**—How shall I prevent and destroy wiggletails (mosquitoes) in a tub for aquatic plants?

HENRY CORDES.

**Answer.**—Boil the water; some gold fish might destroy some, and continual change of water might prevent their rapid increase.

## Stories.

## A CURE FOR DESPONDENCY.

"Please, sir, take me over the crossing," said a little faint voice, as I was leisurely taking my morning walk.

The strange request roused me from my reverie; and looking imploringly in my face stood a thinly-clad, shivering little girl, who carried a small bundle, which she held in her hand with a singular tenacity. I gave a searching look into the child's face, while she imploringly repeated:

"Will you take me over the crossing quick? I'm in such a hurry."

Tossing her in my arms I bounded over the muddy pathway; and just as I set down my little charge the bundle slipped from her grasp, or rather its contents, leaving the empty paper in her hands, and an embroidered vest on the sidewalk. I picked up the vest, and in doing so unrolled the same, when lining, sewing-silk, and padding were all disengaged, so that the nimble fingers of the poor child picked up, and brushed, and packed them together again with scrupulous care; and tying them firmly, she gave me a sweet smile and bounded along. She would soon have passed from my sight had I not again called after her, and interrogated her why she made such haste.

"O, sir," she replied, "because my mother must have expected me an hour ago. I have been waiting for the young gentleman at the tailor's shop to decide which color he preferred, and then the tailor told me to stop while he cut it, and then he gave me such a beautiful pattern for my mother to embroider it by—but it's a sight of work to do it, sir, and I'm afraid she will set up all the long nights to sew, while I am sleeping, for the man said he must have it completed by next Thursday; the young gentleman is to be married then, and will want it—and if it isn't done, maybe he would never give mother another stitch of work, and then what would become of us?"

And as the child hurried on, I caught the same hurried footsteps, and followed on until we came to another crossing, when again came the beseeching tone:

"Will you take me over this crossing, too, sir?"

It was done in a trice, and my interest in the child increased as her prattle continued:

"Mamma is to have a dollar for this work, and she means to buy me a new frock with a part of the money, and then we shall have a great loaf of bread and a cup of milk, and mother will find time to eat with me—if there is any money left she says I shall have a little open-work straw bonnet, and go to Sunday-school with Susy Niles."

And her little feet scarcely touched the walk, so light and fairy-like was her tread.

"And does your mother work for one man all the time, little girl?" I inquired.

"O no, sir; it is only now and then she gets such a nice job. Some of the time she has to sew for slop-shops, where she earns but about twenty-five cents a day, and then she has hardly enough to pay her rent, and it isn't all the time we get enough to eat—but then mother always gives me the big slice when there is one big and one little one; sometimes she cries and don't eat her's at all."

A coach was passing—the child looked toward it and remarked:

"I know the lady in that pretty carriage—she is the very one that is going to marry the young gentleman who is to wear this embroidered vest. She came to

my home yesterday to get my mother to spangle the wreath round her white satin dress, and it's just the same pattern that is to be put on the vest; but she could not do it, 'cause her eyesight is so poor, and the spangles shine so."

My tongue was silent. Could it be that these were to be the very articles that were to be worn at my Ella's wedding? For did I not pay for spangles yesterday, and what was it that vexed Ellen, but because she could not find anybody to sew them on when she returned? She said Mrs. Taggard was almost blind.

"My little girl," said I, "is your name Taggard?"

"Yes, sir, 'Gusta Taggard, and we live down in Sullivan court. Are you going home with me?"

It was a sensible conjecture; for why else should I follow on?

"I am going to see you safely at the door, and to help you over all the crossings."

"There's only one more, sir, and here it is, we live down there at No. 3, in the third floor back."

The child looked kindly, and as she sweetly bade me "good-bye, sir," I thrust my hand in my pocket and drew from it all the change it contained, which was a bright fifty-cent piece, and placed it in her little palm. 'Gusta Taggard gave me her heartfelt thanks, and was soon out of my sight.

An hour before, I had started from my home an invalid. I had long deliberated whether an exposure to a chilly east wind would not injure rather than improve me—I was melancholy, too; my only daughter was about to be married—there was confusion all over the house—the event was to be celebrated in fashionable style. Ellen's dress had cost what would have been a fortune to this poor seamstress, and I moralized. But I had forgotten myself—the cough which had troubled me was no longer oppressive. I breathed quite freely, and yet I had walked more briskly than I had done for months, without so much fatigue as slow motion occasioned—so that when I returned my wife rallied me upon looking ten years younger than when I left her in the morning; and when I told her the specific lay in my walk with a little prattler, and the satisfaction of having left her happier than I found her, she took the occasion to press the purchase for Ellen of a diamond brooch, affirming that if the gift of half a dollar made me so much happier, and that, too, to a little errand street girl, what would fifty times that amount confer upon one's only daughter, upon the eve before her marriage?

I gave the diamond brooch—I paid the most extravagant bills to upholsterers, dry-goods establishments, confectioners, and musicians, with which to enliven the great occasion, and yet I found more satisfaction in providing for the real wants of little 'Gusta Taggard and her mother than in all the splendid outlay at the wedding ceremony; and it was not that it cost less which made the satisfaction, but it was that all extravagant outlays, in the very nature of things, are unsatisfactory, while ministering to the necessities of the truly needy and industrious confers its own reward.

I had seen the glittering spangled dress—but it was made ready by some poor emaciated sufferer, who toiled on in patient trust, and the embroidered vest as finished by the strained vision and aching head of another, who was emphatically one of "God's poor," upon whom blight or disgrace had not fallen, save by His appointment; and the diamond brooch was borne off but to be envied and coveted by admiring throngs, while the simple coin bestowed upon my little street acquaintance had introduced me to a new species of enjoyment, which never cloyed in the retrospect or causes uneasiness in the prospective. I had learned

to do good in small ways—my morning walks have now an object and aim. I pass by splendid palaces to hasten to Sullivan court, and thence on to yet other sources of enjoyment, so that my invalidism is fast leaving me by the new direction which is given to my thoughts.

I am free to acknowledge that while I cheerfully pay for flannel robes, and whalebone skirts, and opera hats, and jewels, and silver-ware, and servants, and all the requirements which fashion imposes, I derive far less pleasure from surveying them, than in sitting beside some worthy recipient of charity, who tells me that the little sum "you gave me saved me from despair and self-destruction, and enabled me to become helpful, so that no other assistance is now necessary." Such a confession fills a void which administering to a luxury never can; and all this satisfaction originated in first helping a little child over the crossing.

## A PARISIAN DESPOT.

During the palmy days of the ex-Empress Eugenie, there was current in court circles the following anecdote of Felix, her Majesty's hair-dresser: He was known throughout Paris as a thorough despot. Respecting this, the crowning glory of the toilet, he allowed no suggestions or interference from any of his customers, however seductively they might be offered. On the evening of a certain ball in the Tuilleries, his services being engaged by the Duchess of —, he entered her dressing-room with the air of a monarch. "What dress are you going to wear to-night, madame?" inquired Mons. Felix, leisurely drawing off his immaculate white kid gloves as he approached the dressing-table, where a magnificent set of coral ornaments was spread to view. "A white moire antique," was the reply. "White moire!" said the artist, with a dissatisfied shrug; "the moire is common-place; all plebeians' wives wear white moire." "Oh! but this dress is really very beautiful," returned the Duchess, humbly; and certainly you won't see many plebeians' wives with such a dress as that," continued her Grace, waving her hand to the doorway, where her maid was extending her dress for inspection. It was surprisingly elegant—a lovely, lustrous fabric, the sheen of its spotless folds being almost hidden by rich meshes of *point de Venise*, arranged as a graceful overskirt. "Ah, 'um!" said the artist, scanning it critically. "With the lace it may pass muster," with a shrug; "but as for the coral, I shall not use it—it will not be becoming to your style of face." "But, Mons. Felix," ventured the lady, "I am so fond of it. I thought of asking you to dress my hair with double braids, and the beautiful coral beads you could twist among them." "Madame," returned this unfeeling autocrat, "your fancies are nothing to me; I must dress your hair according to my inspirations, not according to yours. It is I, not you, who are your hair-dresser. Coral is heavy, Anglian; fit only for Creoles. A wreath of pomegranate blossoms would suit you admirably." "Nevertheless, Mons. Felix," murmured his patron. "If you have no confidence in me, madame, call in another artist; I am responsible for the good looks of my clients," returned monsieur, haughtily drawing on his glove and moving toward the door. To hesitate was critical. "Justine," said she, addressing her maid, "take away the coral and bring a box of pomegranate blossoms." "And a few diamonds," added the unmerciful Felix, replacing his gloves in his pocket; and, taking up a comb, he was soon deeply absorbed in fulfilling his "inspirations." So much for the lordly hair-dresser. His price for his valuable time was almost incredible. The Duchess went to the ball immeasurably happy, because her exquisite coiffure was one of the marvels of Paris—a study by the superb Felix.

# THE Ladies' Floral Cabinet

## AND PICTORIAL HOME COMPANION,

THE HANDSOMEST ILLUSTRATED JOURNAL OF HOUSEHOLD ART, FLOWERS AND HOME LITERATURE IN AMERICA.

PUBLISHED MONTHLY.

Devoted to Housekeeping, Household Elegancies, Fashions, Music, Ladies' Fancy Work, Social Amusements, Home Pets, Flowers, Window Gardening, Cottages, Garden Decorations, and Illustrated Home Literature.

### SUBSCRIPTION TERMS, 1875.

\$1 30 per year, including chromo "My Window Garden."  
1 50 per year, including also chromo "Gems of the Flower Garden."  
75 cents six months, with choice of one chromo.  
65 cents six months, without chromo.  
To club of ten, an extra copy of paper and chromo free to agent.  
These terms include all charges—mounting and mailing chromo, also postage on paper for one year.

### Back Volumes.

\$1 25 for volume of 1874, unbound.  
2 50 " " bound in cloth, and mailed.  
1 00 " cover to vol. 1874, mailed, postage paid.  
1 50 " portable binder and music portfolio, mailed, postage paid.  
1 00 " volume of 1873, unbound.  
50 " numbers July to Dec., 1872, unbound.  
No numbers for sale previous to July, 1872.  
No volumes bound previous to 1874.

Terms for Chromos, Agents' Outfits, &c.  
25 cents additional for chromo "Gems of the Flower Garden."  
50 " for agents' outfit of paper and two chromos.  
25 " for agents' outfit of paper and one "one "

Terms to canvassers sent on receipt of P. O. stamp.

### Caution.

All subscriptions paid to other parties than the publisher are at the risk of the sender. Subscribers are requested to pay no money to unknown agents till they can exhibit a certificate of authority or deliver a publisher's receipt. Publisher is responsible for money only when it reaches him safely. Club agents who are well known to their club subscribers need no certificate or receipts.

### Remitting Money.

Money may be safely remitted to publisher by P. O. Money Order, Registered Letter, Express, Bank Draft on New York. No checks on local banks accepted. Money sent other way than above is at risk of sender. All charges for sending money must be prepaid.

### Expiration of Subscription.

All subscriptions expire with December number, unless printed label on each paper contains a figure (39 to 48) which signifies their subscription is paid only to that time. The letters on labels (A, B, C, &c) denote publisher's mark for date of payment of subscriptions.

### Missing Copies

These are always supplied by publisher when notified by receipt of postal card. As the labels often slip off while passing through the mails, yet paper reaches the post-office, subscribers will ask P. M. of the fact before addressing publisher.

Newsdealers will furnish CABINET regularly, and receive payments monthly or at convenience of reader.

## MAKE YOUR HOMES BEAUTIFUL

WITH HUNDREDS OF BEAUTIFUL HOME ELEGANCIES.

### Fret Work and Fancy Carving.

With this improved BRACKET AND FRET SAW, any one can make dozens of beautiful fancy articles, at "small cost," and decorate their homes profusely with many charming ornaments, while ladies and young people everywhere will find in it a fascinating recreation. Desirable articles can be made for fairs, or sold among friends and neighbors at good profit. With it you can make beautiful articles for presentation gifts. With it you can help beautify your homes. With it you can make money. To parents desiring a USEFUL GIFT for their children, we would call attention to this Bracket and Fret Saw, for it not only affords great pleasure, but it helps to cultivate a mechanical taste. Full directions given. Price, \$1.25 with twenty-five

bracket designs, six saw blades, one cherry frame, one cherry blade, one Rosewood frame. 60 cents for Williams' New Book, 150 "ornamental designs." The most complete book on the subject in the United States.

## Ornamental Designs for Fret Work, Fancy Carving, and Home Decorations.

EDITED BY HENRY T. WILLIAMS.

The interest and easy success attending the use of the Fret Saw has made the subject of fancy carving and the making of household ornaments wonderfully popular. Ladies and young people everywhere find in it a fascinating recreation, and are making dozens of beautiful fancy articles at so small a cost that they can decorate their homes profusely with many charming ornaments. The above book contains upwards of 150 designs of Picture Frames, Consoles, Baskets, Brackets, Letters, Figures, Fancy Stands, Ladies' work Baskets, etc. Book now ready. Price, 60 cents. Address

HENRY T. WILLIAMS, 46 Beekman St., New York.

## Something New and Useful

### FOR THE LADIES.

No Lady's Work-Basket Complete

WITHOUT

JOHNSON'S

Combined Pocket Knife and Scissors.

The most useful and convenient little piece of Pocket or Work-Basket furniture, for Ladies' and Gentlemen's use, ever offered.

Gentlemen's Scissors.

It combines a perfect Scissors and perfect Knife in one article. Can be used for either purpose without interference. The knife pushes by a spring back into the blade when not in use. The scissors are equal in beauty and quality to the best ever made. It is the best ripper of seams or cloth ever made, because of the length of the handle. It will sharpen your pencils, pare your nails, erase your blots, open your letters, cut button-holes, and do anything wanted of any knife or scissors for house use. The knife-blade, if broken, can be easily replaced. For the pocket it is unequalled, and for ladies' use it is fairly indispensable. Made of first-class material, in two styles. No. 1 for ladies' use; No. 2 for gentlemen's use. Sent by mail, postpaid, on receipt of price, \$1.00.

Ladies' Scissors.

TERMS AS PREMIUM.—Given free for Club of six, one year to CABINET, at \$1.30 each, ten, six months " " at 60 or 70c. each.

Address HENRY T. WILLIAMS, 46 Beekman St., N. Y.

Amusement for the Household. Just what Every Child Wants.

## THE NEW PATENT POCKET SOAP-BUBBLE TOY.

300 bubbles can be blown without refilling. Perfectly simple. Cannot get out of order. May be carried in the pocket. Any kind of soap used. Always ready for use. No more wet clothing. No dish of suds overturned. A never failing source of amusement for children of all ages, in-doors or out.

Sent by Mail, postpaid, for 50 Cents.

FULL DIRECTIONS FOR USING WITH EACH PACKAGE.

ADDRESS ORDERS TO

HENRY T. WILLIAMS, Publisher,

P. O. Box 2445.

46 Beekman St., New York.

N. B.—Club Agents, in getting up Clubs for the CABINET, who can procure orders for above Binder from any of the Club, will receive from us commission. Special Terms made known on application.

NEW YORK, SEPTEMBER, 1875.

## EVERYBODY'S FAVORITES.

BY MISSISSIPPI.

Geraniums, Abutilons and Begonias, are everybody's favorites, and are flowers which best repay cultivation. They stand prominent in the greenhouse during winter, and are either pot or bedding plants during spring and summer, and reward the cultivator, all things considered, better than flowers of any other class. In point of rapid and thrifty growth, handsome foliage, symmetrical form, and principally as abounding in blooms of surpassing beauty at every season of the year, they are unrivalled. Many years of experience have shown me that these plants do not require a season of rest, but under a proper mode of culture will grow and grow, and bloom and bloom, until they elicit wonder from all who cull their blooms. Heat, moisture, and a rich, loose soil, are all that are necessary to insure a fine array of blooms of every shade, from deepest crimson and brilliant fiery red to softest rose and snowy white; some double, some single, together with leaves of delicious fragrance and extreme beauty. Lovers of flowers, reflect on the exquisite odor and loveliness of the Rose, Apple, Nutmeg, Coacanut and Lemon Geraniums, together with the incomparable Zonales, which rival the Rhododendrons and Camellias, with their richly colored stately blooms surrounded by leaves with circlets, margins and blotches of bronze, gold and white, blended with the vivid green! Just with this one class we may fill our greenhouses, adorn our sitting-rooms and gratify a love of floriculture, did not the Abutilons claim to be inseparable from Geraniums. Abutilons so soon grow up out of the way of the more lowly growing shrubby-Geraniums, and thrive so admirably under precisely the same treatment, that it were a pity to separate them. Let us have them along with our Geraniums, and give them good culture, and we will please those whom a large variety strikes favorably, as Bell flowers range in color from deep orange veined with blood color to the loveliest and most delicate canary, pink and white. And in extending our choice,

increasing our variety, we must needs reject some varieties, and in so doing cast aside choice kinds, for all in this class are choice. I know not a Geranium or Bell flower unworthy cultivation, and who ever saw an amateur with every standard variety of either kind?

Florists tell us what to buy, tempt us with accurate descriptions of the attractions of every class of plants; journals devoted to floriculture recommend everything that is pretty in the way of a flower or decorative plant; handsome cuts are given on these pages of every flower that grows, from "Dan to Beersheba;" and one who loves flowers must invest in some of *this* and some of *that*, until they feel satisfied with a pleasing variety. But my humble province, now, is to go to the other extreme, and narrow the cultivator to a class of plants that will not disappoint her expectations, where the means and opportunities for the culture of flowers may happen to be limited. Next to Geraniums and Bell-flowers come Begonias. They root readily from cuttings of any size, multiply rapidly, and embrace a large and pleasing variety. For an idea of their indescribable waxen beauty, go to the sea shore and examine shells of the pearliest roseate hues, softly blended, rose into salmon, salmon into pearl. Look above to the clouds of heaven, with their marvellous beauty tinged by the setting sun. The damp, dewy, cool, succulent stems, leaves, and blooms of the Begonias are to my mind what Roses were to the gifted S. S. Prentiss, who in his dying hour bade his wife to bring him a "bushel of Roses." Not only in the last hour, "when I am called to die," but in the "sunny hours" of busy life, now, at all times, bring me a bushel of Begonias! I am partial to many other kinds of flowers, but—"not that I love Cæsar less, but Rome more." My mode of cultivating the Geraniums, Abutilons, and Begonias, possesses not the charm of novelty, but has been thoroughly tested and found to be successful. My plants are all in boxes, filled with earth from the vegetable garden, and coarse manure from the lot and stable. The coarse manure is always on the surface. It is coarse and fibrous and admits the air, never bakes in a crust, and, by frequently renewing the supply and keeping the boxes well watered, the "strength" of the manure washes down to the roots without wasting. I am no scientist, and, on the other hand, would not carry a stone to mill, in one end of the bag, because "Daddy used to do that;" but my father was ever successful as a planter, and he used to say "the Almighty put the best soil on top," meaning the surface, and as he fertilized his corn and cotton so do I my flowers. And my flowers, or rather plants, grow so large that I never keep the "mother" plant over two years, for in that length of time they will fill a half-barrel, but propagate young plants from cuttings.

**Rustic Flower Pots.**—Last season I had a pretty arrangement in my front yard, which was much admired. When the winter's wood was hauled to the house, there were some hollow logs amongst it. These were sawed in pieces about eighteen inches long; the decayed wood from the inside was scraped out, then filled with rich earth and manure; in the centre I had a rose bush, and next moss pinks; on the outer edge I set slips of ivy and Wandering Jew; in one I raised some sweet peas. The plants all grew nicely, and they were certainly beautiful ornaments; a source of pleasure to myself, and admiration to passers by. These little arrangements are but trifling, but trifles add much either to our happiness or discomfort all through life.

SUBSCRIBER.

## GET UP A CLUB FOR SIX MONTHS

FOR

## The Ladies' Floral Cabinet,

The Handsomest of all Ladies' Journals.

Our subscribers have hundreds of friends who would take the CABINET for six months, if it is only shown to them. ## PUBLISHER'S ANNOUNCEMENTS

**Six Months Subscriptions.**—With a little effort each subscriber can send us the name of some friend, or a club, for the rest of the year. We hope all will try. Prices have been fixed as low as possible. So beautiful a journal, on so costly paper, with so many expensive and charming illustrations, cannot be offered as low as other cheap papers, which are not worth keeping. The music alone for six months is worth \$2 at least, and the paper, with chromos, \$1 more—a total of \$3 for only 70 cents.

**Plants for Sale.**—We have several lots of plants, seeds, &c., owing us by florists, which we will sell at 25 per cent. discount from usual catalogue prices. Any one wishing to buy may choose a list from any floral catalogue, deduct 25 per cent. from price, send the order to us and we will have good plants and seeds sent for the money. As soon as we have traded out these accounts our offer will be withdrawn. Persons not wishing to buy now, but next fall, may purchase from us an order now, at this discount, good for any time it may be presented.

**Household Elegancies.**—We shall issue, Oct. 15, a new book about the size of "Window Gardening," full of fancy work, home decorations, household art, and elegant ways of adorning a home, with so many exquisite illustrations, that every lady will be fairly crazy with delight when she sees it. We regard it as the most desirable ladies' book ever published, and it will be truly the *grand Gift Book of the season*. Our readers know that anything we issue is so splendid in style and superior in merit, that, when we make an announcement, it is received with confidence and the most ready patronage. "Household Elegancies" is the finest work we have yet originated, and as a special offer to any one who will obtain 15 subscribers to the CABINET for six months, before August 1st, we will present a copy of this new book free, as soon as issued. Price will be \$1.50, and will be ready Oct. 15.

## Home Pets.

### CANARY BIRDS.

I have had Canaries for over eleven years. Have two singers now; one ten, one eleven years old. They are very fine singers; healthy and happy. I judge by their actions.

I have never had any sick (except once, they got their little feet chilled one *cold snap*, and were troublesome for a short time). I washed off the perches and the cage every day—not in salt water, tho'. I give them fresh water for bathing and drinking, and canary-seed and a bit of a cracker soaked in milk, every day. They have some dry cracker in their cage to pick, and some cuttle-fish. It takes me about ten minutes a day to attend to them, and they give me no further trouble. Is that a great care? I have never seen any mites, lice, or other vermin about them. I give them hemp-seed only as a treat, as it is too heating, and birds are healthier, I think, without it; but if they have been accus-

tomed to it, I am told, will not live when deprived of it. I give green stuff—chickweed, plantain-seed, lettuce, and sometimes cabbage, in the summer, or whenever I have them; now and then, a bit of sponge-cake and apple; but these latter are treats for which, I think, birds (some kinds, at least) don't much care. If one tries to raise a family of them, that alters the case.

S. M. BARBER.

**The Mother and her Child.**—Some mothers make it a practice to go themselves to fetch the candle when the children are in bed; and then, if wanted, they stay a few minutes and hear any confessions or difficulties, and receive any disclosures of which the little mind may wish to disburden itself before the hour of sleep. Whether then, or at any other time, it is well worth pondering what a few minutes of serious

**How to Economize.**—Ladies who wish to modernize plain basques, or change cuirasses into the new fashion, can now do so by adding to the lower part of the two middle forms a straight piece of silk, laid in from twenty to twenty-five fine plaits. Breast pockets are again in vogue, and there are also reticule pockets made to bulge out as if the oval pouch was nearly filled.

### The Girl to come.

—She will be of some use in the world, will cook her own food, will earn a living, and will not die an old maid. The coming girl will not wear the Grecian bend, dance the German, ignore all possibilities of knowing how to work, will not endeavor to break the hearts of unsophisticated young men, will spell correctly, understand English before she affects French, will preside with equal grace at the piano and the washboard, will spin more yarn for the house than for the street, will darn her old stockings and know how to make dough-nuts. The coming girl will walk five miles a day, if need be, to keep her cheeks in a glow; will mind her health, her physical development, and her aged

THE PUMPKIN EFFIGY.

consultation may do in enlightening and rousing, or calming, the conscience; in rectifying and cherishing the moral life. It may be owing to such moments as these that humiliation is raised into humility, apathy into moral enterprise, pride into awe, and scornful blame into Christian piety. Happy is the mother who can use such moments as she ought, and put to good account the lessons derived therefrom.

mother; will adopt a costume both sensible and conducive to health, will not confound hypocrisy with politeness, will have the courage to cut an unwelcome acquaintance, will not think that refinement is French duplicity, that assumed politeness, where hate dwells in the heart, is better than outspoken condemnation, and will not regard the end of her very being to have a beau.—*Ex.*

## Ladies' Boudoir.

## ALL MINE OWN.

There is for me a beauteous face,  
And I live for my love, and I love always—  
There is for me a form of grace,  
And her love it is sweet, and it bides for aye.

Oh, brightly bloometh that face so fair,  
And I live for my love, and I love always—  
Oh, fresh is the hue of her cheeks so rare,  
And her love it is sweet, and it bides for aye.

Oh, bright is the glance of her tender eye,  
And I live for my love, and I love always—  
For its light has been caught from heaven on high,  
And her love it is sweet, and it bides for aye.

Oh, dear are the lips that I fondly kiss,  
And I live for my love, and I love always—  
To view them is gladness, to press them is bliss,  
For her love it is sweet, and it bides for aye.

Oh, tender the clasp of her arms so white,  
And I live for my love, and I love always—  
As she clings to my breast in her young delight,  
And her love it is sweet, and it bides for aye.

Oh, light is the fall of her fairy feet,  
And I live for my love, and I love always—  
As eager she cometh my steps to meet,  
And her love it is sweet, and it bides for aye.

Yes, her heart is as pure as the mountain snow,  
And I live for my love, and I love always—  
The truest and dearest this earth can know,  
And her love it is sweet, and it bides for aye.

Oh, she is the crown of my earthly life,  
And I live for my love, and I love always—  
And I call her my darling, my joy, my wife,  
And her love it is sweet, and it bides for aye.

HAROLD.

## MRS. PETERS' PHILOSOPHY.

Sisters of the CABINET, do you ever sing? I seem to hear the reply, "I used to sing in church when we lived in the country, but my voice is weak; I don't think I could sing now if I should try."

Let me tell you what Mrs. Peters has done. Living too far from the city to be benefited by public entertainments, and having also a dread of the time when boys leave home for a *pleasanter* place, she undertook the task of teaching herself and children to sing. If Johnnie fails in the bass she instantly sings with him, until he has his part learned perfectly, adapting her voice to the part most needed. "Joseph," she says, "doesn't like to spare the sunny window for my plants, so I've trained my Ivy in the shade; other hardy plants I keep in the parlor until the weather becomes too freezing cold, then they must go to the cellar to rest; but Joseph helped me carry loam to the flower-garden last summer, and perhaps it is only right to reward him with silence for a few months."

Now, Joseph is my own brother, and, I am ashamed to say, he refused to have a bay window in his new house, though it faces the south, and his dear little wife said, "Oh, what a nice place that will be for plants!" "You needn't think I'll be so extravagant," said Mr. Joseph; so the little woman philosophizes thus: "Joseph is willing we should sing, for it keeps him from having the blues; I've put away a nice lot of flower seeds for next season, my hardy annuals are sown, my perennials are in a fine condition, and Capt. Jack Frost can come when he likes and not harm any of us." Though I think a slight pain went through her heart at the mention of her summer delights. "Spring will soon be here," she added, "to woo me to my garden hamlets. Poor Joseph; how much he loses in not loving flowers! But then he improves; he used only to admire Sunflowers and Potato-blossoms, now he thinks Tiger Lilies are beautiful, and last summer he brought me some Rose-bushes." "Probably because they bore masculine names," said I; "John Hopper and George IV." "Oh," said she, triumphantly, "I have great hopes for the future, by our singing at home a good deal, he will become more

refined, I know, and then—and then—oh! how happy I should be if he would love my pets as I do, and maybe, sometime, when Johnnie has the trade learned, he will let him put in the bay window. But at any rate, we will sing, it adds so much to the comfort and harmony of the home circle, it drowns many a care, checks many an angry word, keeps us from hearing and relating unkind stories, and brings nearer the angels, who, aware of our feeble efforts, hasten to join us with songs of gladness."

Who will follow the example of Mrs. Peters, and report progress next spring in the FLORAL CABINET? for I must think Mr. Williams encourages all such endeavors by his kindness in providing music on the last page of his paper.

Don't tell me you "hav'nt time." Mrs. Peters does all her housework with the help of two school children, for is she very strong, but her home is a happy one, so the children say, and her voice, instead of being weak and broken at forty-five years of age, never was stronger or more sweet, as her neighbors will testify, who frequently hear her in the morning when the windows are open.

Try it, sisters, if you have the least love for music, and you will be surprised to know how much can be accomplished by only a few hours' practice every week. If you have a piano or organ so much the better, but don't leave all to the music.

**An Interesting Story.**—A very interesting story is now current in New York city in fashionable and philanthropic society. According to this narrative, a lady of advanced years and great social distinction, who is conspicuous for her energetic and efficient benevolence, had her pocket picked recently of a wallet containing about \$600, a large portion of which she had collected for a well-known and most deserving charity, of which she is a prominent manager. Of this sum a part was in checks and the rest in bank notes. She was greatly disturbed at the loss, and was just about to make it good from her own private resources when the servant one day told her that a strange-looking man desired to see her in the parlor. She went down without suspecting what was to follow. Her visitor, addressing her by name, said: "Madam, you have lost a considerable sum of money, and I have come to restore it to you. Of course you are aware that it was stolen by picking your pocket; but the fraternity have considered the subject, and we have concluded that we cannot keep any money that has been taken from you. We know your goodness and the charities to which you devote your time and your means, and we have determined to restore the pocketbook. Here it is with its contents undiminished, and I trust you will not be unwilling to receive and apply, as you apply so much other money, a small addition which we have taken the liberty of making." Saying this he handed her the pocketbook and left the house without waiting a moment. On opening the pocketbook she found everything that she had lost, and one hundred dollars added by the pick-pockets for benevolent purposes.

**A Victimized Young Man.**—An amusing story is told of a young American gentleman who, while sojourning in Paris, invited two demoiselles to accompany him to the theatre. He secured three seats and drove to the house of his fair friends, half hoping that one was indisposed, so that his felicity might be unbounded. The two were awaiting him, and their mother as well, who kindly invited herself to chaperon the party, and intimated that her daughters could under no circumstances go without her. There

was no help for it. The four crowded into the carriage. No fourth seat could be obtained adjacent to the three already secured, or even on the same tier, and during three long acts the three ladies sat in a box, while our young American gazed at them with feelings unutterable from his seat in the parquette. The drama over, only cabs, with room for two, could be obtained to convey the party home. Here, then, was a dilemma—which young lady should he select as his cab companion? They were both charming, and the matter was difficult to decide. The old lady settled it, however, to her satisfaction, if to the annoyance of our now miserable countryman. "Hortence and Sophie, you go in this cab. Monsieur and I will follow in the next." The young man now thinks that French social customs are barbarous.

**A Noble Wife.**—During the troubles in Poland which followed the revolution of Thaddeus Kosciuszko, many of the truest and the best of the sons of that ill-fated country were forced to flee for their lives, forsaking home and friends. Of those who had been most eager for the liberty of Poland, and most bitter in the enmity against Russia and Prussia, was Michael Sobieski, whose ancestor had been king a hundred and fifty years before. Sobieski had three sons in the patriot ranks, and father and sons had been of those who had persisted in what the Russians had been pleased to term rebellion, and a price had been set upon their heads. The Archduke Constantine was eager to apprehend Michael Sobieski, and learned that the wife of the Polish hero was at home in Cracow, and he waited upon her. "Madame," he said, speaking politely, for the lady was beautiful and queenly, "I think you know where your husband and sons are hiding?" "I know, sir." "If you tell me where your husband is your sons shall be pardoned." "And shall I be safe?" "Yes, madame, I swear it. Tell me where your husband is concealed, and both you and your sons shall be safe and unharmed." "Then, sir," answered the noble woman, rising with a dignity sublime, laying her hand upon her bosom, "He lies concealed here in the heart of his wife—and you will have to tear this heart out to find him." Tyrant as he was, the Archduke admired the answer, and the spirit which had inspired it, and deeming the good will of such a woman worth securing, he forthwith published a full pardon of the father and the sons.

**A Good Daughter.**—"My daughter keeps my farm accounts, sir; and she is as systematic and particular as ever my son was, who kept them before he left home. I tell you it does girls (and he might have added boys also) good to give them some responsibility, and set them to watching things about the farm and household. They learn, I find, economy by it, and soon discover that their old father is not, necessarily, a crabbed old curmudgeon because he doesn't loosen his purse-string whenever they see something they happen to fancy; for they discover the real reason why the purse should not be opened." So said a progressive farmer, a kind, appreciative, and proud father, and a big-hearted man on general principles. What he said the *Germantown Telegraph* thinks worth recording.

**Sensibly-shaped Shoes** are at last in vogue. The newest give ease and handsome shape to the foot, and do not cramp it into unnatural size. Yet some ladies will insist that their shoes are a "mile too big for them!"

**The Newest Fans** are a beautiful combination of tortoise shell and feathers.

## Household Elegancies.

## WAX FLOWERS AND FRUIT.

No object of adornment in parlor, library, or sitting-room, is more beautiful than collections of natural flowers. Next to these come, I think, those in wax, which so nearly approach the beauty of form and color of those in nature as frequently to be mistaken for them. There are certain objections attending the making of fruit or flowers in wax, that is the expense of the materials and implements, and the patience and care required in execution. The implements required for flower and fruit making are gilt flower cutters, flower, fruit, and leaf moulds, bristle (poonah), and sable veining brushes, and camel's hair pencils (all assorted sizes), small, medium, and large sized moulding tools and steel pins, with glass heads, two or more sizes, small scissors, spatula or mixing knife, saucers, and palette. The materials are white and green wire (silk or cotton covered), of various sizes; wax, white and green (assorted shades), single; white double, and for Pond Lilies, the extra large; and for autumn leaves, variegated autumn leaf (assorted shades). The best wax is the Madam Scheffele's Sheet Wax, which will not dry out and crumble as that made in the usual way. Fine dry powder colors, which come in "Homo" vials, and are prepared expressly for coloring wax, diamond powder, arrow root, sprig moss (in envelopes), for moss rose buds; green and brown moss in bundles—stamens (assorted), and spiral or plain stems. These materials and implements may be obtained at any artists' emporium.

Having materials and implements ready, if the day is cool and the wax stiff, sit near a fire, or have a small spirit lamp with which to keep the wax pliable. The most simple article with which to begin is the marble cross. This is formed and ornamented with pure white flowers and leaves. Thus, have a plain wooden cross, of desired size, with three steps: paint with pure glossy-white paint; when dry give a coat of clear demar varnish, and while a little sticky, dust with the diamond powder. Take double white wax and the Ivy leaf moulds, dip in cool water, press the wax on the outside gently, but firmly, cutting the edges off with the edge of the mould; then lay a narrow strip of wax down the midrib, place the white wire stem on it; lay another narrow strip on this, then the lining of the leaf, which cut in the same manner as the outside; press every portion between the thumb and fingers, and loosening carefully, remove from the mould; proceed thus with the different sizes of Ivy leaves, covering the stem with a very narrow strip of thin wax, laying the stem in the centre, and twisting from the leaf downward between the fingers. When a sufficient number have been made, take long pieces of thicker wire, covering in like manner, arrange the leaves in a long vine and sprays, and keep in a close box or drawer until the remaining flowers are all finished, adding each one as it is accomplished.

Fuchsias, Convolvulus, or any other vine is pretty and appropriate for climbing up the body of the cross and drooping over the arms. Fuchsias are made thus, having a natural one to copy from, if possible; take a piece of finest wire, dip in melted wax, (unless the wire is very white, silk-covered wire is preferable for these white flowers and leaves, as it requires no covering of wax,) make a little ball of wax and place upon the end of it; cut coarse thread into proper lengths for stamens, waxing it until stiff (make the filaments upon their ends), and press them firmly against the ball.

The pistil must be of finest wire, bent into a graceful curve, the anther moulded as in nature, placed in the centre of the ball; then proceed to place the petals around it, first moulding them with the glass-headed pin (No. 2), until the edges are thin and the slight indentations made down the middle of each one. They must be placed to fold one in another by laying the left edge of the second one to the middle of the first, and so on until the entire four are folded in; the calyx is made from thick wax, doubled and pressed together before cutting. Mould them with pin No. 1, to be slightly hollow in the centre; place around the petals and mould smooth at the base. Make half open buds in similar manner; closed ones of a solid piece of wax (made from the trimmings), moulded into shape with the fingers; take the point of moulding pin and press or cut indentations showing the unopened calyx. The tiny buds at the end do not require any markings. Lily of the Valley is lovely clustered at the base, though a full-blown Rose, Passion Flower, or a collection of any flowers with their respective buds, leaves, and tendrils, are beautiful in pure white wax, looking like chiselled marble. Lily of the Valley is cut with the regular cutter, and then moulded into bells upon the rounded ends of one of the wooden moulding tools, a few threads of spool cotton form the delicate stamens, which are placed on a little ball of wax, on a thread-like wire. Make two sizes of bells, and then some small buds for the end of the stem, all drooping in their naturally modest fashion. Form leaves for these and the Fuchsias in their respective moulds; cluster them around the steps and base of the cross, and place the Ivy vine around the body, with drooping sprays depending from the arms and top. One of the most beautiful crosses I ever saw consisted of a collection of various leaves: Grape, Maple, Abutilon, Ivy, Geranium, etc., around the base, with a vine of Ivy and Convolvulus running up and over the entire cross. Another was a white cross (as described), with autumn leaves of most gorgeous colors: the crimson Dogwood, scarlet Virginia Creeper, yellow Elm and Maple, brown Oak, russet-colored Alders, purple-crimson Sumach, with the varied shades of yellow and green Peach, and the mottled green, brown, purple, crimson, yellow, and orange shades of other leaves found so beautifully blended in the autumn leaf wax. These white crosses are always a source of enthusiastic admiration, and they are (comparatively), so easily made, that every lady should try to possess one. I trust I have made this explanation plain, and if any desire it, I will take great pleasure in giving instructions for forming any other flowers, or for forming the Easter Cross Basket of Flowers, etc., in colored wax.

MRS. C. S. J.

## HOW TO MAKE A USEFUL WORKSTAND.

This convenient article should be in every sitting-room, and perhaps some of the readers of the FLORAL CABINET will be benefited if I tell them how they can make one themselves. The design is simple and pretty, and can be made with but little expense and trouble. The wood-work must be made from light timber, and formed rather delicate; the stalk or body not exceeding three inches in diameter at the base, less will be quite sufficient, but give it a gradual slope toward the top, as this will better preserve the equilibrium. The stand will require three feet, about eight inches in length and two in thickness. Have them shaped something like the feet of a piano-stool, but not carved; put on with screws, or they can be mortised. The top of the stand should be twenty inches in diameter, very thin, and perfectly smooth on the

surface. A skillful brother (if you have one like I have), can construct the required wood-work in a very short time. The whole is to be covered with brown rep worsted; put the cloth—which should previously be sewed together—over the top, and draw it in half-way between the top and bottom of the stand, and tie it with scarlet cords and tassels; allow the cloth to fall gently from where it is tied to the feet, which should be covered with the same material. Make pockets of the brown, heading them with a ruching of scarlet silk or worsted; sew them around the top of the stand and suspend a scarlet tassel from each pocket; they are useful for holding many little things, such as thimbles, thread, scissors, and scraps of various kinds. Place on the top of the stand a fancy cushion of some pretty design and it is complete, and will serve as an ornament, as well as being very useful.

VICKIE BLUE.

**To Polish Shells for Ornaments.**—Many shells naturally possess so fine a polish that no preparation is considered necessary for placing them in the cabinet. In general, however, it happens that when shells become dry they lose much of their natural lustre. This may be very easily restored by washing them with a little water in which a small portion of gun arabic has been dissolved, or with the white of an egg. This is the simplest of those processes which are employed, and is used not only by the mere collector, but by the scientific arranger. There are many shells of a very plain appearance on the outside, by reason of a dull epidermis or skin with which they are covered. This is removed by steeping the shell in warm water, and then rubbing it off with a brush. When the epidermis is thick, it will be found necessary to mingle with the water a small portion of nitric acid, which, by dissolving part of the shell, destroys the adhesion. This last agent must be employed with great caution, since it destroys the lustre on every part exposed to its influence. The new surface must be polished with leather, assisted with tripoli; but in many cases where even these are ineffectual, the file and the pumice-stone may be employed to rub off the coarse external layers, that the concealed beauties may be disclosed. When this is done, the labor and care, though great, have a proportionate reward.

**To Make Alum Baskets.**—Prepare a foundation of wire and cover it with strips of old linen, and then dip the work into hot alum water till a thick coating of that substance is formed. The wires may be twisted into any shape that may please the fancy, and a good effect may be obtained by leaving little tags of the linen strips hanging in various directions. When encrusted with the alum they will have the appearance of icicles. The first dipping of the basket should be somewhat prolonged, but after that it may occasionally be immersed and dried until enough of the alum adheres to be satisfactory. In this way not only very pretty baskets can be obtained, but vases, card-baskets, cornucopias and other attractive ornaments may be prepared.

**Horn Baskets** are among the handsomest made. A nice white horn should be selected and scraped with glass, until a quantity of fine shavings have been obtained. Then make the foundation of the basket in pasteboard, and sew the shavings thereon in small clumps. The first or outer shavings are generally somewhat dark, but the remainder presents a beautiful white appearance. Baskets of this kind may be made either to sit flat or with standards; and when once covered both inside and out with the fleecy shavings, it is quite an elegant ornament.

## Household Elegancies.

## AUTUMN LEAVES—EVERLASTING FLOWERS.

Much nonsense has of late been written about autumn leaves, I know; and many failures have been caused thereby. But they can be preserved so that they will be really beautiful. I have never yet seen full instructions on the subject. My knowledge has been gained by experience, which I will give for the benefit of those who, yearly, "when the melancholy days have come," gather the bright-hued leaves, press, and give them one thin coat of varnish, only to have them wither and curl up. Much depends upon the selection of leaves. Many lose their beauty. The best I know are hard and soft Maple, Hickory, Quivering Aspen, Cottonwood, Pear, Shrub, and black and white Oaks. White Oak leaves are beautiful, but fade soon. Sumac leaves and the crimson leaves of the Sassafras are the very best. Leaves can be preserved by pressing and then dipping them in melted wax, or ironing them with a waxed iron. But the colors are much more brilliant when ironed and then well varnished, and will keep their color full as long. Gather the leaves and iron them the same day, and iron them *dry*. A little practice will teach you how hot to have your irons. You must have a good supply of leaves, as you will spoil many. For bouquets, bunches of leaves can be kept on the twigs by careful ironing. Frames should be large, or you must select very small leaves. Large frames will give most satisfaction. They need not be put together very neatly, as the leaves will hide all imperfections. Tack strips of pasteboard on the frame, as some leaves will not adhere to wood. If medium size, very heavy pasteboard alone will do. Put in your glass and picture first, and fasten firmly with strips of muslin pasted around the edge. Put common brown glue in a large baking-powder can and fill two-thirds full of water; soak over night, then boil slowly. Have it thick and hot. Pour out a little in a saucer and dip in the lower half of the leaf, press it on the frame, leaving the upper half loose. They will curl slightly after a time and have a more natural appearance. If the frame is oval begin at the top, and finish the bottom with a rosette of leaves, having several long slender ones, like Shrub Oak, or Sumac. These should also be arranged along the edges. On square frames groups of leaves can be put on the top, bottom, sides, and corners. For the centre of these use everlasting flowers, berries, or acorns.

To preserve choice leaves, arrange on cards, or form into bouquets on heavy paper, and frame. A pretty design is a basket made of cones or moss, arranged to look as if filled with leaves and ferns. It must be framed flat against the glass. This arrangement will be sure to please. Ferns can also be made into many lovely designs. They must be gummed on paper, or put into books, as ironed, or they will curl. The secret of success in pressing autumn leaves lies in ironing them dry and using plenty of varnish. White is usually recommended. I prefer common furniture varnish. Leaves for cards varnish on one side, for bouquets on both sides. Frame immediately after the work is done. Give all two or three coats of varnish. Follow faithfully these directions and you will be astonished at the brilliant beauty imparted to the leaves. They can scarcely be distinguished from wax autumn leaves. Engravings look better framed in leaves than chromos, and small oval frames, or

wreaths of leaves, look well hung on the long cord above large pictures. Wreaths of grasses and everlasting flowers can be hung in the same way. Ornamental grasses and everlasting flowers, I think, are not very generally cultivated. To those who have not, I

DRACENA AND ORNAMENTAL FLOWER-POT.

say, try them. Besides being very ornamental in the garden, nothing you can grow will give such lasting pleasure. I have kept several kinds four years, and, by remodelling once in a while, have fresh bouquets. All kinds named in the catalogues are worth raising.

ANCHOR OF EVERLASTING FLOWERS.

The new scarlet globe Amaranth, though not classed as an everlasting, is splendid, and the old white works up beautifully. I have a bouquet made of the last-named and the scarlet berries of the Indian turnip, with Ambrosia or Jerusalem Oak for foliage. This

died green with one ounce of chrome green and half an ounce of gum arabic in half a pint of water, hot, but not boiling. This is the very best preparation I have found for coloring moss, seed-pods, or foliage of soft texture. To color grasses, dissolve the gum arabic, dip in the grasses, then dust them with the dry coloring.

I have an imitation of several hanging-baskets, filled with moss stripped from an old log, dried, washed, and colored without breaking. On its well-rounded cushion are everlasting flowers, berries, and shells. Frames and designs, such as arches, anchors, crosses, etc., can be made of this colored foliage and everlasting flowers, that will be *everlasting*, indeed. Many flowers and seed-pods, such as Love in a Mist, or Balloon Vine, can be dyed various colors, and are handsome when dyed and then crystallized. Early in autumn take a ramble in the fields, along the sloughs and creeks, and you will be surprised at the variety and beauty of the curious things you can collect. Then, with ten cents' worth of aniline dissolved in hot water, you can color enough for yourself and all of your friends. Faded grasses, everlastings, coxcombs, etc., can be dyed to look better than at first. With aniline you can dye any color. With purple aniline you can dye all shades of rose and pink.

Dried grasses can be painted in the following manner: Dip them in a solution of gum arabic, and with the fingers dust the following dry paints into them, viz., chrome green, marine green, Paris green, vermilion red, ultra-marine blue, and chrome yellow. To crystallize grasses use one pound of alum and one teaspoonful of fine salt in one quart of soft water. Boil together in a brass kettle, until dissolved. Lay the grasses in the solution, while hot, for five minutes; remove those that are crystallized, leaving the others till done. Some receive the solution more readily than others.

Don't make all of your bouquets tall and stiff, when there are so many pretty ways to arrange them. On a table they look best in small baskets made of straw, brown paper, corn-husks, lichens, or imitation of coral, or even burdock-burs, with or without crystallizing; or you can buy cheap little wicker baskets. If you have not plenty of everlastings, fill up with moss, shells, bright pebbles, and autumn leaves. It improves almost any kind of a bouquet to have a few autumn leaves stuck around and above it. Arrange myrtle, while fresh, around and over your baskets, and it will retain its beauty. Ambrosia is fine for foliage; Bitter-sweet, and what are known as Dry-land Cranberries, are very beautiful.

Cracked preserve-dishes can be converted into ornamental receptacles by painting, or using bronzine, inside. Plaster vases and figures are treasures; superfluous parts can be cut away, and bowls or goblets, lamp bottoms, or like valuable articles secured thereon with putty, then covered with bronzine. Cornucopias made of lichens are nice. Turn up your noses, you dainty ladies who are rich enough to buy whatever you may fancy, or who do not care to exert yourselves to follow these directions; but I know that not more than one woman in a hundred, however much she may love pretty things, likes to spend much money for what others are apt to think useless. And yet, homes of wealth look bare and cheerless without these little things, which give evidence of the presence of a woman of taste and refinement. Though you can buy such things, they usually have a boughten look. Besides, you lose the pleasure and interest of making them, and the satisfaction of knowing that you can.

BERRY WINTERBRIGHT.

## Fireside Reading.

## GOOD TALKERS.

Sir Walter Scott talked well, and was a most attentive listener. Shelley, the poet, wrote of Byron's more serious conversation that it was to him "a kind of intoxication." We are all familiar with the witty sayings of Sidney Smith. There seems to have been no end of them, as each of his biographers have told us something new and quaint. He talked well, because he was bubbling over with health and spirits and new ideas. He was the prince of wits, and had as much point where two roads met, and found no finger-board.

He called Macaulay "a book in breeches," which would imply that he (Macaulay) was fond of the sound of his own voice—was a *monologueist*, not a converser. Rogers talked well, but in a critical spirit. Of that delightful author and conversationist, Charles Lamb, Hazlitt wrote: "No other person ever stammered out such fine, deep, eloquent, piquant things in half-a-dozen half-sentences." Another writer says: "His jests scald like tears, and he probes a question with a play upon words." Madame de Staël's conversational brilliancy has passed into a proverb. She was weak and vain and excessively plain, but charmed all whom she chose to charm; as Curran said, "she talked herself into a beauty." Samuel Taylor Coleridge so dazzled those who heard him that "they forgot all place, all seasons and their change." The "silver talk" of Thomas De Quincey is said to have had an indescribable charm. His favorite hour for conversation was at "five o'clock in the morning," when under the full influence of his daily dose of opium. "He was fond of words ending in *osity* and *ation*, and addressed an illiterate servant with as much pomp as though he were making a vexed point in metaphysics with an Oxford professor." Of living conversationists, Carlyle has undoubtedly the greatest reputation, if one who harangues can be a good talker. Margaret Fuller once said of him: "He allows no one else a chance, raising his voice, and rushing on his opponent with a torrent of sounds." Another has written of him: "His talk, like his books, is full of pictures." Thackeray was a delightful converser, because he never talked for effect. An American author wrote of him: "As the night wore on, and only a few centurions remained, he would tell stories, sing songs, and set the table in a roar."

Alas, the art of conversation is dying out! The age of economy and calculation has succeeded. A trifling joke, a scrap of information, a petty experience, a change of fashion, is made profitable by the literary miser. Once men and women spent days and nights in getting up a brilliant repartee; but now, in social intercourse, ideas are boarded for after use.

A Kansas farmer solemnly declares that a grasshopper sat on the gate-post and threateningly asked: "William Bryant, where in thunder is the balance of that cold meat?"

A Sunday-school teacher in Indianapolis, while catechizing a class of six bright boys, had occasion to speak of the two roads, one leading to heaven and one to hell, and stated that God had placed the Bible in our hands to direct us to the right road, and warn us from walking in the road which leads to ruin. Wishing to illustrate the importance of the finger-board, he asked the boys: "Boys, have you ever been in the country?" "Yes, sir." "Did you ever come to a point where two roads met, and found no finger-board,

voice inside responded that "De bank is closed." But he replied that he had left a new pair of boots there the day before and wanted them. The sable financier opened the door softly, and throwing out one boot, remarked: "We is only paying fifty cents on de dollar."

A Negro woman was relating her experience to a gaping congregation of color, and among other things, she said she had been in heaven. One of the ladies of color asked her: "Sister, did you see any black folks up in heaven?" "Oh, get out! you s'pose I go in de kitchen when I was dar?" This reminds us of the anecdote of a colored man who was so convinced of the lowliness of his position, and that labor was a natural lot, that he even was so indifferent as to a future state, believing that "dey'll make nigger work eben ef he go to hebben." A clergyman tried to argue him out of this opinion, by representing this not to be the case, inasmuch as there was absolutely no work for him to do in heaven. His answer was: "Oh, you g'way, massa, I knows better. If dere's no work for culled folks up dar, dey'll make 'em shub de clouds along. You can't fool dis chile."

Prithee tell me, Dimple Chin, at what age does love begin? Your blue eyes have scarcely seen summers ten, my fairy queen; but a miracle of sweets, soft approaches, sly retreats, show the little archer there, hidden in your pretty hair. When didst learn a heart to win? Prithee tell me, Dimple Chin! "Oh!" the rosy lips reply, "I can't tell you if I try, 'tis so long I can't remember; ask some younger lass than I!"

A Youngster, while warming his hands over the kitchen fire, was remonstrated with by his father, who said: "Go 'way from the stove; the weather is not cold." The little fellow, looking up at his stern parent rather demurely, replied: "I ain't heating the weather; I'm warming my hands."

Traveler in New Hampshire to farmer by the roadside: "I suppose you enjoy these glorious views which people come so far to look at." "Why, yes; but if I'd had the 'sortin' of these hills I'd made 'em a little peakeder."

Bayard Taylor says of California children: Nowhere can more rosy specimens of health and beauty be found. Strong-limbed, red-blooded, graceful, and as full of happy, animal life as young fawns, they bid fair to develop into admirable types of manhood and womanhood.

A Reverend Gentleman, during a sojourn among the hills of New Hampshire, stopping at a cottage, inquired of the occupant if there was any Episcopalians in the neighborhood. "I don't exactly know," replied the dame, "but I believe John shot one in the garden last week, but he thought it was a chipmunk."

The following notice, written on the door of a village school, would seem to indicate that the schoolmaster is abroad: "Kea at the woden house necks dor."

THE UNWILLING PUPIL.

to direct you?" "Yes, sir." "What road did you take?" "The road that had the most black walnuts on," was the quick response of the bright lads.

Where is my little darling going to, if she is good?" asked a Danbury mother. "Up to New Haven," prattled the little flaxen-haired innocent, pointing up with her tiny index finger.

During the great collapse of 1857, a gentleman of color kept a bank in a Western city. His institution was apparently in a sound condition, but to be in fashion with the white folks he concluded he must fail. Next morning a man came and shook the door, but a

## Housekeeping.

## HOUSEKEEPING MADE EASY.

Regarding theories only as nicely poised speculative principles—to be more admired than practiced—we pass them lightly by, and deal with the facts of commonplace things of every day life. For the benefit of the young housekeeper, just embarking on this chequered voyage, we would repeat the few simple principles given to us twenty-five years ago by an experienced, practical friend, in favor of which we now declare after so long a test. First, look with care that nothing be wasted; second, a place for each article, and always in its place. This is quite easy even for those who occupy small houses. A few bags, each with two eyelets, by which to hang against the wall, in some convenient place, will afford ample storage for a great number of articles. One will contain the hosiery for a family; another, the waste scraps, fit only for the ragman; in another may be deposited in neat rolls the larger pieces for future need. One should always be provided in the pantry for holding spare tea cloths; balls of cotton, also, are quite safe in such a place. Thirdly, see that everything is kept scrupulously clean. Once each week the labors of the laundry should embrace and cleanse each soiled garment or piece of cotton or linen, no matter how small or unimportant it may seem. Let no garment pass from the ironing-board to its fixed deposit without being in perfect readiness if called for at any moment. Especially is cleanliness desirable in all culinary operations. First, in the proper care of stove furniture, well washed and rinsed, then dried and hung or placed on shelves, then rinsed again with scalding water before being used; this will insure freedom from the least particle of impurity.

The comfort and elegance of a meal consists not so much in the elaborate display of china, glass, and silver, or the great variety of viands, as it does in simplicity and neatness. A snowy, well-ironed tablecloth, with bright service neatly arranged, and a few well prepared dishes, chief among which are the soft, fresh bread, and sweet golden butter, from out a dairy kept sweet by plenty of pure air, and whose pans are regarded as carefully as though they were china vases. With these few easy principles accepted as guides, many a gloomy house would be converted into a cheerful, smiling home. Many a poor man would become wealthy. Comfort and plenty would take the place of disquiet and want.

In every well regulated home there are seasons and hours for recreation, both for body and mind. Rest consists not in the entire cessation of labor, but we find it most and sweetest in the change from drudgery to some lighter employment in which the mind takes a pleasing interest; something that calls into exercise the pleasing emotions of our nature, from the constant exercise of which we receive a healthy vigor that laughs at nostrums. A thrill of joy sends the blood through its channels with an accelerated motion that drives disease away. Hence, we find the care of flowers of so great consequence, and assign to them a place in every home. So easy it is to achieve success, that the novice need only make the trial; and with the aid of a few suggestions, her first experience will be crowned with satisfactory results. At least we have been abundantly rewarded by treating our plants much as we did our children. After giving them a good soil, cleanliness next, allowing no insect vampire to feed on them, neither dust to obstruct the free influence of the

atmosphere through their delicate leafy textures, for these are the lungs through which they inhale the same air in common with mortals, and very important it is that it should be pure and moist; after this, we consider their nourishment. Once a week, or at farthest once in two weeks, we give ours liquid manure. This treatment, in temperature suited to my own comfort, is rewarding me even now with bloom on very many of my floral children, also a vigorous growth that ensures me blossoms through all the coming winter. If there are a few very delicate varieties requiring special treatment, with the FLORAL CABINET as our oracle, together with the instructive gleanings from the many "Floral Guides" so liberally distributed among us, one can scarcely fail to realize their most sanguine expectations.

The above we have written, not for the connoisseur with wealthy surroundings, but for the tyro whose scanty means make economy an important matter in their everyday life. MRS. M. E. WALDEN.

**The Housekeeper's Table.**—The following is a table by which persons not having scales and weights at hand may readily measure the article wanted to form any recipe without the trouble of weighing, allowance to be made for an extraordinary dryness or moisture of the article weighed or measured: Wheat flour, 1 pound is 1 quart; indian meal, 1 pound 2 ounces are 1 quart; butter, when soft, 1 pound is 1 quart; loaf sugar, when broken, 1 pound is 1 quart; white sugar, powdered, 1 pound 1 ounce are 1 quart; 10 eggs are 1 pound; flour, 4 pecks are 1 bushel; 16 large teaspoonfuls are 1 pint; 8 large teaspoonfuls are 1 gill; 4 large teaspoonfuls are  $\frac{1}{2}$  gill; 2 gills are  $\frac{1}{2}$  pint; 2 pints are 1 quart; 4 quarts are 1 gallon; a common-sized tumbler holds  $\frac{1}{2}$  pint; a common-sized wine-glass holds  $\frac{1}{2}$  gill; a teacup holds 1 gill; a large wine-glass holds 1 gill; a tablespoonful is  $\frac{1}{2}$  ounce; 40 drops are equal to 1 teaspoonful; 4 teaspoonfuls are equal to 1 tablespoonful.

**Baked Sweet Apples.**—Sweet apples, which are not relished for eating by the many, may be converted into a palatable baked apple dish, half jellied, delicious in flavor and moisture, which any one can have by stewing them in a porcelain kettle with just enough molasses and water to prevent them from burning, till cooked through, and then transferring them to the oven with all the liquid residuum, to dry and brown.

**Apple Fritters.**—Make a batter, not very stiff, with one quart of milk, three eggs and flour to bring it to a right consistency. Pare and core a dozen apples, and chop them to about the size of small peas, and mix them well in the batter. Fry them in lard as you would doughnuts. For trimmings use powdered white sugar.

**French Pancakes.**—Two eggs, two ounces of butter, two ounces of sifted sugar, two ounces of flour, half a pint of new milk. Beat the eggs thoroughly, and put them into a basin with the butter, which should be beaten to a cream; stir in the sugar and flour, and when these ingredients are well mixed stir in the milk; keep stirring and beating the mixture for a few minutes. Serve with a cut lemon and sugar, and pile the pancakes high on a dish, with a layer of preserve or marmalade between each.

**Italian Beefsteak.**—Score a steak transversely with a sharp knife, cutting it through, lay it in a stew-pan with a small piece of butter; season it with pepper and salt and an onion chopped fine. Let it cook three-quarters of an hour in its own gravy, and serve hot.

**Oyster Omelet.**—Whisk four eggs to a thick froth, then add by degrees one gill of cream: beat them well together; season the egg with pepper and salt to taste. Have ready one dozen fine oysters; cut them in half and pour the egg into a pan of hot butter and drop the oysters over it as early as possible. Fry a light brown and serve hot.

**To Bake Beans.**—Soak one quart of beans over night in warm water; set them on the stove in the morning and let them come to a boil; drain the water all off, and fill up again with hot water; set them on the stove again, and let them cook slowly until they commence to be soft; throw the water all off, put the beans in a deep pan, or "Yankee bean pot," with a small piece of salt fat pork; fill up with hot water, three tablespoonfuls of molasses, and a piece of soda the size of a bean; bake four or five hours, and keep them filled with water.

**Corn Bread.**—Two cups of buttermilk, one cup of sweet milk, half a cup of molasses, small teaspoonful of soda, three cups of indian meal, one and a half cups of flour—Graham is best. Steam three hours.

**Paradise Cake.**—Three eggs, one cup of butter, two and a half cups of sugar, one and a half cups of sweet milk, a small teaspoonful of soda, four large cups of flour, one pound of raisins; cloves, cinnamon, and nutmeg.

**To Iron Velvet Ribbon.**—Dampen the underside slightly, and draw it back and forth over a hot stove-pipe until the velvet is quite dry. A still better plan—though in winter it is not always convenient—is to lay a wet piece of cotton cloth on a hot flat-iron placed upside down, and while the steam is rising from it draw the underside of the velvet lightly backward and forward over the wet cloth.

**To Remove Paint from Windows.**—Take strong bicarbonate of soda and dissolve it in hot water; wash the glass, and in twenty minutes or half an hour rub thoroughly with a dry cloth.

**A Solution** of gum arabic will remove dirt and stains from marble. Let it remain till it dries, when it will peel off or can be washed off.

**When** it is necessary to break a bottle, the quickest way is to soak a string in turpentine and tie it round the neck of the bottle, and then set fire to the string and it will break in good shape.

**The appearance** of old wall paper will be very much improved by rubbing it with a woollen cloth dipped in dry indian meal. It removes the dust and smoke. Pieces of stale bread are equally efficacious.

**To prevent** the smoking of a lamp, soak the wick in strong vinegar, and dry well before you use it; it will then burn both sweet and pleasant, and give much satisfaction for the trifling trouble of preparing.

**To extract Ink** from cotton, silk and woollen goods, saturate the spots with spirits of turpentine, and let it remain several hours; then rub it between the hands. It will crumble away without injuring either the color or texture of the article.

**An Economical** and effectual method of cleaning greasy cooking utensils, like kettles or spiders, is to use wood ashes with a little warm water instead of soap. After standing awhile, scrape and rinse out the ashes, and then only ordinary dishwater will be required.

**A Teaspoonful** of powdered borax, dissolved in a quart of tepid water, is good for cleaning old black dresses of silk, cashmere or alpaca.

VALUABLE BOOKS

For Household Reading and Amusement.

FLOWERS, GARDENING, AND RURAL LIFE.

Any of the books named in the succeeding list, on this page, are for sale at this office, and will be sent, postpaid by mail, on receipt of price, or given as premium to any who will enlist their interest and effort to procure subscriptions and clubs for the LADIES' FLORAL CABINET. They will afford means for passing away many an evening, and amuse the family circle with innocent and enjoyable diversions.

**Window Gardening.**—A new book, with 250 fine engravings and 300 pages, containing a Descriptive List of all Plants, suitable for Window Culture, Directions for their Treatment, and Practical Information about Plants and Flowers for the Parlor, Conservatory, Wardian Case, Fernery, or Window Garden. Tells all about Bulbs for House Culture, Geraniums, Hanging Baskets, Insects, Plant Decoration of Apartments. The illustrations are unusually beautiful, and many of them perfect Gems of exquisite beauty. Supplies good practical information that can be found in no other volume. Price, \$1.50, by mail postpaid (Premium for club of 10).

**Every Woman Her Own Flower Gardener.**—By "Daisy Eyebright" (Mrs. S. O. Johnson). A delightful little Treatise on Out Door Gardening for Ladies—Practical, Timely, Charmingly Written. Cannot fail to be universally liked. Valuable Information about Pansies, Roses, Geraniums, Climbing Plants, Annuals, Perennials, Fuchsias, Ribbon Beds, &c. Send for it. Printed in Excellent Taste. Price, 50 Cents, postpaid. Bound in cloth, \$1.00 (Premium for club of 5).

**Practical Floriculture.**—By Peter Henderson. Devoted to the propagation and culture of Plants raised by Florists and successful amateurs; is a standard authority on Green House Plants; gives practical suggestions for Planting Flower Beds in the Lawn; Designs for Flower Gardens; How to Grow Bulbs, Verbenas, Lilies, &c. Price, \$1.50 (Premium for club of 10).

**Breck's New Book of Flowers.**—By Joseph Breck. Contains a descriptive list of all varieties of Flowers, Vines and Flowering Shrubs in usual cultivation, with hints on selection of Flowering Plants, Insects, Lawns, Culture of Perennials, Biennials and Annuals. A handy floral encyclopædia for the amateur. 480 pages. Price, \$1.75 (Premium for club of 10).

**A Simple Garden for Country Homes.**—By Charles Barnard. A handy little manual, with diary of operations for each month in the year, of out-door work in the Garden or Flower Ground; a practical and handy help to every gardener. Price, 50 Cents (Premium for club of 5).

**My Ten-Rod Farm and How I Became a Florist.**—By Charles Barnard. A romantic story of how a widow became successful, and attained a competency, through the income of a little greenhouse, in a thriving town. Price 50 Cents (Premium for club of 5).

**Popular Architectural Books.**—Woodward's Country Homes. Price \$1.50. Woodward's Cottages and Farm Houses. Price \$1.50. Woodward's Suburban and Country Homes. Price \$1.50. Woodward's Graperies and Horticultural Buildings. Price \$1.50 (Premium for club of 10).

**Gardening and Country Life.**—Gardening for Profit: Henderson. Price 1.50. Fuller's Grape Culturist. Price \$1.50. Fuller's Small Fruit Culturist. Price \$1.50 (Premium for club of 10).

BOOKS ON HOUSEKEEPING.

**The Young Housekeeper's Friend.**—By Mrs. Cornelius. A very popular and reliable Household Guide and Cook Book. Price, \$1.50 (Premium for club of 10).

**Common Sense in the Household.**—A Manual of Practical Housewifery. By Marion Harland, author of "Alone," "Hidden Path," "Nemesis," &c. One of the finest volume's and aids to ladies' household management ever issued. Price, \$1.75 (Premium for club of 15).

**The Yankee Cook Book.**—A New System of Cookery. Containing hundreds of excellent receipts from actual experience in Cooking; also, full explanations in the art of carving. Price, 50 Cents (Premium for club of 4).

**How to Cook Potatoes, Apples, Eggs, and Fish, Four Hundred Different Ways.**—This work especially recommends itself to those who are often embarrassed for want of variety in dishes suitable for the breakfast-table, or on occasions where the necessity arises for preparing a meal at short notice. Price, 50 Cents (Premium for club of 4).

**The American Housewife and Kitchen Directory.**—Contains 378 recipes for cooking all sorts of American dishes in the most economical manner; also, contains a great variety of important secrets for washing, cleaning, scouring, and extracting grease, paint, stains, and iron-mould from cloth, muslin, and linen. Price 50 Cents (Premium for club of 5).

**How to Cook and How to Carve.**—Giving plain and easily understood directions for preparing and cooking, with the greatest economy, every kind of dish, with complete instructions for serving the same. Price, 50 Cents (Premium for club of 4).

**Mrs. Crowen's American Ladies' Cookery Book.**—Containing over 1,200 original receipts for preparing and cooking Soups and Broths, Fish and Oysters, Clams, Muscles, and Scallops, Lobsters, Crabs, and Terrapins, Meats of all kinds, Poultry and Game, Eggs and Cheese, Vegetables and Salads, Sauces of all kinds, Fancy Desserts, Puddings, and Custards, Pies and Tarts, Bread and Biscuit, Rolls and Cakes, Preserves and Jellies, Pickles and Catsups, Potted Meats, &c., &c. Together with valuable and important hints on choosing and purchasing all kinds of Provisions, and preparing Ripe Fruits for Table, Bills of Fare for the relief of young housekeepers, Arrangement of the Table for every variety of dinner Parties, Etiquette of the Dinner Table, Cookery for Invalids, Carving Made Easy, &c., &c. The whole being a complete system of American Cookery. By Mrs. T. J. Crowen. Illustrated with several diagrams. Mrs. Crowen gives directions for making all sorts of economical dishes, baking all kinds of cakes and pies, manufacturing every variety of confectionery, preserving, pickling, &c., so plainly that the housekeeper of a week's standing can easily act upon her directions. All the receipts in this book have been carefully tried, and may be relied upon as the result of actual experience. 474 pages. Price, \$2.00 (Premium for club of 15).

**The American Home Cook Book.**—Containing several hundred excellent recipes. The whole based on many years' experience of an American housewife. Illustrated with engravings. All the recipes in this book are written from actual experiment in cooking. Price, 50 Cents. Premium for club of 5.

BOOKS OF GAMES AND AMUSEMENTS.

**What Shall We Do To-Night; or, Social Amusements for Evening Parties.**—This elegant book affords an almost inexhaustible fund of amusement for evening parties, social gatherings, and all festive occasions, for young gentlemen and ladies; including complete directions and text for performing Charades, Tableaux, Parlor Pantomimes, &c. It contains over 100 engravings, and 366 pages. Price, \$2.00 (Premium for club of 15, or 20 with extra copy of paper free).

**The American Home Book of In-Door Games and Recreations.**—Containing Amusements for Girls, Boys and Little Children, Musical Games, Forfeits, Games of Memory, Natural Magic, Solitaire Games, Holiday Games, House and Home Amusements, &c. 380 pages. Illustrated. Price, \$1.50 (Premium for club of 10, at \$1.30, or 15, with paper and chromo free).

**Social Charades and Parlor Operas.**—A book really needed, containing the favorite operettas of "College Ned," "Diamonds and Toads," and a List of Charades, Allegories, and Musical Pieces, never before published. Price, 75 Cents, postpaid (Premium for club of 6, at \$1.30).

**Home Arts for Young and Old.**—This little work is a Compendium of all the best known methods of making time pass profitably as well as pleasantly at home, and includes Flower Work, Wax Work, Needle Work, and general home ornamentation. Price, 75 Cents, postpaid. (Premium for club of 6).

COMPANION TO "SILVER THREADS AMONG THE GOLD."

# You are always Young to Me.

Words by GEO. COOPER.

SONG AND CHORUS.

Music by H. P. DANKS.

*Andante con moto.*

1. Yes, my love, we're grow-ing old,
2. Days may come, and days may go,
3. Down the hill of life we'll stray,

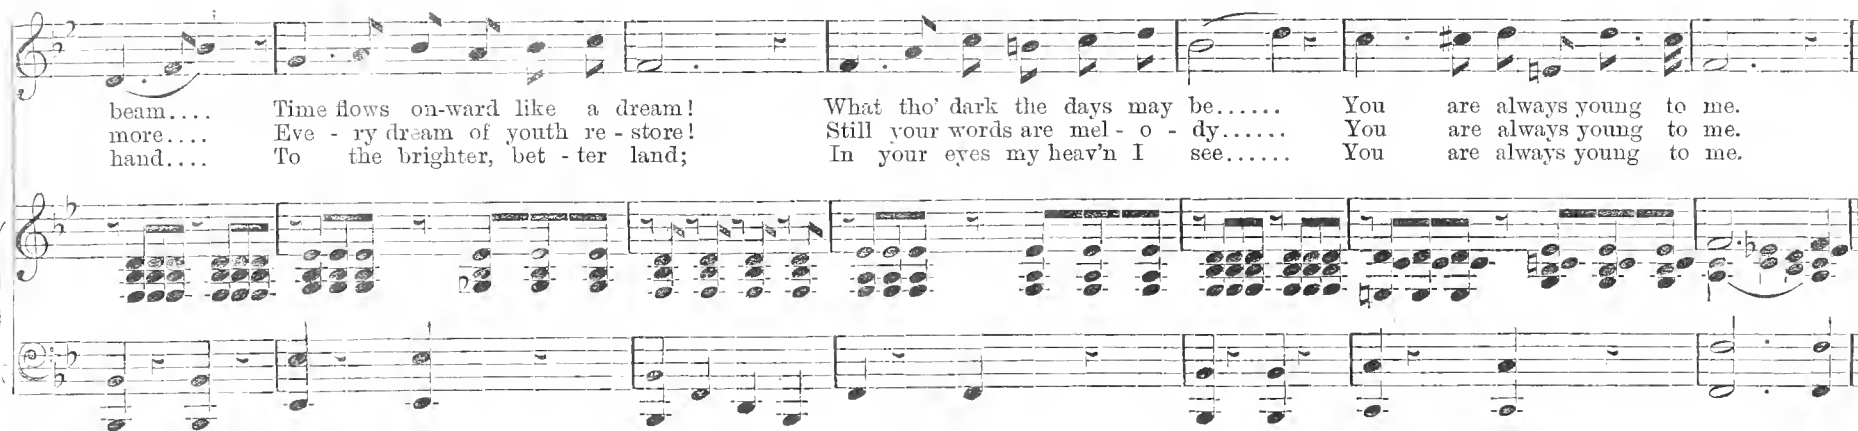

Sil - ver threads a - mong the  
But our hearts will fond - ly  
Soon will come the part - ing

gold;  
glow;  
day;  
Shine up - on our brows to - day,  
For the past we've no re - gret,  
O'er the riv - er dark and lone,

Life has lost its bloom-ing May!  
Since the hour when first we met;  
We shall meet a - gain, my own!

Still your eyes so fond - ly  
Lay your hand in mine once  
Still we jour - ney hand - in -

beam.... Time flows on-ward like a dream!  
more.... Eve - ry dream of youth re - store!  
hand.... To the brighter, bet - ter land;

What tho' dark the days may be.....  
Still your words are mel - o - dy.....  
In your eyes my heav'n I see.....

You are always young to me.  
You are always young to me.  
You are always young to me.

## CHORUS.

Yes, my love, we're grow - ing old,

Sil - - - - ver threads a-mong the gold,

Yes, my love, we're grow - ing old, we're grow-ing, grow-ing old,

Sil - ver threads a - mong the gold,

In our fad-ing locks we

In our fad - ing locks we see,

But you're al - ways young to me.

In our fad - ing locks we see, our fad - ing locks we see,

But you're al - ways young to me.

PRICE 12 CENTS.

## SKETCH OF A WINDOW GARDEN.

BY M. NEALL.

It is a spacious bay window, with a southern exposure. From a hanging basket over the entrance and on the floor at each side start the Ivies—English, German and Irish—their twining tracery forming a lovely border and rich relief work upon the panels. Directly underneath the rustic basket, on a flower stand, is a superb Calladium, with its peculiar and highly-ornamental foliage. A Calla is on either side, and under this green canopy an aquarium, with the merry fish, like gleams of gold, darting over the fringing mosses and marble sands. Groups of plants cluster all about it and extend along in front to the centre of the window. Here are Geraniums of all colors, Pelargoniums, Heliotropes, Roses, Lilies, and Carnations, and for oriental effect, a few French Poppies, which develop a somewhat gaudy and very showy flower. Achyranthus Lindenii form an elegant contrast in their ruby and green liveries. Of the three hundred and fifty species of the Begonia family, for a wonderful plant commend me to the Begonia rex, with its beautifully-marked and crimson leaves. Back of the flower-stand is the Wardian case, in which many of our native ferns and mosses vie with those of the florists, the Silver Leaf or the delicate tropical Maiden-hair. A limpid little stream at the bottom is spanned by a mossy arch formed of Scoria, with graceful festoons of the Moneywort growing in the clefts purposely made for it. Here are

climbing Ferns, curious Walking Leaves, Pitcher Plants, Scarlet Cup-Moss, and green frosted with

silver Moonworts and pearl Plantains. The chief convenience of this arrangement of plants is the entrance on each side of them to the window. Here are two small recesses, with two tiny tables in them; the one is used for a writing desk, and on the other is the last *Harper, Scribner's*, and the FLO-RAL CABINET. Overhead, in suspended vases, are blooming Lobelia flowers of blue, and pink, and star-eyed Oxalis. Between them, in a handsome bird-cage, swings the gayest and prettiest canary that ever trilled a carol. "Fun" is his name, and fun is his nature. Every day he waits by his little door till it is opened, and he comes out to make his afternoon calls. He will fly to my finger and talk to me in the drollest imaginable chirups, and then pour through his throbbing throat a flood-tide of entrancing melody. Birds lead a lonesome life if we do not always try to make them feel they are really one of the family. I must not forget my nook for garden favorites, which received not a little attention. Sweet Peas, Alyssum, Mignonette, etc., as well as numerous devices, I am continually trying for experiment. Very charming is the result if, for instance, you tie a bit of muslin over a tumbler, depressing in the centre till it touches the water, and dropping seeds thereon. The dainty Violets and sprouting leaves form a beautiful study. Here one can read or write in the odorous atmosphere or regale the senses as in summer with the perfume and beauty of the many lovely flowers.

PALM FOR GARDEN DECORATION.

## Floral Contributions.

## RANDOM THOUGHTS.

Goethe says—

"Happy the man who hath escaped the town,  
Him did an angel bless when he was born."

To the devotee of country life was this apostrophe addressed. And one of the most striking proofs of the progress of refinement in the United States is the rapid increase of love for the improvement and embellishment of our country homes. Men of business are now looking forward to the time when they may have a spot of earth all their own, which they may make beautiful by their love for rural homes. But all country homes are not beautiful. Yet, if there is a woman in it, I cannot understand why there is not at least a flower-garden on a small place in the yard, made lovely by the varied tints of our common annuals, that do not require much attention.

Who would be without a rose? It is the type of everything fair and lovely on earth. I think Leigh Hunt knew what he was saying when he wrote:

"Whatsoever of beauty yearns and yet reposes—  
Blush and bosom, and sweet breath,  
Took a shape in roses."

She is the queen of flowers; and there is no limit to the variety and beauty of the forms and colors which it assumes. If you want a vine to hide any defect you can get it from the rose—the wild rose, or, as we here call it, the "Queen of the Prairies," and "Baltimore Belle." These hardy climbers will grow well in any exposure. If you want something that is always sweetness and sunshine, plant you a few or many everblooming roses—they make a garden of themselves—for there are many of them. I have only three different kinds—and to do without them! money could not buy them, scarce as that indispensable is at this place.

Among the list, the most perpetual of all, the most lovely in form and color, and richest fragrance, is the Bourbon rose—(this branch of the family is not repudiated by Republicans). Of that family there are many, more than I am acquainted with, but ask Uncle Vick; he can give you the full nomenclature of that illustrious family, also of the Remountantes, but these can't be depended upon for a constant supply of flowers. Be sure if you have but a small collection to have the Old Red Moss, still at the head of all beautiful roses, and its lovely sister—the Crested Moss. We love roses, and could keep singing of their beauty; but there are also other plants far more rich and vivid, such as bright Lilies and gay Tiger flowers, lovely Dahlias, &c.

And there are others—the Violets, sweet, modest flower, and Jessamines—and with us the lovely Cape Jessamine, all filled with "more passionate sighs of sweetness" than the rose; and all easy of culture. If you once get them to take root they are there always to repay you for your trouble. If you want something to be a thing of beauty at all times, a foliage of rich and glossy green when all things have dropped their summer dress and prepared to meet the snow king, then get you a Laurel, Magnolia, Sweet Bay or Norway Spruce—our woods furnish many lovely evergreens—and let me beg my sisters, if your home is not surrounded with them, get to work and keep humming the same tune "plant me some evergreens," and you will get them, if it is only to hear the tune turned to something else; and while you are nursing your window sweets, your home will have a

warm look outside. If I could have but one or two flowers (annuals) I would certainly have the Petunias and Zinnias. What improvements have been made by florists in these common plants! I said to a friend when walking through her garden, "Where are your Dahlias?" "Who would be bothered with the care of roots when they can be so well imitated with these Zinnias; they rival them in brilliancy of color, and are so double that their petals, in curling back, form almost a round ball, and are in continual bloom from May till killed with frost."

For several years I have been trying to get a variety of bulbs, but have failed; being an invalid I can't get out much. When we moved to this place I tried to get some seed, but not from a neighbor could I get so much as a Prince Feather or Bachelor Button, nothing in the way of seedlings—some had shrubbery—now almost every yard has more or less flowers, and some are real beauties; so much for the determination of one. One of my greatest pleasures is the music of the humming bird as it gathers its breakfast from the dewy Honeysuckle and Morning Glory Vines that hang in festoons around my porch; the dear little ruby-breasted beauties, how I love them. If your neighbors have no flowers, give them some seed; send them a bouquet with dew-drops hanging heavy as emeralds upon leaf and bud; let the soft, rich colors delight the eye with their lovely hues, and the rose odor which every one feels has lost nothing of divine sweetness since its first bloom in the garden of Eden, and if she is a true woman she will never rest till she can gather flowers her own hands have planted, and you will do more good than if you follow the teachings of every woman's rights woman on earth. You will be in your own true place—a lover of all things beautiful.

S. B.

## FERNS.

"Where the copsewood is the greenest,  
Where the fountain glistens sheenest,  
Where the morning dew lies longest,  
There the Lady Fern grows strongest."

One can do so many things with so little trouble if one only knows how. Once in a while they do stumble on discoveries without really knowing how they do it. That was the way with our Ferns; first we thought of one way of doing them, then, almost before we knew, we had thought and been told of more than a dozen ways of arranging these most beautiful and delicate of plants.

Several of our windows are adorned with plates, cups and saucers filled with moss and Ferns in a state of luxuriant growth and beauty. One great recommendation is that they will grow in a place which is too shady for anything else.

The early months of spring are the best time for collecting them, and a basket and trowel all the tools needed; the less distance they have to be carried before planting the better. Flat dishes are the best, and if ornamented by a crack, which would exclude them from table service, so much the better. Put the Ferns, with as much of the dirt adhering to them as possible, in groups, and cover over the entire surface of the dish with moss. Give them plenty of water and not much sunshine, and the moss should always be wet, not merely damp. They ask no attention beyond the supply of water, and you will be surprised and delighted with the number of new Ferns constantly appearing.

A pretty ornament is a large oval platter with a smaller dish of the same shape set in the centre; in

the middle of the dish place a large group of the Ferns, and in the platter a row of them half way between the dish and the outer edge. Cover over with moss so that the dish does not show, giving it the appearance of a mound. One similar, but on a smaller scale, may be made of a cup and soup plate.

We have in our mind's eye a thing of beauty, which we hope will be a joy all next summer. On the outside of one of our north windows, and even with the sill, we intend to fix a box as long as the window, and twelve inches wide, made firm by supports to the ground. Up these supports at each end Madeira Vines are to be trained, and let run up each side of the window as far as they will. All around the edge we will plant scarlet-flowered Tropaeolums, which will fall over the edge in green wreaths and scarlet flowers, reaching to the ground; in the centre of the box, as many Ferns of as many different kinds as we can find room for.

We have got into the habit of carrying with us, in our rambles in the woods, a book for the capture of any specimens we may come across. Patent Office Reports are about the right size; not too large to carry, yet large enough to accommodate almost any Fern. We found it much the best plan to have a book with us and place the Ferns right for pressing, as we gathered them, for if we waited till we got home many of them were withered and worthless, and often we would be too tired to attend to them properly, while the other way there was nothing to do when we got home but to put the book away to press. We like pressing better than ironing, though the latter has often been recommended. The pressed ones look just as well, and do not take one-fifth the time nor patience. For winter decoration nothing can excel pressed Ferns mixed in with bright colored autumn leaves, also pressed.

In one corner of our parlor on a bracket is a miniature bust, and over it a wreath, or half wreath, made by cutting out of stiff paper a crescent-shaped piece; at each end is placed a gracefully curved Fern, and the rest covered with bright leaves and Ferns mixed so that none of the paper is visible; it is put at-cornered on the wall just above the bust, and fastened by little strips of paper, which, if carefully done, will not show.

The long stretch of picture cords can be improved by carefully sewing pressed Ferns along them with a black thread; the Ferns will have the appearance of a drooping vine. Finish off at the top by fastening to the nail from which the picture hangs a cluster of bright leaves and Ferns. You can have no idea till you have tried how pretty the effect will be.

Ferns are made still more beautiful by bleaching, though many are lost in the operation. One cup full of chloride of lime to a half gallon of soft water gives about the strength necessary. Put in a jar, stems first, and let them remain till they are perfectly white, which will be from a few days to a week. A glass jar is the best, as you can see which ones are bleached without disturbing the others. When white, take out and put between the leaves of a book till ready to use.

We intend to make ours into a phantom bouquet, framed in a deep frame, with a background of crimson velvet.

No doubt there are many other ways yet unthought of for arranging Ferns so as to bring out their full beauty. I only suggest a few. Whoever tries them will be more than paid for their labor.

JOAN SAINT PIERRE.

## Gossip with Correspondents.

**Growing from Seeds.**—I noticed in the March number a little girl's inquiry as to growing seeds. I will give her my plan, which never fails me. I take a box some two or three inches deep, and as large in other dimensions as I want. I fill this in the fall, before freezing weather, with about equal proportions of garden soil, sand, and well-rotted manure well baked in a hot oven; (this to kill any insects or seeds of weeds. I put this box away in the cellar until about the middle of March—(early enough in our latitude.) I then bring it up into the sitting room, or any room which is kept warm all the time; I thoroughly warm and pulverize the soil, leaving no lumps in it whatever; I take out a part of the soil for covering the seeds, I then smooth the surface perfectly smooth. When it is ready for the seeds, if I have a new variety of seeds and would not know how the plants would look, I make dimensions in the box giving the names. Having the soil prepared, I scatter the seeds on the surface in their respective places. I then sprinkle them very lightly with the soil I reserved for this. Don't put on too much; better not put enough on than too much. After putting the soil on, I take a piece of flannel large enough, when folded two or three times, to cover the box; I put this on the soil smoothly, covering it entirely; I then take water just as hot as I can bear my hand in and thoroughly saturate the cloth and sufficiently dampen the soil beneath; you can tell this by lifting one corner. Some of the seeds may not be entirely covered, but it don't matter. This cloth must be kept on until the tiny flowers begin to burst the ground, then they must be taken to the sunny window and given all the sun they can have. I keep my box covered with glass after removing the cloth. After I plant my seeds, in this way, I keep them behind the stove in the warmest place I can find, wetting the cloth if the soil begins to look dry. The ends will generally be coming through the ground within a week. I have several kinds of plants growing now from seeds started in that way.

Mervin, Ind.

MAGGIE.

**Justicia.**—Can you give me any information in regard to the Justicia, what kind of soil, temperature and treatment is most favorable? Also, the Farfugium Grande. Should the leaves be large, does it bear a blossom, and require a high or low temperature? Mine shows up one leaf after another, but they are small and delicate and die off, or wilt away gradually, perhaps, like the Geranium, it flourishes best in confined quarters. I have been trying the hot water treatment on several different kinds of plants. I find that the Fuchsia likes it (I frequently give them tea) and thrives well on it. The Geraniums can hardly make up their minds whether they like it or not, and the Begonias disapprove of it decidedly. A mulch of tea leaves seems to keep the Fuchsia feeling moist and comfortable, but all of them turn up their noses at a little bone dust which I ventured to dig into the soil of the pots. The Begonias have all dropped their leaves (except the white one with large, thick leaves, of which I do not know the name,) and look woe-begone and discouraged. The room in which they are kept is warmed by a heater on the floor below, and in all but the most extreme cold weather is warm enough to sit in comfortably, and the window upon which some of them stand, faces the southwest. The leaves of Tradescantia and German Ivy are very much smaller than they should be, though the plants themselves

look healthy enough. Vittata repens I have had several months, and though it seems bright and healthy, does not increase a particle in size, never having had more leaves on it, I believe, than the original ones. Is it of slower growth than the Zebrina, or does it require more elbow-room than a somewhat crowded wire basket affords? Can you tell me of a pink or red Rose that is a profuse bloomer and is certain to be hardy in this latitude a little north of Philadelphia? I have purchased various kinds, at different times, of Dreer, but though two have managed always to survive the winter, they bloom so scantily that I have ceased to care for them. By what name is the old-fashioned Cabbage Rose known now, or has it been, like many other good old-fashioned plants, entirely crowded out by newer but less deserving rivals? Will the Prairie Queen be hardy in this latitude, and what exposure is most favorable to it? I should very often like to ask questions and beg advice in times of perplexity, but as you must, of course, act upon the principle of first come first served, in your replies, and my turn always seems so far off in the distance, I cannot always have the heart to wait, though I fully appreciate the kindness and patience with which you answer the many questions asked, some of which are so trivial and so oft-repeated that they must certainly annoy you.

Upper Dublin, Pa.

MRS. W. J. TAYLOR.

**Answer.**—The Justicia will grow in any good soil. It requires a warm house in winter. Farfugium grande does best in a cool, shady place in summer, and a cold house in winter; the flower is not handsome. None of the Tea or China Roses would be quite hardy, but the hybrid perpetuals such as Jules Margotten are good and hardy. We expect the Cabbage Rose is not in the trade, but buyers will have their roses to flower all the year, and this blooms but once. Prairie Queen will grow in any aspect; it is perfectly hardy.

**Lily of the Valley.**—I have had a Lily of the Valley for six years, and have never had a bloom. Can you tell me how to make it bloom, or what is the matter?

MRS. A. J. HOF.

Millbrook, Ark.

**Answer.**—Plant the Lily of the Valley in rich, cool, shady soil, and it will most probably flower; it is quite hardy.

**Heliotrope.**—Why do the leaves of my Heliotrope turn black and fall off? Why do the leaves and blossoms on my scarlet Begonia drop off before they are half grown?

MRS. H. C. DUFFEE.

**Answer.**—Both the plants named drop their leaves from cold, and perhaps too much water.

**Questions.**—1. Please inform me if Water Lilies can be grown in the house—in Aquarium? 2. Can they be grown in a small pool in the yard, say 4 or 5 feet in diameter? 3. How deep should the water be in which they are to grow? 4. And where can roots be obtained?

MRS. M. F. HESTER.

**Answer.**—1st. No. 2d. Yes. 3d. Not less than two feet. 4th. From Mr. George Such, South Amboy, N. J.

**Smilax.**—When may I look for blossoms on my Smilax? and does it ever grow from cuttings? I have a very nice plant of this variety, obtained from a root last spring, and would like to know in regard to these.

Randolph, Ohio.

MISS CELIA HUTSON.

**Answer.**—The Smilax might be in flower now if large enough, the flowers are small so that they are very inconspicuous. It does not grow from cuttings.

**Rose.**—I would like to ask the readers of the Cabinet if they can tell me why a Rose will not bloom, or in other words, why the buds blight? I have one that was given me three years ago; the first year it had forty blossoms at one time, it was the most beautiful Rose I ever saw, such large flowers and so fragrant, a very bright pink, but since that time it has seldom bloomed, the buds start out but seem so compact they cannot open.

Ellsworth, Maine.

MRS. C. B. GRANT.

**Answer.**—Plant out the Rose in good rich soil and it will probably flower all right.

**Dutch Bulb.**—1. Will you please tell in the Cabinet if Dutch Bulbs and Hyacinths can be successfully grown in the garden until they multiply, and then grown successfully in the house, either in glasses or pots? 2. Also, if it would do to plant them early in the spring? 3. Also, how to grow fine French Gladiolus in the best manner?

Beamsville, Ont., Can.

J. C.

**Answer.**—1. Yes, for private use. 2. Plant in the fall. 3. Dig the ground deep and add some manure in the fall, and plant the Bulbs in April, from four to six inches deep.

**Cyclamens.**—I wrote before something in regard to Cyclamens, as a lady had quite a piece about them, I've had some, both pink and white, for some years and they do well with very little care. In H. H.'s "Bits of Travel," she says: they are called in Italy where they grow wild, Mad Violets, and she herself thinks them a good representative of a vicious horse with his ears thrown back, and I believe I agree with her. The white ones I think are the prettiest, but Mrs. F. N. B. of W. Hights, Ill. can get seed of pink if she wants. Some one else spoke of slugs troubling her rosebushes, I've used white hellebore, sprinkling it over my bushes when the leaves first come out, either when the dew is on them or first using a solution of the powder, syringing them, and then using the dry powder. I've not seen a slug for three years on any of the bushes. The rose-bugs are a nuisance, and as they pay no attention to washes or powders or anything but my fingers, I pick them off and burn them. In my little greenhouse I've not the books by me just now to refer to. I have a Saffron rosebush 5½ feet high, spreading out in a space of about two yards, and I've had roses all winter. Madeira Vines, I can't boast of big leaves, for I let my vine run in length, not to leaves. The root is in the greenhouse, starts its multitudinous branches, and as soon as warm I put the vines through a little door in a large window and let the vines run up the eaves spout to the top of the house. They just revel in the sunshine and spread out over the roof, (house two stories) and in the fall the spout is just one mass of blossoms from the top to the bottom. I believe I like the flowers better than large leaves.

**Lemon Tree.**—Please tell me how to treat my Lemon Trees? I have one a year old and another two years old, both look well. How shall I get them to bear, by budding or grafting? What time of the year is best? We have no florist nearer than fifteen miles from here, but if you think best, can send to them. Are Lemon Trees deciduous?

Neville, O.

MARY C. GALBREATH.

**Answer.**—Bud or graft them at any season. Lemon Trees are evergreen.

**Amaryllis.**—Where can I get an Amaryllis bulb, and what is the price?

Reily, Butler Co., O.

C. E. D.

**Answer.**—From Mr. Geo. Such, South Amboy, N. J., from 50 cents to \$3.

## Flower Gardening.

## DEMOCRACY IN THE GARDEN.

BY E. E. DICKINSON.

"Consider the lilies in the field." In these days of greenhouse pets and gorgeous exotics, how few there are who heed this injunction. We exult over our fine Geraniums and Verbenas; we vie with each other to obtain the greatest variety of Carnations and Pansies; we expend time and money upon Balsams the most double, and Asters the finest. But who thinks of cultivating the delicate Wood Violet, or the curious Wild Turnip? Who plants Cardinal flowers or Wake Robins? It is true that much has been said within the past few years concerning Wardian cases and ferneries, and that is well; but it is not of these that I would speak. I will take you a step farther and show you, if I can, my "beauty spot." I will hold up before your wondering eyes a picture of Lilies which shall constrain you to exclaim, "Even Solomon, in all his glory, was not arrayed like one of these." I have spoken of my beauty spot. It has, indeed, been a thing of beauty, and will be a joy forever. It was not a regulation rockery; it was not a fernery; it was not a grand Wardian case; it was simply a bit of the woods, fresh, green—beautiful description! I brought rich, black mould from the woods, mould so filled with seeds and sprouts, and Ferns, that it was like planting a little wood to place in the shady spot I had selected. I gathered old stumps, clumps of moss, knots from trees roughened by time and weather, hollow pieces of bark, decayed stones, covered with little red and brown lichens, and mossy stones. I cut down those curious growths which we sometimes see on tree trunks, nature's brackets, finished "to order." Everything that I could find to make the place look "wild and woodsy and lonesome." And how the plants did grow, to be sure! It is in its third year of glory now, and you would never know the place from the woods were you to see its wonders. I have taken up roots at all seasons of the year—spring, summer, autumn; yes, even in the dead of winter—and the dainty things have never known the difference. Lovely Woodbine covers the rough fence at the back of the place, and twines pretty wreaths around the posts. Lofty Ferns of many varieties wave their plumes in the breeze. Jack preaches his daily sermon from his unique pulpit, while blue, yellow and white Violets nod their unvarying approval from their low seats in the moss. Gill trails her vines over the ground, covering the unseemly places with her round leaves. Liverworts, pink and blue, peep out from their soft calyxes and make love to the pure blossoms of the Bloodroot. There are wonderful Orchids, and wild Lilies of the Valley; there are sweet blossoms of Arbutus in the spring, and splendid Cohosh berries in the fall, and the half I have not told you. Try for your own satisfaction, my friends, this woodsy gardening; you will be surprised

at the number of wild flowers that will grow at your bidding, beneath your very windows. Woo them with shade and moisture, study their habits, give them their native soil, and you will be richly rewarded. If you will do this, many a flower heretofore unknown to you, shall no longer "waste its sweetness on the desert air," but shall henceforth delight you with its rare beauty.

## WINTER FLOWERS IN GEORGIA.

I have a very pleasant home in a fertile valley, and among many flowers. During the winter months I keep my plants—Zonales, Bouvardias, Heliotropes, Cactus, Ivies, Nasturtiums, Smilax, Corals, Azaleas, Fuchsias, etc., etc.—in a large pit, four feet deep, with a glass cover facing the south, while the north and sides

among the many white rocks. It is near the entrance and is very ornamental. I must tell you of my Heliotropes. I have two, dark and light purple; they are two years old, about two and a half feet high, and can be appropriately styled perpetual bloomers, for I am rarely ever without a number of blossoms, and to me this delicate fragrant little plant is one of the sweetest gems we can cultivate. It grows luxuriantly in very rich leaf mould and cow manure, in a sunny situation. I think the older the plant the better the bloomer. My Nasturtium is one year old, and has been since the first of December one of the prettiest plants I ever saw, perfectly covered with its rich yellow and black blooms; it, too, is in leaf mould and cow manure. It came from seed, but can be propagated from cuttings. Double Pink Geraniums are now in full blast and very beautiful.

S. W. C.

## MY FLOWERS.

Last spring I procured a box that would hold half a bushel of soil, filled it with good rich soil, in the centre of which I placed a large gourd handle, pierced full of holes, for the purpose of watering in the centre. Around the edge of the box I planted Ground Ivy, filling in with a red and yellow Four o'clocks, Petunias Tropæolums and Cypress Vine. I then placed the box on a post five feet high, on the top of which was a round board which somewhat helped the square appearance of the box. At the base of the post I planted Morning Glories and Madeira Vine. Carefully watering and cultivating, I awaited the result. Soon the Ivy started earthward, while the Morning Glories and Madeira went in the opposite direction, and then they embraced and twined together in a lovely manner; but when the Madeira reached the top it gave signs of continuing its expedition elsewhere, so I gave it a string and sent it across to an adjoining building, where it run and raced and shot out in lovely festoons its little tassels of white for the play of the wind and the admiration of my flower-loving friends.

I remarked one day that I thought my Madeira had very large leaves, but did not think of measuring until I saw the statements of others, when, with rule and line, I set to work to take a careful measurement, and judge of my surprise when I found one measuring twenty-six inches. The soil was rich, water abundant, and the box and its

contents was a novelty to visitors, who wondered how I succeeded in getting the plants to grow so well. Now, while the cool winds of autumn whistle around, a Madeira drapes my window in living green, entwined with the graceful branches of the Manrandya and the pretty flowers of a winter-blooming Begonia.

INDI ANA.

**Plant for Name.**—Will you please tell me the name of the enclosed Lily, and if hardy? It was sent me for a house plant. It blossoms in August, and is sweet scented.

MRS. W. A. HORTON.

**Answer.**—The enclosed is the hardy Day Lily, or Funkia grandiflora.

DEUTZIA CRENATA: FL. PL.

are more securely protected from the weather. In there they have the benefit of the sun, and bloom beautifully. Often, when all without is snow and ice, I am in there, warm and comfortable, with my pets. The plants I desire to bloom first I place nearest the glass, then move back as they open. In summer I take them from their winter home and adorn the porches, rooms and windows. I am never troubled with the bug or lice, which I think is owing to the water which stands in the bottom of the pit; it rises there during heavy rains in winter. I made this season quite a neat, showy rockery, piling rich soil the height and width I fancied, and planting Colens, Cuphea, Lemon Verbena, Salvia, Flowering Verbena, Heart's-ease, Violets, Phlox, and other small plants,

## Ornamental Cottages.

### HOW TO LAY OUT COTTAGE GROUNDS.

The design for a cottage upon this page affords, in its description, a favorable opportunity to give some useful hints and suggestions regarding cottage grounds and ornamental planting.

The plans for the house, and even for laying out the foot-paths, walks, roads, etc., are necessarily the work of the architect, but the arrangement of the shrubbery, flowers, etc., are far better attended to by the proprietor himself, who can develop his taste, and add, leisurely, some tasteful touch, or some graceful outline, and fill in one after another choice shrubs and climbing vines.

This lot may be located either in the suburbs of the city, or in some country village of considerable population—facing the village green perhaps. It is at the intersection of two streets, and comprises between an eighth and a quarter of an acre, devoted to ornamental purposes alone, the kitchen garden and domestic offices being in the rear, and not included in the plan.

The dwelling stands back thirty feet from the street, on a slightly elevated spot, which slopes gradually away to the boundaries. A foot-path, five feet wide, starting from the front gate, passes the front entrance, and finally terminates in the open yard in the rear. This, with the carriage road, which leads from the side gate to the stable, is the only path we have introduced on the plan; nor is it desirable to traverse the whole lot by graveled walks, tending as they do to diminish its apparent size by bringing the boundaries nearer the eye, and involving a considerable outlay of money and time in making and keeping in order. It is, however, of great importance that what paths we do make should be made in a thorough manner at the outset. In order to have a perfect road, the soil, in the first place—after the curves have been marked and the lines run—should be excavated from eighteen inches to two feet deep, and all the loam taken away and spread upon some part of the garden; then this ditch should be about half filled with any small stones which may be picked up here and there about the place, and the whole filled up to the desired height with the best gravel that can be procured, taking care to make it a little higher in the centre than at the two sides—say a couple of inches in the five feet path—in order that the surface may better shed what water does not soak through into the drain, and finally, the whole may have a finishing coat of blue screened gravel, evenly spread, and well rolled, and with proper care we shall have, at all seasons, firm, dry and clean walks.

The foundation of the ornamental portion is smooth, green lawn, extending to the boundaries on either side, which are hidden by plantations of evergreens and shrubbery, with occasionally a deciduous tree introduced, to produce a variety and give character to the whole. They are mostly arranged in irregular clumps, connected together by other shrubs and evergreens, and planted with a view to obtain as great a diversity of outline as possible, and heavy masses of foliage and flowers, from spring to late in the fall. The clump on the right of the front gate is

composed principally of tall-growing shrubs and evergreens. In the corner is an American Mountain Ash, the color of whose red berries contrasts well with the heavy green of the two Norway Spruces, one on each side of it. Close to the path is a large, flowering Syringa, and in front some low, bright, flowering shrub, such as Rose Weigela, Double Tree Peony, or

underneath, heavy plants of the rose-colored Kalmia and Rhododendron.

In the centre of the lawn is a single specimen of the Larch, which will here have ample room to show its graceful form and light, airy foliage, to the best advantage.

Returning to the gate, we have on the left a Sugar Maple, and a Scarlet Flowered Hawthorn, surrounded by a white Persian Lilac, a Rose Weigela, a St. Peter's Wreath, and a Fragrant Currant. Beyond this, and close to the fence, is another specimen of the Scotch Larch, and a little beyond, a Maple or Tulip, or some other deciduous tree of graceful form. In the corner range, we might have first a Venetian Sunae or Fringe Tree—desirable on account of its brilliant yellow flowers—and near it one or two plants of the Persian Lilac, or white Mezereum. A Tulip tree, near the corner, forms the central point of this group, while beyond it, and along the side street, are a Syringa, a red Strawberry tree, a Catalpa and a mixed Althea, besides a couple of Evergreens and smaller shrubs to fill up the front. Next comes an area of lawn and flowers, with a view across, into the street, from the bay-window, and beyond this, extending to the carriage road, another group is made

up of a Larch, a broad-leaved Laburnum, a tall Silver Maple, Persian Lilacs, and a trimmed Arbor Vitae tree, with a Fragrant Currant and a Double Dwarf Almond in the foreground. On the opposite side of the road we have a Rose Weigela, a white Japan Quince, a tall Catalpa, and a couple of Evergreens. From this group an Arbor Vitae hedge extends to the pump, and will in a few years separate and partially hide the kitchen garden from the more ornamental portions. A tall Norway Spruce or a White Pine should be set where indicated on the curve of the road, as a reason for making the curve as prominent as we have.

If the buildings are already built, or their positions located, finish up the roads and paths, and as much of the lawn as possible; set the hedges, the larger trees, and the principal background shrubs. Let them get well started, and their forms and outlines in a measure determined, and then, by another spring, perhaps, set out the smaller foreground shrubs, so that they may fill up the space left between the others, and thus form, when fully grown, thick masses of foliage and flowers from the trees down to the grass. Flowers may be cultivated wherever a suitable place offers itself. We have marked the positions of a few of the principal beds. Around the house are four large beds of standard roses, which should be selected so as to offer a variety of color and a constant succession of flowers throughout the season, and in other spots are figures cut in the turf and filled with attractive flowers.

The house itself is an example of the simplest rural Gothic style. It is one and a half stories in height, and contains three finished rooms below and three chambers on the second floor.

This cottage is designed to be built of wood, covered in the vertical and batted manner, and finished inside and out with moldings of a simple Gothic pattern, and will cost from \$2,500 to \$4,000.

DESIGN FOR SUBURBAN COTTAGE.

Double Dwarf Almond, while farther back, near the fence, are a tall Purple Lilac and a Tartarian Honey-suckle. From this clump the range to the stable is as follows: A row of half a dozen evergreen trees of good size near the fence—two or three deciduous trees at convenient distances, and between, and forming the clumps, are Purple and White Lilacs, Altheas, Honey-

PLAN OF GROUNDS AND FIRST FLOOR.

suckles, Syringas, Hawthorns, and Laburnums, while the foreground is made up of specimens of the Spirea, Rose Weigela, Japan Quince, Pink Mezereum, and Fragrant Currant.

Near the corner of the stable is a group of three or four Evergreens, and between it and the corner of the dwelling house there is a clump made up of a couple of Firs, an American Mountain Ash, and in the shade

## Stories.

## THE EMPRESS JOSEPHINE.

There are but few events in history more full of pathos than the divorce of the Empress Josephine. The Emperor Napoleon I (the Great Emperor), weary of incessant wars, thought if he could form a marriage alliance with some one of the royal families of Europe he might put an end to these conflicts, and perpetuate the order of things established in France. For a long time he dreaded to speak upon the subject to Josephine. To Cambaceres, the Arch-Chancellor, he said:

"I will have nothing which can resemble a repudiation; nothing but a dissolution of the conjugal tie, founded on mutual consent; a consent itself founded on the interests of the empire. Josephine is to be provided with a palace in Paris, with a princely residence in the country, with a superb income, and is to occupy the first rank among the princesses, after the future Empress. I wish ever to keep her near me as my best and most affectionate friend."

Josephine became aware of her impending doom, and was overwhelmed with grief. At last the fatal hour came when the Emperor was to make the dreaded announcement to the Empress. It was at the Palace of Fontainebleau, the last day of November, 1809. Dark clouds obscured the sky, and a freezing, wintry wind moaned through the towers of the castle. The Emperor and Empress dined alone. Neither had the heart to speak a word. As the attendants retired at the close of the repast, at which it was said that neither could eat a mouthful, the Emperor, pale and trembling, took the hand of Josephine and said:

"My own dear Josephine, you know how I have loved you. It is to you alone that I owe the few moments of happiness I have known in the world. Josephine, my destiny is stronger than my will. My dearest affections must yield to the welfare of France."

The dreadful blow prostrated the Empress, and she fell fainting to the floor. The Count de Beaumont was called, and, by the aid of the Emperor, Josephine was borne, apparently lifeless, to her apartment.

Queen Hortense (her daughter) was summoned. She said reproachfully to the Emperor:

"My mother will descend from the throne as she ascended it, in obedience to your will. Her children, content to renounce grandeurs which have not made them happy, will gladly go and devote their lives to comforting the best and most affectionate of mothers."

The Emperor sat down and wept bitterly. Then, raising his eyes, flooded with tears, he said to Hortense, whom he loved with parental fondness:

"Do not leave me, Hortense. Stay by me with Eugene. Help me to console your mother, and render her calm, resigned, and even happy, in remaining my friend, while she ceases to be my wife."

Eugene (Josephine's son) soon came from Italy. He immediately repaired to his mother's apartments, and clasping her in his arms, they wept in mutual anguish. He then entered the cabinet of the Emperor, and recoiling from the cordial embrace with which the Emperor would have greeted him, said:

"Sire, permit me to withdraw from your service."

"What?" said the Emperor, sadly, and with deep emotion, "will you, my adopted son, forsake me?"

"Yes, sire," Eugene firmly replied. "The son of her who is no longer Empress cannot remain Viceroy of Italy. I will follow my mother into her retreat. She must now find her consolation in her children."

The Emperor was deeply moved. Tears filled his eyes.

"You know," said he, "the stern necessity which compels this measure. Will you forsake me? Who, then, should I have a son, the object of my desires and the preserver of my interests, who will watch over the child when I am absent? If I die, who will prove to him a father?"

They both then retired to the garden, and, arm in arm, for a long time walked up and down one of its avenues engaged in earnest conversation. The noble Josephine, with a mother's love, could not forget the interests of her children. She urged Eugene to remain faithful to the Emperor.

"The Emperor," she said, "is your benefactor, Eugene; your more than father. To him you are indebted for everything. To him, therefore, you owe boundless obedience."

A fortnight passed, and the day arrived for the consummation of this cruel sacrifice. It was the 15th of December. All the members of the imperial family were assembled in the grand saloon of the Tuileries. An extreme paleness overspread the face of the Emperor. In his brief address to the assembled dignitaries, he said:

"The political interests of my monarchy, and the wishes of my people, require that I should transmit to an heir, inheriting my love for the people, the throne on which Providence has placed me. It is this consideration alone which induces me to sacrifice the dearest affections of my heart; to consult only the good of my subjects, and to desire the dissolution of our marriage. God only knows how much such a determination has cost my heart. But there is no sacrifice too great for my courage when it is proved to be for the interests of France. Far from having any cause of complaint, I have nothing to say but in praise of the attachment and tenderness of my beloved wife. She has embellished fifteen years of my life, and the remembrance of them will be forever engraven on my heart. Let her never doubt my affection, or regard me but as her best and dearest friend."

Josephine then endeavored to read her consent to the divorce. But tears blinded her eyes and sobbings choked her voice. Sinking into a chair, and handing the paper to M. Reynaud, she buried her face in her handkerchief. He read a paper containing the following statements: "I respond to all the sentiments of the Emperor in consenting to the dissolution of a marriage which is now an obstacle to the happiness of France by depriving it of the blessing of being one day governed by the descendants of that great man who was evidently raised up by Providence to efface the evils of a terrible revolution, and to restore the altar, the throne, and the social order. But the dissolution of my marriage will, in no respect, change the sentiments of my heart. The Emperor will ever find in me his best friend. I know how much this act, commanded by policy and exalted interests, has rent his heart. But we both glory in the sacrifices we make for the good of the country."

Napoleon then embraced Josephine and led her, almost fainting, to her apartment, where he left her alone with her children. The next day the Senate met to sanction the divorce. The Emperor, careworn and pale as a statue, leaned against a pillar. A low hum of mournful voices alone disturbed the gloomy silence of the room. There was a table in the center of the apartment, on which there was a writing apparatus of gold. Josephine entered, leaning upon the arm of Hortense. Her face was as pale as the muslin dress she wore. Her daughter, not possessing the fortitude of the mother, was sobbing aloud. The whole assembly rose. Tears blinded nearly all eyes.

Josephine sat down, and, leaning her pallid forehead upon her hand, listened to the reading of the act of separation. Eugene and Hortense stood by the side of their mother, the daughter weeping convulsively.

Josephine, as the reading was finished, for a moment pressed her handkerchief to her eyes, and then, rising, in clear but tremulous tones, pronounced the oath of acceptance. She then sat down, and taking the pen, signed the deed which sundered the dearest ties which can be formed on earth.

Eugene fell fainting to the floor. His inanimate form was borne out of the room by the attendants. Josephine retired with her daughter. Night came. The Emperor, utterly wretched, had just placed himself in the bed from which he had ejected his faithful wife, when the door was slowly opened and Josephine tremblingly entered.

Her eyes were swollen and her hair and dress disordered. She seemed scarcely conscious of what she was doing, as with hesitating, tottering steps she approached the bed. Then in a delirium of grief, all the pent-up love of her heart burst forth, and she threw herself on the bed, clasped the neck of the Emperor in her arms and exclaimed, "My husband! my husband!" while sobbing as though her heart would break.

Napoleon also wept convulsively. He folded Josephine in his arms, and assured her of his undying love. For some time they remained in each other's embrace, while mutual words of tenderness were exchanged. The *valet-de-chambre*, who thus far had been present, was dismissed, and for an hour the Emperor and Empress continued in this their last private interview. Josephine then parted forever from the husband whom she had so long and tenderly loved. They remained the best of friends until the death of the Empress. And one of the last words of the Emperor, as he was dying at St. Helena, was "Josephine."

## SMALL TALK.

Never abuse small talk; nobody does unless he be a stranger to its conveniences. Small talk is the small change of life; there is no getting on without it. There are times when 'tis folly to be wise; when a little nonsense is very palatable, and when gravity and sedateness ought to be kicked down stairs. A philosopher cuts a poor figure in the ball-room unless he leaves his wisdom at home. Metaphysics is as intrusive in the midst of agreeable prattle as a death's head on a festal board. We have met with men who were too lofty for small talk. They would never condescend to play with a ribbon or flirt a fan. They were above such trifling; in other words, they were above making themselves agreeable, above pleasing, and above being pleased. They were all wisdom, all gravity, and all tediousness, which they bestowed upon company with more than Dogberry's generosity. A man who cannot talk has no more business in society than a statue. The world is made up of trifles; and he who can trifle elegantly and gracefully is a valuable acquisition to mankind. He is a Corinthian column in the fabric of society.

**Conversation.**—A Celebrated author says: If I were to choose the people with whom I would spend my hours of conversation, they should be certainly such as labored no farther than to make themselves readily and clearly apprehended, and would have patience and curiosity to understand me. To have good sense, and ability to express it, are the most essential and necessary qualities in companions. When thoughts rise in us fit to utter among familiar friends, there needs but little care in clothing them."

75 cents six months, with choice of one chromo.  
65 cents six months, without chromo.  
To club of ten, an extra copy of paper with one engraving or chromo free to agent.  
These terms include all charges—mounting and mailing, also postage on paper for one year.

### Back Volumes.

\$1 25 for volume of 1874, unbound.  
2 50 " " bound in cloth, and mailed.  
1 00 " cover to vol. 1874, mailed, postage paid.  
1 50 " portable binder and music portfolio, mailed, postage paid.  
1 00 " volume of 1873, unbound.  
50 " numbers July to Dec., 1872, unbound.  
No numbers for sale previous to July, 1872.  
No volumes bound previous to 1874.

**Terms for Chromos, Agents' Outfits, &c.**  
50 cents for agents' outfit of paper, chromos, etc.  
25 " " " " and 1 chromo.  
25 " " " " and engraving.  
Terms to canvassers sent on receipt of P. O. stamp. Agents wanted in every town.

### Caution.

All subscriptions paid to other parties than the publisher are at the risk of the sender. Subscribers should ask unknown agents to exhibit a certificate of authority, or deliver a publisher's receipt, or show a letter of recommendation from some well-known person in his town. Publisher is responsible for money only when it reaches him safely. Agents who are well known to their subscribers as reliable need no certificate or receipts.

### Remitting Money.

Money may be safely remitted to publisher by P. O. Money Order, Registered Letter, Express, Bank Draft on New York. No checks on local banks accepted. All charges for sending money must be prepaid.

### Expiration of Subscription.

All subscriptions expire with December number, unless printed label on each paper contains a figure (39 to 48) which signifies their subscription is paid only to the paper with that number. The letters on labels (A, B, C, &c.) denote publisher's mark for date of payment of subscriptions.

### Missing Copies

These are always supplied by publisher when notified by receipt of postal card. As the labels often slip off while passing through the mails, yet paper reaches the post-office, subscribers will ask P. M. of the fact before addressing publisher.

Newsdealers will furnish CABINET regularly, and receive payments monthly or at convenience of reader.

Trade supplied by American News Co.

Price, 25 cents, postpaid.  
A. M. PURDY, Rochester, N. Y.

NEW YORK, OCTOBER, 1875.

## ILLUSTRATIONS OF THE MONTH.

The illustration given on the first page represents a Garden Decoration of a Palm, surrounded with two basins, one large and one small, filled with earth, out of which are growing ferns, flowers and ornamental plants. This variety of Palm (*Latania borbonica*), is becoming exceedingly popular for display on the lawn in summer, as also in vases, or in windows, or in conservatories, during the cold months. Its long foliage, broad branches and rich tropical appearance are unexcelled by any Palms for this latitude for in-door or out-door ornamental use.

Upon page 148 is figured a bouquet of the flowers and spray of the *Deutzia crenata flore pleno*, one of the most beautiful shrubs in cultivation. The flowers are double, pure white; the edge on the under side of each petal is slightly and delicately tinged with pink. The shrub is very hardy, and extremely beautiful in its habit of growth.

The Cottage, on page 149, is fully described.

Upon this page is a suggestive scene of one of our lady friends looking from a cottage window, admiring floral beauties and lawn verdure below. We have, doubtless, many such, with beautiful faces, beautiful homes and kindly hearts. We wish we could see them all, for we know every home has a happy welcome for us.

Page 153 introduces one of those bewitching little family cherubs, who persists in getting into all sorts of mischief, and cannot keep its hands off

the sweet things in the dining-room cupboard. She knows she is wrong, but how she enjoys it.

Page 156 has an illustration of a key rack, ornamented with cones. The foundation is first made by cutting out a pattern in pasteboard. This is covered with cone work, leaving a space for the board that contains the hooks, which is about four-fifths of an inch wide, and ten and two-fifth inches long. The board may be made by any carpenter, and is furnished with brass hooks. A wire nail, bent over at the back, suffices to fasten it to the cardboard back. A brass ring at the top serves to hang the rack up, besides this, two cords each eleven inches long, meeting beneath a circle of pasteboard two inches in diameter, and covered with cone work, then secure the rack to the wall.

Upon page 156 is also figured a mat for lamps, hot dishes, &c. The materials consist of a piece of fine matting, green oil-cloth, green and brown twist silk, bronze beads of different shades, green chenille, &c. The foundation of the mat, which may be made round or oval, and of the most various sizes, consists of a piece of fine matting stretched over cardboard. The wreath consists of oak leaves cut in various sizes of green oil-cloth, and of acorn twigs made of bronze beads, taking black beads for the darkest and gold beads for the lightest shade. The leaves cut in various sizes are button-hole stitched at the edges, some with brown some with green silk, and have veins of the same silk; however, the green should predominate. The acorns are made of batting and crinoline, and covered with orange beads. The stems are wound about with green silk, and decorated with green tendrils of wire chenille, two shades of green. Such tendrils may, as the engraving shows, be placed here and there among the wreath.

WAITING.

## PUBLISHER'S ANNOUNCEMENTS.

**New Premiums Ready.**—Our new Premiums for 1876 are now ready and can be obtained by all agents and club agents who wish to canvass for THE CABINET the coming season. Prices to agents as follows:

Steel Plate Engraving, "The Rustic Wreath," - \$0 25  
New Chromo, "Autumn Leaves," - 25  
Chromo, "Gems of the Flower Garden," - 25

**Steel Plate Engraving, "The Rustic Wreath."**—To every subscriber of THE FLORAL CABINET for 1876 is given our new art premium, "The Rustic Wreath." This is a first class steel plate engraving, engraved specially for us from a splendid painting worth over \$5,000. This engraving is one of superior merit, representing a beautiful mother and child playing in a grassy field, the child is laughing with glee as the mother twines around its hat a rustic wreath of flowers, grasses, &c. In the distance is an old farm house, and beyond, the village church just peeping out of the trees. We submitted a proof of the engraving to one of the first art publishers of the city, who candidly declared it one of the prettiest subjects of the day, and if the edition was sold wholly at private sale it would readily bring \$2 per copy. This engraving will appear as a frontispiece to the CABINET, and every subscriber at \$1.30 will be entitled to it.

We have discontinued the gift of chromos at the price of \$1.30, and hereafter our yearly art premium will be a first class steel plate engraving, which we guarantee will be really artistic and alone worth the full price of the paper.

**Chromos.**—Those who desire chromos can remit \$1.50, which will entitle them to the paper one year, the engraving "Rustic Wreath," and one chromo additional. Our new chromo for 1876 is "Autumn Leaves," a small chromo, beautifully colored with the tints of autumn foliage, printed with black ground, varnished and mounted with mats of various colors. It is really a beauty, fully as desirable as any ever offered.

**Chromos for Sale.**—We have on hand a few chromos of the past year, which we will close out as follows to all who are now subscribers:

"My Window Garden," - Price, \$0 30  
"Gems of the Flower Garden," - 30

**Term of Trial Subscribers.**—We begin all three months trial subscribers with September or October, as we see fit, and do not permit any other months to be used for this purpose, nor any trial subscriptions to be renewed again. Any one sending us fifteen cents a second time will get the very same number she received before. Our trial offer is to get people acquainted with it. If paper is wanted any longer subscriber must pay regular prices.

**To Club Agents—New Terms.**—Our new terms to club agents are ready. All who expect to get up large clubs will do well to send for them. They are very liberal. Also, see new premium list.

**New Terms to Agents and Canvassers.**—These are now ready. All who wish to canvass on commission, and work up large lists of subscribers, will do well to send for them; also, agent's outfit of new engraving and chromo.

**No Price Less than \$1.30.**—We have no price less than \$1.30, either in clubs or otherwise; neither have we any price without engraving. This is part of the paper, a frontispiece, no volume is complete without it.

**Get up a Club of Trial Trip Subscribers.**—For club of ten trial trip subscribers, at 35c. each, we will give to club agent a choice of one of the following: A Paper Cutter and Folder; a box Initial Note Paper; a Book, "Every Woman her own Flower Gardener;" 1 Bulb Gladiolus, worth \$1; 1 box Decalcomanie; 1 Silk Book Mark, worth 75c; 1 Indelible Pencil. To each subscriber will be given the CABINET three months, and a copy of chromo, "My Window Garden."

## CASH PRIZES FOR ARTICLES.

—To encourage flower lovers, and also those who are interested in household topics to communicate their bits of knowledge, and also to reward them for special efforts, the publisher of the FLORAL CABINET offers the following prizes for the best articles submitted to us for special competition. Contributors will note the following

## REQUIREMENTS.

1. Each article must not be over six letter pages long, nor less than four.
2. All articles must be labelled "For Competition." Communications not so labelled are supposed to be for gratuitous publication, as we see fit.
3. All articles must be sent to this office by Nov. 1, and prizes will be announced in December number, the prize articles being published in January number.
4. Articles may be on any topic interesting to ladies—Flowers, Gardening, Window Gardening, Housekeeping, Fancy Work, Elegancies, Home Pets, Household Art, &c.
5. Articles sent for competition which do not draw prizes, and which contain no request to return to writer, we suppose are intended for contributions to be used at our convenience.

## CASH PRIZES.

1. For best article on Flowers or Window Gardening, - \$15
  2. For best article on Household Topics, 15
  3. 2d best article on each above topics, each 10
  4. 3d " " " " " 8
  5. Each of next five best, - 5
- All articles must be sent with letter postage fully prepaid; as far as possible write only on one side of the paper; avoid foolscap or small note paper, and choose large letter paper.

**Special Offer to Trial Trip Subscribers.**—To any trial trip subscriber, who has sent 15c. or 35c. for trial trip subscription for three months, who will send a club of five more subscriptions at 35c., the club agent shall receive a chromo free, "My Window Garden," and each of the club the same chromo also. Any one willing to form such a club may send 25c. for sample copy of the chromo, and then deduct cost from full club remittance after club has been raised.

Home Life.

SAVED BY GOOD COOKERY.

Careme was the most famous of French cooks, and many curious anecdotes are told of him. One day he was sauntering along the quays of Paris, dreaming of some new dish, when his attention was suddenly arrested by a middle-aged woman who was crying bitterly at the door of a wine-shop. Careme kindly asked:

"What is the matter, my good woman. Can I do anything for you?"

"Thank you, sir; but if I cry it is because no one can help me. My husband, who is a first rate silversmith, spends all he earns in that abominable tavern, and leaves me to starve with my two children."

"He is too fond of good fare, then?"

"Ah, if he were half as fond of his work, we'd be well off."

"Yet, although he is a man of taste, you condemn him to eat boiled beef every day."

"Eh? Who told you that?" asked the woman with a look of surprise.

"I guess it," replied Careme. "No man cares to go abroad for a bad meal if his wife can cook a good one. If you will listen to me, I'll teach you how you can keep your husband at home. Where do you live?"

"No. 33 Royal street."

"And what is your husband's name?"

"Wagner."

"Very well. Take these five francs, and purchase some charcoal. To-morrow morning you'll receive a basketful of provisions, lay them out in the kitchen and wait till I call, for I intend to do the cooking myself."

Next morning Careme paid the promised visit, and found the workman in bed.

"Sir," said he, "I have heard of your talent as a chaser, and I have brought you this silver cup, which requires to be repaired. Though the task is a difficult

bring me an apron. We'll begin with the woodcock."

Careme distinguished himself, and the meal was worthy of Talleyrand himself. Wagner, who was a real *gourmet*, had never tasted such fare.

"Why," he exclaimed, "Careme himself could not prepare a woodcock in better style!"

"Thank you for the compliment; I am Careme," replied the cook. "With your permission I'll come back this day week, and if my cup is ready, we'll try a wild duck. In the meantime your wife, to whom I have already given some good advice, will pay more attention to her culinary duties."

Careme, at his next visit, found his tankard admirably repaired. The wild duck was eaten and found more delicious than the woodcock. Madam Wagner quickly learned how to prepare more tempting food than boiled beef; her husband ceased to visit his favorite tavern and became an artist instead of a common workman.

One morning Careme received a box which contained a silver woodcock, admirably carved and bearing on its bill a small cup, with the following inscription:

"To Careme, from a friend who was saved by good cookery."

A sudden gust of wind took a parasol from the hand of its owner, and a lively Irishman dropping his hod of bricks caught the parachute. "Faith, ma'am," said he, "if you were as strong as you are handsome, it would not have got away from you." "Which shall I thank

you for first, the service or the compliment?" asked the lady smilingly. "Troth, ma'am," said Pat, again touching the place where once stood the brim of what was once a beaver, "that look of your beautiful eye thanked me for both."

IN MISCHIEF.

one, I know that I can safely entrust it to such an artist as you, and you can charge your own price. By the bye, I have invited myself to breakfast, as I want to show you that I too am an artist. Now, Madam Wagner, lead me into the kitchen, and

## Ladies' Boudoir.

## AH, LITTLE MAIDEN.

Ah, little maiden, frank and fair,  
With rosy lips apart,  
With sunbeams glinting in your hair,  
And sunbeams at your heart!  
Glad sounds about your senses rise,  
That have no voice for me;  
Blithe visions dance before your eyes,  
That mine may never see.  
And are the flowers so rare, love?  
And is the day so bright?  
For me the boughs are bare, love,  
And chill descends the night.

Ah, me! I mind me of a time,  
Deep in the buried past,  
When I, too, dwelt in the sweet clime  
Wherein your lot is cast;  
When fragrance floated on the breeze,  
When heaven bent blue above,  
And every wild bird in the trees  
Sang still of hope and love.  
Dead are those flowers so rare, love,  
And dimmed that day so bright,  
For me the boughs are bare, love,  
And chill descends the night.

Grim clouds came up, and overspread  
The heavens with sullen gray;  
The roses drooped, the fragrance fled,  
The breezes died away.  
And now, of all the happy throng,  
One bird is left alone,  
To sing a broken-hearted song  
Of joys forever flown.  
Dead are those flowers so rare, love,  
And dimmed that day so bright,  
For me the boughs are bare, love,  
And chill descends the night.

## HOME.

Housekeeping, in the generally accepted sense of the word, is home-keeping. And home is, or should be, the magnet toward which our hearts ever turn. It is a necessity of our civilized nature to have some abiding place. What a strange spectacle would be presented if our home-keepers were to fold their tents like the Arabs, and as silently steal away. How deeply must the author of "Home, Sweet Home," (himself a homeless man) have felt the meaning of the words he uttered. Although our homes may be "ever so humble," they need not necessarily be bare and unattractive. It should be not only our pleasure, but our duty, to make them as pleasant and inviting as is consistent with our circumstances. Housekeepers are no longer looked upon merely as drudges, who perform their whole duty if they prepare the regular meals, wash, scrub, and mend for their families. Many ingenious devices of the brain have been utilized for their benefit, so that whichever way they may turn there is something to lighten or expedite their tasks. And now may we not look for, and confidently expect, a higher plane of housekeeping, or home-keeping?

"A perfect woman, nobly planned,  
To warn, to comfort, to command,  
And yet a spirit, still and bright,  
With something of an angel light."

If every woman would endeavor to raise herself to this type of womanhood, then might every heart truly sing:

"The dearest spot of earth to me,  
Is Home, sweet Home."

There are too many homes where brightness and pleasantness seldom enter. There is always something to be done, too much remaining undone to think of pausing a little while to do any unnecessary "fixing up," or to brush down the mental cobwebs (which will oftentimes collect in the busy housewife's brain,) by devoting a few moments to reading. To such we would say: Read whenever you do have a spare moment, though it be scarcely sufficient to glance at a single article. You will have food for your thoughts as you busy yourself again about your household duties. Reading is, as it were, only the

cream. Unless we subject it to the churning process of thought, we can never expect it to develop into anything that will benefit ourselves or others.

Every woman knows best in what elements her home is wanting, and any one possessing ordinary intelligence can gather, from the multitude of articles written upon the subject, such suggestions as will best enable her to supply the want.

Who need sigh for anything prettier, with which to adorn their homes, than flowers? Who could ask or a beautiful gift to become theirs more freely or spontaneously? If we "look through Nature up to Nature's God," then, truly, are flowers educators as well as books, pictures, or music, and more truly beautiful and pure in their teachings. Then there are a thousand pretty and useful articles which skillful hands can fashion from almost nothing. Long curtains, looped at the window sides, do not, necessarily, belong only to them who can afford damask and lace. A cheap material, for humbler homes, costing but a few cents per yard, will last for a long time, and always come out the whiter and fresher for the repeated baths it may require. Loop them back, loosely, with bright ribbon; suspend a rustic basket containing vines midway in the window. Train the vines over the curtain, they are easily secured just where they are wanted. Try it. You cannot fail to appreciate the change from the stiff, rolled curtain and bare casings. Old boxes, tolerated only for their capacity of holding just what there seems to be no other place for, may be converted into pretty seats to place under windows, by making a cushion for the lid and covering the whole with some pretty material. Do not allow your walls to remain destitute of pictures because you cannot afford costly or showy frames. From the old magazines lying about, clip some of the pictures you like best, those which seem to have the most reading in them, for if there are "sermons in stones" are there not volumes in pictures? Leave a white margin all around your picture. Procure a glass of the same size and bind the two together with gilt, silver or fancy colored paper. Strings are easily added by pressing strips of cloth, wet in glue paste, over the ends. Be sure that your work is thoroughly safe and dry before you trust it upon the wall. Bind several and hang in a group, or about other pictures. Autumn leaves, nicely pressed and varnished and arranged in the form of wreaths, harps, or crosses, upon a white background, are tasteful ornaments to any home. Imitation coral baskets and baskets made of hoops, with the webbing left on, are very pretty. Tie the pieces in small circles, or in the form of the figure 8. After you have fastened them all together as you wish, tie on grape stems (minus the grapes.) Have ready a mass of melted beeswax, thickened with vermillion, and with a spoon turn it carefully over every part. If your treatment has been skillful, you cannot fail of being pleased.

One short article can, at most, contain but a few vague hints about our home surroundings. Yet "a word to the wise" may not be amiss. Only

"Make your home beautiful—gather the roses  
That hoard up the sunshine with exquisite art;  
Perchance they may pour, as your dread darkness closes,  
That soft summer sunshine down into your heart!  
If you can do so, O! make it an Eden  
Of beauty and gladness, remember 'tis wise:  
'Twill teach you to long for that home you are needing,  
That heaven of beauty beyond the blue skies."

\* \* \* \* \*

"Make home a hive, where all beautiful feelings  
Cluster like bees, and their honey-dew bring;  
Make it a temple of holy revealings,  
And love its bright angel with 'shadowy wing.'  
Then shall it be when afar on life's billow,  
Wherever your tempest-tossed children are flung,  
They will long for the shades of the home weeping willow,  
And sing the sweet song which their mother had sung."

**Cost of "Keeping Company."**—The cost of taking your girl to a ball in New York, according to Jennie June, is not at all a trifle. Supposing the young man to be possessed of the indispensable "dress" suit, the faultless shirt, the fine cambric, the French boots, there is sure to be the delicately-tinted cravat and kid gloves to provide, tickets to purchase, (for *ma belle's* mamma is, perhaps, a lady manager, and depends on selling a hundred dollars' worth at least, to the young gentlemen who dance with her daughters and eat her chicken salad), a bouquet to order, carriage to look out for, supper to pay for, (the latter for mamma, a cousin, a hungry friend, or something, as well as *ma belle* herself), so that, before he is through, the expenses of a single ball will foot up something like the following: Cravat, \$1.50; Gloves, \$2.50; tickets, (2), \$10; bouquet, \$5; supper, (3), including champagne, \$15; total, \$39. An item this, in a salary of \$1500 a year, or \$30 per week. This, too, is doing things on the very smallest possible scale, and at the risk of being considered "mean," for there are always unattended sisters, or some one spending the winter, who would like to be invited, and for whom must be executed the entire programme. Then, no unmarried lady is now content with one bouquet. Belleship is counted by the number of magnificent bouquets of English rose-buds and carnations it draws at its chariot wheels. Shall all the flowers be bestowed upon favorite singers, and none left to crown the queens of youth and beauty? By no means. Sharp young fellows who have learned tactics, therefore, are rather apt to fight shy of inviting young ladies to balls on their own account. They let papa or a chaperone take a couple of carriage loads, set them down inside the "Academy," and then they appear in a faultless get-up, present their bouquets, and come off with flying colors, for an extra bouquet will make amends for everything with the belle of a ball.

**Ladies Worth Marrying.**—"A few days ago, just at dusk, after a cold rain had set in, two English girls and their handsome gray-haired father arrived. They were cold and damp, and the hotel was cold and damp, and as we sat by our blazing fire and heard them go into their cold rooms, we pitied them so much that we opened our door and invited them to share our warmth and comfort; so they came in and chatted together all the evening. Those two bright, fresh-looking girls sat calmly in their chairs and told us they had crossed from Meiringen to the Rhone Glacier, over the Grimsel, on foot the day before, through a foot of snow; had walked nine miles down the valley that morning, and then climbed up all the way from Viesch to the hotel on foot in the rain that afternoon. We looked at them aghast, and murmured, 'Tired!' 'Oh, no,' they briskly chorused; and indeed they did look most revoltingly fresh and pretty. When we did appear in the morning, father (who always comes to breakfast from out of doors, with a blast of cold air, very much as if he had slept on the nearest glacier) announced that 'those English girls started to walk up to the summit of the Eggischhorn two hours ago, and are coming back in time to cross the Aletach glacier to go to the Belle Alp for the night! Before long they came in brisk and rosy as usual. 'Oh, no; not tired at all!—and without waiting for anything more than a lunch they were off again. We groaned in spirit as we saw them disappear around a promontory—*Hartford Times*."

**Precocious Boy** munching the fruit of the date tree: "Mamma, if I eat dates enough will I grow up to be an almanac?"

## Household Elegancies.

## WINTER GARDENS AND MOSS COTTAGES.

When I was a little girl in Vermont, more than thirty years ago, I loved flowers just as I do now. The dear old hills are dear and beautiful in this season, but winter comes early, and lingers long. I used to hunger and thirst for my favorites as the long months went by and the tardy footsteps of spring still lingered. At last I bethought of a solace, and made something I called a "winter garden."

I sought out flat stones, well covered with moss, and with these I covered the bottom of quite a large shallow box. Branches of evergreens served for trees, of ground-pine for shrubs. The beautiful scarlet wood-moss, found round old stumps and clusters of the pretty pearl-white wild everlastings, were grouped for flower beds, and the few shells and minerals I possessed were added, without the least idea that "rock work" would ever be so fashionable as it now is.

I hope every little flower-lover of the present day has something better than this for a winter solace; even my little four-year-old flower worshiper has her little plant of German Ivy, and loves it well, but we used to make moss cottages which I think were really pretty.

Older brothers, "handy with tools," were in great request when a "cottage" was to be built. A pine board was provided, rather larger than the top of a common, old-fashioned "light-stand." This was the "yard," and was surrounded with a neat fence, plain or ornamental picket, or of slats crossed obliquely, forming diamonds. Then a little cottage of suitable size was fastened firmly to the board, some in the middle, some at the back of the yard. Some cottages were plain, with steep, over-hanging roof, some gothic, with many gables.

Our part of the work now began. Coarse white thread was fastened in diamonds across the openings left for windows, and the house entirely covered with the fine gray moss so abundant there, glued on as evenly as possible. Some had panel-doors of two kinds of wood, some were covered with a different kind of moss, as the yellow moss on old apple trees. The yard was covered with green moss; a walk of shells or pebbles was laid from the door to the gate, and the yard decorated, according to fancy, with evergreens, moss-wood, &c.

If I ever find time to make one I think I shall try to make some additions to the plan. A doll, not too tall for the door, dressed like a cottage maiden, might stand by the gate. I should try to make a tiny bird's nest for one of the trees, and I've seen toy kittens which I should like to have basking in the sun on the door-step. A little "cottage-girl" in a swing, a miniature bird-cage, and even a mite of a hanging-basket might be possible. Of course the simplicity suitable to a cottage should be preserved in all parts of the work, but with the superior materials and facilities of the present day, I think something really beautiful might be produced.

MRS. FANNIE E. BRIGGS.

**Toilet Set.**—I give you a brief description of a toilet set, consisting of a pine cushion, hair, hair-pin and match-receiver. Make the pine cushion seven inches square; take canvas the same size, working it with

zephyr on cross stick, four stitches square, one white and one red alternately, until the whole is covered. Place a row of white glass bead trimming around the edge to complete it. For the hair-receiver, use perforated cardboard nine inches square; work with scarlet zephyr in squares of five holes, leaving a space between the same size, in which insert a long white bead; bind all around with scarlet worsted braid; join into a cornucopia; sew a piece of box-pleated worsted braid up the front and around the top, also a loop at the top; get a piece of gold-tinted paper, cut a smaller square and slip in for lining; one bunch of beads, which you can purchase at the store for eight cents, will fill the spaces and have enough left for a tassel on the bottom. For the hair-pin receiver, take a collar-box, without the cover, fill with hair, then take a piece of perforated cardboard the width of the box, and worked with scarlet zephyr and beads the same as the hair-receiver; then join together just tight enough to fit the box nicely; crochet the top with scarlet zephyr round and round in double stitch until you have a piece the size of the opening of the box; place a row of box-pleated scarlet worsted braid around the top and bottom, and it is completed. For the match-receiver, cut three pieces of perforated cardboard three and a half inches square; work a small vine around the edge of each, leaving one hole to join together with, then join in shape of a cornucopia; place the backs of the three together and join them together with a cord and tassel at the top and bottom, made of scarlet zephyr; cut a lining of gilt paper. This completes the set. These are very handsome and useful ornaments for a bedroom or chamber.

EDITH.

**Wax Fruit.**—Commencing with grapes, procure natural specimens, if convenient. For black Hamburg the materials necessary are rosin, lampblack, prepared wax, cotton, wire, carmine, Prussian blue and powdered verdigris. Take wire, cut as many pieces as there are grapes in the bunch, about three inches in length, bend one end slightly, bind on cotton batting, not too tightly. Take a small tin dish, put some lumps of rosin in this as free as possible from pulverized dust; place on a stove; when melted, put in sufficient lampblack to color. Do not heat too hot. In this dip lightly the wire on which you have wound the cotton, turning constantly to form proper shape. Repeat this process until they are of the required size. Then take one-quarter of a pound of white wax, one teaspoonful of Canada balsam and one-half table-spoonful of spirits turpentine; melt in a separate dish, and color with Prussian blue and a little carmine. Dip separately to form skin. Fasten on larger wire, cover stems with tissue paper or Berlin wool. Take powdered verdigris, tie in muslin bag, shake over them; leaves and tendrils to be added when put in baskets or frames. Plums are made in the same way. Dip and hold so as to form an elongated shape; take a blunt-pointed knife and press lightly to form seam; dust with Prussian blue and white lead.

POLLY POPKINS.

**The Phantom Basket.**—I have not been taking THE CABINET very long, but am delighted with what I have seen of it. I see in your April number you wish articles on fancy work. I have not seen the Phantom Basket spoken of in your columns, so I will give you a description of one. Material required, one and a half yards of bleached cotton flannel and thirty-two inches of heavy bonnet wire. Get the cheaper quality of cotton flannel, as it is easier frayed. Tear it in strips three-fourths of an inch in width (crosswise

of the goods), then ravel it out, leaving but four threads exactly in the centre. After you have all the strips frayed out in this way, take your wire and bend it square, then commence and fasten your strips all around it; put eight strips on each side (have it suspended some way that the strips will not become mussed). After they are all fastened at the top, commence at the bottom and *twist* each strip, then gather it up carefully in your hand and tie it about fourteen inches from the top, then cut it off four inches below from where it is tied that forms the tassel. That which is cut off can be neatly tacked together and used if needed. Now take a strip and tack it on one corner, then twist and tack it on the next corner, leaving the loop long enough to come almost to the tassel; take another strip, fasten it inside of that, leaving the loop a little shorter, and so on, making five of these loops. Fix all sides alike, then make little tassels and fasten on each corner. These baskets are really beautiful for the window or under a chandelier. The handles of the basket depends upon where you hang it as to its length. My basket hangs at the front window, and attracts the attention of passers-by. I often hear ladies outside the windows talking and wondering what it is made of, it is so pure white and fleecy looking. If you fix something in the inside of them they are beautiful for holding dried flowers.

MRS. B. F. H.

Baltimore, Md.

**Cements.**—I believe gypsum and oil very good; but, however, here are three descriptions of cement. **Universal Cement.**—Curdle skim milk, press out the whey, and dry the curd by a gentle heat, but as quickly as possible. When it has become quite dry, grind it to powder in a coffee or pepper mill, and mix it with one-tenth of its weight of finely powdered quick-lime, and a piece of camphor, the size of a pea, also reduced to powder, to every ounce of the mixture. Keep it in wide mouth one-ounce vials, well corked. For use, make it into a paste, with a little water, and apply it immediately. **Diamond Cement.**—Isinglass, one ounce; distilled vinegar, five and a half ounces, gum ammoniacum, half an ounce; gum mastic, half an ounce. Mix, and it is ready for use. **New Cement.**—A little ground borax, mixed with plaster of Paris, makes an excellent cement for many purposes. It is simply mixed up into a plastic consistency, then applied with a trowel. It soon hardens. Having used all three of these receipts, I can fearlessly assert they are good.

**Ferneries.**—Ferns have become household favorites; nor is this strange, as, beside their beauty, they are fine for household decoration, are easily grown, requiring little care when once established, and furnish an interesting study of plant growth. Four essential conditions are necessary in order that the culture of Fern plants may be successful, namely: abundance of water, shade, shelter, and drainage. The roots of the plants should always be well supplied with water, which should on no account be allowed to remain stagnant. The only soil should be the finest prepared loam. Previous to planting there should be some pieces of board or bark placed in the bottom to avoid bottom dryness, and not have the roots come in contact with zinc-lined boxes or pots of any description. The fernery should be slightly raised on blocks, from the table or stand, to give free circulation of air underneath. If mold or dampness appear, the glass should be removed or air admitted, as it indicates the existence of too much moisture and confined heat for success in the development of plant life.

## Household Elegancies.

## WINDOW DECORATIONS.

There are so many pretty things to be purchased that, if one has plenty of money, it is very easy to make a selection from the many well-filled baskets, stands, vases, etc., that almost any good florist will provide; but, if money is not plenty, there are few so poor that they can not buy one of those small round stands that can be bought for seventy-five cents or a dollar at any furniture store. Then, when the tinman comes around for the old rags, it is easy to procure one of those round hand basins, which, after being painted green and having two holes punched in the bottom, will be ready to fill. First, strew in a few bits of broken crockery, then mix two parts good garden soil, one part silver sand, and one part charcoal, powdered fine. This compost, when thoroughly mixed, is the best thing for young Ferns. Then plant whichever you can best procure. Among those that are very beautiful and easy of cultivation are the smaller varieties of Polypodium, Lycopodium, Maiden Hair, Lastrea, Davillia, Lygodium, and Woodwardia. When these are well started nothing can be more lovely. Then, if you can not afford new and handsome flower-pots and vases, take those that you have, that are unglazed, and convert them into very beautiful articles by coating with copal varnish first, into which has been worked the color desired, either chrome green, or vermilion; or, let the color be mixed with turpentine first, then varnish over; when varnish is almost dry, dust bronze powder over the whole, those painted with vermilion being a copper color, while those painted green will be a beautiful bronze.

There are numerous ways of making hanging baskets, all of them simple and handsome enough when completed and filled. The most popular way of making those rustic ones that are so much admired, being a change from the bowl covered with roots and branches, are the log cabin baskets, made by taking pieces of oak, maple, or other suitable wood, in lengths of eight or ten inches, and about an inch in diameter, boring a gimlet hole about an inch from the end of each stick, then building then up log cabin style, and passing with loop on upper end through the holes at each end or corner a wire, and bending it up on the bottom to secure; place a piece of board the required size in bottom, between third and second sticks, then fill with moss and ferns, and you have something worth having. Then the pressed ferns for vases, brackets, etc.; mosses, lichens, and creeping ferns are all beautiful.

There is a way of arranging acorns in bunches in their natural state that has a very pleasing effect; take the leaves of the oak, any of those handsome russet shades, and arrange around a bunch of acorns with caps all on, then add dry tendrils and mossy twigs, and place upon a bright blue or scarlet velvet back-ground, then frame, and you have a "thing of beauty." The beautiful wax autumn leaves are so

pretty and so durable that every one should have, at least, one spray to brighten up the room most used. The process is so simple and they are so inexpensive that any one can have them. For the benefit of those

to copy from, to imitate the most beautiful autumn leaves that so soon fade after being gathered.

I have made this article longer than the rules allow, and so cannot notice at any length those lovely fern mottoes and tidies, but will do so another time.

CABINET READER.

## WAX FLOWERS.

## CROSS AND AUTUMN LEAVES.

After forming the pure white cross and flowers, the next and easiest step will be a cross, ornamented with the gorgeous and beautiful autumn leaves. Many of these leaves must be colored by hand, in imitation of natural ones; others can be naturally and beautifully formed from the mottled and colored autumn wax, sold at the shops.

Having a cross of suitable size, paint it a very light stone color, also some rugged pieces of rock, varnish the whole with denar varnish, and while a little sticky, dust with the fine diamond powder. Place the cross upon a stand and group the stones around it; select various leaf moulds, as maple, sumac, oak, dogwood, ailanthus, apple, peach, etc., then form the leaves as nearly like nature as possible, and as formed lay carefully aside. Make the oak of russet brown, ivy leaves green, veined with blue or blue-white paint; make scarlet and purple berries by moulding

the wax in tiny balls of different sizes, and stems of wax, then clustering naturally.

Bright scarlet and yellow wax can be obtained with the autumn leaf, for certain of the leaves requiring these colors, and many can be formed of white wax and colored with shades of crimson, orange, etc.

Many green leaves are greatly improved by being touched upon parts with umber or raw sienna. Having formed sufficient leaves, group them around the vase of the cross, allowing some to form long trailing vines, to fall over the stones, and a vine of Ivy, with one of bright autumn tints intertwined, running up and around the body of the cross, across the arms and over the top in thick clusters and graceful sprays. Intermix the berries and you will have a most beautiful ornament. Protect with glass shade.

MRS. C. S. J.

**Rustic Ornaments.**—I make very pretty frames, comb cases and brackets by using pine and spruce cones, acorns, nuts, and burrs. Cut heavy cardboard in strips the width and size you wish your frames, or make them oval; pick the large ones apart, leaving the small ends two inches;

soak in warm water the cones picked apart, or they will split when sewing; sew them on your frame all around the out and inside, projecting over the edge far enough to hide the cardboard; if the frame is wide, two rows look better. Then use your ends of the cones, burrs, etc., for the corners and centres, arranging in clusters to suit the taste. Comb cases and brackets are pretty covered in nearly the same way, and varnishing adds greatly to their beauty.

St. Petersburg, Pa.

KEY RACK—CONE WORK.

that cannot procure the metal moulds I would say that paper patterns cut from the natural leaves are full as

MAT FOR LAMPS.

satisfactory, if one has a mould to mould or line them after they are painted. And if very bright scarlet ones are desired, the darkest yellow wax makes the most brilliant leaves, and I desire no better brush than my right forefinger to rub the bright carmine in with. A little practice will enable one, with nature

## Fireside Reading.

### PRETTY SPEECHES.

Caustic speeches are sure to draw, and the most amiable people, who would not themselves hurt their friends' feelings on any account, chuckle over them as much as others. Therefore they are continually chronicled; but pretty speeches lack the same pungency, and are passed by as insipid; yet there is a fine savor about some of them—that said by George the Fourth to the officer of marines, for example.

There was an empty bottle on the table, and the King told the servant to “take away that marine.”

A guest sitting next the King whispered in his ear that an officer present belonged to that branch of the service. George the Fourth ascertained his name, and then, addressing him aloud, asked if he knew why an empty bottle was called a marine.

“No, your Majesty,” replied the officer.

“Because,” said the King, “it has done its duty, and is ready to do it again.”

Which was as neat a way of getting out of a rather awkward phrase as one can well imagine.

Ladies, however, are the fair and proper recipients of pretty speeches, and a man who gets them is a sort of poacher.

The Duc de Nivernois made an ingenious one to Madame du Barri, who was endeavoring to persuade him to withdraw his opposition to some measure she had set her heart on.

“It is of no use, Monsieur le Duc,” she said; “you are only injuring your influence, for the King has made up his mind, and I have myself heard him say that he will never change.”

“Ah! madame, he was looking at you,” replied the Duke.

Could any but a Frenchman have ever conveyed determined resistance in so polite a form?

There was an ingenious amount of devotion implied in the remark of a love-sick millionaire, when the object of his affections became ecstatic over the beauty of the evening star.

“Oh! do not, do not praise it like that!” he cried; “I cannot get it for you.”

It was no wonder that Tom Moore was such a general favorite, if he often said such charming little things as he wrote. The very prettiest, quaintest quip ever penned is in one of his love-songs. The lover cannot deny that he has paid homage to others before he saw the present object of his affections; in fact, he learned lip-service very early:

“That lesson of sweet and enrapturing lore  
I have never forgot, I'll allow:  
I have had it *by rote* very often before,  
But never *by heart* until now.”

**Irish Wit.**—On one occasion the poet Moore—Tom Moore, of immortal memory—stayed one night in the house of Mrs. Blake, in a little village in Scotland. The lady troubled him all the evening to write for her an epitaph, and at length, to be relieved of her importunity, he wrote:

“Good Mrs. Blake, in royal state,  
Arrived at length at Heaven's gate—”

which he gave her, saying he would finish it in the morning. He quite forgot his promise, and was already in his carriage about to drive off, when she came to the door with the sheet of paper he had given her, demanding a performance of his promise. “Oh, yes,” said he, with a smile, “I'll finish it for you.” And he did so, by adding:

“But Peter met her with a club,  
And knocked her back to Beelzebub.”

**Bad Spelling.**—Frequently cases of bad spelling crop out among the professions, and some lamentable.

The proprietor of a country store once worked himself into a brain fever endeavoring to make intelligible the following note given to him by a small boy, the son of one of his customers: “mister Gream Wunt you let my boay hev a pare of Easy toad shuz?” However, he was probably not more horrified than the schoolmaster who received a letter from a man who wrote: “I have decided to inter my boy in your scull.”

**A Churchwarden's wife** went to church for the first time in her life when her husband was made churchwarden. Being late, the congregation were getting up from their knees when she entered, when she said, with a condescending smile, “Pray keep your seats, ladies and gentlemen; I think no more of myself than I did before.”

**A young lady**, at home from boarding-school for the holidays, was asked if she would have some roast beef, when she replied: “No, I thank you; gastronomical satiety admonishes me that I have arrived at the ultimate stage of deglutition consistent with dietetic integrity.” The young lady was never asked if she would have anything after that.

**A French butcher** who was on his death-bed said to his wife: “If I die, Francoise, you must marry our shop boy. He is a good young man, and the business cannot be carried on without a man to look after it.” “I have been thinking about that already,” she replied.

**Profane versus Sacred Music.**—Dominic Thomas Campbell, of Glasgow, was one day watching a carpenter making repairs in his house. The carpenter whistled “Maggie Sander” as he worked, and worked in time to the tune. “Sauners,” said the dominie, presently, “can ye no whistle a mair solemn and godly tune while ye'er at wark?” “Ah, well, minister, if it be your will I'll c'n not do it,” said Sauners, and changed the tune to the “Dead March in Saul,”

still planing in time to his music. The dominie looked on for some minutes in silence, and then said: “Sauners, I hae anither ward to say till ye. Did the gude-wife hire you by the day's wark or by the job?” “The day's wark was our agreeing, minister.” “Then, on the whole, Sauners, I think ye may just as weel gae back to whistling Bonnie Maggie Sander.”

**Grandma**, do you know why I can see up in the sky so far?” asked Charlie, a little four-year-old, of the venerable lady who sat on the garden seat knitting. “No, my dear, what is it?” said grandma, bending her eye eager to catch and remember the wise saying of the precious little pet. “Because there is nothing in the way,” replied the young philosopher, resuming the astronomical research, and grandma her knitting.

THE COMING EXPLOSION.

instances of weakness in this respect come to light among the “humanitarians.” For instance, a young lawyer in an interior city early one morning locked his office and left upon it this mysterious legend: “Gon to brexfus.” In a small New England town a druggist was surprised and disturbed to receive at the hands of a dirty-looking customer the following prescription: “Please give the bare sumphin to fizick him 15 cts. worth.” During the war a letter written by a rebel soldier to his sweetheart was captured, wherein the writer said: “We will lick the yanks tomorrer if godlemity spares our lives.” Some wonderful things in the way of directions appear on letters passing through the mails; for example, the letter directed to a Pittsburg judge, endorsed, “To the onerable gug.”

## Housekeeping.

## POETRY IN THE KITCHEN.

Do you say it is only prose, and very prosy, too, you who find your penitential among pots and kettles, bread-making, dish washing, and the thousand and one petty cares that crowd your days? But rhythms and rhymes may have their place even in the kitchen, if you know the art of making them. Pots and kettles may shine with a glory of their own, and your dishes may sing you a song while you wash them, if you will take the trouble to teach them how. And, first, be sure to make the room as bright and cheery as possible. Dark paper and dull surroundings will cause even a parlor to look dingy and uncomfortable. You are fortunate if your kitchen is sunny and boasts a number of windows, but if not, make it light with hangings and pictures. It is a mistake to suppose that in papering a kitchen, dark paper should be chosen; it will show the soil of dust and smoke much sooner than paper of a light shade. It is also more economical to purchase satin paper, since the dust slips off easily from the smooth surface. Beautiful pictures can be cut from papers and tacked against the walls, and albeit they have no frames, will do much to brighten the room. If you cannot have these everywhere, do not forget the kitchen in your distribution.

Every kitchen should have a pin-cushion—a pretty one, too—which can hang quietly in some corner, and give its help towards the lifting of skirts and sleeves in times of need.

Who will say there is not something pretty and quite poetical about washing dishes, when one has a bright pan for washing and rinsing, clean, hot water and plenty of good soap; when the sink can be kept sweet and unsullied by means of a small brush broom hung conveniently near at hand; when spiders and kettles can be agreeably cleansed with a ring dish cloth—blessings on the man who invented it, or was it a woman?—when cloth and towels are hung on a galvanized wire line, which will not rust; and when a general air of order and good management prevails in the cupboard? There should be also a large tunnel in the opening of the spout, which will save a too frequent use of the brush broom when moments are precious.

Plants are as fond of the kitchen as the library, and will beautify the room with their greenness and fragrance even if they have no blossoms. Happy are they who live in the country, for are there not the glorious woods? Put on your hat, take your basket and trowel, and come back laden with sturdy ferns, bright partridge berries and clumps of green moss. You can take up these wood darlings, even though they are fast asleep in their snowy beds; bring them into your warm kitchen and plant them in saucers and plates—anything that will hold them; give the dears enough to drink and they will make poetry for you all through the winter months. And what else shall you bring to your *sanctum sanctorum*? Do all this and other ways will suggest themselves to you; ways of making the kitchen one of the pleasantest, brightest, happiest rooms in the house. Let it be cosy; have a rocking chair or two, three or four books and a case for newspapers. Let it wear a homey look; make it pleasant with pictures, plants, conveniences, cleanliness and sunshine. Let us have such appointments in this hitherto prosy kitchen of ours, that it shall grow into a poem.

LUCY C. ORDWAY.

## TESTED RECIPES.

## RICE PLUM PUDDING.

One quart new or raised milk with the cream, one cupful seeded raisins, one cupful washed, dried currants, half cupful chipped dried citron, and lemon, (or orange peel, candied), one cupful rice, one cupful sugar, two eggs, one tablespoonful butter, a little salt, and one teaspoonful mixed spices, (cinnamon, nutmeg, and a small portion cloves). Burst the rice for two hours, keeping it on the stove in a little water for two hours, until soft, and each grain entire, then add the milk, the eggs beaten separately until light, sugar and butter, and lastly the spices and fruit. Stir carefully, so as not to break the grains, bake about three-quarters of an hour.

## SWEET POTATO PUDDING.

To two coffeecupful of mashed sweet potato, (boiled), add one teacupful sugar, one teacupful butter, four eggs, one teacupful sweet cream, one glass of brandy or strong wine, one teaspoonful cinnamon, one grated nutmeg, a teaspoonful lemon, (extract) and a pinch of soda, dissolved in a teaspoonful of water. Beat the eggs light, add sugar and butter rubbed to a cream, stir all together into the mashed potato while hot. Cover a deep plate with puff-paste, and pour in the mixture. Bake in a moderate oven; when done, cover the top with slices of fruit marmalade, and sprinkle thickly with granulated sugar. To be eaten with a glass of rich milk. This will make three puddings.

## CREAM CAKE.

*The Shells.*—Beat five eggs, yellow and white separately, add to the yolks one cupful of sugar, then the whites whisked until they “stand alone,” rub half a teaspoonful of soda into one teacupful of flour, beat this into the eggs and sugar, and add one full teaspoonful of cream of tartar, beat well, and divide into cakes by dropping a large tablespoonful upon a baking tin, not allowing the drops to touch each other, nor placed near enough to run together when heated. (“Gem pans” are best to bake them in, the flat circles instead of deep ones). Let the oven be quick, and when the cakes are a light brown, remove them and allow to cool a little, then split them open on one side and drop the cream in the hollow opening.

*The Cream is made as follows:*—Boil one pint of new milk, beat the yolks of two eggs and add half a teaspoonful of sugar, and enough of corn-starch to thicken, (about three even tablespoonfuls) stirred smooth in a little cold milk; add these to the milk also, the whites of the eggs, a teaspoonful extract of lemon, one also of extract of vanilla, beat well, and as soon as thick remove from the fire, allow to cool before placing in the puffs, pinching the parts together after filling. Paint over with white of egg and dust plentifully with powdered sugar.

## WASHINGTON PUDDING.

Two cupfuls white sugar, one cupful butter, one cupful sweet milk, three eggs, nutmeg and extract of lemon. Beat the eggs separately, add three teacupfuls of flour, in which a half teaspoonful of soda has been well rubbed, and a full teaspoonful of cream of tartar added (sifting after adding these). Bake in shallow pans or “jelly-cake pans.” Peel and grate two large juicy apples, and the zest of one lemon, also the strained juice, one heaping teacupful of fine sugar and one egg, boil in a stew pan, when cool spread over the cakes, placing one upon the other as with jelly cake; sift powdered sugar over the top, and serve with rich wine or lemon sauce.

## FRUIT PUDDING.

Two eggs, (whites and yolks beaten separately), one cupful of mixed sweetmeats, (left in jars or at table), table spoonful sweet butter rubbed in a cream, half a nutmeg, half a teaspoonful of cinnamon. Butter a baking dish and bake quickly. Serve with tart lemon sauce. This is a delicious pudding.

## WASH-DAY PUDDING.

One pint of flour, three eggs, one teacupful of pounded sugar, one cupful of milk, half a teaspoonful of soda, one teaspoonful cream of tartar, one full tablespoonful of butter, rub the soda through the flour, dissolve the cream of tartar in the milk and stir all together quickly, just before dinner is served; bake in a quick oven, and eat with sauce, either hard or soft. Baked in small tins or open pans, this forms nice tea cakes.

## GINGER PLUM CAKE PUDDING.

Two cupfuls of brown sugar mixed in two teaspoonfuls of dark molasses, (not syrup) two teacupfuls of butter, six eggs, six cupfuls of flour, one pound of raisins, one pound of dried currants, one lemon chopped fine, one teaspoonful ginger, one tablespoonful cinnamon, one tablespoonful nutmeg, clove and maise, (mixed), one cupful of brandy or wine; beat thoroughly for a half hour before adding the fruit, and finally add a half teaspoonful of soda and the same of cream of tartar, dissolving each in water. Serve hot, with wine sauce, (the fruit should be prepared the day previously. Bake in a slow oven for three hours.)

## BOILED CUP PUDDING.

Beat four eggs very light, (the whites until stiff), mix together one coffeecupful of flour, one coffeecupful of brown sugar, one coffeecupful of butter, one coffeecupful of raisins, one coffeecupful of currants, one coffeecupful of citron and candied lemon and orange peel, (mixed), one nutmeg, one teaspoonful cinnamon, one teaspoonful mixed spices, and any flavor desired. Pour into a well floured bag and boil four hours. Serve with sauce.

C. S. J.

## USEFUL HINTS.

**Frosted glass**, useful for screens, etc., is made by laying the sheets horizontally and covering them with a strong solution of sulphate of zinc. The salt crystallizes on drying.

**Butter** will remove tar spots. Soap and water will afterwards take out the grease stains.

**Black shoes** may be bronzed by a strong solution of aniline red in alcohol.

**Flaxseed** and tallow are used in Germany as a stuffing for cushions. One part of tallow to ten parts of flaxseed are employed, the mobility of the greased seed rendering the cushion very soft and pliable.

**Four parts** borax and three parts Epsom salts, mixed with three or four parts warm water to one part of the combined substances, is said to form an excellent fireproof wash for clothes. It should be used immediately after preparation.

**The total** number of strings in a piano, when properly stretched to produce the right tones, exert a pull of over ten tons; this explains why good pianos must be durably and heavily built.

**To prevent** moths in carpets, wash the floor before laying them with spirits of turpentine and benzine.

**Straw** matting should be washed with a cloth dampened in salt water. Indian meal sprinkled over it and thoroughly swept out will also cleanse it finely.

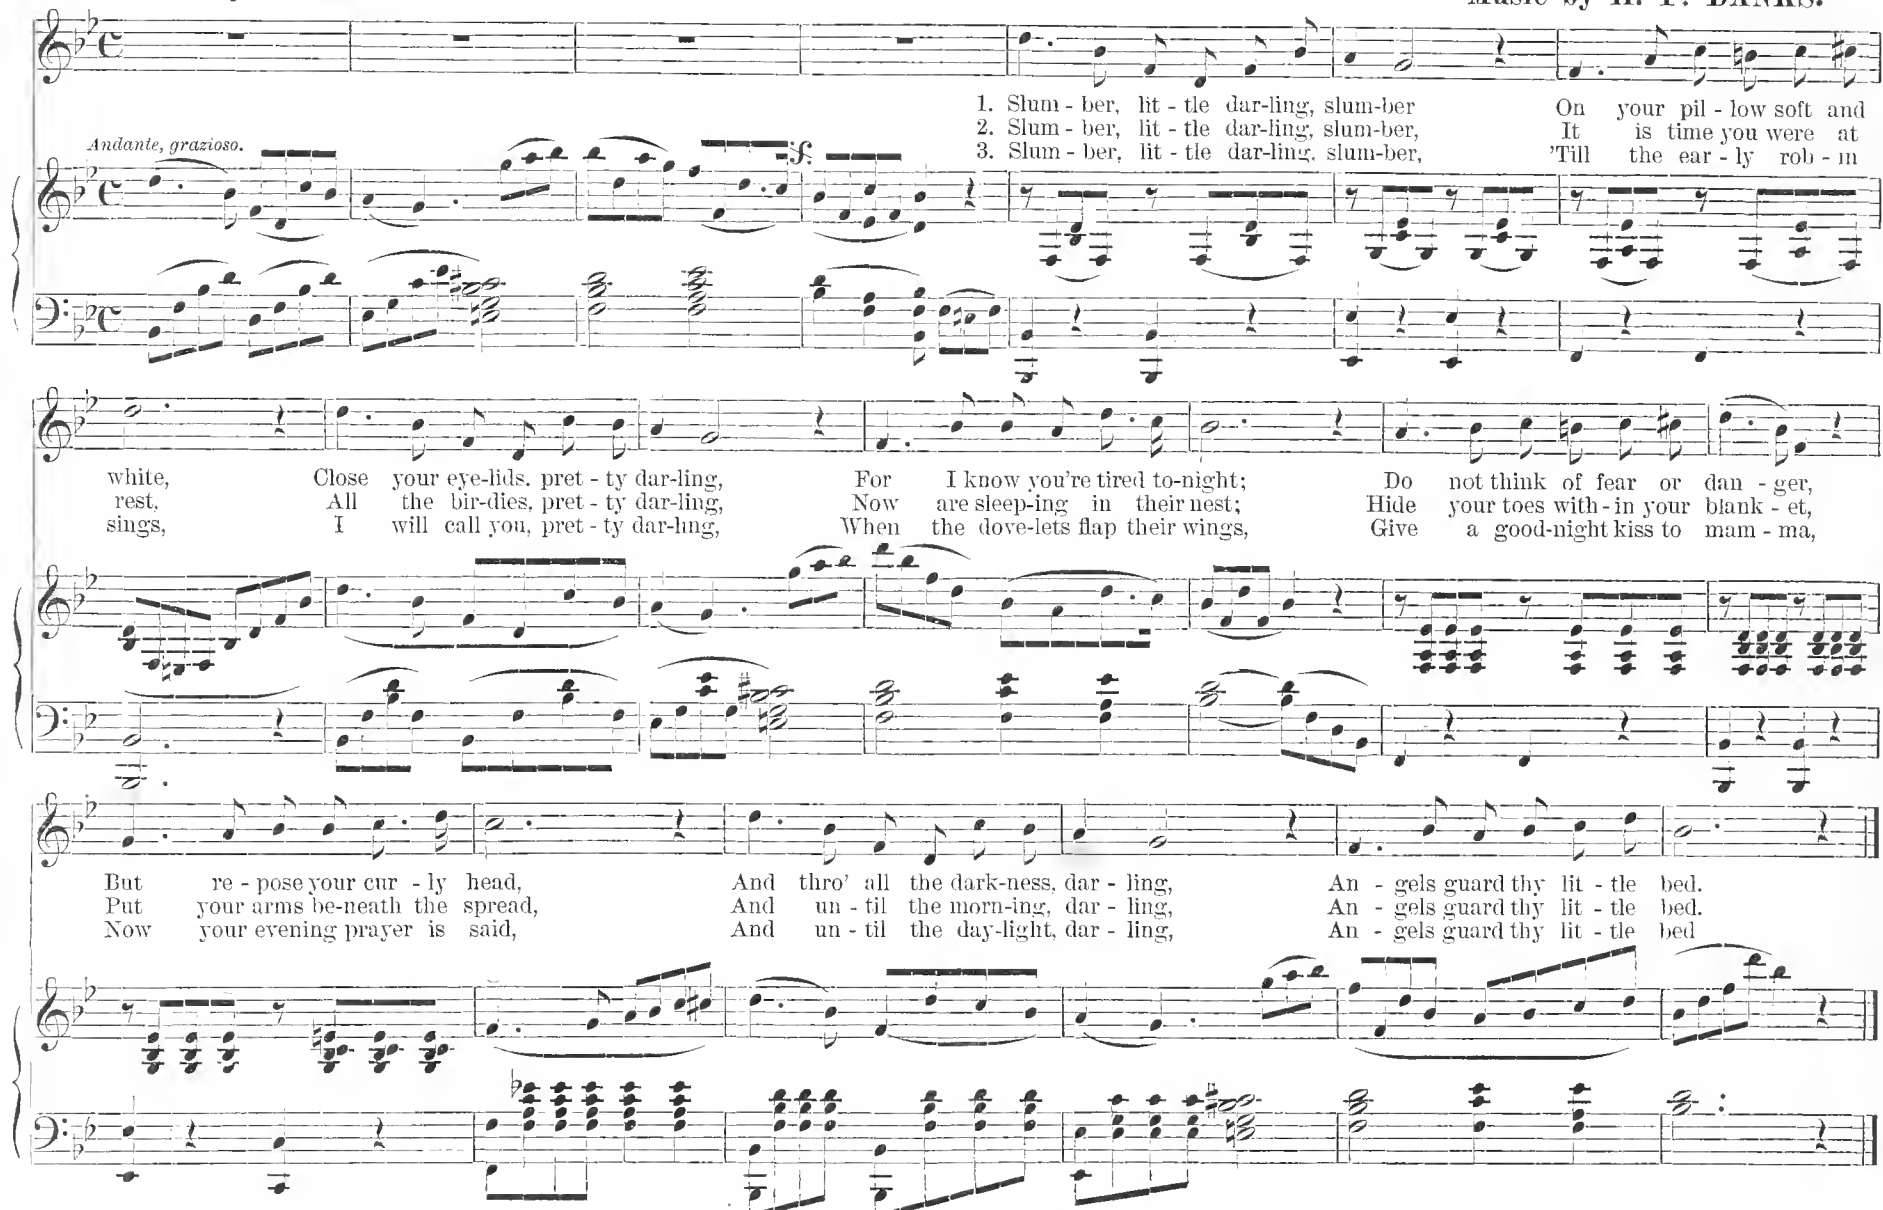

# Angels Guard thy Little Bed.

# THE LADIES' *Home Cabinet*

BY HENRY T. WILLIAMS.

VOL. IV.

NEW YORK, NOVEMBER, 1875.

No. 47.

PRICE 12 CENTS.

## KEEPING FLOWERS.

I have so much pleasure and profit from the elegant pages of the *CABINET*, I would like to give some of my own experience in the keeping of flowers. My hands are more accustomed to the trowel and rough flower-pots than the pen, but a few words from one who has had for near forty years successful cultivation of fruits, flowers, etc., might set some of your readers thinking.

The beautiful days of early autumn make one desirous of keeping some of these lovely flowers all winter; so I wished last fall, and determined to try it. Our sitting-room is in the south-east corner of the house, with veranda on both sides, closed on west end with wall of vestibule, but open east and south; a window to the floor on the south side was made a door by removing sash and shutters. First laid thick building paper on the veranda floor, then 2x3 inch scantling, filling it in with dry sawdust; then the floor, a double base a foot high, with three inches space stuffed with sawdust, made it cold-proof at bottom, and enclosed a space seven feet square. The east and south sides are all glass, fitted close to the ceiling and sides; a narrow stud between the sash gives strength. Outside, the base is finished in panel work, and painted to correspond with the house, the

sash stained cherry color; inside is finished smooth and painted sky-blue; is heated through the open (window) door from the sitting-room; the stove is a coal stove, and the fire never goes out, and burns no

very warm water with ammonia in it. It was a perfect success and a blaze of bloom all last winter. On the coldest nights newspapers were put between the plants and glass; the temperature was between 60 and 90°.

The whole cost was fifty dollars, and I think the pleasure of being able to lift your eyes to the floral treasures from the work-table or sewing machine is heavy interest for the money. It is all put together with screws, and two hours work took it down, packed it away (will soon put it up again), and restored the veranda to its summer use; the sash and shutters were replaced early. Such is my conservatory, which was the admiration of all the country, and made our place known as "the house where the flowers are."

JERSEY WOMAN.

**Sweet Peas.**—In the September number of the *CABINET* H. W. M. wishes to know why Sweet Peas fail to bloom. I am satisfied late planting is the cause. I planted seed in June two years, the first year not a bud appeared, though the vines were very thrifty. This year they did not show signs of blooming until the first of September. This morning I find a few scattered blossoms, while those planted early in April have supplied us with bouquets the whole season.

SCENE IN PROSPECT PARK, BROOKLYN.

## Floral Contributions.

## FOLIAGE FOR CHURCH FLOWERS.

[In reply to the inquiry of Mitchellia Repens, in August number, "What shall we have for green?"]

"Deterioration" has run low with me, even down to the carrot patch in the vegetable garden. A year ago I would have despised it, but now, I confess, when I steal out of the house of a Sunday morning—short waterproof dress and rubbers on, basket and knife in hand—my first visit is to the garden, to line my basket with the tall, dark and light, plummy, ferny leaves of the carrot. They should be gathered while yet the dew is on, or thrown soon into water; else, especially if the weather is dry and warm, they might wilt before going into the vases. Once in water and erect, they will stand a week.

Let me describe my last arrangement for a mid-August Sunday service. The vase came from the breakfast-room closet—a tall, large glass fruit-dish, filled with wet sand. At first I went to the carrot-bed, and next to the poppy and dahlia borders adjoining; lastly, I visited the vases that stand in the front yard, and the borders cut in the lawn, the brackets under the piazza roof, and the vines that cling to the trellis and pillars all about the house. There are always in summer abundant half-spent trusses of scarlet and white geraniums needing to be cut, the pods and withered parts of which can be trimmed away with small, sharp scissors, and the remainder massed to excellent advantage. Thus, with my vase and my large market-basket filled to overflowing, the trailing vines laid on last, I proceed to the chapel, to lay my offering on the altar of the Lord.

Long sprays of the Clematis, or Virgin's Bower, are placed in the sand, to fall over the front of the dish, and, lest they draw out, small stones are laid over the ends of the stems. My vine, I judge, is the infertile plant which grows much larger and more massive than its mate—the vine that runs daintily over thickets, and after flowering, is tufted with the silky tails of the seed.

Back of the Clematis are inserted longer sprays of the Madeira Vine, so, when the vase is in place, these may be brought forward to come beneath and below, their fresh, waxen leaves and graceful fall making a fine contrast to the Clematis, which is in fringing blossom and white bud to the very tip. Straying outside, and over and among these, are the trailing stems of that most exquisite of all vines—the Adlumia Cirrhosa, or Mountain Fringe—its fine-cut leaves and tendrils, and pale, drooping flowers, showing against the tinted wall of the chapel, have a charming effect, though in a very large church it might be lost.

In the middle of the dish are placed a few stiff asparagus branches, with the tops cut off—I am not yet so deteriorated as to be willing that these should show—and in this are set vivid Nasturtiums, falling down among the vines, pale Dahlias, Double Poppies, in shades from gray-white to deep crimson; scarlet, cream, and buff Zinnias; white Drummond Phloxes—far more effective than Candytuft, and as easily raised—double white stock Gillies, and large, white Asters. Among these, green sprays of the more delicate Clematis, and for a background, the carrot leaves, and—shall I say it?—the rather graceful spiked panicles of the Pigweed (*Chenopodium Album*), and—tell it not to ears polite—the Nettle. Its gray-green blossoms, in a panicle spike, looked pretty to me; with its leaves cut away, very few would guess what it was, and both had a good effect to vary the outlines and shades of green. I find often how lowliest things may serve highest uses.

Done, and in a measure to answer my ideal. Three hours of my precious Sunday morning are gone; the books I long to look into must remain shut; but have I not heard from afar the song of the wood-thrush which would never have reached me save through the hush of the early Sabbath hour? Have I not revelled in the dewy freshness and fragrance and beauty of the garden and lawn, and rested while I worked alone for the love of the dear Lord and his followers, in the sanctuary? I know how many weary eyes will find refreshment in the beauty of the flowers, while the spirit is strengthened by the service, and thus I get my compensation.

The vase for next Sunday is all in my mind. A tall silver pitcher in quaint design. From its narrow throat ray out spikes of Gladiolus in flame color, and shades of cherry and scarlet; above them deep green river grasses, which I grow for the purpose in abundance around a fountain, and a few sword-like leaves of the Flower-de-Luce or the Cat-Tail (or reed mace), *Typhoea Latifolia*. Lower, white day Lilies—the early ones, to save the buds, are held by the stem against the end of a twig, and damp moss wrapped around and fastened by thread-wire; a few of the cool Lily leaves or small Caladiums or Cannas, are among and below the Lilies, and the pitcher, too graceful to be hidden, is lightly draped with *Maurandia* in blue and white bloom, *Adlumia* caught into the handle, and one or two English or German Ivy vines. If I have enough time and material, I shall hang a large pearl snail from the rod of the chandelier near the desk, and deck it with looping, falling, straying vines and standing ferns of the firmer sort, or with the pretty erect leaf stalks of the first year's growth of the *Adlumia*, and fill in with flowers—sometimes with deep pink and white Geraniums, Verbenas and Phloxes, or with white only, and it is charming, outlined against the wall.

The long compound deep green leaves of the Sumachs, *Rhus Typhina*, or *R. glabra*, stand well the test of the church vase; the Mountain Ash is also good, and the leaves, not the sprays, of the American Ivy, *Ampelopsis quinquefolia*, both to droop and stand.

Carrot, Clematis, Madeira Vine, Sumach, Ivy, *Adlumia*, only ask for a foothold in the soil, and hoe culture or no culture, or string or trellis, to furnish foliage in prodigal abundance; and ferns with little care will flourish in out-of-the-way places.

After church, the flowers are given to those who love them best or need them most. Sometimes, instead of a vase, a large brown willow basket is dressed with green, and bright bouquets, all ready to give away, laid in vase or basket, redressed with some small flowers, answer well for the dining-room mantel, or parlor, or hall bracket, after church, and so may serve a double purpose and twice repay the trouble of arranging.

IVIE GREENE.

## MY CALLA LILIES.

The Calla Lily, that beautiful Nile flower, has always been a great favorite of mine. Though not an amateur florist, for I never succeed in making anything grow, I determined, after due reflection, to undertake the management of a Calla Lily which a friend presented to me in the fall of the year. As I was not gifted myself where flowers were concerned, I always envied those people who did not appear to have any more brains than I, who could carelessly break off a slip here and there from their luxuriant plants, and by merely sticking them in the ground find them sprouting in a few days in the most encouraging manner.

Still, notwithstanding the drawbacks I had to contend with, I took hold of the Calla with a cheerful heart and faithfully tended it through the winter. I soaked it in water daily till it could almost swim, bearing in mind the injunction that accompanied the gift: "Remember, the Calla comes from the wet banks of the Nile and requires a great deal of water." Through persistent effort the leaves presented a very green appearance, corresponding to the florist in charge, but there was no sign of a blossom.

When the warm weather came I determined to treat it scientifically, for I had read in different floral articles on the subject something like this: "Take your Calla Lilies, after the cold weather is over, and turn them, pots and all, on the sides, so that they will receive very little sun or rain, and pay no attention to them during the summer. In the fall take them up, re-pot them, and you will have beautiful flowers during the winter."

I attended to the first part of this piece of advice, but alas! alas! I was unable to follow it up. There is an Isaac here (I am Rebecca), and soon after my Calla was left to the tender mercies of the elements, Isaac became suddenly infatuated with gardening. My protegee being out of sight and out of mind, I had not glanced at it for two or three weeks; then, on going to look at it one day, I was quite dismayed to find nothing but a broken pot; even the earth had disappeared. Isaac was entirely over his "spell"; didn't know anything about it, but supposed he might have thrown it out as useless. I did not cry over spilled milk, for I was resolved not to acknowledge a defeat until after another trial, and in the fall I went to the florist's, bought a beauty of a Calla, already in bud (one bud), and tended it as carefully as the other. As the bud did not seem inclined to unfold, I was afraid the air of the room did not suit it, so I tried it in nearly every room in the house, and finally landed it in the lumber-room, in the fourth story. I made pilgrimages to it as to a shrine, every day, with a large supply of water, which "affliction sore long time it bore," and my efforts were in vain; the bud dropped off unopened. Still I was not discouraged, I kept at it, and finally another bud made its appearance and actually opened into a very beautiful Lily, as if under somebody else's care. I felt triumphant.

When the summer came round again I proposed to try the plan once more of turning the pot over on its side and leaving my Calla to take care of itself. I was pretty sure that Isaac would not meddle with it this time, as a burnt child dreads the fire. But there happened to be somebody else's Isaac visiting us soon after; he was taking a stroll one day in our 25 x 80, and seeing a pot lying down as if blown over by the wind, stood it up again in its normal position, and then dug up the plant to see if anything was the matter with the root, as it did not present a thriving appearance. This was a little too much for my equanimity—I happened to catch him in the act; I had quenched one Isaac, and here was another taking his place.

Now, what I am aiming at in my story is this: To find out whether anyone knows what to do with the Isaacs who, when they are not whittling, are apt to be in mischief? I think I can manage the Calla Lilies.

ELMER LYXNDE.

Philadelphia, Pa.

**Water Lily.**—Will any of the kind readers of the CABINET tell me if I can succeed in growing my Water Lily (*Nymphaea Odorata*) in a large basin of a fountain which has a northern exposure? and oblige

MRS. A. K.

## Gossip with Correspondents.

**Calla, or Bulb Box.**—I should like the many readers of the CABINET to know how to make a bulb box like mine. Any one with common sense can make it, and it is so pretty and inexpensive it must be admired. Materials: A box two feet long, twelve inches wide, eight inches deep, made of half-inch pine plank; one pound inch brads, one pound white paint, a little glue and a little white varnish; also some straight rods of willow or cedar, half an inch or an inch thick, with the bark on. Be sure the box is strongly made. Commence by nailing a rustic strip around the upper edge so as to cover it, then strips up at each side of the corners, then a strip around the bottom. Next make the length into spaces of eight inches each, and nail a strip down to divide it off, fill in each panel for an inch and a half with strips, and it will leave you six panels, five inches square, and the ends 5x9. Next take some thin wood (shingles will do), and cut out panels to fit the spaces, making them as smooth as possible with plane and sandpaper; nail them in with brads; then after you are done nailing, have it lined with zinc; when this is done, give the panels four coats of white paint; when the paint is dry, take some nicely pressed ferns and gay leaves, group them nicely and glue to the centre of the panels; give all a coat of white varnish, and you will have a beautiful tiled jardiniere.

M. G. OSGOOD.

**Cinnamon Vine.**—A correspondent who sent us once last summer a wreath of the branches of a Cinnamon Vine, so delighted the visitors of our office with the delicious fragrance which filled the entire room for days, has at our request given us more specific information about it. "The tuber we have sent was grown in a pot, the only experiment of the kind, which proves it may be grown in the house, and in pots of almost any size for this purpose. I would recommend yearling tubers; the bulbs should be planted in the garden, and the tubers at one and two years old, planted where vines are wanted for ornament around arbors and front-doors of dwellings. Our strongest vines, from three-year old roots, ran 30 feet; these were in the garden on lofty poles; those by the side of the front-door, two-year old tubers, were conducted on heavy twines perpendicularly, and then horizontally to completely surround the entrance, top and sides. Morning Glories were trained upon the same string. The effect of the beautiful green leaves of the two vines, and the open flowers of the Morning Glory, together with the fragrance of the Cinnamon Vine, may be imagined, but realized only by their presence."

I. W. BRIGGS.

**Church Flowers.**—I was much interested in an article on "Church Flowers," in August number of CABINET. Mitchella asks if some one will suggest suitable green for her church bouquets. The most beautiful I have ever seen is the Cypress Vine, so graceful and delicate; then the varieties of Tropæolum, the leaves of the English Ivy (the shoots are too stiff); try the old fashioned sweet Clover. I agree with her that those who will work may, but do not consider the work of beautifying the house of God a thankless task. Anything will not do if you can get better. Do not the eyes of perhaps hundreds feast upon these our Father's gifts, and the more heartily thank the Giver? God has given us so much of the beautiful in this world, let us in beautifying His temple, dedicate the best back to Him. Once, I

too had the privilege of adorning the sanctuary. Now both pulpit and decorations are things of the past, for in my far off home in the rural districts of Oregon, these privileges are denied me. My sister, work while you can. The ten-weeks stock, double white, Sweet Pea and Mignonette, are all lovely in church bouquets.

MRS. C. S. HAMILTON.

**Sooly Qua.**—Has any one heard of this famous cucumber? W—bought a package of seeds early in the spring (cost fifty cents), and as soon as possible submitted them to the test of growth. One was planted in a small wooden box, and after careful nursing in the house, was planted out on the approach of warm weather. With great delight we watched its growth, and when at last a cucumber (?) appeared, we were on the *qui vive* for the result. A delegation was appointed every few days to measure and report its length, while we daily hied to the garden with solemn and expectant aspect and visions of the rare and delicious dish dancing through our heads. At length it was said to have reached maturity, and our expectations being at their highest, we cut it open for inspection. Picture our chagrin and dismay when it proved to be a Luffa, or Dish-rag! Any one who has seen the latter plant will know it to be of fibrous substance, not unlike a sponge, and is used for the purpose of cleansing, as its name implies. The catalogue had reported the Sooly Qua as a Chinese cucumber, used when fully grown and served with rice; now if a Chinaman's digestive organs can manage that vegetable, I think his *post-mortem* examination will be a revelation to science. At any rate it can be but a benefiting process to devour dish-rags, and I congratulate them upon their excellent constitution with all my heart. We threaten to give W. nothing to eat for the next six months but those delicious Sooly Quas, a proceeding which will at least cleanse him of all ideas of novelties. And now I must say a good word for the Luffa; in its own true character it is of inestimable use to housekeepers. It resembles nothing more than an irregularly woven, tangled mass of thread, absorbs readily, and is especially adapted for washing tin or glass, as it leaves no lint as a piece of cloth would. When bleached well it is beautifully white, and being cut into shapes and bound with bright colors, makes very pretty baskets. The plant is gourd-like, but much prettier and has large yellow flowers. I can furnish seed to those who will intimate the wish through the CABINET. I enclose flowers and leaves of a vine whose name I would be glad to learn. It is an evergreen, grows astonishingly fast, and clings in the same manner as do the Thunbergia and Barclayana vines—by the stem of the leaf. Can any one tell me how to destroy cut-worms? I have tried everything I hear or see, but without success.

JENNIE.

**Wax Plant.**—Having gained much valuable information from your paper, I beg permission to send through your columns some which I have gained by experience. L. H. H. asks, "Why do the leaves of my Wax Plant (*hoya carnosa*) wither?" I am the possessor of a Wax Plant, 36 inches high. In April, the leaves began to wither and turn yellow; in May I changed the plant to a larger pot, putting in rich garden earth well sifted—I let it stand for one week, watering it as usual; I then made a water-pail full of soapsuds of common bar-soap and tepid water, and using a watering pot, washed the plant with it, rinsing it well with clear tepid water; in two weeks after I repeated the washing, both times selecting rainy days. My plant is now sending out new leaves; it

has regained its original rich green color, and has lost but one leaf. Whale-oil soap is the best kind to use for washing plants of all kinds, if obtainable.

Brooklyn, L. I.

MRS. L. DEF. B.

**Squills.**—Will S. J. of Easton, Mass., please describe the plant Squills, of which she writes in the FLORAL CABINET of June, 1875? I have a plant known by the name of Onion Lily, also the plant Star of Bethlehem—they are quite distinct plants. My Onion Lily is ten months old. In February last, five bulbs grew from its side, amounting to nothing, dropping off one by one. In April I changed it to a larger pot and richer earth, gave it plenty of water at night, and sun by day; on the 14th of May I saw signs of bulbs forming; in two weeks afterward the outside layer (which is very thin) peeled off and exposed to view five of the most perfect little Lilies, each having a leaf; they still cling to the parent bulb, and three days since the opposite side burst open through the second layer of the bulb, which is very thick (the same as an onion), and exposed to view four more little Lilies in good condition, making nine in all. The parent Lily looks exactly like an onion; is very transparent, measures five inches in circumference, has growing from the top long narrow ribbon leaves, which droop gracefully over the sides of the pot. I suppose it belongs to the family of Amarylis, and as this is my first experience with one, I would like to know from some of the readers of the CABINET what they know about them.

MRS. L. DEF. B.

Brooklyn, L. I.

**Tradescantia.**—Vines are great favorites of mine, especially those which will grow in the shade. They look so graceful and pretty twining around picture frames, trailing over vases, brackets and mantels, and making our very walls a support for their brightness and beauty. Surely, there are no ornaments more beautiful than those which nature provides, for making our homes cheerful and pleasant. Last November, before we had hard frosts, I cut about fifteen sprigs of what we call Jacob's Ladder or Joint Plant (I think it is the green variety of Tradescantia); they were very thrifty, having grown in a shady, sheltered place in the garden. I put them in a Parian marble vase of water, where they rooted, and grew very fast. The longest ones were eight inches in length when cut, and now (1st of June) they are five feet, and several of them have branched. I have trained them over our book shelves, and a picture which hangs above them, and the glossy green vines are peeping out from every nook and corner, looking as pretty and growing as fast as ever. I keep the vase full of water, and when the leaves get dusty, I take it down and sprinkle them. If those who never have grown this plant in water, would do so, they would be amply repaid for their trouble. I think the cuttings should be thrifty, and placed in something which the light cannot shine through, as the roots like darkness. Can any one tell me of another vine that will grow in water? Does any one know of a remedy for lice on Aster roots? We lost three-quarters of a large collection last year by the little torments. The black ants destroy our Peony buds every year; what will prevent them?

Warren, R. I.

MINNIE.

**Asparagus.**—In answer to Mitchella Repens, in the August number of the CABINET, I would say that Asparagus will, in my opinion, answer her requirements, and add grace and beauty to her bouquets. If she will send me her address, I will send her some seeds in the Autumn.

C. L. MARION.

Woburn, Mass.

## Flower Gardening.

### PELARGONIUMS, Etc.

I have frequently seen communications in the *CABINET* in regard to the culture of Pelargoniums; and as I have had some experience in raising them, I thought perhaps it would help some despondent sister to successfully grow them and have as handsome plants as mine.

Three summers ago a friend gave me a large and healthy slip of a fine Pelargonium; for want of better knowledge I planted it in quite a large pot. I kept it all winter in this pot and it did not grow at all, but when spring came it began to grow; its branches spread far and wide, and it blossomed profusely the last of May.

Following the directions given me by some one, I then cut it back, and the consequence was I had no more blossoms that season, and very little growth. I concluded that I'd "kill or cure," so I cut it back to the main stalk that was about five inches high; the top had three main branches, and I cut it just below where they met, so that all three were joined together; this top I planted in a three-inch pot, it rooted immediately, commenced to grow and made a lovely bushy plant, and is now full of large promising bunches of buds. The stalk remained in the large pot and put out a few leaves and then stopped. Completely exasperated with it I took it out of the pot and shook all the earth from the roots, potted it in a three-inch pot with street dirt and garden soil, half and half. Did it grow? Yes, it grew, and is now a great bush about a yard in circumference, and just as full of buds as it can be.

Showu from above, I think, that a small pot, rich soil, not too much sun, and avoid cutting back, will generally produce plants that will be a delight to behold. They do very well bedded out in the summer.

Geraniums are very easy to cultivate if properly managed. To begin with, about midsummer obtain young healthy slips that break easily; root them in tiny pots or saucers of sand, and as soon as they begin to grow, pinch back to make them throw out branches; for if they grow after their "own sweet will" you will have plants very awkward in appearance. Pot them now in two-inch pots in good soil, two-thirds garden soil and one-third leaf mold, and a little sand (I prefer the coarse river sand, but fine silver sand does very nicely) is about right for all Geraniums.

In the autumn re-pot them in three or four-inch pots and place them in their winter quarters before a fire is started, and thus accustom them to the change; they will go straight to growing, and always, provided you wash their leaves and keep them clean, you will have plants that will be sure to attract attention by their rich green leaves and distinct markings, even though you have no blossoms. Geraniums treated in this way will bloom about the middle of January (if they have a sunny situation) and continue in bloom all through the remainder of the winter and spring.

In summer, bed them all out, and your garden will be a mass of bloom until heavy frost. I hear through the *CABINET* that United Italy and many others lose their markings when bedded out; such has not been my experience; my United Italy and all my Zonales are bedded out, and are as distinct and beautiful as though in a greenhouse, and in size and texture of the leaves much superior.

In the grounds of the United States Treasury, they

PASSIFLORA. PASSION FLOWER VINE.

have circular beds twenty feet in diameter, filled with brilliant scarlet Geraniums, and they are one mass of bloom all summer long, and perfectly dazzling to look upon; and then there are innumerable beds of Petunias that are all blossom, and Roses, Tropæolums, Perennial Phlox, Gladiolus, Carnations, and all beds edged or outlined by deep red Colens; the walks are five feet wide, of grass, shaven so close that it looks like velvet.

I have also had some experience in the culture of Begonias, and for the benefit of Mrs. Stewart, and any others who may be troubled in keeping them through the winter, I will tell my experience. Last summer I bought three, one—a leaf variety—Madame Alweldt, one pink Weltoniensis, and a white Passiflora. They did very well all summer, and bloomed, and in the fall I brought them in the house and placed them in a south window. The leaf variety was in my basket and it was too wet for it, and it soon dropped all its leaves and did not appear again all winter, while the white one grew more and more feeble and finally died; so I brought my poor little one into my room where it was warmer, but with only a north window, and gave it very little water; it commenced to grow very nicely, when one day I broke off one of the two slender stalks. I was in despair; however, I planted the slip in the same pot and was soon delighted to know that it had rooted. The parent plant grew quite slowly, but finally put out two new shoots from the roots, and then it began to grow faster, and is now a large flowering plant.

The leaf Begonia showed itself this spring, and I took it out of the basket and planted it in a pot by itself, and it has now two large handsome leaves and another coming very rapidly. A slip of white Begonia was sent me in the winter from Indiana, and although it came in such cold weather it grew and flourished and threatens to rival my Weltoniensis in size and beauty. The leaves are large and smooth, a very light green that sparkles when the sun shines on it. If any rule can be laid down for the culture of Begonias, I think the following directions learned from dearly bought experience will come as near being correct as any:

A rich garden soil with a little leaf mold and enough sand to make it quite light, and common flower-pots without glazing or paint, and bits of charcoal for drainage, will be almost certain to grow Begonias.

In potting them put about two inches of broken charcoal and fill the pot to within one-half an inch of the top to allow for watering; be sure to place the plants in the centre of the pot, for they are a perfect eyesore to me if at all one sided. Use only common pots, as they are porous and absorb all surplus moisture, and only water when dry, and you will have no trouble in raising large, constant and flourishing plants.

A. F. PETERSON.

Washington, D. C.

**Red Spider, Etc.**—It is said that the plant pest called "the red spider," which often ruins the choicest house plants, may be removed by frequently syringing the afflicted plant with carbolic soap-suds.

Many people dose the "Aphis" with tobacco smoke. But this troublesome creature usually attacks only plants which are in some way diseased, and therefore the surest method of getting rid of them is to doctor the sick plant by sunshine, charcoal and good drainage. A white spot is often made on a painted window-seat by allowing flower-pots to set long thereon. To remedy this, take fine wood ashes, rub the spot, then wash off with clean water.

## Floral Pleasantries.

### BOUQUETS.

What a pleasure to gather the beautiful flowers, and fashion them into bouquets, to ornament our rooms, decorate the graves of our dear ones, or gladden the heart of the invalid! They are fit messengers of love and sympathy to our sick and suffering friends, telling their own story of heavenly care and protection.

Many people dislike to cut their flowers at all, while others will pluck all kinds and colors in one bunch, and, never giving a thought to their arrangement, crowd them into a little vase, or put them in an old pitcher too large by half, and down go several of the prettiest into the water out of sight. We should know when we gather our flowers what we wish to do with them, and cut and arrange them accordingly. Some flowers have very short stems; these look pretty in something shallow like a saucer, for we dislike to cut off large clusters of buds every time we pick a Verbena, or take a whole plant to get one Pansy or Balsam.

Every bouquet should have a good proportion of green and white, and not too many bright colors, for it is in poor taste to put all shades and varieties together. Neither should flowers be formed into rank and file like a regiment of infantry, where like the soldiers they lose all their individuality by their similar positions and crowded appearance, but grouped loosely and gracefully, letting each flower show its own peculiar beauty and habit as far as possible. Those with long, slender stems, such as the Tassel Flower and Calliopsis, look so pretty nodding their heads above their larger and stiffer companions. Then the Pansy, which chooses a shady nook to grow and bloom in, should never be placed on the outside of a bouquet to stare at the whole world, but be seen peeping out from beneath the green leaves, half hidden from view; while the stately Gladiolus may look proudly fourth from the centre, surrounded and intertwined with fine flowers or wavy green.

Very pretty bouquets can be made in saucers of wet sand; they are easily arranged, the sand keeping each flower in place.

These are very appropriate to place in the cemetery, as the flowers appear to have grown and blossomed there in the grass. Very beautiful ones are made with the June Pinks, the white English Pinks, and two or more kinds of Rose-buds, with a Rose just opened in the centre. For green the Scotch Rose leaves are the prettiest for the top, they are so small and delicate. Place larger Rose leaves round the edge, allowing them to fall over and hide the saucer, and the bouquet will appear to be made in a wreath of Rose leaves. The next morning the Rose-buds will have opened, and you will almost wonder if this is the same bouquet you made the day before.

There are no flowers that excel the lovely Pinks and

Roses; to their firmness of texture, perfect form, and beautiful coloring, is added a delicate perfume, more pleasing by far than that of the Mignonette, which is not a particular favorite of mine. I would choose first those flowers having beauty as well as sweetness, among which will be found the half-hardy purple Heliotrope and Sweet Alyssum. Let us always have the pretty, sweet-scented blossoms, for fragrance gives a delightful charm to our bouquets.

A very common mistake is the forming of too many flowers in one cluster, destroying their graceful, airy effect; a few, carefully selected, and tastefully arranged with slender sprays of running vine, and finely cut, wavy green, will surely give us more pleasure than a confused mass, of many varieties, so huddled and jammed together that they present the rueful ap-

GARDEN VASE OF FLOWERS AND GRASSES.

pearance of floral criminals condemned to die by suffocation.

MINNIE.

### THE WATER LILY'S STORY.

When I first opened my eyes to the daylight I was in a lovely place. My home was a beautiful pond, whose waters were so clear they reflected the blue sky and fleecy clouds overhead, and where everything was still, and calm, and quiet; I was surrounded by fair companions each as lovely as myself. We grew fairer and sweeter every day, and we thought ourselves better than the common flowers that grew on the farther side of the pond, the Daisies, the Blue Violets, Adders Tongues, that queer fellow, Jack in the Pulpit,

and the Wild Rose, who was so rude if anyone touched her. Were we not tall and slender, fair and sweet of face, and did not our green dresses become our fair complexions wonderfully? Were we not admired by every one who saw us; and more than all, did not our mirror, the pond, tell us we were beautiful every time we glanced in it? Yesterday there came to our pleasant home a gay pleasure-boat with a party of ladies and gentlemen; the ladies all exclaimed, as soon as they saw us, "Oh, how sweet, how lovely!" and one, whose face was like an angel's, reached over and took me and several of my companions into the boat with them. The other ladies gathered some of my fair sisters, and we were all carried away to our new and separate homes. The lady that I and my sisters were with took us to a grand house on a hill, where we were again admired and our fragrance inhaled, and at night I shone like a star in the raven braids of my new mistress's hair in a ball-room. Her lover's hand placed me there, and as he did so, he bent and whispered something in her ear, and then kissed the rosy lips that looked so tempting. The warm blood rose to her cheek, and I thought I never had beheld anything so beautiful. I missed my old home and my pretty mates, but I felt sure I had fallen into good

hands, and I felt proud in having so beautiful a mistress, and being so admired. When my mistress came home and looked in the mirror she saw my drooping head, for the heat in the ball-room had made me faint and languid. She took me from her hair, and said, tenderly, as she held me in her hand, "Poor wilted lily, I'm sorry you faded so soon." Then she put me in a vase of water, which refreshed and strengthened me, and this morning when she looked at me my white petals were open once more, which made her exclaim: "Ah, my pretty lily, you are alive yet, ain't you." But I have lost some of my fragrance, and I know that before the sun sets I shall be dead, for the life of a lily is very frail. They say this is a cold world, but "my lines have fallen in pleasant places," and I am sure that when I am dead, and all my beauty and fragrance gone forever, my sweet mistress will not throw me into the street to be trampled in the mud, but will lay me carefully away in remembrance of the night when her lover whispered sweet tender words as he placed me in her shining braids of hair.

**Wiggletails.**—I see in the September number of the CABINET that Henry Cordes wishes to know what will prevent wiggletails in a tub of plants. A small fish, say perch, caught in any stream or pond, will keep the water entirely free from the above pest, and mosquitoes will not bother. Only keep the tub full as it evaporates, just fill up with fresh water, no need to bail the water; I have a perch in a tub of Water Lilies, and the tub of water is free from all pests of the kind. I catch a few house-flies once or twice a week and throw them in the water just to see the fish eat them.

PRISCILLA.

## Stories.

## A HEART'S REWARD.

Mabel Clifton sat before one of the windows of her father's magnificent mansion. A servant stood in waiting.

She was making out a list of articles wanted for the next day. Coming footsteps attracted her attention. She raised her eyes and looked out. The crimson flush deepened on her bright young face, as "Oh!" in a tone of deep regret escaped her lips.

She turned round after an instant of thought and said:

"John, I am not just ready to finish this list, and shall not send it for an hour yet. If you have anything to attend to in the meantime you can do it."

Mr. Clifton had been reading in a distant part of the room. Hearing the door close after John's departure, he said:

"You have not forgotten to send for those wines I spoke of, my dear?"

"He has not gone yet, papa."

"Ah, well, do not make it late. They will be very busy to-night," her father said, turning again to his paper.

"Papa."

"Well?"

"A boon, papa. Promise to grant me this last day of the year my boon!"

"What is it, my love?"

"Promise to grant it, first."

"Not in ignorance, my child."

"Trust me, father."

She had an eager, earnest, noble look in her eyes that her father did trust in, and he promised her.

"Well, you shall have your way."

"Father, let us abstain from using wines to-morrow."

"What! no, no; I cannot grant you that. No wines! Why, child, have you gone crazy? For twenty-five years I have offered my friends wine on New Year's day, and never have felt that I was doing anything wrong. What has come over you?"

"Oh, father, I have never felt just right when offering men wine, and just now as I was making out the order for John, I chanced to raise my eyes just as Edgar Livingston was passing. It needed but a glance to see he was very much under the influence of liquor. Father, his mother is a widow; he is her only child, and all her earthly hopes centre in him. Will they not be wrecked, think you, if he indulges in the wine cup? To-morrow he will make many calls. Beautiful women will offer him wine. He will not have the courage, possibly, to wish to decline. To-morrow night, most likely, he will return home to fill his mother's heart with sorrow. I do not wish to contribute one drop to that bitter cup."

"My dear, whether we have wines or not, with him it will be all the same, as you say he will make many calls."

"Father, if you had a son, would you not talk differently? Think how many young men of the brightest future have failed, nay worse, won disgrace and early graves, from love of wine. I feel as if Edgar Livingston stood upon the brink of a fearful precipice. Father, stretch forth your strong arm to draw him—if only step by step."

Just then a servant entered and handed him an envelope, saying:

"A telegram, sir."

Mr. Clifton tore it quickly open, read it, and exclaimed:

"Really, this is too bad, but I must go. John, here—"

And hastily writing a few words for a return dispatch, he handed it to the servant, and turning to Mabel, said:

"My old friend Harwell is dying, and begs that I will hasten to him. I can not deny him. So you will have to entertain my friends to-morrow, and explain to them the reason of my failing to see them this first time for so many years."

"And—well, dear, you can do as you choose about the bill of fare. As I shall not be at home, the people will not hold me responsible for what happened in my absence."

An hour after, Mr. Clifton was on his way to the side of his dying friend, and Mabel sat down and wrote:

"DEAR FLORA:—Come help me to receive our friends to-morrow. Papa has been called away, and I must have you with me, as I am particularly anxious to have my reception a success. Lovingly yours,  
MABEL."

"Edgar likes Flory, I can see plainly, and I think she is not wholly indifferent to him. Together I think we can manage to hold him here to-morrow, and thus save his mother a great sorrow, most likely," said Mabel.

Mabel Clifton was one of the loveliest girls in P—. Friends wondered that her heart had not yielded to some one of her many suitors. They did not know that she had no heart to yield to any of those who had sought it. The first season she appeared in the select circle in which her father's wealth and position had placed her, she met Ernest Addison. He was a noble looking man, talented, with mind and heart alike filled with true resolve. To Mabel he had been very attentive, and she grew to love him, feeling sure the time was not far distant when he would come to tell her of his love. But months rolled by, and he spoke not. Gradually his visits grew less frequent, until they ceased. What it was that had come between his love and her she could never think; but she felt perfectly sure that he did love her, and so, hoping that time would solve the mystery and bring a balm to her wounded spirit, she watched and waited for the coming.

New Year's day came beautiful and bright. Mabel and her friend, Flory, never looked lovelier. Mabel had explained her wishes, and fully infused her spirit into her friend. It was impossible for any indifferent person not to feel their power of fascination. To Edgar Livingston, one of their first guests, they were quite irresistible. He lingered on, notwithstanding the many efforts of a young friend who accompanied, to draw him away.

"Do stay and help us," said Mabel, and when Flory's beautiful eyes repeated the wish, Edgar yielded.

Few, if any, went away from the Clifton mansion dissatisfied. But, as her father had said, many tongues were busy speculating about it, and in a few hours it was widely known that Miss Clifton was giving a temperance reception. Eagerly Mabel's eyes sought the door on every new arrival of guests. She had hoped for the coming of a certain one. She had seated herself wearily in an arm chair when the same greeting that had fallen on her ears so many times that day, "Happy New Year, Miss Clifton," caused the bright light to return to her eyes, the beautiful flush to her face, as she rose to receive Ernest Addison. There was rare expression in his eyes, when he received from her the greeting which seemed as if seeking an answer to the suspense of years. Edgar Livingston

had drawn Flory to the window. They were looking out on the passers by. Reeling along the sidewalk, shouting and singing a drunken song, came Edgar's friend of the morning. Flory turned from the sickening sight. Edgar followed, saying:

"But for you and Miss Clifton, I might have been one of that party." And going to Mabel, he said:

"Miss Clifton, your slumber to-night should be peaceful. You have not helped to cloud either brain or heart of any of your friends to-day. Accept my warmest thanks for having saved me from both."

Edgar saw an expression in Ernest's eyes that made him think it would be quite as agreeable to all parties if he would take Flory back to the recess of the window, to the piano, or any where out of hearing just then. A few moments after his fine voice was blended with hers in a well chosen duet. Then Ernest told Mabel of the love that had been hers ever since he knew her.

"I came one night to lay my heart before you. You had many guests and offered them wine. You noticed not that I placed my glass untouched on the table. I left early. I dared not woo the heart of one who held such a fearful temptation before me; why you will know when I tell you the terrible truth. My only brother went down to a drunkard's grave, the woman he loved urging him on. For a time mother and I won him from the fatal passion. He was doing well. We believed he would fulfil the bright promise of early youth. He grew to love a beautiful girl. She was wild and thoughtless, and one night at a party in her father's house, she urged him to drink. 'One glass. Every one but you takes wine,' said she. He resisted. She taunted him about having to abstain entirely because he had not the self-control to use wine in moderation. He yielded, accepted the fatal glass from her hand, and drank, first moderately, then on and on, in the old fearful way, until the end came—a ruined life and a mother's broken heart. Do you wonder that I fled from you? Every hour since, yearning to return yet daring not. To-day I heard what you were doing. Earnestly thanking God that light had dawned upon you, I hastened here to lay my heart before the only woman I ever loved. Will you be my wife, Mabel?"

Her heart was too full of joy; she could not tell him in words how happy she was, but her little hands lay still in his. She raised her eyes a moment, and he saw the love of years beaming there. He needed no answer. Judging from the low tones into which the voices in the other room had fallen, I think some other hearts must have found their mates. But the pairs were separated, or rather rejoined, by the return of Mr. Clifton, who entered, calling out:

"Mabel, dear, to me these rooms look rather dark. Let's have the gas turned on, if you please."

And when there was light enough for Mr. Clifton to look into his daughter's eyes he saw a bright light shining there. Another moment, when Flory came to greet him, he said with a smile,

"Ah, I see why you young folks know nothing of the surrounding darkness—guided by the light within. Well, have you had a pleasant day?"

"A happy day, father; there are no regrets to steal in and mar it," Mabel said with a bright smile.

"I am glad of it—glad of your resolve, Mabel. How glad you will know when I tell you that this morning I closed the eyes of a father whose only son was away in some drinking saloon. How my heart ached for that father! And what a balm it was to think at that time my daughter was not holding the fatal glass to any young man," said Mr. Clifton, his voice trembling.

# THE Ladies' Floral Cabinet

PICTORIAL HOME COMPANION,

THE HANDSOMEST ILLUSTRATED JOURNAL OF HOUSEHOLD ART, FLOWERS AND HOME LITERATURE IN AMERICA.

PUBLISHED MONTHLY.

Devoted to Housekeeping, Household Elegancies, Fashions, Music, Ladies' Fancy Work, Social Amusements, Home Pets, Flowers, Window Gardening, Cottages, Garden Decorations, and Illustrated Home Literature.

75 cents six months, with choice of one chromo.  
65 cents six months, without chromo.  
To club of ten, an extra copy of paper with one engraving or chromo free to agent.  
These terms include all charges—mounting and mailing, also postage on paper for one year.

## Back Volumes.

\$1 25 for volume of 1874, unbound.  
2 50 " " bound in cloth, and mailed.  
1 00 " cover to vol. 1874, mailed, postage paid.  
1 50 " portable binder and music portfolio, mailed, postage paid.  
1 00 " volume of 1873, unbound.  
50 " numbers July to Dec., 1872, unbound.  
No numbers for sale previous to July, 1872.  
No volumes bound previous to 1874.

## Terms for Chromos, Agents' Outfits, &c.

50 cents for agents' outfit of paper, chromos, etc.  
25 " " " " and 1 chromo a.o.  
25 " " " " " and engraving.  
Terms to canvassers sent on receipt of P. O. stamp. Agents wanted in every town.

## Caution.

All subscriptions paid to other parties than the publisher are at the risk of the sender. Subscribers should ask unknown agents to exhibit a certificate of authority, or deliver a publisher's receipt, or show a letter of recommendation from some well-known person in his town. Publisher is responsible for money only when it reaches him safely. Agents who are well known to their subscribers as reliable need no certificate or receipts.

## Remitting Money.

Money may be safely remitted to publisher by P. O. Money Order, Registered Letter, Express, Bank Draft on New York. No checks on local banks accepted. All charges for sending money must be prepaid.

## Expiration of Subscription.

All subscriptions expire with December number, unless printed label on each paper contains a figure (39 to 48) which signifies their subscription is paid only to the paper with that number. The letters on labels (A, B, C, &c.) denote publisher's mark for date of payment of subscriptions.

## Missing Copies.

These are always supplied by publisher when notified by receipt of postal card. As the labels often slip off while passing through the mails, yet paper reaches the post-office, subscribers will ask P. M. of the fact before addressing publisher.

Newsdealers will furnish CABINET regularly, and receive payments monthly or at convenience of reader.

Trade supplied by American News Co.

Address J. L. FATTEN & CO., 162 William Street, New York.

NEW YORK, NOVEMBER, 1875.

## WINDOW GARDENING.

A garden in winter! what a pleasant thought as we hear the wind howling, and see the snow flying through the air; but how much pleasanter the sight of our window of plants full of bloom. How they speak to us of the beautiful summer gone, as well as of the one coming, and yet how few, comparatively, are willing to put forth the effort required that they may enjoy this "thing of beauty" in their own homes.

Do you not, my young married friend, spend much time and strength on "that which profiteth nothing" to the happiness of your little family? Now let me prevail on you to try the experiment for one winter, and I am sure you will never willingly give it up. But, do you say they are so much trouble? So is everything in this world that is worth having at all. Surely you will not begrudge them a few minutes every day, which is all they need after you once have them arranged in the fall. Commence with a few, and if you have not a bay-window, or cannot afford a beautiful flower stand, you can surely have a little window box, or even a simple shelf in your sunniest window, where you may stand five or six pots. And now let me give you the benefit of my experience in selecting your plants: Do not select large plants in full bloom, or you will be disappointed as I have been time and again, but rather take small plants or even slips to begin with. Have two or three good varieties of single Geraniums, such as the Leonidas, Maid of Kent, or General Grant, and do not fail to have a Calla Lily. I have one now seven or eight years old, and I have had more satisfaction with it than any plant I ever cultivated. The treatment could not be more simple.

In June, when it is done blooming, (and mine always blooms from January until June), I take it out of the pot, cut the roots off very closely, and re-pot with a mixture of leaf mold, sand, and garden soil, with fine manure at the bottom of the pot; set in

some cool, shady place, and pay no further attention to it until the last of August, or first of September, when I bring it out. Give plenty of water and sun, which will be all it will ask until the next spring, unless it may be to wash the dust from the leaves once or twice during the winter. Try one, and I am sure you will not repent it. I had sixteen lilies—beauties too—from one pot last winter; if any one can beat that, I should be glad to know it. Next in my affections comes a Chinese Primrose (white, single), which I have also had seven or eight years. In summer I put it in the ground in a shady place, where it blooms a little; but in the winter and early spring months it is one mass of beautiful white flowers. A pink one makes a very pretty companion for it, but I have not been so successful with the pink; try one of each, and these, with your Calla and Geraniums, will be a never failing source of delight to all who come in and go out of your doors. But do not imagine that you can slight or forget them day after day, and yet enjoy the same results; no! you must love and care for them daily, if you would have them smile upon you. “Perseverance therein to the end” is Presbyterian doctrine, and is just as good when applied to window gardening as to soul culture. Only try it, and you will surely be convinced, at least this is the experience of one who is

NO NOVICE.

**Wandering Jew.**—I have twice seen inquiries in the CABINET concerning the Wandering Jew. The *Tradescantias*, *zebrina*, *vittata*, &c., are known by this name here at the West. That those who inquire may know whether this is the plant they mean, I will say it is a creeping plant, with leaves clasping the stem, and, when growing freely, throws out little rootlets at every joint. If Mrs. R. H. Truslow will send me a little seed of Apple Geranium, I will send

RUSTIC SUMMER-HOUSE IN CENTRAL PARK.

in exchange seed of Australian Pea, received from California—a perennial, with pink, fragrant flowers.

MRS. FANNIE E. BRIGGS.

Baxter, Jasper Co., Ia.

**A Rustic** poet was heard one day to observe thus: "I never took much to writing poetry till I got to going with that Johnson girl, and then, by gosh, I couldn't help it!"

## PUBLISHER'S ANNOUNCEMENTS.

**Only 15 Cents.**—See how cheap for three months. We think hundreds and thousands of our readers have friends everywhere who would be glad to see the CABINET and take it on trial. Please recommend it everywhere. We send only three months (our choice of numbers) for that price, so as to introduce it everywhere. We do not send it any longer at that price, nor permit a trial subscription to be renewed again except for a full year.

**Chromos for Sale.**—To trial trip subscribers we will sell copies of our chromos for back years for following prices:

"My Window Garden,"	\$0 30
"Gems of the Flower Garden,"	30

**Gardening.**—All interested in gardening, floriculture, plants, trees, shrubs, fruits, greenhouses, &c., will find the **HORTICULTURIST**—also published by us—very desirable. Only 30 cents on trial three months. \$2.10 per year.

**Get up a Club.**—To any one getting up a club of five to the CABINET we give a sixth or extra copy of paper free, to club agent, for 65 cents which includes steel plate engraving. Any one who will get up a large club, should send to us for *Special Terms to Club Agents*, and also get advance copy of new steel plate engraving, "Kustic Wreath," price 25 cents. This amount can be afterwards deducted from remittance after club has been raised.

**Silk Book Marks.**—Our readers can form no idea of the beauty of the Silk Book Marks we offer in our paper. They are simply superb. Every one who has purchased one has been the means of selling another. Agents can do well with them. In lots of a dozen to any one we will sell at a discount. As birthday or holiday presents they are especially appropriate. A special circular, with list of mottoes and prices, sent on receipt of P. O. stamp.

**Better Times.**—Prospects are excellent for subscription this fall and winter. Agents and club agents will find the field more encouraging than for two years past. Begin early and secure orders before people subscribe to other papers, or bad weather prevents good walking.

**Cheapness.**—One year's numbers of the CABINET contain as much reading matter as ten books at \$1.50 each, and twelve pieces of music worth \$5. Here is a real value of \$20, together with a pretty chromo, and postage prepaid, given for only \$1.80.

**Caution.**—Subscribers, when asked to subscribe to the **CABINET** by agents whom they do not know, will always ask them for either a letter of recommendation from some prominent citizen of that place or a letter of authority from the publisher. Subscribers who pay money to unknown agents always do so at their own risk. Publisher is responsible and will furnish the paper only when he receives the money. Subscribers must be sure then to see that their money is sent to the publisher.

**Household Elegancies.**—The announcement of this superb new book is stirring up the ladies wonderfully. Hundreds are writing for terms for clubs to get it as the great premium for this season. We are ourselves more and more delighted with it as the work progresses. It will be issued Nov. 15, instead of Nov. 1, as before announced. It is about the size of a "Window Gardening," full of fancy work, home decorations, household art and elegant ways of adorning a home, with so many exquisite illustrations, that every lady will be fairly crazy with delight when she sees it. We regard it as the most desirable ladies' book ever published, and it will be truly the *grand Gift Book of the season*. Our readers know that anything we issue is so splendid in style and superior in merit, that when we make an announcement, it is received with confidence and the most ready patronage. "Household Elegancies" is the finest work we have yet originated, and we will give it free to any one who will get up clubs as follows:

- |    |   |        |
|----|---|--------|
| 1. | For 30 trial trip subscribers, 3 months, at | \$0 35 |

| 3. | " 10 " 1 year, at - - -                     | 1 30   |
| 4  | " 15 " 1 " - - -                            | 1 30   |
- with copy of Book, and paper one year free.

with copy of Book, and paper one year free.

**Back Nos.**—We can supply back numbers of the CABINET as far as July, 1872, and will club them at special prices as follows to new trial trip subscribers:

For \$2—All back numbers of 1875 and one year advance subscription of 1876, including one chromo, "My Window Garden," and steel plate engraving, "Rustic Wreath."

For \$3—Same as above, with addition of back numbers full year 1874.

For \$4—Same as above, with addition of back numbers  
year 1873.

For \$4.50—Full set of CABINET from July, 1872, to December, 1876, with two chromos and a steel plate engraving, "Rustie Wreath."

**Bound Volumes.**—We can sell bound volumes of 1874 only, as previous to that the large size prevented binding. Price for 1874, \$2.25, bound and mailed.

### CASH PRIZES FOR ARTICLES.

To encourage flower lovers and also those who are interested in household topics to communicate their bits of knowledge, and also to reward them for special efforts, the publisher of the *FLORAL CABINET* offers the following prizes for the best articles submitted to us for special competition. Competitors will note the following

### REQUIREMENTS.

1. Each article must not be over six letter pages long nor less than four.
2. All articles must be labeled "For Competition." Communications not so labelled are supposed to be for gratuitous publication, as we see fit.
3. All articles must be sent to this office by Nov. 15, and prizes will be announced in December number, the prize articles being published in January number.
4. Articles may be on any topic interesting to ladies—Flowers, Gardening, Window Gardening, House-keeping, Faney Work, Elegancies, Home Pets, Household Art, &c.

CASH PRIZES.

- | CASH PRIZES.  |   |   |      |
|---|---|---|------|
| 1. For best article on Flowers or Window Gardening, | - | - | \$15 |
| 2. For best article on Household Topics,            | - | - | 10   |
| 3. 2d best article on each above topics, each,      | - | - | 5    |
| 4. 3d " " " " " " " "                               | - | - | 8    |
| 5. Each of the next five best,                      | - | - | 5    |
- All articles must be sent with letter postage fully prepaid; as far as possible write only on one side of the paper; avoid foolscap or small note paper, and choose large letter paper. Address

46 Beekman Street, N. Y.

## Home Life.

### THE KINGDOM OF HOME.

Of all the myriad forms of government that have existed since the world began the most enduring and beautiful is that of home. A dominion divinely appointed, in no age or country has it equalled the fair proportions of the present day.

It is comparatively easy to make home attractive with abundant means at command; but it is a most invigorating art and science in the opposite case. It calls out the dormant energies and faculties, exciting to healthful brain and finger work. Circumstances are powerful allies; they do not wholly control us. We may be chained to an unceasing round of toil and care, with no outlook on any side.

Then we must look up! High above us let the spirit soar like one of Liszt's grand triumphal strains, "I will hope and I will conquer," and we do conquer if but one heart and life by us is made happy and forever blest. Not what one family have but what they are, that makes the superiority of classes with all truly cultured people.

The most charming room in the house should be the living room, even if the sunshine has to be the principal furniture. No upholsterer's art can introduce a feature that can approximate to it for comfort and beauty. Let it come to the flowers first, freely with its royalty of warmth and splendor. Corolla and calyx will expand and throb and burst into a passion of efflorescence for the lover they adore. Let it light up the glory of the paintings, strike down in golden bars upon the music and play in aureoles around the heads

of children. Many a woman would think three hundred dollars a meagre sum for a year's outlay on dress, yet will such a one for a moment consider that this will procure the principal reproductions of classic

tian schools is a rich recompense for some reduction in expenses. Less than this fills the shelves of the family library. The education of our schools is potent, but that of home paramount to all! The work of the day ought never to prevent at least an hour's recreation

with books by the mother who would command the respect and admiration as well as the love of her children and husband. She owes this to them no less than to herself. We instinctively imitate whatever we love.

Therefore, it is the true ideal of a young girl's heart to sometime occupy a position as honored and pleasant as her mother's;

that of the son to win for himself a lady whose chief charm in his eyes is that she is like his mother! Such a one is dearer to her children to their dying day, in reality and memory, in that peculiar and indefinable relation than any other. None ever take her place. She inspires the highest love and reverence and to deeds of deathless daring, as much as the memorable mothers of Napoleon and Washington, what though they go unrecorded. Her home is a focus of attraction; it does solid good in the

world, and is a perpetual reproach to the neglected and gloomy abodes near it. It puts to shame their monstrous growths of selfishness and pitiful abortions of Christianity. Few are the children that will dishonor such a home, and those will suffer the poignant sorrow of the earliest created for the paradise they lost.

The interest that invests such a place is undying, till the contemplation of the change from the beautiful home on earth to the more beautiful one in heaven seems but a transformation scene. Heaven becomes but a continuation of home.

M. NEALL.

LITTLE COQUETTE.

sculpture in ancient and modern times. This is of itself a rare education and beautifier of home. To have upon our walls copies from the works of the celebrated painters of the German, French and Vene

## Ladies' Bandair.

## BY AND BY.

What will it matter, by and by,  
Whether my path below was bright,  
Whether it wound through dark or light,  
Under a gray or a golden sky,  
When I look back on it, by and by?

What will it matter, by and by,  
Whether, unhelped, I toiled alone,  
Dashing my foot against a stone,  
Missing the love of a dear one nigh,  
Yet thinking, still thinking, of hopes by and by?

What will it matter, by and by,  
Whether with grief or joy I went  
Down through the years with a glad content,  
Ever believing—yes, yes, I—  
Joy would be sweeter, by and by?

What will it matter, by and by,  
Whether with cheek to cheek I've lain  
Close by the pallid angel—Pain,  
Soothing myself through sob and sigh?  
All will be otherwise, by and by.

What will it matter? Naught! if I  
Only am sure the way I've trod,  
Gloomy or gladdened, leads to God;  
Mentioning not of the how, the why,  
If I but reach Him, by and by.

What the sorrow, grief, or unheard sigh,  
If, in my fear of slip or fall,  
Closely I've clung to Christ through all,  
Mindless how rough the path might lie,  
Since He will smooth it, by and by?

Oh! it will matter, by and by—  
Nothing but this: That joy or pain  
Lifted me skyward; helped to gain,  
Whether through rack, or smile, or sigh,  
Heaven! Home! Love! all—by and by.

## OUR HOMES.

How gloomy are some places called home; not a plant in the window; but instead a torn paper window blind, looking as sorry and sad as the inmates themselves. Did I say torn window blinds? Yes, only look! They are not half tacked up, as they should be, and the children not being trained that there is a place for everything (as Carrie Lee says, and she is exactly right, too), have been shooting holes through the blinds, instead of playing out doors with their bows and arrows. "There, now! Charlie, I told you to take that garden-rake out of the house; now that makes two panes of glass you have broke to-day. Here! stick your pa's best hat in there; he won't want it to-day, as I know of. Children, what have you done with the cradle pillow. Here it is, ma; I stuck it in the window, to keep out the rain." At this same home (if you can give it that name), I'll defy you to get into the house without stepping on bits of paper, which should have been put into the rag bag; scraps of calico and muslin, which would have made a lovely quilt; carpet rags, barrel hoops, waiting to strike you in the face, if trampled upon; old bucket bales to hook fast in your dress-skirt, to say nothing of the old brooms, mop, empty fruit cans, dish-pan, and buckets, &c., &c., lying around all over the yard and porch. The wife of such a home is always to be found with a frizzly head, torn dress, and her apron would almost stand alone with dirt, instead of starch; I don't wish to visit such places, but I do say it is enough to drive a husband to hunt another boarding place.

This won't do. I did not take up my pen to write on the subject of dirt, but to tell our kind editor, as well as the readers of the CABINET, that I wish you could all see my CABINET pictures. I have "Primrose Gatherers" framed and hung in the parlor; in a group, in my sitting-room, I have "Gems of the Flower Garden," "Good Night," "Good Morning," "My Window Garden," and "The Morning Song." The two last named I happened to have old frames for, and I covered the frame with candle-wick, and crystalized it with alum, for the lovely song-bird. I thought to add to the beauty of "My Window Garden." I'd put a strip of white paper around it, about

an inch and a half wide, for a margin; and I succeeded in it, to be sure I did. I then covered the old-fashioned frame with raw cotton and crystalized it, and I feel proud of them; they are beauties.

Aunt Leisurely, could you visit Aunt Jemima, I would introduce you to my old man, made of cornstalks; but he is not so good-looking as William Penn. He has a corn-cob pipe in his mouth, filled with the "weed;" but I never have caught him smoking yet; and he has a gun, ready to fire at the big stuffed owl, wild pigeon, or grey squirrel, by which he is surrounded. The wild pigeon has been sitting on a nest of eggs for five or six years—I guess she'll never hatch—and the squirrel sits up with a hickory nut in his mouth. Isn't it strange that these folks can all live in one dooryard? Well, they do, and live in peace. Their dooryard is a board, a little over a foot wide, and about four feet long. This is fastened up to the wall with strong cord (wool twine), and I trimmed the cord with shrubbery. I begged a pasteboard box of our clever storekeeper; cut out a window, and pasted white curtains inside; made a door, and sewed it fast, and left it standing half open, with a white button sewed on for a doorknob; put carpet on the floor, gave the roof a high slope, and covered it and the dooryard, also, with moss. I have a fence all around the yard cut out of pasteboard, and a gate, too; and a graveled walk to the house from the gate. I also have an old-fashioned log cabin, made of cornstalks. Success to the CABINET.

AUNT JEMIMA.

## A NEW ENGLAND THANKSGIVING.

"Thanksgiving Day!" what magic do those two simple words contain. Well we remember how our youthful hearts swelled with gladness as the time drew nigh. Yes! we were going to the old homestead to spend Thanksgiving; eagerly we counted the days until at last the Wednesday evening came; our dreams all that night were of the good times we were to have on the morrow. Early the next morn, long before the great god of day had made his appearance over the mountain tops, we were awakened by the sleigh-bells. Bounding out and peeping through the curtains we saw the big sled drawn up before the door, waiting to be filled, and filled it was in a very short time; father, mother, brothers, sisters, uncle, aunt, and cousins, all crowded in, with many a laugh and shout, and away we sped over the level road, bound for grandpa's. Many sleighs were passed, brimful of men, women and children, who were all brimful of fun. Soon we saw the old red farm-house with its weather-beaten gables and broad chimneys; with one grand shout we all landed safe in the sitting-room, where grandpa's and grandma's cheery voices bade us a hearty welcome. We were soon divested of our wrappings, and gathered around the big fireplace which was well filled with hickory logs, whose crackling and snapping made a merry accompaniment to our happy hearts.

Soon sleigh-bells were heard again, and the well-known forms of Jonathan Peabody and his mother, dear old Aunt Sally, came in view. Out in the hall we bounded, and after cordial greetings Aunt Sally was established in her accustomed place in the chimney corner. Jonathan in his favorite position before the fire, his hands stuffed in his pockets and his thin Yankee physiognomy beaming with supreme satisfaction. Aunt Debby was flying back and forth, her bright sunny face giving pleasure to all who came near her; every time the door leading into the kitchen was opened we stretched our necks and peeped about to see if we could catch a glimpse of the well-filled tables we

knew were there. Soon Aunt Debby's cheery voice announced "dinner is ready!" What a rush! we all knew that on this day there would be no unlucky ones whose fate would be to wait, but we were all seated, from dear old grandpa and grandma, whose heads were silvered by the frosts of many winters, to Aunt Katie's little two-year-old Nellie, whose round blue eyes gazed in wonder at the scenes around her.

How could we wait while grace was said? But we had been trained by pious parents, and reverently bowed our heads while grandpa with tremulous voice asked God's blessing on all, and thanked Him for the bountiful store spread before us. Soon he breathed the low "Amen." Then began the fun—turkey, chickens, and boiled ham; potatoes, turnips, and cabbage were piled on our plates; then came mince pie, doughnuts, and, best of all, pumpkin pie—how we did eat! No caution; no thought of getting sick, or having bad dreams; but we ate and ate until we could hold no more. After dinner the kitchen was soon cleared, and we young folks took possession of it. We played "Blind Man's Buff," "Pussy wants a Corner," and all the games dear to our young hearts. As the shadows lengthened, and the kitchen grew dark, we piled the broad, old fireplace full of logs, and the bright flames cast their ruddy light over the low ceiling and whitewashed walls. Nuts, apples, cider, and popcorn were brought, and we all gathered close around the hearthstone. Stories were proposed, and Jonathan was called, who was always ready to spin his long yarns. He soon had us spellbound with his wondrous ghost stories; some of the more timid glanced uneasily toward the dimly lighted corners, and we all sat (mouths, eyes, and ears open) as if we half expected a white, spectral form to step down the wide, old chimney. The fire burned low; and, at Aunt Debby's call, we all went in where grandpa was seated in his armchair, with the time-worn bible on his knee. He read a psalm of thanks, and offered up a fervent prayer that we all might meet on many other Thanksgiving Days, and when death called us home, we might all be united in that land where there is one eternal thanksgiving. Good nights were then spoken, and we were soon in the land of dreams.

Stockwell, Ind.

SUE O. PIERCE.

**Mexican Beauties.**—Bet. Perley Poore writes from the City of Mexico: "It used to be said that the Mexican ladies began the day in black, on their knees in chapels, and ended their waking hours amid the blaze of dress and jewels in the family box at the opera. I think that the matin prayers are rather out of fashion, but an opera box is still an indispensable necessary of life. Social visiting is not common, but ladies are 'at home' in their opera boxes, where their friends call upon them between the acts. The moment the drop-curtain descends there is a crackling of the wax matches in use here, cigarettes are lighted, and the gentlemen go the rounds of their lady acquaintances, who receive them courteously, coquettishly using their fans, while their lustrous eyes welcome favorites. A gentleman who has resided here for some time declares that if the Mexican ladies are not so variously beautiful as the women of the northern lands, in whose veins the blood of many nations has mingled, they are most lovable creatures in spite of the uniformity of their national type. There is a degree of exquisite tenderness and an expression of affectionate sincerity in the faces of the Mexican women which instantly wins not only respect but the confidence of the gazer. The toilets we saw at the opera were elegant, but not in any way gaudy.

## Household Elegancies.

### EASTER CROSS AND BASKET OF FLOWERS.

BY MRS. C. S. JONES.

In answer to Mrs. James A. Morgan's request to give instructions in making Easter Cross and Basket of Flowers, I am somewhat at a loss to know whether she means with wax or natural flowers. To make a basket of natural materials entirely, first obtain one of the tiny willow baskets sold at the floral stores, or construct one of pasteboard or wire (in the latter case make only half a basket, as if it were cut longitudinally). By cutting four pieces of card, wider at top than bottom, and sloping in the sides, a recurved form will be given as in the imported baskets; sew the edges together, with a slender wire along them, fasten in a little semi-circular (rather half-oval) bottom, put a wire handle across, and you have a pretty skeleton which may be covered with scales of cones, small lichens, colored straw, or moss; fasten this half basket against a piece of white card and fill with tiny leaves in autumn shades (that have been duly pressed and fastened to thread wire), feathery and downy grasses (a few crystallized), small Immortelles or Everlasting Flowers, and sprays of Ferns and Moss. A few very small shells fastened on here and there add to the effect. Make a log of a mossy little tree branch, and place beneath the basket, dusting it with frosting around the edge of the card; make a border of Fern fronds both brown, and pressed green ones, and a motto in fancy letters by fastening the leaves and tips of Fern fronds on the traced pattern. This will, of course, require a recess-frame.

#### EASTER CROSS.

Take the stiff, white-tufted moss found on rocks and crystallize sufficient to cover a cross (of any dimensions required), which should be made of thin strips of wood. Cover sides and back of a recess with black velvet, and fasten one-fourth the distance from the bottom a piece of cardboard (or section of a box) so that it will extend out like a shelf. It should be not quite as deep as the depth of the recess, and extend only across one-half the frame (in the centre). In this shelf, and about in the centre of depth and width, cut a slit sufficiently large to accommodate the body of the cross, fastening it in at the bottom and placing a piece of wood behind the arms to keep it in position, and slightly projecting from the back. The cross must be made of size suited to capacity of the recess, as if too large it gives a crowded appearance, and in a small one looks lost in the centre of a capacious frame; to have one two-thirds the size of the recess will be a good size. Next cover the shelf with moss, allowing it to hang down in graceful sprays over the edge, and on it arrange clusters of grasses, groups of flowers, and directly against the back a little range, as of mountains in the distance, made of shaded bark. Around the base of the cross group flowers and grasses, with a delicate vine climbing up the body and falling over the arms. This may be made by fastening small leaves and moss on wire with scarlet berries and scarlet sealing-wax, or white wax painted purple or yellow; these must be adapted to the size of the leaves, &c., and all embellishments should be made to correspond with the cross and recess.

When finished touch parts with fine gum-arabic mucilage and dust with diamond frosting powder,

such as is used in waxwork (or varnish with demar and then frost). Make a tiny crown of briar rose and three nails, which cover with calcined plaster until perfectly white (or if preferred leave of natural color); place these on the green moss beside the cross. The crown must be only half the width of the cross, and the nails in proportion and heavily frosted.

Another beautiful cross is made of branches of Sweetbriar twined together, and trimmed entirely with Violets and other spring flowers in wax. A pure white one is made by covering with horn scrapings, then ornamenting with Ivy leaves and purple berries, with clusters of scarlet Geranium at the base, and trailing sprays of the Partridge-vine falling from the lower part, the scarlet berries lying on the moss covering the shelf. This will be found exceedingly beautiful and chaste.

A very artistic and lovely cross is made thus: Prepare the cross and base as previously described, cover the cross with white muslin and make a number of Rose and Convolvulus leaves by cutting from the muslin, with gilt molds or natural leaves as patterns. Paste three of these together, using fine flour paste. Make also some small Roses and buds by cutting scalloped circles of several sizes, gathering the smallest around wire stems and adding the others (as in paper flowers), curling and moulding the petals while damp with the paste. The buds make of the smaller circles and a few single petals surrounded by a calyx cut as in nature. It is a good plan to paste the muslin together in large pieces, and then to cut out leaves and flowers while partially damp, pressing smooth with a warm iron. Mold all the leaves in order to vein them, and curl each petal of the Roses. Make tiny Convolvulus flowers by cutting three-fourths of a circle, fastening the edges and making stamens of thread. Arrange a vine of this and clusters of the Roses, buds and leaves; finish the cross by sewing or pasting folded strips down the edges, as if carved in moldings or panels, and if liked make three steps or a deep base, and cutting I. H. S., of muslin in several diminishing sizes; paste one on another, and fasten this monogram on the base. When the preliminaries are finished, make a wash of finest French plaster, mixed in thin gum-tragacanth water, and either by quickly painting with a brush or dipping each piece in, cover the whole with a uniform, smooth coat. Mix but little plaster at a time and work with rapidity lest the plaster set or harden before it is applied. When all the pieces are finished fasten the cross in position, as before described, and group the Roses and buds around the base, not over-crowding; make Convolvulus leaves and flowers to twine around the body and cluster thickly on and over the arms and top and fall in graceful sprays here and there, using very small ones for thin parts. Varnish with fine demar, and dust with finest diamond powder. This cross is exquisitely beautiful.

#### WHITE WAX FOR FLOWERS, ETC.

I would say to Mrs. Morgan, in answer to her next question regarding the coloring of wax, that I never use colored wax excepting in some cases of mottled autumn leaves, bright scarlet or yellow ditto, or the shades of green; these I purchase in sheets colored, but for flowers I use white wax colored in imitation of nature with the regular wax colors put up in the "Homo vials." In some cases I moisten with thin gum-arabic water (the least drop) where glossy textures are required, but in soft velvety surfaces I endeavor to produce the bloom of nature, which is best imitated by using powder with the tip of the finger, or

with a "stumper," which is merely a camel's hair brush cut off almost to the end of the hair. As Mr. Williams applied to me, I have given my experience, but perhaps some of the other sisters will know of some method of using oil paints on wax.

#### VASES FOR WINTER GRASSES, ETC.

As elegant vases are costly affairs, I will tell our friends a method of making little "beauties" at small cost. Obtain some pretty pictures (the "scraps" sold at fancy stores answer finely), either paper or muslin, gilt paper, some colored paint mixed with turpentine, and lamp chimnies of the kind that turn over at the top like a lamp shade. Clean the chimnies and fasten on round boxes as bottoms, paste rims or bands of gold paper around the top, and gum the pictures on (from within); then, when every edge is tight, give the whole a coat of demar varnish (inside); then a coat of paint, also within; fill with sand, and "there you are."

MRS. C. S. JONES.

**Easter Cross.**—Will Aunt Carry please give the dimensions of the Easter Cross, the directions for making which were given in the February number? Will she also tell us if by "white frosting" she means diamond dust? She says, "when dry dust the frosting over it"—does she mean over the whole surface of the cardboard, or only the cross? A SUBSCRIBER.

**Answer.**—I gave the size of the recess, and the cross was four inches smaller from top, bottom and end of arms; but the cross *may be* of any size desired, from four inches to as many feet, but the ornamentation must correspond with the size, using tiny leaves, berries, &c., for a diminutive cross, and entire clusters of Fern fronds, large flowers, &c., for one of large size. Diamond dust will, perhaps, answer better even than the ordinary frosting, of which the former is made. I use the mica, sillex, or "frosting," because I can purchase as much or as little of it from the druggists or art stores as I please. I said "when dry touch lightly with mucilage," &c., meaning, of course, when the work just done was dry, the glue with which the mosses, &c., were fastened. You only frost and whiten the cross, using care not to let any adhere to the card-board. Shall be glad to answer any questions and make this work as clear as possible. C. S. J.

**Bible Autograph Albums.**—Every one has in store some sort of pictures, if only those which may be found in the illustrated papers, now so common; and many of you are probably the happy owners of nice steel engravings. Procure a pretty scrap-book, paste your pictures nicely in it, and get your friends to exercise their scriptural knowledge by writing an appropriate verse under each, accompanied by their autographs. Rare and expensive pictures may be used by those who have them; but, even with cheap and plain ones, a pretty album may be made, which will give you a pleasant and profitable Bible reading, and be a pleasant reminder of loved-friends.

**Rustic Frames,** skillfully designed, made of all the different varieties of burrs; of all varieties of mosses; of nutshells, every kind; of stones, all the prettiest pebbles that can be found, look much better, than to have a mixture of every thing that can be available for fancy work frames.

**Worsted Tidy for Hair-Cloth Rocking-Chair.**—Crocheted of black worsted, netted, for groundwork; a vine of roses and rosebuds, running over the network, for the figure. The vine, etc., of variegated green worsted; the roses crocheted of red variegated worsted. A handsome tidy for a parlor.

## Household Elegancies.

## HOUSEWIFE.

The Housewife illustrated on this page is so good that with our description any lady can, we think, be able to make one quickly. It is 6 inches wide and 10 long; the outside of green morocco, and the linings and pockets of green silk; it is bound all around with green galloon. The spools are held by a piece of strong wire, which is fastened at one end into a round pincushion, and at the other fits into a piece of pasteboard, covered with silk. A piece of tin bent in the shape of a half tube (cut in two lengthwise) is placed between the outside and lining from A to B, and fastened there; a round pincushion closes one end and the pasteboard the other. The pincushion is fastened in by only half a dozen stitches, so that the wire on which the spools are strung may be movable. This housewife may be rolled up and tied with a bit of ribbon. It may also be made larger, a foot wide and length in proportion.

## WALL-POCKET.

Materials: Gray yarn, green woolen rep, stout cardboard, one small brass ring. This wall-pocket, which is a handy repository for newspapers and the like, consists of a back part  $11\frac{1}{2}$  inches wide, 12 inches high in the centre, and slanting towards the sides, where it is 9 inches high, and a front part 9 inches high and of the same width as the back. These parts are covered with green woolen rep, and the front part is decorated with a square tidy crocheted or tatted in some pretty design with gray yarn. At its top, the front part is joined to the back by a strap of ruched merino  $3\frac{1}{2}$  inches long and  $1\frac{3}{8}$  inches wide, crossed in the centre by a double cord of gray yarn. The lacing

WALL-POCKET.

of gray cord at the sides prevents the papers in the pocket from falling out. Pinked ruchings of merino, and gray yarn cord and tassels, arranged in the manner the illustration indicates, completes the decoration of the pocket. A brass ring at the top of the back part serves to hang it up.

## SOFA-CUSHION.—CANVAS WORK.

Materials: Canvas, four shades of sepia-colored worsted, four shades of a somewhat more reddish color in floss silk, silk lining, stuffing, trimming, etc. The embroidery is executed on canvas, in broad stitch and stem stitch; the blank spaces left are filled up with cross stitches. Four shades of sepia-colored worsted

HOUSEWIFE.

are used for the arabesques, which are worked in stem stitch, and for the leaves in the bouquets. Four shades of a more reddish tint of floss silk are taken for the flowers and tendrils, but each flower is embroidered with light worsted beneath the silk. The corn flowers are worked of one of the darkest shades of the worsted,

the net-work over them of a middle shade of floss silk. The stamens in the centre of the flowers consist of knots of golden yellow silk in three shades. For the filling in, choose a lively color, corresponding with the decoration of the room. The edge is surrounded by a ruching of silk bound with satin, and points of silk beneath it. This design may be worked on velvet or cloth, and is equally suitable for round cushions or chairs.

**Star Frames.**—Very pretty frames are made with stars made from paper. I will not describe them here, as some reader of the CABINET has already given their description. First make your frame the shape of a box, then put two rows of stars in the bottom of the frame and on each of the four sides, then in the centre

make a cross of your stars; they are to be set on black paper, or most anything black will do. I painted paper black for mine. Now fasten your glass with strips of cardboard on the frame with material to match the inside, cut stars or scallop gold-paper and glue on the strips that holds the glass; then attach a

cord and tassel (most any cord will do) and hang it in your sitting-room, and you will have something that will be admired by all, as it looks very much like wax-work. AMELIA.

**Ornamenting Flower Pots—Imitation of Japanese Inlaid Work.**—A method of ornamenting common pots, and one within the power of every one to accomplish, is by means of various colored autumn leaves, with a few gilt ornaments and some strips of plain gilded paper, such as is sold by the yard. The surface is painted ebony black and varnished, polished with pumice-stone and revarnished until smooth and even; the leaves, which should have been pressed perfectly flat, are then covered with mucilage (or very thin white glue) and pressed upon the surface in the place designed, using care to arrange the colors and sizes so as to form a pleasing and tasteful combination; put two or more rows along the upper edge, then a garland of tiny leaves, then another band of gold. This forms a beautiful border for the top. Have a soft napkin to hold and press each piece in place until firmly fixed. When finished paint with a coat of isinglass size, when dry varnish with copal. The appearance of this work when completed is exceedingly fine. Chintz, or the pictures used for Potichomanie work a number of figures, scenes and devices, such as we see upon Chinese work, when entirely covered (filling in with tiny bees, bugs, flies, leaves and odd devices); varnish with demar varnish. Another beautiful mode to imitate the Chinese style is to paint the ground black, and obtaining the gold and black figures used in Potichomanie fasten them upon the surface in the manner before described. A large piece, such as a pagoda with boat, figures, houses, &c.; then scattered over the surface the small separate figures, with a border around the edges.

**Flowers.**—For a rose, take a piece of wire for the stem any length desired, take a small button and fasten to the end of the wire, use paper cambric, pink and white is the nicest for leaves, cut out twelve pieces of cambric, three different sizes, having four in each

SOFA-CUSHION.

size, double four times, and cut round in the shape of a rose leaf; fringe some yellow tissue paper for the centre; you can use green cambric for leaves, or take green paper, which you can paint yourself. For a basket, make any pretty shape, and fill your basket with cotton, and then glue on the roses. HATTIE.

## Home Pleasantry.

### LOVE.

Hath the Lily no sweetness when closed to its sleep?  
Have Roses when dying no fragrance to keep?  
Love, pure as a Lily, is sweeter, and throws  
The fragrance of Roses wherever it grows.  
'Tis the gift of our Father, His own sweet breath,  
Oh, what he has given, how can it have death!

### POPPING THE QUESTION.

Said she, "Pray tell me, if you can,  
Why men so bashful are;  
They fall in love and dream and sigh,  
And worship us afar;  
But when they strive to tell the tale,  
They stutter, hesitate and fail!

"We ladies like a man, you know,  
One not afraid to speak—"  
And here I thought a blush appeared  
Upon the maiden's cheek;  
Then to myself I said, "I see  
This maiden's heart belongs to me."

Then out I spake—"Oh, lady fair,  
My heart, my life is thine!  
And since I boldly speak my love,  
Pray wilt thou not be mine?"  
"No, sir!" said she, with wondering stare,  
"Strange, how presuming some men are."

### VERY DRY.

On a sleeping-car the other night a lady exclaimed in a slow and solemn voice, "Oh, how *dry* I am!" There was a moment's pause, and again rung out, "Oh, how *dry* I am!" Another moment passed, and the dozing sleepers were once more startled by the sepulchral exclamation, "Oh, how *dry* I am!"

"Won't somebody get that woman a drink?" howled an old gentleman, who being rheumatic and occupying an upper berth could not very well do it himself.

The demand was soon complied with, and the grateful sound of gurgling water was soon heard. Then there was a moment of silence, and following it came the same solemn tones, "Oh, how *dry* I was!" There appeared no doubt of it by the occupants of the car, and if the truth could have been known, they were unselfishly glad she had found relief, and they composed themselves afresh for sleep. Then the voice again smote the air, "Oh, how *dry* I was!" Everybody started and every eye was distended. "Oh, how *dry* I was!" repeated the grateful woman.

"Then dry up!" screamed the gallant old gentleman in the upper berth. She did.

An Iowa woman went to church one Sunday and "experienced religion." Arriving home, she called her children about her and said: "I am pious now, and I am going to give you two days to get religion. If you don't do it I'll whale your hides off. I have learned my duty. Do you hear me?"

An old Irish seaman at a prayer-meeting in Dublin, in relating his experience, stated that when at sea in storms and tempests, he had often derived great comfort from that passage of Scripture, "Faint heart never won fair lady."

A lady occupying letter B at a hotel wrote on the slate as follows: "Wake letter B at seven; and if letter B says 'let her be,' don't let her be, nor letter B be; because if you let letter B be, letter B will be unable to let her house to Mr. B, who

is to call at half past ten." The porter more of a boot-black than an orthographist, after studying the above all night, did not know whether to wake letter B or to let her be.

THE YOUNG LARKS.

MAKING THE "CAT'S CRADLE."

A widow was weeping bitterly at the loss of her husband, and the parson tried to console her. "No, no," said she, "let me have my cry out, and then I shan't care anything more about it."

"No estin appuls in school ours!" reads a sign on the blackboard of a school-house in enlightened old Massachusetts, where Education is supposed to sit on the top rail and make faces at Ignorance.

A three-year old boy asked his mother to let him have his building bricks to play with; but she told her darling it was Sunday, and therefore not proper for him to have them. "But, mamma," said the hopeful, "I'll build a church." He got the bricks.

"I guess I'll take this book," remarked a Chicago lady to the clerk of a book store; "it's got twice as much gold leaf on the cover as any of the rest."

"Sarah was a good wife," said a Georgian, speaking of his last wife, "but she could never do up a shirt real nice."

A Clergyman being much pressed by a lady of his acquaintance to preach a sermon the first Sunday after her marriage, complied, and chose the following passage in the Psalms as his text: "And there shall be abundance of peace—while the moon endureth."

"Gentlemen and ladies," said the showman, "here you have the magnificent painting of Daniel in the lion's den. Daniel can be easily distinguished from the lion by the cotton umbrella under his arm."

"What's the matter, Uncle Jerry?" said Mr. —, as old Jeremiah R. was passing by growling most furiously. "Matter!" said the old man stopping short. "Why, here I've been lugging water all the morning for Dr. C.'s wife to wash with, and what d'ye s'pose I got for it?" "Why, I suppose about ten cents," answered Mr. —. "Ten cents! she told me the doctor would pull a tooth for me some time."

When the flood had commenced in Galveston, an old colored woman, whose house the water had not yet reached, was warned to get out of the way of danger. Firm in her faith that according to Scriptural promise the world would not be drowned again, she refused to budge, and stayed in her house until it went to pieces. Then she paddled ashore on the bed of a table, with a good deal of her faith washed out of her, but with no other remark than this: "I 'clare to goodness, dis yer's bery 'markable!"

"Man," says Victor Hugo, "was the conundrum of the eighteenth century." Woman is the conundrum of the nineteenth century; we can't guess her, but we will never give her up. No never.

"George, dear, don't you think it rather extravagant of you to eat butter with that delicious jam?"

"No, love; the same piece of bread does for both."

A Saratoga belle writes home: "It's horrid here—not a man in town worth over \$15,000."

### FORGET ME NOT.

There is a flower, a lovely flower,  
Tinged deep with Faith's unchanging hue;  
Pure as the ether in its hour  
Of loveliest and serenest blue.

The streamlet's gentle side it seeks,  
The silent fount, the shaded grot,  
And sweetly to the heart it speaks,  
Forget Me Not. Forget Me Not.

## Housekeeping.

## RUGS.

As rugs are almost indispensable articles in a house perhaps one or two ways of making them may be acceptable to some one.

Take a coffee bag, cleaned well; cut the size and shape you wish; work a vine, or any pretty design you wish, around the edge, with coarse, Germantown yarn; put an initial, a star, or any figure you choose, in the centre, and bind the edge with woolen braid.

Yarn rugs, for common use, may be made of old woolen stockings. Make your foundation of burlap; cut your stockings in strips, about one and a half inches wide; ravel them, leaving about one-fourth of an inch for sewing on to the foundation. Begin at the outer edge, and sew around the rug the raveled edge of each row, just covering the part sewed on of the preceding one. Take Etruscan cloth, or Turkish toweling, cut in any shape you like; cut out figure, of thick flannel, or bright colored cloth, and button-hole stitch them on with worsted or fine yarn; cut a border of some pretty design, put it on in the same way, and either bind the edge or trim with short heavy fringe. By using a foundation of old, but strong white cotton, lined with something firm and durable, and putting on figures of black and bright-colored cloths, and trimming the edge with a strip of black cloth scalloped, a very pretty rug may be made.

Chenille rugs may be made from old bits of all sorts of bright and neutral tints of woolen, silk, and cotton, which are usually considered fit for nothing but the rag bag. Cut these in small bits, of almost any shape as their form will allow (though it is better to cut them nearly square, if you can); take a coarse needle and strong linen twine, double in long needlefuls, and string these bits of rags. After the string is full, take some shears and trim off the ragged edges, so as to make the roll as round as you can; when you have enough string, take a piece of tapestry or Brussels carpeting for a centre, and sew on the edge a strip of your chenille; then, on that another strip, and so on, just as you do braided mats. They are indeed very pretty, and children can do the stringing as an occasional pastime.

MARY I. HERRON.

## THE TWO WAYS.

"Good morning, Annie; how is thee to-day?"

"Good morning, Auntie; I am very well, and so glad to see you, though you find me very busy. I have undertaken a task I always dread, and, that is, paring quinces; they are hard and often rough; I am fortunate if I do not cut my fingers, before the day is over."

"I can help thee. My method is better than thine, as it saves both time and patience. Will thee try it?"

"Certainly, I will, Auntie, with pleasure."

"Put a large pan of either cold or warm water on the stove, where the water will heat slowly; put the quinces in the water, not too many at once; they will be ready for our knives in a few minutes."

"Excuse me, Auntie; but I would rather not boil them."

"Yes, Annie; we will allow them to remain in the water only long enough to soften the skin; we can take these out now and put in the rest. Pare one, Annie, and let me know thy opinion."

"Oh! Auntie, this is splendid. Only see, I could not pare a peach with more ease. My parings, too, are nicer for my jelly, for by the old method, the par-

ings were cut in little bits, and the decayed part so hard to remove."

"Tell me, dear, where I can find something to put the rest of the fruit in, as they are all soft enough, then I can assist to pare."

"Look on the top shelf, Auntie, and you will find a nice tin pan."

"May I take one of these large yellow or brown bowls I see here?"

"Help yourself, Auntie, to anything you see; but why do you like the bowls?"

"Because, if you leave pared fruit for a short time in a tin vessel it discolors the fruit. I see thee looking very curious at this knife. Thee must not think I am putting on airs; I always carry this silver fruit-knife in my pocket, to use on such occasions as this. I never pare fruit with a steel knife, for it makes my fingers black. I am wonderfully proud of my hands."

HERRIOTT.

## HOUSEHOLD HINTS.

**Good Bread.**—For yeast, take six potatoes, pare and grate them, steep a handful of hops in one pint of water, turning the liquid on potatoes and scalding it together, stir it well, when nearly cold add one teacupful yeast, salt, ginger, and sugar, to your judgment. To make the bread, take two quarts milk, one and one-half teacupfuls yeast, sift and stir as much flour as you can with the spoon, let it stand over night to rise. In the morning knead it into three loaves—one of which in biscuit for breakfast—let them rise and then bake. Take a six quart pail, a cover to it, to mix in.

**Lemon Pie.**—The juice and rind of one lemon grated into one cup of water, one cupful of loaf-sugar, the yolks of two eggs, three tablespoonfuls flour. Frosting, beat the whites of two eggs, add four tablespoonfuls of sugar, spread on the pie, and bake lightly in the oven.

**Ginger Cake.**—One egg, one and one-half cupfuls molasses, one large spoonful ginger, one teaspoonful allspice, one large spoonful butter, one and one-half spoonfuls cream, the same quantity of sour milk, one teaspoonful soda, one-half teaspoonful cream of tartar, beat well together; made of coarse flour, same consistency as griddle-cakes.

**Cookies.**—One egg, one cupful sugar, two-thirds cupful sour cream, one teaspoonful saleratus, one tablespoonful butter, two teaspoonfuls caraway seed, flour enough to roll. The foregoing are original.

**Crullies.**—One egg, one spoonful sweet cream, one pinch saleratus, four spoonfuls sugar, spice to your taste, flour enough to roll out stiff, and fry them in lard.

**Advice to the Carver of Fish.**—With epicures, the fins of all large fish are considered a delicacy, and should be helped to your guests when the fish is being served. The thickest parts of fish are the most esteemed, but a little of both back and belly should be offered to each guest at table, so as to gratify all tastes. Never help any one to the green parts about the eyes of a cod's head. The shoulder part of the cod-fish and mackerel, the cheek of John Dory, and the palates of carp, and cod-sounds are the most admired by epicures. Of all fish, the tail is the least desirable portion, except in lobsters. Short-grained fish, such as salmon, should not be cut crosswise, but lengthwise; the fat of salmon is much prized. All fish should be helped in tolerably thick slices.

**To take mildew out of cotton or linen,** wash in a strong solution of chloride of lime.

**Corn Muffins.**—Beat two eggs and tablespoonful of butter together thoroughly, add three cupfuls milk, one of corn-meal, and four of prepared flour, bake in hot oven.

One important item in making corn-bread is nearly always omitted in published recipes, namely: To put in the soda or saleratus the last thing, and just before it is put in the oven.

**Make jelly** in shallow pans and in small quantities. This way will insure solidity.

**Custard Pudding.**—Four eggs well beaten, and small tablespoonful flour, wet up with milk; have a quart of milk, boil and stir in the flour briskly with some kind of flavoring, put in eggs, boil three or four minutes, then put in whatever dish is going to the table—put one-half cupful white sugar in the bottom of the dish, then put one cup on the top of the pudding and set it in a cool place. Sauce cold.

**Baked Indian Pudding.**—Scald a quart of milk and stir in seven tablespoonfuls Indian meal, a teacupful salt, a teacupful molasses, and a tablespoonful ginger or cinnamon, bake three or four hours.

**Roasting** is the best method for cooking meat. It develops the flavor and preserves the juices, and is easily digested. It loses twenty-five per cent. of its weight in roasting, which is chiefly water. When first commenced, the heat should be great enough to coagulate the albumen on the surface, and thus form a slight crust; then cook slowly until a fork will readily enter any part.

Many people do not understand how to make nice baked beans. Bake your beans all day Saturday, and if convenient let them stay in over night, baking full twenty-four hours, and our word for it, your beans will come out in the morning smoking, with a flavor that will make your mouth water to taste of them, and your breakfast will be the best you ever had.

Hot alum will destroy insects indoors or out, says the *Journal of Chemistry*—one pound of alum to two quarts of water. It should be used while nearly boiling, and applied to all the cracks and crevices.

**Brown Bread.**—The Sweetest bread ever made. Take three pints of coarse yellow corn meal, scald it with three pints and a half of boiling water, add two pints of coarse rye meal after the corn has cooled. Knead thoroughly with the hands. Take it out into a stoneware crock which is a little larger at the top. The quantity here given will take a vessel which holds five or six quarts. Place it immediately in the oven, after smoothing over the top with a spoon frequently dipped in cold water. Cover with a stone or iron plate, and have but little heat in the oven. It should take three hours to begin to bake, then bake slowly four hours. Leave the loaf in until the oven cools off, if it is several hours longer. It should be dark-colored, light and firm, with a good soft crust. A round-bottomed iron kettle will do to bake in. Try it.

**Warts** may be cured thus: Immerse the parts on which the warts are developed in a strong solution of black soap. This causes a slight canterization of the surface of the wart. The loosened tissue is to be removed and the application repeated every day till the cure is complete.

**Safety** requires that lamps be filled every day. As the oil burns down, a highly inflammable gas is created on the surface, and if the oil is allowed to burn very low, it gives room for the collection of a quantity sufficient to cause an explosion, which a simple jar of the table will sometimes produce.

## HOUSEHOLD ELEGANCIES.

The most beautiful Ladies' Book ever published.

CHOICE, CHARMING, CHEAP.

GET IT FOR YOUR  
WORK-BASKET OR PARLOR.

A BEAUTIFUL GIFT  
TO FRIENDS.

By HENRY T. WILLIAMS and  
Mrs. C. S. JONES.

READY NOV. 15.

A splendid new book on Household Art, devoted to a multitude of topics, interesting to ladies everywhere. Among the most popular topics are: Transparencies on Glass, Leaf Work, Autumn Leaves, Wax Work, Painting, Leather Work, Fret Work, Picture Frames, Brackets, Wall Pockets, Picture Boxes and Baskets, Straw Work, Skeleton Leaves, Hair Work, Shell Work, Mosaic Corners, Card Board Work, Worsted Work, etc., etc.

Hundreds of exquisite illustrations decorate the pages, which are full to overflowing with hints and devices to every lady how to ornament her home, cheaply, tastefully, and delightfully with fancy articles of her own construction.

By far the most popular and elegant gift book of the year.

300 Pages. Price, \$1.50.

HENRY T. WILLIAMS, Publisher,

P. O. Box 2445.

46 Beekman St., New York.

## WINDOW GARDENING.

By HENRY T. WILLIAMS, Editor The Ladies' Floral Cabinet.

A New Book, with 200 Fine Engravings and 300 pages, containing a Descriptive List of all Plants suitable for Window Culture, Directions for their Treatment, and Practical Information about Plants and Flowers for the Parlor, Conservatory, Wardian Case, Fernery, or Window Garden. Tells all about Bulbs, of House Culture, Geraniums, Hanging Baskets, Insects, Plant Decoration for Apartments. The illustrations are unusually beautiful, and many of them perfect gems of exquisite beauty. Price \$1.50, by mail, postpaid.

HENRY T. WILLIAMS, Publisher,

P. O. Box 2445.

46 Beekman Street, New York.

## FLORENCE SKATES.

Florence All Clamp-Spring Skate,

The Spring-Clamp and Strap Skate.

Is fastened to the foot by Clamps only, and is readily slipped on and fastened by a few turns at the heel. The thumb screw being a part of the Skate, can at any time be tightened. No parts exposed to be clogged with ice.

Price \$3.50.

This is a light, elegant and most desirable style. The Spring Runners in this, as well as in the All-Clamp Skate, give greater ease to the feet and ankles in skating than is possible in any other style of Skate. Price \$3.00, complete with straps.

### THE FLORENCE STEEL CLUB SKATE.

The best Skate in the world for the money. Beware of Cast Iron Imitations.

Price \$1, with heel sockets and straps complete.

Every Skate Warranted Steel and free from any Imperfections.

Sent by express or mail, charges prepaid, on receipt 25c. in addition to the above prices.

MANUFACTURED BY

THE FLORENCE SEWING MACHINE CO., Florence, Mass.

## BEAUTIFY HOME

BY PAINTING WITH THE

## Averill Chemical Paint

The most beautiful and durable exterior paint known. White and all the fashionable shades are sold by the gallon ready for use. Sample Card of Colors, furnished free by dealers generally, and by the

## MODEL STEAM ENGINES

FROM 50 CTS. UPWARDS, FROM GEORGE PARR'S

UNEQUALLED MODELS OF

Steam Cranes, Vertical Engines, Circular Saws, Paddle Engines, Steam Lathes, Steam Hammers, Horizontal " Steam Rotors, Locomotive Engines, Portable Engines, Steam Pumps, Marine Screw Engines, Beam Engines, Steam Winches, Powerful Engines, Electric Engines, Fire Engines, Water Motor Engines, requiring no fuel, Unright Engine, Miniature Machine Shop Engines to run with Kerosene Oil or Gas for domestic purposes. Miniature Mechanical and Optical Figures and Saw Mills run by above appliances.

Also, Celebrated Amateur's Lathes, Tools and Fittings of every description. Inimitable Castings for \$1.00 per set and upwards, by means of which numbers of the above steam Engines, Lathes, etc., have been successfully made by Amateurs. Thousands prove the unparalleled success of the above models and castings.

For full description and prices of above, together with the requisite tools, see "Parr's Technical Guide," 8vo, Eighth edition, Sixty-fifth thousand, over 150 pages with nearly 600 splendid illustrations, giving full instructions in Sorrento Fret Carving and Scroll Sawing and 150 Parlor Experiments in Chemistry, the wonders of Microscopy, the beauties of model telegraphy, together with other useful and scientific information; also all necessary instructions how to buy, how to use, and how to make model engines. Post free, 30 cts. Address, GEO. PARR, Mfr. of Mechanics' Tools, BUFFALO, N. Y.

## THE YOUTH'S COMPANION

A WEEKLY PAPER FOR

## YOUNG PEOPLE AND THE FAMILY

THE COMPANION aims to be a favorite in every family—looked for eagerly by the young folks, and read with interest by the older. Its purpose is to interest while it amuses; to be judicious, practical, sensible, and to have really permanent worth, while it attracts for the hour.

It is handsomely illustrated, and has for contributors some of the most attractive writers in the country. Among these are:

J. T. Trowbridge, Louisa M. Alcott, Edward Eggleston, Rev. W. M. Baker, Dr. I. I. Hayes, Louise C. Moulton, Rebecca H. Davis, C. A. Stevens, Abby Morton Diaz, Harriet P. Spofford, Edward Everett Hale, Geo. M. Towle.

Its reading is adapted to the old and young, is very comprehensive in its character. It gives

Stories of Adventure, Stories of Home and School Life, Letters of Travel, Editorials upon Current Topics, Historical Articles, Biographical Sketches, Religious Articles, Tales, Poetry, Selections for Declamation, Anecdotes, Puzzles, Facts, and Incidents.

Subscription Price, \$1.75. This includes the payment of Postage, by the publishers. Specimen copies sent free. Please mention what paper you saw this in.

PERRY, MASON & CO.,

41 Temple Place, Boston, Mass.

The very best ladies' magazine published.—*Seneca Falls (N. Y.) Courier.*

CHEAPEST AND BEST!

## Peterson's Magazine

Every subscriber for 1876 will be presented with a superb, large-sized steel engraving of Trumbull's celebrated picture of "The Signing of the Declaration of Independence." This will be "PETERSON'S Centennial Gift."

"PETERSON'S MAGAZINE" contains every year 1,000 pages, 14 steel plates, 12 colored Berlin patterns, 12 mammoth colored fashion plates, 24 pages of music, and 900 wood cuts.

Great improvements will be made in 1876. Among them will be a series of illustrated articles on the great Exhibition at Philadelphia, which will alone be worth the subscription price. They will be appropriately called

## THE CENTENNIAL IN PEN & PENCIL

The immense circulation of "PETERSON" enables its proprietor to spend more money on embellishments, stories, etc., than any other. It gives more for the money than any in the world.

Mammoth Colored Fashion Plates ahead of all others. These plates are engraved on steel, TWICE THE USUAL SIZE, and are unequalled for beauty. They will be superbly colored. Also, household and other receipts; in short, everything interesting to ladies.

N.B.—As the publisher now prepays the postage to all mail subscribers, "PETERSON'S" is CHEAPER THAN EVER; in fact is THE CHEAPEST IN THE WORLD.

## Imperial Granum

THE GREAT MEDICINAL FOOD.

This justly celebrated DEITETIC Preparation is, in composition, principally the GLUTEN derived from the White Winter Flint Wheat Cereal, a solid extract, the invention of an eminent chemist.

It has not only been highly recommended, but certified to by a large number of CHEMISTS and PHYSICIANS—representing a very high degree of medical science—as the

SAFEST, MOST ACCEPTABLE AND RELIABLE FOOD

FOR THE GROWTH OF INFANTS AND CHILDREN, AND FOR MOTHERS LACKING SUFFICIENT NOURISHMENT FOR THEIR OFFSPRING.

Unlike those preparations made from animal or vinous matter, which are liable to stimulate the brain and irritate the digestive organs, it embraces in its elementary composition—

That which makes strong Bone and Muscle.

That which makes good Flesh and Blood.

That which is easy of Digestion—never constipating.

That which is kind and friendly to the Brain, and

That which acts as a preventive of those Intestinal Disorders incidental to childhood.

And while it would be difficult to conceive anything in Food or Dessert more creamy and delicious, or more nourishing and strengthening as an aliment in

Fevers, Pulmonary Complaints, Dyspepsia, Prostrations of the System, or General Debility,

Its rare medicinal excellencies in all Intestinal Diseases, especially in

DYSENTERY, CHRONIC DIARRHOEA AND CHOLERA INFANTUM,

Has been incontestably proven.

See circulars for testimonials. Sold by druggists. Wholesale Depot,

**AGAIN** to the front with the best business for AGENTS

LAST SEASON our Agency business surpassed all others. It amounted to a quarter million of dollars. Many Agents laid up from two to three thousand dollars each, in a few months. The reason: new features, embracing several large additional profits unusual in this kind of work.

THIS SEASON the money-making chances are doubly improved! To show our good faith we guarantee Agents against all losses. Not one cent is risked. Be quick. Send two 3c. stamps for valuable specimens, liberal terms, &c. Address: THE ILLUSTRATED WEEKLY, New York, Boston, Chicago, or Atlanta, Ga.

## FENCE GARDENING.

The upper end of my lot is laid out in walks, grass-plots, and flower-beds, and looks very fine. But the lower end running along the back building, is narrow

In May I bought a number of pots filled with hanging plants, and placed them on the ledge running along and near the top of the fence, and in August, the ledge and pots were covered with a mass of leaves

with a purple and green Tradescantia, Cuphea, a variegated Sweet Alyssum; just back of this is a pink Oxalis, a white Lobelia, blue Lobelia, and yellow spotted leaved Geranium; the whole forming a beau-

Gardens of Rentiily.

and paved with brick, and dividing it from my neighbor's yard is a high board fence, the wrong side of it is on my side. This was a constant eye-sore to me, until a happy thought suggested fence gardening.

and flowers. The first pot is filled with Kenilworth Ivy; twelve inches from that, a pot of Moneywort, then white edged Ivy Geranium; then comes the first post, on which I fastened a Cypress Knee, filled

tiful group. Next, a green Tradescantia, a Water Ivy, Ground Ivy, Nasturtium, orange and white Thunbergia, Madeira Vine, white edged Myrtle, Cypress flowered Morning Glory. Mrs. H. G. A.

## Floral Contributions.

## WINDOW GARDENING IN THE WILDS OF IOWA.

Last year I made a new beginning with in-door as well as out-door gardening. I kept nothing through the winter except one Carnation, but towards spring I prepared to entertain some new-comers. I used rich surface soil from the woods, with some sand and pounded charcoal and calcined bones, sifting the finer parts into the soil, and using the coarser for drainage.

First came a lot of plants from a greenhouse, just at the time of the great April snowstorm, and they had been nearly two weeks somewhere on the way. I sprinkled them and made a shelter with two chairs and a blanket, next day set carefully, and kept them in the dark a few days, admitting light gradually, but lost nearly all.

Nothing can look more forlorn than a lot of plants under such circumstances, trying to hold up their heads in a new and uncongenial atmosphere, and only succeeding in dropping their leaves in the attempt. But the true flower-lover sees, not what they are but what they will be, and lovingly awaits that time. Some one, Mrs. Stowe, I think, says that "next to good wholesome care, nothing is so beneficial to children as a little wholesome neglect." I think this will also apply to plants, but I find it the hardest lesson of all to learn.

Other plants came from time to time, and slips from various sources. A friend sent an Agapanthus Lily. It seemed at home at once, and grew well for a time. It was a stranger to me, and as I like to know the relationships of my plants, I watched it carefully. As I pulled away the old leaves I noticed that the thick viscid juice spun into threads like a spider's web. This, with its general appearance, color of flowers, and reputed love of water, convinced me that it belonged to the family of Spiderworts. I do not know yet whether my theories were correct, but if they were, one little item of practical knowledge would have been worth them all. The plant likes shallow culture, the roots seeking the surface. Ignorant of this, I set it rather deeply at first, and as the earth settled, added more. I soon noticed that something was wrong, but too late to repair my error. I have another now, and promise that this little "Aggie" shall not be smothered.

I think my little Calla had been reading the authorities concerning its rights and duties. As it had never flowered nor grown any to speak of, I thought it needed no rest, but it just showed a little point of green above the surface, and there it stayed till the prescribed month for growth, September, then it started up wide awake.

I am not so clear in my mind as to what was the matter with my Amaryllis family, of which the same friend sent me four kinds. A. Atamaseo being a native, grew without any trouble, multiplied well, and flowered till October. A. Regina attempted to grow without forming roots, exhausted her strength and died. A. Jacobea, and A. Vallotta, just did nothing at all. In vain I set them alternately in the dark loft over the kitchen stove to coax them to root, and in the sun to coax them to grow. I was absent nearly all of September, and found no change on my return, but within a week each put forth a leaf, whether touched at last by my devotion, or having in my absence secured that little portion of neglect, I am unable to say.

Geraniums were my greatest comfort. Whatever

else fails, if I can but get a slip of Geranium in good order I feel sure of success. I put them in a little can of good but not extremely rich earth, press it well around the base, water it sparingly until growth commences, and keep in a dark cool corner a few days, gradually giving light. The foolish little things nearly all wanted to bloom as soon as rooted, but of course I nipped that in the bud. For cleaning the leaves of Geraniums, and some other rough-leaved plants, I find nothing equal to a tooth-brush. I use it dry first, laying each leaf on the palm of the left hand and brushing lightly. Those who have never tried it will be surprised to see how the dust will fly from pretty clean looking plants. Then repeat with tepid water. It is rather slow work, but I think any one who tries it once will find time to repeat occasionally. The brush must be very fine and soft, and carefully used of course.

When cold weather set in I had about forty plants, more in number and variety than I had ever wintered before. Oleander, Hydrangea, and some others, were dried off and placed in the cellar. After the extreme cold weather set in I covered everything at night, chiefly with newspapers. I lost none by freezing after I adopted this plan, and only two or three before. I prepared a mixture of charcoal, calcined bones, hen manure, and soot; about two parts of charcoal to one of each of the other ingredients, pounded and sifted it, and applied according to size and condition of plants, lightly mixing with the surface soil. I thought that this would be distasteful to insects in some degree; and also, that anything that promoted the health of the plants would help to prevent their appearance. I kept water constantly on the stove to supply moisture, was as careful as possible about dust, and watered and sprinkled as I judged necessary.

Not a single insect made its appearance. A few boxes were infested with little white worms, but a little mingled soot and ashes made an end of them. My plants all made constant, though not very rapid, growth through the winter; a few bloomed, and others are blooming.

When I add that my house is small and partly unfinished, and that I have no help with my work or in the care of my plants, I think I may say that if I have succeeded in some degree no one need to fail entirely.

MRS. FANNIE E. BRIGGS.

## WHITE WATER LILY.

If the readers of the FLORAL CABINET knew how easily this Lily (*Nymphaea odorata*) could be cultivated, we believe that many of them would be as proud of their lily gardens as of any other part of their premises.

The roots should be procured in the fall at the rate of four for a tub, which may be made by sawing any kind of a barrel (except oil and tar barrels) through the centre. Then put in from six to eight inches of fine black loam, mixed with well-rotted manure. If your roots have been procured from a distance, and packed in moss, they should be put into a pail of water and allowed to remain until the little fibrous roots can be spread out evenly (this might be hastened by taking them by the top, or crown end, and dipping them in the water). When your roots are ready for planting, take out two inches of dirt from the tub, put in your roots at equal distances around the tub, with the crown ends towards the centre, and the fibrous roots spread out straight with the fingers; then put back the dirt, leaving the crown ends of the roots just above the soil.

Now put in water gently, so as not to disturb the

dirt, and cover about six inches. Let them stand out doors until freezing weather, when they should be put into the cellar for winter with water added at intervals to keep them from getting dry.

In the spring set your tubs in some convenient place in the yard or lawn, fill with water and keep full by adding a little once or twice a week as it evaporates, and your work is done.

Truly, there is no flower that requires so little care, and yet is so beautiful and fragrant as the water lily. I have a number of these tubs sitting around my home, and from July to September, while they are in bloom, they are admired by all who see them.

These roots are hardy and will grow in any kind of loam or mud, but in sand or gravel never. A few roots put into a small muddy bottom pond would completely cover it in a few years.

J. E. S. CRANDALL.

## NAMES OF PLANTS, ONION LILY, &amp;c.

No doubt every flower lover regrets the confusion that exists concerning the names of plants. We have all groaned in spirit to hear *Paeony* pronounced "Piney," and *Asters* called "China Oysters;" and this summer I found an old lady who had her porch draped with the beautiful *Calistegia* and a group of *Gladioli* in her garden, and she called the latter "Olluses" and the former "Cast Ages," and I think enjoyed them even with these barbarous names. On the other hand, I think we all enjoy a pretty and appropriate English name. When a very little girl I saw some yellow *Xeranthemums*, and heard them called "Golden Eternal Flower," and the name impressed me then, and thrills me now like a strain of sweet music.

I have been looking over back numbers of the CABINET and trying to settle (for my own satisfaction) the "Onion Lily" question. I wish B. Grinshaw (Feb. No.), who has the plant, had described it.

I have in my garden a *Star of Bethlehem* (*Ornithogalum umbellatum*). It has white and rather small bulbs, grass-like leaves, marked with a white stripe, and clusters of white flowers with a bright green stripe on each petal and sepal. I have also a house-plant, sent me with the name "Squills, or Sea Onion." It has a large green bulb growing entirely above ground, very long leaves, and is said to bear clusters of white flowers. It corresponds with Webster's description of the Official Squill (*Ornithogalum Squilla*, or *Scilla maritima*). As both these plants belong to the order Liliaceae, and tribe Scilleae, the name Onion Lily would not be absurd for either. Perhaps the Alliums are the true Onion Lilies, for they belong not only to the same order and tribe, but to the same genus with the onion, leek, garlic, etc. MRS. F. E. BRIGGS.

**Plants in Bay Window.**—Is it possible to keep plants in the winter in a bay window in a room where no fire is kept, though there is a fire in room adjoining? We do not keep fire all night, as we burn wood here. Would a lamp kept burning be sufficient to keep out frost? Could I keep an aquarium in this room without danger of breaking, through frost? The room I speak of is well plastered and has an eastern exposure, and is somewhat protected by a room north of it. My house is a frame one, not brick. Your kind attention to this will much oblige, as I am very anxious to have flowers and ferns in winter.

R. PAYNE.

**Answer.**—If frost is excluded (which can only be tested on the spot by a thermometer or shallow dish of water), or thermometer keeps over 50°, you can keep them.

## Gossip with Correspondents.

**Water Lily.**—I wish to inquire through your columns if some flower-lover from Massachusetts will furnish me with a root of *Nymphaea odorata rosea*, either in exchange or otherwise. Georgia B. Carver sent me two roots of the white in May, and contrary to her expectations it has bloomed, and has grown beautifully in a tub sunk in a flower-bed. It has excited much admiration, as it does not grow here.

MRS. R. S. TRUSLOW.

Kanawha C. H., W. Va.

**Cobœa Scandens.**—In the July No. of FLORAL CABINET the question is asked if the *Cobœa Scandens* will bloom the first year from seed. It is answered that it flowers the second year. I have a plant four months old from seed, which stands fifteen feet high, and is in bloom.

MRS. LOIS C. BUSH.

**Angle Worms.**—1. Do you know of any remedy for angle worms when they get in the earth in flower-pots. 2. What treatment do *Dracœnas* require in the winter? 3. Also, *Begonias*, leopard and silver-leaf?

N. J. B.

**Answer.**—1. Water with lime-water. 2. *Dracœnas* require a warm place, and to be kept tolerably wet; wash the foliage every week if grown in the house. 3. Keep the *Begonias* rather dry during the winter.

**Wax Plant.**—1. Information relative to the proper treatment of a Wax Plant is desired, and will be thankfully received by the writer from any of the numerous readers of the CABINET. The plant in question is quite large, and of luxuriant growth until about a month since, when the frame seeming too small, it was changed for a new one, without, however, disturbing the roots, since which time the leaves have lost their bright green color, and now present an unhealthy appearance, with shrivelled edges, &c., and gives no sign of budding, although this is the proper season. 2. Will thank some one also to prescribe some particular treatment for the *Rhododendron*. I purchased one last spring, while in bud, which bloomed beautifully in due time, and was admired by all who saw it, who predicted at the same time that it would never bud or bloom again in this climate. From present indications their predictions were correct, as there are no evidences whatever even of budding. Can it be so treated as to force blooms in this season?

Macon, Ga.

SUBSCRIBER.

**Answer.**—1. The Wax Plant is probably broken in putting in the new trellis, or it had been over-watered and the roots are dead; in either case you will have to begin with a fresh plant. 2. There is no reason why a *Rhododendron* should not flourish in Georgia, unless it is a limey soil. The plant has probably suffered from want of moisture.

**Hanging Basket.**—Noticing that fragments of the pen were gladly received by the CABINET, I intend to describe to you my Hanging Basket, but more particularly to speak of my Wandering Jew. My basket is made of the root of a dead palm: the latter plant, you recollect has a crusty, scaly bark, and is very hard; when the palm dies, the fibres inside decay, and leave a perfectly hard hollow vessel, which is entirely round. Of this hull, I made my basket, fastening a tin bottom, and suspending by a rope, I placed

it on the northwest side of the gallery where it would receive a light sun. I then filled it with a light soil, and in the centre I planted a Fern: around the edges I set Wandering Jew and Moneywort. The latter having the smallest leaves, I trained up the ropes, and the Wandering Jew I left to grow around the sides of the basket. One year has not elapsed since it was planted, and it has not only covered the sides, but has grown about a foot and a half below it; all the limbs twining together beautifully, forming a complete network below the basket. I make a practice of watering it every morning, and lately it has been damp continually, in consequence of daily rain. I have never heard of Wandering Jew blossoming, but believe me when I tell you I was pleasantly surprised by the appearance of a delicate little blossom at the extremities of several limbs. It is of a light purple color, and has only the slightest fragrance. Its life is very brief, twelve hours being the time allotted for its earthly career. It uncloses its trio of petals when the sun is about two hours high, and closes them again before twilight. The best way to produce many blossoms, is to keep it damp continually; some plant in water altogether, but I have never tried it in this way: I imagine the soil strengthens the plant. I have also growing on the sides of my basket, a few twigs of piney woods moss. It is different from the moss of which beds are made, and I do not think it is used for any of the same purposes. It is of a light green color, and would be an ornament to any lady's basket. The FLORAL CABINET is a monthly visitor at our residence, and many a pleasant hour have I spent, perusing its interesting columns. Whoever subscribes for this little paper, can truly say, their money is well spent.

MISS G. H. C.

**Cobœa Scandens.**—1. How shall I treat my *Cobœa Scandens* this winter, that I may preserve it for another season? Will the root, planted out the second year, do as well as a seedling, and would it be advisable to save it? It is a fine plant, measuring thirty-six feet in height, and covered with more than a hundred buds and blossoms. It is planted where it gets the sun until 9 a. m., in a soil of leaf-mold, rotted turf and sand, equal parts. Have watered it thoroughly thrice a week, and given liquid manure a few times during the summer. 2. I have a rustic basket, in which are fine plants of *Vinca Major*, *Centaurea*, *Abutilon Thompsonii*, variegated leaved *Geraniums*, *Fuchsia*, *Begonia Rex*, etc. Can any of them be saved to be replanted in the spring, and what is the best way of keeping them through the winter?

Buffalo, N. Y.

MRS. S. B. BUTTS.

**Answer.**—1. As your young plants have done so well, it would be best to plant a young plant another year. 2. The same answer to this: it is seldom large plants are worth the trouble of housing.

**Pomegranate, Crape Myrtle, etc.**—1. Will you inform the readers of the FLORAL CABINET how to propagate Dwarf Pomegranate and Crape Myrtle? 2. What is the proper treatment of *Cinerarias*, also for herbaceous and shrubby *Calceolarias*? 3. What is the best work on window gardening? 4. Will herbaceous *Calceolarias* succeed as bedding plants?

JENNIE A. REMINGTON.

**Answer.**—1. By cuttings. 2. Both plants require to be kept cool and moist; grow in rich soil: the least frost will spoil *Cinerarias*, which are usually raised from seed: *Calceolarias* from cuttings: these would do for bedding. 3. William's Window Gardening, to be obtained at this office. 4. No.

**Rustic Hanging Basket.**—I am a little girl, thirteen years old, and I thought I would suggest a design for a rustic basket. Procure a good sized gourd, cut out half of it (that extending from the larger part to the end of the handle), leaving four strips a half an inch wide an equal space apart from the end of the handle to the remaining half. Then paint, or varnish if you choose, and fill up the interior with earth, and plant vines, Moss, Dew Plant, or Ice Plant, which is a favorite with me. This looks very pretty, and it is cheaply and easily contrived. Can you tell me when the Jerusalem Cherries bloom? We have had ours two years, and they have never borne any cherries. Will the Calla Lily bloom all winter if in water?

DOLLIE HARDING.

Nelson Station, Cal.

**Oleander.**—Will Elvie E. Larkin give her experience as to the White Oleander? It has so often been spoken of as being very tender and not producing flowers to compare with the other varieties, consequently raised principally as a curiosity. Her name appeared in the January number of the FLORAL CABINET. Will she give her address?

Orange.

FLORAL SUB.

**Wandering Jew.**—N. H. asks, in the last FLORAL CABINET, how many kinds of Wandering Jew there are, and at what age it blooms. I have the brown and green variegated. I bought it as a small plant in the spring and it has bloomed all summer, a beautiful delicate pink blossom. I have two other species that I have never seen bloom. My flower garden, as well as my pot plants (of which I have a great variety), have been admired by all as the finest in our city.

Mrs. P. C. M.

**Some Choice Plants for a Fernery.**—While herborizing this summer, we have found in the depths of a sphagnum swamp, which none but an enthusiastic botanist would have the hardihood to penetrate, some very interesting little plants embedded in moss, which we think would thrive in a fernery, and would be very beautiful for that purpose. I will give the names of a few we should deem particularly desirable: *Chiogenes hispidula* (Creeping Snowberry), *Drosera rotundifolia* (Sundew), small plants of *Sarracenia purpurea* (Pitcher Plant), *Coptis trifolia* (Gold Thread), *Dalibardia repens*, *Mitella nuda*, *Smilacina trifolia*, also *Mitchella repens* (Partridge Berry), which is much more common. Nearly all that we have named are evergreens of dwarf habit, and all would be very attractive in a fernery. If any of the readers of the CABINET wish to exchange greenhouse plants, Roses, or fall bulbs (named or good varieties), for any or all of these, and will furnish a list of what plants they have to offer, and will specify what they desire, we will promptly attend to their orders. We can also furnish many varieties of native ferns, including *Adiantum* (Maidenhair), *Botrychium* (Moonwort), and dwarf plants of *Dicksonia*, *Aspidium* and *Asplenium*.

MRS. F. A. CURTISS.

Central Square, N. Y.

**Mats.**—Will the little boy's mamma be so very kind as to tell me, through the FLORAL CABINET, how the *drawn in mats* mentioned in the May number are made?

JINNIE.

**Tuberoses.**—What shall I do to make Tuberoses blossom? Please, tell me through the CABINET, and oblige a subscriber and agent.

MOLLIE.

**Answer.**—Plant thorny bulbs the end of May, or, if in a cold locality, start in pots in the house early in April, and plant in very rich ground early in June.

## Flower Gardening.

### THE PERPENDICULAR GARDEN.

#### A GOOD USE FOR OLD PRESERVE CANS.

Gardens generally grow on a horizontal plane, but the garden we wish to speak of stands in a vertical or perpendicular position, but which may be arranged in various ways; for instance, you can add to your land another piece all around in a perpendicular position, and a piece in the middle like a cylinder, thereby making the land much more than before. In the same way you can annex territory to the wall of the house, and in winter around the windows inside. Suppose we ornament the kitchen, that being the ugliest room, and see if it don't soon beat all the others in beauty. As this is all to be done by means of the flower-can, the first thing to talk about, is

#### HOW TO PREPARE THE CANS.

Set them on the stove and melt off the bottom of the can, leaving the top (the hole in it already) for the bottom of the flower-can; then punch a hole from the inside near the rim, to hang it up by, and rub off the paper by all means, as it would be ridiculous to see Verbena and Petunia labelled tomato and corn, or still worse, a beautiful Tulip, perhaps, called an oyster. Then give the cans a coat of smooth whitewash to keep them from rusting, and also from looking so can-nish; they are not preserve cans now, you see, but flower-cans. Put crocks in them, to keep the earth from running away; then they are ready for use, and as it is the season for growing plants indoors, we will begin with

#### THE VERTICAL KITCHEN GARDEN.

Hang the cans about half a foot apart, one above another, not too near the glass; suppose four cans for each side of the window, have in the lowest can a blue Lobelia *Erinus*, in the next one above a Sweet Alyssum, above that a rose-colored Oxalis (the kind with many small flowers, not that with a few large flowers), and here is red, white and blue; above that a vine, Barclayana or Smilax, to train over the top of the window. On the other side a yellow Oxalis, then a Topezia, a trailing sort of plant looking like a red Lobelia; then have a white Oxalis and another vine above; these blossom all winter better than most plants, and are among the showiest and most hardy. On the window-sill put either a box as large as will fit, or a row of large cans, in which plant a rose Heliotrope, Mignonette, Stevia, etc., and you will have a pretty garden all winter; hang the bird in the upper sash, and if the kitchen don't beat the parlor, if that is bare of flowers and bird, and the inmates look more happy, its odd. Miss Madehne may sigh with her novel in the parlor, while

little Susie in her kitchen will be as happy as her bird among the flowers; so much for the kitchen window garden. We will now proceed to

#### THE GARDEN ON THE PERPENDICULAR PLAN.

By this plan, if you have but the privilege of the fence, you can have a garden that will give you as much work and flowers as you may want. Hung in

VASE WITH ORNAMENTAL PLANT—VERSCHAFFELTI MELANOCHOETES.

flower-cans on the fence, the Petunia and Verbena, etc., can be made to look like vines; training the plants so as to cover the cans, they can be carried on as far as you please. The ribbon bed on the fence is a great novelty; plant a row of yellow Coleus a foot or little more from the fence, hang the next row (of red Coleus) a foot from the ground, then one of Golden

Feather a foot above the last; the next one of Alternanthera, a rose-colored plant, and top off with a trailing plant, Periwinkle or Lysinachia, to cover up the top row of cans; as they grow, clip the stripes even, when they hide all the cans. So much for this style. Another style, more novel is the cylindrical, or

#### THE BARREL GARDEN.

Bore several holes in the bottom of the barrel for drainage, and rows of gimlet holes around the barrel, about a foot apart; to use a poetic explanation, a foot apart tandem, half a foot abreast. To drive the nails, you must have a number of blocks about two inches square, and drive the nails into the blocks through the gimlet holes; you must hold a hammer head against the block inside as the nail is driven. Put the crocks in the barrel, fill it with earth and hang the cans, and then you can have Petunias and Verbenas, etc., all growing up on end, instead of lying on the ground; or make a barrel ribbon-bed in the same manner as that made on the fence. If you put a pole in the centre, with strings from the rim of the barrel to the top of the pole, and train vines closely to the top, it will be as handsome a lawn monument as can be seen. The canned garden for winter use will give decidedly more pleasure than canned fruit; it is good for as many mouths as the fruit is for days. It is not so much trouble to take care of flower-cans as flower-pots, as they do not dry up so soon. If you wish to take a plant out of a can, you tap the can on the side, and not the top, as you do a flower-pot, and don't quite fill it with earth, but leave room for water when required. This style of growing flowers is quite new, and we would like the readers of the FLORAL CABINET to be the first to introduce it. ZIVORE.

#### Church Flowers.—“Mitchella Repens”

does not tell us what she does use for green in her church bouquets. I wish she had, for I have had some experience in the business, and have the same trouble that she has. We have a great many Lilac bushes on our place, and I often use branches from them for green, partially concealing them with Mountain Mist or Gypsophila. Asparagus is fine for bouquets, and is easily raised. The lemon Geranium grows very rapidly; small slips in spring will become large plants by the last of July; and the branches are beautiful for large bouquets; so is rose Geranium, but that is of slower growth. For white flowers, I like the Mountain Daisy; the flower resembles Pyrethrum, but

is somewhat smaller. It is a perennial, blooming abundantly, and remaining a long time in flower, and is perfectly hardy, requiring no winter protection in Maine. A very showy bouquet may be made of Mountain Daisy and scarlet Verbena. I hope we shall hear from others on this subject, and please don't forget to tell us what you use for green. F. J. S.

## Window Gardening.

### MY SITTING-ROOM.

Mrs. Reader, will you take a walk with me? I know a place where one can pass a pleasant hour even in a dull December day like this. It shall not be a long walk, so that, even though it should not give the same pleasure to you that it does to me, it will not be wearisome, I trust. It is by no means a paradise, this place to which I would take you, yet lying toward the south as it does, and protected on the north and west, it is warm and bright and—sunny, I was about to say, but a glance at the sky forbids that; however, it is altogether a very pleasant spot, so that, though I take this walk almost every day, yet I am never weary of it, indeed, am always ready to go again, especially if I can have a companion. Assuming, then, that you cannot resist so charming a prospect, I will imagine you at my side and that we are off for a tour—around my room.

This room is at once sitting-room, library, and conservatory. As I told you, it has a southern exposure, these two large, broad windows giving abundance of light, and air, too; rather more of the latter than we like, but we comfort ourselves with the thought that fresh air is healthful. Here, by this westernmost of the two, you see my stand of plants; but never mind them just now; I want you to look at this fine lot of Callas. That stool was formerly a music-stool, but has been diverted from its original use and made to do duty as a pedestal for my Callas. The pot they are in is nothing but an old soup-tureen. It was chosen for that purpose when we started them this fall (we turn them down on their side through the summer and take them up about the first of September) for its size, and because it had no place for drainage. I thought I would imitate its natural condition as nearly as possible, and see what the effect would be. Knowing that in its native place (the banks of the Nile) it was subject to an overflow during a portion of each year, and at the same time received its greatest heat, I accordingly placed it in a light soil of muck, with sand enough to give it some body, in this tureen where the water could stand on it. I added the water gradually at first till the earth was covered. Now, you see from the three bulbs there are fifteen good leaves, and any number of little bulbs are starting up. They are looking so finely that I think I must have hit on the right way of treating them.

Hot water? Well, yes; occasionally I make the water for all the plants a little warmer than my hand, but I do not dare to pour very hot water on these for fear, of injuring the stalks. Last winter, when I had them in pots with saucer, I used to pour boiling water into the saucer, and so I do now with my Oleanders. Besides keeping the roots constantly wet, as these plants seem to require, it gives them heat at the bottom, where it is better than at the top, I think. They are growing so fast and so thriftily that I am looking to find a bud as each new leaf comes out.

Before we leave this window just notice that basket above the Calla. Nothing but Oxalis? No, that is all I want in it. Two years ago, I had one bulb in that basket that had been taken from a crock the first of October. About the first of November it came into flower, and bloomed until we stopped it in April

or May, by cutting off its supply of water. All winter long that basket was a mass of those delicate pink blossoms. If you have not had them you can have no idea how the little things enlivened the room. It is such a bright pink, and it blooms so constantly. Through last summer I gave them only enough water to sustain them, purposely keeping them back that they might lose no strength in blooming when we had other flowers and did not need them. I fear now I did not bring them forward soon enough, for you see they have only just now begun to show buds, though the plant looks finely otherwise.

Now, come over to this other window; I want you to see my Cannas. I have nothing that gives me

have no idea how much that was admired. I kept the Ivy headed back so that it grew thick and bushy, and the leaves did not fall off as they are apt to do when it is allowed to run long. The Canna sent up two or three flower-stalks, and one of them was out at the same time as the Calla. Yes, you may well say so; they were lovely together. The contrast of the brilliant scarlet and the pure white was beautiful.

In the spring I took out the Calla and turned it down beside the house to rest; the Cannas I took out to plant in a group with Ricini; then filled in with suitable vines and plants, a Heliotrope and Begonia in the centre, and set it out on its standard in the garden for a vase. I ascribe its beauty entirely to the daily (or evening) waterings it received, and to the use of a super-phosphate. I don't know what it is. It is sold here in town as "super-phosphate." I suppose from its name it is a preparation of some minerals, but what materials of that kingdom can be combined to produce such an odor I can't imagine.

This fall I emptied the bowl and filled it with fresh earth, light and rich; then after dividing the Canna roots I put in as many as it would hold—O, there must have been a dozen or two—leaving only space around the edge for these slips of Ivy. I prefer to start my Ivy from slips. I know it does not look as well for a time, but is better in the end; it is not as apt to drop its leaves as that started from roots. I cut a branch into two, or at most three buds, and set one in the earth to form the root, and one above to grow. My success was so good last winter, with a few Cannas, that I wanted as many as I could get this winter; they require so little care, and repay it so well in flowers, that they are better worth housing than many things considered more choice.

Here you see are a lot of small things, young plants mostly. I took slips in the summer of all my Geraniums, Pelargoniums, &c., that I wanted for winter-blooming. My experience has been—and I have heard the same from others—that cuttings taken the last week in August are more likely to give satisfaction than old roots; though, if they are kept back through the summer and not allowed to bloom, they may do something in the winter. I keep these small pots standing in a box of sand; they do not dry out as they otherwise would.

Before leaving this window I want to call your attention to the hanging basket. First, you see all around the outside I have stuck slips of the Ivy and this little vine—I don't know what it is, I have heard it called "gooseberry vine." Inside I have placed around the edge Coliseum Ivy, an English Ivy, a couple of slips of the Tradescantia Zebrina and a Dew-plant, with Maurandya to run up the wires. In the center are two Achyranthes, a Cuphea, Scarlet Geranium, a root of the ornamental grass used so much for this purpose, and a Begonia. Isn't that a collection for one basket? O, and there are four Nemophilas that I transplanted from the garden the other day, when the snow blew off. If everything continues to thrive as it does now, it will be very handsome in three or four weeks. As we turn away just notice that vine above you, looped back over those pictures; you recognize it, of course—the Inch-plant. It has several names, Wandering Jew, Joint-plant, &c.

And now, Mrs. Reader, having completed our little tour, I shall take the liberty of returning you by the same conveyance that brought you here—our imagination—to your own fireside, craving pardon for so unceremoniously dropping you.

C. OAKS.

FLOWER STAND WITH ROCK WORK, FERNS, ETC.

more satisfaction; they are sure to bloom, and are so brilliant and showy. This bowl that holds them is nothing but an old butter-bowl. You see I have nothing in it but the Cannas, and German Ivy in the edge. I wish you could have seen it last winter, Mrs. Reader; it stood over there behind that door. Not light enough? O, yes; this Ivy does better where the sun does not shine directly on it. I had only a few Canna roots in the fall, but I put part of them in this and set slips of Ivy around the edge thickly, as you see here. Then I plunged one pot of Callas in the center. There was a root of Achyranthus, too, and one of the white-leaved plants, a Centaurea or a Cineraria, I don't know which. Well, Mrs. Reader, you

## Social Topics.

## LOVE.

## POETICAL QUOTATIONS.

I thank the Great Fa her for this,  
That our love is not lavished in vain;  
Each germ, in the future will blossom to bliss,  
And the forms that we love and the lips we would kiss,  
Shall offer love's welcome more sweetly again.

The more thou dam'st it up, the more it burns.—*Shakespeare.*

Read it, sweet maid, though it be done slightly,  
Who can show all his love doth love but lightly.  
—*Daniel's Sonnets.*

All true love is grounded in esteem;  
Plainness and truth gain more a generous heart,  
Than all the crooked subtleties of art.  
—*Buckingham.*

Who never loved, ne'er suffered.—*Young's Night Thoughts.*

O, she was all!  
Deep in the secret foldings of my heart  
She lived with life, and far the dearer she.  
—*Young.*

O, Love! how hard a fate is thine!  
Obtained with trouble, and with pain preserved,  
Never at rest.  
—*Lansdowne's Heroic Love.*

She felt his flame; but deep within her breast,  
In bashful coyness or in maiden pride,  
The soft return concealed.  
—*Thomson.*

None without hope e'er loved the brightest fair;  
But love can hope where reason would despair.  
—*Lord Lytton.*

True love's the gift which God hath given  
To man alone beneath the heaven.  
It is the secret sympathy,  
The silver link, the silken tie  
Which heart to heart and mind to mind,  
In body and in soul can bind.  
—*Scott.*

Thou yet shalt know how sweet, how dear,  
To gaze on listening beauty's eye!  
—*Montgomery.*

My dream of life from morn till night,  
Was love, still love!  
—*Moore.*

There's not a look or word of thine,  
My soul hath e'er forgot.  
—*Moore.*

I love thee, and I feel  
That in the fountain of my heart a seal  
Is set to keep its waters pure and bright  
For thee.  
—*Southey.*

She had marked  
The silent youth, and with a beauty's eye,  
Knew well she was beloved.  
—*Percival.*

Ask me not why I should love her;  
Look upon those soulful eyes!  
Look, while mirth or feeling move her.  
And see there how sweetly rise  
Thoughts gay and gentle from a breast  
Which is of innocence the rest.  
—*Hoffman.*

O, lady! there be many things  
That seem right fair above;  
But sure not one among them all  
Is half so sweet as love.  
—*O. W. Holmes.*

Thinkest thou  
That I could live and let thee go,  
Who art my life itself? No, no.  
—*Moore.*

## NEATNESS.

"What a very neat woman Mrs. Ames is," said a lady to a neighbor, who had called upon her.

"Indeed! is she more than commonly particular?"

"Yes, I should think so: she is scrubbing from morning till night; she washes her windows twice each week; there is not a speck of dirt to be seen in any of her rooms."

"I should think she would wear herself out: she will learn better one of these days, I reckon."

"Her mother was just so: she has washed herself to death."

"I do not believe in a woman doing that. I think intemperance in work as wrong as in other things."

"But she does keep her house nice: I wish you would go over and see it."

"Perhaps I will. I have never called on either of the Mrs. Ames. I believe the brothers were married about the same time. I ought to have called before."

"I do not know so much about Mrs. James Ames

as I do about William's wife; they live farther off; and she is a different kind of woman; their houses were just alike; they were both new when the brides came to live here. They say—— never mind."

Three years before two brothers had built each of them a nice, pleasant cottage house in the same village. They were just alike, both inside and out; nicely papered, painted and finished, with pleasant porches, green blinds and pretty fences; and about the same time they had each installed pretty, lovable women in them as mistress and wife. Both young brides were fortunate in their husbands and homes; The young men were steady, industrious and thriving, and the future looked bright to them both.

The furnishing of the new houses rested with the ladies. Mrs. William had a pretty fortune of her own, and she was lavish of her outfit. Her furniture was the best that could be obtained, and the pretty rooms were decorated in fine style; while Mrs. James, being an orphan and almost penniless, was contented with cheaper articles, but everything was in good taste, and if not as splendid as her sister-in-law's, were of equal adaptedness.

Two years had passed before Mrs. Leighton called; circumstances had prevented her from visiting; but as she stepped upon the porch of the first cottage, she noticed that the paint was badly worn, and around the door-knob and bell-pull was entirely off, giving the front entrance a decided old look. The oil carpet in the hall looked as if it had done service, and the beautiful parlor carpet was actually almost threadbare. Mrs. Ames herself looked as if she had almost come to mending; her face was thin and care-worn, and a little nine-months' baby was crying and fretting all the time of her stay. She noticed that the furniture looked dim, the bright polish had disappeared; the sashes of the windows had a worn look, and the paint was mostly gone entirely from the casings and stools.

"I have been trying to have Mr. Ames paint the inside of the house, but he says there is no use, I would scour it all off in a year; but I do wish he would, it looks bad."

Mrs. Leighton thought herself it did look bad, but of course she did not say it; the glass window panes were as clear as crystal, and the stove shone like a glass bottle.

After a polite call she took her leave, noticing as she passed out from the yard that neither bush or flower root had found a place in the little yard; it looked bare and lonely; a little further on was the home of Mrs. James. The walk was bordered on either side by beautiful shrubs and roses, and a luxuriant ivy festooned over the porch almost nodded a welcome; a home-made rug lay before the door, and the paint was as perfect and fresh as if just spread on. A sprightly rosy-cheeked lady gave her a smiling welcome, and seated her in the parlor, where everything looked as nice and fresh as if the painters had hardly gone out of sight. A few choice plants decorated the windows, and the pretty rag carpet looked as clean and bright as if it were just out from the loom. The furniture was bright with varnish, and some nice crayon drawings in home-made frames were hung upon the walls. A darling, bright-eyed, smiling baby sat upon the carpet busy with some playthings. Mrs. Ames herself looked contented and happy.

"What a pleasant home, Mrs. Ames! it is delightful!"

"Yes, I like it: I think homes ought to be cheerful."

"Certainly, but yours is almost as beautiful as a dream."

"I'm glad you like it. I hope we shall see more of you."

"I am sure you will. What beautiful brackets! you have been painting your parlor this spring, I see."

"No indeed! my husband had it nicely painted before I came, and it will not need it for some years, I hope."

"Well, it is nicely kept, certainly, and looks like new."

"These brackets which you admired, my husband made last winter in the long evenings, and we made the frames together."

"Well, Mrs. Ames, you understand making home pleasant, for yours is one of the prettiest places I ever saw," and smiling, "you ought to give your sister lessons."

"Oh, sister is too neat! She spoils everything with her scrub-cloth; it is a wonder she is not dead; I intend to be neat enough to keep sweet and healthy; but there is no use in making a martyr of one's self, so as to be called the neatest woman in the world: my husband cannot afford to have so neat a wife."

FARMER'S WIFE.

## ENGLISH SOCIAL COWARDICE.

A London correspondent of the New York *Sun* makes the following daring assertions:

I suppose all my English friends will feel outraged by it, but the truth compels me to say that, in some respects, the English people are the greatest cowards in the world. Physical danger and suffering they will encounter readily enough, but ridicule and public disapprobation have terrors for them which they dare not face. One of the most charming Englishmen I ever met was narrating to me only a day or two ago how a young American, a common friend of both of us, used to wear, when he first came to London, a Scotch cap in the street, and he was finally obliged to tell him that unless he put on the orthodox stovepipe hat he could not accompany him. It seems that etiquette forbids a gentleman to appear in public with any other headgear than the stovepipe aforesaid, and my English friend dared not countenance a contravention of the law. A gallant captain of the Queen's bodyguard, to whom I related the matter, sustained his countryman, and declared that he himself, although of a profession which requires courage as its first essential, would not venture to show himself in Bond street or the park, in a soft felt hat.

Pursuing my inquiries, I have found that a similar tyranny prevails in innumerable respects. Mr. Gladstone is reported to have said that a cabinet minister might better commit any blunder rather than have his front door opened by a maid servant. Custom demands that a man shall be employed for that duty, and whoever infringes the custom becomes an outcast at once. So, too, the carrying of parcels in the street by gentlemen or ladies is forbidden, and I have no doubt been set down as a lunatic by shopkeepers many a time, because I would insist on taking home my purchases in my own hands. I believe an exception is made in the case of books, provided they be not wrapped up in paper. These may be carried with no loss of caste, but everything else is a mark of infamy. To walk with the coat unbuttoned in front is likewise improper, and is regarded very much as walking without any coat at all. Nor may a gentleman, not in business, wear a sack coat in London. No matter how hot the weather may be, his outer garment must be a frock coat buttoned up as I have mentioned. Only in the country, and while traveling, is the luxury of looseness and comfort permitted.

# THE Ladies' Floral Cabinet

AND PICTORIAL HOME COMPANION,

THE HANDSOMEST ILLUSTRATED JOURNAL OF HOUSEHOLD ART, FLOWERS AND HOME LITERATURE IN AMERICA.

PUBLISHED MONTHLY.

\$1 30 per year, including Steel Plate Engraving, "The Rustic Wreath."

1 50 per year, including also chromo "Gems of the Flower Garden," or "Autumn Leaves."

To club of ten, an extra copy of paper with one engraving or chromo free to agent.

These terms include all charges—mounting and mailing, also postage on paper for one year.

For further terms, see page 184, this number, also CABBINET for November.

Address,

HENRY T. WILLIAMS,

Office, Publisher,  
46 Beekman St. P. O. Box 2445, New York.

## The Horticulturist.

Devoted to Gardening, Flowers, Ornamental Plants, Greenhouse and Conservatory Culture, Ornamental Trees, Shrubs, &c.

On trial three months, 30 cents. Specimen copies 10 cents. Every lover of gardening should have it.

Address, HENRY T. WILLIAMS, PUBLISHER,  
P. O. Box 2445, 46 Beekman St., N. Y.

The attention of the Lady readers of the FLORAL CABINET is respectfully invited to the

## "FAMILY FAVORITE,"

for the following reasons:

- 1st. Because it is adapted to all the wants of family sewing.
- 2d. Because it can be readily comprehended by any one wishing to sew.
- 3d. Because it runs so easily.
- 4th. Because it is always ready and never takes on "fits."
- 5th. Because it will do any kind of sewing with less changes and fewer extra attachments than any other machine.
- 6th. Because it is self-adjusting.
- 7th. Because it is made of the very best materials, and in the most thorough manner, and will never wear out.

It is a two-thread machine, making an elastic Lock-Stitch.

It has a straight short Needle.

It has a Shuttle with a Patent Spring Tension.

Its upper Tension requires no manipulating to admit the passage of kinky or uneven thread, whether linen, cotton or silk.

Its oiling is done upon the under side by turning it up on its hinges, and soiling goods is impossible.

Its stand is solid and firm.

Its table is long and roomy.

Every part works positively, and it is not subject to the yielding or uncertain operation of springs.

No machine costs so little for new parts and repairs.

Perfect satisfaction guaranteed in all cases. Salesrooms can be found in most towns.

WEED SEWING MACHINE CO.,  
HARTFORD, CONN.

Address J. L. PATTEN & CO., 162 William Street, New York.

NEW YORK, DECEMBER, 1875.

**MY WINDOW GARDEN.**

I will tell you something of my window garden. I have about forty plants, and am never without blooms a day during the year. I wish so much that you could see how nice and pretty I have them arranged. My house is a small cottage, one room of which has a southern and eastern exposure. I have the walls decorated with some very beautiful pictures. In one of the windows, I have a box suspended about half way down, four feet wide, four feet long, and four inches deep, which contains twelve or fifteen eight-inch pots; I have the outside of this box covered with lead-colored can-brie, in box plaits, which gives it a very pretty appearance; then under this box I have a table, which contains about the same number of plants, only larger ones. Then in the other window, which has an eastern exposure, I have my largest plants, and such as do not need a great deal of sun. I also have suspended from the top of each window, a hanging basket, containing the most beautiful vines you ever saw. I don't know what it is called by florists, but we down south here call it the Ruins of Rome. At one side of the window, I have a large pot containing a Madeira vine, which I have trained up the side and over the top of the window, which, with its large leaves and beautiful flowers, gives everything a most charming and beautiful appearance. My flowers are the envy of all my neighbors, many of whom have flowers and are wealthy; but as cold weather is here, they have consigned them to their pits (or graves as it were), where they will remain during the very time we need flowers most. I tell them there is no pleasure in having them, for the only time they do them any good, is in the summer and spring; then we have so many annuals which are so

much more beautiful, and do not need near as much attention.

I have been very successful with my plants, never being troubled with any kind of insects; I will at some other time tell you how I avoid them. I tell you there is nothing like having a home (though it be small), well embellished and adorned with flowers and pictures. It makes everything look so cosy and home-like, and has a tendency to keep our husbands at home at night. My husband, being a bank clerk, is absent all day, but when he comes home at night, I tell you we have a jolly time all among the flowers, with our Hope and our Ivy, into whose little hearts I have already installed the love of the beautiful. I never saw children love flowers so well in my life.

I will now tell you of what my collection consists, viz.: Night-blooming Jessamines, Fuchsias, Hydrangeas, Begonias, double bronze, gold, silver, tri-color and scented Geraniums, Ivy Geraniums, Smilax, Cacti, Calladiums, Coleus, Carnations and Callas—quite a varied collection. Don't you think so? Those that are now in bloom, are double and single scarlet Geraniums, one Ivy Geranium, night-blooming Jessamine, Lantana, Fuchsias and Carnations. My Hydrangea, Smilax, and several Geraniums, pink and white, will be in bloom in eight or ten days. Hoping that I have not wearied you, and that I will be welcome again, I bid you adieu.

BIRDIE ARNETT.

Augusta, Arkansas.

THE BEAUTIFUL BOOK.

**PUBLISHER'S ANNOUNCEMENTS.**

**LAST NUMBER. RENEW! RENEW!**—All subscriptions, yearly or trial, expire with this number, and must be renewed by sending direct to this office. Papers with labels or printed numbers beyond 43 will be continued till date of expiration. Money can be sent safely to us by money order or registered letter, express, or bank draft on New York. Do not send checks on local banks, or distant cities, and, if possible, no check less than \$5.

**Prizes for Articles.**—The prizes offered in October and November CABINET will be kept open one month longer, till December 25th, and awards published in January issue. The term hitherto given has been too short, and many good articles not yet finished. See November CABINET, page 163, for offers in full.

**COMPLIMENTARY.****What the Ladies say of The Floral Cabinet:**

You provide such a feast for the ladies as no other man in the United States could or would do. When we are allowed to vote, just run for President, won't you? **MRS. H. T. STRICKLIN.**

I would, under no circumstances, do without the FLORAL CABINET. There is no periodical which could take its place, in my estimation; and one thing strange, I like it for thus far, it has kept the "fashions" out of its columns. **MRS. E. C. BOYLE.**

A "Sunbeam" in every home. I want every lady to take it, for it is certainly a sunbeam in every home it enters. **MRS. A. M. JOHNSON.**

The CABINET has deeply interested me. Every lady ought to be a subscriber. I say to my acquaintances, "You don't know what a perfect little treasure the CABINET is; I could not do without it." **MISS LAURA B. HALL.**

**Back Numbers—Special Offer to Trial Trip Subscribers.**—Thousands of trial trip subscribers have now received the last three numbers of the CABINET. They ought to have all the back numbers to make the year complete. Many are expecting to take the CABINET for 1876, and still have as many back numbers as possible. We therefore make the following very fine cheap offers, clubbing the volume of 1876 with the back numbers of past year:

1. For only \$2.—I will send CABINET, January to December, 1876, and all back numbers of 1875, January to September, together with steel-plate engraving, "The Rustic Wreath."
2. For \$3.—Same as above, with addition of volume for 1874, and chromo, "My Window Garden."
3. For \$4.—Same as offer No. 2, with addition of volume for 1873, with chromo, "Gems of The Flower Garden."

**Holiday Presents.**—No more acceptable presents can be given than a choice of some of the splendid articles offered in our supplement the past three months. For a lady, choose the FLORAL CABINET, or Household Elegancies, or Window Gardening, or some of the little Book Marks. For the children, choose THE LITTLE GEM, or a Bracket Saw, or some of our Games. Any articles wanted for Christmas Presents should be ordered of us one to two weeks beforehand—although, in many cases, we can sometimes fill orders up to within three days of that date. Every order is now filled, and articles mailed within twenty-four hours of receipt.

**Only One Dollar.**—For only one dollar, we will send the LITTLE GEM for 1876, and all the back numbers of 1875. This is a splendid offer to any one who wishes to provide good, pure, entertaining reading for the children.

**Household Elegancies.**—This truly magnificent volume is now ready, and hundreds of copies are daily sent by mail to distant parts of the United States. It contains 300 pages, and over 250 illustrations; so full of fancy work, home decorations, and household elegancies, and its pages adorned with so many charming devices and exquisite engravings, that it hardly seems possible for any home to be complete without it.

**FOR A PRESENT TO A LADY.**—No book is more acceptable, and every one about to select a good, useful Christmas gift for a lady, cannot give her more genuine delight, than to select this book as their present. It is the finest household book ever issued. We also give it free to any one who will get up clubs for us as follows:

1. For 10 subscribers, one year at \$1.30, to the CABINET.
2. " 15 " " 1.30, and to club agent a copy of both book and paper, one year free.
3. For 5 subscribers at \$1.30, (and 65 cents extra) from club agent, either the book or one year's subscription to CABINET, will be given free.

**Music.**—The page of music we publish each month, is usually sold by music publishers at 35 to 50 cents. Each of our pieces are the very choicest of new music, and in the course of a year, every subscriber receives an honest value of \$5 in gems of song and musical melody.

**Cheapness.**—Besides the music, one year's numbers of the CABINET contain reading matter of choicest quality, sufficient to fill ten books at \$1.50 each; additional to this, is the steel-plate engraving, worth \$2.00—and for but \$1.30, the subscriber gets an honest value of \$5.00. No other journal offers so much genuine worth and merit.

**Bound Volumes.**—We can supply bound volumes of 1875 and '874, for only \$2.00 each, delivered only at our office. If ordered by mail or express, add 50 cents postage for each volume.

**January Number** will be especially brilliant in fine articles and delightful illustrations. It will be issued January 1st. Those who wish the CABINET for Christmas gifts, will have to order the December number, and a subscription receipt for 1876.

**Silk Book-Marks.**—The silk book-marks offered in our supplement, are so charming that if our subscribers could but see them, they would all declare them more handsome than the CABINET itself. We now offer special club terms for them.

For \$1.70, CABINET one year, and one 50c. Book-Mark.  
" 1.80, " " 75c. " "  
" 2.00, " " 1.00 " "

To any who will buy in lots of one dozen or more, we will give a discount of 25 per cent. To firms, teachers, schools, and agents, who desire larger quantities, special wholesale prices.

**SILK BOOK-MARKS TO CLUBS.**

Any 50 cent book-mark is given free for club of but 3 subscribers to CABINET at \$1.30 each.

Any 75 cent book-mark is given free for club of but 4 subscribers to CABINET at \$1.30 each.

Any \$1.00 book-mark is given free for club of but 5 subscribers to CABINET at \$1.30 each.

Any club agent getting more than five subscribers, will be allowed 20 cents for each name in his club, towards the purchase of as many book-marks as he wishes.

## Home Life.

### ALL'S FOR THE BEST.

All's for the best! be sanguine and cheerful,  
Trouble and sorrow are friends in disguise,  
Nothing but folly goes faithless and fearful,  
Courage for ever is happy and wise.

All's for the best—if a man did but know it,  
Providence wishes us all to be blest;  
This is no dream of the pundit or poet,  
Heaven is gracious, and—all's for the best.

All's for the best! set this on your standard,  
Soldier of sadness, or pilgrim of love,  
Who to the shores of despair may have wandered,  
A way-wearied swallow, or heart-stricken dove.

All's for the best! be a man but confiding,  
Providence tenderly governs the rest,  
And the frail bark of his creature is guiding  
Wisely and warily all for the best.

words, "To Thy," and below the cross the words, "I'll Cling." Have the letters rather large, as they are more easily filled out. For the letters, cut the ferns in small pieces with a pair of small, sharp scissors. Brush each piece with the brush dipped in mucilage, and fill out your letters, pressing the pieces of fern down neatly and smoothly. Fill the cross out in the same way, placing a pansy here and there (first having brushed the back of the pansy with mucilage) as your fancy may suggest.

After your motto is done, lay the bristol-board in a large book and weigh it down for two or three days, then frame. A motto of this kind made with bleached ferns, on a background of black velvet, is exquisitely beautiful. To press the ferns, and use them without bleaching, a very handsome effect is obtained.

#### SCRAPS OF WAX.

Ladies working in wax can use their scrap wax

in a deep dish, some melted lard, enough corn meal to fill your deep dish, a spoon and a case-knife. Then take a small but handsome vase (without arms, or side pieces, as they are sometimes called) and stuff it full of cotton; then paste a piece of writing-paper smoothly over the top; then grease one-half of the vase and lay the part which is not greased down sidewise in the corn meal, afterward pressing the corn meal firmly around it, being careful to have it just half way down in the meal. Then, with some cold water and a spoon mix up a stiff batter of plaster-of-paris and pour quickly over the part of the vase which is not in the meal. Mix just enough plaster to cover that half of the vase with a thick coat, as the plaster will not do to use after standing ten minutes. Dip the case-knife in water, smoothing the plaster a little as you pour it on. Allow the plaster to run down into the meal, as that will give a good edge to your mold. Then set

### THE LION IN LOVE.

All's for the best! then fling away terrors,  
Meet all your fears and your foes in the van,  
And in the midst of your dangers or errors,  
Trust like a child while you strive like a man.

All's for the best! unbiassed, unbounded,  
Providence reigns from the East to the West;  
And, by both wisdom and mercy surrounded,  
Hope and be happy that all's for the best.

### FERN LEAF MOTTOES.

Have ready a quantity of pressed Ferns and Pansies, a handsome rustic frame with glass, a bottle of mucilage and small camel's hair brush, and a piece of white bristol-board to fit your rustic frame. In the centre of your bristol-board outline a cross in any style, plain or fancy, that you may desire. Then above the cross draw in Old English capitals the

very advantageously just now. Having gathered a quantity of autumn leaves—maple and oak are most beautiful—lay some of your scrap wax on a newspaper and rub a warm flat-iron over it. Then iron your leaves carefully, laying them in a book as you iron them. Leaves waxed in this way and then dried are very nice for making crosses, wreaths, or for decorating pictures. Sprays of oak leaves with the acorns attached are very prett. Iron the leaves with a waxed iron as soon as they are gathered; do not have the iron too hot, as it makes them dark and dead looking; iron over two or three times, so as to dry them thoroughly, then suspend as your fancy may dictate.

#### TO MAKE VASE MOLDS.

Have ready half a pound of plaster-of-paris, a deep

in the sun to dry. When thoroughly dry remove the mold from the meal, but do not take the vase out. With a penknife scrape the edge of your mold perfectly smooth. Wipe all the meal from the other side of the vase, and grease it and the edges of the mold very thoroughly with lard. Lay the plaster side (or the one which is already molded) down in the meal. Mix up more plaster and cover the remaining side thoroughly with a thick coat of the plaster, allowing this last coat to run a quarter of an inch over the other part. Smooth with a case-knife dipped in water, then allow mold to dry one hour. Then place mold in a basin of water, allowing to stand a few moments, when the mold may be carefully taken apart and the vase removed. With a clean cloth rub the mold perfectly dry, and it is ready for use.

MRS. E. S. L. THOMPSON.

## Ladies' Boudoir.

## THE BOBOLINK.

Once on a golden afternoon,  
With radiant faces and hearts, in June,  
Two fond lovers in dreaming mood,  
Threaded a rural solitude;  
Wholly happy, they only knew  
That the earth was bright and the sky was blue,  
That light and beauty and joy and song  
Charmed the way as they passed along.  
The air was fragrant with woodland scents,  
The squirrel frisked on the roadside fence,  
And hovering near them. "Chee, chee, chink!"  
Queried the curious bobolink,  
Pausing and peering with sidelong head,  
As saucily questioning all they said;  
While the ox-eye danced on its slender stem,  
And all glad nature rejoiced with them.

Over the odorous field were strewn  
Wilting winnows of grass new mown,  
And rosy billows of clover bloom  
Surged in the sunshine and breathed perfume,  
Swinging low on a slender limb,  
The sparrow warbled his wedding hymn,  
And balancing on a blackberry brier,  
The bobolink sang, with his heart on fire—  
"Chink! If you wish to kiss her, do!  
Do it, do it! You coward, you!  
Kiss her! kiss, kiss her! Who will see?  
Only we three! we three!"

Under garlands of drooping vines,  
Through dim vista of sweet breathed pines,  
Past wide meadow-fields lately mowed,  
Wandered the indolent country road;  
The lovers followed it, listening still,  
And loitering slowly as lovers will;  
Entered a gray-roofed bridge that lay  
Dusk and cool in their pleasant way.  
Under its arch a smooth, brown stream,  
Silently gilded with glint and gleam,  
Shaded by graceful elms that spread  
Their verdurous canopy overhead—  
The stream so narrow, the boughs so wide,  
They met and mingled across the tide.  
Alders loved it and seemed to keep  
Patient watch as it lay asleep,  
Mirroring clearly the trees and sky,  
And the fitting form of the dragon-fly—  
Save where the swift-winged swallow played  
In and out in the sun and shade,  
And darkling and cowering in merry chase,  
Dipped and dimpled its clear dark face.

Fluttering lightly from brink to brink,  
Followed the garrulous bobolink;  
Rallying loudly, with mirthful din,  
The pair who lingered unseen within;  
And when from the friendly bridge at last  
Into the road beyond they passed,  
Again beside them the tempter went,  
Keeping the thread of his argument—  
"Kiss her! kiss her! chink-a-chee-chee!  
I'll not mention it! Don't mind me!  
I'll be sentinel—I can see  
All around from this tall birch tree!"  
But ah! they noted—nor deemed it strange—  
In his rollicking chorus a trifling change—  
"Do it! do it!" with a might and main  
Warbled the tell-tale, "do it again!"

## HOME-KEEPING AND HOUSE-KEEPING.

There is a vast difference between home-keeping and house-keeping. The first includes the latter, and a great deal more. Paul taught that women were to be homekeepers, and by that we do not suppose he meant that they were always to stay at home and scrub and cook. Many have an idea that the highest encomium that can be lavished upon a woman is that she is a good housekeeper, and by that they mean one who keeps the domestic machinery running without jar or interruption, one whose house is in perfect order from cellar to garret, and whose table is always with its appurtenances faultless.

This is desirable, and so far as it conduces to the true happiness of the family, is included in my idea of home-keeping. I have seen housekeepers who sacrificed the comfort and freedom of their husbands and children to the one idea of an orderly house. I have been a guest in a house so stiffly kept that I feared to take up a book lest I should forget which side up I found it. It is "Johnny! look at your boots!" if he chances to come bounding in with some important news for mother. "Go right out and clean your feet! then I will hear you." Johnny drops his head and goes out and cares not to come in again, to confide in mother that item so important to him. That

mother had much better follow the little feet, with brush and dust-pan, than check the confiding nature of her boy, who will soon learn to look to some one else for sympathy. That mother may some time weep in sorrow for the lost confidence she might have kept. A child's home should be attractive and warm with love. A house built of clean cakes of ice may be neat but it would not be inviting.

Perhaps I can give my idea of home-keeping by describing to you a home I visited the past summer in the city of Rochester. The first thing that attracted the eye upon entering the well-lighted hall was the word "welcome," formed of green Moss and tiny Everlastings tacked upon the tinted wall. From that simple word radiated a warm cheer that pervaded the whole atmosphere of the place, and gave you an assurance of hospitality. It was a little thing, but how much of life's happiness or woe is made up of little influences. Let us enter the parlors: The first impression you have here is one of harmony, giving a feeling of ease and pleasure. Webster gives as one definition of home "a place of rest." Here you naturally drop into an easy chair and drink the quiet beauty of the place. There is nothing so startling in its cuteness, or glaring in its gorgeousness, as to arouse you, but it produces the same restful feeling that one has in looking upon a beautiful blended picture or a quiet landscape. Who would think of rest in a visit to Niagara, where every step reveals something new to arouse and excite the whole being? But this quiet beauty begins to resolve itself into pleasant details. A bay-window in the back parlor first claims attention; it is filled with vines, choice plants, and thrifty hanging-baskets. A stand holds a warden case filled with ferns, and it does better for being partially shaded by the plants ranged between it and the glass. From this beautiful bower ran Ivies, Mandarins and Madeira vines over pictures, and apparently where their wild fancies led them, yet you knew they must have been carefully guided. They seemed like my friend's children, to have been so constantly and gently guided that they appeared to go of themselves just where they ought. The centre-table was filled with the choicest magazines and newspapers of the day.

I must have looked my surprise at the variety of periodicals, for my friend says, "nothing pays us so well as the reading matter we furnish our children—no retrenchment here." Over the piano are two fern wreaths—one of green pressed ferns fastened with touches of glue to white bristol-board, the other of bleached ferns upon a black velvet background. The frames were wrought in putty—leaves and fruit of the grapevine, and varnished. These home-made frames and their contents, which cost only patience and skill, were to me more beautiful than a pair of Prang's chromos with their expensive frames that hung opposite. The front parlor had its bouquets of skeletonized leaves and bleached ferns. Autumn leaves arranged like a vine ran over the doorway, over pictures, and fell in sprays over the lace curtains. These leaves were ironed with a warm iron, dipped in melted paraffine, and fastened to long wire to simulate a vine, and was beautiful beyond description. The wall being plain, and the slightest remove from white, showed the vine much better than a figured paper.

Suspended from the centre of the arched doorway was a large wreath made of green Moss and Everlastings, and standing within the wreath was a white dove with extended wings (made of cotton flannel), holding in his beak a green sprig. This, as an emblem of peace and love, was very suggestive. But time would fail me to tell of all the beautiful adorn-

ments that mother's love had created to make home beautiful to her children. In reply to a remark of mine she said, "I am striving to make home so beautiful to my children that no other place on earth, be it ever so attractive, shall look so pleasant to them. They went to Buffalo to spend a part of their last vacation with cousins, whose parents are very wealthy. I awaited their return without fear, yet with some anxiety. Almost the first exclamation of Emma was, 'Oh, mamma, how lovely our home is! Uncle Harry's house is so big and so stiff that I am dreadfully tired. Everything looks so bought.' The fine furniture is always kept covered, except on some grand occasion, and Effie says they made her think of the mummies she had read about. There is nothing in our home, as you see, too good to enjoy every day."

I must say a word about the children's rooms. Many who fill their parlors with beautiful books and pictures leave their children's rooms bare and uninviting. Not so here. Henry's room has his book-case, filling with choice books, which he is made to understand is the beginning of his library. He is to read the last before another is added. His specimens of insects, his collection of fossils and shells, have their proper place. A bright carpet, a few chromos, &c., make a room that a boy is proud of and a man would love to look back upon. The girls' room showed the same evidence of the taste and love of mother, and contained many articles of their own handiwork. I could not but express my delight at the success of my friend in making a home. She says: "My time is nearly all given to the education and training of my children, and it seems to me that my work for the next ten or fifteen years, if my life is spared, will be to keep my home a haven to my children and a place of rest to my husband."

To me it seems that the calling of a true home-keeper is as much above that of a mere house-keeper as the position of a wife and mother is above the veriest menial.

MRS. H. M. BARKER.

**The Tyrant Mamma.**—"Letitia" writes to *The Louisville Courier-Journal*: "I have been invited to two parties during the past week, and am told by my mamma that I must not attend either, because the weather is changeable and severe, and because I will not consent to wear any other than a dress with low neck and short sleeves, which would necessitate the removal of my winter woollens. The conditions are peculiarly hard to me. For several weeks I have been endeavoring to rob a rival of her lover. I have invoked all my charms and blandishments in the contest, and the result of the battle hangs just now upon a thread. Indeed, I think I have the advantage of the fight, and could I only attend one of the parties in question I would feel confident of being rewarded with a complete victory. I dance better than my rival, and the gentleman over whom we are contending has often told me that I appeared to superior advantage in party dress. But I have just heard that in consequence of my refusal to accompany him he has made an engagement with my enemy. She, willing to be second choice, consented. And, oh heavens! They are going alone in a close carriage; I know they are! What am I to do? What a torture my imagination will be to me during that long and feverish night! The parental tyranny is the greatest of cruelty. I had rather have the pneumonia in its worst type than suffer this mental misery. Not that I care for the man, for I do not; but I want to spite my hated rival, and gain the glory of a victory over her. She loves him, and would marry him to-morrow if she could. But with the help of heaven and the hard times I will prevent it."

## Ladies' Fancy Work.

### PAINTING GRASSES.

In reply to Mrs. F. W. S.'s request for directions for coloring or painting grasses: I have tried coloring, but do not like it, as it soon fades and is so brittle and at the same time stiff and ungraceful.

I begin gathering the grasses as soon as mature, which is at different seasons. In June, blue grass, wheat, oats, and other grain and grasses, are in right condition, and then all along until frost. As I gather the grasses and grain I have an old pan, pail, or box of sand in a dark place, and stick the stems—a few in a place—in an upright position in the sand. In this way they do not dry too fast, retain their color better, are more pliable and graceful than when dried any other way. I leave them until I want the room to place more; I then remove them to vases or some place, keeping their heads up. When ready for painting I procure five cents' worth each of chrome green, Paris green, Chinese or California vermilion, yellow ochre. Mix equal parts linseed oil and turpentine, say one gill each, in wide-mouth vessel. I then make a little sieve of two thicknesses of tarlatan sewed on a piece of wire bent in a circular form, a little loose or bagging in the middle. Take one or two pieces of grass, lay the tops or parts to be painted on an old plate or piece of tin. Gently brush with the oil and turpentine with a clean paint or varnish brush. Be careful not to get too much on, but touch it all. Then with the little sieve, sift on the the desired color. Lay it on a paper for the dusting the color on, so as to catch all the dry paint and prevent waste, as it can be sifted on the next piece until used up. Have the sand ready again to stick the painted grasses in until dry, being careful not to let the different colors touch till dry; then arrange to suit the taste, mixing in a good deal of crystallized grasses and grain, and if you do not think them beautiful write and let me know. They are as pliable as when in their natural state, and retain their color for years. I sent to Vick and bought fifty cents' worth of Everlastings and Immortelles and Feather Grass, and made several bouquets which I sold for five dollars a pair—would sell for more in large cities.

#### CRYSTALLIZING.

My recipe for crystallizing is: One pound of alum to one gallon of water; very clear water should be used. When cool place the grasses in and leave for two or three hours. If fine crystals are desired, move the grasses every little while, turning them over. Then hang in a shady place to dry.

C. N. EVELEIGH.

### A QUILTING PARTY.

"What shall I make for the fair?" some lover of fancy-work may ask, in great perplexity.

Tired of making pin-cushions, needle-books, tidies, lamp-mats, and all other articles with which the tables at fairs are generally stocked, a desire may perhaps be felt to make something new and different. For the benefit of such a person I will describe a miniature quilting party that I made once, after a description of one had been given me. As I was not in a city where I could buy the material used for the one I wished to copy, "necessity was the mother of invention," in this case, as it often is in others.

For a foundation of the whole I used a piece of stiff

pasteboard eighteen inches square; and making a covering of dark brown stuff, for one side, and cambric for the other, sewed up like a pillow-case, I put in the pasteboard and sewed up the end.

Next, having bought nine toy chairs, with wooden frames, I fastened the legs of all to the foundation, in the places desired, by putting strong short dressing-pins up through the pasteboard into the legs, making them quite firm. Four of the chairs were for the quilting frame to rest on, and the others were for the quilters. The frame was made of smooth, slender, pine sticks, fastened securely at the corners, and on this frame was sewed the little quilt, the blocks of colored print, and white muslin only an inch square, and the whole quilt a foot square.

As I could not find jointed dolls the right size in our village, I made all the six quilters with walnut heads and muslin bodies. A strip of muslin three inches wide, made into a roll the size of my thumb, served for each body; this allowed a sitting posture, without bending the body. A white lace cap, fitting closely around each head, with the ends of the lace gathered up, was fastened to the body. Of course there were features marked with ink on every face, and it was quite amusing to see the difference of expression on these sharp-nosed faces! Over the tight lace cap was a more dressy one with ruffles and ribbon bows. Their dresses were quite plain and just suited to old ladies with caps. One had on a brown dress, a long black silk apron that came nearly to the bottom of her dress, and a white kerchief. A black silk bag, with a white handkerchief just visible at the opening, hung on the chair near this one, who, with the help of another opposite, was standing up to mark the quilt with a string. Their hands were all sewed to the quilt, one hand of each quilter underneath and the other on top. Two of the old ladies had their heads so close together they seemed to be gossiping as quilters are apt to do. On the quilt were two or three very small spools of thread (Nos. 180 or 200), a small piece of wax, and some scissors an inch long.

It was rather tedious work getting all the materials together, from bags, and baskets, and boxes; ironing them, cutting them out, and sewing them; but, after it was done it afforded much amusement to those who saw it. I had the satisfaction of knowing that it sold for two dollars at the fair, for which I made it. The only expense that I incurred was twenty-seven cents, which I paid for the chairs. ABBY G. SHAW.

### A PRETTY PICTURE FRAME.

I was so well pleased with the suggestion of the FLORAL CABINET, of the uses of autumn leaves, that I soon had two stars cut geometrically. The smaller one I covered with varnished maple leaves of different sizes and colors—very pretty. Another, quite large one, was composed of a variety of unvarnished oak leaves of various kinds, with a cluster in the centre of acorns or the cups. One day, among some broken picture frames, I found a long narrow one of some dark wood. Not caring for an illuminated text, or worked motto, which are so common, and having some pressed ferns and two sprays of red sumac leaves, I arranged them on white cardboard, so as nearly to fill the frame; in the centre a dark red and shaded initial letter was placed, but perhaps one of gilt might be preferred.

My two unpretending rooms have been made quite cheerful this dreary winter by various inexpensive devices. I have an anchor and hute of autumn leaves, the CABINET chromos framed, as well as many other pic-

tures, a cross of moss and basket of wax-work, hanging-baskets improvised to suit circumstances. One of German Ivy, in an ox-muzzle, has an old funnel in the centre containing Zebrina Tradescantia, which is of various shades of green, and looks like burnished silver—much admired by my friends. Another small piece is a cigar-box, covered with moss and fungi, containing some small vials of water with bits of vines and three kinds of Achyranthus. A lady caller fancies this last, and the rustic log, above any of the rest. Her coming is like a ray of sunshine, always finding something to commend, looking over my plants, and taking away some cheerful thought, like the busy bee, intent only on the sweetest and best, overlooking any discrepancies or failures. We receive so many useful hints and directions from the CABINET that I ventured to add my mite to the stock of the floral band. If one has but moderate taste, and some ideas as a basis, many home-adornments may be made, both pleasing and useful.

JUSTINA PALMER.

**How to make Husk Baskets.**—Very nice baskets and wall pockets can be made by taking pasteboard and cutting it just the shape you desire your basket, and then procure some husks; some prefer the outside husk, but I prefer the inside, it being so much whiter and easier to handle. Take the husk and cut it into strips three-quarters of an inch broad, lengthwise of the husk, then cut in lengths one inch and a half long, then double in the centre lengthwise, then double them over your finger so as to form a nice point in the centre, lapping the ends so as to sew on to the pasteboard, putting the open side next to the pasteboard, then sew on to the pasteboard: sew one row around the outer edge of the board, letting each one lap so as to hide the stitches in each piece, and then fill up the center in the same way, letting each row cover the stitches above; make a handle by taking a narrow strip of pasteboard and sewing one row of husks on each side, then one through the centre, hiding the ends of the outside row; a strip like this around the bottom of the basket improves it very much. If any of the ladies try this and cannot succeed, I will send them a sample by sending me their address.

Will some lady please tell me what is the matter with my Geraniums? I have some which grow very nicely and bud, but never open; some will almost open, and then just wilt and drop off, but I cannot tell why. M. I. Mc.

**My Medley.**—Last summer it became quite a fashion to make "medleys," as they were called. They were made of a number of small pictures pasted upon bristol-board, forming one large one which was then framed. Turning over my stock of pictures one day, preparatory to making one, my husband said, laughing, "You've got pictures enough to make a medley to cover one side of the house." "Well," I replied, "I shan't cover one side of the house, but I'll make a mammoth medley of the east hall." So I commenced operations that day. I had a large supply of plates from Godey and Peterson, also from the floral catalogues, and a quantity of woodcuts from various sources. I pasted these all over the walls of the hall, fitting them as well as I could; all places which did not join neatly I covered with a flower, cut from one of the catalogues and colored. When it was all finished and dry I gave it two coats of varnish, and now—well, now, I'm proud of it!

MRS. ANABEL C. ANDREWS.

## Household Elegancies.

## WALL-POCKET IN FRET-WORK.

Very ornamental and useful wall-pockets or receivers, made of carved black-walnut, as represented in our engraving, can be purchased in almost any fancy shop; but such things are apt to be somewhat expensive. A home-made article is, on economical grounds, more desirable, besides possessing an interest which the purchased one cannot have. Thin pieces of wood can be readily procured at the cabinet-maker's and sometimes at piano-forte factories. These obtained, you have only to copy or design a simple yet graceful open-work pattern for the back and the front pocket piece, and with a sharp pocket-knife carve the wood to correspond. The sides of the pocket are made of cloth or leather, and it will be found an improvement to back the front piece with some bright color that will show through the carved open-work. Before using the penknife, it is a good plan to bore large holes in the wood at intervals, according to the pattern, and then cut away the wood from hole to hole. A very pretty wall-receiver, in the design of the present engraving, can be made of stout pasteboard, which, though not so durable, is more easily managed than wood. When the article is finished, paint it with hot glue, and instantly sprinkle ground coffee, ground allspice, or any kind of pretty garden seed, thickly upon it. If the first sprinkling does not completely cover it, touch the bare places with glue, and sprinkle again. The seed of gum-balls is very pretty for this purpose, but it is a good plan to use a mixture of various kinds of seeds. Split gum-balls, or acorns, may be used as a border, if desired, though the article can be more neatly finished with a stout twine, over cast all around its edges, and sprinkled and varnished like the rest. The lining of the open-work pocket-piece should be of a color contrasting well with the outside. Before the pocket is lined, however, the receiver should be varnished with gum-shellac dissolved in alcohol. This shellac varnish is preferable for the purpose to any other kind, as it gives a soft lustre instead of the unpleasant shiny effect of other varnishes. It is easily made by dissolving enough gum-shellac in the strongest alcohol to give it the thickness of fresh cream. It dries quickly.

LAMP SCREEN IN FRET-WORK AND DECALCOMANIE.

## LAMP SCREEN IN FRET-WORK.

The lamp screen illustrated in engraving is made of white holly, sawed out in fancy shapes with the fret-saw, of six or eight pieces, as fancy may prefer, joined together with loops of colored ribbon; the inside of

each section is covered with colored transparent paper, muslin or silk, and the panel on the outside is decorated with some fancy ornament transferred by decalcomanie. The entire screen is simple, easily made and very inexpensive.

WALL-POCKET IN FRET-WORK.

## HOME-MADE FANCY TRAY.

Before commencing to make a tray, it is necessary to have a flat piece of wood cut round, square or oval,

HOME-MADE FANCY TRAY.

as your taste may decide; this should be bordered with molding, or with a narrow, pliable strip of wood, like the rim of a salt-box cover; perhaps you have a wooden plate, or the lid of a box, that may be used.

If your tray is designed to hold only a single glass, a salt-box cover will answer. The wooden form must be rubbed down with pumice-stone and sand-paper until it is as smooth as you can make it, and then painted black; as soon as the surface is thoroughly dry, rub it down again with pumice and sand-paper, and put on another coat of paint. When this dries, if the tray is not perfectly smooth, looking almost like Japau work, you will have

to repeat the rubbing down. Next, with the best white glue, fasten pieces of dried ferns and small autumnal leaves upon your tray. Initial letters or monograms, made of fine pieces of fern, add very much to the effect. If you have no ferns, small gilt or

colored figures, such as are sold for decalcomanie work, may be used. After the leaves or pictures are fastened on, cover the whole with a coating of white shellac varnish, or any other which is colorless and water-proof; but be sure first to allow the glue a day for drying, so that there will be no danger of the leaves curling up when they are varnished. Small tables, work-boxes and glove-cases, may be very prettily ornamented in the same manner. In our engraving we represent merely the bottom of the tray, as the rim is not ornamented.

## CARD-BASKET IN PHOTOPHAMIE.

This card basket is made of card-board, the sides joined with loops of ribbon; the double line around the edge of each side consists of embroidered stitches, and the fancy figures in the centre are made by pricking through the card-board with a needle or pin, from the outside. A little picture is first held on the surface, and its outlines are then pricked through; the other side shows the raised surface of the holes, which being open give the curious effect known as photophamie.

## FRAMES OF WHITE PERFORATED CARD-BOARD.

These frames appear like white carved marble, or heavily embossed work, and are made by first cutting out a foundation of white bristol-board, leaving the corners projecting a half inch or more (according to size of frame). Then a section of perforated card is cut to fit on this, and the narrow part of the sides are ornamented with pieces of the card, square, round, or in any ornamental shape, making them ten or more deep, and cutting each one one hole less than the one beneath, until at the top only the section of card between two rows of holes is left. Use gelatine, flour or starch paste for fastening. The corners are ornamented in like manner, but the pieces should be so arranged that open spaces are left between the ornaments. When all the sections are placed, make a mat or edge around the inner part with plain gold paper.

Gold and silver perforated card forms lovely frames if embroidered with chenille and floss silk, cutting the corners deeper than the edges.

CARD BASKET IN PHOTOPHAMIE.

Beautiful lamp shades are made by cutting five panels of perforated card, white, gold or silver, and cutting out sections; line with various colored "glass-cards" (gelatine paper), then tying together with bright ribbons.

MRS. C. S. JONES.

## Timeside Reading.

### TIT FOR TAT.

A young lady, the daughter of the owner of the house, was addressed by a young man who, though agreeable to her, was disliked by her father. Of course he would not consent to their union, and she determined to elope. The night was fixed, the hour came, the lover placed the ladder to the window, and in a few moments the young girl was in his arms.

They mounted a double horse, and were soon some distance from the house.

After a while the lady broke the silence by saying:

"Well, you see what proof I have given you of my affection; I hope you will make me a good husband."

He was a surly fellow, and gruffly answered:

"Perhaps I may, and perhaps not."

She made no reply, but after a silence of some minutes she suddenly exclaimed:

"Oh, what shall we do? I have left my money behind in my room."

"Then," said he, "we must go back and fetch it."

They were soon again at the house, the ladder was again placed, the lady remounted, while the ill-natured lover waited below. But she delayed to come, and so he gently called:

"Are you coming?"

Then she looked out of the window, and said:

"Perhaps I may, and perhaps I may not;" and then shut down the window, leaving him to depart alone.

**A Dream that Parted Man and Wife.**—Bundy has been married two weeks, and has left his wife. Bundy is a little man, and his wife weighs two hundred and forty pounds, and was the relief of the late Peter Potts. About ten days after marriage, Bundy was surprised, on awakening in the morning, to find his better half sitting up in bed, crying as if her heart would break. Astonished, he asked the cause of her sorrow, but receiving no reply, he began to surmise that there must be some secret on her mind that she withheld from him that was the cause of her anguish, so he remarked to Mrs. B. that as they were married, she should tell him the cause of her grief, so, if possible, he could avert it, and after considerable coaxing he elicited the following from her:

"Last night I dreamed I was single, and as I walked through a well-lighted street, I came to a store where a sign in front advertised husbands for sale. Thinking it curious, I entered, and arranged along the wall on either side were men with prices affixed to

them. Such beautiful men; some for \$1,000, some for \$500, and so on to \$150. As I had not that amount I could not purchase."

"Thinking to console her, B. placed his arm lovingly around her, and asked:

"And did you see any men like me there?"

"Oh, yes," she replied, drawing away from him, "lots like you, they were tied up in bunches, like asparagus, and sold for ten cents per bunch."

Bundy got up, and went to ask his lawyer if he had sufficient ground for divorce.

**A bashful young clergyman** recently rising to

Two or three months ago a Detroitier started to build house, and as he had always heard his wife "jawing around" about the lack of closets in the house, he determined to give her an agreeable surprise. She went up with him a day or two ago, and he pointed out eleven different closets to her, and asked: "Now what do you say?" "Well," she replied, after another look around, "if there was another closet off the hall I'd be willing to live and die here."

**A Little** baby stranger came to a family in Augusta, last week, and a bright five-year-old brother, who had been heretofore the only child in that household, was brought in to see the new-comer. He greeted the little one with apparent pleasure and delight, patting it playfully under the chin and smoothing its soft hair. Then all at

once came the inquiry, "Say, how was God when you left?"

During a class-meeting held by the Methodist brethren of a southern village, Brother Jones went among the colored portion of the congregation. Finding there a man notorious for his endeavor to serve God on the Sabbath and Satan the rest of the week, he said: "Well, Brother Dick, I am glad to see you here. Haven't stole any turkeys since I saw you last, Brother Dick?" "No, no, Brudder Jones; no turkeys." "Nor any chickens, Brother Dick?" "No, no, Brudder Jones; no chickens." "Thank the Lord, Brother Dick! That's doing well, my brother!" said Brother Jones, leaving Brother Dick, who immediately relieved his overburdened conscience by saying to a near neighbor, with an immense sigh of relief: "If he'd said ducks, he'd a had me!"

### WEARY.

Weary of living, so weary;  
Longing to lie down and die,  
To find for the sad heart and dreary  
The end of the pilgrimage night.

Weary, so weary of wishing,  
For a form that has gone from my sight;  
For a voice that is hushed to me ever;  
For eyes that to me were so bright.

Weary, so weary of waiting,  
Waiting for sympathy sweet;  
For something to love, and love me,  
And pleasures that are not so fleet.

For a hand to be laid on my forehead,  
A glimpse of the dark glossy hair;  
For a step that to me was sweet music,  
And a brow that was noble and fair.

Tired, so tired of drifting  
Adown the dark stream of life;  
Tired of breasting the billows,  
The billows of toil and strife.

Wishing and waiting so sadly  
For love that was sweetest and best,  
Willing to die gladly,  
If that would bring quiet and rest.

### THE CHILDREN'S WELCOME TO THE SNOW BIRDS.

preach for the first time, made a terrible mix of it, and announced his text in this wise: "And immediately the cock wept, and Peter went out and crew bitterly."

**A fashionable young miss** was taken by her mother to the eccentric and celebrated Dr. Abernethy for treatment. The doctor ran a knife under her belt, in presence of the mother, instantly severing it, and exclaiming, "Why, madam, don't you know there are upwards of thirty yards of bowels squeezed under that girdle. Go home, give nature fair play, and you'll have no need of a prescription!"

**Another Kind.**—Two Irishmen, lately landed in New York, were boarding at a hotel where they were sorely troubled with mosquitoes, and could hardly obtain sleep enough to satisfy nature. "Put yer head under the blankets," said Mike, "an' thin they'll not bite yeess." Pat did as requested, but scarcely had he found himself free from the mosquitoes when he was attacked by the bed-bugs that he had failed to notice. "Bad luck to me, Mike," said he; "here's another kind widout wings an' fiddles; but, begorra, they bite as hard as the others."

Florence All Clamp-Spring Skate,

The Spring-Clamp and Strap Skate.

Is fastened to the foot by Clamps only, and is readily slipped on and fastened by a few turns at the heel. The thumb screw being a part of the Skate, can at any time be tightened. No parts exposed to be clogged with ice.  
Price \$3.50.

This is a light, elegant and most desirable style. The Spring Runners in this, as well as in the All-Clamp Skate, give greater ease to the feet and ankles in skating than is possible in any other style of Skate. Price \$3.00, complete with straps.

### THE FLORENCE STEEL CLUB SKATE.

The best Skate in the world for the money. Beware of Cast Iron imitations.  
Price \$1, with heel sockets and straps complete.

Every Skate Warranted Steel and free from any Imperfections.

Sent by express or mail, charges prepaid, on receipt 25c. in addition to the above prices.

MANUFACTURED BY

THE FLORENCE SEWING MACHINE CO., Florence, Mass

LADIES will find profitable instruction in the pages of the *Lady's Book of Knitting and Crochet*, just published. New England News Co., Boston, and American News Co., New York, wholesale agents. For sale by all booksellers, news agents, trimming and fancy goods dealers, or mailed on receipt of 50 cents, by the publisher, J. HENRY SYMONDS, 68 Devonshire St., Boston.

VINEGAR. HOW MADE IN 10 HOURS, from Cider, Wine, Molasses or Sorghum, without using drugs. Address, F. I. SAGE, Vinegar Maker, Springfield, Mass.

FREE to applicants, my Wholesale and Bulb Catalogues. Four catalogues (the set), post free, 20 cents. F. K. PHOENIX, Bloomington Nursery, Ill.

THE COMPANION aims to be a favorite in every family—looked for eagerly by the young folks, and read with interest by the older. Its purpose is to interest while it amuses; to be judicious, practical, sensible, and to have really permanent worth, while it attracts for the hour.  
It is handsomely illustrated, and has for contributors some of the most attractive writers in the country. Among these are:

J. T. Trowbridge, Louisa M. Alcott,  
Edward Eggleston, Rev. W. M. Baker,  
Dr. I. I. Hayes, Louise C. Moulton,  
Rebecca H. Davis, C. A. Stevens,  
Abby Morton Diaz, Harriet P. Spofford,  
Edward Everett Hale, Geo. M. Towle.

Its reading is adapted to the old and young, is very comprehensive in its character. It gives

Stories of Adventure, Stories of Home and School Life, Letters of Travel, Editorials upon Current Topics, Historical Articles, Biographical Sketches, Religious Articles, Tales, Poetry, Selections for Declamation, Anecdotes, Puzzles, Facts, and Incidents.

Subscription Price, \$1.75. This includes the payment of Postage, by the publishers. Specimen copies sent free. Please mention what paper you saw this in.

## Imperial Granum

THE GREAT MEDICINAL FOOD.

This justly celebrated DEITETIC Preparation is, in composition, principally the GLUTEN derived from the White Winter Flint Wheat Cereal, a solid extract, the invention of an eminent chemist.

It has not only been highly recommended, but certified to by a large number of CHEMISTS and PHYSICIANS—representing a very high degree of medical science—as the

SAFEST, MOST ACCEPTABLE AND RELIABLE FOOD

FOR THE GROWTH OF INFANTS AND CHILDREN, AND FOR MOTHERS LACKING SUFFICIENT NOURISHMENT FOR THEIR OFFSPRING.

Unlike those preparations made from animal or vinous matter, which are liable to stimulate the brain and irritate the digestive organs, it embraces in its elementary composition—

That which makes strong Bone and Muscle.

That which makes good Flesh and Blood.

That which is easy of Digestion—never constipating.

That which is kind and friendly to the Brain, and

That which acts as a preventive of those Intestinal Disorders incidental to childhood.

And while it would be difficult to conceive anything in Food or Dessert more creamy and delicious, or more nourishing and strengthening as an aliment in

Fevers, Pulmonary Complaints, Dyspepsia, Prostrations of the System, or General Debility,

Its rare medicinal excellencies in all Intestinal Diseases, especially in

DYSNTERY, CHRONIC DIARRHOEA AND CHOLERA INFANTUM.

Has been incontestably proven.

See circulars for testimonials. Sold by druggists.

# Only Remembered by what I have Done.

QUARTETTE.

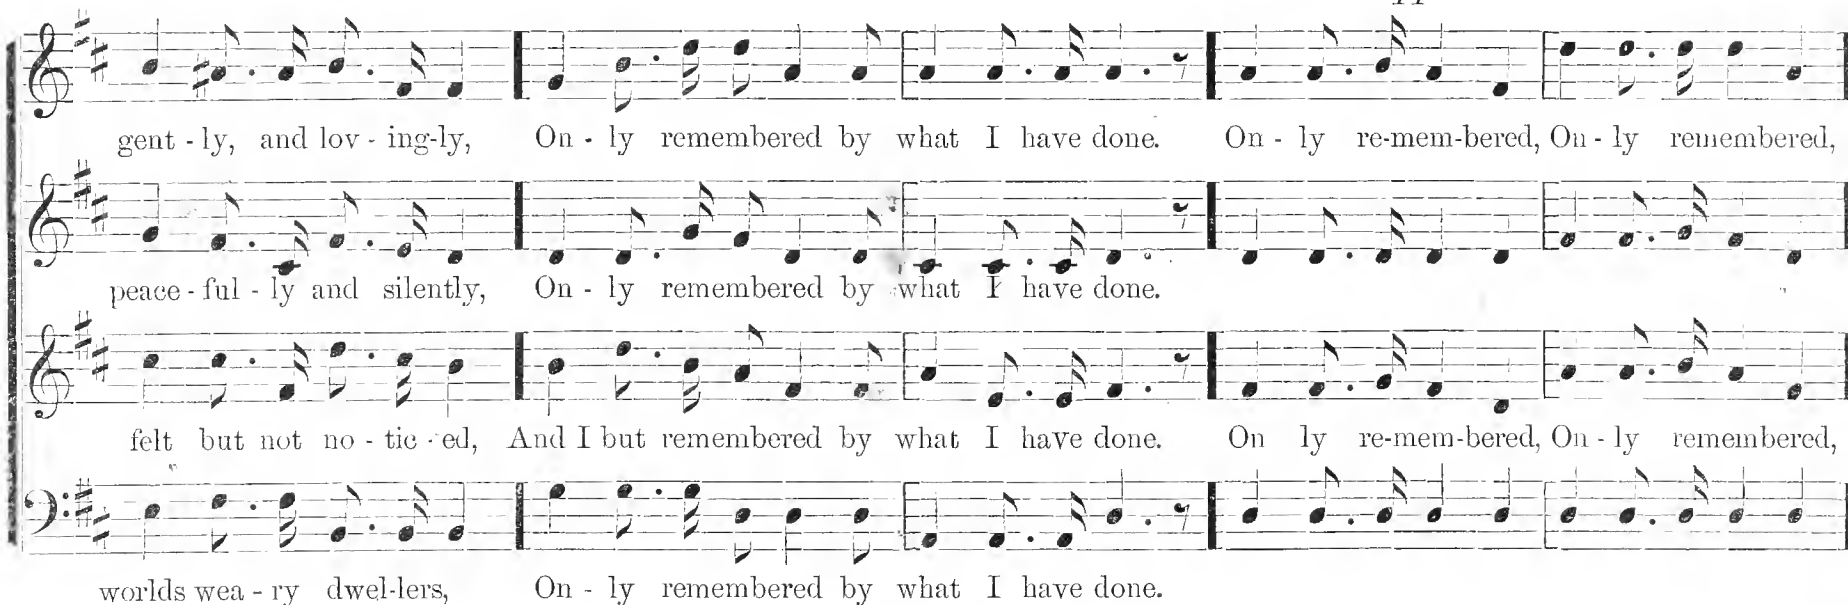

Poetry from DR. BONAR.

*Delicato.*

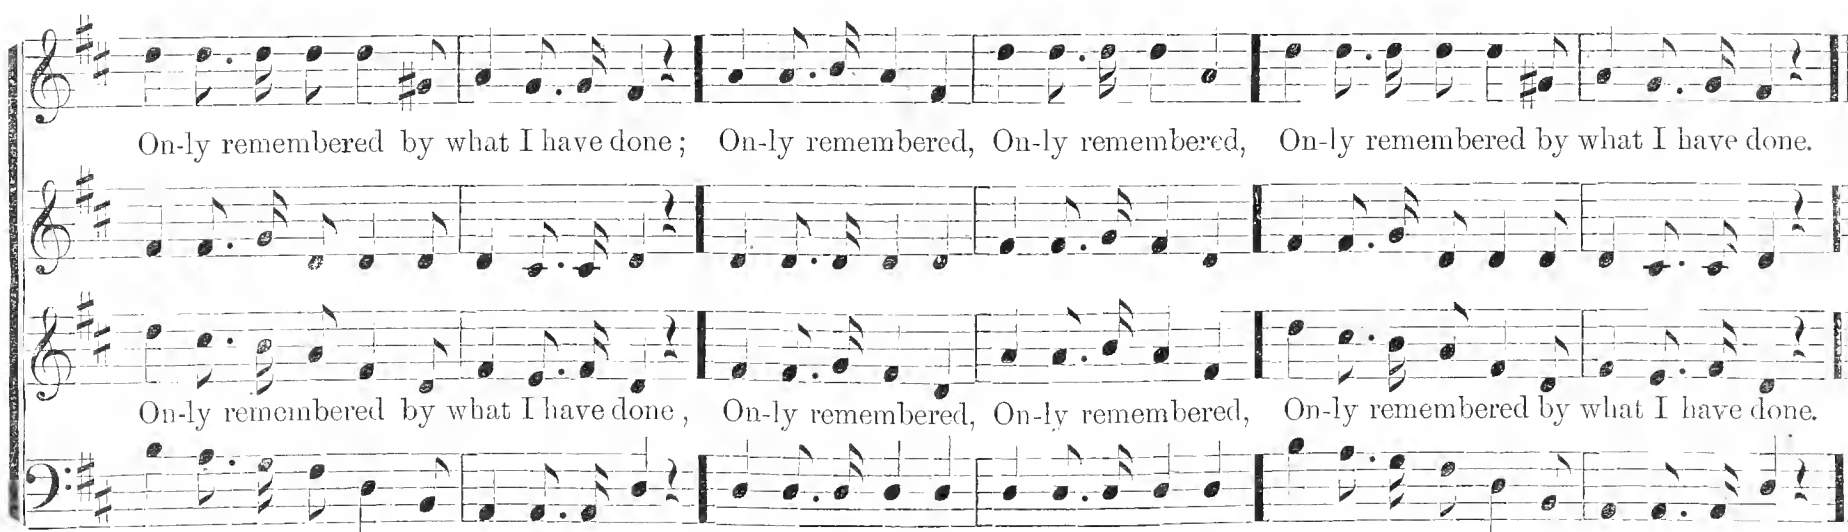

1. Up and a-way, like the dew of the morning, Soar-ing from earth to its home in the sun,— So let me steal a-way,  
2. My name and my place, and my tomb all forgotten, The brief race of time, well and patiently run; So let me pass a-way,  
3. Up and a-way, like the o-dors of sun-set, That sweeten the twilight as dark-ness comes on, So be my life, a thing  
4. Yes, like the fragrance that wanders in freshness, When the flowers that it came from are elosed up and gone, So would I be to this

CHORUS. *pp*

gent-ly, and lov-ing-ly, On-ly remembered by what I have done. On-ly re-mem-bered, On-ly remembered,  
peace-ful-ly and silently, On-ly remembered by what I have done.  
felt but not no-tic-ed, And I but remembered by what I have done. On-ly re-mem-bered, On-ly remembered,  
worlds wea-ry dwel-lers, On-ly remembered by what I have done.

On-ly remembered by what I have done; On-ly remembered, On-ly remembered, On-ly remembered by what I have done.  
On-ly remembered by what I have done, On-ly remembered, On-ly remembered, On-ly remembered by what I have done.

5 Needs there the praise of the love written record,  
The name and the Epitaph grayed on the stone?  
The things we have lived for,—let these be our story,  
We ourselves but remembered by what we have done.  
CHO.—Only remembered, &c.

6 I need not be missed, if my life has been bearing,  
(As its Summer and Autumn moved silently on;)  
The bloom, and the fruit, and the seed of its season,  
I shall still be remembered by what I have done.  
CHO.—Only remembered, &c.

7 Not myself, but the truth that in life I have spoken,  
Not myself, but the seed that in life I have sown;  
Shall pass on to ages—all about me forgotten,  
Save the words, I have spoken, the things I have done.  
CHO.—Only remembered, &c.

8 So let my living be, so be my dying;  
So let my name lie, unblazoned, unknown,  
Unpraised, and unmissed, I shall still be remembered,  
Yes,—but remembered by what I have done.  
CHO.—Only remembered, &c.

## WINDOW GARDENING.

My window garden has a south exposure, and consists of a box three feet long, eighteen inches wide, and a foot deep. Early in September I filled it with rich earth and started my plants. At each end is a thrifty Boston Smilax, which I raised from seed started in the

the centre, with a Shot Canna, a sweet-scented Geranium, an Aloe, and a trained Boston Smilax. On a shelf, high over the box, are a Fuchsia, Wax Plant, Carnation, Heliotrope, two double Geraniums, a pot of Coliseum Ivy, and midway between this and the box is a hanging basket of Oxalis. The Swallow-tail

leaves, to woo a place among the more delicate vines in the window garden.

This room is warmed by a wood stove, and the fire is seldom entirely out, from early fall till spring. My windows are fitted with double panes of glass, and are frost-proof when all cracks are stopped. I always

WOODWARD'S GARDENS, SAN FRANCISCO.

house in April; Madeira Vines, Petunias, Pinks, Dicentra, Dusty Miller, pretty Moss, Yellow Myrtle, and Wandering Jew, are at the ends and on one side; the centre is filled with Cyclamen, a mixed variety, for winter blooming. On a low shelf, below the box, opposite the window, stands a magnificent Calla, for

Cactus, with thirty or more beautiful flowers, some of them not fully open, but dazzling with beauty, are the central attraction of this garden. The Smilax vines are trained across the window and around it, but do not exclude the sun. The Ivy-leaf Geranium is throwing out its long tendrils, filled with thick, glossy

keep water on the stove, and water the plants with warm water, and use a sprinkler to keep them clean. I stir the ground often, and if any signs of green lice or black flies appear, sprinkle or dust the plants with Scotch snuff, and they soon disappear.

Cornwall, Vt.

MRS. E. A. WARNER.

## Floral Contributions.

[For the LADIES' FLORAL CABINET.]

## FERN LIFE.

October skies are molten gold,  
October hills are gay;  
We'll dig deep down in earth's dark mold,  
And bid October stay.  
The breezes and the summer show'rs  
All died in summer's death;  
And now we guard the fading flow'rs,  
And catch their fluttering breath.  
O! flowers of the woodland dell,  
We loved and cradled you;  
But He who doeth all things well,  
He can create anew.

November skies are leaden gray—  
The year is growing old;  
The brown leaves shiver as they say,  
"November winds are cold."  
Scarlet and green, crimson and gold,  
Fluttering on the sod;  
Wrinkled and brown, withered and old,  
We give them back to God.

December gathers all his strength  
Of snow and icy blast;  
He seizes ev'ry stream at length,  
And binds it tightly fast.  
We ferns are robed in softest snow,  
"Ermine too dear for carls;"  
We watch the Old Year lying low,  
And wear his tears for pearls.  
We greet with joy the new-born star,  
While ev'ry spruce and fir,  
Like Eastern wise men from afar,  
Brings frankincense and myrrh.

With joy and brightness breaks the morn—  
Welcome, thou glad New Year!  
New joys, new hopes, new pleasures born—  
Yet will we shed a tear.  
For in the silence of the night  
The weary Old Year died.  
We watched the last dim ray of light,  
Standing his cot beside;  
The weary Year—sin grief and care  
His shroud, and withered flow'rs  
And dead, brown leaves. Yet he was fair  
In sunny youth's glad hours.

February mocks the tyrant Death,  
And whispers of the spring!  
Still ice and snow, but in his breath  
Is fragrance of the spring.  
He calls the birds from Southern clime,  
New life each fiber thrills;  
We watch afar the glad spring-time,  
The verdure of the hills.

March winds and sunshine, snow and death,  
The travail of the spring;  
We fought for life, we fought for breath,  
And conquered the Ice King.  
We lift our heads up to the light,  
And stretch our quivering hands  
To reach God's majesty and might,  
Where on the hills he stands.  
Through grief and pain, darkness and cold  
We struggled; and at last,  
In God's own sunshine, we unfold,  
Safe from the wintry blast.

Weeping and laughing, sunshine and rain—  
O! April! smiles and tears!  
Sorrow and gladness, joy and pain,  
God's smiles, man's gloomy fears!  
We ferns have donned our robes of green,  
Sweet life fills ev'ry vein;  
And God's own glory, golden sheen,  
Makes gladness after pain.  
The wee, bright blossoms from their sleep  
Have waked, the morn to greet.  
O! Soul, fear not; God's love will keep  
You safe, His face to meet.

M. H. E.

## SCALE LOUSE, MEALY BUG, &amp;c.

I have been wanting to have a chat in our paper for some time, and as I have had something to do with the above-mentioned intruders during the past summer, I have concluded this is a good time to have it.

These disgusting creatures were introduced to my notice by a Myrtle and two Bouvardias (pink and white), received from the greenhouse some months ago. I wondered why my Myrtle grew so slowly, and one day, on giving it a more loving look than usual, I discovered it was literally covered with little brown scales; the midribs and aril of every leaf, and all along the woody stem, till every joint looked swollen. I immediately thought of the scale louse I had read of, so I concluded this was the pest, and went to work. I put the pot on a paper, and with a dull penknife, carefully scraped every stem and leaf, till they fell down thick on the paper, which I burned;

then with an old tooth-brush I scrubbed the entire plant with soapsuds with ammonia in it, and have repeated this operation three times within as many weeks, and my Myrtle, even in this short time, shows a change; it is putting out tiny shoots all over, and every little glossy leaf looks bright and healthy now. I know it thanked me for those scrubbings.

In many places one would scarcely detect the scale louse, it looks so much like the bark, but a touch with the point of your pen-knife will soon tell you if it is there. My pink Bouvardia I treated the same way, and it is also flourishing. The white Bouvardia (*Jasminoides*) had the mealy bug on it, and before I had observed it, they had infested my *Vinea Harrisonia*, but constant watching has freed them both from this pest. One day you will see some white powdery looking stuff, and the next, perhaps, a snug nest of young mealy bugs; they increase rapidly, as it seems to me all enemies of plant-life do. I find it best to look over all plants from the greenhouse, for there is almost always some enemy hiding around, and one infested plant will soon spread through a collection, and give more work of the kind than one cares to perform.

And now I want to ask a few questions, one about Apple Geraniums—great favorites of mine—and this, by the way, reminds me to say, through the CABINET, that I answered Birdie Arnett's letter in February number of the CABINET, 1876 (Augusta, Ark.), and sent her some flower seed, but never after heard from her, and suppose the letter never reached her. I was so delighted at her success with Apple Geranium, and I wanted to ask her if a green excrescence ever grows down near the root of hers, and if it must be removed? or, does it develop into a branch? I have always taken mine off, as it looks like a disease to me. I have a handsome Poinsettia, and must speak in its favor as a winter window plant. I kept mine in a frame house, and more than a dozen times during the winter the thermometer was down to 40° at night, yet its scarlet bracts were lovely, and remained on for two months. I got it from a florist last October, repotted it, using a great deal of old manure (it is a gross feeder) and watered it freely till it was done flowering, then watered gradually for a few weeks longer, when I set it away for a good rest. About May 1st, I repotted and started it so as to be ready for another winter, and it has half a dozen new shoots, three of which I have pinched back, so as to have more branches for blooming. It is a fine stately plant now, and is admired by all, even when not in bloom.

I would like to know what is meant by a double Poinsettia. Does it mean several rows of flower bracts? If so, then mine is double. The *true* flowers have a yellow gland at the top, on one side, filled with a drop of honey.

I raised a slip of *Hoya Carnosa* last fall; it had but two leaves then, now it has eighteen and is over eighteen inches high. I also have a larger one, bought from a florist last spring; it has several branches four or five feet long, and I am looking for buds, as he said it would bloom in August. I give mine the hottest sun and plenty of water, while it is in active growth, and it has flourished ever since I got it, and sent out several new shoots from the roots, besides numerous side branches. It is in a six-inch pot, and I want to know if that is large enough. I will send slips to any floral friend who will let me know she wants one.

I have a fine double pink and white variegated *Oleander*, eight feet high; it has been a mass of bloom ever since June, and I have just budded it with the single white and buff. I wonder all the ladies don't

learn to bud their plants, it is so easily done; only watch it done once and you will know how. I am trying to bud Geraniums also, but they require more care than Roses, etc.

I did not allow my Calla to have an entire rest this summer, as there was a lovely pink *Maurandya* with it, which grew and covered entirely the large pot, so I kept the Calla damp enough to let the *Maurandya* live and bloom, and it has been covered with its pink *Gloxinia*-like flowers all summer, and now I have commenced to give an abundance of water, as I like my Calla to bloom early in the fall, and then it keeps on all winter. A Calla is no trouble at all, and its pure white spathe is too beautiful to try to describe. I like the name "Lily of the Nile," though we all know it is not a Lily at all, but belongs to the *Arum* family, like our "Jack in the Pulpit" (*Arisaema triphyllum*); neither is it a true Calla, according to Dr. Gray, but a *Richardia*, named for the French botanist, L. C. Richards, and is a native of the Cape of Good Hope.

My Catalonian Jassamine or *Jasminum Grandiflorum* is full of buds and bloom; it is such a fine fall and early winter bloomer, I wonder every one who loves fragrant flowers does not have one. I can furnish slips of it also.

I have three fine *Stevias* ready for winter-blooming; were slips last May, and now are over a foot high and very bushy. I keep pinching the branches up to Sept. 1st, and then let them grow to form buds. My *Smilax* is in a seven inch pot, is several years old, and has run to the top of a five-foot trellis, and is sending up no end of new runners. I let it rest in early summer (May and June), repotted, July 1st, in rich soil, gave it plenty of water and shade, and it is a marvel of beauty. If *Begonia* lovers want a beauty let them get *Glaucophylla Scandens*.

Mrs. R. S. TRUSLOW.

Kanawha C. H., W. Va.

**Scotch Thistle.**—In your "Window Gardening" favorable mention is made of the *Daphne Odorata*, and I have searched for it in vain in every catalogue that I have, but without success. Can you tell me where I can procure one? As a slight token of gratitude for the numerous hints I have received from the various contributors to your pages, permit me to lay before them an annual not much cultivated in this hemisphere, but which makes a splendid foliage plant with no trouble. I refer to the Scotch Thistle. Do not start. I do not mean the Canada Thistle, or any other similar horror. The plant I mean is of a beautiful glossy green, reticulated with pure white, the leaves serrated and studded with strong sharp spines; it grows from two to four feet high, and then sends up a flower, such as you only see in heraldic paintings; there is no danger of its spreading, as the seed has to be carefully preserved every fall, and the appearance of the plant, in its various stages of growth, varies from sweetly cool to majestic; it will bear transplanting, but it is best to sow it where it is to grow, as it is tap-rooted and loses leaves and growth by transplanting. I have grown it every year for six years, and to all of your contributors, who send me their address, I will, if I have my usual good luck, send a few seeds, in the fall, for trial next spring. Mrs. R. CALVERT.

La Crosse, Wis.

**Answer.**—The *Daphne Odorata* is generally found in catalogues of the best florists, such as Dreer, Dingee & Conard, etc. You will probably be astonished at the correspondence the CABINET readers will favor you in response to your free offer.

## Gossip with Correspondents.

### EDITOR'S CHAT WITH HIS READERS.

After a long summer's trip in California, Colorado, and among the wonders of the Rocky Mountains, the editor returns to the comforts of the pleasant office of the FLORAL CABINET, to meet with many enthusiastic and cheerful letters from our readers. Bright, witty, amusing, sensible, and useful, how truly delightful is the treat to read them over and respond, as far as we can, to their requests.

Few readers know how immense our army of friends and correspondents is. Within a year the CABINET has received over 50,000 letters from its admirers, and we hope neither their number or their precious encouraging contents will ever be less. The coming months we shall do more richly for our readers than ever before, and make "each particular face shine with thrills of delight."

In our rambles in California we saw many wonders of floral abundance. In a little garden at Los Angeles, we saw, clambering up the pillar of a cottage porch, a Fuchsia vine, only six months old, over six feet high, with three thousand blossoms upon it. In another garden was a Geranium bush; once it was but a little slip, planted last spring; now it had grown so fast that it had one hundred and fifty branches and over one thousand scarlet flowers. In a little garden in San Francisco I saw a large fence, fifteen feet high and sixty feet long, all covered with Geraniums (which grow there as fast as vines), and all in bloom. Think of one thousand square feet of red Geranium blossoms. What a glory! At a little cottage garden in Santa Cruz, we saw a Fuchsia so large as to be a tree eight feet high, with trunk nearly two inches in diameter.

But we will tell more of the pleasures of our journey another month, and now ask only a hearty greeting to the little notes our friends send us from so many portions of the country.

**A Little Girl's Tub.**—A little Texan girl has made up her mind to write us, and says: "MY DEAR FLORAL CABINET—I am only a little girl, but I love flowers very much. I want to tell you about my tub. Early in the spring I took a half of a molasses barrel, and set it on the northeast side of the house; I put about six inches of loam in the bottom of it; in that I planted a Calla Lily and three large roots of white Water Lilies (Nymphia Odorata); then I filled the tub with clear fresh water. It evaporates a great deal during the summer, and you will have to keep it filled. I have six little Minnows in my tub, and they play so nicely. The Water Lilies bloomed in June; I think I never saw anything prettier in my life. Do not let the water freeze more than one inch deep.

I have got a pitcher I want to tell you about. The bottom was broken out, and I was going to throw it away, when a happy idea struck me to plant it; so I put a lot of pebbles, etc., in it, and then filled it with sandy loam; in that I planted a Calla, some Ferns, Lycopodiums, Moneywort, and Kenilworth Ivy; all of these like plenty of shade and water, which I give them. The vines have nearly covered the pitcher, and it is beautiful.

**How Flowers made a Happy Home.**—An unknown correspondent writes us a pretty story of how much good a few flowers did in saving one family and making a happy home. How great the good done. Our correspondent has been richly repaid.

There once lived a family in the old town of G——, who never knew what happiness was. When the husband came home there was nothing to denote a cheerful greeting; the young wife's face presented one mass of frowns, caused by discontent. This family was small, consisting of man and wife only; no little bright-faced prattlers came to bless this unhappy couple; there was nothing to dispel the wife's gloomy monotony; therefore, we call this fireside the doleful wreck of what a home should be.

Indeed, this household could not stand; there must come

some change, it was too preceptible; they both knew and felt that things could not take this drift always; there were but few cheerful, loving words between this man and wife. "The rumblings of the volcano are still audible, and the smoke of the crater continually ascending, mingling not infrequently with those flames and masses of ignited matter which announce a new and more terrible explosion;" in fact, gossipers said there would be a separation finally; some went so far as to say a divorce suit would ensue; others said, they each married for money and were both disappointed. "Oh, thou friend of ill omen, thou shalt live but to see the falsehood of thy prediction," but alas for human nature (or their tongues).

I am a great flower lover; I lived in this same town, took many flower books, papers, etc., cultivated flowers on a large scale, and had them in great perfection; in fact, by some I was called the flower leader in town. I chanced to visit a sick friend one day, and took with me some of my prettiest flowers; while there I met with this Mrs. ———, was much attracted by her face and the interest

she seemed to take in the flowers, their culture, etc. I afterwards heard the rumor about her unhappy home. I resolved to visit her, did so, she returned my visit, during which time I took her to see my flowers (which are now snugly fixed in their winter quarters); her extravagant admiration pleased me much; when she left, I gave her a few papers and books to occupy some otherwise idle moment. A short while afterwards she called to return the books, which she said she had enjoyed much; and I, too, thought she looked brighter than before. When spring came, I gave her slips or cuttings of my flowers; her husband prepared soil and boxes, and that summer she could cope with most of the flower raisers in town. Her writing talent was tested, her pieces found great favor, so by this means she was well supplied with papers and flower books of her own.

Mrs. ——— has now a beautiful greenhouse, her husband has contracted the flower disease, spends much time with his wife in her flower work, in fact, they are as happy as any couple I know; but few can equal them in this point. The gossipers pass them and hang their heads with confusion and shame. Husband and wife are absorbed in their flower beds of bright Lilies and Roses.

**Removing the Glove.**—Not long since this was referred to in the CABINET, and now Willful Wayward writes us as follows: While enjoying your very interesting pages, I noticed an article from the pen of a lady. She writes of the ridiculous custom of persons begging an apology for not removing the glove before offering the hand. I do not know that I understand, but every one has a right to their own opinion, and I have, I believe, one idea about the glove question. Every lady must know it is a rule in society, or etiquette, for a gentleman to remove the glove before offering the hand to a lady, and if the gentleman should fail to do so, I think it would sound very nice for him to beg an apology. All such etiquette may be called ridiculous, or any other term the lady wishes to give it, but as for me I like such ridiculous etiquette. It is a modest gallantry gentlemen may show to ladies in a quiet way, for which a true lady will notice and feel grateful.

**How to make Mignonette bloom.**—"Artist Lake" tells "Cousin Cornelia" how she can make Mignonette bloom during winter. If before frost, she puts some cuttings (that have not bloomed) in clean wet sand until they have become rooted, which will take about three weeks, then pots them singly in two-inch pots, and last, but not least, gives them a little weak ammonia water once a week, after they begin to grow.

Mrs. A. R. R., too, favors us with a little bit of her experience: A lady asks for information in regard to raising this sweet little flower, and having it bloom. As my experience has been just the reverse of hers, having had constant bloom with very little trouble, I will here tell all about it. Last fall I had several young plants, raised from seed in common ground, which commenced blooming in October, and filled the room with its delicious perfume all winter; some seed was left to ripen, on a spray or two,

and the rest was frequently taken for my friends or for myself. I think it blooms all the better when the sprays are often picked off. I planted the seeds again, toward spring, and had young plants to set out among the earliest; also sowed more seed in the bed out-doors, so that I have had a profusion as well as a constant succession of Mignonette for bouquets, with Roses, Geraniums, Verbenas, Pansies, Petunias, and Heliotrope. Flowers possessing fragrance, as well as beauty, are doubly precious favorites with me, and having fragrance without much beauty, is far preferable to beauty alone. My plants are in an eastern exposure during the winter, having the morning sun, and the room is warmed by steam radiators, which I think is preferable to coal or wood fire. All my plants were healthy and bloomed freely; or, I should say, *are*, for they were never more so than now.

**How to make a Wash-Stand.**—Mrs. Irene wishes to tell Mollie how to make a wash-stand: Take an old office stool, cut the legs off until it is the desired height, nail a shelf on the lower rounds, for the pitcher, and another on the highest ones, to hold a saucer for soap, then stain the shelves the color of the stool, and the wash-stand is finished. Holes can be cut in the lower shelf and the top, in which to place the pitcher and bowl, to keep them in place, and a curtain, made of muslin over paper cambric, can be fastened to the edge of the top all around. A very pretty table is made by taking two pieces of board, cut round, or any shape desired, and fastened together by an inch and a half pole, or stick, cutting it as long as you wish the table high; bore a hole in the middle of each board, smaller than the pole, shave the pole off until you can drive it into the hole, cut it off even with the top of the board, put the other board, in the same way, on the other end, and the table is ready to cover. Cover one board with paper cambric, cut a little larger than the top, and fasten the edges; take a piece of cambric that will go around the board smooth, tack it on, draw it down half way between the two boards and tie a string around it, then tack the loose edge to the other board. Now you have a cambric table shaped like an hour-glass, and this you can cover with muslin, by covering the top smooth, making half an inch ruffle to go around the top edge and tying it in the middle with ribbon to match the color of the cambric. Plain muslin curtains, hemmed at top and bottom, gathered so as leave a little ruffle at the top, and tied back with a little ribbon fastened to a tack, improve the appearance of a room very much. And I should think no reader of the CABINET need have bare walls if they are only whitewashed. A pretty bureau might be made of a dry goods box, set on end, with shelves nailed across the inside, the top and sides covered with cambric and muslin, and a curtain of the same in front.

Will some one tell me how to treat Zepheranthus and Ixia bulbs, Passion Flower vine, Plumbago, and Ivy Geranium?

**A Pretty Ornament.**—S. A. B. writes how to construct a pretty ornament, as follows, of a bowl of a goblet with the stem broke off: Wash it and wipe dry, then cover it as smoothly as you can with red flannel, leaving the top open, but the edges covered; then, after it is covered, wet the flannel so it will be pretty damp, have ready some flax seed, spread on a platter or plate, then roll the prepared part until it is covered with the seed, thickly, and what will not roll on place on with the fingers, being careful not to remove the others; place in a saucer with the open part downward, and fill the saucer with water, and as often as it dries up; in a few days the seed will begin to swell, and, finally, shoot forth little green sprays, which look very pretty on red ground; it has fine blue flowers, which are very pretty. The seed can be purchased at the druggist's, and five cents' worth is sufficient.

**Autumn Leaves Exchanged.**—Any of the subscribers of the CABINET wishing pressed Ferns and Autumn leaves, either in exchange for plants or bulbs, can address me. Kanawha Valley is famous for her autumnal tints and handsome ferns.

Mrs. R. S. TRUSLOW.

Kanawha C. H., W. Va.

## Window Gardening.

### A BEAUTIFUL WINDOW.

The summer is ended; the bright autumn leaves lie faded beneath our feet; we almost feel the breath of winter, and if we are destitute of house-plants to brighten our rooms, how long and dreary the winter seems. If we would have plenty of blossoms on our plants in winter, sunny windows are indispensable. But do not despair, you who are so unfortunate as to live where the glorious sun cannot enter, for I am sure I can arrange a beautiful window, even for you. Crochet three scarlet casings, with scarlet tassels and cord, just large enough to easily admit a cocoa-nut shell. Bore holes in each one to insure good drainage, and fill with light, rich earth. In the first plant Kenilworth Ivy; in the second, four or five bulbs of yellow Oxalis. Hang these opposite each other. Fill the third with German Ivy, pinching off the ends of the shoots until it has sent forth branches on every side. Hang this directly over and between the two first. Fasten side brackets on each side of window. Have window-box, or whatever you like, to fill lower part of glass. My plants for the sunless window shall be Begonias, Calla Lilies, Tradescantias, pink and white Oxalis, all the Ivies, Cobæa Scandens, Vincas if your room is warm enough, Ivy Geraniums, Madeira Vines, Acanthus, Coleus, Pilea, Chinese Primroses, Lycopodiums, Ferns and sweet-scented Geraniums. Train Cobæa Scandens and Madeira Vine up either side of window. The bright-hued foliage plants, judiciously arranged, will take the place of the blossoms one fails to obtain from the greater part of these plants. Begonias need careful watering and excellent drainage, or the roots decay.

A description of my window-garden may be of service to some one of the CABINET'S many readers. Its dimensions are, thirty-two inches by sixteen, and eight inches deep—painted green outside. The box is lined with zinc, soldered in the corners. Several holes are pierced through the zinc in centre of box, directly over one previously bored through the bottom of box—this is for drainage. A layer of charcoal to the depth of an inch is added, and the box filled with rich soil. In the centre stands my Smilax, in a pot sunk in the earth, and clinging to and around a frame two or three feet in height. On one side is a pot of white Maurandia, trained over another frame of different style and shorter than the first-named. It has completely covered it, and the white, waxen flowers contrast finely with the mass of delicate green, making a most beautiful plant. Opposite this, on a similar frame, is twined a lovely Ivy Geranium, Centaurea, the brilliant Acanthus, and different kinds of Coleus help to fill the box. Saxifraga peep out from each of the four corners. Tradescantia and Kenilworth Ivy run and race over everything, climbing up the plants and trailing over the edges of the box. Dear little Ivy, what should we do without it? Here and there, all over the box, are bulbs of yellow Oxalis. All too young to bloom are disposed of in this way, while a few older ones are mixed with them. I think them beautiful—the glossy, delicate, yellow blossoms look up so lovingly from their nest of green. Their leaves, with the Ivy, will entirely cover the surface of the box. A six inch pot, filled with good soil, will grow from one to two dozen matured yellow Oxalis bulbs, which give me every season many hundreds of fragrant flowers. In summer I take them out, dry them off, and put away in a paper bag until wanted in October. If I

could have but four plants, and those four to be of easiest culture, I should choose a pot of Calla Lilies, a pot of different kinds of Oxalis, an English and Kenilworth Ivy. If you are without a Calla there seems to be something wanting. They have such a stately, tropical appearance. I have seen them so large that leaves and blossom both touched the ceiling overhead, while the pot stood upon a common, low workstand.

My English Ivy was a tiny bit of a branch five years ago last spring. I rooted it in a bottle of water, then potted, repotting when necessary, and now it is yards and yards long, with many beautiful branches. The pot stands on the floor, behind an oval table which is placed against the south wall of my sitting-room. A large mirror hangs over the table, behind which the Ivy is trained, and from this point branches in all directions, covering that side of the room, with half of east and west side. In the summer it is trained up the front piazza, where it runs the entire length.

Chinese Primroses are most desirable plants for house culture, blooming abundantly the entire winter and spring. Bouvardia Hogarth is a fine winter bloomer. Primula sinensis albaplena is very beautiful. Did you ever try white Centranthus for winter blooming? It is lovely. Sow the seed early in spring in the hot-bed, and as soon as the ground is reasonably warm transplant. They bloom quite early, and I prize them very highly for loose bouquets, giving them just that finishing touch, that delicate net-work, one so much admires. The seed falling to the ground will sprout, and the young plants you find in early autumn are just what is needed for winter bloom. I put two or three in a cigar-box, with a plant each of Sweet Alyssum and Mignonette. They grew up and over the box, hiding it completely—giving me a profusion of flowers until they were banished from the house in May.

Browallia is a charming little plant, literally covered with its tiny blue and white starry-like flowers. But if you want an elegant, a rich, royal, velvety blue, search the world over and you will never find the equal of Torrenia Asiatica. I go into ecstasies over the flower, but the scraggy-looking vine I conceal as much as possible beneath something more pleasing to the eye. Catalonian Jessamine is exceedingly pretty, both in its manner of growth and bloom. Scarlet Salvias, if kept small and backward, pinching off any bud that may chance to show itself until the middle of October, make excellent and showy plants, but are prone, like Carnations and Roses, to be infested with that deadly enemy, the red spider. Thorough sprinkling will prevent its ravages about as well as anything; and I will say that an excellent sprinkler can be obtained in this wise. Go to the tanners and ask for a fine clothes-sprinkler holding a pint. If he has none, he will make you one for about twenty or twenty-five cents. Cork tightly, and you have just the thing—as good as a real shower. Geraniums are very easy of culture, and give great satisfaction, blooming freely if confined in small pots. The single Hybrid Petunias, blotched and striped with their many beautiful markings, are great favorites. Old plants cut back nearly to the roots, or young plants from seeds or cuttings, do equally well. Give them plenty of sun, and with delicious Heliotrope and fragrant Mignonette, your room will be filled with rich perfume. The Ageratums are excellent bloomers, especially A. Mexicanum, remaining in flower a long time. Pilea Arborea is very pretty. It is covered with myriads of buds so tiny one hardly notices them; but watch them closely, and when fully grown immerse the whole plant in a pan or pail of quite warm water. The tiny buds soon fly open, and you have thousands of Lilliputian Apple Blossoms (at

least they always make me think of them), while little clouds of smoke rise from here and there, and as you gaze you say, "Wonderful."

When you carry your Fuchsias to the cellar, be sure to leave one behind. I refer to the ever-blooming (called Lustre). Mine is so loaded with bloom all the year that it seems cruel to cut it back, even when it reaches the ceiling and begs for more room. A Sweet Potato Vine makes quite a pretty plant for a hanging-basket. Start it in a glass of water, and be sure to give it the very hottest place on the mantel behind your kitchen stove, lest your patience be exhausted while you wait for it to grow, and you be tempted to throw it away in disgust. If your soil is prepared aright, you will need no artificial stimulants until towards spring. The rest of the season a little can be profitably used. Here is a recipe for stimulant, perhaps new to some reader. Dissolve in one pint of hot soft water four ounces of sulphate or nitrate of ammonia, two ounces of nitrate of potash, one ounce of white lump sugar, cork tightly in a glass bottle, and use a tablespoonful to three or four quarts of soft warm water. I prepare my soil for potting in this way. In an old box or barrel, in spring, I put half a bushel of very fine, well rotted, barnyard manure, half a bushel of leaf mold gathered a year or two before, two or three pansfull of wood ashes, the same of sand from middle of street, and a quantity of common garden soil; mix well together, and leave it to decay until wanted in autumn.

I give you one or two inexpensive plans for window vases. Procure a deep wooden bowl, eighteen inches in diameter. Three-quarter oval iron; that is, oval iron three-quarters of an inch wide—it requires four pieces, each three feet long. Bend each one into the shape of a new moon, with a scroll at the lower end. The legs are joined in the centre by a cross-piece like a +. A blacksmith can shape the legs for you. They should spread at the top enough to admit the bowl, the edges of bowl being even with the upper end of leg; fasten to the bowl with screws; spread the legs at bottom one inch more than at top. Handle, half-inch rattan. Paint the whole green. Bore hole in bottom of bowl. Put six or seven inch pot in centre; fill with good soil, and plant whatever is suitable, twining the vines back and forth around the handle, and in a short time you will have a thing of surprising beauty.

Another, very simple and very pretty, is made in this fashion. A small box for lower base; a smaller plank for second base; an urn off the top of an old stove next; then a deep wooden bowl. Paint the whole two good coats of white, and sand with marble dust while the last coat is fresh. SEAWEED.

**Propagating Plants.**—Mrs. A. M., of Georgia, wishes to tell the CABINET readers her simple but reliable mode of propagating plants. Take an ordinary soup plate and fill it with sand; saturate thoroughly with clear water. Then pinch off the tender branches of whatever plants you wish to propagate, about two inches long, and set them out in the prepared plate, thick enough to cover the whole surface; then set the plate in the sun. Keep it thoroughly wet, and in the sun all day, (I set mine on a chair, and move the chair around as the sun changes). Treat in this way for eight days, then transplant in pots they are intended to grow in. In taking them out of the sand you will find a perfect network of delicate, perfectly white roots. I have just propagated a plate of Heliotropes, and this plan is worth the trial for these alone, as I have never succeeded in increasing them in any other way.

# Winnifred's Will.

BY AUGUSTA LARNED.

[Written specially for the LADIES' FLORAL CABINET.]

## CHAPTER I.

"I pray you tell me if this be the  
Lady of the house, for I never saw her."  
—SHAKESPEARE.

"O, Steenie! Steenie! Whar's dat brat ob de ole boy—dat lim' ob Satan hisself? Done gone playin' truums agin, I'll allow. Didn't I ketch him firin' ole Mass'r's musket at de lane gander on'y las' night; and de piece jess kicked and keeled him ober in de dirt. O, Steenie! Steenie! if I lay a bolt on ye I'll break eb'ry bone in your brack skin"; and the large, solid negress, with a face shining under her gay turban, a pair of comfortable, fat hands propped against her ample sides, and in a large print gown that rose in front and dipped majestically behind, again lifted up her voice out of the back kitchen window of the old Hall.

"I'm a comin', Gandy. What's de use of makin' such a 'tarnal clatter, and raisin' de neighbors? You might as well be a howlin' cat-a-munk"; and with that respectful announcement, a young Sambo, a shade lighter than his grandmother, whom he had denominated "Gandy," came lounging into the kitchen with an air of leisure, as if he had just as soon be all day about it as not. His tow trousers were tattered, and hung down in a fringe around a pair of shapely, naked legs and feet. His grandmother, commonly called Aunt Nanna, at the Hall, remarked with a chuckle, that they were a good wearin' color, "cos dey didn't show dirt." His monkey face, of a curiously creased and wrinkled childishness, was crowned by a mat of highly frizzled wool, that stood out from his head with a breezy lightness, and was topped by a jaunty little glazed cap. He had on a braided jacket that might have been worn by a smaller child, for though the boy was twelve years old he looked a year or two younger. He had a wiry, mechanical restlessness that made one suspect he was interiorly fitted with steel springs.

"Whar's dem peas I sot you pickin'?" demanded old Nanna, sternly.

"O, confoun' dem peas!" returned the boy, using a word he had picked up from the white farm laborer, Jake. "It's allus suthin' niver—pickin' peas, or cleanin' knives, or brackin' Mass'r Edgar's boots. I don't have no time to find out I'm a free nigga, and b'long to myself."

"You'll fine some sore spots on dat dar ungenerated hide ob yours," said the ireful old lady, reaching into the chimney corner where she kept her switches. She had taken the precaution to seize Steenie by what she called "the scruff ob his neck."

"O, Gandy! Gandy! don't whale me dis time. I'll be good"—wriggling like an eel, and hopping up and down among the pots and pans of the hearth—"I couldn't pick dem peas, cos I had to go kotch Thunderbolt for little Missy, and when I'd kitched him, it took Jake and dat oder man both to hold him for little Missy to jump on his back. And den wasn't he mad! He went tearin' ober de gate, back'ards and for'ards, and she sot like a tree, and jess put de whip on good."

"De ole Peter! Dar is dat hair-burned chile," cried Nanna, releasing Steenie and running to the kitchen door, as a dark-faced, spirited girl, sitting splendidly in the saddle, went flying down the avenue on a powerful young horse, with fire flashing from his wild eyes, and a torrent of foam pouring over the bit.

Her hat had fallen off, leaving the long dark hair to float in the wind, and her form, though slender and graceful, with its tense muscular rigidity looked like a statue of embodied will.

Thunderbolt had ceased to plunge, and was simply running now, having gained the highroad. Winnifred Braithwaite enjoyed the motion so intensely that she let him go without curb or check.

Just as the struggle began between horse and rider, a flaxen-haired young lady, in a white dress, ran out of the old brown house, upon the lawn in front, and stood crouching and cowering, and pale with fright to the very lips, as she watched the strong, dark, determined girl shower down blows on the frantic colt. Though she uttered no sound, more than a half articulate moan, it seemed as if she would have fallen to the ground if a young man had not advanced from the house and offered her his arm. They stood silent for a few minutes, watching the horse and rider with painful suspense. The young man was even paler than his companion. "What mad recklessness," said he, in a low voice, almost under his breath.

His companion looked up timidly, and shrank away from his support. "Is there any danger now?" she asked.

"No," he said, rather coldly, "Miss Braithwaite has broken the brute at the risk of her neck."

Old Nanna, flourishing an iron spoon in her hand, and followed by Steenie, had waddled out as fast as possible to see the end of the fray. "Bress his heart and soul alive," she muttered, half scornfully, to herself, on overhearing the young man's remark, "he'll never resk nothin', nothin' 'tall, poor little pigin, but fallin' dead in lub wid little Miss, and much good 'twill do him."

"She's done gone an' broke Thunderbolt," cried Steenie, hopping about on one foot. "He's comin' back joggin' along quiet as an ole sheep."

"'Twould ha' been wus for you, sah," remarked Nanna, with grim emphasis, as they took their way back to the kitchen, "if de little Miss had come to harm. For plottin' and contrivin' wid her, ole Mass'r would hole you ober de bottomless pit, to smoke like a side ob bacon, or he'll drop you in whar de Bible says dars washin' and wailin' and gashin' ob teeth."

"I ain't afeared ob ole mass'r; I se a free nigga, and hole to nobody but little Missy. She'll hab a heap ob money one ob dese times, den she's promised to make me her totum, (dunno what dat means). I se to have a tall, shiny hat, wid a cockade, and a pair ob white glubs, and to ride behind on a long-tailed pony, and to bow so 'spectful and perlite, you wouldn't know me. I'll do such credit, Gandy, to your nussin' and bringin' up."

"Specs de ole boy 'll know ye, whatsomdever you have on," said Nanna, with a half chuckle, as she bared her large black arms, preparatory to kneading bread. "He ain't to no kind o' loss 'bout his chil'ern."

"O, I don't 'low I'm one o' dem kind," said Steenie, rolling up the whites of his eyes in holy horror, as he took a boot on his hand, and began polishing away rather languidly. "I se never gwine to de bad place, Gandy. I se gwine to t'oder place, and I spees to do a powerful sight o' erabbin' on de river Jordan. I spees to get converted," he went on in his most wheedling voice, "and be first best at de shouts, if you'll lemme take Uncle Teddy's Bible, dat b'longed to granddaddy, out to de barn, whar I can spell ober de texes, as little Missy teached me."

"Bress you, honey! said the simple old creature, beaming on him with a sudden revulsion of feeling, at this unexpected display of early piety, "if you want

to sarch in Uncle Teddy's Bible, dar must be good spots in you whar de Lord can drop seed, if de heart is despately wicked; and you won't bring down ole Gandy's gray hair in sorer to de grave. Dar's ole Mass'r callin' powerful strong," she added, as she hastily freed her arms from flour. "He's pearter dis mornin' dan usu'l. I se comin' Mass'r," she shouted through a back passage, and the next moment had picked up a pan containing a seraggy joint of meat and a pair of scales, and waddled off to obey the summons.

Judge Braithwaite occupied the back chamber of the second story of this large and rambling place, called Halcourt Hall, for his sitting room and study. The old house had been built in Colonial times, and this room was wainscotted in stiff oak panels, with deep window-seats, and was partly filled with book-cases containing an extensive law library, the yellow calf bindings showing through the glass doors like rows of petrifications. All else in the room evinced the extreme of shabbiness, not excepting the little, wizened, paralytic old man who sat propped up in a high-backed chair. The carpet was worn in long threadbare stripes, and the chair coverings, once rich and handsome, were falling off in bits. The corners of the room were filled with rubbish piles, and the table was heaped with a litter of books and manuscripts, for the old man had an unconquerable aversion to having his room cleaned.

He was crooked and singularly dried up, like an anatomical specimen, with a tuft of white hair on top of his yellow parchment-covered poll, and a gray unshaven, foxy old face, with a pair of marvellously bright eyes, indicative of cupidity and cunning. His paralytic form was swathed in a ragged dressing gown, and he wore a colored silk handkerchief tied about his neck to conceal the frayed edges of his linen, not too immaculate in its freshness.

This decayed old man, sitting in that shabby and still stately room, had been a distinguished jurist in his time, with a wide reputation for learning and acuteness. Though slowly dying at the root, his brain remained unnaturally active and vivid in all its operations, and with the aid of a secretary he still spent many hours each day in compiling a learned treatise on the law. A sharp dry cough racked his frame, and he dosed himself with large quantities of patent medicines. His senses were preternaturally alive, and enabled him to still rule his household with a rod of iron, and make himself felt and feared all over the old Hall.

"Well, Nanna, well, Nanna," cackled the old man, in a high treble voice, as the negress made her appearance. "Bring here the meat, and let me see if I can catch that rascal Burroughs at his old tricks. He's a clever cheat, but he'll have to get up early in the morning to outwit me," and with his old shaking hand he adjusted the joint upon the hook, and peered anxiously at the ounce marks.

"Does seem to be a mon'sus sight ob bone to dat dar meat," remarked Nanna, gravely, as she stood with her hands propped against her sides. "'Pears as if beef critters was made up different from what dey used to was."

"For my part I don't care about meat," responded the Judge in his thin, wiry voice. "I've lived on vegetables and oatmeal a good many years, and my mind is as clear as a bell. Bad in the legs, Nanna, and racked all to pieces with this cough; but my father had the long consumption for thirty years, and then died of something else. I have had it only ten, and I mean to live to be a hundred, Nanna, to disappoint the people who want to put the old man under ground." He gave a deep, inward laugh, like the rattling of peas in a dry pod, that wrinkled his old face curiously, and made it look more foxy and cunning than ever. After a moment of reflection, he suddenly asked, "Is Mr. Edgar down stairs?"

"Yes, Mass'r, I spees he's in de lib'ry. Shall I call him?"

"No, no. I was only thinking what an unnatural, I may say depraved appetite that young man has. Well people have no need of animal food. It is only a prejudice, and like putting fresh fuel on a fire already overheated. I give Edgar his board and the use of the library for his services, and he is dear at that."

"Dey do say," answered Nanna, soothingly, "its hungry work to keep de nose poke into books all day

long; an' it 'pears if Mass'r Edgar couldn't see noffin through his specs but print. Ef he do be hearty, toder folks only pick and mince like robins. Dar's dat new young lady, Miss Jinny, dey call her, bress your heart alive—"

"That new young lady," repeated the old man, shrilly, after one of his convulsive barks, "that foreign girl Winnie has taken such an insane fancy for. I have to thank my foolish, hair-brained nephew, Bradley Halcoart, for fastening her upon my back. What of her, Nanna?"

"'Pears she's dat small in her eating," returned Nanna, closing her eyes to represent the vanishing point of an appetite, "dat de keep ob a sparrow would cost more; and roun' de house she's still as a little mouse."

"Fiddle fiddle!" piped the old Judge, "she is another mouth to feed, and it has occurred to me if she can write a plain, legible hand, that I might train her in the duties of secretary, and let Edgar go."

"But it 'pears dat Miss'r Bradley 'gaged her to teach little Missy pinner music, and dem forrin tongues," said Nanna, with a dismayed face.

"Don't meddle with what does not concern you," snapped the old Judge. He would bear more from the old negress than from any one but his daughter Winnifred, the only creature he loved. "Go and tell Miss Virginia I desire to see her here in my room."

"Shall I speak to Mass'r Edgar?"

"No; I do not require his services this morning."

Nanna went out reluctantly, looking much discomposed, and closed the door behind her. At the same instant, Mrs. Braithwaite issued from her chamber. She was a large, heavy woman, lame in one knee, and with a slight halt in consequence. Her countenance had the waxen pallor of settled ill-health, and her pale, watery, blue eyes were dead and lifeless. She spent her life on the balcony or in an easy chair in her own chamber, adjoining the Judge's study. The old man liked to have her within reach, as a target for his sarcasms, which she received as a soft pincushion receives pins. If she was wounded, her dull, vacant face seldom gave signs of discomposure.

Now, as she came hastily out and closed the door, halting forward as rapidly as her lameness would allow, she looked unusually flurried and awake.

"Nanna," said she, in a deep, inward whisper, as she unfolded her hand furtively, and displayed a piece of silver, "its fast day and I must have some fish. Send Steenie down to Pete Finster, and see if he has caught a pickerel. And shut all the doors when you are broiling it, Nanna, he has such a sharp nose."

The old negress eyed the silver suspiciously without touching it.

"I took it out of his pocket, I don't deny it," said her mistress, abjectly. "You know, Nanna, I can't help it. He has got such a strong will, I never could resist, for I love peace and quiet. And Winnifred is just like him. They all oppose me, they all browbeat me, and keep me down. I shall confess it to the priest, the next time he comes."

"'Pears like 'taint right to do things underhand, Miss Susan," said Nanna, looking at her with her honest old face of disapproval. "Wasn't you borned into enuf, Miss Susan, and didn't de ole place by rights b'long to you, and didn't I tote ye and nuss ye when you was a pickininny, Miss Susan, and hasn't I a right to speak?"

"Yes, Nanna," groaned the poor woman, "the Hall was mine, it came to me by inheritance, with all the farms that belonged to the old manor. I was called an heiress in my day, and so was my mother before me, in those times when your mother was a slave. But I married the Judge, and then everything went out of my hands, I don't know just how. He had a strong will, and rode everywhere rough shod," and with a feeble sigh, "I always did love peace; but its hard to think how once I had my own fortune, and now I can't get the necessities of life."

"Little Miss will never let nobody saddle and bridle her," returned Nanna, with a peculiar twist of her broad shoulders, indicative of impatience.

"She's her father's child," returned Mrs. Braithwaite, out of the abyss of her nervelessness and weak spirits. "And Nanna, when he is gone, I've a feeling that Winnie will rule me in the same way."

"Tings would have gone a powerful sight better, if dem priests hadn't been let into de house," said Nanna, discharging this Parthian arrow as she turned to go down the broad oaken staircase that led into the

front hall. It was wainscotted like the Judge's study, in stiff panels, and was of the most generous dimensions. The house door was open, and the sun streamed in a broad sheet over the dark, uncarpeted floor, partially covered with a few faded rugs. A large hound lay in this strip of sunlight, and now and then he lifted his head to snap at the flies. There were old-fashioned mahogany tables, and carved high-backed chairs, and a few engravings in shabby gilt frames. An old-fashioned clock ticked slowly in one dim corner. The place had what an artist calls tone; it was like a picture.

At the moment old Nanna was about to descend the stately staircase, Winnifred Braithwaite, and the young lady in white, and the young man who had so anxiously watched the breaking of Thunderbolt from the lawn, entered the hall in a group. The dark, graceful girl was dressed in a long blue riding skirt, pinned over her white specuer, and a hat with a blue plume sat jauntily upon her head. There was the lingering flush of exercise in her brown face, and her eyes were in a glow. It could be seen now that she was above the medium height, but the exquisite proportions of her form were the more striking in consequence. In one hand she held her riding whip, and the other arm was curled lovingly around the shoulders of the girl in white who had watched her mad ride with such undisguised terror, and who now looked almost like a child beside her tall protector; her abundant golden hair seemed to coil naturally around an elegant little head, with misty touches over the full white forehead; the large blue eyes were soft and appealing, almost pathetic in their expression, and now they were half full of tears as they looked up into the other's face.

"You sully little goose," said Winnie, laughing, and displaying a beautiful set of even, white teeth, while warm, vivid changes of color and expression passed over her face, "you were frightened nearly out of your wits to see me punish Thunderbolt. I saw that you were, as I was flying over the gate. Your face looked as white as chalk, and you had put your innocent little hands together as if praying to the Virgin, good protestant, though you are, Virginia."

"O, it was terrible!" returned the young girl, with a very slight but delicious foreign accent, and a half sob in her throat, "the furious beast snorted fire from his nostrils, and when he plunged I thought I should see you full dead upon the road, I could no longer look, I hid my eyes."

"It was delightful to make the mad beast mind me," said Winnie, lightly. "He found there was a stronger will than his own that had the mastery and he was forced to obey. I shall have no more trouble with him now. He will jog along, under my hand, as gentle as an old cow."

"They say we all find a master sooner or later," said Virginia, looking up with one of her appealing glances.

"Thunderbolt has found a mistress and has learned a lesson he wont soon forget," returned Winnie in the same light tone. "As for my master, I don't believe he has been born; I would a great deal rather rule than obey. But it was a burning shame to give you such a fright, you dear little puss; and now your hands are like bits of ice." Winnie swept up the childish figure with a strong hand and laid her on the sofa. "There," said she, tucking in the little slippers, "I shall give you something to quiet your nerves, and you can sleep it off."

The near-sighted young man, with a pale, studious face and slightly consumptive bend of the shoulders, had stood for the last three minutes looking at this scene with a mild but fascinated gaze. Now Winnie flashed around upon him, and with a half sarcastic toss of the head addressed herself to him:

"Were you frightened, too, Mr. Edgar? Did your little heart go pit-a-pat when you saw Thunderbolt in the air? I will give you some valerian, if you will take it, and then you can read me a homily on the impropriety of breaking wild colts and racking the nerves of delicate young people."

The speech was cruel, and Edgar looked into the dark, brilliant, mocking face with a surprised, almost stunned air; he nervously readjusted his eye-glasses—a motion habitual to him—and a flush of pain and humiliation gradually spread over his pale cheek and even dyed his forehead. Before he could find words to answer, old Nanna had descended the stairs.

"Is the Judge ready for me?" he asked in a forced voice of composure, turning towards her.

"Ole Mass'r says he haint no call for you dis mornin'."

"What is it then?" said Winnie imperiously, reading something unusual in the old woman's face.

"'Pears ole Mass'r got suffun niver in his head, honey," she answered, fumbling about for words. "Took a freak all of a sudden like, and axed to have Miss Jinny walk up to de study."

Virginia, at the mention of her name, rose to a sitting posture and pushed away the shawl Winnifred had spread over her. At the suggestion of an interview with the dreadful old man, up-stairs, she shrank into a corner of the sofa and faltered out: "Does he want to send me away?"

"Tell me, at once, Nanna," Winnie demanded, imperiously, "why my father wishes to speak with Miss Virginia?"

"Bress your heart, chile! I nussed you and carried you in my bosom when you was little, and why should you speak cross to ole Nanna; de ole Mass'r has got a notion in his head to make Miss Jinny his sec'tary."

"Virginia, his secretary!" repeated Winnie, in a shrill tone of wonder.

Virginia involuntarily put her hands over her face, with a little moan. The thought of being shut up hours a day with that old man, whom she so feared and dreaded, was unendurable.

"Then the Judge wishes to dismiss me from his service," said Edgar, in a low voice, as he moved nearer to Winnifred.

"No, it is I that must go away," suddenly broke in Virginia, "It is I that have intruded and done harm!"

"Hush!" cried Winnifred, with her imperious, clear, resonant voice. "You are neither of you going away; I shall arrange matters with papa myself. Go to the kitchen, Nanna!" And she immediately arose and swept up the stairway, trailing her long skirt like a young princess.

Edgar had taken a chair near Virginia. They were both pale, and sat looking at each other in silence, with painful chords vibrating in their hearts. The strange situation in which they found themselves had suddenly created a thrill of sympathy never before awakened during their residence under the same roof. They were both dependent, both homeless, both almost friendless, and on the issue of the moment seemed to hang the fate of the future. They waited with the breathless anxiety the prisoner feels when his sentence is about to be pronounced, and the moments seemed to prolong themselves to hours; but at last she came, sweeping down the grand staircase, in her long blue skirt, glowing, radiant with the light of victory upon her face.

"I have had a dreadful battle," said she, laughing gaily; "it was necessary to order up the heaviest artillery, but I have won. Mr. Edgar, you will resume your duties; I have convinced papa that Virginia could no more do your work than a butterfly could grind corn." She went up to him and held out her hand, with beautiful benignity and frankness shining in her eyes. "If I have wounded you, you must try and forgive me; attribute it to thoughtlessness, rather than to a bad heart."

Poor Edgar was wounded in a way she wot not of. He looked as if he would have fallen straightway down at her feet. "O, Miss Braithwaite!" he murmured, in a sudden rush of happiness that almost took away his breath. "I am not worthy of so much goodness!"

Winnifred drew away and released her hand. "Yes you are!" she said dryly, "You have done a great deal of hard work for small pay," and then she turned her back on his mortification and chagrin.

"The funniest part of it is, Virginia, that mamma thinks that you, being a foreigner, are a dangerous character. She fancies that you have brought an infernal machine into the house."

"O!" exclaimed Virginia, clasping her little hands in one of those expressive gestures that belonged to her French blood. "I have done a great wrong; I have made you quarrel with your parents!"

"Nonsense!" returned Winnifred, lightly. "I have always quarrelled with papa, and yet we love each other dearly; you know the old eagle would not like the eaglet unless it tried to peck; and as for mamma, it is not of the slightest consequence what she thinks."

Virginia gave her a glance full of wonder and pain.

[To be continued.]

NEW YORK, OCTOBER, 1876.

## MY BLUE-EYED GENTIAN.

The weeks had been weary and full of pain. All through the lovely September weather I had been a prisoner within four close walls; and as October was flinging her banner of scarlet and gold upon the hillsides, I came slowly back to strength and freedom. John, my own dear blessed John, who had been so patient and tender through all the changes of mental moods and tenses caused by tortured, diseased nerves, persuaded me, one lovely Indian summer day, to take a drive with him out into the sunshine and softened, misty glory. But I was weak and depressed, and hardly knew whether, on the whole, to be glad or sorry I came. As we drove quietly over the hills and through the valleys, I was rebellious and out of tune, and all the beauty around me failed to bring harmony out of the discords. John, wise and thoughtful, did not directly combat my humor, but contented himself with a few quiet words now and then to draw my thoughts from myself to the lovely scene around us. But he did not break the spell of silence, for I felt so weak and useless, such a dead weight in God's world of busy workers, that all the beauty jarred upon me, and I longed for clouds to correspond with the shadows in my heart.

Suddenly John checked Neddie Norse, and, springing from the carriage, soon placed in my hands a bunch of the loveliest blue blossoms I had ever seen. "Oh, what are they?" I cried. "I have it now! You know in Whittier's 'Psalm' he says of Autumn:

'Yet shall the blue-eyed gentian look  
Through fringed lids to Heaven;'

and see! this answers the description perfectly. They are very rare, and I never saw one before!"

John smiled at my flushed, lighted face, so different from the pale, listless one of a few moments before. "Drive on slowly, dear," he said, "and I will pick a large bunch for you. The ground is blue with them a little farther into the swamp."

Oh, those blue-eyed gentians! Never were larger, more perfect specimens found than those which came

to us that Autumn day. Neddie seemed to understand the case perfectly, and walked leisurely along, as though waiting for flower-hunters had been the business of his life, while I drank in the beauty of the blossoms eagerly, and studied their lovely proportions; noted the dainty pencilings in the heart of the flowers, and the exquisite fringes, which in their softness and grace somehow reminded me of the delicate drooping lashes which lay closed upon my dead baby's face, years ago.

When John returned, his hands overflowing with their wealth of beauty, he found my tongue verily unloosed, and my heart stirred to its depths with enthusiasm.

"Isn't it strange enough," I said, "and romantic, too, that Whittier should tell me the name of our flower? And Lucy Larcom, I think it is, says,

'The gentian  
Hangs all her fringes out on sunny days.'

O John, I am so glad I came!" And I kissed my precious blossoms in my delight.

My good man's grave and tender eyes looked at me with a smile in them. "Yes, darling," he said, "I thank Providence, and Whittier, and all the sweet influences which have proved such a potent medicine. Providence directed us this way, where we should find the flowers, and Whittier has suggested all sorts of happy thoughts by his vivid description. I am so glad that the sunshine has crept into your heart, and shines out of your eyes."

Then, as we rode homeward, I confessed it all to John; all the rebellion and bitterness that had blinded my eyes to the beauty around. But now all was changed. It seemed as though the golden, mellow day was sacred, and the calm, a Sabbath calm of peace. As I looked on the soft Autumn glory, Whittier's "Psalm" still echoed in my heart, and the same poem which had christened my treasures, sent its strong, grand measures to lift and sustain my weak soul.

Neddie walked slowly up a hill and through a grove where the dying glory of the trees strewn the ground, as I said:

"I see it all, John. The discipline is needed, and yet there are compensations. Autumn, bleak and dreary, has its Indian Summer, its drapery of scarlet and gold, and even its Asters, and blue-eyed Gentians."

I bent low over the blossoms which had been such eloquent teachers, and John repeated softly from this same grand poem, while my heart echoed his words:

"All as God wills, who wisely heeds,  
To give, or to withhold,  
And knoweth more of all my needs  
Than all my prayers have told.

"Enough that ble-sings undeserved  
Have marked my erring track,  
That wheresoe'er my feet have swerved,  
His chastening turned me back.

"That more and more a Providence  
Of love is understood,  
Making the springs of time and sense  
Sweet with eternal good."

Looking up from the flowers with swimming eyes, I whispered, smiling through my tears:

"And so the shadows fall apart,  
And so the west winds play,  
And all the windows of my heart  
I open to the day."

MRS. S. B. TITTERINGTON.

## ILLUSTRATIONS.

The sketch of Woodward's Gardens, on first page of CABINET, this month, is one of a famous place of resort in San Francisco, Cal., where is gathered many splendid specimens of plants from all parts of the world. The Gardens cover several acres of ground and are a great place of amusement for the families of the city, as many as 25,000 visitors having been gathered there in a single day.

"Queer Acquaintances" depicts an old man and woman from the country, visiting the curiosities of the city, and perfectly astonished with curiosity and amazement at the sight of a monkey, dressed in imitation of a soldier's uniform. They do not understand what race of creatures he belongs to.

"The Astonished Baby" tells its own story. Baby astonished to see another, puts out its hands—but finds nothing, and its face shows its feeling of wonder and almost fear.

## PUBLISHER'S ANNOUNCEMENTS.

**Prizes for Household and Floral Articles.**—The following prizes will be given for articles on Flowers, Window Gardening, Housekeeping, Elegancies, and kindred subjects relating to the comforts, pleasures and advancement of Home Life and Household Taste:

- For best article on Floral Subjects. .... \$10 00
- For second best article on Floral Subjects. .... 5 00
- For best article on Household Subjects. .... 10 00
- For second best article on Household Subjects. .... 5 00
- For each of next 10 best articles on Flowers; Book, "Window Gardening"
- For each of next 10 best articles on Household Subjects; Books, "Household Elegancies," or "Ladies' Fancy Work."
- For each of next 20 best articles (10 of each class of subject): FLORAL CABINET free one year.
- For each of next 20 best articles (10 of each class of subjects): one Silk Book Mark.

Contributors will notice the following rules: 1. Label all articles, "For Competition." 2. Each article to fill space equal to three to five foolscap pages long. 3. Articles all to be forwarded to this office before December 10th. 4. Award of prizes will be announced in January number, and prizes forwarded to the fortunate competitors by Christmas. 5. Articles contributed, not specially marked for return, may be understood as having the desire of writer to be used in FLORAL CABINET, as a voluntary contribution whenever convenient.

The object in offering these prizes is not so much to induce the writing of articles for sake of pecuniary remuneration, as it is to encourage our readers and writers to contribute really useful information, which will be a help and benefit to others. All are sharers in the benefit; even those who contribute articles are immensely benefited by reading the articles of others, whose worth is far more than the value of any prize. The highest ideal of usefulness to which any of us can attain, is to try to do some good to others; and many of our readers who are confined at home can benefit the world by writing something which will help to cheer, brighten, and beautify another home.

**Prizes for Choice Recipes on Cooking and House-keeping Topics.**—Desirous of encouraging Housekeeping Topics, in connection with the FLORAL CABINET, we offer the following prizes for best collection of recipes, proved by actual experience of our readers. We want all first-class housekeepers to compete for these prizes, and contribute from the stores of their knowledge. Send no recipe which is of ordinary value, only those which are the very best, superior if possible to anything yet published in any cook book. We do not limit the contributor to any class of recipes; their lists may consist of all things eatable.

- First prize, 25 best Recipes. .... \$15 00
- Second prize, 25 best Recipes. .... 10 00
- Third prize, 25 best Recipes. .... 5 00
- Fourth prize, to each of 25 next best collections: Any \$1.50 book in our list.
- Fifth prize, to each of next 25 best collections: Choice of any Silk Book Mark in our list.

NOTICE.—1. Each list should contain but 25 Recipes, not more than two Recipes for each class (such as cake, pie, &c.), and lists to be written on one side each of sheet. 2. Mark the 5 best Recipes with double cross, XX. 3. Mark the next 5 best Recipes with single cross, X. 4. All lists to be sent to this office by December 10th. Prizes to be awarded January 1st, and names of successful contributors published in January number CABINET. The Prize Collections of Household Recipes will be published each month in the FLORAL CABINET for 1877, and the series will alone be worth to each housekeeper five times the price of the FLORAL CABINET.

**To Church Fairs.**—Ladies, and others interested in Church Fairs, are invited to write to us for Special Terms of our Books, Papers, and Silk Book Marks, wherein we donate certain portion of the proceeds of sales to each Fair. Write for "Special Terms for Fairs."

**Prizes for Largest Club Trial Trip Subscribers.**—To Club Agents who will send us as many names of friends, as Trial Trip Subscribers, to CABINET, three months, we will give following prizes:

- To largest list—First prize, Webster's Unabridged Dictionary. Price, \$12.00.
- To second largest list—Second prize, Set household books: "Window Gardening," "Household Elegancies," "Ladies' Fancy Work," "Every Woman her own Flower Gardener."

Prize to be awarded January 1st. Everybody invited to compete. Probably a list of 30 to 50 would win the first prize.

**Opinions.**—As our readers renew their subscriptions, we would be pleased to hear them express their opinion of the CABINET. A good natured suggestion, how to make it better, will always be kindly received. Some topics, which we may not yet have discussed, may be desired. We would also like the views of our readers, whether the CABINET should give more of its space to home matters than it now does; also, whether readers would like an enlargement of the paper to four or eight pages more, with price at \$1.50 per year. There are many cheap journals published at less price, but our reading matter is almost wholly original; theirs almost wholly selections, and no illustrations. If any improvement can be made, or any change more acceptable, we will gladly do it.

**Chromos for Sale.**—To trial trip subscribers we will sell copies of our chromos for back years for following prices:

- "My Window Garden." - - - - - \$0 30
- "Gems of the Flower Garden." - - - - - 30

**Gardening.**—All interested in gardening, floriculture, plants, trees, shrubs, fruits, greenhouses, &c., will find the GARDENERS' MONTHLY AND HORTICULTURIST very desirable. Only 30 cents on trial three months. \$2.10 per year.

**New Story, "Winifred's Will."**—We have engaged a charming new story, "Winifred's Will," to begin this month, and continue during the entire fall and may be a large portion of next year. It has been written specially for the CABINET, by Augusta Larned, one of the most pleasing writers of *The Independent*; and is, we are confident, bound to be considered one of the greatest attractions of our paper.

**A Compliment.**—An English gentleman, calling at our office and purchasing many copies of the CABINET to send back to his lady friends in Europe, said that the FLORAL CABINET was the purest and handsomest paper he had ever seen in England or America.

**Teacher's Position Wanted.**—To any family or school needing the services of a competent teacher, we can recommend a lady (late principal of public schools in a prominent place) who has excellent ability and recommendations. Any person knowing of a vacancy, or one soon to occur, will confer a favor by addressing Editor THE FLORAL CABINET.

PERSIAN LOVE OF FLOWERS.

Very beautiful is the Persian's love for flowers. In

the sun, and then pray before it, and fold up his mat again and go home. And the next night, and night

increasing troops to it, and sit and sing and play the guitar or lute before it, and they would all together

Bombay the Parsees use the Victoria Gardens to walk in, "to eat the air" — "to take a constitutional," as we say.

Their enjoyment of it is heartily animal. The Hindu would stroll unsteadfastly through it, attracted from flower to flower, not by its form or color, but its scent. He would pass from plant to plant, snatching at the flowers and crushing them between his fingers, and taking stray sniffs at the ends of his fingers, as if he were taking snuff. His pleasure in the flowers was utterly sensual. Presently, a true Persian, in his flowing robe of blue, and on his head his sheepskin hat, "black, glossy, curl'd the fleece or Kara-Kul," would saunter in, and stand and meditate over every flower he saw, and always as if half in vision. And when at last the vision

was fulfilled and the ideal flower he was seeking found, he would spread his mat and sit before it until the setting of

after night, until that particular flower faded away, he would return to it, and bring his friends in ever

article of sale, but now large quantities are brought to this city, and sent all over the United states.

pray there, and after prayer, still sit before it, sipping sherbet, and talking the most hilarious and shocking scandal late into the moonlight; and so again and again every evening until the flower died. Sometimes, by way of a grand finale, the whole company would suddenly rise before the flower, and serenade it, together with an ode from Hafiz, and depart.

This is the true aesthetic enjoyment of flowers, of which those can know little who in any way outrage the historical associations or their individuality.

Ferns.—

In the up-town streets of this city, on pleasant days, what is called "Hartford Fern" is peddled extensively. It is a creeper common in the woods of New England, and it is only within two or three years become an

QUEER ACQUAINTANCES. WHO'S THIS.

## The Fireside.

## GUESTS OF THE HEART.

Soft falls through the gathering twilight,  
The rain from the dripping eaves,  
And stirs with a tremulous rustle,  
The dead and the dying leaves;  
While afar, in the midst of the shadows,  
I hear the sweet voices of bells,  
Come borne on the wind of the autumn,  
That fitfully rises and swells.

They call and they answer each other—  
They answer and mingle again—  
As the deep and the shrill in an anthem  
Make harmony still in their strain;  
As the voices of sentinels mingle  
In mountainous regions of snow,  
Till from hill-top to hill-top a chorus  
Floats down to the valleys below.

The shadows, the fire-light of even,  
The sound of the rain's distant ehime,  
Come bringing, with rain softly dropping,  
Sweet thoughts of a shadowy time;  
The slumberous sense of seclusion,  
From storm and intruders aloof,  
We feel in the stillness of midnight  
The patter of rain on the roof.

When the spirit goes forth in its yearnings  
To take all its wanderers home,  
Or afar in the regions of fancy,  
Delights on swift pinions to roam—  
I quietly sit by the fire-light,  
The fire-light so bright and so warm—  
For I know that those only who love me  
Will seek me through shadow and storm.

But should they be absent this evening,  
Should even the household depart,  
Deserted, I should not be lonely,  
There still would be guests in my heart;  
The faces of friends that I cherish,  
The smile, and the glance, and the tone,  
Will haunt me wherever I wander,  
And thus I am never alone.

With those who have left far behind them  
The joys and the sorrows of time—  
Who sing the sweet song of the angels  
In a purer and holier clime!  
Then darkly, O evening of autumn,  
Your rain and your shadows may fall;  
My loved and my lost one brings me,  
My heart holds a feast with them all.

## ART TREASURES AT THE CENTENNIAL.

Among all the curious and interesting articles of foreign exhibit in the grand Centennial buildings, none is more worthy the attention of the women of our land than the unique and beautiful display of art embroidery from the Royal School of Needlework in Kensington, England. Perhaps all the readers of the CABINET may not be aware that this school was founded by one of the Queen of England's daughters, aided by other noble and large-hearted ladies and gentlemen there, artists, and persons of high rank, for the two-fold purpose of restoring needlework to the honorable place it once held in art, and of providing employment for women in reduced circumstances. Until quite recently, embroidery might have been called a lost art, having been but little practiced since the days when in castle and in bower the fingers of fair and gentle dames wrought out the most wonderful designs in tapestry, to wile away the time in which their lords were fighting for the cross and for fame in Palestine. Some of these remarkable specimens of woman's patient skill yet remain, and they have formed the nucleus from which has sprung, as if by magic, the fanciful and tasteful work we see before us in the tapestried alcove belonging to the school.

But the object of elevating the quiet and refining occupation of needlework, to take its rank as artistic work, suitable for furnishing our houses and adorning our public edifices, is only secondary to that of providing occupation to ladies in search of employment, who can thus find a remunerative and pleasing pursuit, which they can follow in the retirement of home, without being forced to struggle with the world, which, however it may suit some women, all are not fitted for.

Here are, in rich variety, chairs, screens, cabinets, cushions, table-covers, in fact every device imaginable from a curtain to a court train. Some of the designs exhibited are from antique specimens of embroidery, yet existing in the old castles of England; others are of modern style, suggested by the old. Many of the most beautiful were not only designed, but executed, by the Queen and her daughters, and a noble example they thus set of industry and taste which may well be emulated by our country women. There is a very rich parterre or curtain in a sunflower pattern, the counterpart of one in Windsor Castle. Among the screens, there is one which seems entirely new on this side the Atlantic, a combination of a screen and footstool, the valence of the screen being exquisitely embroidered. These curtains and screens were indeed all very charming in their effect. For example, one had lily stems on a ground of deep red; another, a delicate oriental tracery, with pale tints exquisitely blended; then again were honey-suckles, wild hyacinths, and acanthus leaves, on a pure blue satin ground. But what must first of all challenge attention, was a dado, or wall-screen, designed by Mr. Morris, the poet, who is poetical on walls as well as in books. It was a grape pattern on a deep green ground, with stately peacocks at intervals standing like sentinels at attention. The bunches of grapes and leaves all intertwined in a most graceful manner, and appeared as if raised from the soft background. But it is impossible to do justice to these paintings in needle-work, with a mere description; they must be examined and studied to be appreciated, and they well deserve the time and attention bestowed upon them. They may serve as hints in teaching some useful lessons even to those who only cultivate embroidery as an amusement. One is, that instead of devoting what little time and money they have on trifling, useless articles, they may see here how to economize their powers, and out of a little carefully bestowed, produce works of real and enduring worth. Another is, not to rely for effect upon gaudy colors. Most of these embroideries owe very little to bright or startling contrasts; the few colors used produce one rich, harmonious whole, with an effect perfectly exquisite. Blueish green, with pale yellow primroses, bright sunflowers on rich, dark brown, pomegranates on a cream-colored ground, are merely named as suggestive of the fine effects of two contrasting shades. Then again, many are deterred from embroidery on account of the expense of the materials. While much of this work is done on what may be called truly sumptuous stuffs, and with a great deal of rich silk and gold, some of the most elegant patterns owe their sole merit to the taste with which the design was carried out in simple artistic beauty, unaided by expensive materials. For instance, there was a white cotton stuff, like jean, worked over with worsted, in appliqué work, and a white quilt embroidered in gold chain-stitch from an old pattern. The Princess Christian and the Princess Louise, both have sent very lovely designs of their own, one a screen of dark green satin, with velvet appliqué leaves, and an admirably embroidered bird, which was tasteful, yet simple.

Much of this art embroidery, especially clothes and table covers, are done on linen, worked in various colored wools, which are less expensive than silks, and yet has almost the same effect done in those curious and beautiful stitches, which in proper hands works out such marvels. While some of the designs are classical, in many cases nature has been the teacher, and to her are due the foxgloves, poppies, and harebells that shine forth from their beds of velvet, as panellings for

doors or cabinets. But even to name over all these articles, worked out even more perfectly in this our Centennial year than by the fair embroiderers of mediæval days, would fatigue the reader, who must see and study for herself these objects of art, and take a lesson from this Royal School in the culture of the beautiful and the artistic in contradistinction to the vulgar and tawdry.

So shall we return in our way the graceful compliment paid us by the ladies of another land, in placing these treasures before our eyes, and not only admire, but cultivate such refining and picturesque work, in which all can unite who have nimble fingers and a love of the beautiful.

E. B.

## HOME PETS.

It is very natural for us human beings to bring in some little creatures which are foreign to our homes, and to train, pet, and lavish upon them our warmest affections. So it was with a little yellow songster entrusted to our care. We expected this one, like most other canaries, being in a place to which he was unaccustomed, to remain quiet for at least a few days; but how agreeably surprised and delighted we were when the very next morning he awoke us with a sweet little carol.

Dick soon showed himself to be a very fearless bird, which inclined us to train him. After a little patience had been exercised on our part, a lump of sugar as reward would always tempt him to walk a tight rope, a cord stretched from one support to another. A miniature rocking-chair, belonging to one of the smallest dollies, was occasionally brought out, and Dick placed into it, reclining as near as possible in the same position which we are wont to adopt. In this posture he would grasp a piece of paper which was offered to him, and apparently read the news. He would also hold a short lead pencil in a horizontal position, by which, after enjoying the rocker which had been constantly kept in motion by his gratified exhibitor, he would be taken from the chair, and still clinging to the pencil, would then be the point of intensified interest and wonder in his athletic feat of swinging in the air with inverted body and closed eyes. This was generally ended by allowing him to fall for a short distance only, for his natural instinct would then direct him to soar to the highest object which met his gaze, which was not unfrequently the chandelier. And a nice little chase we were led then. No sooner would we be firmly located on a chair on one side, than he would hop over to the opposite side, chattering and enjoying it greatly.

But these were his brightest days. When the winter came, this dear little pet took cold and became totally blind. Though he could always feed himself, his boisterous and cheering notes were missed, and his wonderful achievements were gone. In the following summer he was taken with us to the country, where it was hoped he might recover his sight. But, alas! though he was the recipient of the choicest pieces of apples, pears, berries, plantain, lettuce, etc., he uttered not a note, save a call as he recognized our voices. We kept him all that winter, and by the following summer, when we were in the country, we made the acquaintance of a gentleman from the city, who possessed three or four canaries, and to him, though I regret to say it, Dick was given away.

We have never attempted to train another bird; the memory of what a brave little creature Dick was is too dear to us.

FLORENCE WINTER.

## Household Art.

## RUSTIC FLOWER-STAND AND AUTUMN LEAVES.

Having seen two or three designs for a rustic flower-stand, with accompanying descriptions, I conceived a great desire to possess one; and not only to possess it, but to fashion it with my own hands. For those I had read of, the Grape, Cedar and other knotty woods were recommended. But, after my rambles through the woods, I decided in favor of the Sweet Gum, with its rough, wing-like bark surrounding and projecting from even its tiniest twigs. Procuring several branches, I selected those which I thought best suited to my purpose. These were more or less curved and bent, in such a manner as naturally to assist me in the formation of the stand. I first tried three branches, but found that a fourth was better; all the small side branches I cut off, leaving them one, two and three inches long—when they had grown out no longer than this, I left them entire, these little twigs being quite ornamental. In all the cutting, I took care to expose the wood as little as possible; pruning so that the bark concealed the cuts. Having thus prepared them, I stood the four branches on the floor, as nearly at right angles as possible; all curving into the centre, thus forming the neck of the stand where interlacing. I secured them with a small wire, which the little twigs and projecting bark concealed quite effectually. Then I proceeded to form the basket or upper part of the stand, by intertwining the small branches or twigs, which were left uncut for this purpose—adding and interlacing others where the vacancies required, and securing them at different points with the wire. In order to give strength and steadiness to it, I put cross-pieces between the legs of the stand, one above the other, resting in the forks formed by the ends left on, securing them also with wire. Being completed, I then varnished it, and really I looked upon my work with some degree of satisfaction, but was quite surprised at the admiration it drew forth when I brought it out to view. It was deemed worthy of a place in the parlor, where it was placed in a conspicuous corner; and being light, graceful and artistic as well as rustic, it bore well its surroundings of carved walnut.

Being too late in the season to fill it with roots, I used it for cut flowers. And particularly pretty it was on one occasion, with long sprays of Periwinkle falling around it, some being caught up as though clinging to the tiny twigs; while the top was decorated with a plate and glass bowl filled with Stars of Bethlehem, bright, shining sprigs of Box, and drooping vines, and marsh grasses with starry blooms.

But wishing to decorate it with living plants in the spring, I took some cocoa-nuts which I had sawed in half, filling them with rich earth, and roots of Ivy, Vine, Begonia and drooping mosses. One of these, with a fine Ivy in it, I placed on the cross-pieces below, securing it firmly. And now the Ivy has grown, and twined and festooned itself all around the lower part of the stand; while, from the basket above, the Vine falls in long, winding sprays, intertwining with the Ivy below. And through the meshes of the basket creeps the Peperomia; and a Begonia peeps through on one side, showing its bright, glossy leaves, and delicate, cream-like blooms. Having been removed to the front veranda, every one who comes exclaims: "What a pretty thing! Who made it?" I have tried to tell how I made it.

And now, may I add my experience in preserving

autumn leaves to that of many others, whose articles in your paper I have read with instruction and pleasure? I have tried both ironing and pressing them in books, and much prefer the latter method, as you thereby avoid bruising them. I find that from ten days to a month is required to dry them out, so that they will not shrink or shrivel when exposed to the air. When thoroughly dried thus, they may be oiled or varnished on both sides, if used for vases, picture cords, curtains, etc. If wanted for gumming on paper or cardboard, take the leaves, after pressing them, have your sheet before you, select and arrange the leaves, then take up each leaf, apply the gum with a mucilage brush, replace it on the paper, and press it on firmly but gently until every part, particularly the edges, adheres to the paper. Then go over the leaf and stem with the brush, coating them lightly with the gum. I prefer it to varnish—the effect is the same and it wears better. Those I prepared thus two years ago are as bright and fresh looking as when just done. I procured nice, smooth, thick blank paper from the book-binder's—fourteen by seventeen inches in size—large enough to arrange the leaves as one may wish.

I have quite a collection of beautiful leaves, in various tints and shades, arranged in groups, sprays, wreaths, etc., as fancy may suggest; each variety on a separate sheet, with botanical name and class, and also the common name, written beneath each. These are placed in a handsome case of black walnut and maple, with glass top, showing a group as beautiful as a painting, my friends say. The case is, in size and shape, similar to a large, handsome Bible, the deeply fluted maple representing the gilt edges between the walnut framing. In another case with glass top, I have a collection of wild flowers, medicinal plants, and beautiful vines with rarely shaped leaves and delicate tendrils, all pressed, gummed and labelled, as the forest leaves. I prepared these collections for a State Fair, where they both took premiums. Both collections are greatly admired by my friends, and, apart from their entertainment, they have afforded me many hours of pleasant employment and instruction. The pleasure they give extends even to the little ones, who gather in their rambles every bright-tinted leaf, or pretty spray, or trailing vine "for mamma." And may not these beautiful things become family heirlooms? And loving eyes may look over the bright leaves when mamma sleeps beneath others, flitting down in their crimson and gold.

CECIL.

## FLOWER PAINTINGS.

For some little time past, there has been quite a rage for hand-painting on small mirror frames, screens, fans, paper cutters, &c., and lovely designs in roses, forget-me-nots, and violets, have tempted lovers of pretty things to stretch their purse-strings rather widely to accomplish the desired end. For these dainty bits of ornamentation seem most unreasonably dear; the magic label, "Painted by Hand," is considered all-sufficient in the eyes of the sellers, and judging from the price it might be the hand of an old master.

But very satisfactory effects can be produced with real flowers by those who are willing to exercise a little skill and patience. It is fascinating work, and almost as artistic as painting. The materials needed are a quantity of paper known as botanical drying paper, which is light and soft, with an undressed face; two covers of wire cloth, which comes in sheets two feet long by one and a half in width, bound with a narrow strip of zinc; two stout leather straps, with buckles; a paper knife, and a camel's hair pencil.

The flowers for this work must be used as soon as gathered, and be quite free from moisture; half-blown blossoms and buds are preferable to fully expanded ones. The first step is to prepare a thick bed with the sheets of paper; this should be half an inch deep for small flowers, and a full inch for such large ones as roses, japonicas, etc. This bed, or cushion, absorbs the moisture, and dries them perfectly. The flowers are to be laid on this pile in natural positions, and far enough apart to prevent their touching, for this is one of those things that, if worth doing at all, is worth doing well. The paper knife and pencil now come into use in arranging the petals, stamens, etc., which must be done with the utmost care. It is better to put only flowers of a uniform size on one bed, and never to dry flowers of different colors together, as this is almost sure to dim or discolor them. When the bed is comfortably filled, a German style of coverlet may be placed on top; this should contain as many thicknesses of paper as are underneath. Then the other sheet of wire cloth outside of the whole, and the straps tightly buckled. The whole affair must then be hung where both sun and air will have free play; out of doors is best, if there is no danger of a sudden shower, and a summer breeze is a most desirable aid in the drying process. The small flowers will generally be ready for use in six or eight hours, while the large ones may require two days of sunshine; but they should not be removed from the papers until every vestige of moisture has disappeared. When quite dry they may be carefully removed with the paper knife to a sheet of stiff white paper, and put out of the way of dust or moisture until they are needed for use.

Foliage does not bear the process so well as blossoms, unless it belongs to the laurel family, and small quantities of lycopodiums and moss are used instead. Very little green is necessary, just enough to separate and relieve the colors. The flowers when carefully prepared in this way, will be perfectly flat, and retain their natural hues, so that any surface on which they are placed will look as though it were painted.

Cardboard is the most satisfactory foundation, and it is safer to trace upon it an outline of the design than the flowers are intended to fill. Brush this lightly over with gum tragacanth, or mucilage. Then put on the flowers, touching them here and there with the camel's-hair pencil, to make them stick. The gum must be put only on the cardboard, as it would injure the appearance of either flowers or verdure.

When the floral design is complete, the article must be carefully laid away in a dark airy room to dry. This will take a day or two. The finishing touch is given by placing lace very smoothly over the flowers, and gumming it securely at the edges. Ribbon, or small silk fringe, will make a pretty finish.

If properly done, these pressed flowers have almost the beauty and grace of freshly gathered blossoms, and can be used in many different ways as most effective ornaments. Pansies retain their form and coloring wonderfully, and a cross of heart's-ease, edged with a little lycopodium, makes an exquisite transparency. The forget-me-not is also very satisfactory and poetical, and a wreath of sweet peas, mingled with grasses, encircling a gilt monogram on a grey-covered portfolio, is one of those things of beauty that live in the memory forever. A fan of cardboard, covered with silver paper, or with black or white lace, and the pressed flowers lightly attached to this covering, is quite charming. Designs may be multiplied indefinitely, and these natural scrap-book pictures are so fascinating to handle, that after a few successful experiments, one feels like taking the entire contents of a garden and placing them between paper beds. E. R. C.

## Household Elegancies.

## PANSY MATS.

These mats imitate the shape and brilliant shaded purple and yellow tints of the Pansies, and are really beautiful. The materials required for a pair of them are—of single zephyr—one-quarter ounce of white, one-quarter ounce of black, half an ounce of the brightest yellow, and one ounce of richly-shaded purple. They are very easily made.

Commence with the white; make a chain of six, and join it; into that crochet twelve long crochet stitches, with one chain-stitch between each; fasten it, and make three chain-stitches for the next row. Do this at every row. Third row: Make two long crochet stitches into every loop of the second row. Fourth row: Two long crochet stitches, with one chain between, and alternate with one long into every loop, not stitch. Fifth row: Two long crochet, alternated with two separate stitches of long crochet with one chain between each. Sixth row: Two long crochet stitches, with three separate stitches of long crochet chain between each. Seventh row: Commence with the back; two long crochet stitches into every loop of the white. Eighth row: Commence with the yellow, and crochet two long crochet into every loop. Ninth and last row: Commence with the shaded purple, and crochet the same as the last two rows.

Thread a long needle with fine black thread, and catch down the fulness so as to give the effect of Pansies, as seen in the illustration.

## NEEDLE-BOOK IN THE SHAPE OF A SHELL.

The materials used are, blue velvet, white glass beads, a bronze clasp or blue silk ribbon. Fancy dives to the depths of the sea for ministrants to her service. This time she brings us a charming needle-book in the shape of a shell, well adapted to grace a lady's work-basket. Two flaps should be cut of stiff, white card-board, covered on the outside with blue velvet and on the inside with white silk. In order to give the upper flap the shell-like curve, sew a wire around the rim beneath the lining. When the velvet has been tacked to the upper flap of card-board, decorate it with the embroidery plainly delineated in the engraving, passing your needle through the velvet and the card-board, thus giving the work a firmer hold. The stripes on the shell are made of fine gold cord. The leaves and the bunch of grapes are cut of white paper and tacked on the requisite spots. Tack two or three rows of beads in the direction of the veins of the leaves, then begin at the centre and sew rows of beads closely to each other over the preceding rows. The stitches in the centre are covered by the veins of the beads firmly fastened down; the stems and tendrils are made of closely strung beads, tacked down

here and there. The bunch of grapes is made of wax, and milk-white beads. Sew on the wax-beads in transposed rows in strict accordance with the illustration; surround the outer beads by a wreath of milk-white beads, and separate the inner wax-beads by loops consisting each of eight milk-white beads, that

by means of a bronze clasp. Instead of the clasp, the parts may be sewn together and finished off by a bow of ribbon of a corresponding color.

## HOW I MADE MY LAMBREQUIN.

Having a large chamber, with four windows I desired to furnish with lambrequins at small expense, I set myself about inventing a way, and now wish to give the result to the readers of the CABINET. I procured five and a-half yards pink cambric, seven and a-half yards book-muslin. I cut the cambric the size of window at top, in the form of a crescent, only wider at the ends; this I sewed upon strips of cotton cloth the length of cornice. I then tore from the end of muslin twelve strips three inches wide, which I hemmed and plaited on the bottom of the cambric, for ruffling; then divided the remainder into four pieces, plaited about an inch below selvage, thus forming a standing ruffle at top; hemmed down the ends of muslin on inside of cambric, taking care not to take stitches through; gathered the muslin in centre with scarlet cord and tassels, looped in puffs, at sides. The entire cost of the four structures was only three dollars. We all think them very pretty and well worth the money expended.

Last year a friend visiting me when roses were in bloom, seeing the ground strewn with decaying petals, asked me why I did not dry my rose leaves and make a sofa-pillow. I immediately caught at the suggestion, and from that day to this not a Rose corolla has been allowed to scatter its petals on our premises. The result is, my pillow is nearly finished and encased—thanks to my fair friend and her timely visit. Now I will tell you how I made the ease: One ball tidy cotton. No. 10, three ounces green zephyr; this I crocheted in stripes, afghan stitch, twenty-seven stitches in stripes, one stripe green for centre with white on each side. This forms one side. A narrow boxing unites the two sides, finished with cord and tassels. The white stripes embroidered with green vine and pink rose buds, green strip plain. Cost one dollar.

I am now eight years on the shady side of fifty. The probability is, the perfume of these Centennial roses will outlive the gatherer many years, and may be retained by some friend as a memento of this our Centennial 1876.

HORTENSE.

**Spatter-work.**—Procure a fine piece of drawing paper and fasten on a smooth surface, arrange a bouquet of pressed ferns on it and fasten them securely with pins, dip a tooth-brush in the ink and comb with a fine comb over the paper. When your paper is colored sufficiently take the leaves off and you will find a dark back-ground with a bouquet of the delicate white fern leaves. If this is done according to directions you cannot fail to have a pretty picture. You can make mottoes, crosses, and many other things the same manner.

FLORENCE.

PANSY LAMP-MAT.

NEEDLE-BOOK IN THE SHAPE OF A SHELL.

velvet by means of overhand stitches, and trim the outer edges of both flaps with slanting rows of glass beads, seven beads in each row, the latter binding, as it were, the edges. The whole is completed by cutting two flaps of flannel the same size as the covers, pinking them, and fastening them between the outer flaps

colored sufficiently take the leaves off and you will find a dark back-ground with a bouquet of the delicate white fern leaves. If this is done according to directions you cannot fail to have a pretty picture. You can make mottoes, crosses, and many other things the same manner.

## Fireside Reading.

**Levities.**—When Mrs. ——— was working a beautiful WELCOME on cardboard to have framed and hung over the hall door, her 'cute little son asked her if she hadn't better work a "COME IN" to put over the outside of the front door.

Molly Smith's sweetheart's name is Will Bones. One day Molly was singing "Silver Threads among the Gold" while she was rolling out piecrust, and had just come to the line, "Yes, my darling you will be, will be—" Here her precocious little brother interrupted her with "Ha, ha, Molly, I know who you mean by Will B. You just emphasized the *you* all you could. Ha, ha ha! Yes, my darling *you*, Will B., Will B." Molly for the first time discovered the significance of her tantalizing little brother's remark, and she appreciates it so much that she never plays and sings "Silver Threads" any more, before company, while he is around.

Years ago, when the country was comparatively a wilderness, Miss Lawrence was engaged in teaching a district school in an out-of-the-way locality. Grammar and rhetoric were branches entirely unknown in that benighted neighborhood, if one might judge from the people's conversation. She started the oldest class of her school in grammar, and they finally learned to know the parts of speech, and to parse tolerably well. One day the brightest pupil in the class (a girl of about fourteen years) was called upon to parse the word "creature" which was in the lesson. "Creature? creature?" the puzzled girl slowly repeated, "think I never heard of creature afore, Miss Teacher." Miss Lawrence pointed out of the window where a number of cattle could be seen grazing in the meadow. She told the bright scholar that these animals was sometimes called creatures. At this a ray of intelligence seemed to light up the girl's countenance as she quickly responded, "Oh, now I know! you mean *critter*. Critter's a *neoun*."

The first chicken that Mr. W. ever carved was not exactly a success. It was in the days of log cabins when the country was new, and W. himself was young and green. Several ladies were present at the time, but no gentlemen except W. He was finally prevailed upon, when dinner time came, to carve the chicken, though he hesitated at first, doubting his own ability to attend to that branch of industry. The guests were seated at the table and he essayed to carve, but at the first pressure of the knife and fork, the roasted fowl bounded off of the plate, landed on the floor and disap-

peared from sight under a bed which was in a recess of the room. This caused some merriment, which was increased when a little black dog that was in the room scampered under the bed, and came out dragging the unfortunate chicken in its mouth. Luckily another chicken had been prepared for the repast, and was brought in upon a clean platter. W. made a determined effort to cut that meat into some kind of shape or other, and the meal proceeded with no more accidents.

**Old Doctor Strong**, of Hartford, Conn., was not often outwitted by his people. On one occasion he had

to have you preach for me, and I want you to preach the same sermon you preached to my people this morning." The young minister, supposing this to be a commendation of his sermon, started off in good spirits, delivered his note, and was invited to preach most cordially. He saw before him one-half of Doctor Strong's people, and they had to listen for one hour and a half to the same dull, humdrum sermon they had heard in the morning. They understood the joke, however, and said they would never undertake to run away from Doctor Strong again.

**'Cute Little Girl.**—A New Hampshire newspaper tells about a little six-years old girl in a country town in that State who went into a store where her father was lounging, the other day, and slyly approaching him, said:

"Papa, won't you buy me a new dress?"

"What! buy you a new dress, Susie?"

"Yes, papa, won't you?"

"Well, I'll see; I'll speak to your mother about it."

Elongation to an alarming extent rapidly spread over the little face, but a thought suddenly struck her, and with a smile she looked up into her father's face and said:

"Well, papa, if you do speak to mamma about it, touch her easy, or she may want the new dress herself."

The father at once saw the point, and the new dress was purchased without consultation.

**Too Late.**—The woman who arrived at the wharf just as the excursion boat had a start of ten feet, didn't comprehend the situation for a moment. She didn't know but that boats had a habit of starting off and backing up to keep the machinery from getting rusty. When she realized that she was being left, she jabbed a man in the back with her elbow, knocked a hat off with her parasol, and squealed at the top of her voice:

"Hold on, there—you haven't got me!"

"Make a jump!" screamed one boy. "Swim for it!" called out another; while the "left woman" fiercely shouted:

"Why don't some of you folks up there tell the captain?"

The people on the upper deck replied by laughing and waving their handkerchiefs. The woman on the wharf recognized only one among the crowd, and pointing her parasol directly at her, and holding it extended, as if taking aim, she shouted:

"You want to understand, Mrs. Baker, that you can never, never borrow any more butter or flat-irons of me!"

"Mamma, my doll's weared out, and I don't want any more rag dolls; I want a meat baby."

THE ASTONISHED BABY!

invited a young minister to preach for him, who proved rather a dull speaker, and whose sermon proved unusually long. The people became wearied, and, as Doctor Strong lived near the bridge, about the time for the commencement of the afternoon service he saw his people flocking in great numbers across the river to the other church. He readily understood that they feared they should hear the same young man in the afternoon. Collecting his wits, he said to the young minister, "My brother across the river is very feeble, and I know he will take it kindly to have you preach to his people. If you will do so, I will give you a note to him, and be as much obliged to you as I would

## Housekeeping.

## A CHAT WITH HOUSEKEEPERS.

Lovely autumn days, why cannot they be with us longer? Already the wind whistles among the trees, flinging their bright leaves to the ground, and reminding us that winter will soon be here. Gather these treasures, and fashion them into wreath and garland gay. Take small branches, press between boards with heavy weights, then hang on the nail from which pictures are suspended. There are so many ways of arranging dried flowers, grasses and ferns, and they all brighten our homes during the winter.

These housekeepers have many cares and troubles, too; and the more fresh air and sunshine they can get during the day the better they will feel, and I know of no better way to obtain these than by cultivating flowers. They will repay you a hundred fold with their beauty and fragrance. I always find a little time every day to work among my flowers, and never miss it. But I could hardly do without the dear flowers.

Very often we hear housekeepers complain that they are so tired. There is much tiresome work in the kitchen, but in many cases might not the fatigue be made less by a suitable work-dress? Have the dress made short, so that it will clear the ground, and it will be found to be much more comfortable than the long skirts which have to be held up with one hand every time one goes up stairs. What sport we would make of a man who, while at work, wore a coat that he was constantly obliged to raise with one hand to keep it out of the way. Let each housekeeper adopt a system at her work, and she will be surprised at the difference it will make in the course of a week.

I saw something pretty at a fair a short time since; a wreath, picked with a needle on bristol-board. I cannot describe it, but the flowers, leaves and buds were all there—pure white—and when enclosed in a heavy, dark frame, the effect was beautiful. I saw also some specimens of spatter-work. It was pretty, and I want to tell how to make it, so that some of the housekeepers who read this can make some for themselves. Bristol-board, India ink, a fine comb and some ferns are all that is needed. Arrange the ferns in any form on the board, fasten with needles stuck through each piece, take a little ink on an old tooth-brush, and draw the comb gently over it, letting the spatter fall on the work; after the board is blackened evenly, put away until perfectly dry; remove the ferns, and it is ready for a frame. Mottoes, crosses, anchors, etc., are a few of the many ways for arranging the ferns.

Many cannot afford to buy frames for pictures. Take old wood frames, and fasten to them with putty, acorns, now and then a bright leaf, with whatever cones or other articles you may have, with a row of popped-corn on each edge—varnish, and it is pretty.

To those who think soap-making a trial, I would tell my way. Take the soap grease, boil and cleanse with white lye, removing all the bones. Pour this grease in the barrel where you wish the soap; pour over it, a pailfull at a time, strong lye; stir often, and that is all there is of it. Any person can tell when it is thick enough. The lye will eat all the grease.

Let me tell my sisters how to wash calico so that it will not fade. When the garment is soiled, dip in strong salt water, and dry; then wash after the usual way, putting salt in the rinsing water. This need be done but once, the first time the garment is washed.

It is not known by every one that horse-radish root

cut lengthwise and placed on the top of your pickles will give them a pleasant taste, and also preserve the vinegar from mold.

It is rather late in the season to talk green corn, but this receipt will keep till next year, and none will be sorry who try it instead of drying their corn for winter. Cook the corn, cut from the cob, mix with as much salt as you can (there is no danger of too much), pack in a crock. It will keep a year, and I know not how much longer. When wanted for cooking, freshen a long time, changing the water often, then cook as usual, adding milk, butter and pepper when it is done. I often have compliments for my corn, and the question always follows: "How do you keep it?"

Let us not forget in our housekeeping that we should be homekeepers. Let us make our homes the dearest spot on earth, and the bright spot toward which the absent one will turn with longing. Let us make our homes cosy, and warm, and bright. There are so many little things that contribute toward the beauty of a room which are not costly, more than that they take time for construction. Those who sigh for costly furniture, tapestry and carpets rare, with lace and jewels, find too often that it is not in them that most comfort may be found. Then let us have flowers, vines and hanging-baskets; and, with snowy curtains at the windows, bright rugs on the much-used spots of the carpet, books on the table, a couch and rocking-chairs, with a bright fire, could we not spend a pleasant evening? Of course we would have pictures. Costly oil paintings would be out of place in this sitting-room; but nice engravings, a chromo or two to brighten up the wall, and the sweetest picture will be contentment written on every face.

MRS. G. T. CLARK.

## VARIOUS THINGS.

Alas! for the vanity of earthly expectations! I spent a short time with a friend in the country last week. She said, one day: "Do tell me how you make a brown stew." "There is nothing easier to do," I replied. We drove in town the next day, and while we ladies held the reins, the husband of my friend ran into a shop for a piece of beef. "What kind shall I get?" he asked. "O! anything will do; get it with some fat, and as little bone as possible," I answered. But anything will not do, I found to my sorrow, particularly the piece known as brisket, which the gentleman bought. A thick piece, that will cut down nicely when cold, is best. To go on with my story. The brown stew was to be for dinner. At nine A. M. (mistake No. 1), I washed the meat, put it in a pot with a loose lid (mistake No. 2), and covered it with boiling water.

It is needless to add that the brown stew was a failure. I saw my friend mentally exclaim: "Humph! that is what she calls brown stew; city folks do not know how to cook as well as country folks, after all." To make this dish a success, have a piece of beef such as before mentioned. It need not be off the round. I have gotten nice pieces as low as fourteen cents per pound, which, for a place where sirloin steaks and rib roasts sell for thirty cents, is quite reasonable. Put your meat on four hours before needed. Be sure and pour boiling water on it. Understand me, I do not say put the meat on in boiling water—it makes all the difference in the world which you do. Have a lid that fits your pot perfectly. After the water boils away—you cover it with water at the first—only add enough from time to time to keep it from burning. Our object is to brown the meat; consequently, if all the water boils away after the meat has cooked tender, so much the better, for the fat will allow the meat to brown

without burning; provided, of course, you have a slow fire. Add salt during the first half hour of cooking. For a dish of cold meat for supper there is nothing nicer than this same brown stew. Cut in thin slices—not in wedges big enough to knock a body down—and garnished with parsley, its looks would tempt the most fastidious. It is far preferable to roast beef, in our estimation; for roast beef is often beyond one's control. "It might be tender, and then again it mightn't." Cooked in the way I have described, you have it under your thumb and finger. If needed for tea, put it on soon after breakfast; set it aside to cool in the pot in which it was boiled, with the lid on as nearly tight as can be without having it entirely so. Do not laugh at the minuteness of detail. Should this article find its way into print, and be carried into execution by some good housewife, all excepting the boiling water, for instance, what a host of denunciations would fall on my devoted head; for, instead of something eatable, you would simply have a tasteless lump of fibrous matter.

There is nothing nicer in the bread line than Graham biscuits. I fancy they are not as indigestible as hot white biscuit; still they may be. I never found out till last summer, and then only after a series of experiments, that it was as easy to have Graham biscuit as white for breakfast. I take one quart of water, or milk if you have it, butter the size of an egg, three tablespoonfuls of sugar, two of baker's yeast, and a pinch of salt. I take enough white flour to use up the water, making it of the consistency of batter-cakes. Add the rest of the ingredients, and as much Graham flour as you can stir in with a spoon. Set it away with your bread sponge till morning. In the morning, grease your tin well, flour your hands ditto. Take a lump of dough the size of a large egg; roll lightly between the palms of your hands. Let them raise twenty minutes, and bake in a tolerably hot oven.

Grape jelly. I know of no nicer way for making jelly than that given by Marion Harland, in her "Common Sense in the Household." I do not follow her directions verbatim, for I find it will do just as well without heating the sugar as she directs. For my table jellies—those I want to be extra—for example, take grape jelly, green or ripe, and either is delicious. I cover the fruit with water; let it boil slowly till thoroughly soft; then turn into a heavy muslin bag, and hang in the cellar over night. My husband—Mouse, I call him—fully appreciates that part. Many a night he has suspended for me a bag of "to be jelly," while I held the candle. In the morning, take the juice that has dripped into the bowl, which we suppose to have been placed under the bag on the preceding night, and proceed as usual. The juice still left in the bag can be squeezed out; though not so clear as the drippings, it is still most excellent for cake. I used last summer five pounds of sugar to seven pints of juice—not pound to pint as receipt-books say—boiled the juice twenty minutes, added the sugar and boiled five minutes longer.

ELLIE MORGAN.

It is said that lining the walls, ceiling and windows of a cellar with four or five thicknesses of old newspapers, pasted on with strong size, will prevent roots and other articles stored therein from freezing.

To Remove Old Paint, cover with a wash of three parts quick stone lime, slaked in water, to which one part pearl ash is added. Allow the coating to remain sixteen hours, when the paint may be easily scraped off.

## IF YOU WANT TO MAKE MONEY DURING THE HARD TIMES, NOW IS YOUR TIME TO SECURE AN AGENCY FOR THE CELEBRATED ROBBINS FAMILY WASHER.

This machine has been ON TRIAL for the past six months in every State and Territory in the Union, and the almost unanimous verdict is: "Your Washer has proved a complete success."

Some of the reasons why this popular verdict has been reached may be found in these facts:

The Robbins Washer is an entirely NEW MACHINE. It is constructed upon a NEW PRINCIPLE—that of forcing water by downward pressure through the fabric. The dirt or discoloration is removed by water force; there is no rubbing or friction about it. This principle is the only one that has ever been successfully applied to the cleansing of fabrics by machinery. All others have failed in one or more essential points. The Robbins Washer will cleanse perfectly, without rubbing, all kinds of wearing apparel, table or bed linen. It will not injure the most delicate fabric. It is the greatest bleacher extant, and for this purpose alone is worth ten times the price of the machine. It is simple, self-operating, never gets out of order, and will last a lifetime. It saves time, it saves labor, it saves material.

By purchasing a ROBBINS WASHER you can count the hard drudgery of the washboard among the things of the past.

Therefore, we confidently say to every housekeeper in the land, you want a ROBBINS WASHER. You cannot afford to be without one. It will pay to buy one. THE RETAIL PRICE IS ONLY \$3.50. Sample to those desiring Agencies, \$3.

The philosophy of the Washer is fully explained in the following circular, which is full of valuable information to housekeepers. We bespeak for it a careful perusal.

In bringing the Robbins Washer before the public it becomes necessary to take into brief consideration the

ART OF CLEANSING FABRICS, which, although so common, is yet imperfectly understood. Having had a life-long experience in the laundry business—in connection with first-class hotels, public laundries, asylums, hospitals, etc.—we know whereof we speak. The numerous devices of friction rollers, pounders, squeezers, dashers, agitators, steam wash-bollers, etc., have all done very well, so far as it was possible for such principles and devices to do. But they have all failed in one or more of the three essential points, viz.: The saving of labor, the wear and tear of clothes, or in perfectly extracting the dirt or discoloration—all of which are accomplished by the ROBBINS LITTLE WASHER.

WHAT IS IT THAT REMOVES THE DIRT? You may ask all washerwomen and housekeepers, and your answer from nine out of ten will be, "Plenty of elbow grease," or, in other words, plenty of hard, laborious rubbing on the washboard. And such is the case, for you first have to rub soap upon the cloth, then you have to rub it in, to make the dirt soluble. But does that remove it? No; to do that you must first dip it in the water, and then rub it in again to force water through the fabric. That is what removes dirt after being softened by the chemical action of the soap upon it.

The way in which this could be the most economically accomplished is what we have so long and patiently sought after, and at last a principle has been developed in the LITTLE WASHER that embodies all the above-named points.

All the aforesaid mechanical devices have many objectionable features. It is harder work to operate them than to use the common washboard. They are constantly getting out of order, and, at the best, wear out in a short time. They wear out clothes ten times faster than the rubbing board, because the friction is a hundred per cent. greater than can possibly be applied to that article. They take the entire time of a person during the whole wash, and, last of all, they will not perfectly remove streaks from clothes.

THE GEO. D. BISSEL CO., Naugatuck, Conn.

**Aster, Zinnia, Pink, Phlox, Pansy.**  
Packets of each of these very choicest seeds mailed to new customers for trial on receipt of only ten cents and stamp. Large packets, well worth \$1.00. Address E. WYMAN, JR., Florist, ROCKFORD, ILL.

**Birds! Birds! Birds!**  
Large lot of Song and Ornamennal Birds, among them is the Hartz Mountain German Canary, the finest songster in the world. Address GEO. C. PEARL, Bird Store, READING, PA.  
N. B.—Birds shipped by express any distance.

**WANTED** Men to travel and sell goods to dealers. No peddling. \$80 a month, hotel and traveling expenses paid. MONITOR MANUFACTURING CO., Cincinnati, O.

## PRESSED FERN.

A large quantity of the beautiful CLIMBING FERN (Lygodium Palmatum); also, Pressed Fronds of a great variety of exotic Ferns, by Express at the following rates:

Per dozen Fronds, 60 cts.  
Six dozen " and upwards, per doz., 37 cts. Cash.

Address DEXTER SNOW, CHICOPEE, MASS.

50 Your name on Postmaster, 50 Mixed Vis. Cards Mallet Creek, O. 10c.

THE PRINCIPLE OF THE LITTLE WASHER embodies all the essential points. First, we have the desired heat, which expands the fabric, and causes it to discharge the dirt. Second, we obtain a powerful suction beneath the clothes, which causes a rapid downward current or water force through and through them, thereby removing the dirt. Third, we use a large body of water, which holds the dirt in solution. Thus we cleanse thoroughly, rinsing the clothes as usual being all that is required to complete the operation.

The Washer is composed of solid galvanized iron, which will not rust or corrode. There are two sizes—the No. 1, or family size, for ordinary household use; and No. 2, or hotel size, suitable for country hotels, boarding houses, laundries, &c.

Family size weighs 6 pounds, is only 7 inches long by 5 inches wide by 1 1/2 inches deep. The discharge pipe is 13 inches high over that, and is 1 1/2 inches in diameter. It throws water in a solid, unbroken stream at the rate of 15 to 20 gallons per minute, will work in any common family boiler, and if you wish will do the work in a boiler nearly twice that size, thereby enabling you to do twice as much, or the same amount in half the time. It takes only 3 ounces of soap to 15 or 20 gallons water, and will wash household linen, such as bed and table linen, a boiler full in ten to fifteen minutes, and do it perfectly; wearing apparel in from fifteen to twenty-five minutes, and will remove all streaks without any rubbing; requires no previous preparation of the clothes, such as soaking over night, &c. We take the clothes dry, and when the Washer gets thoroughly at work we will fill the boiler as full as it will hold by gently pressing them down with a stick. We use no chemicals, only good soap and soft water. If the water is hard it may be softened by a small piece of borax, which is perfectly harmless.

The No. 2, or small hotel size, will do the work in a boiler four times the size of a common family boiler, and wash of average pieces from 1,500 to 2,000 per day; or it may be used in any smaller boiler. They will work in anything that has a bottom large enough for them to rest upon.

### OUR METHOD OF HANDLING.

We want agents everywhere throughout the United States in every State, county, town, and hamlet. The retail price of No. 1 Washer is \$3.50; of No. 2 Washer, \$5. But we will sell sample machines of No. 1 size at \$3; No. 2, or small hotel size, at \$4. Canvassers for this Washer can make more money with it than with anything ever before offered to the public. As, for instance, we established two agencies to test the sale of the Washer upon its merits—one in Naugatuck, Conn., and one in Providence, R. I. The former, Mr. Charles Daniels, in a town of about 2,000 inhabitants, sold by canvassing in two weeks eighty-two Washers. In the latter place, Mr. James Roberts, now of Naugatuck, Conn., sold in less than three months, without canvassing or advertising, outside the store, over 500 Washers. A thing never before heard of.

### TO PERSONS OUT OF EMPLOYMENT

we would say, if you want to secure a paying business, now is your time. Don't wait until the best territory is taken up, but send at once for sample machine and go to work. By following instructions you can sell to nearly every family in your neighborhood. Others have done it, and there is no reason why you should not. Full directions and instructions accompany each machine. Also special terms to agents, circulars, testimonials, etc. All orders must be accompanied with cash. Remit by money order or registered letter to

THE GEO. D. BISSEL CO., Naugatuck, Conn.

## 5 Magnificent Lilies for \$1

AURATUM, ROSEUM, LONGIFLORUM, CANDIDUM and DOUBLE TIGER.

### POSITIVELY NO SUBSTITUTION.

12 Double or Single Hyacinths, \$1.00  
12 Tulips, Double or Single, 50  
12 Crocus, Mixed, 15

Sent by mail upon receipt of price.

**ROYAL FRAGRANCE**  
SOLID COLOGNE.  
Double Strength of Perfumet. Excellent to prevent ravages of moths in clothing. Send for it. 3 samples for 25 cts. Postage stamps will be received.

DR. W. A. HUBBARD, Chemist, 45 N. Anderson Street, BOSTON, MASS.

## THE BEST ENGLISH DICTIONARY, WEBSTER'S UNABRIDGED.

From the Chief Justice of the United States.

WASHINGTON, D. C., Oct. 25, 1875—The book has become indispensable to every student of the English language. A Law Library is not complete without it, and the Courts look to it as of the highest authority in all questions of definition.—MORRISON R. WAITE.

Sold by all Booksellers.

## TREES

The Largest and most Complete Stock of Fruit and Ornamental Trees in the U. S. Priced Catalogues sent as follows: No. 1. Fruits, with colored plate, 15 cts.; plain, 10 cts. No. 2. Ornamental Trees, etc., with plate, 25 cts. No. 3. Greenhouse; No. 4. Wholesale, and No. 5, List of New Roses, Free.

Address, ELLWANGER & BARRY, Rochester, N. Y.

## DOBBINS' STARCH POLISH

### A GREAT DISCOVERY!

By the use of which every family may give their Linen that brilliant polish peculiar to fine laundry work. Saving time and labor in ironing, more than its entire cost. Warranted. Ask for Dobbins'.

SOLD EVERYWHERE.

DOBBINS, BRO. & CO., 13 N. 4th St., Phila.

## WHITE WATER LILY (NYMPHIA ODORATA).

I will select strong, hardy roots of this fragrant Lily, with buds started for next year's blooming, and forward by mail to any address, for 35 cents each, or \$3 per doz.

Printed instructions for planting in tubs and caring for them will be sent with each package.

Address, J. E. S. CRANDALL, Rockville, Washington Co., R. I.

**VINEGAR.** How made in 10 hours from Cider, Wine or Sorghum without using drugs. Name paper and address F. I. SAGE, Springfield, Mass.

**Leamon's Dyes Color Silks.**  
**Leamon's Dyes Color Woolens.**  
**Leamon's Dyes Color Cottons.**

Splendidly adapted for all kinds of fancy work. They make the best and cheapest inks. Druggists sell them. A book giving full and explicit directions will be sent to any one by addressing the proprietors; or a package of any color will be sent postpaid on receipt of 30 cents.

WELLS, RICHARDSON & CO., Burlington, Vt.

**Use Corticelli Silk!**  
IT IS THE BEST.

\$12 a day at home. Agents wanted. Outfit and terms free. TRUE & CO., Augusta, Maine.

LADY READERS of the Cabinet should refer to the MAY number for the advertisement of the "Favorite Dishwasher," and send 35 cents for one to Coleman Smith, New Haven, Ct. They are cute.

All about Maryland & Delaware. Catalogue and maps free. J. F. MANCHA, Easton, Md., Smyrna, Del.

**CLARK'S INDELIBLE PENCIL** is the best to mark clothing. Agents' samples mailed, 35c. CLARK IND. PENCIL CO.'s Box 141, Northampton, Mass.

## BULBS FOR FALL PLANTING, FLOWERS FOR THE HOUSE.

The Autumn No. of Vick's Floral Guide, Containing descriptions of Hyacinths, Tulips, Lilies, and all Bulbs and Seeds for Fall Planting in the Garden, and for Winter Flowers in the House—just published and sent free to all. Address

JAMES VICK, Rochester, N. Y.

B. GREENWOOD  
11 1/2 to 13 College Pl., New York.

Dealer in AQUARIA, Gold Fish, Water Plants, Globes, Prepared Fish, and Bird Food. Also, Cement for Setting Glass in

Aquaria, Greenhouses, &c. Propagating Ponds at Passaic, N. J. Send for Circular.

Prepared Fish Food, \$1 per dozen boxes, by mail, postage paid.

## PARSONS' Oriental Glove Powder IS WHAT EVERY LADY WANTS.

It is highly perfumed, and makes the hands soft and white.

Sample by mail, 25 cents. Address

JOHN PARSONS, 290 PEARL ST., NEW YORK.

## Bulbs! Bulbs! Plants!

Hyacinths, Tulips, Lilies, Crocus, Narcissus, Roses, and Winter-blooming Plants! Extraordinary inducements! Send for new Catalogue (free). Address,

F. K. PHOENIX, BLOOMINGTON NURSERY, Bloomington, Illinois.

600 acres; 24th year; 13 greenhouses. 5 Catalogues (the set), 25 cents.

## LADY AND GENTLEMEN AGENTS WANTED. Goodyear's Pocket Gymnasium.

ENDORSED BY THE MOST EMINENT PHYSICIANS. The Most Complete System OF PHYSICAL EXERCISE Ever Devised for Home Practice.

100,000 in use by men, women and children. Used standing, sitting or reclining. Hundreds of graceful movements. For home, office, schools, hospitals.

Price List.—No. 1, for Children 4 to 6 years, \$1.00. No. 2, for Children 6 to 8, \$1.10. No. 3, for Children 8 to 10, \$1.20. No. 4, for Children 10 to 14, \$1.30. No. 5, for Ladies and Children 14 years and upwards, \$1.40. No. 6, for Gentlemen of moderate strength, \$1.50. No. 7, used by Ladies, Children or Gents, \$2.00. No. 8, for Gentlemen of extra strength, \$2.50. Full set, family use, 1 each, (1 to 6) Two 7's and Two 8's, \$16.00. Nos. 7 and 8 are fitted with a screw-eye and hook to attach to the wall or floor. A pair of No. 7, (\$4.00), or 8, (\$5.00), make a complete Gymnasium and Health Lift. Sent post-paid on receipt of price. Exclusive Agencies granted in unoccupied territory. Exclusive rights to sell the Pocket Gymnasium afford the largest possible returns for small investments. Its sales are nearly universal wherever it is placed before the public and its merits fully understood.

For Illustrated descriptive circulars, terms, &c., address, Goodyear Rubber Curler Co., P. O. Box 5, 156, 697 Broadway, New York. RUBBER GOODS OF EVERY DESCRIPTION.

VOL. V

NEW YORK, NOVEMBER, 1876.

No. 59.

PRICE 12 CENTS.

## THE NIGHT-BLOOMING CEREUS.

In our northern climate the opening of the blossoms of this plant is not often witnessed. A wealthy family in Utica, N. Y., upon the occasion of the opening of one in their conservatory, held a brilliant floral levee.

stem, and above it appeared a closed bulb nearly as long as a banana. Saturday evening, about dusk, the bulb suddenly burst open, revealing the magnificent flower so often described but seldom seen. Mr. C. generously placed this beauty in front of his residence

and the stamen six inches in length, both unusually large. The delicate white and yellow tints of the stamen and petals appeared very beautiful in contrast with the dark green leaves or covering of the bulb, and the repelling prickly body of the plant. The

VIEW OF CONSTANTINOPLE AND THE BOSPHORUS—FROM A TURKISH GARDEN.

As the story comes to us, it runs as follows: Mr. C. had a plant of the Night-blooming Cereus variety in his possession for the last ten or twelve years. During this time no flower had appeared upon it, and it occupied a modest corner of the conservatory. A few days ago a prickly bud emerged from the side of the

so that all passers by might share in the enjoyment of examining it. During the evening hundreds of ladies and gentlemen stopped to examine the rare sight. Later it was transferred to the parlor table, and the gas-light added to its brilliancy. Upon measurement the flower was found to be fourteen inches in diameter

flower was expected to close and disappear about midnight, like all beautiful things, fading quickly. It emitted a rich, pungent perfume. A short distance from the blooming flower was one more bud, which it was expected would soon bloom. A more beautiful floral display cannot very often be seen.

## Floral Contributions.

## MY BEAU IDEAL REALIZED.

"There's a magical isle up the River Time,  
Where the softest of airs are playing;  
There's a cloudless sky and a tropical clime,  
And a voice as sweet as a vesper chime,  
And the Junes with the roses staying."

During my summer wanderings in the mountains of Virginia I happened to light upon, or rather within, a regal greenhouse; I would say a Zenobian greenhouse, but that I dare say it was warm enough in Palmyra to dispense with a conservatory, and an old-fashioned flower garden would answer every purpose. But, however that may be, I derived so much genuine pleasure from this one that I feel impelled to describe it to my CABINET sisters.

I went to visit it very often—thought I should like to live in it, and my farewell visit can never be effaced from memory's page; it is written in illuminated text. It was a bright, crisp, sparkling evening early in October; the breeze just whispered of the coming frost, when I started for a three-mile walk to say good-bye to this radiant home of the flowers, where Titania might spend her winters and never know aught of the bleakness without, save for the fleecy down which Nature sees fit to wrap about her then, as a kind of Chinese mourning for the death of the flowers. The entrance was through a small brick house where a vestal fire is sustained, supplying the warmth which is so sadly wanting in Sol's wintry smiles. Then, passing through the vestibule, we enter the "crystal palace" itself through a doorway arched and framed in with the waxen leaves of the Hoya, nearly the whole side of the wall being covered with a tracery of leaves and branches as with some rare tapestry. The greenhouse contained three divisions, similar to those usually seen at the florists'. This one is in charge of an English gardener, under whose touch everything seems to grow and blossom in utmost profusion, as if grateful for his care and thorough knowledge of their wants. All down the centre division were columns entwined by various graceful vines, among which the Cissus discolor was most prominent and beautiful. At one end a huge Caladium Esculentum reared its lofty leaves the size of a sun umbrella, one actually measuring forty-four by thirty-four inches. The Torrenia, with its shaded purple blossoms and delicate foliage, formed a fringe-like bordering aided by that inimitable trailer Cobæa scandens variegata, while the Geraniums, Abutilons, Tuberoses, Dracænas, Fuchsias, Chinese Primroses and Begonias mingled in rich, yet uncrowded, luxuriance; among the last-named the Semperflorens is most valuable, for it is truly named and is never without its clusters of gay little red blossoms. Nor were the Callas wanting in readiness to add their stately grace to the beauteous sisterhood—they were present,

"Unfolding from the earth's embrace,  
Fair pages where I meekly trace  
A promise sure."

The Fuchsias were immense, being the size of shell roses, and their corollas of rich, velvety purple resting lovingly against the crimson sepals, could only be equalled in glory by another member of the same family, the Lustre. This Fuchsia, I was told, had been blooming in the same lavish manner, dozens of bells to every branch, ever since last December: the wax-like purity of its snowy sepals, with the faintest suspicion of a glow upon them as if it were reflected there from the deep vermilion corolla, produced a vision of loveliness, and it seemed so intense in its

vitality that one could almost believe it had a soul, and I was irresistibly reminded of the lines—

"It is not that cheek, 'tis the soul dawning clear  
Through its innermost blush makes thy beauty so dear;  
As the sky we look up to, tho' glorious and fair,  
Is looked up to the more because Heaven is there."

There were some curiosities that claim worthy mention. The variegated Tradescantia was exquisitely lovely, but in order to keep it variegated one must take good care that the solid green shoots are pinched off, for it has a continual tendency to return to its native homeliness, or if not exactly homeliness, its unpretentiousness. Then there was the most sensitive plant I ever beheld. If one of the tiny leaflets of a single frond were touched, however lightly, the whole branch collapsed, as if resenting that a mere mortal should dare approach its fern-like beauty. It amused us very much with its queer ways. And now we came to the gayest little butterfly of a flower—the Clerodendron Thompsonii. I think it must be descended from the Thunbergian family, for though it is much more aristocratic looking, yet it has some striking points of resemblance. The little balloon, out of which it starts so suddenly, is of purest white, instead of emerald-green, and the brilliant red of the tiny floweret forms a singular and startling contrast to it, while its long, delicate stamens add the grace that would otherwise be wanting to this gem of the conservatory.

I met with a book during the summer called "Beautiful Leaved Plants," and some of the illustrations so transcendently lovely that I took for granted they were mere fictions, highly-colored romances, and never ventured to hope for their realization in this world, when lo! in this paradisiacal greenhouse I came right upon one of the very plants that had taxed my credulity to the utmost! It was one of the Calladium tribe, in leaf-shape like to its gigantic brother, but with leaves not more than five or six inches in length; it was a delicate green with a deep magenta band through the centre of the leaf shading off into green, and then had innumerable flecks and spots of red sprinkled over the surface that resembled nothing so much as Chinese characters. Not having an interpreter, it remained a sealed book to me, save that it spoke of the wondrous power and love that had created all this beauty. There were others of this curious family, but none had the fascination for me of this singular plant; I found myself returning and studying its queer phases over and again. Time would fail me to describe the Lycopodiums and Alternantheras, without which no collection is now complete.

One thing that struck me about Mr. B.'s floral economy was that all the spaces under these stands of flowers were filled with gay plants growing in the natural soil, bright-hued Coleus and Achyranthus, and whole beds of Tradescantia of most vivid green, the warmth proving sufficient to bring them to perfection with scarce any sunshine. When I finally compelled myself to bid them a last, lingering adieu, this gardener—this great and glorious man—gave me slips and a magnificent bouquet; I am even now tenderly watching the growth of these little ones in my own pit, and fancy they shall one day recall the picture of this queenly greenhouse.

ISIDORA.

## PRESERVING FLOWERS FOR WINTER.

We number not a few botanists among our readers, and a still larger number of persons who love flowers for their own sake, and who would like to preserve them with more or less freshness throughout the year. This can be done with a little care.

All that is required, is to dry and press them, and

then to fasten them with glue or gum to the pages of a blank-book; attach also the names of the flowers. In selecting specimens for preservation, take those of average size, with no part wanting. Get those with leaves attached to the flowers, and with stems not very thick, else they will not press well nor lie smoothly within the leaves of the book. Get also a specimen of the seed vessels, if you have a seed-bearing plant.

The plant-gatherer should, if possible, go out into the woods and fields, equipped with a botanical box. This is nothing more than a flat tin box, six or eight inches wide, and a foot or fifteen inches long, and shaped like a candle box, only thinner, and having a lid which shuts tight. This will keep the specimens fresh for a day or two, if occasionally sprinkled.

He should also have at home a portfolio a little larger than the box, for receiving the plants at the close of each excursion and for drying them. The paper may be any common unsized sort, such as the poorest printing paper, or grocers' white tea paper. The newly gathered specimens should be laid separately between the sheets of paper, and then a moderate weight laid upon the closed portfolio. If the specimens are quite succulent and moist, they should be placed between several sheets of coarse brown paper, to absorb the moisture; and it may be necessary to change these absorbers daily for a week, before the specimens are perfectly dry.

The blank-book for receiving the dried plants is generally called a herbarium. It should be made for this specific use. The botanist Linnaeus used common foolscap paper, eleven by seven; but he found this too small. The best kind of paper for an herbarium is a neat, rather firm, and sized paper, kept for such purposes at most book-stores. The several species of plants should be placed in sheets by themselves, with only one specimen to a sheet. The generic and specific name of the plant should be written at the lower right-hand corner of the sheet, together with any other items of interest connected with the history of the plant; such, for instance, as the place and time when gathered, or the friend from whom it was received, etc. Then, as these sheets accumulate, they should be gathered into covers (called by botanists genus covers) made of a thin sort of pasteboard, or the coarsest drawing-paper, and the name of the genus written on the outside. When several of these are collected, they may be put into a thick portfolio, having the name of the order on the outside. The portfolios may be kept on the shelves of the library. Specimens should be dried as quickly as possible, to prevent their becoming black and moldy. As many kinds of plants, and coufers especially, are apt to fall to pieces when dried, this may be prevented by plunging the newly gathered specimens for a moment into boiling water. We know of few recreations for a stormy day in fall or winter more pleasant than examining a good herbarium.

DAISY MEADOWS.

**Rockery.**—This is not a gardener rockery that I am about to describe, but is only on a smaller scale. It may be made on the mantle or on a little table. I have quite a collection of pretty stones, and having seen a parlor rockery concluded to make one. I placed a small collar-box on the mantle, against the wall, filled it with earth, and planted long, drooping vines of Ivy. Then I grouped the stones around until the box was hid from view. I arranged shells and small stones on the earth, leaving the Ivy to trail gracefully over the stones.

FLORENCE.

## Gossip with Correspondents.

## EDITOR'S CHAT WITH HIS READERS.

This summer, travelling among the grand scenes of California the Editor of the FLORAL CABINET visited some of the pretty little gardens of the "Golden State." In the lovely little village of Santa Cruz, embowered in vines, and sheltered from storms, were hundreds of charming cottages, pictures of contentment and floral beauty. What a world of bloom! what an ocean of flowers! and how balmy the air!

Santa Cruz is on the shores of the Pacific Ocean, and is often called the Long Branch of the Pacific. It is a pretty village of about five thousand inhabitants, whose white cottages are almost invariably surrounded with gardens. It was intensely delightful to wander, hour after hour, up and down the streets, looking over into the yards, and viewing the varied specimens of luxuriant growth. In one garden the Fuchsia had never been removed since it was originally planted, years ago, and it has grown to be a tree twelve feet high, with branches spreading out nearly four feet, from which the pretty drops hung so sweetly, while the trunk was over two inches thick. In the same garden was an Abutilon over twenty-five feet high. Roses bloomed in millions, and Geraniums were as common as weeds.

The most brilliant display of Geraniums we ever witnessed was as we passed near Meulo Park. A long avenue of five hundred feet, with a width of fifty feet, has upon its outer edge a hedge of tall Arbor Vitæ. Up and down the path were ribbon beds of Coleus, Achyranthus, etc., while immediately next to the dark green of the hedge was a fiery line of Geraniums. Gloriously bright seemed the bed, like a line of fire, a meteor, or a shooting star, as the train swiftly passed by. Near the station, and running along the track, was another hedge, and up and down its branches many Geranium vines were growing, whose bright red blossoms shone in grandeur against the dark green background.

In San Francisco we saw a fence, fifteen feet high and sixty-five feet long, covered with an immense mass of Geranium vines that had clambered up one side and then dropped down the other, filling both sides with a double blanket of scarlet blossoms of vivid hue. The Geranium is the favorite garden flower of California. It grows as fast as weeds, needs no care, and is ever in bloom. Once planted, it never stops growing.

In Los Angeles, as we wandered among the gardens, we saw a sight of a most wonderful nature. In the Washington Garden was a veritable Rose tree, the diameter of its trunk being five inches. This grew up about three and a half feet; then the top branched out perfectly straight, and almost flat, over sixteen feet across, and completely covered with Solferino Roses. In this garden was a Grapevine arbor, arranged in a semi-circular form, which covered over half an acre.

In one of the little gardens we saw the Oleander, which our ladies at home grow so carefully in-doors. One specimen was twenty feet high, and the stalk was four inches in thickness. In the same garden was a Geranium bush ten feet high, with stock two inches in diameter. In another garden was a large specimen of Pampas Grass, with a diameter of eighteen feet, and over fifty heads or tufts rising from it.

In one garden we saw a Fuchsia, planted out this year, clambering up the pillars of a porch; it was only six feet high, but bore over three thousand blossoms upon it. In the same garden was a mound of Pelargoniums, of colors more beautiful than we have ever seen in any greenhouse, while up and down the fence was a huge hedge of Geraniums.

In many of the gardens the Mignonette grew as large as the tomato vine we see at home, and had to be hooped up from the ground.

In still another garden was a monster Geranium bush, which was only a little slip last spring. Now it has one hundred and fifty branches; its stalk at its base was four inches thick, and it had over a thousand blossoms. Think of what a fiery red ball this would make!

In a nursery we stood, and within a few feet of us, growing in the open air, and bearing fruit, were the Fig and Chestnut, a long avenue of each, with trunks one and a half feet in diameter, heads eighty feet high, branches seventy feet diameter; also the Peach, Pear, Plum, Apricot, Orange, Lemon, Lime, Olive, Guava, Pomegranate, hot-house Grapes, India Rubber tree, Cactus, Palm, and Banana. Think of all these in one garden!

In all the streets I saw not a single shade-tree which we usually grow in the North. Not a single Maple, Elm, or Beech. Instead, every garden or lawn has the deep-green Orange tree for its shade, and in the streets were the gentle, willowy Acacia.

This is the home of the Orange tree. In one grove I saw there were gathered last winter 1,250,000 oranges, which sold for \$17,000, all owned by a Spanish lady who asks

the modest sum of \$70,000 for the grove. In one little garden we saw no shade-trees but the Palm, over seventy feet high, and next to it was the little hut of Hop Lo, the Chinese washerman, whose porch was covered with a mass of Wandering Jew, so thick we could not see the door.

Such are some of the wonders of travel. Happy will our readers be who can ever find it their fortune to visit this sunny land for health or pleasure.

But other topics demand our space, and other correspondents claim an interest in our "Notes of Gossip."

**Broken Goblets Utilized.**—Mrs. M. A. B. says that in the July number of the CABINET she saw an article on the use of broken goblets, and would like to tell us how she has made very elegant mantel ornaments of them. She says: When the stems are broken, I take them and transfer decalcomanie pictures on the outside, such as oval or round heads, and oval bouquets or landscapes. For the outside rim of the glass I take a strip of gilt paper half an inch wide, and cut the lower edge in sharp points, and paste to the glass with the same varnish I use for the pictures, using a wet sponge to press it in place. When all is thoroughly dry, I carefully paint the inside of the glass with Chinese vermilion, which comes in tubes, and can be obtained of any chemist for twenty-five cents, which will be enough to paint half a dozen glasses. I then make a stand similar to a table castor, by sawing out an ornamental piece, of black walnut, a wreath of leaves, in two circles, on one piece of board, twelve inches long and nine inches wide. In the centre of each circle I saw out another circle, just large enough to insert the stem of the goblet, and firmly glue them into place. The rims of the glasses should be about an inch apart to allow space for the upright standard or handle, which I fasten after the table castor, and insert in the stand by sawing out a place in the centre between the two glasses, and gluing firmly in its place. Then saw out three or four ornamental feet, and glue on underneath; then varnish the stand with shellac, or furniture varnish, and you will have a very handsome stand for cigars, autumn leaves, cut flowers, or table and mantel ornament, and when you have once made such a stand, I think you will never sigh over broken goblets. I have made a match-stand after the same pattern, by taking the lower part of broken lamp-chimneys of the student lamp, and turning them bottom side up, transferring pictures, painting them, and gluing them to stands sawed out with a fret saw, and they have been very much admired.

**Barrel Chair.**—Mary M. Morris answers an inquiry in June number of CABINET. Lucinda R. Howe requests me to tell her how to make an easy chair out of a barrel. The head is knocked out and fastened half way down; the shape of the back and arms chalked out first, and then carefully sawed. After that some coarse canvas or other old stuff is tacked loosely on, and stuffed with horse-hair or wool, a cushion made for the seat, and the whole covered with bright chintz.

**Converted by a Flower.**—There is a beautiful incident told of a Texas gentleman who was an unbeliever in the Christian religion. One day he was walking in the woods, reading the writings of Plato. He came to where the great writer uses the phrase, "God geometrizes." He thought to himself: "If I could only see plan and order in God's works, I could be a believer." Just then he saw a little Texas Star at his feet. He picked it up, and then thoughtlessly began to count its petals. He found there were five. He counted the stamens, and there were five of them. He counted the divisions at the base of the flower, there were five of them. He then set about multiplying these three fives to see how many chances there were of a flower being brought into existence without the aid of mind, and having in it these three fives. The chances against it were one hundred and twenty-five to one. He thought that was very strange. He examined another flower, and found it the same. He multiplied one hundred and twenty-five by itself to see how many chances there were against their being two flowers, each having these exact relations of numbers. He found the chances against it were thirteen thousand six hundred and twenty-five to one. But all around him there were multitudes of these little flowers; they had been growing and blooming there for years. He thought this showed the order of intelligence, and that the mind that ordained it was God. And so he shut up his book, picked up the little flower, kissed it, and exclaimed, "Bloom on, little flowers; sing on, little birds; you have a God, and I have a God; the God that made these little flowers made me."

**He does not Care for Flowers.**—A lady writes us that she heard a remark made by an intelligent young man, to the effect that if he had a home of his own, he would not care enough for flowers to cultivate them. He is a believer in the Bible, and considered a Christian. Is it possible a child of God loveth not the things his Father hath given him for his pleasure and happiness? What he despises, the unbeliever in the above incident learned to love. Did he never think of the "Rose of Sharon," the "Lily of the Valley," pure emblems of his Saviour's life?

**Pomegranates.**—M. A. Line says she must tell our readers about some of her flowers, especially the monthly Pomegranate. "Gus Vick" has a light, warm sitting-room. To her I intrusted this plant. It is now covered with bright scarlet flowers and buds, and will bloom all winter. I have never seen a handsomer window plant. A white Lantana was placed in the sitting-room, and is now about eight feet high; it has no less than one hundred clusters of flowers. This is certainly an unusually fine specimen.

**What to do with the Fireplace.**—Mary E. Walters writes us a nice little article on fireplaces. It is real sensible: "The articles which have been appearing in one of our leading monthlies, under the quaint title of 'Beds, Stools, and Candlesticks,' have excited a very wholesome reform among its readers, and put many an idea of artistic adornment into the heads of people whose opportunities have not been great, as well as among the cognoscente in such matters. The author of these remarkable papers has given several very successful treatments of those unsightly objects, fireplaces. I have just completed, and I believe originally conceived, a far different course from his, which is equally novel, certainly less expensive, and as thoroughly beautiful as that designed by the writer above spoken of."

"What to do with the fireplace in summer, is a question which puzzles many a good housekeeper, and out of an ugly hiatus in the wall to bring forth the 'sweetness and light' so much desired by Ruskin, or is it Matthew Arnold who is always demanding these articles? The usual way is to place a paper or muslin-covered frame over the 'hole in the wall.' Almost every house in the country, and many in the city, have the fireplace to conceal in warm weather, and the polished andirons affected by some people present a barrenness objectionable to all. I undertook to manage the fireplaces in the parlor and music room, and ever since their completion have been thronged with visitors whose avowed object in calling was to criticise them. All, or nearly all, of them have resolved to make one or more in their own homes. With these prefatory remarks let me at once proceed to give the necessary explanations, so that every reader can make one of these beauty-spots for their own home."

"After I removed the stoves, I had the walls of the fireplace coated with two or three layers of the whitest lime. I then gathered two or three wheelbarrow loads of large stone, the roughest I could find, and among them some large bits of cinder from the furnace, with some petrifications and stalactites from the many caves in this vicinity. I arranged these in as ragged a manner as possible, making an irregular wall about two feet high, and semi-circular in form. It extended in front out from the line of the chimney. Between this wall and the back of the fireplace I placed a layer of charcoal and half-rotted leaves, three inches in depth. In the centre of this I placed a ragged old stump, which I caused to be hauled from the banks of our beautiful blue Juniata, where it had been deposited by the last freshet. In one room the stump had an even top, while that in the other room extended its gnarled and knotted limbs in snake like convolutions some distance up the chimney, affording a convenient place for pots containing hanging vines. I then put in a layer of good soil, sand and leaf-mold, well mixed, some few pebbles, and covered the walls of the rock fortress with sheet-moss obtained from the woods, and here and there planted Parlor Ivy, Wandering Jew, a great many Ferns, Morning-glories, Allegheny and Madeira vines. With regular watering every morning they flourished remarkably well, and ten days after planting all the surrounding objects were covered with abundant hangings. The graceful Ferns nodded in profusion, while luxuriant festoons of the Parlor Ivy and Morning-glory scrambled in and out among the limbs of the gnarled old stump. You can have but a faint idea of what a beautiful picture it made, and how lovely the once desolate old chimney looked. I placed here and there a few sea-shells, and suspended from the front of the fireplace a small globe with gold-fish. This must never be hung under the flue, else the cold and soot will soon kill the bright, lively little fellows. On the branches of the largest stump I placed brightly-plumed stuffed birds, which furnished just the bit of color necessary to add a finish to the picture, like the red buoy in one of Turner's sea views. A vase or shell to hold cut flowers, on the other stump, answers the same purpose."

"I would like to convey a just impression of its beauty to the readers of the CABINET, but it is quite impossible; nothing short of seeing it will give them a fair idea. I have endeavored to convey, as fully as possible, my directions for making it, and I cannot help adding that I think it a most admirable way to utilize the old fireplace, and the more old-fashioned your fireplace is, the better for the purpose."

**The First Ivy Vine.**—A slip of Ivy was transplanted several years ago from Norwich, Conn., to Honolulu, in the Sandwich Islands. Last year it had reached a height of thirty feet, and won the admiration of the people, as it was the only vine ever known upon the island.

## Window Gardening.

## MY SUCCESS AND FAILURES IN HOUSE PLANTS.

As I have a better talent for reading than writing or composing, and feeling I could say nothing of interest, I contented myself by reading what others more experienced had to say, and therefore have not made an attempt until now. I feel as though I would like to say a few words in regard to my experience in the culture of flowers. I first became acquainted with the CABINET by a kind friend having it sent to me on a trial trip of three months. I was so delighted with its pages, and found it so useful and instructive, that I subscribed for it. I now feel as though I could not get along without it and cultivate flowers successfully.

I have a Chinese Primrose, grown from seed. I bought the seed for double white, but the one I grew proved to be only semi-double. However, it is very pretty. It requires a great deal of care to grow them from seed. I planted mine in a small pot; kept the earth damp and shaded until fully up; then gave it only the early morning sun; as it grew larger I gave it more sun. Having but little experience in house-plants, and not knowing the nature of the plant, I thought it needed sunshine to make it grow. It did grow, and bloomed the first winter, although it had a delicate and unhealthy appearance. Through the winter I kept it in my sitting-room, near a south window. Thinking it needed a different treatment, I tried shade and air last summer; and since I have brought my flowers indoors I have kept it in my parlor, where there has been no fire this fall. I feel doubly paid for all my trouble. It is growing in a ten-inch pot, measures twenty-two inches across, and has been in bloom two months. I kept the flower-buds pinched off from June until September, causing it to bloom more freely through the winter months. This I learned from the CABINET.

I have a white Begonia, grown last summer, measuring twenty-seven inches high and twenty-five across. It requires shade, too. It has such glossy green leaves that no one can help admiring it who sees it. I had a red Begonia I thought a great deal of. I had it on a stand near the window during that cold spell last winter, and it froze and I lost it. I would be glad to exchange a white for a red one. I also have other plants I would give in exchange if any of the readers of the CABINET wish to do so.

I am better prepared to guard against the cold this winter, for my good husband has made me a present of a Wardian Case. I now have it full of plants—Calla, Begonia, Cyclamen, Parlor Ivy, Catalonian Jessamine, Carnation, etc. I read about ladies having Geraniums to bloom through the winter. I have been unsuccessful in that line. I am trying Lady Callum's advice, in February number of FLORAL CABINET, hoping thereby to be successful in having blossoms. I would be pleased to know the name of the ever-blooming Geranium spoken of by her.

Hancock, Ind.

MRS. SOPHIE A. HORNER.

## HOUSE PLANTS.

I am a great lover of plants myself, and have got so that the care tendered to them by me is quite a pleasant pastime. Do not think that I am some celebrated florist, and write this article as an advertisement. Far from that. I am nothing more than a printer, and work daily for a living. But as many of my friends have said to me, "I wish I could have such nice flowers as you have, and have such good luck in raising them as you have," I have taken this means of telling all ladies, publicly, how they may have a little window garden. In the first place, a small table, two and a half by three and a half feet, made out of planed hemlock boards, is the cheapest; and, painted with any kind of paint to keep it from warping, will answer as well as any costly wire stand, as the sun may strike down on all plants that it may contain.

Those that are not able to buy flower-pots may use old tin fruit-cans. These may be picked up in the

deep and wide, so as to shield them from the cold winter weather, as they contain the life of the plant from fall to spring. House plants have no such large roots, and therefore do not need so much earth. I find that all of my plants do better in small cans than in pots. It is not in the different plants that causes this difference, as I have Rose-bushes, Hyacinths, Begonias, Geraniums, and other plants, one of each, set in pots and cans, and give them each the same treatment and care that each variety requires.

For a hanging basket, if you don't feel able to purchase a fancy one, take an old round tin pan, which can be found around most any house, punch through the sides at the top four holes, one opposite the other, through which put wire or picture-cord; suspend it from the ceiling in front of a window, to a small hook which may be screwed through a lath or in a beam, if you can't afford a bracket-hook. Fifteen cents' worth of green paint will do to paint this and a number of

cans such as I have before spoken of. I have used one of these for two years, with yellow myrtle hanging over the sides and two Begonias in the centre. All who have seen it say it is very handsome.

Many who are too poor to purchase plants may ask: "How can we get them, they cost so much?" If you have a friend that has plants, they would not refuse you a cutting, which is worth as much as a rooted plant, if treated well. The cuttings should be taken from new wood. Trim well—not forgetting to cut the lower leaf off, and the wood within a quarter of an inch under the leaf, as this is where it takes root—set in moist sand about an inch; keep well watered; keep them in a warm, light place, but no sun is required until they have taken root.

This is how I have a window-garden that has not cost me three dollars. I have nearly a hundred plants, most all of which I have raised from slips myself—some I have got for nothing, others in exchange. When I commenced housekeeping, nearly three years ago, I had about half a dozen plants, which have multiplied to the number above spoken of, mostly by cuttings. The spring months are the best time for propagating.

L. M. S.

GROUP OF HANGING-BASKETS.

streets most anywhere, and answer every purpose as well if not better than an earthen pot, as they do not draw the moisture all out of the earth. I have about fifty of these cans in use, and have had them during the past two winters, and find plants do a great deal better in them than in pots. Before setting plants in them, I break clam-shells in small pieces, and throw them in the bottom of the can, as they keep the dirt from clogging at the bottom, and also give the water free access to pass through the holes which I make (four or five in number) around the sides, about an eighth of an inch from the bottom. The largest General Grant Geranium I had last winter was about two feet high. This I had in a pint can. It bloomed freely all through the winter, throwing forth large clusters of beautiful flowers.

House plants do not need as large a quantity of dirt as hardy plants do, for this reason, a hardy plant requires plenty of earth so that it may spread its roots

**A Grass-Plat.**—We had, in previous years, a very pretty plat of grass, not large enough to be called a lawn. Last year we built a house, and the grass was covered with clay. It was dressed with good soil and seeded, but the grass has not grown very well. Please tell me, then: 1st. Would you advise seeding again this coming fall, and covering with manure and dead leaves during the winter? 2d. Will Rhododendrons grow on a lawn a good deal shaded by large trees? 3d. Will double Dentzia grow and bloom in the same situation? We are in northeastern Pennsylvania, latitude about forty-one degrees.

WYOMING.

**Answer.**—1st. Seed again next spring, and cover plentifully with manure. The clay earth is not as good as fresh field or garden soil to grow in.

2d. Just the place for Rhododendrons.

3d. Double Dentzias should have just a little more sun.

[Written specially for the LADIES' FLORAL CABINET.]

## Winnifred's Will.

BY AUGUSTA LARNED.

### CHAPTER II.

"Then dost thou come of gentle blood.  
Disgrace not thy good company;  
If lowly born, so bear thyself  
That gentle blood may come of thee."

"Father Dooley will ride over from Clovernook to-day," said Mrs. Braithwaite, in her low-spirited accents, insinuating the unpalatable announcement into the middle of one of old Nanna's long-winded sentences. She had painfully descended to the great comfortable kitchen, and was sitting in a lumpish, lifeless way in Nanna's splint-bottomed rocker. Her voice had the apologetic accent it always assumed when she entered into explanations with her old nurse. "He will give me absolution and spiritual council, of which I am sorely in need," she added. "What is there for dinner, Nanna?"

Nanna, with her ealico sleeves rolled up above her broad black arms, was engaged over the fire in the odorous process of trying out what she called "de drippin's." The judge particularly objected to having anything in the form of grease wasted; but now the fat was in the fire; the sunshine which usually irradiated the old woman's ebony features, was suddenly quenched. She objected to feeding the priest, as she would have objected to giving dainties to a boaconstrictor.

"Dar's jess noffin 'tall for dinner, Miss Susan. De butcher done gone comed along day before yesterday. He wont be here till to-morrow, no how. 'Pears dar's jess noffin at all, unless I make some kind of witch soup out ob Steenie's mind-turtle."

Steenie was standing at the sink quietly enough peeling potatoes, with his mouth puckered for a low whistle. Now he gave a long crescendo, a note of wonder and surprise. Nanna wheeled abruptly round and administered a sounding slap on the boy's ear. "Dar, take dat, and wime your manners, and stop tootin' when de missus comes down to de kitchen." It was necessary for Nanna's discomposure to find vent, and the slap was a kind of safety valve.

Steenie gave one bound to the door. "Peel your own taters, ole 'ooman, and rub dem knives, and han' rom' dem plates. I'm goin' fishin' and shan't be back till nex day after nebber."

"Nanna, you mismanage Steenie," said Mrs. Braithwaite, her melancholy guttural intensified in order to administer reproof; "you will drive that boy to ruin if you are not careful."

Nanna let the fat sputter over the fire, and placing her hands on her hips took her stand on a high moral pinnacle.

"Dat boy is my own flesh an' blood, an' bones an' vitals, Miss Susan. De Lord give him to me dat I might set him into de way he should go, an' if he gets a cuff too much now an' den, it don't count no how. Dat dar boy needs c'rection more'n he needs wittles, an' if I does wrong with him I knows whar to go an' 'fess—right down at the footstool of my Lord an' my Saviour. I nebber leans on no poor mortal man dat's in de gall ob bitterness an' de bonds ob obliquity hisself, as if he could take away my sin, an' make me eb'ry whit whole."

Nanna's excitement almost choked her, and Mrs. Braithwaite's heavy face turned a dull purple.

"You forget yourself, Nanna," said she with some dignity, "and that you are speaking to a Haleourt. You forget what your mother was in this house before your time."

"I minds it all, Miss Susan," returned the old woman, shaking her head profoundly. "De Halecourts ob dem days nebber brung priests ob Satan into dis house. I'se as 'speatful to Halecourts as I knows how to be, but I can't be 'speatful no how to de chillern ob sedition."

"I shall not talk with you about things you don't understand, Nanna. You must get a chicken of Finster, a small one will answer. And don't put the dish

near Mr. Edgar. He is a very absent-minded young man at the table."

Nanna was now clattering some plates in a pan of water, which saved the necessity of replying, and her mistress took her slow way back to her own room, with her accustomed air of having been browbeaten and put down. When she reached the wide upper hall, a slight girlish figure with golden hair, and in a light morning dress, came gliding toward her. She paused shyly as if anxious to speak, and yet half afraid.

"Good morning, Virginie," said Mrs. Braithwaite, seeing that she could not avoid the encounter, and then after a moment's interval, she added, "were not your parents French?"

"My father, dear madam, was French Swiss. My mother was an English governess, whom he met at one of the German baths, where she was serving in a gentleman's family."

"It seems strange that your father, being French, did not belong to the true church."

"My father belonged to protestant Switzerland, dear madam. He was passionately attached to the reformed faith. My mother being of the church of England, there was perfect sympathy between them."

"If you had been of my religion," said Mrs. Braithwaite, in a dull, querulous tone. "I might have found some comfort and consolation in your presence here in this house."

"But, dear madam, is not the spirit the same, whatever the form or the name may be?"

The fair, girlish face rose all over. She had shaken off her shyness, and taken an impulsive step forward, and now she held out her small, white hands, and seized the heavy, mottled hands of the woman who stood opposite.

"Oh, let me love you, madam," she said, pleading in a low, sweet voice; "let me help and comfort you if I can. I have no mother; I am all alone in the world. I would devote myself to your happiness if you would but let me."

Mrs. Braithwaite shook off the small, clinging hands. The surprise of Virginie's appeal gave unwonted energy to her movements. "You cannot help me," said she, with suppressed excitement in her countenance and voice; "we do not understand each other; we have nothing in common."

She turned abruptly and shut herself into her chamber, but her large frame was tingling all through and through with the consciousness of this girl's pity. It was more galling than the judge's sarcasms, or Winnie's indifference; but the glimpse it gave her into Virginie's nature only served to harden her heart against this young stranger.

The little, wizened old man was seated in his arm-chair, with his feet on a footstool, and wrapped in his shabby morning-gown, with an almost diabolical look of intelligence and acuteness in his crafty, gray face, that seemed whetted to the sharpness of a knife-blade. There were law volumes strewn on the table and chairs, and over the floor. He was dictating to his secretary.

Mr. Edgar sat with his back half turned, intent upon his writing. His slender hand moved rapidly over the paper, and a ray of sunlight came in at the window, and, through the general duskiness of the room, sought his head where the light, fine hair was thin about the temples. His forehead was ample, and stamped with culture and thought, and beneath it shone the ray of mild, blue eyes. It was the lower part of the face that was wanting in power. His smiles lost themselves in a network of fine wrinkles about the corners of the thin lips, and the small chin was indented with a sensitive dimple.

"Susan!" piped the old judge, as he heard the heavy foot of his wife entering her apartment. Mrs. Braithwaite appeared in the doorway between the two rooms, and he began in his blandest tones: "So, my dear, you are to have the priest here to-day. The presence of your spiritual guide is a consolation you cannot deny yourself. You will, I trust, unburden your conscience, and confess to him the money you have stolen from me, and the various fibs you have told me about family expenses."

The inert mass of Mrs. Braithwaite's frame quivered as if it had been galvanized, and her dull, pallid face turned a kind of livid green. Edgar colored involun-

tarily, and his hand half paused in its movement over the paper. The foxy old eyes of the judge, that saw everything without looking, noted this display of sensibility, on the part of the poor secretary, with positive pleasure.

"Go on with your work, Swayne," said he; "my wife and I must have our little conjugal pleasures. She is naturally of a sportive disposition."

Mrs. Braithwaite turned, with the air of a hound that has been too severely punished, to re-enter her room.

"Don't go yet," called out the dreadful old man, rubbing his bloodless hands, and chuckling softly; "I want to say to you that it will be quite needless for you to engage masses for the repose of my soul after I am dead. I shall outlive you, my dear. My family is one most tenacious of life. I shall have the sadness of burying you, so do not indulge in any premature grief at the thought of my taking off."

There was a breezy rush of footsteps up the stair, and a rich young voice in playful tones of tenderness was calling, "Virginie, Birdie, Mousie, where have you hidden yourself?"

Edgar, at that moment with his back half turned toward the old man, bent forward, and made an awkward blot on the page before him. The judge's cruel old eyes happened to be fixed upon him, and they lit up with almost sardonic joy.

"How unsteady your hand is, Edgar. I have noticed of late that you were growing painfully nervous. It may be an affection of the heart, and if it is, I am afraid you will find it quite hopeless."

The secretary shifted in his seat, but made no answer, while his hand pursued its course over the paper.

Winnie burst open Virginie's bedroom door, and found her friend sitting on a low chair with her hands clasped round her knee, looking mournfully out of the window, at the distant hills and shifting cloud shadows.

"Why do you sit moping here," she asked, "like an owl in an ivy bush?"

"Oh, my sister," said Virginie, with gathering tears, looking up at the strong, bright, vivid face that bent over her, "you must know I have an exile's heart, and thoughts of the old home and the dear parents who are asleep in the shadow of the great, solemn mountains, fill me with yearning and sadness. Madam does not trust me, and I sometimes feel *de trop* here. I fear the day may come when you too will regret I ever entered this house."

"It is very unkind of you to say so," returned Winnie, with tender petulance. "You are like a part of myself, Virginie. I think I never loved any woman until you came, for I had no sister, and my brother died when a lad. It was better so, for we should have quarrelled. Papa, who had fastened his hopes and his pride on him, grew harder after he died, and made avarice more and more his god, but I am sure if Herbert had lived he would have been a spendthrift, a wild, reckless, passionate youth. But I shall never be reckless, Virginie. When I am an heiress, and come into the property, I shall have good, prudent, practical ideas, and a head for business. I feel it all in me now; but I am daring and audacious because there is so much life and energy beating in my veins, and in this dull existence I have no way of working it off without convulsions. Oh, Virginie, I ought to have been a man, and then I could have married you, my dove with the shining head."

She had fallen on her knees to caress the young girl who looked up with a sad smile.

"But the great love will come," said she, "and then I shall be forgotten."

Winnie gave a little, scornful toss to her head. "Do you think I am so simple as to believe in the grand passion, Virginie? I might feel it for you were I a man, but for no other, and I am too much a woman of the world already to cherish romantic notions. I seek the means of doing as I please, and papa has taught me a few sage maxims. One is, that if we would possess power, we must subdue all weaker passions. I have always despised Anthony, because he gave up a kingdom to dally with Cleopatra. What a child you seem beside me, Virginie, and yet we are of the same age, just turned nineteen."

"You do not know," said Virginie, looking up with her great, blue, innocent eyes into the other's dark face, "what a capacity for loving there is in you."

Winnie laughed gaily. "I love you, little one, and I am constant. What I hold to once I hold to always. That is a Halcourt trait. But come out into the orchard; the sun is shining gloriously, and we will bring a rug to lie on under the trees."

It was a charming day, and the two girls ran lightly down stairs, and out into the orchard. The view from the old hall door was one of exquisite beauty. The house stood in the centre of a wide sweep of green hills, with forest roads winding up to the Halcourt mines, and scattered clearings and isolated farm-houses patching their sides. A clear, beautiful lake was nestled at the foot of the slope crowned by the gray old Hall, with a ragged, picturesque hamlet grouped at its lower end, from which rose the tall chimneys of furnaces and smelting works. It was also a pastoral country, with rich meadows and deeply shaded orchards. The world, that day, seemed full of grass and leaves, and birds, and white clouds.

The lawn and drives, and flower gardens and shrubberies of Halcourt Hall, had fallen into a sadly neglected and unkempt state, for the old judge had long since ceased to employ gardeners, and carried on the work of his farms with as few laborers as possible. He had emptied the greenhouses of the rare plants that filled it in the time of the famous Halcourt who had been minister to France, and had turned it into a tool shop; and the stables and out-buildings were rotting down and falling to pieces. But the fine, solid old granite dwelling was well suited to the landscape it seemed to dignify and rule over, and could be seen for many miles.

Virginia clasped her hands as she saw the cloud shadows sweeping over the green heights, like great flaunting banners. "O, how I love the hills," she exclaimed.

"But these are but pigmies compared with your Alps."

"They are far better than none," said Virginia. "I should die of homesickness on those vast western plains, where they say there is no hill so large as a grave."

The girls had reached the orchard, and spread their rug beneath a shady apple tree, where the sun spotted the ground, and bees were humming in the thick boughs. Virginia in her light dress looked like a white bird with a golden head, but Winnie always wore dark, positive colors, and to-day she had adorned herself with a crimson sash, and pinned on a breast-knot of the same.

"What have you brought, Virginia?"

"A volume of Beranger, and a little gown to sew for that poor miner's baby up in the hill. I cut it out of one of my old ones."

"Oh, you little sister of charity!" exclaimed Winnie. "I am afraid the miner's babies would all go naked if I had to make gowns for them." She stretched herself out upon the rug, her face turned toward the sky, her lithe limbs easily composed and her long arms twined above her head.

"I am going to watch you sew, and just be lazy," she continued. "There is immense capacity for idleness in me. I am like a race-horse that is capable of mighty efforts during moments, but must have long intervals of rest and high-feeding. I hate that kind of goody missionary work that you delight in, Winnie, and I believe I hate sewing, and all sorts of useful things; but when I have money, perhaps I can build better houses for the miners to live in, up on the mountains, and I will do something to help Mike Finster, the fisherman down at the lake. He is not a bad sort of a fellow, though he does take too much liquor now and then."

"It may be long before you can do all that," said Virginia, as she plied her needle meditatively.

"Of course I don't want any one to die," said Winnie, almost sharply; "I am not thinking of that. But when I come of age I shall have money of my own, the fortune that would have gone to my unclé, Bradley Halcourt's father, if my grandfather had not willed it to me. When one is young and full of life and spirits," she added, with her voice softening, "it is natural to dream dreams."

"Not love dreams."

"No, Mousie, but dreams of what one will do with one's life—how one will manage to set some of the crooked things of this world straight, and gratify one's secret wishes and desires."

Virginia's eyelids trembled, and a faint rose color dyed her pure cheek. After a moment's pause, she asked, in a loud voice, "Is it not settled that you are to marry your cousin, Bradley?"

"Oh, I suppose so; Bradley will do as well as another. He will let me go my own way, and we shall be mutually civil and obliging; but the property will be settled upon me."

Virginia gave her an almost startled glance from under her long, silky lashes.

"I see you are shocked, Mousie," said Winnie, laughing good naturedly, and showing her beautiful white teeth; "but there are family reasons why Bradley and I should marry. His father, my mother's half brother, was wronged in some way out of his share of the property. He must have quarrelled with grand-papa Halcourt, and I was preordained to set matters right. Mamma stipulated that if she had a daughter she should marry her half brother's son, and papa has never objected, though he does not think too highly of Bradley's tastes and habits. You see the Halcourts were the grand people of this part of the country. The old minister to France built the Hall not long after the Revolution, and he brought back the goblin tapestry that hangs in the musty old drawing-room, and the fine brocade furniture that is all dropping to pieces, and that picture of Murillo's Annunciation that is covered by the red velvet curtain. Bradley goes into ecstasies over the dark old thing, but I know nothing about art. Our ancestor lived in great state, and there were plenty of slaves on the land in those days. That was before slavery had been abolished in these middle States. Old Nanna's mother was a slave, and Nanna has staid on account of her loyalty to mamma, Miss Susan, the baby she toted when she was little. Papa has not paid her anything for years, but she lives in some way on the boardings of the past; and when the money is mine, I will pension her off, and Steenie's future shall be provided for. There were sunshiny days in the old minister's time, and I will bring them back, for the land is worth more than it was then, and I have heard that the mines would yield largely if properly developed. There are many farms that papa lets well, and he has money in bank, and stocks, and mortgages, and bonds, and railway shares, and a block of houses in the city."

"Did monsieur belong to a great family?" Winnie asked, demurely stitching away, the sun flicking her bright hair.

"Oh, papa," said Winnie, plaiting some bits of grass together, "belonged to no family in particular. He was what they call in America a self-made man. He obtained his own education, and, after many struggles, was acknowledged one of the first lawyers in the country. He was made a judge, and then he married mamma. It was fortunate for me, for if Halcourts had continued to intermarry with Halcourts, as they did formerly, I should have been a nunny, and I ought to be grateful to papa for giving me one parent whose intellect I can respect. How shocked you look, Mousie. You see I am obliged to tell you everything. I become as clear as glass when we are together."

"I never thought of my parents in that way," said Virginia, with a scarcely perceptible shrinking away from the arm that Winnie held up to encircle her waist.

"Of course you never did, Mousie. You were not brought up as I have been. But why should I be hypocritical? Papa has taught me nearly everything I know. He freed me from superstition, and gave me the fruit of the tree of the knowledge of good and evil to eat. When I was a little thing, I could not help seeing that he had a contempt for my mother's weakness and spirit of intrigue. I know you think I am a strange creature, irreverent, and almost wanting in natural affections; but I do love the truth. Papa always ridiculed mamma's religion, for the Halcourts were not papists before her time. He would even dress up and say a mock mass, to make me laugh."

"But is it not better than no religion?" Virginia asked, with an intensity of emotion Winnie had never before heard in that gentle voice. "If madam goes wrong, is she not seeking the right path in her feebleness and ignorance, and is she not longing for divine aid and comfort, for the support of a heavenly father and friend? Can you not pity madam?"

Winnie was for a moment cowed, and her eyes shrank away from Virginia's candid glance, now quite fearless and searching. Her self-confidence took flight

for a moment, and then with a little petulant half sigh, she said: "We ought not to pity our parents, Virginia, we ought to love them. But tell me about yours. I am sure your childhood must have been like a poem."

"Oh, there is so little to tell," said the other, letting her work drop into her lap and clasping her hands together. It is like one of those happy, common-place stories, with nothing to relate until death comes—it is all so simple, so humble, so obscure. My father, Ernst Duval, was a poor music master in Geneva. He played the organ in one of the parish churches there, and in his spare hours he taught classes, and wrote beautiful chaunts and interludes which he sold to the music dealers for a mere pittance. One summer, when his chest had failed, the physician sent him to some small German baths. It was there he met my mother, who was an English governess, an orphan bound to the service of rich and vulgar people, who made her life miserable. It was pity, and then love that woke in my poor father's heart. Before that time, music had been his only mistress. But when they married, love was never wanting in our humble little home, though bread sometimes was scanty. My mother shared my father's enthusiasm for music; she was always his pupil and dear sympathizer. I do not now remember when I first learned to speak English, for it was always heard in our home. Four little mouths came to be fed, and at times there was much hardship and poverty, but affection made it light, and more than all, trust in the dear God who helps through every trial. My three brothers died one by one, and I was left to receive all the tenderness and care of those loving hearts. In the summer we went to the high mountains and lived in the chalet of a herdsman, on black bread and goats' milk. In the still blue weather, we could hear avalanches sliding down the sharp slopes many miles away, and then we sat in the high green pastures among the cows and young calves, and the chamois hunters were far over our heads, where the sky seemed to dazzle black against purple and white peaks. Then my father would take out his flute, and play the simple Swiss melodies he loved, while my mother sewed garments for the poor people, or taught me to draw."

Virginia paused a moment with her head drooping, and unconsciously heaved a long, deep sigh.

"And about that English uncle of yours, Virginia, the one you lost," said Winnie.

"Oh, yes; he was my mother's only brother, and he had been wild in his youth, and had gone away to America, and for many years was quite lost sight of. And then the very year before that dreadful last summer, there came a letter to my mother from a very remote part, somewhere in the far West. It had been forwarded to her from her old home in England, and was from my uncle Walter Freeborn; and my poor dear mother rejoiced over him as if he had been raised from the dead. He told her that for years he had led a roaming life, but at last he had settled in one of the wild territories; that he owned rich mining lands, and hoped to secure a fortune. He did not even know that his parents were dead, or that she had married away from England. But his own wife and child had died, and he longed to hear from the old home he had abandoned."

"That was not the last you heard?" put in Winnie.

"Oh, no, *ma chère*; my mother wrote, and several letters came. That was the year we went to an unhealthy valley, where the fever broke out among the herdsman's huts in August, and my father nursed the peasants, and fell ill and died in the little house where we were staying. Oh, that dreadful time!" Virginia put up her hands, and clasped her head. "I cannot think of it; my brain reels, and all memories run into a confused blur. Then my mother took the fever, and was buried three weeks later. I do not know what happened; I lost count of the days. Our kind old pastor from Geneva came up to me, and performed the last sad rites over my mother's form. I was strangely dull, and could not feel or weep at all; and when he took me home with him, and showed me the little house where we had lived, I came to life with a long shuddering cry, and then I too fell ill, and was close to death for many days. They were not kind, they would not let me die; and after a time I began to gain strength, and to remember and weep."

[To be continued.]

skin soft and smooth, contribute to health, and prevent dis-  
eases. Does away with all powders, chalk or other emollients.  
A safe preventive of *chafing, itching, &c.*, in babies, the cause  
of half the crying and crossness of babyhood. Worth ten times  
its cost to every mother and family in Christendom: packed in  
one of 12 cakes, of 6 ozs. each, and sent free to any address on re-  
ceipt of \$2.50. Address **B. T. Babbutt, NEW YORK**  
 For Sale by all Druggists. 

NEW YORK, NOVEMBER, 1876.

## HOW TO UTILIZE AN OLD PITCHER.

As the time approached that we devote to the celebration of the birth of the Christ-child, we desired to brighten up the house-furnishings. We had brought our orange and lemon trees in, and set one on each side of the hearth. We prize these, as we have raised them from the seed, and they have now attained the height of five feet or more, with fine bushy tops. In the fall, when we removed them from the spot they had occupied all the summer, we found the long tap-root had penetrated the bottom of the keg, and entered the earth to the depth of six or eight inches. They had often drooped during the previous summer, and had needed to be watered frequently, and this summer they had flourished uncommonly. We found they had escaped from their prison-bounds and gone foraging for themselves, verifying the old adage: "Help yourselves and your friends will help you." The kegs were formerly paint-kegs, made of oaken staves and bound with iron, like Woodworth's "Old oaken, moss-covered, iron-bound bucket that hung in the well." Just here we will say a good way to get rid of any extraneous paint within the keg is to put a few live coals in and roll it about; when it is well on fire, and you fear the keg will burn up, turn it bottom up. It works well. We have tried it.

The door-sills and window-sashes were repainted; vases and hanging-baskets looked beautifully with fresh autumn decorations. We hung up a bracket made in this wise. Cutting the back out of an old pasteboard box, we took the cover, and where the rim was still firm we cut the shelf part and the support thereof. Cut notches in the rim part of the supporting piece an inch apart, turning every alternate piece backwards after the manner of the paper-doll furniture. By sewing it on the back of the bracket it was firmly united; then sewed the shelf on; this needed no notching, the rim being left entire on the underside. Then we sewed on the edges of the underside of the shelf, in a fringe-like position, a row of those hard, gray, shell-like fungi which grow on old logs, fence-rails, etc.

Another row turned backwards on each side of the support. Covered all the rest with beautiful green carpet-moss, which was pressed dry to preserve the color, and then raised a little by sprinkling with water and then confining under a glass. On the shelf we placed a group of chestnut-burrs, acorns, horse-chestnuts, and one scarlet ball, the fruit of the Solanum, and sprinkled the whole with the berries of the strawberry-tree (*euonymus latifolia*), a native of the woods in this latitude. Rising from behind the back, maiden-hair ferns, etc., which looked very pretty against the wall.

Then we looked about us and saw a dull corner in this our sitting-room, where, placed corner-ways, the old time-keeper swings unceasingly its ticking pendulum. If anything should happen to it, we should miss its soft, silvery tones at the time of striking the hours, albeit we have never sufficiently venerated this ancient piece of furniture. It is an heirloom, manufactured one hundred and fifty years ago. It stands over six feet in height, in a fine, old, dark mahogany case, with silvered countenance; but has withal a dull appearance, as old things will have. In the sides near the top, which is a gothic archway, are oblongs of glass; these we had reglazed, and in one placed a spatter-work cross set in shaded fern-leaves; in the other a panel of black with white Hyacinth and Blue-bells. This we made with flowers, cut out and pasted on a black ground.

Here is a pitcher, of graceful, vase-like form; not as ancient as the clock, but old enough to contain pleasant memories. A severe frost opened a crack on one side, so that it would hold no water, but it was still firm and handsome-looking. We made a quart-pail of common starch, and into it stirred, previously wet with cold water, a table-spoonful of redding, such as we use on the brick garden-walks, adding to this half a teaspoonful of unadulterated rose aniline. This was applied to the pitcher, the neck of which had a cravat of newspaper, and on the side a large oval patch of the same—this was neatly pasted with the starch before coloring. Before quite dry the newspaper patches were removed, and a band of gilt paper substituted round the neck and edge of white oval. In the centre of the medallion was placed a delicately tinted picture (Tea Company's Indian Queen), cut out from the card. Filled it to exuberance with grasses, leaves, ferns, etc., placed it on top of the old, old clock, and are no longer ashamed of the corner.

AUNT MARIAN.

P. S.—When you open oyster-cans, lay them flat down and cut out the entire upper side. Put away till you need boxes to plant seeds in. AUNT M.

## ILLUSTRATIONS.

The first page is illustrated with a pretty view of Constantinople and the Bosphorus. The scene is unusually lovely, the minarets and Turkish residences contrasting strongly with the glossy, green foliage. The foreground is a portion of a Moorish garden.

On page 164 are several pretty designs of Hanging Baskets; one is made of rustic work, another is a tin can made over, the third sawed out of a fret saw pattern.

On page 169, the little folks are helping mother to stir the Thanksgiving Pudding. The little ones are full of glee, but the mother is thinking of old and dear ones who used to be at the thanksgiving dinner, but will never be with them again.

On page 173, a sweet face is aglow with bright thoughts of "over yonder," and cheerful visions lead her soul to think of its home beyond the skies.

## PUBLISHER'S ANNOUNCEMENTS.

**Prizes for Household and Floral Articles.**—The following prizes will be given for articles on Flowers, Window Gardening, Housekeeping, Elegancies, and kindred subjects relating to the comforts, pleasures and advancement of Home Life and Household Taste:

- For best article on Floral Subjects.....\$10 00
- For second best article on Floral Subjects..... 5 00
- For best article on Household Subjects..... 10 00
- For second best article on Household Subjects..... 5 00
- For each of next 10 best articles on Flowers: Book, "Window Gardening"
- For each of next 10 best articles on Household Subjects: Books, "Household Elegancies," or "Ladies' Fancy Work."
- For each of next 20 best articles (10 of each class of subject): FLORAL CABINET free one year.
- For each of next 20 best articles (10 of each class of subject): one SILK Book Mark.

Contributors will notice the following rules: 1. Label all articles, "For Competition." 2. Each article to fill space equal to three to five foolscap pages long. 3. Articles all to be forwarded to this office before December 10th. 4. Award of prizes will be announced in January number, and prizes forwarded to the fortunate competitors by Christmas. 5. Articles contributed, not specially marked for return, may be understood as having the desire of writer to be used in FLORAL CABINET, as a voluntary contribution whenever convenient.

The object in offering these prizes is not so much to induce the writing of articles for sake of pecuniary remuneration, as it is to encourage our readers and writers to contribute really useful information, which will be a help and benefit to others. All are sharers in the benefit; even those who contribute articles are immensely benefited by reading the articles of others, whose worth is far more than the value of any prize. The highest ideal of usefulness to which any of us can attain, is to try to do some good to others; and many of our readers who are confined at home can benefit the world by writing something which will help to cheer, brighten, and beautify another home.

**Prizes for Choicest Recipes on Cooking and Housekeeping Topics.**—Desiring of encouraging Housekeeping Topics, in connection with the FLORAL CABINET, we offer the following prizes for best collection of recipes, proved by actual experience of our readers. We want all first-class housekeepers to compete for these prizes, and contribute from the stores of their knowledge. Send no recipe which is of ordinary value, only those which are the very best, superior if possible to anything yet published in any cook book. We do not limit the contributor to any class of recipes; their lists may consist of all things eatable.

- First prize, 25 best Recipes.....\$15 00
- Second prize, 25 best Recipes..... 10 00
- Third prize, 25 best Recipes..... 5 00
- Fourth prize, to each of 25 next best collections: Any \$1.50 book in our list.
- Fifth prize, to each of next 25 best collections: Choice of any SILK Book Mark in our list.

**Notice.**—1. Each list should contain 1st 25 Recipes, not more than two Recipes for each class (such as cake, pie, &c.), and lists to be written on one side each of sheet. 2. Mark the 5 best Recipes with double cross, XX. 3. Mark the next 5 best Recipes with single cross, X. 4. All lists to be sent to this office by December 10th. Prizes to be awarded January 1st, and names of successful competitors published in January number CABINET. The Prize Collections of Household Recipes will be published each month in the FLORAL CABINET for 1877, and the series will alone be worth to each housekeeper five times the price of the FLORAL CABINET.

**A Club** of only 15 subscribers entitles club agent to extra copy of FLORAL CABINET free, one year, the engraving, "Glee Maiden," and also choice of one book, "Household Elegancies," "Window Gardening," or "Ladies' Fancy Work." Here are three splendid rewards for a small club, which almost any one can raise.

**20 Cents Commission.**—Club agents may get up clubs of any size from three upwards, and for every subscriber they get, 20 cents is allowed in trade commission toward any article in our Premium List, or their extra copy of the CABINET.

**Prices Reduced.**—Last year a club often was necessary to get free copy of CABINET, one year—this year, only seven names are necessary.

**Get up a Club of Trial Trip Subscribers.**—For club of ten trial trip subscribers, at 35c. each, we will give to club agent a choice of one of the following: A Paper Cutter and Folder; a box Initial Note Paper; a Book, "Every Woman her own Flower Gardener;" 1 Bulb Gladolus, worth \$1; 1 box Decaleomanie; 1 SILK Book Mark, worth 75c.; 1 Indelible Pencil. To each subscriber will be given the CABINET three months, and a copy of chromo, "My Window Garden."

**Only 15 Cents.**—See how cheap for three months. We think hundreds and thousands of our readers have friends everywhere who would be glad to see the CABINET and take it on trial. Please recommend it everywhere. We send only three months (our choice of numbers) for that price, so as to introduce it everywhere. We do not send it any longer at that price, nor permit a trial subscription to be renewed again except for a full year.

## COMPLIMENTS.

We rarely publish any compliments since we prefer the CABINET to speak for itself with its bright, sweet face; but we have many thousand new readers who will be pleased to hear what our old friends say of us—and what we quote is only a very small portion out of thousands of testimonials which flow upon us every day.

"I can hardly wait for the month to pass by to get it, and I drop everything to read it. I agree with 'Lina,' it is too good to cut a line out."

"I find we cannot do without its bright, pleasant pages; it is certainly a 'bit of sunshine,' and I recommend it to all who love the beautiful among my friends." Mrs. C. BRISTOL, Milford, O.

"I assure you it affords me many hours of sincere pleasure. Its perusal is a perfect feast. I know of no paper that contains so much information and so many valuable suggestions in regard to beautifying and decorating ones home, and all in so entertaining and attractive a style."

"I feel as though I must say something in regard to the CABINET. I have just learned how to express myself about it; it is what the girl wrote home about the Centennial. Oh! oh!! oh!!! that is just how I feel when I get a fresh CABINET in my hands. Oh, Mr. Editor, you are a prince among flower lovers; the CABINET is just what we want; it improves every number. I want all my friends to take it. I hope to see the CABINET enlarged; am willing to give double the price now paid. A long, happy life to you, Mr. Editor, you make others so happy." Miss L. T. SHORT.

MISS CARY IN MOSCOW.

Miss Annie Louise Cary, the celebrated prima-donna, writes to a friend in Chicago an amusing account of her first night in Moscow. Here are some extracts:

"The terrible night came, and I put on the war-paint with fear and trembling, and my eyes were double their size with excitement. I sang my complets, which open the second act of 'Trovatore'—and such applause! It was like the Cincinnatians at the Festival (bless them). I had been told to make my first bow at a certain box, containing the princes and princesses, but for the life of me I couldn't tell which it was, so I stood still, as frightened as a goose, and then, in my misery, I first bowed to the 'plebs.' Horrors! When I came to my senses I made a bow to the wrong box. After the delirious scene I was applauded and shrieked at until I almost thought the Modocs were on my track, and then I bowed to the wrong box again.

"After the close of the second act we were called out four times. By that time I knew where to bow, and I smiled my sweetest to 'the Royalties.' After the third act I was recalled three times, and after the entire opera we went out six times. The

second time we sang the public was even more enthusiastic, and I had to go out alone in answer to the cry of 'Cary, solo.' They called for me alone the first night, but I do not like to offend my brother and sis-

thought nothing special could come from Yankeedom. When I say I am an American, they think I am from South America, which I hasten to explain by telling them I am the Yaukiest of the Yankees, and that I

was born among the rocks of dear old Maine."

**A Beautiful Sentiment.**—Sorrow sobers us and makes the mind genial. And in sorrow we love and trust our friends more tenderly, and the dead become dearer to us. And just as the stars shine out in the night, so there are blessed faces that look at us in our grief, though their features were fading from our recollection.

**A Western lawyer,** who was defending a man on trial for wife murder, sought for some euphonious and innocent phrase with which to describe his client's crime, and finally said: "He winnowed her into paradise with a fence rail."

**This is what Mr. Bryant** said to the lady at the Homoeopathic Fair, for whose little paper, *The Echo*, he promised to write a poem, and did it:

"I gave my word, dear madam, it is true.  
At your request, to write a verse or two:  
I gave it you as frankly as 'twas sought,  
And now you chide because I keep it not.  
Talk not of honor—I am honor's slave;  
None but a rogue would keep the thing he gave."

SPINNING THE PLUM PUDDING.

ter artists, so I went out with the others at the end of the opera. I went out alone six times, and such shouting and waving of handkerchiefs! My success has been the event of the season thus far. You see they

## Fireside Reading.

## PLAYING AT CROQUET.

We had an introduction,  
I scarce remember how;  
She swept a graceful curtsey,  
I made my lowest bow;  
'Twas on the lawn it happened;  
We stood, a party gay,  
With mallets duly waiting,  
All ready for "Croquet."

A shower of silken ringlets,  
Like golden sunbeams fell  
Around her form of beauty,  
And wove a magic spell,  
Her eyes were of the azure  
That marks a summer day;  
My heart she quickly captured,  
While playing at "Croquet."

At pic-nics, hops and parties,  
As oft it chanced we met,  
I still got more entangled  
In love's bewildering net;  
For hearts, like balls, are sometimes  
Hit, when they're not "in play;"  
And many a hope has vanished,  
When beaten at "Croquet."

At last I dared to ask her  
If she would change her name,  
The witch, she flashed for answer,  
"If you can win the game!"  
And when my pet was vanquished,  
I kissed a tear away;  
And that was how I won her,  
While playing at "Croquet."  
G. W. W.

## A HAPPY MARRIAGE.

After having been married some weeks, it came into the head of a young husband in this city, one Sunday, when he had but little to occupy his mind, to suggest to his wife that they should plainly and honestly state the faults that each had discovered in the other since they had been man and wife. After some hesitation the wife agreed to the proposition, but stipulated that rehearsal should be made in all sincerity and with an honest view to the bettering of each other, as otherwise it would be of no use to speak of the faults to which marriage had opened their eyes. The husband was of the same mind, and his wife asked him to begin with her faults. He was somewhat reluctant, but his wife insisted that he was the first to propose the matter, and as he was at the head of the house it was his place to take the lead. Thus urged, he began the recital. He said:

"My dear, one of the first faults I observed in you after we began keeping house was that you a good deal neglected the tinware. You didn't keep it scoured as bright as it should be. My mother always took great pride in her tinware and kept it as bright as a dollar."

"I am glad that you have mentioned it, dear," said the wife, blushing a little; "hereafter you shall see no speck on cup or pan. Pray proceed."

"I have often observed," said the husband, "that you often use your dish-rags a long time without washing them, and then finally throw them away. Now, when at home I remember that my mother always used to wash out her dish-rags when she was done using them, and then hang them up where they would dry, ready for the next time she would need them."

Blushing as before, the young wife promised to amend this fault.

The husband continued with a most formidable list of similar faults, many more than we have space to enumerate, when he declared that he could think of nothing more that was worth mentioning.

"Now," said he, "my dear, you begin and tell me all the faults you have observed in me since we have been married."

The young housewife sat in silence; her face flushed to the temples, and a great lump came in her throat, which she seemed to be striving hard to swallow.

"Proceed, my dear; tell me all the faults you have observed in me, sparing none!"

Arising suddenly from her seat, the little wife burst into tears, and throwing both arms about her husband's neck, cried:

"My dear husband, you have not a fault in the world. If you have even one, my eyes have been so blinded by my love for you that as long as we have been married I have never once observed it. In my eyes you are perfect, and all that you do seems to me to be done in the best manner and just what should be done."

"But, my dear," said the husband, his face reddening and his voice growing husky with emotion, "just think; I have gone and found all manner of fault with you. Now do tell me some of my faults; I know I have many—ten times as many as you ever had or ever will have. Let me hear them."

"Indeed, husband, it is as I tell you; you have not a single fault that I can see. Whatever you do seems right in my eyes; and now that I know what a good-for-nothing little wretch I am, I shall at once begin the work of reform and try to make myself more worthy of you."

"Nonsense, my dear; you know sometimes I go away and leave you without any wood cut; I stay up-town when I ought to be at home; I spend my money for drinks and cigars when I ought to bring it home to you; I—"

"No, you don't," cried his wife; "you do nothing of the kind. I like to see you enjoy yourself. I should be unhappy were you to do otherwise than just exactly as you do."

"God bless you, little wife!" cried the now thoroughly subjugated husband; "from this moment you have not a fault in the world; indeed you never had a fault. I was but joking—don't remember a word I said!" and he kissed away the tears that still trembled in the little woman's eyes.

Never again did the husband scrutinize the tinware nor examine the dish-rag—never so much as mentioned one of the faults he had enumerated; but soon after the neighboring women were wont to say:

"It is wonderful how neat Mrs.—— keeps everything about her house. Her tinware is always as bright as a new dollar; and I do believe she not only washes but even irons her dish-rags!" And the neighboring men were heard to say, "What a steady fellow M—— has got to be of late; he don't spend a dime where he used to spend dollars, and can never be kept from home half an hour when he is not at work. He seems almost to worship that wife of his."

## A WOMAN'S FRIENDSHIP.

It is a wondrous advantage to a man, in every pursuit or vocation, to secure an adviser in a sensible woman. In woman there is at once a subtle delicacy of tact, and a plain soundness of judgment, which are rarely combined to an equal degree in man. A woman, if she be really your friend, will have a sensitive regard for your character, honor, repute. She will seldom counsel you to do a shabby thing, for a woman friend always desires to be proud of you. At the same time, her constitutional timidity makes her more cautious than your male friend. She, therefore, seldom counsels you to do an imprudent thing.

A man's best female friend is a wife of good sense and heart, whom he loves, and who loves him. But supposing the man to be without such a helpmate, female friendship he must still have, or his intellect will be without a garden, and there will be many an unheeded gap, even in its strongest fence. Better and

safest, of course, are such friendships where disparity of years or circumstances puts the ideal of love out of the question. Middle life has rarely this advantage; youth and old age have. We may have female friendships with those much older, and those much younger than ourselves. Female friendship is to a man the bulwark, sweetness, ornament of his existence.

## SOCIAL AMUSEMENTS.

"The melancholy days have come, the saddest of the year," and with them the long evenings, which the poet has not included in the general sadness, but which in many households would exceed in melancholy even the "sad November days," were it not for the pleasant amusements which can be devised to make the hours pass on as merry wings as did the "moonlit nights of June."

A very amusing game is answering questions in poetry, and putting in certain words that are given, and doing it all in a stated time—say five or ten minutes. Each player is provided with a pencil and paper, and may write any question they choose. Fold the top of the paper over the question so it cannot be seen, and place all the papers together; mix them so none will draw their own paper, and each draw one and write a word—any word; fold and mix and each draw again, and are ready to answer the question and put in the word in poetry. For example: Miss H., Mrs. S., Mr. M. and Mr. S. are playing. On drawing the papers, Mr. M. finds his question to be "How do you like snakes cooked?" and the word under it, "Grasshopper." Five or ten minutes are given to answer in, and at the close of the time he produces the following:

Skin them first, both neat and clean,  
Being sure by no one you are seen;  
Then fry them slowly over the fire,  
With wood as dry, if not any drier  
Than that they use for a bottle stopper,  
And season well with a young grasshopper,  
If then it does not suit your taste,  
Just "dump" in any other "baste;"  
And you will like it, I am sure,  
Unless you're a senseless epicure.

Miss H. reads the following, in answer to the question "Whom do you love best?" and the word "Hero."

The one I love is not a hero,  
If war's bright laurels make him so;  
The wreath that crowns his brow as victor,  
Does not on any bay tree grow.  
No thousand tongues proclaim the story  
Of wondrous fight by flood or field;  
No herald's voice shouts forth the glory  
That wondering nations to him yield.  
The one I love is not a hero,  
If learning's laurels make him one;  
The Alma Mater's halls that held him  
Lift not their towers to the sun.  
No stately halls have e'er resounded,  
As through their domes his voice has rung;  
No crowds in breathless silence waited  
For music from his silvery tongue.  
The one I love best is a hero,  
If victory o'er himself makes one;  
If fighting against wrong's heroic,  
His heroism has then begun.  
For he who his own spirit ruleth,  
And keeps his feet from going wrong,  
Is greater than the brave commander  
Who takes the guarded city strong.

Mr. S. finds his question to be, "What is an old bachelor?" The word is "Undoubtedly." He writes as follows:

A bachelor is a funny man,  
And the reason why he's funny,  
Is undoubtedly because he can  
Call no nice girl his "honey."

Mrs. S. has the question, "Is thy life solitary?" The word is "Pancakes." She answers in this way:

My life, six months ago, was cold and lone,  
My heart was sad with thoughts of coming sorrow,  
Till lo! I came across a rolling stone,  
And brighter dawned my prospect's of to-morrow.  
The stone is mine, my life no more is lone;  
The past with joy I can review,  
And think with gladness of the approaching day,  
When I my pancakes light shall fry for two.

The game is an excellent one to sharpen the wits and try the poetical powers of the players, and will be found highly entertaining and even exciting if only five minutes are given in which to answer the questions.

Rochester, Minn.

MRS. N. STONE.

## Household Art.

### COUNTRY HOME ADORNMENTS.

Our cottage is nestled down in one corner of a Michigan apple orchard, and in summer we have so many pleasant sights and sounds that it would require the masterly pen of W. C. Bryant or H. W. Beecher to portray them, and reveal the secrets that the trees inspire to those only who love them best. But it was not of apples or apple trees that I would write to you, my sisters, but of a few simple country home adornments, as we all feel anxious to make our homes so pleasant within that we shall not feel the dreary winter storms without.

For several years I have been experimenting with quick-growing vines for the house. Madeira and German Ivy we always have, and find satisfactory; and Maurandia is still more graceful and airy. This year we have tried Lophospermum, and it is lovely; we planted the seed in a box in May, and it stood on the veranda until October, when we brought it indoors. The main vines, four in number, had grown six feet, and we set it under a bright chromo, and two of them we twined up the cords and the others around the frame; then, and now, the leaves were a rich, dark green, serrated, and more halberd than heart shaped, and with the abundance of laterals, which it has lately sent out, of a soft, velvety green, it makes it one of the most desirable climbers. This vine is one of the leaf climbers.

A friend of mine had a Cobœa vine, and although it was very thrifty, you would scarcely have known it, or dreamed that it could put on such airs of refinement; it stood on a bracket at the side of a sunny window and climbed up the lace curtains by its own sweet will and in its own sweet way—and over the top of the window; there it hung in great billows, the most graceful and airy, and here and there a long festoon. I never saw any lambrequin that could compare with this. I know of no other vine that climbs as this one—with the delicate tendrils at the end of its pinnate leaves; this vine was one that did not blossom in the border—was taken up, potted in good rich soil, accepted the situation, and was the admiration of all beholders.

I wanted a shelf in my sitting-room for my small pots of Cacti, and upon consultation with Isaac it was for a time given up, because to put up brackets would mar the wall—but the shelf we must have. I had provided a walnut board, three and a-half feet long and seven inches wide, rounded at the ends in front. I took a brad-awl—and to ladies who do their own constructing, I would say a brad-awl is much better than a gimlet—and made two holes in each end of my board; then, with two picture screws and two pieces of picture cord, we made a shelf very much to our liking. To relieve the stiff look of the short cords, we put a pot of German Ivy on each end of the shelf; then cut a long grape-vine, leaving on the tendrils and two or three inches of laterals, and with this formed an arch for the vines to climb over; under the centre of the arch hangs a small picture of "Faith," and Isaac thinks it couldn't hang in a more appropriate place. Behind the frame we suspended a bottle of water, and into it put some branches and twigs of Black Alder, covered as they are with their bright red berries, and they have not as yet withered; as a finishing touch we added a bright golden butterfly, and at present writing the whole is a very pleasing addition to our sitting-room.

### FROST BOUQUET.

On a little black walnut bracket, in a little bogwood vase, is one of our prettiest ornaments. Take very delicate grass—the skeleton seed pods of wild pepper-grass answer nicely—dip into water, then into flour; you want only a very few stems for your vase, and one little one to trail over the front. The beauty of this will depend entirely upon the delicacy with which it is made.

To keep Isaac out of mischief I have persuaded him to try some ornamental work, and he has succeeded well, considering all things. He had pressed and oiled (with boiled oil) some varieties of ferns, also twigs of soft maple seedlings, and with these he has made two very handsome pictures. The leaves are arranged in a group on tinted bristol-board, and with drab mat and rustic frame, it looks like a chromo. The ferns were arranged and framed in same way. To begin, Isaac made several small ornaments to learn on.

### A COURT-PLASTER CASE

was made by taking three tinted cards, which were cut from the bristol-board, a little larger than a common visiting card. No. 1 was ornamented with a bunch of bright leaves, put on with mucilage; No. 2 had three narrow bars cut into it lengthwise, about one-fourth of an inch from each edge, to receive the plaster. On No. 3 was written,

"May you never have a wound  
Which this cannot heal;"

and the whole tied together at the corners with bright ribbon. Another was a

### WALL-POCKET.

Cut front and back from the bristol-board; put a very tiny leaf in each point and arrange a group of leaves and delicate ferns on the front; and with ribbon bows, and long loops to suspend by, makes it very handsome. This pattern I have seen used for spatter-work.

Then, Isaac has been making some little

### THIMBLE CASES,

for his friends. Takes English walnuts, and with a knife opens them carefully, and removes the inside, varnishes the shells; then, with a tiny brad-awl, makes two little holes in each shell; ties them together at bottom with a bright ribbon bow, and slips another piece of ribbon through the holes at the top, and leaves that long enough to tie in a bow, and leave a loop to hang up.

### STRAW WALL-BASKET.

I must not forget to tell you of a new kind of straw wall-basket I saw lately at a friend's, and it was filled with pressed ferns, grasses, and autumn leaves. The leaves were mostly Sumac, and for this purpose are indispensable; the delicate grass which the children call "tickle grass," and which can be found almost anywhere, was used very plentifully. The basket was composed of twenty-four straws. The back has nine straws; the middle one is twelve inches long, and each one grows an inch shorter until the last ones are eight inches; so you see when the back runs up to a point at the top, the basket is even on the bottom, and the straws in front and sides are eight inches in length. Cut your straws, then lay them down on a table, and with a ruler and pencil mark where you will put your wire; put one wire about the middle and one an inch and a half from both top and bottom. Buy a bunch of cap wire, cut away the tape, scorch off the threads, and then string your straws, leaving about one-half inch space between, and fasten the ends of the wire together; then take zephyr or taste and wind to cover the wire; then you have a bottomless basket. But by inserting the stems of fern, etc., in the tops of the straws, it gives it a light, graceful look, and met my

ideal more than any other arrangement of that kind I ever saw. I wish I had time to tell you of the school mottoes we have been making of ferns and leaves—and this is one other way to employ the Isaacs.

### LACE TRANSPARENCIES, ETC.

Reading some time since, in the CABINET, directions for making lace transparencies of ferns, I made some accordingly, and thought they were very pretty. But have since made, I think, quite an improvement.

I cut two pieces of the lace (coarse cape net) as large as the window-glass; then, out of perforated cardboard, I cut a nicely shaped cross, the top of cross to come about two inches from the top of the lace, the base to be even with the bottom of the lace, and in the centre, from side to side. Twine delicate sprays of pressed leaves and ferns around the base and top of cross; pressed pansies look nicely mixed with the leaves. Then drop some mucilage carefully on the leaves and cross, to keep them in place. Now place the other piece of lace over, and put pins in to hold it together until the mucilage dries. Cut narrow strips of gold paper, and press it firmly around as a binding, and you will have a beautiful transparency.

I also made another by cutting an anchor out of perforated cardboard, and placing it the same as the cross, with the leaves, ferns, and flowers; it makes an elegant transparency.

A beautiful hanging basket can be made of lace, for dried grasses, pressed ferns, autumn leaves, etc. Cut two pieces of lace octagon shape, for the bottom of the basket; then cut pieces for the sides, two of each, three or four inches high; place between them bright leaves, ferns, etc.; sew the sides together, and to the bottom; cut narrow strips of gold and silver paper to cover the seams. A piece of wire sewn around the top and bottom will keep it in shape. It makes a delicate basket, and will look much prettier for grasses, ferns, etc., than one of heavier material.

I am making splash mats that are quite pretty and not expensive, and give a room a very cheerful and pleasant appearance. They are to put up back of washstands, to protect the wall. Take a yard of white oil-cloth; cut out for three mats, rounding off the two upper corners, and pink the edge all round; then in the centre paint, in oil-colors, a group of ferns, ivy and autumn leaves, with some bright berries. The upper corners should have a maiden-hair fern, while on the lower corners a bright maple leaf may be represented. When dry, it may be varnished, and then it can be washed, when necessary, without sustaining the least injury. I have a mat now in hand, with a landscape in the centre, and a wreath of ivy surrounding it. They can, of course, be as varied in their ornamentation as the fancy of the designer dictates.

**Pincushion and Jewelry Case.**—To make a pincushion and jewelry case combined, take a gentleman's collar box, pad nicely with cotton on the inside, and wool on the outside, of lid and box. It is better to cover with cambrie, or some other material, to keep the padding from working through the silk. Take pink silk and sew neatly over the lining; make some buttons by cutting from cardboard the required form, putting some cotton on the top, and covering with silk; sew them inside and outside of box and lid, to suit your fancy, only be sure to have them regular distances apart; then bind the edge of box and lid with white ribbon; hinge the lid, and make a bow of ribbon, and fasten to the centre of lid on the inside, leaving the ends long enough to lap the sides.

## Household Elegancies.

## A PRETTY WASH-STAND.

This pretty wash-stand will certainly excite the admiration of all who see it, and create, no doubt, the desire to make a fac-simile, which we are glad to say may be easily done. First, it will be perceived that the table fits snugly in the corner, which is a great advantage where room is an object: a triangular box, or case, made of a section of a common packing-box, will answer, and should be two feet on the sides, and two feet three inches in height, rounding out on the top and bottom, in a gradual curve, two inches deeper at the centre.

Square blocks, two inches square, of "inch stuff," are nailed under the lower corner, on which casters are fastened. On the upper sides are fastened two pieces of board, eight inches high at the front, and curved gradually toward the back, where they unite in a point, two feet high. This may be sawed out tastefully with the fret saw, and carefully carved with tools, or merely sawed out in scrolls on the top and embellished with painting, etc.

Against the back are fastened two narrow shelves, supported by brackets (the small ornamented iron ones answer well, and appear extremely tasteful if of good design), or three single brackets of carved wood, a corner one high against the corner, and one on each side, lower down, and placed flat against the sides. These are to accommodate the various articles required on such a stand, the soap and tooth-brush cases, the mug, and water decanter, etc. The insides of the lower part is fitted with a shelf for the slop-pail, shoe-brushes, etc. Six feet above the corner of the back, a little corner bracket is conveniently arranged so as to hold a vase of flowers, statuette, or other suitable ornament, and is fourteen inches deep on the sides, extending out about an inch and a half in a rounded form on the front.

The wood-work of the stand is stained, and embellished to suit the furniture of the room, and the top covered with a brown ornamented oil-cloth, a lambrequin of which is arranged to hang down one foot below the edge, and is cut out in a design figure, under which is laid oil-cloth of buff or other contrasting colors, and the points bound with brown or buff worsted braid.

The hangings of Swiss muslin are to be lined and trimmed to correspond with the style of furniture.

MRS. C. S. JONES.

## MOSS-CROSS AND FLOWERS.

Line a recess with white velveteen. Cut a wooden or card cross with three steps, using care to make the steps of size suitable to depth of case. Fasten on the back of recess, and cover with the stiff white moss found on rocks, and clusters of the sealing-wax moss; if none of the latter can be procured, dip pieces of the white moss in scarlet sealing-wax, dissolved in boiling alcohol, touching

only the extreme points. Make a foundation of card below the steps and cover with green moss. Cluster grasses, immortelle flowers, pretty leaves, shells, etc.,

A MOSS-CROSS AND FLOWERS.

A PRETTY WASH-STAND.

fences, with ferns that have been pressed; cluster flowers and grasses, at the back, upon the steps; and form a vine of tendrils, stems of ferns, bright green leaves and tiny berries or flowers; let it fall in thick sprays from one arm, and cluster thickly upon the top and other arm; dot various pretty shells among the moss over the entire cross, and touching with mucilage, dust with diamond powder. Frame in a rustic frame of black walnut inlaid with white wood.

MRS. C. S. JONES.

## SEAWEED FLOWERS.

A new species of artificial flowers has become fashionable in England—Seaweed flowers. We find the following reference to this new industry in an English journal devoted to fashion, and which amongst other things informs its readers that Seaweed flowers are patronized by the Queen.

Flower making occupies large numbers of women, girls, and boys. Deft and subtle fingers cut out and fasten, paint, and wire the bits of muslin and silk which are to imitate the pride of the garden or the glory of the hedgerow.

It is our purpose at present to introduce to our readers a new species of artificial flowers. These flowers are said not to spoil either by wind, or sun, or rain, and they are not so dear as the ordinary artificial flowers. We are all perfectly acquainted with the bunches of seaweed which visitors bring back with them as seaside trophies. They are gummed against a piece of white bristol board in various more or less fantastic devices, and underneath the trophy is written:—

Call us not weeds—  
We are but flowers of the sea.

Anything more unlike flowers can hardly well exist; but the seaweed flowers we are now speaking of are as different from these weeds as possible. They are brilliant in color, they are elegant in form, they are artistically arranged, and are really "things of beauty."

A great deal has been said of late about the reckless destruction of life which follows the adoption by women of certain fashions, such as the wearing of bright colored plumage of birds. Lady Burdett Coutts has urged this as a reason why some women should find some new adornment other than the feathers whose metallic gloss is so exquisite.

Here is a new adornment—newer than birds' wings, newer than even the heads of birds, capable, too, of rendering colors as bright as the brightest on a bird's or insect's wing, while at the same time the half tints so dear to the eyes of the fashionable world can be rendered in their most exquisite shades. Can anything be conceived more appropriate for the trimming of a dress of a sea nymph at a fancy ball than seaweeds themselves? But it is not only for such special use as this that the new seaweed flowers are elegant and suitable: they are mounted as flowers for the hair, for bonnets, for trimmings of dresses, for ornaments for the dinner tables, for banner-screens, and for ornaments to take the place of the standard wax flowers.

## Fireside Reading.

**The Wrong Kind of a Candle.**—A Kentucky paper relates that during the Christmas holidays, Starling Curd, an industrious colored man, living near Bristow, in that State, gave an entertainment at his house. His wife asked him, coming to town the day before the frolic, to get a tall candle with which to ornament and illuminate the table. Starling called on H. C. Hines & Co. for the candle, but stated the case in such a shape that Mr. Hines thought he wanted a Roman candle. It was accordingly put up for him, and Starling returned to his home, when his wife insisted that he had made a mistake, saying that it was a candle she wanted. Starling assured her that it was the latest style of candle he had purchased, and, to prove it, stuck it into the fire. To the astonishment of both, a flaming ball popped out; then another, and another, when the frightened Starling dropped the "infernal machine" upon the floor. Another explosion, threatening the destruction of the house, and he again seized it, but, unfortunately, wrong end foremost, when a ball struck him in the abdomen. Suddenly turning it around, another ball shot out through a new counterpane, through which it burned a large hole. The whole household was in a state of terror, and Starling went to town the next day with a mind full of lawsuits for damages, but, being a fair-minded man, was pacified when it was explained that Mr. Hines misunderstood him.

**A Precocious Philosopher.**—A young philosopher of seven years of age, who had not got far enough to hear the Holy Scriptures disputed by science, listened attentively in his father's parlor, the other evening, to a warm discussion on the Darwinian theory, and, after the guests had departed, somewhat surprised the paternal with:

"Father, I don't believe Mr. Darwin is right." "What?" said the parent, looking down at this unexpected reasoner, who stood behind him with a little Bible in his hand; "you do not, and why?"

"Because, papa, my Bible says 'God created man in His own image,' and I don't believe it was a monkey." "Well, well," said the sire, laughing, "run along, Tommy; you are too young to talk about such things."

"But, papa, almost the next verse says, 'God saw everything He had made, and behold it was very good.' Now, it wasn't good if men were monkeys, was it? For you are gooder than a monkey, ain't you, papa?"

**An old bachelor** having been laughed at by a party of pretty girls, told them: "You are small potatoes!" "We may be small potatoes," said one of them; "but we are sweet ones."

**A Detroit**er was called on as a witness in a case before one of the justices lately, and when the oath was administered he raised both hands and said: "I shall spoke nodding what ain't drew if ever I hope to die so quick as a minute!" He was so earnest and solemn that the lawyers let him alone.

**A little miss**, writing to her father on the first day of her entrance at boarding-school, says: "The first evening we had prayers, and then singing, and a passing around of bread, which I did not take, because, not being confirmed, I thought I had no right to take communion. Afterward I learned that I had lost my supper."

"OVER YONDER."

**Little Johnny** has peculiar views as to original sin. One day he was about to be punished for some misdemeanor, when he pleaded: "It wasn't me, mamma, dear—it was the bad man." "Well, Johnny, I'm going to whip the bad man out of you." "Ah, yes, but that'll hurt me a precious lot more than it will the bad man."

**An Englishman** was boasting to a Yankee that they had a book in the British Museum which was once owned by Cicero. "Oh, that ain't nothin'," retorted the Yankee; "in the museum in Bosting they've got the lead-pencil that Noah used to check off the animals that went into the ark."

**A bright little girl** of this city, the day before the meeting of the conference, in great glee, told one of her little chums that "Mamma is going to have a hired girl during conference week, as there will be lots of confidence men in town then."

**The other day** a Vicksburg wife went into the country on a visit, without saying anything to or leaving word for her husband. He was uneasy on returning home, and made inquiries among the neighbors. "Gone!—missing!" exclaimed one woman; "why, I should think you'd be uneasy about her!" "I am," he replied, wearing a sorrowful look, "for some one has got to split the wood to get breakfast with!"

**A boy** of five years was "playing railroad" with his sister of two and a-half years. Drawing her upon a footstool, he imagined himself both the engine and the conductor. After imitating the puffing noise of the steam, he stopped and called out: "New York," and, in a moment after, "Paterson," and then "Philadelphia." His little sister said eagerly, "Top; I des I'll dit out here and do to Centennial!"

**A doting mother** of a waggish boy having bottled a quantity of nice preserves, labelled them, "Put up by Mrs. Doo." Johnny, having discovered the goodies, soon ate the contents of one bottle, and wrote on the bottom of the label, "Put down by Johnny Doo."

**One day** Bill had company to dine with him, and his wife, wishing William to appear well, quietly admonished him to be careful what he said. All went well till Bill got his potatoes well mashed, when he said: "Dolly, pass the grease!" "Why, William," said his wife, "you must call it gravy." "Wall," says Bill, "I guess if I got it on your tablecloth it would be grease." The guests shouted.

**For a printers's wife**, Em; for a sport's wife, Betty; for a lawyer's wife, Sue; for a teamster's wife, Carrie; for a fisherman's wife, Nettie; for a shoemaker's wife, Peggy; for a carpet-man's wife, Mattie; for an auctioneer's wife, Biddy; for a chemist's wife, Anna Eliza; for an engineer's wife, Bridget.

**A drunken man** came home at midnight. After avouching that somebody had stolen the keyhole, his wife admitted him with a scowl on her brow and a lamp in her hand. "Brute!" she exclaimed. "Br-o-o-t, (hic)—Givus harder one." "Idiot!" "Thaz harder (hic), but I kin spellum. I-d—I-dg—I-d-i-g-t, Idiot. Now givus er stunner (hic)." She picked up a poker and gave it.

**A good story** is told of Spurgeon. His habit is to shut himself up on Saturdays. One Saturday a man called and insisted on seeing him. "Tell him," said the visitor to the servant, that a servant of the Lord wishes to see him. The message was delivered and the following returned: "Tell him that I am engaged with his Master."

## Housekeeping.

## CONCERNING STOVES.

Notwithstanding the progress of modern improvement, in the shape of houses warmed throughout by steam and heated air, there are hundreds of dwellings in the land that are dependent on stoves for this purpose.

Now I would like to make a suggestion to the workers in iron, and to those whose business it is to design the patterns of these stoves. Why, instead of the great black cylinders which now encumber while they render comfortable our parlors, could we not have an elegantly-draped statue in cast iron—say, of Ceres, with cornucopia; or of Pallas, with shield and helmet; or of Jove himself, with his thunderbolts, through whose hollow body, head, and members the hot air might permeate, while the eye rested with delight on the classic contour of its form? For a church or Sabbath-school room, in place of these heathen deities, what a fine idea it would be to have a figure of Charity, offering a warm welcome to all who, with blue noses and chilled fingers, gathered around her on a cold winter day; or of Faith, pointing upward to future joys, and at the same time dispensing present comfort; or of Hope, leaning on an anchor, whose *flukes* should be *flues*, conveying warmth to the body while suggesting the safety of the soul.

Polished to a brilliant blue-black by the patient brush of the stove-cleaner, one might almost imagine such a stove a statue of black marble designed by Phidias or Canova. In the pedestal might be concealed the fire-pot, ash-pan, etc.; and perhaps some ingenious contrivance could be found to dispose of the necessary appendage of stove-pipe, so that its stern, uncompromising lines should not destroy the illusion.

I merely throw out the suggestion, hoping that some one will work out the idea to perfection.

And now a word on polishing stoves: As many ladies in the country are obliged to clean their own stoves, it is well to know the best and easiest method of doing it. I have known persons to spend two hours in blackening a stove, and to be so tired after it that nothing more could be accomplished that day. This is a useless waste of time and strength.

Have your stove perfectly cold, and, if possible, in a room with the windows open, as the air assists the process greatly. Apply the stove-polish with an old brush to a portion of your stove, and rub over with your polishing brush for a minute or two: then leave it to dry a little, while you serve another portion in the same manner, but be careful that it does not dry too much, or it will be grey in spite of all you can do; then return to it, and polish briskly for several minutes. In this manner go over the whole stove, returning to the charge again and again, until the brightness begins to appear—at first greyish-black, but becoming, as the friction is continued, a rich, jet black, both durable and beautiful.

This is for the castings. For the sheet-iron parts, as well as for the stove-pipes, use a soft flannel cloth to apply the blacking, a small portion at a time, and rub up instantly with another flannel cloth, and in a few minutes—I had almost said moments—you will have a smooth polished surface in which you may see your own grimy countenance reflected. I. M.

Wood Ashes and common salt, made compact with water, will stop the cracks of a stove, and prevent the smoke from escaping.

## A LEAF FROM MY COOK-BOOK.

**HOW TO MAKE CRUMB CAKES.**—Gather up the crusts and crumbs, or bits of dry, light bread, biscuits, rolls, etc., from your bread jar; put them in a bowl, and pour over just enough milk as you think will be absorbed, and let it stand over night. In the morning pour off the milk, if there is any unabsorbed; with a fork break up the lumps, and when quite smooth, stir in two well beaten eggs, a pinch of salt, a teaspoonful of soda, and a tablespoonful of flour. Bake on a hot griddle. They will require a little longer to brown than ordinary hot cakes, and one more difficult to turn until the hand is practiced.

**BREAD AND APPLE PUDDING.**—Butter an earthen or tin pudding dish, and place in it alternate layers of bread-crumbs and thinly sliced apples, over which sugar should be sprinkled, that is, the sugar should be sprinkled over each layer of the apples; when the dish is filled, let the last or top layer be of bread-crumbs, over which two or three tablespoonfuls of melted butter should be poured. Bake in a moderately hot oven, and place two or three nails under the pudding dish to keep from burning in the bottom; let it bake from three-fourths to a whole hour, according to the quality of the cooking apples.

**SAUCE.**—Take a pint of boiling milk, drop in a lump of butter, a large tablespoonful of sugar, and flavor with cinnamon or nutmeg. Or take boiling water, add tablespoonful of sugar, lump of butter, teaspoonful of corn starch moistened in cold water, the yolk of an egg, and flavor to taste. The egg should be well beaten and stirred in when the sauce is partially cold, then return to the stove a moment or so only.

**POTATO CAKES.**—Use the cold mashed potatoes left the day before. To a small dish full, beat up the yolk of an egg, add two tablespoonfuls of sweet milk, one tablespoonful of flour, a pinch of salt, and a little black pepper. Have the potatoes mashed nicely, so that there will be no lumps; add the above ingredients, beat the whole until very light, and fry in hot lard or butter.

**POTATO CUSTARD.**—To four medium sized Irish potatoes, boiled and mashed, add two heaping tablespoonfuls of sugar, two eggs, half a tea-cup full of milk, and an ounce of butter. Bake in a pudding dish—is best served with a brandy sauce. Potato pie may be made in the same way, observing the above proportions, except that you may use eggs and milk more liberally, as per pumpkin pies, and allow two tablespoonfuls of sugar to each pie. The milk should be added last; make very light crusts; use only an under crust.

**CUSTARD PIES.**—Made in the usual way, except to use only the yolks for the custard, and reserve the whites until the pies are done; then allowing the whites of two or three eggs to each pie, beat to a stiff froth, allow a tablespoonful of pulverized sugar to each pie, and flavor with lemon. Put the top dressing on smoothly, return to the oven a moment or two, until a light brown, and set them away in a cool place. These are the best looking and the best tasting custards that I have yet learned to make.

**BREAD PUDDING** made in the usual manner, is improved by spreading a glass of either currant or raspberry jelly over the top after it is done, and then spreading on a top dressing of the frosted eggs, as per the custard pies above described.

Now if some lady reader of the CABINET will give me a recipe for making Delaware or Maryland biscuits, I will hope to be able to repay the donor in some

way; at any rate, she shall have a warm place in my heart, for I am anxious to surprise my husband with a dish he has so often extolled. Mrs. K. Oregon.

## RECIPES.

**LEMON CAKE.**—One cup of sugar, one of flour, four eggs, and a piece of butter the size of an egg, one teaspoonful cream tartar, half teaspoonful of soda; beat eggs separate; bake in layers. For jelly, grate the peel of one lemon with the juice, beat with two small eggs, one cup of sugar, butter size of a walnut, stir over a slow fire till it boils.

**CHOCOLATE CAKE.**—Half cup butter, two cups sugar, one cup sweet milk, three and a half cups flour, two teaspoonfuls cream tartar, one of soda; mix without separating the eggs. Grate chocolate in half the dough; bake in six layers, putting plain icing between the layers, having the top cake light, the next one dark, and so on alternately. This is very nice.

**DELICATE CAKE.**—One cup butter, two of sugar, three-quarter cup sweet milk, four of flour, six eggs (the whites only), three heaping teaspoonfuls of baking powder, sifted with the flour; whites of eggs put in last of all, and the whole well beaten. Excellent cup cake made as above, only adding the yolks.

**FROSTING.**—After a cake is frosted plain and it is hard, a nice way to trim it is to take a square of thick writing paper, form into a cornucopia, fill with frosting, and squeeze so that it comes out at the small end; you can form a vine around the edge of the cake, bunches of grapes, mottoes, and many pretty devices. The frosting must be stiff; beat sugar and whites together, add a little starch to make it whiter. M.

**Candy.**—I send a candy recipe which I have not noticed in the CABINET. It will please the children, for no other candy is comparable to it. Three tea-cups of white or coffee sugar, one and a half tea-cups unskimmed sweet milk to dissolve it; boil till done, and flavor with vanilla; after it cools a little, stir until hard, and eat when you please. A. LEE.

**Chocolate Cake.**—Thinking that all the readers of the FLORAL CABINET must admire "the true, the beautiful, the good," as much as M. Consin himself, I send them a recipe which is true and good, while one can make it beautiful also, by a little icing. Take eight eggs, one pound of sugar, half a pound of flour, the grated rind and juice of a lemon, and a quarter of a pound of butter. Beat the whites of the eggs to a stiff froth; cream the butter with half the sugar; when the yolks are beaten light, with the rest of the sugar, add the butter, then the stiff whites, and finally stir the flour in slowly; season and bake in round shallow tins, called jelly-cake pans. Now for the caramel. Half a pound of chocolate, one and a half pounds of sugar, quarter of a pound of butter, one tea-cupful of cream, or rich milk; boil ten or twelve minutes; add a teaspoonful of vanilla. When nearly cold, spread between layers of the cake, as you would jelly, sift powdered white sugar over the top, and it is done. I do not exaggerate when I say it surpasses fruit cake, equals cocoa-nut cake, and puts pound cake to the blush. E. J. S.

**Polish for Furniture.**—Equal proportions of turpentine, linseed oil and vinegar well rubbed in, and then polished with a piece of chamois skin, will work wonders with furniture that has become dingy from exposure to dust and old age.

## LAMB KNITTING MACHINE.

IS the only Machine that can knit all sizes of work, and narrow and widen it; that can shape and COMPLETE, without hand-finishing, seamless Hosiery, Gloves, and Mittens, or knit them in all sizes; or knit Ribbed, Double, and Fancy stitches for Underwear, Jackets, Shawls, Scarfs, etc. It knits over 25 different Garments. Over 100 per cent. Profit in Manufacturing Knit Goods. The Farmer trellis the value of his Wool by converting it into Knit Goods. Women make \$5.00 a day with it. Agents wanted. Send stamp for Samples of work, and reduced Price-List. Address LAMB KNITTING MACHINE CO., at Chicopee Falls, Mass.; Cincinnati, O.; Chicago, Ill., or 922 Chestnut St., Philadelphia.

## MEZZORGRAPH.

A NEW AND BEAUTIFUL ART.

The finest connoisseurs of the Old and New World are now looking upon the MEZZORGRAPH ART with wonder and amazement. Years of constant thought, study, and experiment have developed this GREAT ART, which brings before the admiring Public a new Science of producing a Picture that surpasses, in Softness, Brilliance, and Beauty, the finest Oil Painting, and has not been surpassed by any artistic skill. Such Pictures as are furnished by the Mezzorgraph Co. can not be purchased at any other Publishing House in America. WHAT IS IT?—It is not a Steel Engraving; it is not a Chromo; it is not a Photograph; it is not a Mezzotint; it is not an Oil Painting; it is not a Lithograph; it is a Mezzorgraph.

The first edition of this Picture of 20,000 exhausted.

THE QUEEN CITY MEZZORGRAPH CO., No. 155 West Fourth St., Cincinnati, O.  
Are now offering to the readers of this paper the second edition of 100,000 copies of this new and beautiful Picture, entitled

## THE CROSS OF ROSES.

A picture that PREACHES; an ornament and sermon combined. The picture represents a LOVELY FEMALE in somber garb, the type of religious devotion. She becomes her pathway in life, and after putting by CROSS after CROSS, finally discovers one entwined with roses. Being about to embrace this emblem of temptation, she discovers that the roses are interwoven with thorns. She drops it in despair, and cries: "My Cross I can not bear." Suddenly a form appears, bearing the plain cross of true faith, exclaiming: "I AM THE WAY." The somber garb of the female is beautifully contrasted with the light robe and graceful drapery of JESUS, ADVANCING IN HIS MILD MAJESTY, while the dark foreground is artistically relieved by the rays of HOPE and FAITH, as reflected from the presence of the DIVINE MEDIATOR, imposing grandeur to earth and sky. It is sublime in conception, grand in execution.

As a vivid picture, a gem of art, an ornament, and impressive lesson, the picture possesses an especiality which commends it to every HEART and HOUSEHOLD. Send for the picture at once. You will be more than SATISFIED. Orders will be filled in their turn. If it does not please you and fully come up to our representation, please return it to us, and we will promptly return to you your money. We wish by honest dealing to justify merit the confidence and patronage of the readers of this paper.

Every Picture GUARANTEED to be as represented, or money REFUNDED.

On the receipt of 50 cents, to pay postage and wrapping charges, we will mail to the sender one copy, size 24x30 inches, upon the best calculated PLATE PAPER; or, to a club of five pictures (to one address) we will send one extra copy free. All orders must be plainly written, giving the post-office, county, and State, and addressed directly to the

Queen City Mezzorgraph Co., 155 W. Fourth St., Cincinnati, O.

SPECIAL NOTICE.—An opportunity to obtain so beautiful a picture, at such a decided bargain as mentioned above, has never occurred before in the history of the science of art, and may never occur again.

## FOUR

grand premiums are this year offered to subscribers to THE ILLUSTRATED WEEKLY. They comprise Chronos of the famous paintings—"THE OLD KENTUCKY HOME," by Eastman Johnson, for which the late Mr. A. T. Stewart paid \$15,000; "THE LITTLE MATRON," by Wier, the figures of which are life-size, and in which the artist has caught the true expression of the tender mother in this beautiful child as she carefully lays her doll down to sleep.

"AMONG THE ROSES," a magnificent bunch of roses and plants, a picture every lady that sees would long to possess.

"WATKINS' GLEN," by Waters, a true picture of one of the loveliest spots in America, and one of Nature's most beautiful wonders. Size of each 2 x 2 1/2 ft. The Illustrated Weekly is a large eight-page paper, pure, in true and amusing; portraying with pen and pencil current events; historical, household and useful subjects; fun and fiction. Unsectarian and non-political—going alike to all sects and parties.

JAMES PARTON, contributing editor, and a host of the best contributors, including Dr. Fisher Walker, Julius H. Brown, Max Adler, Howard Paul, Col. Thomas W. Knox, "Walingham," Jennie June, John Brougham, Edgar Fauchet, Emerson Howard, etc.—MONTAGUE L. MARKS, Editor.

This paper has attained the largest circulation save one among the illustrated journals of this country, which is the best proof of its merit.

SUBSCRIPTION PRICE \$3.00 per year, including a choice of two of the above-named Chronos, which will be delivered post-paid to any address for 25 cents additional, which sum barely covers the cost of postage. Chronos can be sent mounted, all ready for framing, for 50 cents each additional, and delivered free of other expense at any express office in the country east of the Rocky Mountains.

"It far exceeds Harper's or Leslie's in literary ability."

# THE LADIES' **Practical Cabinet**

BY HENRY T. WILLIAMS.

VOL. V

NEW YORK, DECEMBER, 1876.

No. 60.

PRICE 12 CENTS.

## FERN CASES.

As this is the season for arranging the Ferns, &c., that we have taken the care to gather and press during the long summer and autumn, I have thought perhaps some few of our readers might not have heard of the pretty cases, so appropriate and beautiful for this purpose, and therefore will describe my method of making them.

For the sake of variety in the different rooms, these may be made of different forms and sizes, and of varied materials. Supposing for our first one we use the delicate "white-wood strips," (sold for ten cents per package at the fancy stores). Having decided upon the size of the case, which may be perhaps about 12 or 14 inches long, we cut the strips that length, and notch out a triangular piece from each end, which leaves two points, and gives a more ornamental appearance; then we commence, and laying twelve or more pieces on a table, arrange them to form a square, placing each strip one inch apart; next cross them, by weaving as many pieces in and out between them (basket fashion), sewing them at the ends with a stitch taken through and tied on the under side. Then, if desired very ornamental, take some small gilt, steel, or other ornamental buttons, and piercing a hole at the intersection of each strip, press the eye of the button through and fasten on the under side with a stitch, or by means of a tiny stick (cut from a match, perhaps).

"MORNING GLORIES."

Make two of these squares, and placing them together, tie with bows of ribbon at the corners, making a point to come at the bottom, and hanging by a long ribbon fastened to the two side corners; this allows the case to be opened at the two top points, and making a sort of pointed case.

The openings between the squares, as well as the inside of the case, allow places for arranging the Ferns, which should be placed closely in the centre (where a few autumn leaves will prove a pleasing addition), and more loosely at the sides.

Straws and hoop-skirt wire may be made into similar cases, using for the latter, bronze paint or gold paper on the connecting parts.

MRS. C. S. JONES.

**Bouvardias**—Will you please tell how the Bouvardia is cultivated, in order to give the plant beauty and successful winter bloom; should there be more than one stalk? I have a plant, will you please give me the proper name? I find those that have the plant call it Candle or Tallow plant, I do not think that is botanical. I send a sample leaf.

Miss M. McKee.

Huntsville, Ill.

**Answer**—The Bouvardia is propagated from roots, planted out when danger of frost is past, and taken up and placed in a light, warm room, before cold nights in autumn, these plants will grow well in any good rich soil, and require plenty of water. No specimen received, but candle plant is certainly not a botanical name.

## Floral Contributions.

### HOW I DECORATED OUR CHURCH AT CHRISTMAS.

The decoration of our church in her festival seasons has often been left entirely in my hands, and it seemed to be one of the ways in which I could offer a sweet-smelling tribute to the great Ruler of all things. The church itself is a cozy little place over fifty years old, with no pretensions to grandeur, but extremely neat in all its fittings. In the centre of the chancel stands a white marble font, between the lectern and the reading-desk. The first design I shall describe, I should have mentioned before, was at the institution of the Rector. We had but few flowers, but those we had did good service. In our garden a mammoth Fern was growing whose leaves formed a perfect vase or basket. This we dug up carefully and placed it in the bowl of the font. Then I made a cross of the choicest white flowers and fixed it in the centre of the fern basket, its delicate and graceful leaves forming an exquisite base. Around the outside I fastened a wreath of the most fragrant Roses, and trailing therefrom were long sprays of Clematis. The D.D. who performed the office of institution and for years charmed his hearers in Washington City, was pleased to speak of it in his sermon, practically taking his text from the thing of beauty it was. I took the beautiful Fern home, and although this was years ago it still stands in my garden a living souvenir of that occasion.

Again the Christmas decorations were left to me. Wreaths of Laurel and Pine festooned the walls. On the font I lavished most of my care, as it faced the congregation in the most prominent manner. Two large pieces of bark, with knots of Lichen, were placed on either side of the marble font and between the bright green Mosses of various species, held firmly to its place by black thread, the whole forming a perfect resemblance to an old tree stump some four or five feet high. At the foot of this a wreath of gay leaves of the brightest yellows and reds gathered in autumn, pressed and waxed, were placed and gave life to a large cross covered with Lichen (the relics of many a ramble through the woods), which extended upward from the old stump. From the arms of the cross, and depending from the marble bowl of the font, hung long sprays of the lovely Southern Gray Moss, seeming like a beautiful mist hovering all over and around the decoration. Oh, that in all things the North and the South could thus be blended, and so lovingly meet together and forget all past differences in the great future that in God's own good time will come to our nation!

At Easter, when the church sends forth her most joyous tones, it was my lot again to prepare the building for high festival. Pot plants banked in Moss were arranged in front of the chancel in pyramidal shape, and gay cut flowers which filled the font perfumed the air; but what most attracted attention and claimed the most praise was the work done at our own house, and which was kept a secret from all until it was put in position. A large shield, over four feet high, painted a delicate azure tint, with a silver border, was elevated over the pulpit. The words "Christ is Risen" were formed around the top of the shield. A large cross springing from a bed of Lilies occupied the centre and base of it. I never had seen anything like it, and evolved the plan from my "inner consciousness," as the Germans say, and was surprised myself, when it was completed, at its wondrous beauty, and can safely

assure readers of the CABINET that modifications of this idea will serve to adorn the parlor and provoke many words of praise from visitors. The letters were some three inches high and two inches in thickness, being cut out of several thicknesses of the whitest cotton wadding pasted together, causing them to stand out in relief, and much resembling letter scut from very heavy marble, and as against the blue background the effect was admirable. The cross was formed in the same way, and the Lily bed was cut from one thickness of the cotton, mounted on bonnet wire. A few pennies' worth of powdered mica and diamond dust was sprinkled over the whole, and here and there bits of it adhered to the cotton and background, making it to glitter with charming effect in the glare of the gas. The words "Christ is Risen," in pure white relief, seemed to re-echo back in constant refrain the notes of the sweet-voiced soprano of the choir, making the few strands of Spanish Moss that was hanging among the white Lilies to tremble in delight. A few grape tendrils dipped in melted white wax added not a little to the bed of Lilies. This lovely creation was a wonder to myself, and had I seen it in a Broadway or Chestnut street shop window, I should have had hard work to restrain my propensity for the purchase of pretty things.

We here in the country have to originate designs and carry them out as best we can, and I think an interchange of ideas between those who are so fortunate as to live in the great cities and the suburban dweller will result in good to each. Hoping these suggestions will find favor in your eyes and give some new ideas to those who delight in the making and owning of pretty things, I will simply sign myself,

LEWISTOWN.

### PARLOR HOT HOUSE.

Some of your readers may be interested in an improvised hot house that once afforded me no little pleasure and amusement, and doubtless my "invention," which I have not secured by patent right, will be so improved upon by some cute Yankee, so modelled and dressed in less homely guise, that I will never recognize the child of my brain, in which case I shall only have to join the noble band of martyrs recruited from the ranks of those who sow for others to reap. Several years ago I was for many weary months a prisoner in my own room, looking out of one window on the Blue Ridge Mountains of Virginia, and from two others southward on the fair Valley of the Shenandoah. November had come in bare and chilly, and the bleak winds that swept down from the mountains with rain and sleet destroyed the last vestige of autumnal beauty in my flower garden. Some of my special pets were already ranged on flower stands and brackets in my southern windows, curtained with Madeira vines and Parlor Ivy; but the prospect for winter bouquets was not encouraging. My Roses turned yellow and dropped their leaves; Geraniums seemed seized with a consumption and stood limp and well nigh lifeless in spite of all the tonics I could administer; and as for my Fuchsias, they persistently refused to be comforted for the loss of summer sun and gentle zephyrs, and stood with watery transparent stems, utterly bare of even a hint of bud or leaf. There they were! They would not die outright, and they gave no sign of coming vigorous life.

My room was warmed by the old-fashioned fireplace, roaring and cracking all day long, and black and cold all night. Long may they live, these relics of the olden time, in song and romance; but for nine-

teenth century comfort, commend me to a parlor heater or some such device of this prosaic age. I sat at my window one day feeling that it was really

"Hardly in a body's power  
To keep at times frae getting sour,  
To think how things are shar'd—"

I wanted a hot house, and I longed for money to build one. Suddenly a fifteenth amendment, aged about ten years, rushed down the paved walk dragging after him a battered tin wash-boiler. A thought flashed into my brain, and opening my window I called, "Abraham Lincoln Jefferson Davis!" so christened by a prudent daughter of Ham as a compromise between her gratitude to "de 'liverer of my people" and her desire of propitiating her "old mars," whose faithful servant she remained. A. L. J. D. came and readily surrendered his right in the old boiler, and upon the promise of an unlimited supply of candy, undertook to find me two worn-out baking pans and fill them with woods earth. By dint of hammering, the dents in the old boiler were made to disappear, and it was treated to a good scraping and then a coating of green paint, which color happened to be convenient; brown would have been prettier. Then I had A. L. J. D. bore a row of holes all around the top, about two inches from the edge; then I procured a shallow bowl and poured into it some lard oil, placing in the oily bath two or three floating tapers—"witches." A. L. J. D. came in with the pans of earth, which I thoroughly warmed before my hickory fire, and then returned to the pans after arranging for drainage. "Now, Abe, can you get me some pieces of pine board, and ask your father to come to me at dinner time with his hammer and saw?" Out of the boards I had old Sam construct two rude frames, closely fitting into the inside of the two earth-filled pans, and these I covered with panes of glass. My hot house was done. I had but to go to my ungrateful pots of flowers and cut off every stem and twig that had a semblance of vitality. These I planted in my pans, setting the boiler in a window, putting the pans on top of that and letting them alone in the day time, as I knew the heat of my room was then all sufficient; but about ten o'clock at night, when the fire began to burn low on the hearth, I lighted my tapers, and watering well, covered my cuttings with the glass and went to bed to sleep the sleep of a quiet conscience. I had done my duty by my plants; now let them perform their part. And they did! Night after night I would awaken in the silent watches, and the light streaming through the tiny air-holes of my hot house shone out like so many unwinking eyes, saying to me, "All right; just go to sleep; you see we are wide awake and attending to business." The way those things grew! By the middle of January my pans were a mass of green, and I was forced to transplant into pots and boxes enough thriving, healthy plants to fill my borders in the spring, after having delighted the weary invalid for hours with fragrance and beauty and the pleasant pastime of caring for them.

Now I am sure I have suggested an idea to somebody, who is very welcome; only, when elaborated, let me know the result. PHEBE SCOTT.

Baltimore, Md.

**Gloxinias.**—What kind of treatment do Gloxinia bulbs require during the second winter? 1. Does the plant die down in the fall? 2. Do the bulbs multiply? 3. Do the old bulbs blossom more than one season?

Monmouth, Me.

A SUBSCRIBER.

Answer—Keep dry and warm. 1. Yes. 2. No. 3. Yes.

## Gossip with Correspondents.

**The Thistle.**—This plant was referred to in the October number by the offer of Mrs. Calvert to send a few seeds in the fall. She writes us: "I had no idea when I timidly made my offer that I was negotiating for an elephant. I received so many applications that I could only respond to each by sending two seeds, and I have now very few left. Will you permit me to say a few words as to their treatment? The Thistle is a native of a cold, moist climate, and Southern growers must govern their treatment accordingly. Plant reasonably early in rather rich, sandy soil, the same depth as seeds of similar size, and give at least two feet round the plant for growth. It grows most luxuriant in the shade, but the sun develops better flowers. Water well."

[Note by Editor.—In mercy to many correspondents who have no idea of our circulation we rarely ever insert any of the offers of exchange or gratuitous seeds, which are sent in. In every case we have done so, the avalanche of responses has been so great the lady has regretted her offer and written to stop it, but always too late. We remember one person who received 15,000 responses to a similar offer in one of our New York weeklies.]

**Spanish Moss.**—With regard to exchange of Spanish Moss for plants, I wish to state to the many who have favored me: First, I have received up to this date one hundred and thirteen letters, half as many packages, and no sign of cessation; and owing to my manifold household duties, it is impossible for me to dispatch the Moss as fast as they are received. Second, Many of the packages have had no clue but the similarity of writing to connect them with the letter, and in some cases I have totally failed to identify them. Some have been so dry as to be entirely worthless, while others are fresh and crisp. Third, Owing to the great number of proposals, I am anxious to see the end of exchange for the present, and request that no one else will respond to my proposal. Fourth, For these reasons my letter on Cacti and other plants will be indefinitely postponed, and if any other flower sister wishes to step in and fill the vacancy she has my permission. I hope my numerous correspondents will be charitable toward my shortcomings, and believe that the fear that some will be dissatisfied has almost destroyed my enjoyment of the many choice plants I have received.

MARY C. McCURDY.

**The Passiflora.**—I observed in your August number that one of your contributors, A. Walsh, desired information in regard to her Passiflora. The only treatment I know of, so used, was to plant them in good light soil in May, and they would soon cover one end of a veranda and bloom profusely all summer. The single variety grows in abundance spontaneously in my yard, and is quite as pretty as the double, and perfectly hardy. The double requires some protection through the winter. I will send the Passiflora to any of your contributors in exchange for other plants or dried flowers and mosses. I have another beautiful climber that is perfectly hardy. I call it the Wild Rose because of its resemblance to a rose. The bloom is beautiful; it is large and double, a beautiful pink color. I would like to exchange Geraniums, Heliotropes, &c. Of the latter I have three varieties, and quite a number of Geraniums. I will send either of the varieties for other plants. I have a great many other plants I will exchange with my floral friends. I have had remarkably good luck in growing plants this fall. They are the prettiest I have seen, most of them budding and some blooming. I have a new, large, roomy pit opening from my dining-room, and if it proves a success I will tell you how it is arranged. I am particularly anxious to get a few of those beautiful dried flowers and mosses the CABINET so often speaks of. We have no pretty mosses here. What an indispensable little friend the CABINET is. It is my most welcome visitor. It always has a happy greeting at our threshold. Every countenance beams with delight around the fireside when it is being read. I wish it was a weekly visitor instead of a monthly, the months seem so long. Any desiring to make the exchanges I speak of, address Carlisle, Kentucky.

Mrs. C. W. MUNGER.

**Soil for Plants.**—Knowing that nearly every lady in the city finds it hard to get manure of the right quality for her plants, I thought this suggestion might be of some use to them. Gather up the falling leaves and put them in an old box, or in some obscure corner where they will not have to be removed. After getting all you want, pile them in as close quarters as possible, then throw on them all of your dish water, wash water, or any water that will help to make them rot. Every week or two take a stick and turn the leaves over, and keep on doing this until they are all rotten, which they will be in a short time, and you will have as good a manure as any florist could want. If you could get the droppings from a cow and put them in an old

dish and pour water on them, let it stand for a day or two, then take the liquid and pour it around the roots of the plant, it will give it a dark green color and make it grow very fast; but in putting the last named on the roots do not let any get on the leaves. As nearly every lady has some plant which they cannot pot, from its large size, they would be very glad to know of some way in which they can enrich the soil without going to the trouble of taking the plant out of the pot. By putting the liquid on every month it will make the soil nearly as rich and do the plant as much good as if they had put it in rich soil.

Newark, N. J.

J. H. CASTERLINE.

**Maryland Biscuit.**—Your correspondent, Mrs. K., of Oregon, asks for a recipe for making Maryland biscuits, and as I consider mine the true article I willingly furnish it, as follows: Three pounds Patapsco family flour sifted, six ounces lard, a heaping teaspoon of salt, mix well together, then add about a pint of water or milk; beat until the dough blisters; bake in a quick heat.

Mrs. SUSAN C. GRAPE.

**Agapanthus Lily.**—I have an Agapanthus Lily several years of age; the first year it did well and bloomed; shortly after this I divided it, cutting the root in two; since that time each part grows thriftily but neither blossoms nor buds. I wish to know first, does the old stock ever bloom but once? second, was it wrong to separate it? and third, what kind of soil, treatment, etc., should they receive?

A SUBSCRIBER.

**Answer.**—1. The old flower stem blooms but once, but new stems come from same stock. 2. Not if you wished more plants. 3. Any good rich soil, with abundance of water.

**Questions about Lilies.**—My Liliun Chalcedonicum grew about three inches high, then began to die. I went down to the bulb, found some little white worms, and then transplanted. Is there any hope of its coming up again? I have a L. Longiflorum in a pot by itself; it has been in good soil since May 6th; the bulb seems sound, but it has never come up. Can you tell me what is the cause of it, and will it come up yet?

Stockwell, Ind.

Mrs. CARRIE L. STALLARD.

**Answer.**—1. Probably the large bulbs have decayed, you had better take them up and replant in a fresh place, your position may be too wet or too dry. 2. The worm explains the decay of the bulbs, treat as above; do not use any fresh manure in planting. 3. Longiflorum will probably grow in its proper season; May was six months too late to pot it; this species commences to grow in October.

**Melon Cactus.**—Will you be kind enough to tell me what kind of treatment is best for a Melon Cactus?

**Answer.**—Give good drainage and little water at any time and, if a large plant, none in the winter.

**Fuchsias.**—1. I would like to ask, through the columns of the more than welcome CABINET, if old or wooded Fuchsias, that have bloomed all summer, will winter well in the cellar? 2. What time should roses be repotted and trimmed, before or after resting? 3. Will India ink wash out of white cotton goods? I made some phantom tides and spattered with India ink, bought at Ann Arbor, Mich., I used Fern leaves, and they received much praise. I gave one to a friend, and in a few weeks she returned the muslin, but the beautiful designs had all washed out. If any of your readers wish to arrange leaves, be sure and not overlap them, let them be distinct.

Cass County, Mich.

O. E. CHAPMAN.

**Answer.**—1. Yes. 2. After. 3. Will some of our lady correspondents oblige by replying to this?

**Ferns.**—1. What is best for winter greenhouse Ferns, soil for pots, etc., also treatment? 2. Also, what to do for Jasmine, and must I keep them in the house? 3. Name a few good winter-blooming parlor plants, etc.

E. J. T.

**Answer.**—1. Few Ferns will grow well in a room, unless in a glass case, but any good open soil with good drainage, as the plants, when in full growth, require abundance of water. 2. Both Jasmine and Musk are best cut off doors in summer, and should have rich soil; the Musk requires plenty of moisture, and the Jasmine pruning well in after flowering. 3. The following are good parlor plants: Camellias, Azaleas, Bouvardias, Carnations, Poinsettias, Fuchsias, Crab Cactus, Echeverias, Crassula, Daphne, Begonias, and Geraniums.

**Calla Lily.**—1. Will some of your readers be so kind as to give their mode of treatment for the Calla Lily? I have three fine large ones, just a year old, and am anxious to know how old they will have to be before blooming. 2. Also, of the Jerusalem Cherry? Mine blooms finely but bears no cherries.

L. T. M.

**Answer.**—1. Give rich soil and abundance of water when in full growth, and keep dry from June to September, then shake all the soil away and pot as above; our plants flower from young shoots the first year.

**Plants to grow in water.**—1. Will you kindly tell me, through the CABINET, which plants will grow best in water? I have some broken goblets and preserve dishes I wish to use as hanging baskets. Do you think any plants would grow without drainage? 2. Does the Hydrangea require much water? 3. What treatment do you advise for Callas?

**Answer.**—1. Water Lilies, Calla Lilies, Arrowheads, Pontederia, Water Lettuce, and other plants, according to space; nothing but water plants will grow without drainage. 2. Yes, when growing? 3. For winter blooming we keep dry in the summer.

**Plants for Borders.**—1. I wish to know the names of some flowers that would do well in the border, during the hot summer months. I have tried now for several years to have a good flower yard, and I can say the yard is there but only a few flowers. The thermometer shows, during mid-day, sometimes 130°, and rain is scarce. 2. I wish to know if it is possible to raise a Victoria Regia in the open air? 3. How large a tank would it take to hold one? 4. Where could I procure the roots or seed? In winter, the temperature with us is never below 20° during the night, and hardly ever below 32°, in day-time, in the shade.

A MAN THAT LOVES FLOWERS.

**Answer.**—1. Lantanas, Heliotrope, Geraniums, Cannas, Caladiums, Gardenias, Jasmines, Yuccas, Arums, and many others, which the local florists could name. 2. Yes, if started early in a hot-house. 3. Not less than thirty feet in diameter. 4. In Europe, through any of the large seedsmen there, they would probably charge a dollar a seed.

**Gas-light.**—Is gas-light injurious to plants more than astral oil, or ought the room to be lighted at all at night?

A CONSTANT READER.

**Answer.**—Gas is always injurious to plants, but not very much so, if burned only two or three hours a day, and plants well ventilated; oil lamps will not injure plants. Plants need pure atmosphere; common sense says, give it to them, and not keep your rooms too close.

**A Wardian Case.**—I have had very poor success in keeping a window garden, on account, I suppose, of gas in the room, both burning and from the coal stove. One winter I thought surely we would succeed, if it were possible; so we had a large glass case made, to stand on the flower table; it was about six feet long, two feet wide, and two feet high. In the bottom of the case we spread sand to the depth of two or three inches, we then placed our flower-pots in it and kept them well sprinkled. The case had a very good southern exposure, and the top could be easily lifted off, to allow fresh air to circulate freely. This seemed, however, to be of no avail, for the plants seemed to wilt and die, just as they had been doing before without it. We gave up, finally, in despair, and put the case in the garret, out of sight. Now, if you can tell me the cause of our poor success, I would be exceedingly obliged to you for the information. Do you think it would succeed in a room without either fire or gas?

**Answer.**—Take your plants out of the pots; if you have not got space, build a deep basin at bottom of the case, four inches deep, fill with good earth, put your plants in, then water twice or three times a week; keep top closed, and do not open unless there is a surplus moisture inside; put broken charcoal and pottery below the earth; see that the water drains off and does not stand, and your plants will grow successfully.

**Questions.**—If it is not too much trouble, will you please answer a few questions through your columns: 1. How can I keep the worms away from my Roses? 2. Which is right, Wistaria or Wisteria? 3. Is the Easter Lily the same thing as the Calla? If not, what is the difference? 4. Do people now think flowers are bad in a sleeping-room at night?

ALLIE.

**Answer.**—1. If you mean Rose slugs, throw dust over them, or tobacco "soap," or carbolic soap, diluted in water. 2. Wistaria is right. 3. The Calla Lily is the only Lily in bloom at time of Easter, although the Liliun Longiflorum is being forced for Easter purposes. 4. Flowers are not injurious in sleeping rooms, not half so much so as the bad breath of occupants who do not ventilate at all.

**Answering Questions.**—The editor would gladly answer all questions, personally, by letter, or in THE FLORAL CABINET, but the task is so great, and we receive so many thousand letters, we must beg pardon for our deficiency of time and space. Our spirit is willing and glad to oblige, but we can only select such as are most important. We are glad to have our readers contribute their experience, how they succeeded. Such items as these are the best answers to questions. "Offers to exchange" plants, we cannot find space for, except occasionally. Inquiries desiring an immediate reply, if accompanied with twenty-five cents, will be sent to a competent florist, with directions to send full information by private letter. These statements are necessary, so the reader must not feel neglected or disappointed. We do the best we can with such an army of admirers.

## Floral Contributions.

## HOW A PRETTY ROOM WAS DECORATED.

I must tell you about my birthday present. At the close of a ten months' hard study at school, I was allowed the pleasure of making a visit to a friend's house in a neighboring village, with the understanding that I was to return home on the 7th day of last August, which was my fourteenth birthday. After a pleasant time of a few weeks, a summons came for me to return to my home, and I was most agreeably surprised, upon entering a handsomely-furnished room, to be told that it was my birthday present. It had originally been my room, but so completely changed that one could have never recognized it as being the same. It had been repapered, painted and varnished, and furnished entirely new from one side to the other. The paper on the walls was sky-blue, with heavy buff bordering. The wood work of the room was painted in imitation of maple, to match the bordering. The carpets were composed of remnants of three-ply, purchased at the low price of eighty cents per yard, and so arranged as to appear to have been pieced by design. I have, you see, a new three-ply carpet for half price, which is greatly admired by all who see it. The wardrobe, bedstead and bureau are veneered with walnut; the lambrequins over the window are ruffled and faced back with red oil-cloth calico, mounted and looped back with red worsted cords and balls; the cornice is composed of rustic work, straight at the bottom and scalloped at the top, the scallops at the centre and at each corner being wider than those in between. A basket formed from the globe of a broken goblet, with red zephyr filled with grapes and flowers, hung between the curtains just below the cornice. Over the cornice hung the motto, "Our Father shall give His Angels Charge Over Thee," embroidered in variegated red zephyr and framed with a rustic frame. On each side of the window is hung a cornucopia of rustic work filled with feather flowers and dry grapes. Above this hang oil cromos in rustic frames to match the cornucopias, all hung with coarse worsted cord and tassels to match. The wash-stand is a dry goods box of just the proper dimensions, with castors to make it easily moveable; curtains to correspond with the lambrequin tacked on all sides, and a white marble oil-cloth with a two-inch edging crocheted with red zephyr for the top; a beautiful set of red and white mats for the wash-stand set; a screen at the back, to correspond with the curtains, the full length of the stand about eighteen inches wide. Above this hangs a bracket with one drawer and two shelves. On these shelves are arranged various little articles of interest; the whole arrangement, exclusive of the bracket, costing only seventy cents. On the stand was a beautiful chamber set, a present from "big brother." Over the bed hung a rose-colored mosquito bar, with a cornice of rustic work around the top four inches in width; on the bed was a pair of beautiful pillow-cases embroidered in red and a beautiful pattern for the bureau. There was also a beautiful set of mats and a toilet given me by my little sister, and a handsome comb and brush given me by a schoolmate; also, various other little articles, presents from friends. In the centre of the room was a handsome work-stand, a present from my father, and on it were two bound volumes of the FLORAL CABINET and an autograph album, with this written on the first page: "A happy birthday for my little daughter, and as this day returns in each succeeding year, may it find her adorned by

every grace and crowned by every virtue. As she grows in years so may she increase in wisdom," to which was attached the autograph of my kind father. On each side of my stove is a pair of ottomans made of boxes covered with pieces of carpeting stuffed with moss and supplied with castors; they are cheap and convenient. On the wall is a hanging basket made of hoop-skirt wire, tied with candle-wick and dipped in melted wax, composed of one part of beeswax to two parts of rosin, and colored with five cents' worth of vermilion to give it the appearance of coral. Fastened on the handle of the basket is a stuffed pigeon in the act of alighting, with a paper in its mouth, intending to represent a carrier-pigeon. In the basket are the numbers of this year's CABINET, to which my mamma says I am indebted for my present. If so, I hope that every mother in the land will subscribe for it and treat their little daughters as my mamma has me. Over one dozen pictures adorned the walls of my room, most of them with frames of rustic work made by my good mamma. Two are made of brown wrapping paper, and resemble carved wood work, some of straw and others of pine cones. LADY M. FOWLER.

## PLANTS FOR SHADY PLACES.

I was much interested in Mr. Drew's article in the September CABINET, concerning plants for shady places. I have been obliged to pay especial attention to that subject, having two shaded beds in the centre of my garden. One is much shadier than the other, there being two hard maples to cover it, and they make such a dense cover that even the dew hardly gets under them. I find Fuchsias do the best there, either sinking the pots, or, if old plants, setting them out, but they must be faithfully watered. The blue Day Lily blooms nicely in the densest shade here, and so do Begonias, especially the grape variety. Larkspurs bloom prettily, too, but they make rather straggling plants. Toward the edge of the shaded portion, I find that the Centaurea Gymnocarpa and the variegated Abutilon grow splendidly, and Coleus flourish also; but Geraniums don't like this corner.

My other bed is shaded by but a single large tree—a Balm of Gilead—which has a rather loose foliage; and the best is that not only do the plants look thrifty, but they would not do as well anywhere else. At the edges I have Geraniums; then a white-flowered Begonia, with plain green foliage. I think it is called the Cone-shell. It blooms all the time, and is a most beautifully shaped plant. Grouped round the tree trunk, in pots, is Eupatorium and Libonia taking care of themselves, except as to water, for the summer. A Coleus leans against the trunk almost and grows like a weed, but a broken bough gives it the sun for two hours in the morning. Another pot holds a Farfugium Grande, whose yellow spotted leaves have been greatly admired this summer. I have owned it but a few months, so I want some of the CABINET authorities to tell me how to winter and how to propagate it. Being a bulb, I should think it ought to be dried off. A Cureuma variegated also lives near, and I don't know what to do with it either. The tuber came from the Brazilian department of the Centennial Exposition, and was not potted until some time in June, and is now about ten inches high, not variegated in the least. I was delighted to have Mr. Drew recommend Candy-tuft for shaded places. Never having raised a respectable piece of that indispensable flower, it gives me courage to try again. Speaking of Marigolds, I hope that charming little plant, the Tagetes Signata (Pumila), is in every garden that the CABINET visits.

It is by far the best of the family, the Fern-like foliage being excellent for bouquets. These trees of mine, though for a long time a trouble, I now consider the greatest treasure in my garden, for they give me a bed to the north of them, shaded from the sun, yet fully exposed to the light and air, in which my Geraniums luxuriate, growing and blooming marvellously. I never see such fine plants anywhere else, and I ascribe their extra beauty to the location mainly, assisted by liquid manure and soapsuds, applied once a week. I hope to hear about the Farfugium and Cureuma very soon. Mrs. J. H. B.

Dyer, Ind.

## NYMPHÆA ODORATA.

I have tried the plant two years in succession, but on account of much bothering with it the first year, my experience has been rather "checkered with good and evil," and my Lilies finally came to naught altogether, in this wise:

I had at first a molasses hogshead, and having wintered the roots in an old tin oil can, I planted them in the hogshead, being puzzled whether to lay them flat in the dirt or to set them up on the end. I, however, decided to do the latter, and they did well for a while, until I noticed the water gradually turning blacker and blacker, and the plants not doing quite so well, which I think was on account of too much manure. I next planted them in a barrel, but at last went back to the hogshead, in which the plants grew until the vessel "burst all to smash," letting out the water, when I was done, and gave it up in disgust for that year. During all this bad treatment my Lilies kept on growing, and Mr. J. E. S. Crandall, of whom I had purchased the roots, very kindly also kept on answering my letters of inquiry.

My experience this year, however, has been very different. I purchased four more roots from Mr. Crandall, prepared a whiskey barrel by sawing it in two above the hoop next to the middle, and did exactly as directed by Mr. Crandall, laying the roots flat in the dirt, which is garden soil without any manure whatever, filling the tub with rain-water and letting it alone, sitting in a sunny place.

And right here I would remark that I think a whiskey barrel preferable to a molasses barrel, on account of the molasses retained in the wood, forming an acid in the water, which is the contrary of what we need for the health and growth of plants. This is, however, only a surmise of mine, and may be incorrect.

All of the four roots bloomed and otherwise did well. The blooms open early in the morning and close toward evening, each single one lasting three or four days. They are of marvellous beauty, rivalled by nothing I have seen yet in the shape of a white flower, except the "Koenigin der Nacht."

I shall, however, try the hogshead tub again the next year, as I think the water surface of a barrel too small, thereby greatly cramping the leaves and spoiling the appearance of the plant. I also think it necessary to keep the water in the tub to the depth of two feet, as I had occasion to visit a section of South Carolina where they grow wild, during the past summer, and saw the Nymphæa grow in mere puddles, and bloom well. Altogether, the Nymphæa is to be recommended for the following reasons:

It does not drown in wet weather, nor parch up during a dry season, and needs no other work except keeping the tub full of water, of which any kind will do, though rain or brook water is preferable.

THE MAN THAT LOVES FLOWERS.

[Written specially for the LADIES' FLORAL CABINET.]

## Winnifred's Will.

By AUGUSTA LARNED.

### CHAPTER II.—(Continued.)

"And it was then the good pastor wrote to your uncle here in America?"

"Yes, it was then he wrote, and my uncle replied at once, and arranged for my voyage. He sent money to pay the passage, and appointed the ship in which I was to sail, and the day he would meet me in New York. The good friends of my father and mother sold all our small effects—the unpublished music, the dear old violin, a real Cremona—the humble things we had always used. They made a little purse for me, and bade me adieu with tears and prayers."

"How strange that your uncle failed to keep his appointment," said Winnie, musingly.

"Oh, that was the terrible moment, when I found myself alone in a strange country, there at the busy crowded wharf, and all were hurrying from the ship. Then your good cousin Bradley saved me from despair. He had been most kind during the voyage, in the terrible *mal-de-mer*. Finding me all alone he sought occasion to speak. He helped me to the deck and cheered me with pleasant words. When he saw me now, pale and scared, as no one came to claim me, he spoke to me gently, and soothed my fears, and at last he took me from the ship and passed my little box through the customs. I knew the name of the hotel where my uncle was to lodge. He went with me there, and made all possible inquiries. For three days he worked and sought, while I remained alone in that terrible hotel. He engaged the police, but no such man as Walter Freeborn could be found; and then he told me he had secured a home for me in the country, to teach the French and music to a young cousin. But we do not work, *ma chere*, at the French: I cannot induce you to touch the keys of the piano."

"Oh, by-and-by we will begin French," said Winnie, carelessly, "but I have no taste for music, and why should I pin you down to that drudgery when it would not do me a particle of good? I want to enjoy you as a luxury. Virginia, at least for the present. I do not need a governess, but I do need a friend, a sister, some one to love with all my heart. Bradley for once has shaken off his early habits, and shown himself indefatigable in your service. I shall always bless him for giving you to me. I had to struggle with papa, and contend with mamma about you, but that was only fun. When Bradley and I are married, and have grown indifferent, or perhaps are hating each other devoutly, I shall always remember his kindness to you, and the blessing he conferred upon me by sending you to this dreadful old house."

Virginia did not speak. She sat with her hands clasped and her eyes cast down.

"Bradley has written to that town in Nevada where your uncle lived, has he not?"

"O, yes, he has written, and the answer came that Walter Freeborn had removed from there months ago. No one knows where he is at present, but Monsieur Halecourt has put an advertisement—what do you say in English?—into one of the great papers that goes everywhere. My uncle, if he is alive, will see it; he will come for me to-day—to-morrow—next week," she added with a kind of awe in her pale face.

"He shall not have you," retorted Winnie, seizing hold of her dress. "He has no claim upon you now, when he left you in your need to the tender mercies of strangers; you belong to me, and we are never to be separated far, for I will provide for your future."

Virginia turned slightly pale. "God disposes," she murmured.

"We must go in now," said Winnie, getting up lazily and gathering the things from the grass; "that dreadful old priest has come, I suppose; it is a penance to sit with him at table, he has such dirty hands, and such a sloppy way of eating. They say at Cloverbrook that he sits barefooted in his garden, and sleeps for hours every day. He is only an Irish peasant with a tanned head; but mamma would get down and let him tread on her if he so ordered."

"She does not regard him as a man," said Virginia.

"Nor I," returned Winnie, with a little scornful laugh; "he seems more like a pig."

As the two girls entered the hall door, they were confronted by a strange group. Edgar was there looking pained and miserable, and Mrs. Braithwaite had sunk upon a chair and covered her face with her trembling hands. Father Dooley, with his slovenly shoes untied, his mottled hands not too clean, his long flapping coat skirts, and vulgar, common face, now quite white and tremulous, was moving towards the door, for the old judge was menacing him with his stick from the top of the staircase, waving it quite wildly, and looking like an aged vulture, ready to pounce down and tear something with his cruel claws and beak.

"Get out of my house," he cried to the priest, "and never darken these doors again."

"I am about my master's business," said the priest, with a strong Irish brogue.

"You're a hypocrite and a gormandizer," screeched the wicked old man; "you make it a business to hoodwink silly women, and

rob them of their money. Ugh, get along with you. I won't have you on the premises. If he don't move lively, Swayne set on the dog."

"Oh, pardon me, father," cried Mrs. Braithwaite, sinking in a lumpish way upon her knees. The priest extended his hand over her head.

"Bear up under persecution, my daughter. Power from the blessed saints will be bestowed upon ye." And he took his way out of the house.

### CHAPTER III.

"O noble strain!  
O worthiness of nature! breed of greatness!"

Another beautiful morning in that leafy country, with a merry little breeze sending light sends of purple cloudlets over the green hillsides, that smiled and grew sober alternately, like a rognish dimpled child's face. There was the pride of the meadow and the milky alder blowing in wild hedgerows, and everywhere the twittering of birds and the flutter of butterflies' wings. The lanes where cows plodded early and late, were buried deep in gadding grapevines, and the wild sumach and straggling clematis. Blackberry bushes sprang up everywhere along stone walls and waysides, and were burdened with green and red fruit. The whole land was crowned with the luxuriance and glory of the mid-summer.

Virginia had seated herself in a low rocking chair on her favorite Eastern porch, under a brilliant wreath of the trumpet vine. Here she could see the blue hump of Saddle Back, and catch a glimpse of the shining mirror of the lake, called Glenmere, and a turn of the elm-shaded road, where a great wagon, loaded with golden grain, was creaking on toward the barn. She was dressed in a light buff wrapper of cheap cotton—for her gowns, though of the simplest, were generally in light and delicate hues, and had the quality of always looking fresh and unrumpled. Her lap was half filled with brilliant petunias, fuchsias, and salvias, mixed with fragrant sprigs of mignonette, heliotrope, and a few large dark pansies. A round stand was drawn up beside her with some quaint old wine glasses upon it, in which she was arranging her flowers.

Winnie was seated on a stool, a little way off, with her long, slim hands clasped easily around her knees, and the masses of her dark hair just ready to tumble from the pins that confined it. Her hat, a coarse straw one, with a red ribbon twisted around it, had fallen back and was hanging by the strings to her neck.

Steenie lolled on the step below, with his ragged elbow holding down the fluttering leaves of a primer, while with a sharp stick, in the other hand, he prodded a slimy black beetle.

"You are like a picture," said Winnie, watching Virginia, "but I can't fuss over flowers as you do, I am too impatient to study artistic effects; I love great masses of color, splendid reds, and purples, and blues, and if I had not some standard of taste outside my own instincts, I should dress like a gypsy or a squaw. But you, Virginia, are a womanly woman down to your pink finger tips. You were born to pet birds and flowers, and sing little love songs, and make some man insufferably vain and conceited with your boundless devotion."

"There, you are making sport of me," said Virginia, looking up with a smile in her eyes; "you are wishing to say that a womanly woman is, how shall I say it—contemptible?"

"No, I am not, Virginia; but I could not be such a one if I tried. I am an anomaly, and ought to have been born a boy. That would have suited papa and me much better, but it is weak and silly to bemoan one's sex. I shall have to try and put up with myself. Come, Steenie, let me hear you read."

"Yes, Missy," responded Steenie, as he reluctantly raised himself to a sitting posture, and allowed the beetle to escape. "I see powerful fond o' larnin'."

"Powerful fond o' larnin' mischief and evil," said old Nanna, sticking her shiny face out of the kitchen door.

"I'm afraid that's true," remarked Winnie, seriously. "Steenie, you were more than half tipsy that day you went out in the boat with Finster."

"'Twas that pore white trash, Sandy, as done gone 'ticed me to it," said Steenie, feeling safe under Winnie's guns. "De ole 'ooman was unreasonably savage and aggravatin'. Its Gandy, Little Miss, as is allus drivin' me to destruction wid her drefful bad temper; but I wasn't no time off my legs from de apple-jack dat dar day in de boat."

"I 'low I was riled," murmured old Nanna, half convicted, "by dat dar ole priest of Belzybubby; felt suthin' workin' inside like de stuff in a winegar bar'l—if dar isn't no bung-hole de bar'l busts."

"I don't no how like to hab de bung-hole made frew my head," remarked Steenie.

"You ran away and left no one to do a hand's turn about the place," said Winnie, with a clear, steady look of arraignment in her dark eyes. "When Father Dooley was sent off, Mr. Edgar was obliged to fetch his horse."

Steenie sniggered out, "I jess to see Mass'r Edgar sarvin' de ole boy!"

"Pears I know, remarked Nanna, with a twinkle in her eye, "what done gone an' roused ole Mass'r. 'Twas de smell ob de chicking cookin' in de pot, for de priest's dinner. He's got powerful sharp smellers, honey, and he couldn't 'bide dat no way. De ole Mass'r hasn't 'peard' like hisself sence dat time. He's dat trembly as a leaf, and twice he's shook his stiek and drove me out ob de room, as he never did to ole Nanna no time afore now. 'Pears he's broke fast these few days."

"Poor papa," said Winnie, with a sigh, "that encounter with the

priest was too much for him. He had not taken a step before for six months, and I can see that he's not himself, for he is terribly irritable even with me."

Old Nanna waddled away, shaking her head ominously.

Winnie sat for a moment with her chin dropped in the palm of her hand. "Virginia," said she, suddenly, "I never saw a better piece of breeding than Edgar's treatment of the priest; he dislikes him like poison, but he felt the old man had been ill-treated, and he served him as if he had been a saint out of heaven. Did you not think it fine, Mousie?"

"I admired him for doing a kind action."

"There, I knew you admired him, and I shall make him happy by telling him so."

"Oh, no, no!" cried Virginia, clasping her hands together with an imploring air. "Why are you so cruel? Why do you love to torment poor Mr. Edgar?"

Winnie gave an impatient twist to her shoulders, and turning away, bestowed her attention on Steenie's lesson. "Come, you little scapegrace, let me hear you read. What is that word?"

Steenie scratched his wool, cocked his head from side to side, and eyed the word suspiciously. "I knows dat dar word well enuf by sight, but I can't no how call him by name. Dat am strange how a pusson'll know a word when you hears him spoke, but can't tell nothin' 'bout him when you sees hissen's likeness. I tells you what, little Missy, if you'll agree to let me off on de readin' I'll show you de peartest pair o' game chickens you eber sot eyes on."

"Where did you get game chickens, Steenie?"

"I kotched 'em."

"You don't mean to tell me you have been stealing?"

"No, Missy. Don't 'euse me wrongfully. Dat's what dey calls bearing false wickedness. I'll tell you de livin' truf. Gandy's ole man, my granddaddy, had a big Bible, full of picturs, dat he used to preach and 'spound out oh on Sunday. He could read all but de biggest words, an' dem he guessed at powerful well. But Gandy can't read a hooter; she only use de ole book to kneel down on when she's prayin' to de Lord dat I may be saved from de galluses, an' fire unquenchable; an' she puts it in under her pillar when she hab got a misery in her head, or tinks she's been tricked, or dat kine ob foolin'. Skinny Dater, he took a notion to de picturs, an' offered dat pair ob lubly game fowls. An' see here," with a tug under his waistband, bringing up a large brass watch, attached to a huge chain of the same metal, "he's gwine to let me carry dis to boot, for a munf or two."

"You wicked boy," Winnie was shaking with ill-suppressed laughter, while a look of real dismay came into Virginia's face. "Do you mean to tell me that you have sold your poor old grandfather's Bible for a pair of fighting cocks, and the privilege of carrying about a brass watch?"

Steenie hung his head.

"Go this minute and get the book back, or I will tell mammy."

"Little Missy," said Steenie, with an air of injured innocence, "I'd have my ban' chopped squar' off if you tole me to, but it do come powerful tough to gib up dem lubly chickings. If Skinny Dater has cut out dem picturs, I shall hab to paste in some from de Perlice Gazette. Gandy has gone bline, an' 'twont signify, she'll nebber know de differencee."

Winnie was still shaking spasmodically, and had her back turned toward the young scapegrace as he took himself off.

"I see you don't approve of my method of bring up that boy," said she, looking with mock humility into Virginia's face.

"I am only afraid he will some day break his old grandmother's heart."

"No danger of that, for the good predominates in Steenie. Don't you see how easy it is to control him through his affections. But I can't help sympathizing with the idle, vagabond side of human nature. The world would be insufferably stupid if everybody was good. I don't take to my book any more than Steenie does. I have learned what little I know because I have been ashamed of being called an ignoramus, and one can accomplish by force of will anything one sets one's self about. I yawn over a novel, even, after ten minutes. You, dear, are a little Minerva of wisdom, but I am half a savage. I want to learn facts and things at first hand. I love to live, and feel the rain, and the sun, and the flowing wind; I could kiss the dear old earth because I am alive, for pure joy." Leaning back, with half-shut eyes, she added, "It is a wonder I ever took to a perfectly good person like you, Virginia. Mr. Edgar is perfectly good, but I detested him for a long time, and can only now do him justice when he is out of my sight."

Virginia gave her a glance of reproach, as she selected a tea-rose bud from the fragrant heap in her lap. "It is unkind to over-praise me," said she, "but I know all you say of Monsieur Edgar is true."

"He is more than good, he is a hero!" exclaimed Winnie, suddenly straightening herself and opening her eyes. "He was always very religious, so he has told me, and he educated himself for a preacher with great effort for he was poor and had no friends that could help him; finally, he went away from the theological school with the highest honors. He became the pastor of a rich church that almost adored him for his eloquence and fervor; but one day there came a change; Edgar had studied and looked deeper into things. He could not preach the old doctrine, for he believed he had got hold of a new truth; he was impelled to speak out his convictions, and the church hissed him away. He was disgraced and could get no place or employment: it was then that papa found him by advertising, and here is one of the most eloquent men of the day tied down to uncongenial drudgery, and eking out a livelihood by chance literary work, because he would be true to himself."

"That is grand," said Virginie, "it is like the confessors and martyrs of old; and living true to one's best self may be harder than dying for the faith; but why," she added, looking straight at her companion, "do you treat him so unkindly? Why do you mock as if you believed nothing?"

"There is but little that I do believe," returned Winnie, with a careless laugh. "My father has taught me to doubt, and there is a delight in tormenting some people I cannot resist. But don't view me with such horror. Mousie, as if I were a monster of iniquity. If I have given Edgar wounds, perhaps I can pour in oil and wine. Nothing would make him so happy as an independent chnrch, with an assured support, where he could preach without fear or favor. I have thought of giving him this. I could do it when I come of age, and get control of the fortune my grandfather left me."

"O, you are a noble creature!" exclaimed Virginie.

"In spite of all my unpardonable sins, and the contradictions of my nature. Do you know what I think you were made for, Monsie?"

Virginie shook her head.

"For a clergyman's wife. Think of what a comfort you would be to the old women and children, and young mammas. How sweet and perfect a life you would lead in that calm repose that would drive me raving, distracted, and make me break all the commandments at one and the same moment."

A violent rush of color came over Virginie's fair face, and her hands trembled so that the flowers dropped out of them. "Do not try to order my life for me," she said, in a low, pained voice. "It would be better that I should drift away, far away, among strangers, I know not where."

Before Winnie could answer this half-suppressed outburst of passion and sorrow, so unusual in the gentle girl before her, Mr. Edgar Swayne presented himself on the vine-clad porch, and bowed gravely to the young ladies.

"Miss Braithwaite, your father requests that you will wait upon him in his study."

"Now I am in for a lecture," said Winnie, with a careless laugh. "Mr. Swayne, won't you take my seat here on the stool. I have been adoring Virginie. You know every fair saint ought to have a worshiper."

"We are forbidden to fix our eyes on earthly idols," returned Edgar, and he looked searching at Winnie.

She colored a little on her dark cheek, in spite of herself, as she brushed past him, giving a slight impatient twist to her shoulders, which was habitual.

He sat down rather awkwardly on the stool, as he had been ordered, but Virginie was ill at ease, and pushed her chair nervously back from the little stand, with its glowing flower vases, and made Hector, the hound, yelp with pain, as the rocker grazed his paw.

"Don't let me embarrass you, Mademoiselle Duval," said he in a low voice, picking up some flower stalks that had fallen on the floor, "but I have a favor to ask of you. There seems to be a bond of union between us, a kind of kinship in misfortune, for we are both very singularly situated in this house."

Virginie gave another little hitch to her chair; she dreaded to enter upon confidences with Monsieur Edgar, for her nerves were still vibrating from the effect of Winnie's thoughtless words. But Edgar was too thoroughly engrossed in his own emotions to remark her manner.

"We find ourselves very singularly placed here," he repeated, "and I want to ask you if you think Miss Braithwaite desires to have me remain? I should have gone away long before had not the idea suggested itself that under circumstances not unlikely to arise, I might assist her in carrying out her plans, or in some manner be of service to her. Her father's state of health seems to me very precarious. He is failing much faster than his family seem to realize, and should he die suddenly, she would be helpless and almost alone."

"Miss Braithwaite would never be helpless," said Virginie, in a low voice, evading the question she was determined not to answer.

"You mean that she has a great deal of latent force of character; that she would develop a strength of will, firmness of purpose, and clearness of vision, no one now gives her the credit of possessing. I understand all that as no one else can. But tell me, do you think she would wish to have me remain here?" and he looked fixedly in her face.

Virginie's heart was beating tumultuously. Of all things on earth, at that moment, she did desire that he should leave Halcourt Hall, for she felt, in a vague, half-terrified way, that destiny was entangling the threads of their lives, and against such a chance her whole nature revolted. She could not truthfully deny that Edgar Swayne, the eloquent ex-preacher and poor amanuensis, did enter into her friend's plans for the future, but now she looked at him with a face paler than he had ever before seen her wear, and said slowly: "Do you know, Monsie, that Mademoiselle is betrothed to her cousin, Bradley Halcourt? Would not he be her natural helper and protector in a time of trial?"

Edgar returned her gaze with a fixed pallor and rigidity, as if incapable of replying. "I have heard," said he at last, with an effort, "some rumor of again uniting the old family name and estates, but it is a matter that must surely be left to her free choice. This Bradley as I am told, is a mere idler, a dilettante, a man of no moral earnestness."

"I know not what you mean," said Virginie, interrupting and flashing out upon him. "Monsieur Bradley is the noblest man I have ever known."

Edgar looked at her without comprehending what she had said. The emotions set throbbing within him seemed to cause a humming in his ears, and partial blindness. He arose from the stool and

mechanically took two or three steps, and then turned back and stood before Virginie, with an almost abject air of pleading. "Tell me," said he, in tones of entreaty, "does she love this—this cousin?"

Virginie wondered at the hardness of her heart. She answered in a clear, calm voice, "Do not the maidens in this country marry for love? It is in France that marriages of convenience are made."

Edgar turned again with a pale, miserable face, and went down the steps, and walked slowly away into the shrubbery.

Winnie was up in the judge's study, kneeling by the old man's arm-chair, where he sat well wrapped and swathed, although the day was sultry. His feet were thrust into a pair of old fur-lined carriage shoes, a rug was folded and tucked over his knees, and a worsted comforter encircled his throat, above which his face rose gray, pinched, and almost corpse-like. All the life in his body seemed concentrated in these wonderful eyes, that glittered and glared, and roved with ceaseless activity about the room.

"You are very ill," said Winnie, tenderly, with real alarm in her voice, as she chafed the chilly, numb old hands, that felt like a bundle of bones and parchment.

"Nothing serious," returned the old man, in a querulous, high-pitched growl; "I have been worse than this, and got up again, to the intense disgust and disappointment of those who wanted me to die, your mother especially. This time it's nothing but a chill, brought on by the excitement of having that cursed priest in the house. I haven't been warm since that day, and I suppose he would say I never would be, until the great burning."

"O, don't, papa," pleaded Winnie, with a shudder. "You are very ill, and ought to let me send for a doctor."

"Doctor!" screeched the old man as well as he could in the midst of a severe coughing fit. "I would as soon have a rattlesnake near me as a doctor. Next to the priestly tribe, I hate the men of pill-box and lancet. I have probed down to the depths of one profession, and I judge of the futility of the others by my own. They are all shallow, ignorant, grasping pretenders and hypocrites. I have found at the centre of the things I have searched, nothing but a pinch of dust. Who knows that there is anything more at the centre of the universe? It is all I shall be when I lie in the coffin. A pinch of dust—this brain has been called the acutest on the bench. When the spark goes out, nothing but a pinch of dust."

His voice had sunk to a gasping whisper, but now he roused himself, and added in his usual peevish tones, "But I am not going to die yet awhile. I won't die yet. Life is as stubborn as death when it hangs on to spite those that long to put us under gravel."

"O, this is dreadful," cried Winnie, as she hid her face against the arm of the chair.

"I don't mean you, child," with a slight softening in his tones, and he put his hand out towards her, and groped about as if a sudden blindness had seized him. "You are the only being that loves me, and the only creature I love. You are a part of myself. We love ourselves in loving our children. Love is only another name for selfishness. It is the sole principle that binds human beings together. I have tried to keep your mind free from superstition and prejudice, and you will see I have trusted you. It is what I have done to few. Distrust of human nature is one of the secrets of power, my child; distrust of human nature, and a knowledge of how to turn its weaknesses to account. But I know you have got the brain of a man, a clear head, and cool judgment. They call me miserly, but you will be no spendthrift. You will come to love money too, my girl, because it will insure the objects of your ambition. O, I know you, I know you all through and through."

The hollow cough seized him again and nearly bent him double; he sank back in his chair exhausted and panting, and when he had slowly come to life again, Winnie said: "I am glad you trust me, papa; that thought makes me very happy."

"I trust you," returned the judge, shrilling out his words, "because you are a Braithwaite clear through, with enough of the Halcourt strain to give you that pride and distinction that never justly belong to plebeians. If the blood of the robodies had not replenished the veins of the rich aristocrats, they would have perished of inanition. I made myself by the force of intellect, and seized the prize; and I have saved and planned all these years for you, Winnie. I wonder now I have been so fond of you, my girl. It is a weakness I cannot understand. Your grandfather left you a good slice of the estate, that you will inherit when you come of age. It includes Halcourt Hall, and the mining property, and three farms in Dingley Hollow; and it has been gaining and making more all these years. I don't suppose you will drive your old father out of the house when you come to be your own mistress?"

"You are very cruel, papa," said Winnie, with tears in her eyes.

"There, don't cry, my girl. Your eyes were not made for tears. I like to see you assert yourself, and walk like a queen, and put yourself on people's necks. Don't turn into a meek, submissive sniveller. I am going to tell you what you will have one day in your own right, and it might turn a stronger head than you have got on your shoulders. You will be one of the richest girls in the country; for what your grandfather left you is only a drop in the bucket compared with the fortune you will inherit from me. You will be my sole heir. I have turned everything to the best advantage. I have made a crown a pound, as the old song says, and you will have it all, after your mother's dower is deducted. And, Winnie, promise me that you won't let those whining, beggarly priests come sneaking around the place, when I am gone. I won't have them canting over my body when it is in the coffin. I have got it all down in writing, and you must sign the paper. This old house shan't be turned into a papistical chapel, if I can help it. I will make my arm long enough to

reach beyond the grave. Your mother must be controlled. She is not fit to guide herself, and never has been. And, Winnie, there is one thing more."

"Yes, papa."

"Would you object to marrying your cousin Bradley?"

"Not if you wish it."

"I do wish it. That is, it is the best arrangement that can be made under existing circumstances."

"I thought you did not approve of Bradley."

"Nor do I. He has got the cursed taint of the Halcourts, the gangrene of all rich, old families, that are dying of slow decay. He is an agreeable cipher, a man in whom the will power has run down; but there is something I must confess to you, my girl."

"Don't do it now," pleaded Winnie, as she observed a flush of agitation in his manner, for his hands had grown hot, and were shaking as they unlocked the muffler from his neck. "I have perfect confidence in you, papa. Your slightest wish shall be my law. Don't excite yourself needlessly to-day, and you know it is not seemly that a father should confess to his child."

The old man choked and coughed violently for some minutes, with spasms and contortions that seemed to wrench the life out of his enfeebled frame, and then, after many gasps and throes, he resumed the thread of his discourse.

"I must speak now to clear away any apparent contradiction in my views respecting Bradley. Not that I think I did wrong. I have no superstition about conscience; it is a priestly device to enslave the minds of men, for the world is governed by self-interest. I don't mention scruples, I haven't any; but I wish you to understand how affairs are related in this family. You are the only woman I could trust with such knowledge, the only one that would comprehend, for I have taught you to think with my brain, to see with my eyes. I once did what the hypocritical, canting world would have condemned in words, while practising all manner of deceit and knavery in secret. I influenced your grandfather's will, and was the means of securing your fortune, but I don't demand any gratitude on that account. I had gained an ascendancy over the old man, who was weak and half imbecile. His affairs were all in my hands. He had quarrelled with his son Harold, Bradley's father, your mother's half brother, a mere idler and spendthrift. He said a hundred times with violence, almost, with imprecations, that he would cut him off with a shilling. I knew it was for the best. Harold had married a rich wife, whose money was settled upon herself; she kept him on an allowance like a pet animal. You can do the same, child, when you marry Bradley. He is that cultivated booby called a man of taste. You will find him expensive, but not so much so as if he had taken to gaming or other fashionable excesses."

"But grandfather's will," said Winnie, who had risen now and was standing before the old man's chair.

"Yes, yes," said the judge, in a weaker and more peevish tone. "I have told you how it all came about; will not that suffice? He was bitter enough against Harold when he was well and strong, but when he got into his dotage, he would drive and snivel over the vagabond an hour at a time. If I had not been on guard Harold would have been sent for, and the whole thing upset, that I had labored so hard and waited so long to accomplish. You have me alone to thank for being an heiress in your own right and title. Your mother's portion was mine of course. The old man knew a wife's interests could be safely trusted in the hands of an affectionate husband." A cynical smile drew and wrinkled the parchment skin around the old man's sunken mouth in a manner peculiarly ghastly.

Winnie was pale, as she stood inflexibly before him, with her cold hands clasped nervously together. "Do you mean, father," said she, with slow emphasis, "that you deliberately planned to keep my uncle Harold out of what justly belonged to him?"

"I don't put it in that way," piped the old man, with a startled look at her face. "What I did was perfectly justifiable. The property would have all gone to the dogs long before this time, if it had fallen into Harold Halcourt's hands. I made you a great heiress, and you have it in your power to more than compensate your cousin for all that he lost. You can make it up to him if anything has gone amiss; and there you stand, you ungrateful girl, accusing me."

"No, no, papa," cried Winnie, in an agony of dread, but still with a firm, pale face; "I do not accuse you; but if there was nothing wrong about the will, why should I marry my cousin Bradley to set it right?"

"You do accuse me," shrieked the old man, seizing his stick with his trembling hands as if he would strike her. His eyes glared, his whole frame was shaking convulsively, and a ghastly, livid hue overspread his face. "You are an ingrate, a viper that I have warmed in my bosom. You stand there as if I were a prisoner at the bar, and you the judge passing sentence of death. It was all a mistake that I saved, and made, and schemed, that you might be the richest woman in the country. But there is time yet, and I will strip you of every penny. I will leave it all to found an asylum for invalid cats and dogs. I will live long enough to take revenge for your thanklessness." Every word came by gasps and spasms, and writhings of the old man's frame. Winnie had sunk on her knees, and with sobs and the dumb pleading of outstretched hands, was entreating his forgiveness. But though his jaw partly dropped, and his eyes seemed to roll up in his head in a fit, he feebly pushed out at her with his stick.

"Go away, go away," he muttered in thick tones, "I won't have you in the room: the sight of you has become hateful."

Winnie sprang to her feet with a cry, and ran shrieking down the back passage.

"Nanna! Nanna! I have killed papa!"

of \$2.50. Address **B. T. Babbitt, NEW YORK CITY.**  
For Sale by all Druggists.

NEW YORK, DECEMBER, 1876.

**MAKE YOUR HOME BEAUTIFUL.**

Home! Southey says:

"There is a magic in that little word;  
It is a mystic circle that surrounds  
Comforts and blessings never found beyond  
The hallowed limits."

Those that have trouble in keeping their Ivy vines through the winter may make beautiful substitutes of wax. If you cannot obtain the moulds, make a smooth paste of plaster of Paris, and press natural Ivy leaves of different sizes into it, taking care to do it before the paste hardens, and to press them firmly into the moulds, so that there will be no air bubbles. After you have formed the moulds take a sheet of green wax of the right shade and lay it on the mould; lay a wire covered with wax along the centre for a stem, then another sheet of wax, and press them firmly into the mould; remove and trim the edges; in this manner form enough leaves to make your vine as long as you wish; then take a good sized wire covered with the wax and arrange the leaves upon it as naturally as possible. Put your vine in a vase or fancy flower-pot, and place it on a bracket under a group of pictures; twine the vine around them as naturally as you can, and you will have a vine that will not freeze the first cold night that comes.

Pressed ferns and autumn leaves are something all can have, and when nicely arranged do make a room beautiful. Take large, feathery ferns and brilliant sumac and maple leaves, and arrange them in the form of lambrequins over lace or muslin curtains, and loop the curtains back with sprays of ferns and leaves. Then hang a pretty hanging-basket or transparency in the window, and you have no idea, unless you have seen the effect of ferns over lace, what a pretty window you will have.

I press my leaves with a hot iron and rub with spermaceti. I always press a few green leaves and vines; the vines work in so nicely with the leaves in ornamenting picture cords, and in bouquets with ferns and grasses. You can make your own vases of the coral work described in the CABINET, putting in little paper cones to hide the stems. Baskets made of

coral work, lined with moss and filled with everlasting, dried grasses and leaves, look pretty.

A beautiful design of everlastings is made thus: Have an oval piece sawed out of wood, about a foot long, eight inches broad and one inch thick. Fasten in the centre a cross fifteen inches high, nine inches across the arms, one thick and two broad. Cover both standard and cross with bright green moss and everlastings, putting them on with glue. Then of heavy wire make an anchor, and wind on moss and everlastings with thread, and put it on the standard, leaning against the cross; form a wreath in the same manner, and put it on the other side. I have one made in this way that took the first premium at the fair this fall.

This design looks pretty on a corner shelf, with lambrequins of perforated board worked with scarlet zephyr and wax beads, with little tassels of zephyr and beads on and between the points, or a lambrequin of spatter work looks nicely.

To make a portfolio for engravings, take two sheets of white card-board the size you want the portfolio. In the centre of one, pin fancy letters to form the words "Portfolio of Engravings," with tiny vines and ferns twined around the letters, and groups of graceful leaves, ferns and vines in the corners; put similar corners on the other sheet, with a bouquet or ornamental design for the centre; spatter the whole, bind with narrow black ribbon, and fasten together with little bows, or spatter with blue ink or dissolved indigo, and bind with blue ribbons.

For imitation of lava work, take two pounds of putty, two teaspoonfuls of coach varnish, two of demar varnish, one of Japan dryer, four heaping teaspoonfuls of burnt umber, more or less according to the shade desired. Mix the other ingredients well together before mixing in the putty. If the composition is too moist, wrap it in paper; if too hard, add raw linseed oil. Make plaster of Paris moulds of leaves, fruit, acorus, wood-carving, cast-iron ornaments, &c. I took a pretty mould from the flowers on a glass fruit stand. Make a little rim of putty around the object you wish to mould, and pour a thin paste of plaster of Paris over it and let it harden.

Have the foundation of your bracket, frame, wall-basket, or whatever you wish to make, made of wood and painted, so that the composition will adhere; then cover with a thin coat of the composition, made soft with the oil; then take impressions from the moulds (you need the composition quite hard for this), and apply before the groundwork hardens. After finishing it let it be until it hardens; then varnish; or it may be gilded by taking one ounce of benzine, cut it with best proof alcohol; apply with a sponge.

LILLIE ATHERTON.

**PUBLISHER'S ANNOUNCEMENTS.**

**Last Number. Renew, Renew.**—All subscriptions to THE CABINET for 1876, expire with this number, both yearly and trials. Renew then quickly, and bring as many new names as possible. To every one bringing three or more subscribers, we will allow toward your extra copy 20 cents for each additional subscriber you get. We hope all are so well pleased that we may have the pleasure of their company again for 1877.

**Back Volumes.**—New subscribers, who are pleased with THE FLORAL CABINET, will find in back volumes an immense fund of delightful reading, pictures, and the choicest of family music; there are single pieces of music so sweet and charming as to be alone worth the price for a volume. We will club these together with subscription for 1877, as follows:

\$2.00 will pay for subscription 1877, the steel plate engraving, and all the back numbers of 1876, January to September.  
3.00 will include all of 1877, 1876, and 1875.  
4.00 " " " " " and 1874.  
5.00 " " " " " and 1873.

Bound volumes for each year will cost 65 cts. for each volume in addition to above prices.

**Missing Papers.**—To any subscriber, at any time, we will always furnish a missing paper. First, ask the Postmaster if a copy came with the label off. If so, it belongs to you; if not, we will send another on notification. We wish subscribers to receive all they pay for.

**Prizes for Clubs.**—A Prince Parlor Organ, worth \$100, is given to the club agent who gets up largest club for 1877. See Oct. Number and Premium List for other Prizes.

**Books on sale. Agents Wanted.**—Our Household Books are so popular, and so sure to delight the ladies, that to any subscriber, club agent, or agent, who can sell copies among their friends, we will give special commissions. They may purchase of us, and we will take back all they cannot sell, and refund the money.

**The Economical Cook Book.**—This is a very neat and useful manual for ladies' housekeeping, cheap and very full of reliable recipes; contains nearly five hundred on all topics. Edited by a Housekeeper of practical experience. Given free for club of three subscribers to FLORAL CABINET, or sold for 80 cents, postpaid by mail.

**Six Months' Subscriptions.**—By reference to publisher's new terms, subscribers are allowed privilege of six months' subscriptions at 65 cents (without Premium), to begin with any number. This will accommodate those who may not be able to pay but for six months at a time. It is better, however, to pay for a full year at one time, and thus save trouble of double remittance and correspondence.

**To Housekeepers.**—Ladies will take note that the Prize Collections of Recipes, which THE CABINET will publish next year, will be of immense value to them, virtually a first-class Cook Book of themselves, worth \$1.50. We do not see how any lady can do without them.

**Special Discounts. Silk Book-Marks for Holiday Presents.**—Until Christmas we will offer collections of Silk Book-Marks for Holiday Presents, at special discount, as follows:

For \$2.00, purchaser may select Book-Marks, worth at retail, \$2.50.  
" 3.00, " " " " " 4.00.  
" 5.00, " " " " " 7.00.

For any chosen from the 75c. class, in lots of three or over, special discount of 20 per cent.

The beauty of these articles is such that all who purchase once will be sure to purchase again. Lower prices will be given to any who wish from one to four dozen.

**A Sweet Home Paper.**—THE FLORAL CABINET is eminently a practical paper of *Home Work*. It avoids fashions and exciting stories, and considers things of common sense and practical use; but specially teaches ladies how to beautify their homes—this is our special mission. We choose flowers as a leading feature, but it is not an exclusive subject. Music, Art, Elegancies, Housekeeping—all we give, have ideas which have cost time, dollars, and experience to procure. There are plenty of papers at cheaper price, but none which give more true worth for the money.

**Household Books. Premiums for Clubs.**—A club of only eight entitles club agent to one of these splendid household books:

"Window Gardening," - - - - - Retail price, \$1.50.  
"Household Elegancies," - - - - - " 1.50.  
"Ladies' Fancy Work," - - - - - " 1.50.

If agent's club is less than eight, 20 cents is allowed toward any book for each name in his club, and he can remit balance in cash. A little effort on the part of each subscriber will enable him to get his book or paper at a reduced price.

**Beautiful Music.**—Back numbers of THE FLORAL CABINET contain dozens of splendid pieces of music, charming home songs and melodies. Not one of them is poor. Not one could be bought in a music store for less than 40 cents. Buy the back numbers, they are rich in merit, music, pictures, and reading.

**Holiday Presents to Ladies.**—In choosing your gifts to present to ladies, do not forget those indispensable books, "Household Elegancies," "Ladies' Fancy Work," "Window Gardening," or some Silk Book-Marks. They are all charming in the highest degree. Nothing can please the ladies more.

**Compliments.**—"There is always a pleasant excitement in the family when THE CABINET arrives. I love it very much, and have never met with a paper which I can more willingly place in the hands of children. I think yours a grand enterprise."

"I enjoy THE FLORAL CABINET very much. It looks so pure and fresh, too, and its embellishments are so charming it seems just the paper for the parlor of refined taste, for either the rich or poor."

"We are highly delighted with THE CABINET. It is always welcomed with joy in our family."

**MAGNIFICENT NEW FLORAL PREMIUMS.**

**"The Floral Cabinet" Collection of New Seeding Gladiolus.**—This is a new collection, never before offered, grown exclusively for us, which consists of twelve flowering bulbs of Gladiolus, of the finest quality and most exquisite variety of colors. The quality of this collection is unequalled, and in every respect, we can safely guarantee them extra choice. The same quality of named varieties of Gladiolus, obtained of reliable seedsmen, would cost \$12. The colors range from the most fiery scarlet to the purest white.

**OFFER No. 1.**—This collection, worth \$12, will be given free to any person who will raise a club of 15 subscribers to the FLORAL CABINET at \$1.30, and also an extra copy of paper 1 year, free to agent.

**OFFER No. 2.**—To any one who will get up a club of 20 subscribers at \$1.30 we will give sufficient bulbs that the members of the club may have each 1 bulb worth \$1, and the club agent the entire set of 12, also with extra copy of paper free 1 year.

**OFFER No. 3.**—One subscription at \$3, will give subscriber the CABINET 1 year and collection free, all worth \$15.

This collection is not for sale by any seed house, and cannot be obtained at any other place, and all are new seedling varieties just originated.

**The Floral Cabinet Collection of Balsams.**—This comprises the best strains of Camellia-flowered Balsams ever offered. The Balsam is a great favorite with the ladies. This collection is the very cream of the extra choicest sorts ever raised. Its value may be judged when the seedsmen have offered 10 cents a seed for all that can be spared. We know there is nothing in Europe or America to equal them. The collection consists of 6 packets, pure white, deep rich purple, brilliant scarlet, crimson spotted, velvet violet spotted, and carnation striped. The flowers are so large and perfect as to be almost equal to roses. The set is worth \$1.50 at least, and can be obtained only on the following terms:

No. 1.—A club of 10 subscribers to FLORAL CABINET at \$1.30, will entitle club agent to 1 set of above packets, \$1.50, and 1 extra copy of CABINET and engraving free.

No. 2.—A subscription of \$2 to CABINET will entitle subscriber to the paper and collection in addition.

No. 3.—A club of 4 subscribers at \$1.30 will entitle agent to the collection tree, as a premium.

No. 4.—A club of 20 subscribers, at \$1.30 each, will entitle club agent to enough packets to present each member of the club with the collection, worth \$1.50, also the CABINET and engraving 1 year, all together worth \$3.50, and the club agent to extra set of paper, engraving, and collection, free.

The supply is limited, and those who desire them will do well to get clubs in as soon as possible.

These collections of Balsams and Gladiolus are named specially after the FLORAL CABINET, and we are very cautious never to send out anything but just as represented. The good name and fame, and honor of the CABINET is the best endorsement of these new floral collections, which are of extraordinary value.

### MODERN POINT-LACE.

On a certain day we visited a Belgian gentleman and his wife, in whose possession were two of the most remarkable pieces of modern point-lace (needle point) that I have ever seen. The first was a three-cornered point or shawl, and was made of creamy-white, diamond-shapen silken pieces joined together for a ground, upon which glowed the forms, colors, and shades, of from fifty to one hundred flowers and exotics, delicate wistarias, blue-eyed forget-me-nots, gorgeous dahlias and roses, and many a floral gem of name known only to the practical botanist or florist. The web was as delicate as if woven of the spider's most attenuated thread, and as strong and elastic as any horse-hair.

It was, in fact, needle point, in both white and colored silk. The whole piece was so filmy fine it could be drawn through Madame Esther's wedding ring. I burst into a rapture of delight when M. Eugene held it up between us and the light.

"I have found it!" I exclaimed, "I have found it! This is the magic web with colors gay, woven by the Lady of Shalott. I

always suspected that wondrous web to be lace, and now I am sure of it."

"Softly," said Madame Esther, smiling, "I think this is modern *point de bruxelles*, and none but the deft fingers of Belgain girls could have perfected these flowers. The fairy Lady of Shalott was no doubt a lace artist, and her web was doubtless colored *passe-*

*ment au fuseau*, but it was not equal to this. Beautiful, beautiful, indeed! It is the rarest piece of work of the kind I have ever seen, and in my day I have handled the laces of imperial and royal wardrobes. Here are flowers of a hundred tints and forms growing into beauty, and arranged and grouped by an artist's hand.

and the fingers of no less than eighty experts in needle point were employed a whole year in executing this wonderful triangle."

This *chef-d'œuvre*, fit for an empress, or a queen of American society, would have found its place among the treasures of some crowned head of Europe, along with the lace dress of as marvellous beauty that was

brought with it to this country, if it had not been for the late Franco-Prussian war. In fact, both pieces were made with the expectation of finding a purchaser for them in the Empress Eugenie. But the revolution in European affairs which banished Napoleon III. and Eugenie from France, seriously affected the lace industries of Belgium, as well as those of France, and the lace artists of M. Eugene's manufactory are to-day engaged in selling oranges in the streets of Brussels, or are starving, and his beautiful laces are in the hands of Custom-house officials. Such pieces of work as the bankrupt lace manufacturer brought over are not at present in demand in Europe.

Political affairs there are too unsettled, the situation too uncertain, for even em-

presses and queens to order \$25,000 dresses or \$5,000 shawls.

Miss Clara Rose, of Philadelphia, had \$7,000 expended on her Latin, French and German education, and then married a man who has to buy his butter half a pound at a time.

PERFORMING "ON THE SLY."

M. Eugene: "The hand of D'Huyghens himself"—gazing fondly at the marvellous creation, as he held it up in such a manner as to show to the greatest advantage the glowing hues that were imprisoned in its delicate mesh. "D'Huyghens designed the pattern, and then painted each flower, petal, leaf, and tendril, separately, for the parchment lace-workers,

## Home Life.

## HORTENSE'S TRIUMPH.

Winter had passed. April with its smiles and tears came, and with it came Fred for his truant little wife, who, worn with the duties of the school-room, cheerfully took her seat beside him in their handsome buggy, and the first day's drive brought them to a picturesque cottage, whose odor of fresh paint, bare level yard, and newly-paled garden gave indications of recent completion. Hortense gave one longing look, which turned to despair as she thought of taking up the old life at Swallow's Home.

"Here I have arranged to spend the night," said Fred; "just walk to the house while I attend to our baggage." She was met by a tidy servant, and conducted to a room whose newly-carpeted floor glowed in the ruddy light of a cheerful fire, while the last rays of the setting sun gleamed through crimson curtains, and fell athwart the cherry bedstead with spotless counterpane and pillow-case. "There is a bedstead just like mine," thought Hortense, "and the counterpane—if it isn't the very same figure!" and once more a little ache aroused, gave a stifled sob and slept in despair. In the absence of the servant, she took a more careful survey, and was struck with the resemblance of the very washstand, bureau and wardrobe, to her own cherry set, save a richer, deeper glow of freshness, and welcome seemed to reach out to meet and make her feel at home. Fred came in, and Hortense was about to call his attention to the remarkable likeness, when the supper bell rang, and Fred led the way to a neat dining-room, with a little parlor stove, a china safe, a refrigerator, a row of painted stools against the wall, and a table set for two. The servant apologized, saying: "Mr. S. said make yourselves at home to-night; sorry dere's no white lady to keep your comp'ny," looking at Hortense. The ache would not sleep. As she poured out coffee in little china cups so like those given by her papa, and was helped on a plate like her own little supper plates packed away at Swallow's Home, to await the despaired of change, Hortense trusted not her voice to speak. "Now this is the way I should like to be fixed, wouldn't you, Hortense?" said Fred, watching his wife with uncommon interest. The aching heart alone responded yes, but a tear revealed her unspeakable despair.

As they returned from the dining-room through the oil-cloth carpeted hall, Fred opened a door, and said: "See what a neat parlor." Hortense noticed that carpet, curtains, settee and chairs of dark maroon, with walnut woodwork in furniture and room finish, displayed the same harmony of color and taste of arrangement as the chamber, but when she lifted her eyes to the wall, she started; was not that her picture in the walnut frame! As the truth began to dawn upon her, with a longing, hungry look, she threw herself into Fred's arms, crying, "What does it mean, darling?" Mingled tears, caresses, and murmured words of endearment explained all. Fred had proved his intention of gratifying his wife, and she was overwhelmed with humble gratitude, and immediately enthroned him again as king of her heart. Fearing this might be a delusion to which she might awake, Hortense slept not, but arose next morning to reassure herself by examining into all the particulars of this lovely home. She found the two rooms up stairs unfurnished; one was filled with the plunder which native economy had prompted her to lay by. There

were old clothes, her old carpet, quilts, a sack of carpet balls of the shavings from her rag-bag, rugs made of scraps, leaky tin buckets, shells, pine cones, bits of wire, bottles, fruit cans and jars, etc.

"I am glad Fred left these rooms for me to furnish; it will give me an opportunity for displaying my ingenuity," said Hortense, as she surveyed this chaos. "This carpet from my old room is faded, and has some holes burned in it, but the wrong side is quite bright yet;" and with some yarn like the filling, and thread like the chain, she darned it across, tying her thread each time to the end of the burnt chain. The carpet was then stretched smoothly, with the wrong side up, over straw evenly spread upon the floor. Upon the hearth she placed a rug, which she had crocheted of scraps of gay-colored yarn and other soft goods, strong but easily torn in fine strips; this shaded from the centre and terminated with a row of notches, shading to white; at the point of each was tied a bunch of white fringe, in the maroon ground fringe which surrounded the rug. It was lined with the coarse cover of a coffee sack, washed, starched and ironed. The curtains, fresh starched and ironed, though they had long hung in her room at Swallow's Home, looked quite new. A bedstead, washstand, and table, which Fred's mother gave him, though a little the worse for wear, were made to look like new by a coat of walnut stain, and afterwards varnished.

Upon the bed Hortense put a comfort made of her old dresses; in the centre was a square of red, surrounded with green, then pink, gray, blue, and the border black. The lining was made of alternate stripes of brown and black, the whole quilted by the seams on the upper side. There was a scrap calico quilt of simple pattern, lined with half-worn calico dresses, and quilted by the pattern; over all was a muslin log-cabin quilt made of scraps, over black alpaca, which, being felled down after joining, served as lining. The bright colors were in keeping with the carpet, rug, and table cover, made of opera flannel and velveteen, after the pattern of the "capitol steps."

Above the toilet table hung a mirror, and upon a snow-white mat lay the brush and comb. Cotton mats with borders of Turkey red, protected the washstand, upon which sat a clean bowl and pitcher, a mug and soap dish. Two neat boxes, with ruffles tacked on, and a pretty cover stretched over a stuffing of fine shavings, finished by a quilting to conceal where the lid closed, served as shoe and splinter boxes, as well as stools. These, with a spare chair from her chamber, completed the furniture of her best spare room. With satisfaction Hortense closed the door upon this chamber and turned to the one remaining. There was little left with which to furnish it. With her \$200 of school money she might furnish it handsomely, but she would lend that to Fred, as he had gone to so much trouble to surprise her, and she would add articles by degrees. Her father sent her a neat cottage bedstead and mattress; this, furnished with new sheets, homemade comforts, and a snow-white counterpane, and the lounge pillows encased in envelope pillow-cases, looked inviting. A box set on end and covered with a piece of oil-cloth, with the front piece buttoned with round-headed nails, served as wash stand and press in which to keep the towels. Upon it sat a pitcher and new tin basin, a goblet, and a saucer for the soap. Another box, similarly covered, served as toilet table, and a cushioned stool, a chair with a leather bottom covered with brown knitted tufting, and Fred's trunk, completed the furniture of the second-best bed-room.

Hortense now began her beautiful system of house-

keeping. She arose early each morning, raised the windows, spread open the bed to air, and after dressing, went to the dining-room to skim the milk, having arranged everything for breakfast the previous night. She kept but one cow, yet she managed to keep enough milk for her own and Fred's dinner and supper, and churned the cream once a week, when they had buttermilk with which to make the bread. They both liked corn bread, and a very little soda dissolved in a teacup of buttermilk made it light, and when baked crisp and brown was more wholesome than wheat bread. Boiled ham or beef agreed best with Fred, and with good coffee made a delightful breakfast. After the table was cleared, Hortense prepared the soiled clothes for the wash, while Susan raked the garden beds and John picked up stones, till 10 o'clock, when preparations for dinner commenced. This consisted chiefly of vegetables, dessert discarded, save for company, when was added a harmless crumb pudding, made of the remains of light bread and beat biscuit, which last she often made on Fred's account. Potatoes left at dinner were made into cakes with a little flour, and fried for breakfast. For supper there was only bread and butter and milk, with a little jam or jelly for herself, as a relish. Fred could not use sweets or acids.

Tuesday was wash-day. While the cotton and linen were in the boil, the flannels were washed out in warm suds and hung to dry; common clothes and calicoes were dipped in thick flour starch after rinsing, and hung to dry, while the linen was first dried and then dipped into starch made of two tablespoonfuls of store starch to a pint of water, with a drop of mucilage or gum-arabic. This was enough for two shirts, two sets of collars and cuffs, and an apron. Wednesday morning these clothes were evenly sprinkled and rolled tightly, and laid in a basket, and Susan was ready to begin ironing immediately after dinner. Hortense usually repaired any damage done in washing, darned the hosiery, aired the clothes, and by night everything was in its place. Thursday and Friday she directed in the garden, unless it rained, when she basted for the machine, while Fred read aloud, and Susan patched the clothes or sewed carpet rags. On Saturday, preparation was made for Sunday. Ham or beef boiled, light bread baked, fruit stewed, dessert prepared, knives and forks rubbed, house cleaned, ashes carried out, hearth fresh coated with clay boiled in buttermilk, lamps cleaned and refilled, chimneys washed in boiling clear water and soda, a bath, clean clothes, and Hortense retired ready for the sabbath. A warm breakfast, to Sabbath-school and preaching, a cold dinner, reading in the afternoon, lunch, and "early to bed, early to rise" on Monday morning.

Thus passed the summer, and when the sharp wind came with a whisk around the corner, as Jack Frost swung his great mantle around his ample shoulders, preparatory to his five months' journey over lowland and mountain-top, then might be seen spread to dry, and hanging in paper bags in the kitchen garret, sage for sausage, hops for yeast, poke-berries for rheumatism; gypsion, hoarhound, and mullein buds to be inhaled with sulphur for asthma, and immortelles and grasses for ornament. Clematis was twined, while green, around picture frames, to open its feathery plumes in the shade of the darkened parlor. Flowers housed, vegetables easy of access, but safe from frost, and winter had come again.

In a home of her own, her sympathizing mother knitting in the corner, while Fred reads aloud, we leave happy Hortense.

## HOUSEHOLD ART.

## ORIOLE.

"The day is cold, and dark and dreary;  
It r-a-i-n-s, and the winds are never weary."

Fannie's hands hung idly by her side, and her nose was flattened against the glass in a way that would have seemed ludicrous to one outside. Pat, pat, came the crystal drops on the window; and the old maple swayed, and wept great tears on a mottled aster that nodded courageously, although it was the sole survivor of a family that had smiled so brightly in the early autumn.

"Girls," cried Cousin Madge springing from the sofa, "I've thinned it all out," as the children say. Very bright blue eyes, and a quick, decided way of saying what she meant, had Cousin Madge. "Lena," said she, addressing the little mistress of the cottage, "what did Jack say to you just before he left for the store?"

"That he would not be home to dinner."

"That if it did not rain we might give him a call; but I should say it rained," said Fannie.

"He said," pursued Madge, "that he had seen Kate's new furniture; that yours looked meagre in comparison, and that he must refurnish with his next quarter's salary."

"O, yes; but really, his old overcoat——"

"Now I propose," laughingly interrupted Madge, "that we three furnish it in a style more useful and attractive than Kate's cold marble tops. We'll have bread and milk for dinner, to save time, and something extra for tea, when Jack comes home. Are you ready to help?"

"I declare, Madge," cried Fannie, "when you start up so, I feel like shouldering the world and running away with it. We are ready. 'Thy will, and thine alone, forever and a day.' You shall be called 'Inspiration.'"

"And you, 'Quotation.' Let me see; your wall-paper is a drab ground, with a scarlet flower and dark green leaf. Have you any green cloth?"

"Several pieces of my old green cashmere."

"Capital! Let us have that scarlet ribbon you dyed with aniline the other day."

"Sacred to the memory of dolls by the score," laughed Fan. "How many times we have adorned with that same ribbon our adorable Victorias and Katinas."

"Now," said Madge, "we'll cut a piece of pasteboard, twenty-three inches long, twenty inches wide at one end, and sixteen at the other, which will be rounded. I will make three pockets similar to those of a comb-case, graded in size, one to be fastened to the broadest end, for razor and strop; one above, for hair-brush and combs, and the smaller one at top, for shaving-soap and brush; the whole to be covered with cashmere, with scarlet ribbon plaited around the edges, a scarlet loop to hang it by, and Jack's initials on the lower pocket, in scarlet ribbon, made-fast with gum. Some day we'll make him a slipper-case of green and scarlet, like the one we read about."

"Wouldn't it be well to tie scarlet ribbon on the door-knob?" asked Fannie, gravely; but her needle flew with a will, and when the dressing case was held up for inspection, she was in raptures. "How lovely! What next, Inspiration?"

"Perhaps Quotation will favor us," suggested Madge.

"If I was to quote now," laughed Fannie, "it would be Saxe, with variations:

"Whatever she did, this maiden fair,  
'Twas certain to fix the public stare;  
And the constant cry was 'I declare!'  
And 'Did you ever!' and 'Just look there!'  
Among the dazzled girls."

"Madge," chimed in Lena, "do you know of any pretty style for pinecushions?"

"I plead guilty," was the reply. "Have you any zephyr?"

"Only red, shaded in the skein."

"That will do. Now, have you common woolen yarn?"

"Not a bit."

"I have," said Fan; "I was going to knit pa some socks, but my ardor cooled wonderfully. But it is ugly gray, Madge."

"Never mind. Obedient, will you wind it in a compact ball, nearly as large as a coconut? We must hurry, for we want it done when Jack comes."

The little wife wound and wound with alacrity.

"Fan, we'll make balls. Cut a piece of pasteboard the size and shape of a cup plate. (If we had no pasteboard, we could make some by joining two or three pieces of thick paper with common paste, and pressing, when partly dry, with a warm iron.) Cut a round hole in the centre; thread a needle with zephyr, and put it in and out of the hole and around the rim until it is filled; thread a needle with strong thread, run it around the edges of the hole, under the zephyr, hold firmly and cut the zephyr around the rim; you see it is all confusion, after you have removed the pasteboard; shear it closely. Here are our balls."

"The little beauties," cried Fan; "I had no idea how they were made."

"Now, Lena, that will do. Wind this zephyr around the ball evenly, until it conceals the gray. We must twist cords of the zephyr; fasten one around the centre of the ball, then another around the centre the other way, then one between these two, each way, making four in all. Now, a short piece of cord to attach these two little balls to one side of the large one; then a long loop of cord on the opposite side to suspend over your bureau from one of the jutting points on the mirror."

"Cousin Madge, you're worth your weight in gold," cried Lena, using a time-worn expression, but using it sincerely.

"Of course you have empty spice boxes," said her cousin, oblivious to the compliment.

"Plenty of them."

"Bring me two of different sizes. I have some perforated cardboard, worked with scarlet zephyr, in imitation of grape leaves. I will fit this piece to the smaller box; then, having fitted one to the larger box, I will suspend it with three short cords from the smaller one; and on the bottom of the larger, we'll fasten these two scarlet balls with cord. Now we'll suspend the whole affair from the other side of the mirror. A match safe, my dears, the lower one for burnt matches."

Lena and Fannie were speechless with admiration.

"If we had not wanted it opposite the cushion, we could hang it like a picture—so." She stepped on a stool and pointed to the wall with a button-hook, felt her feet slipping, caught at something to save herself, and down sat Inspiration on the floor, flourishing a button-hook in one hand and clutching a pillow with the other.

"Hurt you?" asked Lena, half laughing, half anxious; and then the clock chimed five. "Jack will be here soon, and we must get tea."

"And we haven't had our bread and milk!" gasped Fannie.

They looked at each other, then sat down and had a hearty laugh. They were tired, but they didn't care. It had poured out-of-doors all day, but they didn't know it. Their lips had carolled, their hearts sang, their fingers kept time to the music, and the burden of the song was: "When Jack comes home!"

Madge made feather cake for tea—one cup of sugar and milk each, two and a half cups flour, one egg, one teaspoonful butter, cream tartar, soda, and lemon extract. And when Jack came, they let him toast his feet and eat all he wanted, before they showed him their handiwork, for they knew—these wise little bodies—that when a man is cold, and wet, and hungry, he cannot appreciate the beauties even of paradise. Then they took him in there and told him all about it. And the great, whiskered fellow played he was a little boy, and danced, and sung "I've got a dressing-case, and you haven't; I've got a croquet ball for a cushion; I keep my matches in ginger; I don't button myself to the floor with a button-hook, and you do-o-o!"

Then they all flew at him and dragged him into the sitting-room, and I'll wager that no happier quartette possessed marble tops that night.

## PICTURE FRAMES.

"I have made some pretty picture frames. The last one was for 'The Graces.' I had a carpenter to make a pine back or support, about two inches larger than the engraving, and the corners square at the top. I then cut pasteboard for the frame, following the oval form at the top; then I doubled papers eight or ten times, gradually making it smaller—this was for the outer edge of the frame; then I cut paper leaves, ivy and grape, having natural leaves for a pattern, also rose leaves. I took old kid gloves and made three large bunches of grapes, using cotton to make the grapes; then made paper roses or dahlias. With strong cotton thread and a large needle, sewed all to the pasteboard, arranging a bunch of grapes at the top, just in the centre, and a bunch each in the large corners to the right and left of the oval, then the leaves, roses, and grape tendrils, from the vine; when all was finished, I put my picture on the pine back.

## SNOW TREE.

Get a round board (the bottom of a keg is as good as anything), and in the centre of it fasten a broom-handle in an upright position, leaving it as tall as you wish your tree to be; from one and a half to two feet being a very good size. The broomstick should taper to a point at the top. Then bring in use some old skirt-hoops, and cut them in strips about one-half yard long, and fasten on the pole at equal intervals, so as to resemble the branches of a tree. Tear some discarded muslin garment in strips three-fourths of an inch in width, and fray the edges until only enough threads are left to hold it together. Then wrap the foot, trunk and branches of the tree carefully, letting one row fall over the other, so as not to let the wood show. Then make tassels, by taking about five to seven strips of the frayed linen, a finger and a-half in length, and suspend from the tip end of each branch and on the very top. This tree is certainly a thing very beautiful, when carefully formed. It is called the "Snow Tree" on account of its pure, fleecy look.

FLORENCE.

## Household Elegancies.

## DECORATION OF BEDROOMS.

## BED-CANOPY AND LAMBREQUIN.

The illustrations on this page represent several tasteful and inexpensive ways of decorating beds and bedrooms with canopies, curtains and lambrequins.

Fig. 1, is a sketch of some elegant bed-hangings, the upper portion only being shown, as the curtains are easily understood to be continued to any length that may be desired. The canopy should be placed at the head of the bedstead, and hang towards the foot. This canopy is formed by screwing a piece of one inch plank, as long as the width of the bed, and four inches wide, against the wall, and to it fastening the tester, formed of three strips, two the length of the bedstead, and one the width, across the bottom. On this, the cornice of walnut moulding, and artificial carvings are fastened, and beneath this, the hangings. The tester is covered with a tightly stretched lining of white or colored muslin, which may be embellished with a lovely group of flowers, in some beautiful transfer style; or it may be covered with tinted paper. The curtains, of soft, rich woolen fabric, have a border of contrasting color, embroidered with a design such as has been shown in former illustrations. A half-yard plaiting is fastened above these, with festoons of cords and knots, with tassels at various points. The form of the curtains and lambrequin are easily understood by a glance at the illustration.

## BEDSTEAD AND CURTAINS.

The second illustration on this page is a bed, which is really elegant, but not as costly as it seems.

The bedstead can be made by any cabinet maker, of native colored woods, with inlaid panels and veneers. The corner scroll-work, and artificial ornaments at the top of the posts, can be had at little expense.

On the wall, over the bed, nail two brackets, three feet apart, and upon these nail a board four feet long and three feet wide, with the corners sawed off; cover this with neat tinted paper. Artificial carving may be fastened around the board to match that of the bedstead. Now fasten around this, hangings of Swiss, edged with embroidery and lace; or with a border in application of lace and bobinet; or tucks may appear neat and pretty, and spray work will be found to make a charming finish.

These hangings must be sufficiently long and full to

cover the entire bedstead, and almost reach the floor. Around the ornaments on the top, twine a scarf, of material corresponding with the upholstery, and trimmed with fringe.

MRS. C. S. JONES.

BED CANOPY AND LAMBREQUIN.

BEDSTEAD AND CURTAINS.

## FANCY FRAMES.

Several have inquired how to make fancy frames and ornaments. First, I will tell you about some picture frames that are made of arbor vitæ cones, or

burs. The bottom of an old handbox, that had done good service in the family, was found to be just the thing we wanted. We laid our chromo on it, and cut the centre, just large enough to fit it. It is now a nice oval, just large enough for an eight by ten inch glass to fit nicely. The cones were broken apart, and commencing at the outside edge, three rows were sewed on thickly; then commencing on the inside edge, two rows were sewed on; the middle row was made of whole burs. Near the top a small pine cone, 1½ inches long, was sewed. These were the side pieces. The upper and lower pieces were made the same way, only instead of putting the row of whole burs, the pieces were sewed thickly, excepting in the centre of the piece we put two rows of whole burs, arranging them as near like a flower as possible. This frame contains a chromo of tulips. Another is made something like the rustic frames that we see so many of now-a-days. The

side pieces are 10½ inches long and 1 inch wide; the upper and lower pieces are 9 inches long and 1 inch wide; two rows of arbor vitæ burs were sewed on; in the centre of each piece three whole burs were placed. In the centre of the upper and lower pieces we put a small pine cone, 1½ inches long, with a whole bur at each end. The side and end pieces overlap each other and extend an inch; two whole burs are sewed on where the pieces are fastened together. This frame contains a chromo of lilies and tulips. A piece of strong cloth is sewed on the back, to hold the glass and chromos in their places. I have seen frames made of pine cones in the same way; it depends considerably on one's taste and ingenuity whether they succeed or not.

## A HOME-MADE CARPET.

An Eastern lady says: Have any of you a spare bed-chamber, seldom used, which you would like to carpet at little expense? Go to the paper-hanger's and select a paper looking as much like carpet as you can find. Having taken it home, first paper the floor of your bed-room with brown paper; then over this put down your wall-paper. A good way to do this will be to put a good coat of paste upon the width of the roll of paper and the length of the room, and then lay the paper, unrolling and smoothing at the same time. When the floor is all covered, then size and varnish, only dark glue and common furniture varnish being used,

and the floor will look all the better for the darkening these will give it. When it is dry, put down a few rugs by the bedside and toilet table, and you have as pretty a carpet as you could wish.

## Fireside Reading.

**An Organ with a Will.**—The good people of a country village in Indiana desired an organ to assist in the church services. As they could not afford to hire an organist, they got a self-operating instrument, warranted to grind out forty tunes of a religious cast. The instrument was placed in position for the next Sunday. The sexton was taught how to set it a-going, and how to stop it, but forgot the latter. After singing the first four verses of the hymn before the sermon, the organ could not be stopped, and continued playing two verses more; and just as the clergyman finished the words, "Let us pray," the organ clicked and started another tune. The sexton and others tried, but could not stop it. So he got six strong men to carry the perverse thing, still playing, out into the yard, where it continued playing till all the forty tunes were finished.

**This note** from a Chicago girl to her lover was made public through a lawsuit: "Dear Samie, Pap's watermillions is ripe. Come and bring some poetry like you brought afore. My love for you will never flow like water running down a tater row. Bring a piece as long as your arm, and have a heap more about them raving ringlets and other sweet things. Come next Sunday and don't fule me."

**A sick man** in New Orleans was told by the doctor that nothing would save him but a quart of catnip tea. "Then I must die," said the poor man, "for I don't hold but a pint."

**Charles Francis Adams** is the gentleman who so impressed the little girl known to history. Mr. Adams visited the child's mother, it will be remembered. The little one was so afraid that she hid under the table. When Mr. Adams had departed she went up to her mother and asked, in a voice heavy with awe, "Ma, was that Dod?"

**The country storekeeper** said: "Here, my friend, those balls of butter I bought of you last week all proved to be just three ounces short of a pound." And the farmer innocently answered: "Well, I don't see how that can be, for I used one of your own pound bars of soap for a weight."

**Poor Preach, Poor Pay.**—An Onondaga minister, who has preached in an agricultural community, has had a varied experience in getting his pay. One farmer, at the end of the year, offered to settle by giving him a buck, or two dollars in money. The minister took the latter. Another met him one day and said: "I have subscribed forty dollars for preach-

ing; I will give you a cow and call it square. She's an awful poor cow, just like your preaching." The parson drove home the cow.

**A nicely-dressed lady** stopped a boy trudging along with a basket and asked: "My little boy, have you got religion?" "No, ma'am," said the innocent; "I've got potatoes."

**An old farmer** once said, with more truth than elegance: "There are two talks in this world to one do."

watering-pots between the flowers and her own little feet. Her simple but becoming dress contrasted favorably with the gorgeous apparel now worn by the little damsels of the rising generation—a large straw hat and a suit of white cotton; a colored *fichu* was the only ornament she wore."

"What ails dis beoples of America," says an old traveler from Germany, "is dot dey walks mit der legs too much in der sthreet gars out, und don't got some muscles some more."

**Lady Sydney Morgan**, who was very proud of her sister, Olivia, was in the habit of addressing every new-comer with "I must make you acquainted with my Livy." She once used this formula to a gentleman who had just been worsted in an encounter of wits with the sparkling Olivia. "Yes, ma'am," he answered, "I happen to know your Livy, and I only wish your Livy was Tacitus."

**The Princess de Metternich** is as frolicsome as was Marie Antoinette. A Paris correspondent of the *Philadelphia Telegraph* says that her last freak was to go out to lunch in the forest near Marienbad in a cart drawn by oxen, the cart, harness, animals, and all being covered with garlands of flowers, while Madame de Metternich, dressed as a Watteau shepherdess, herself drove the oxen, directing their movements with her rose-wreathed crook. Her guests, who occupied seats in the cart, were all arrayed in Watteau costumes to correspond with that of their hostess.

**A waggish fellow**, somewhat troubled with an impediment in his speech, while one day sitting at a public table, had occasion to use a pepper-box. After shaking it with all due vehemence, and turning it in various ways, he found that the pepper corns were in no wise inclined to come forth. "T-th-this p pe pepper-box," he exclaimed, "is something like myself." "Why so?" interrogated a neighbor. "P-poo-poor delivery," was the reply.

**A Connecticut editor**, in winding up a most touching obituary article, said to the mourning friends: "Be comforted, ye sorrowing ones; there is still a balm in Gilead." The next morning he read: "Be comforted, ye suoring ones; there is still a barn in Guildford."

**When the Breton** mariner puts to sea his prayer is, "Keep me, my God! my boat so small, and Thy ocean is so wide!" Does not this beautiful prayer truly express the condition of each of us?

**If a man** does not make new acquaintances as he advances through life he will soon find himself alone. A man should keep his friendship in constant repair.

"Oh! My!"

"How much will your new school books cost, Johnny?" says father. Johnny calculates to himself, soto voce: "Lemme see—62 cents for the singing book, 75 cents for a new 'rithmetic, \$1.25 for a new 'jography, 25 cents for a hockey, harf a dollar for a new hat, and a quarter for candy." Then, out loud, says: "'Bout four dollars, pa!"

**The Earl of Albemarle** describes the Queen of England when, a bright, pretty girl, seven years old, she day after day watered the plants under the window, where he watched her: "It was amusing to see how impartially she divided the contents of the

**THE Twenty-first Edition** of our celebrated **Seed Catalogue and Amateur's Guide to the Flower and Kitchen Garden**, containing upwards of 200 pages, including several hundred finely executed engravings of favorite flowers and vegetables, and a **beautifully colored chromo**, with a Supplement for 1877, will be ready Jan. 1st, and mailed to all applicants upon receipt of 35 cts. An edition elegantly bound in cloth, \$1.00.

**BLISS'S GARDENERS' ALMANAC**, for 1876, and **Abridged Catalogue of Garden and Flower Seeds**, contains upwards of 100 pages, and embraces a monthly Calendar of Operations and a price-list of all the leading GARDEN, FIELD and FLOWER SEEDS, with brief directions for their culture. A copy will be mailed to all applicants inclosing ten cents. Address

**B. K. BLISS & SONS,**  
34 Barclay Street,  
P. O. Box 5712. New York

**Leamon's Dyes Color Silks.**  
**Leamon's Dyes Color Woolens.**  
**Leamon's Dyes Color Cottons.**

Splendidly adapted for all kinds of fancy work. They make the best and cheapest dyes. Druggists sell them. A book giving full and explicit directions will be sent to any one by addressing the proprietors; or a package of any color will be sent postpaid on receipt of 30 cents.

**ROYAL FRAGRANCE**  
**SOLID COLOGNE.**  
Double Strength of Perfume! Excellent to prevent ravages of moths in clothing. Send for it. 3 samples for 25 cts. Postage stamps will be received.  
DR. W. A. HUBBARD, Chemist, 45 N. Anderson Street, BOSTON, MA. S.

**ROBBINS FAMILY WASHER.**  
We take pleasure in calling the especial attention of our readers to the advertisement of the Robbins Family Washer, in our October number.  
This machine is gaining in popular estimation every day, being especially adapted to the wants of families. It is simple, self-operating, never gets out of order, and will last a lifetime. We advise all of our readers who are in want of a really good washing machine, or who wish to secure a good paying business, to send at once for a sample machine. The price for a sample machine is only \$3. For full description, terms to agents, testimonials, etc., apply to the manufacturers, THE GEORGE D. BISSEL CO., Naugatuck, Conn.

**HAPPY NEW YEAR.**  
Splendid Holiday Novelties! New Year's Stories; New Year's Presents; New Year's Pictures; New Year's Music; New Year's Cabinet Gems; New Year's Chromos; New Year's Poetry; New Year's Chromo Bookmarks; New Year's Household; New Year's Fashions; New Year's Greetings, and other Holiday Novelties, with rare Literary Gems and Full-size Patterns, in the splendid Holiday January Number of DEMOREST'S MONTHLY MAGAZINE, 25 cts., post free. Yearly, \$3, with a Splendid Premium. Do not fail to see or send for the January Number, with the beautiful Cabinet and Artistic Oil Chromos, worth several times the cost of the Magazine. Sold everywhere.

**A TOWN LOT FOR NOTHING.**  
We would call the attention of our readers to the advertisement of the Ohio, Kentucky and Texas Land Co., and to their very liberal offer. They have certainly taken a very novel method of increasing the value of their property, and one which, in the end, will certainly work for the interests of all concerned. The Company are only carrying on, on a large scale, what is done every day in our large cities—selling alternate lots to induce settlers and increase the value of the remaining lots—with this difference: that this Company give away their alternate lots. Mineral City is a growing town, and will undoubtedly become a large city, when the lots that are now given away will be very valuable. The offer is bona fide, and only open for thirty days, as the demand will exceed the supply, and the Company will not dispose of all their lots free. The Company are composed of reliable gentlemen, and our readers can be assured that they will, by complying with their instructions, receive, by return mail, a warranty deed to a town lot, which can be held for further use, or sold, or settled upon, as the owner may please.

**For Singing Schools!**  
Make them doubly interesting by introducing

**THE ENCORE!**

By L. O. EMERSON. 75 cts.; \$7.50 per dozen  
**THE ENCORE**  
Contains a First-Class Elementary Course, with the best kind of exercises, airs, tunes in one, two, three or four parts, for practice.

**THE ENCORE**  
Contains 100 pages filled with bright, wide-awake, easy glees and four part songs. Thus it is a good Glee Book as well as Singing School Book.

**THE ENCORE**  
Contains 50 of Hymn-tunes and Anthems of the best character.

**Mr. L. O. EMERSON,**  
(Half a million of whose books have been sold), has never been excelled as composer and arranger of music exactly adapted to the public taste. His "tact" in this matter is infallible. Then try

**THE ENCORE**  
For sale by all prominent dealers. Specimens mailed, post-free for 75 cts.

**OLIVER DITSON & CO., Boston.**  
C. H. Ditson & Co. J. E. Ditson & Co.  
711 Broadway, Succ'rs to Lee & Walker  
NEW YORK. PHILADELPHIA.

**THE COMPANION** aims to be a favorite in every family—looked for eagerly by the young folks, and read with interest by the older. Its purpose is to interest while it amuses; to be judicious, practical, sensible, and to have really permanent worth, while it attracts for the hour.

It is handsomely illustrated, and has for contributors some of the most attractive writers in the country. Among these are:

**J. T. Trowbridge,** **Louisa M. Alcott,**  
**Edward Eggleston,** **J. C. Whittier,**  
**James T. Fields,** **Louise C. Moulton**  
**Rebecca H. Davis,** **G. A. Stephens,**  
**Mrs. A. H. Leonowens,** **Harriet P. Spofford**  
**Edward Everett Hale,** **Julia Ward Howe.**

Its reading is adapted to the old and young; is very comprehensive in its character. It gives

Stories of Adventure, Stories of Home  
Letters of Travel, and School Life,  
Editorials upon Current Topics, Tales, Poetry,  
Historical Articles, Selections for De-  
Biograp' Sketches, clamation,  
Religious Articles, Anecdotes, Puzzles  
Facts & Incidents.

Subscription Price, \$1.75. Specimen copies sent free. Please mention in what paper you read this advertisement.

# Sweet Little spot on the Hill.

By CHARLES A. BURKE.

1. How sweet are the mem-o-ries of  
2. When I left my own coun - try, and  
3. But now that I've plen - ty of

days long gone by. Once re - called by a word or a thought..... Yet me - mo - ry re - verts to the past with a  
came to these shores I had not a friend in this land..... But at last a kind stran-ger met me at his  
mon - ey in store, To help a poor friend who's in need..... No cra - ven shall say that I've turned from my

sigh, When I think of the plea - sure that's lost..... As down by the stream I pon - der and dream, And  
door, And stretched forth a wel - com - ing hand ..... Yet now day by day I watch and I pray, And  
door The one who for Cha - ri - ty pleads.... And in af - ter years, 'tis then with - out fear Fil

watch by the side of the mill..... Sweet vis - ions of child - hood pass by like a gleam, On that sweet lit - tle spot on the hill.  
strive my poor heart to keep still..... For to me there's a place that will nev - er de - cay, 'Tis the sweet lit - tle spot on the hill.  
tell how I've worked with a will .... To build a neat cab - in for my Ei - ly dear, On that sweet lit - tle spot on the hill.

## Chorus.

TENOR.  
Oh Ei - ly, my true love, Ei - ly my dear, With love now my heart fair - ly fills.... So cheer up, my darling, I'll return, nev - er fear, To the sweet little spot on the hill.  
ALTO.  
Oh Ei - ly, my true love, Ei - ly my dear With love now my heart fair - ly fills.... So cheer up, my darling, I'll return, nev - er fear, the hill.

# THE LADIES' **Domestic Column**

BY HENRY T. WILLIAMS.

VOL. VI

NEW YORK, JANUARY, 1877.

No. 61.

PRICE 12 CENTS.

## A COUNTRY PARSONAGE.

The book-case was already in its place and full, and deserves a passing notice. Of course, no such movable property as Methodist ministers have any right to great, cumbersome book-cases, yet their books are an important item. So *our* book-case was made of packing-boxes, and the boxes were made to fit the books. One box was placed above the other, open side outward, then securely screwed together and stood up against the wall. Where the boxes join, a piece of black walnut, about two inches wide, was screwed on. Two walnut boards the height of the eight boxes, or shelves, as they have now become, were screwed on the ends, a slight cornice over the top, the books placed in their appropriate shelves, and a very handsome black walnut book-case stood forth.

Between the two west windows hung a little cluster of oak leaves, done in pastel, my last Christmas gift to Liddy.

"The home group will hang here," I said, pointing to the only space wide enough for more than one picture, and between the south window and the wall. So the loving father whose face I had not seen for three years, and that I should never again see on earth save as pictured before me, looked down from the wall, and mother's kindly one hung just above, looking as if she would like very much to step down and help. Just beneath father hung the only brother, while at his left was the sweet face of our Margie, who for a year and a half had slept by the side of our father. To the right was our Oracle, and I really think I ought to introduce her, for she forms an important item in our home life. She is the youngest sister of Mrs. Miriam, but the family dignity centres in her. She is a most energetic seeker after bugs, and we call her Orrie, for short. Over the fold-

ing doors hung one of the mottoes so common now; yet I believe they are beautiful educators.

Two or three small pictures, three hanging shelves for books (which I have seen described in the CABI-

NET, and therefore pass by), a mantel-piece full of the inevitable books, a corner closet, with glass doors, filled with that same article, and the walls of our little room were finished for the time being.

BIRD'S NEST.

## DESIGN FOR COTTAGE.

Upon this page is illustrated a design of a cottage in the Italian style of architecture, modified to suit our American climate by a steeper pitch of roof, &c.

This style of design seems to be most appropriate to our cottages of small cost, because of the plainness and consequent inexpensiveness of its details and finish.

The building is intended to be sheathed diagonally and tar papered, thus giving strength and warmth; then to be clapboarded on the lower story and boarded vertically with battened joints above, producing a pleasing variety without additional expense.

The main roof is covered with slate. The interior is, we think, conveniently arranged. We enter a square, well-lighted hall, nine feet wide, containing broad, easy stairs to upper story. We prefer a *square* hall to a long, narrow one, giving simply an *alley* alongside of stairs—the latter generally taking more square feet of space than the former, and being much more cramped.

The parlor and dining-room are connected by large sliding doors. The kitchen is convenient to the dining-room, with passage between. The kitchen is provided with stationary range, with boiler attached for warming water. Force pump to supply tank, sink, &c., complete.

There are three bed-rooms and bath-room on the second floor. All rooms throughout are well supplied with closets. The bath-room has bath-tub and wash-bowl, supplied with cold water from tank in roof.

The cost of this cottage would be from \$2,500 to \$2,800, complete.

DESIGN FOR COTTAGE.

## Floral Contributions.

## MY AFTERNOON AT MRS. BRIGGS.

[This article received first prize floral topics.]

When we commenced house-keeping, Moses and I, our assets were not heavy, and we soon learned that finding a living for two, in addition to the usual outlay necessary to begin a house of one's own, *did lighten* them uncomfortably, especially in the winter, and no work; though M. was skilled in the use of plane and saw. We economized, and several years had passed, bringing with them a reasonable degree of prosperity, yet the old habits clung to him, and he believed, or thought he did, that the mere beautiful should be passed by, mostly, by persons in our circumstances. He was not willing that I should be a breadwinner in any way. "If I attended to my household duties it was enough, he could support us," he guessed. Like a dutiful wife, I acquiesced in all his views and wishes; but I often wished for something to enliven those bare windows and walls, neither very large, but bare, nevertheless. One evening, I saw an advertisement in the *Times*, something like—"10 Beautiful Window Plants for \$1.00. Catalogues Free." How those "beautiful window plants" haunted me. I said to myself, Moses does not care for those things, and I don't think he would be willing to spend much, if anything, for them; but I am going to have them, if it can be done. Fortune favors the brave. Just then Mrs. Ruffle was making a wonderfully extensive trousseau for Miss Precise (aged 36), and she must have the buttonholes very nice.

Now, Mrs. R. can build the most elaborate structure of flounces and puffs and folds, but she cannot make a decent buttonhole. It happens, I have acquired some reputation for excellence in this ornamental utility department; so, stating the situation, she offered me \$1.50 if I would do said buttonholes. I caught eagerly at the chance, for here was the means of getting my coveted plants. Every stitch meant a leaf or a blossom to me; and I enjoyed that work, though the pay was in small proportion to the amount of work, as I found before I got through with it. To lose no time, I had sent for the catalogue, which I examined carefully, and by the time I received my pay I had decided to send for two Fuschias, a double, two single, and one Rose Geranium, a Heliotrope, a Calla and an English Ivy. When they came, they were fresh and beautiful, surely, and there was a bright Coleus added to them. When I went to buy pots, I was astonished at the prices, but was assured that they could be sold for no less; so I concluded to buy two six-inch and one five with what was left of my \$1.50. There were two one-gallon jars I did not need, not good for much else anyway, and I would use some old tin cans. I saw some nice plants in cans in a window as I came down town. Accordingly the gallon jars were filled with mostly manure and a little soil, and no drainage, and the Fuschias put in them. The double and single Geraniums in the six-inch pots, the other single one in the five-inch one, the Calla in a three-pint can, the Coleus, Heliotrope and Ivy in cans holding about a pint apiece. After being thoroughly watered, they were put in the east and south windows, and I watched to see them grow. In a few days the Fuschias began to decay; the leaves dropped off, and they gradually dried up. My sad, longing looks could not save them, and I saw with dismay my Heliotrope turn yellow, then blackness, then the stem looked black too, and soon it, too, was gone. Soon the Coleus followed;

and I fairly cried when I could no longer deny that the Geraniums were likely to perish also. There was one consolation, my Calla was flourishing. That was one ray of hope. I need not follow the course of their lives and deaths, suffice to say, that soon I had left, my Calla, Ivy and two Geraniums, the last with one leaf apiece, about as large as an old-fashioned half dime.

A friend gave me a plant of white-flowering, large-leaved Begonia. I began to think I had watered them too much, perhaps, so tried a new plan with my Begonia. Just a very little was given, on the top of soil, at a time. The result was so unsatisfactory that my husband's sympathies were aroused. "Bella," he said, as he turned away from the half dead remnants, "why don't you ask Mrs. Briggs what to do for the poor things?"—"Just what I ought to have done before; why did I never think of it." The next afternoon found me in her sitting-room, and I do wish I could describe it, but the three to five pages would be filled before I got done, if I tried to; and I would rather tell you what she told me. When she asked me to lay off hat and shawl, I said, with a slight flush I suspect, for it is hard to say one has failed. "Thank you, I will; for I have come for a long talk about plants, if you have the time to spare."—"I always have time to talk about them. While I go for a piece of work for my hands, please look at my pets."—There was one east and one south window, neither very large; the last close by a partition, along which were arranged shelves, so that all the sunshine was used. As Mrs. B. took her seat, she said, "Now, tell me what you want to know about." I told her how unfortunate I was in my attempts at window-gardening: and when I spoke of my Fuschia, I could not help looking at a graceful, drooping one, just laden with its jewels of waxy white and rose; I also saw the shadow of a smile she could not wholly conceal; but she only said, "You made a mistake in putting them in too large a quantity of soil, and it was too rich. For a long time I lost every one of that family I received by mail, and about concluded that it was hardly possible to recover them after being sent in that way; but finally found that no plant small enough to be sent by mail was too large to put in a two-inch pot, and use pure, fresh garden soil to pot it in. When they have got growing again, and made, say, two new sets of leaves, you can transfer them to something larger. A four or five-inch pot will be large enough for a good-sized plant; if they are in a larger one, they will not bloom so soon. The soil should be one-third well-rotted manure (I use that from the cow stable for all my plants) with two-thirds garden soil and, say, three or four tablespoons of sand to a five-inch pot. Some soils do not need any, there being enough in it already. I always wash the sand, if there is any clay in it. They want plenty of light, but are content to get along with very little sun. Unless watered enough to keep the earth moist, they are apt to drop their leaves; yet, must not be allowed to stand with water in the saucers, as no plant suffers sooner from sour soil. I will here give you a word about watering: water when they need it, then withhold until they need it again—whether it is twelve hours, or two weeks. All plants, except Callas (in common culture), love a sweet, well-drained soil. To secure this, drain your pots well, by putting some pieces of rock, pebbles, broken pot, or dishes, or even some straw (fine) in the bottom of the pot, and, if you can procure it, some charcoal, a few small pieces. Now, I usually water from the saucer, especially in the winter, when I use water too warm to put around the stems. Watering from the saucers prevents the soil from becoming hard on the surface.

"After an hour or so, pour out what water may be left in the saucers. The proportions of soil I mentioned are about right for most plants." "But, if I should get the dirt from the roots, I should be no better off than when they came from Post-Office," I said, thinking of changing them from the smaller to larger pots. "Not if you do as I am going to tell you: Have the new pot ready with drainage and soil, half full or more, so that the plant, with the ball of earth around, will not be above the top of the pot, or rather one-half inch below the top; then place the small pot upside down in your left hand, with the stem between your first and second fingers; with the right hand strike gently on the bottom of the pot, when the contents will be deposited in your hand; turn it right side up in the new pot, and fill to within a half-inch of the top."—"I forgot to ask you when you water them, in the morning or evening?" "In the morning in the winter, and in warm weather in the evening; and Heliotrope and Rose Geraniums and Vincas, and all those that need more water, again in the morning. Always give enough to wet the ground through, and when it is dry a half-inch or more from the surface, give again, but do not water when the sun shines hot on them, or you may destroy them." "Now, tell me about Geraniums." "I find that they double-bloom better in three or four-inch pots, and a five-inch is large enough for a large single, and most of them can be successfully grown in a four. They need moderate watering; will stand a good deal of dryness, but do not do well on it. Those of yours you had better take from the pots they are in—the soil has become soured. Take a knife and cut out a ball of three inches in width with the plant; break away the soil carefully until you reach the roots; then take some of those smallest cans, make some holes in the sides, near the bottom, and fill half-full of drainage, and fill in the top of that with pure soil; put your plants in, and water them so as to settle the soil good; then don't touch it while it is wet—you utterly ruin soil to stir or touch it then. After that, let them set until they either grow or show signs of wilting; if the last, water thoroughly, and, if they are beginning to grow, water frequently, but be sure the surplus can run off. Keep them out of the noonday sun until they begin to grow. The flowering, or Zonales, need good soil, moderate supply of water (more when in bud or bloom, as all plants do), good drainage and plenty of sun. The Scented Leaf, as well as the Variegated, need more pot-room, and plenty of sun and water, as it is foliage we want in this case. The Ivy-leaved need a warmer, dryer soil than any of the rest, so are well-adapted for baskets in the sun. They do not need near so much root-room as any of the other varieties. So when yours start again, give them the sunniest place you have, but save one as good for the Heliotrope I am going to give you. But put it in one of those empty pots (they are a particular family about the size of their houses), and be sure and draw their water well and often, unless you want the leaves to drop off after they have blackened. Charcoal in the soil is very acceptable to them."—"What are these lovely bells?" "They are Abutilons; that striped one is Striatum; that pure white, Boule de Nilge, that large-leaved, gold and green, is Thompsonii; and those drooping branches so filled with golden and green marbled leaves and yellow patched blossoms with scarlet calyx and a bunch of brown stamens that look like tassels, that is Velillarium Variegatum. There are more new varieties, and when I am rich enough to own a conservatory I mean to have them all. They are so easily cultivated, plenty of root-room, sun and water, and they are so free from insects, which is a great consideration. One must be

sure to pinch the top out; when six or eight inches higher you will see a straight stem and few blossoms, but if pruned right and cared for well they are constant and free bloomers. Those are *Cuphea Platycentra* and *Libonia floribunda*, both valuable. The first blooms almost all the time, and from a fancied resemblance of its blending of scarlet, black and white, to the lightest end of a cigar, is sometimes called cigar plant. Its treatment is similar to the *Fuchsia*. The *Libonia* is a winter bloomer, and the blossoms resemble those of *Honeysuckle*, in shades of orange. Like the *Bouvardia*, it should be grown in the same pot all summer in which it is intended to bloom. I found some dark gray lice on mine last summer, and as it stood somewhat hidden by others, they were quite numerous before I knew it, and I think they injured it.

"Those odd-looking scarlet and yellow flowers are *Asclepias Curassavicas*. I grew them from seed last spring; I know nothing about them but what I have learned from those. But they have bloomed constantly for several months, and from the number of buds on them I think will continue for a while yet; one thing, they will stand a good deal of bad treatment. I grew those *Lantanas* from seed also last spring. Are they not lovely, that pure white, that buff with orange centre, and this that opens just like the buff one, but turns to rosy purple, so the cluster when fully open shows all the intervening shades. They need only common care and amply repay me for what they get. This *Carnation* will soon reward me with a wealth of fragrant, crimson bloom. They must have sun and rich earth and not be allowed to suffer for water." "What ails these plants?" "They are *Pelargoniums*, first cousins to the French *Geranium*. They are not of the every day value of their uncle's family. They bloom only in spring and early summer, but the flowers are so beautiful; and they seem like some member of the human family to live so perfectly in the memory of that one grand achievement, that they can only be brought to a sense of duty by lopping off their branches, thus compelling them to replace their lost proportions; this should be done when they are done blooming, and then repotted, shaking off nearly all the old soil; then started and grown as fast as they wish until about three months before you want them to bloom; then give just water enough to keep them from turning yellow or wilting for six or eight weeks; then give more and let them grow, and when buds appear you may give them manure-water."

"I heard you kept your *Calla* pot out of doors, and lying on the side, during the summer?" "I do; after it is done blooming in the spring, I put it on the side somewhere in the shade, and leave it there about two months, then carefully wash the dirt from the roots; wash the pot clean, too, (by the way, never put a plant in a dirty pot, box, or can), then re-pot in one-half rotten manure, the other half two-thirds dirt, the rest clean sand, with a handful of sand around and under the bulb, water well and set somewhere in the shade. After they get started again, put in the sun and fill the saucer at least once a day with boiling water, and keep water in the saucers all the time. This boiling water plan is a good one for all winter-bloomers. They will need no other watering, but empty the saucers again. Those are *Vincas*, wandering their own sweet way among the pictures. I had them in a basket, but that was too dry for them, so I put them in that good-sized pot on the bracket, and see how they grow. That English Ivy has grown over seven feet since I took it a little over a year ago and gave it plenty of root-room and warm manure-water, weak. That basket is *Senecio Scandens*, some-

times improperly called German Ivy. It makes a fine basket in the shady corner there. I keep the ends pinched off, and you can't tell that the root fills an old tomato can. That other basket in the other shady corner is *Linaria Cymbalaria*, or *Kenilworth Ivy*. It likes a loose, light soil, good drainage, plenty of water, and no sun. What is it in? A cocoa-nut shell opened near the end. This *Othonno* is in one, too, and so is this *Fragaria*, but I must put it in something larger. This *Oxalis* has something more aristocratic—an old wash bowl painted green. These last three need sun, and there is, I think, one of the prettiest, that *Dewplant*, it needs sun, too, but can do with very little water. When you get your plants, I will come and help you pot them."

She did help me and gave me a good many slips, and some day I will tell all she told me about those two things. This was a year ago, and now I have some fine specimens, thanks to Mrs. B. and THE FLORAL CABINET, which she first showed me a copy of. Moses thinks our home is much prettier than it was. So do I.

BELLA DONNA.

**Bleaching Wax—Hair Flowers.**—Will some one be kind enough to inform me, through the medium of your columns, how to bleach wax, and how to harden it and prepare it for making wax flowers, and also how to make wax grapes? Will some one also tell me how to make hair flowers?

EMMA CARSON.

**Painting.**—Perhaps the lady who paints with oils on Bristol board will find the following preparation for ready use, convenient: To any quantity of glue use common whiskey instead of water. Put both together in a bottle, cork it tightly, and let it stand for three or four days, when it will be fit for use without the application of heat. Glue thus prepared will keep for years, and is at all times fit for use, except in very cold weather, when it should be set in warm water before using. To obviate the difficulty of the stopper getting tight by the glue drying in the mouth of the vessel, use a tin vessel with the cover fitting tightly on the outside to prevent the escape of the spirit by evaporation.

AVIS.

**Fringed Gentian.**—Another lady wishes to know something of the habits of the Fringed Gentian. Here in the west it is found in roadside ditches, or in moist unfrequented places, where it will bloom year after year if undisturbed. Its habits are similar to those of the closed Gentian, which abounds in the sloughs of our prairies. We have also the Creeping Gentian, which loves a dry, somewhat clayey soil, but it is rare, and its rich, expanded blossoms are never seen until after the first frosts of October.

AVIS.

**White Worms.**—In what way, without injuring the plants, can we destroy the little white worms that seem to breed in the jars containing old plants? We have some old *Fuchsias* that we keep in the cellar during the winter, and about two months since we brought them up, and now there are hundreds of buds and blossoms on them, but the earth is full of those little worms. We have tried tobacco tea and diluted ammonia, but they do not seem to have the effect of killing them. An answer through the CABINET would very much oblige

F. D. PERKINS.

Rome, N. Y.

**Answer.**—Bake the earth in an oven and it will kill all animal or insect life—after baking put the plants in.

**Japan Lily.**—My Japan Lily failed to bloom this season: it is now six years old, and never failed before. Shall I divide the roots?

MRS. H. SWAN.

**Answer.**—The original bulb is probably decayed; the offshoot will most likely flower next year.

**Stove Urn.**—One of the CABINET correspondents tells how to make old stove urns useful (I had already found it out), and perhaps it may be interesting to some of your

numerous readers to know how they can easily utilize the cover. First give the outside two coats of brown or drab paint, then take a round wooden box which will just fit into the bottom of the cover (a strawberry box will answer), and treat in the same way; now invert the cover, attach three cords of suitable length, place the box in this, and you will have a very respectable hanging-pot, and something much prettier than a tin basin. Do not omit to make a hole in the bottom of the box for drainage, and place under it, in what is now the bottom of the cover, a piece of sponge or some moss, to absorb any water that may pass through. Will correspondents give their methods of treating *Smilax*? I have had one for several years, but have never succeeded in making it grow well, and not at all except in the shade; and can any one give me the true name of what is sometimes called "*Abutilon Fuchsia*"? also the name of the plant commonly known as "*Baby's Breath*"?

W.

**House Vines.**—What vine can I have in the house this winter that is a rapid grower and has bright flowers? Also tell me the price of the plant and mode of culture.

LOUIE.

**Answer.**—*Coboea Scandens*.

**Liquid Fertilizer.**—The following works like magic on vegetable life. You can recommend it without fear of failure. Its inexpensiveness and convenience will recommend it to all. Take of ammonium sulphate, 4 oz.; salt-petre, 2 oz.; white sugar, 1 oz. Powder, mix, and dissolve in one quart of water. One tablespoonful of this mixture added to one gallon of water and sprinkled on the plants once or twice a week enriches the soil and imparts health and vigor to the plants. I do not know who is the originator. I have been using a tablespoonful to about one and a half pints of water on an almost hopeless window basket and it has done wonders.

ELLE SCHEREFFER.

**Splendid Salve Receipt.**—You will confer a kindness by publishing the following for the good it may do. It was sent to my mother to relieve her agony while suffering with a carbuncle on the back of the neck, and afforded her wonderful relief. For boils and sores of almost every kind it will be found of great service: Tallow, 1 lb.; linseed oil, 1 lb.; beeswax,  $\frac{1}{2}$  lb.; Burgundy pitch, 4 oz.; Venice turpentine, 4 oz.; rosin,  $\frac{1}{2}$  lb.; oil of lavender, 2 oz. Mix all together and simmer over the fire for about twenty minutes. As this makes a large quantity, one half of the above ingredients may be taken. I consider this receipt alone worth many times the price of the CABINET.

ANNIE O. SOLLERS.

**Maryland Biscuit.**—One of your correspondents asks for a receipt for making these biscuit, and as Maryland is my native State I can give her very explicit directions how to make them, but whether she will be successful is the question, as the whole secret is in the proper handling of the dough. The fact is that few can make them in perfection except the old colored women who have been brought up as family servants, and who are fast passing away. This is the receipt: Rub in two quarts of flour, one small teacup of lard, and the usual quantity of salt. Mix it up with just enough water to make a stiff dough. Now comes the tug of war. The dough must be worked and beaten from half an hour to an hour. It should be worked until the blisters are constantly snapping and breaking and the dough is waxy. After the dough is once mixed there should be no more flour worked in. When it is all right, if you break off a piece quickly, it snaps off short, and in cutting a piece off with a sharp knife the holes or pores where you have cut it are small and of an even size. Now break off the dough in small pieces, and work each piece into a nice biscuit shape, and press it with the lower part of the thumb where it joins the hand to make the indentation; prick, and bake quickly in a very hot oven. The biscuit should be a light brown in the centre of the top and on the bottom, but not all over, and not hard. I should like to hear if your correspondent is successful in making them.

MRS. M. W.

Waterbury, Md.

## Flower Gardening.

## THE DANDELION.

Gay little "Golden Head" lived within a town  
Full of busy bobolinks flitting up and down,  
Pretty neighbor buttercups, easy auntie clovers,  
And shy groups of daisies whispering like lovers.

A town that was builded on the borders of a stream  
By the loving hand of Nature when she woke from winter's dream:

Sunbeams for the workingmen, taking turns with showers,  
Rearing fairy houses of nodding grass and flowers.

Crowds of talking bumble-bees, rushing up and down,  
Wily little brokers of this busy little town—  
Bearing bags of gold-dust—always in a hurry,  
Fussy bits of gentlemen full of fret and flurry.

Gay little "Golden Head" fair and fairer grew,  
Fed with flecks of sunshine and sips of balmy dew,  
Swinging on her slender foot all the happy day,  
Chattering with bobolinks, gossips of the May.

Underneath her lattice on starry summer eves  
By and by a lover came with a harp of leaves,  
Wooded and won the maiden there—tender, sweet  
and shy—

For a little cloud-home he was building in the sky.

And one breezy morning on a steed of might  
He bore his little "Golden Head" out of mortal sight,  
But still her gentle spirit, a puff of airy down,  
Wanders through the mazes of that busy little town.  
AMBER HOLDEN.

[This Article received Second Prize for Floral Topics.]

## FLORAL ITEMS.

In Floriculture, as in most other pursuits, success depends greatly upon attention in little matters. Plants cannot be neglected and thrive. Many who keep their plants in almost sunless windows, wonder why they do not have more blossoms, not realizing that they must have plenty of sunshine to perfect them. A window with southern exposure is best suited to plant-growth; if a bay-window, so much the better. But many fine plants may be grown in ordinary windows, if facing east, south, southeast or southwest; and even in a western window we have seen some excellent plants; while Ivies, hardy Ferns, Tradescantias, and similar plants, will thrive in a north window.

In the cultivation of house plants, much of our success depends upon our choice of plants. Most any of those known as green house plants will flourish in our sitting-rooms, also some called hothouse plants, though not a great many, unless our rooms are kept far too warm for human health or comfort.

One winter I had a beautiful Croton—it barely lived; but barely living did not please me, and though I paid a high price for it, I did not care to try it another year. So, too, with the Torrenia—it was pretty, but I found in order to thrive that it wanted to live a-top of the stove-urn, or over the tea-kettle, and that followed the Croton. So, too, with Bouvardias. I had blooms, to be sure, but not in any such quantities as to render them desirable. In my choice, I wish to select only such plants as are well-adapted to room-culture, doing well in an atmosphere from 60 to 68 or 70 degrees by day, often ranging as low as 40 or 45 degrees at night.

From observation and experience, I find the following plants well-suited to grow in such a temperature; The Calla, Genista, Smilax, winter-blooming Fuchsias, Cupheas, Daphnes, Feverfews, all the different sorts of Geraniums, Jessamines, Pelargoniums, Stevias, Eupatoriums, Primroses, Centaureas, Ivies, Achyranthus, Dracenas, greenhouse Ferns, Cacti, some sorts of Begonia, Veronica Variegata, Petunias, Mahernias, Oleanders, Maurandias, Ageratums, Roses, Carnations, Abutilons, Camelias, Azalias, Sedums, Lobelias, Lantanas, Cyclamen, Mesembryanthemum, Violets, Musk-plant, besides many others. The Heliotrope, too, we all admire for its delightful fragrance; although

classed with hothouse plants, we find that by giving it the highest shelf in the sunniest window, we are rewarded by its sweet blossoms. Then there are the different bulbs, such as Oxalis, Ixias, Hyacinths, Polyanthus, Narcissus, etc., so that any lady can find sufficient variety from which to choose, and be confident of success, if proper care be given them. Make ready for the winter by starting cuttings of the various plants desired, during the summer and autumn. It is best to commence early in the fall, potting and cutting such as we wish to preserve, not leaving too many till there is danger of hard frosts, for then we are apt to work too hurriedly, and may lose some of our treasures after all. Never bring them at once into a warm room, but place in some sheltered spot or cool chamber, where they can have plenty of light and air. John says I have "posies on the brain," and thinks his "pathway actually strewn with flowers," for they are growing "upstairs, and down stairs, and in my lady's chamber." He thinks the cellar may need enlarging to accommodate all my Oleanders, Chrysanthemums, Roses, etc., that go there to rest; (but I have agreed not to crowd the potatoes and cabbages.)

Having many plants to care for, I wish, of course, to make their washing easy, and to save as many steps as possible. I spread down a piece of old carpet in front of the bay-window, set thereon a small table to hold my pail or basin of water. The small and medium-sized plants can be immersed and receive a good washing here, while the larger ones must go to the kitchen sink for their bath. After setting on the table to drip, the pots can be wiped, and the plants restored to their places, while we proceed with others. One lady said in THE CABINET, that she thought washing did more harm than good, because it "stuck the dirt down." I really cannot see how there can be much "dirt" to "stick down," if they are washed weekly. Some persons never smoke their plants, thinking it more agreeable to pick off all intruders by hand every morning. I have no patience with that method, but prefer smoking them. It is very disagreeable, to be sure, but is the only preventative or cure for the aphids and green fly. I recollect telling my manner of smoking in the pages of THE CABINET some years since; but knowing the paper has hosts of new readers since then, I will repeat it for their benefit:

Beyond the kitchen, in a back room, we have a large old-fashioned sink, beneath which is a capacious closet; into this I set my plants as closely as convenient, leaving a large unoccupied space in the centre. Here I place a large brick, and upon this a piece of iron, several inches square, previously heated red-hot in the stove among the coals; then lay upon it some tobacco cut fine, and rather damp, so as not to blaze, and close the door as quickly as possible. In about half an hour I remove the plants, wash both plants and pots, and carry to their places in the windows. I thus proceed with them all before putting in their winter quarters. Those too tall to stand in the closet, I lay upon their sides. The plants should not remain too long after smoking, before being washed, or the insects (should there be any) might revive. A writer, in THE CABINET, once said that the aphids or green fly appeared only on the most healthy plants. Now, I always thought there was something wrong about mine when I chanced to see any of those insects upon them; that they had been kept too wet, so that the roots had suffered, and become sodden and rotten. I repot such plants, cutting off the rotten roots, and if the pot is too hard baked to allow of sufficient evaporation through its sides, change it for a new one, not forgetting to place in the bottom a handful of broken

charcoal. If placed in moderate sunshine after repotting, and kept there, its health will be restored, and the aphids not likely to appear again, especially if washed every week with carbolic soap suds. Perhaps some of our readers do not know that tobacco smoke, though called destructive to the aphids, will not kill their incipient offspring. To do this, it will be found necessary to smoke again on the second or third day, that is, all such plants as we know to have been infected. This will generally suffice, if the weekly washings are attended to, to keep them free from insects.

When plants seem subject to attacks from the red spider, they should be washed, or dipped in water twice a week or more. Common flower-pots are far more healthy than glazed or ornamental ones, and plants grown in the latter should be more sparingly watered. The temperature of the room should be kept as even as possible, and air given on mild days. Plants at rest, or lately cut back, require little water. In winter use warm water, and remember to give your Callas water much too warm for the hand. Also turn hot water in their saucers. I commence this treatment soon after potting in September, and the last two years buds have appeared in October. Hot water may also be turned in the saucers beneath Fuchsias, Genistas, Geraniums, etc., when blooming freely or coming into bloom. All new pots should be well soaked in water, and old ones thoroughly cleansed before using. In potting, have your soil slightly moist. Plants, when first brought in, need no stimulants; but later in the season, or when blooming freely, they may be given it once a week. That from stable manure is much safer, especially for the inexperienced. To prepare it, get your "John" or "Isaac," to fit a cheap lead faucet (cost about a quarter) into one side of a tight butter firkin, as near the bottom as convenient. Have a circular piece of board well perforated with large holes for a strainer; nail upon it three small blocks of wood three inches long for legs; but do not have it fit too tightly the sides of the firkin, so as to be easily removed and replaced. This strainer when dropped upon its legs into the firkin, will, of course, leave a space between the bottom and the strainer, the height of these legs. Place upon the strainer a large handful of straw, and upon this several shovelfuls of stable manure; then turn on sufficient boiling water to nearly fill the firkin; place on the cover tightly, and when cool it is ready for use. Keep it where it will not freeze, and have it placed upon blocks, so as to draw off easily. Add warm water to make it the color of weak tea. I find this much neater and more convenient than the usual method. One writer in THE CABINET thinks angle-worms are beneficial to her Callas, while I carefully avoid all insects and worms by baking my earth. Another says, "don't do it, for it takes the life all out of it." Now, it has sometimes happened that in baking my earth, it has really been burnt a little, and I observed that my plants never did better; the Petunias and Pelargoniums that had been re-potted in it, were splendid in growth and perfectly gorgeous in color. Once, owing to an unexpected change in the weather, I had some fine Verbenas, Pelargoniums, and Petunias (kept in a chamber) badly frozen. I plunged them at once into cold (not freezing) water, and had them removed to a dark closet in the cellar, where they remained for two or three days. They were then returned to their places, looking as fresh and well as though the frost had never touched them. This is the only way to restore frozen plants.

MRS. POLYANTHUS PERIWINKLE.

[Written specially for the LADIES' FLORAL CABINET.]

## Winnifred's Will.

By AUGUSTA LARNED.

### CHAPTER IV.

"A young man married is a man that's married."

A tall, broad-shouldered, brown-haired young man was standing in an elegant little city breakfast parlor, fitted up with the subdued, well-harmonized colors and artistic devices that modern taste delights in, and holding in his hand one of the ominous yellow envelopes of the Western Union Telegraph Company. The centre of the polished hardwood floor was covered by a rich Turkey carpet. The shining, plate-glass windows, draped with heavy striped curtains of Oriental stuff, the jardinières full of growing plants, the gleam of a soft coal fire in the low grate of polished steel, the mirror frame, and buffet, and mantel, all of the most exquisite wood-carving, the few excellent oil sketches on the wall, with rare Japanese bronzes and vases scattered about, made this room a perfect setting for the lady seated by the breakfast tray, furnished simply with a fragrant pot of tea and crisp, golden rolls, and dainty pats of butter.

She had lived much abroad, and abominated heavy American breakfasts. You might know she would—so perfect was she from the crown of her head to the tip of her bronze slipper. There is a beauty that does not perfect and mature itself before the age of fifty. It was fresher at eighteen, but less harmonized, less complete. The smooth puffs and bandeaux of this lady's silvery hair, the pale, aristocratic tint of the skin, the clear-cut features, the fine dark eyes that had a depth of passion and intensity time had not subdued, the hands and feet slim and delicate with the distinction that belongs to some old races, the rich lace of the morning cap, and the violet wrapper, with touches of the same lace about the neck and sleeves, enchained and satisfied the eye as rounder contours and brighter tints seldom do.

She was a woman of delicate and perfectly refined charms, like faint, sweet perfumes shaken out of a silk robe. She was an eager woman, intent upon the objects of her life, and with a fire of purpose and energy in her that years could not tame, though her manners had the perfect ease and composure that the best society requires. She had travelled much, had read widely but not profoundly, and had met and mingled with many elegant, high-bred people in different countries, and was a charming companion when her sense of self-respect was bolstered up by fine old laces and beautiful, artistic surroundings. She needed a rich frame, an appropriate background of finely-blended tints and tones, and then she never failed to make a delightful picture.

Now, as she raised the little pot to pour an odorous stream of breakfast tea into a china cup that a collector of ceramics would have coveted, her hand was arrested by an exclamation from the young man at the fireside.

"What is it, Bradley?" and she placed the tea-pot back on the tray.

"He is dead, mother."

"Not the old Judge?"

"Yes, mother, the old Judge."

Mrs. Halcourt subsided into her large, soft, easy chair. She experienced the giving way of physical powers which follows a shock. But the shock was an immense relief—a cause of congratulation and rejoicing, as she acknowledged to herself with the next breath she drew.

In a moment she had recovered from the surprise, and straightening herself, and giving a little shake to the violet cashmere drapery, said, with clear, distinct intonation:

"Bradley, why don't you read me the telegram?"

"Yes, mother, pardon me, I will," he replied, with his eyes still bent upon the bit of paper in his hand, and then he began slowly:

"Judge Braithwaite died at Halcourt Hall, of apoplexy, on the evening of the 25th. The interment takes place on the 28th. Your immediate presence is requested."

"EDGAR SWAYNE."

"The telegram is ten days old," he added. "It has been following us about to various places. Of course there were notices in the papers which we missed, as we happened to be out at sea in the yacht; and getting in town late last night there was no one to tell us the news. I see," he added, scrutinizing the piece of paper again, "the telegram was originally sent to Newport."

"And why to Newport?" Mrs. Halcourt asked, a little sharply.

Bradley's face was well bronzed from the sea air—only a strip of white forehead, with the golden-brown locks of hair scattered over it in picturesque confusion, showed what his natural hue might be. He calmly directed his hazel eyes toward his mother as he said, with deliberate slowness:

"Mademoiselle Duval must have told them. I wrote to her that we might put in at Newport for a day or two. We have had some correspondence in reference to her missing uncle."

Mrs. Halcourt appeared to receive the information with a shade of annoyance.

"You take a deal of unnecessary trouble about that girl, Bradley; but come, sit down and have a cup of tea. I do not know why I should be deprived of my breakfast because of the demise of that old man. If I had passed off the stage instead, it would not have affected him to the turning of an eye-lash. In fact, I believe he would have openly rejoiced, and regarded his having outlived me as a victory. He was a dreadful old man. I wonder that any human being can shed a tear over him. But it is strange that when he was taken seriously ill they did not summon you to the Hall. You might have been of great service to your cousin at such a time."

"Oh," said Bradley, stirring his tea, "I presume she had all the aid and assistance she needed from this Edgar Swayne, who signs the telegram. Perhaps he is my fair cousin's chosen swain."

"How can you speak so lightly and make puns, Bradley?"

The young man smiled, and showed a beautiful set of even, white teeth.

"I am sure, mother, you do not think it necessary to pull on a long face about the taking off of the old Judge. He was no good to anybody, himself included. He made life disagreeable to all around him by his parsimony and bad temper. He worshipped his money-bags, and believed in nothing else. Such people cannot expect even the hypocritical pretence of mourning. I am sure my poor aunt must secretly rejoice that he is out of the way, and though Winnifred probably felt some natural affection for her father, who humored her one moment and showered imprecations on her the next, she will soon reconcile herself to the independent life of a great heiress. I really cannot see how this event is going to affect us."

"But it does affect you immensely," said Mrs. Halcourt, leaning forward, while the fire burned in her dark eyes; "or it would if you had the natural and proper ambition of your manhood. You are the head of the Halcourt family, and the Halcourt estates ought to go with the name. Your poor father was terribly wronged by this old man, who is lying cold in his grave, while his wicked deeds remain behind him to work their spells on the living. There is every reason to believe that he influenced your grandfather Halcourt's will. The old man stood in mortal terror of him, but was as abject as a whipped dog in his presence. He gained complete ascendancy over his mind after he became weak and childish, and the slave Jeanette, mother of old Nanna, who was devoted to the Halcourt interest, told us, with tears streaming down her cheeks, how the old man would sob and moan and cry for his son when the Judge's stern eye was withdrawn. At last it reached that pass that the Judge would allow no one to approach him. He gave him all his food and medicine to prevent the poor old creature from sending a message to Harold; and when he begged on his dying bed for the privilege of reconciling himself to his son, the boy he had loved so fondly, the Judge, with a fiendishness almost unparalleled, denied his prayer, and kept him locked up like a lunatic. We knew the will was extorted by that wily, wicked man, but there was no redress. The Judge was then on the bench, all powerful in the courts. We could not afford to risk our whole fortune in a legal contest, and so we endured the wrong. Does it not rouse your indignation, Bradley, to think of the manner in which you and your father were robbed?"

Bradley was leaning back in his chair. His clothes sat upon him with easy and unstudied grace. There were golden touches in his beard and hair, and his eyes had a kind of gentle benignity seldom seen in a young man's face. He had taken out a cigar, and was holding it unlighted in his fingers.

"Well, no," said he, turning his gaze, with a lurking smile in it, upon his mother, "I can't say that I am indignant. I suppose I ought to be; but I always seem lacking in emotions proper to the occasion. I do feel deep regret that my poor father's last years were embittered by this unfortunate will; but I haven't it in me to envy that wretched old man, who browbeat and half starved his family. The money, or something else, was a curse to him; perhaps it would have been a curse to us if we had got it; and as for being Halcourt of Halcourt Hall, that would not weigh with me a rush. You know, mother, that is all moonshine."

"Oh, Bradley, you are exasperating," cried his mother, her consuming anxiety breaking through her repose of manner. "Why can't you be reasonable, and look at things as other people would; people whose opinions you ought to respect. Why, with all your cleverness, haven't you a little of my spirit? It seems impossible to arouse you. You are never prepared to take hold of advantages, because all motive is 'sicklied o'er with the pale cast of thought.' It is the not-worth-while that comes in to hin-

der everything. Now your pulses are as even as clock-work, when the opportunity has come to redeem all the past."

He turned his eyes just enough to note the unwonted flush in her pale cheek, and her flutter of excitement, and then he said slowly and seriously, looking down, "I know what you mean, mother. You would have me try for the hand of my cousin Winnifred."

"And why not?" she asked eagerly. "It is an idea that must be familiar to you, for it has been talked of for years in both families; even the old Judge was not averse to it. It would right the wrong, and put you at once in your true position. What possible objection can you have, Bradley?"

Bradley elongated his long limbs, and, putting the cigar in his mouth, sat in silence for a moment, and then withdrew it.

"Oh, it is not worth while to discuss my objections. A man might not like to be disposed of like a bale of goods, or an odd auction lot. He might not care to be led about by a rich wife like a poodle dog by a ribbon. The point is, what objection has my Cousin Winnifred? She is as independent as an heiress can be, with full liberty to bestow herself on the first knave or fortune-hunter that comes along. I am incapable of deceiving her. She would know my motives were mercenary in proposing marriage to her, and she would either laugh in my face, or scorn me bitterly. How, I ask you, can a man fall in love with a girl he has dreaded as an *enfant terrible*? When I last saw Winnifred, five years ago, she was a lean, brown, meagre, scrawny creature, with great eyes out of all proportion to the rest of her face—a perfect hoyden and mad-cap. She wore me out and exhausted me, strong fellow that I was. She put me directly on my muscle, and challenged me to foot races, and beat every time. Now, I don't fancy marrying Atalanta. I wouldn't take the trouble to drop golden apples in her path."

"She has outgrown the hoyden. She has become a beautiful, clever girl," Mrs. Halcourt rejoined. "Those dark, meagre children, with great saucer eyes, do often develop into rich, ripe loveliness. Mrs. Fortescue, who has spent several summers at Clovernook, is enthusiastic over Winnifred's picturesque, fascinating, vivid kind of beauty. She says she flashes about like a red-bird, and is as natural and unspoiled as one, with great shrewdness and spirit. Her father, though diabolical, was a brilliant man of the world; and he has given her a training that will fit her for the position she is to fill. Cleverness and a little eccentricity are pardoned in a great heiress. They add piquancy to her charms, if she has any. We shall see Winnifred day-queening it in society one of these days. It will not take long to polish away any rusticity of manner, and it is fortunate that she has none of poor Susan's beauty. Charley Fortescue has been more than half enamored with her these two seasons past."

"Oh, well then, let Fortescue take her," said Bradley, with a half yawn. "I can't undertake to rival him."

"Oh, Bradley, why will you be so resistant, so blindly, cruelly opposed to your own interest?" She clasped her jewelled hands together in an agony of expostulation.

"Mother," said he, drawing himself up and wheeling round, "what have I to offer her, when we come to that? I know I am a failure; and the knowledge ought to make me miserable, but it does not. Life has been singularly pleasant to me. I have enjoyed the whole of it thus far, but I have always looked forward to my marriage as to the time when trouble was to begin—probably because this thing was hanging over my head, like the sword of Damocles. My book fell dead from the press, though some of the critics did me the favor to say that it ought to have succeeded. My play was damned, though the manager voted the public stupid and purblind not to applaud. Art, and music, and poetry, and numberless things, have lured me with their wiles. My head is stuffed with an odd assortment of lumber that nobody cares for. I should be a conceited ass to offer my incompleteness and miserable failures in exchange for my brilliant cousin's beauty and ducats. I have viewed all my own disappointments with a calm and philosophic eye, because no man is really a failure unless he seems so to himself; but, would it not be the most disastrous failure of all to deliberately approach this girl with mercenary motives? I am not so confoundedly weak-minded as to set myself up on my old blood and lineage, but I do prize my honor, my manhood."

"Why do you take such a high tone, Bradley?" the mother asked, with an anxious wrinkle in the middle of her forehead, that was usually as smooth and fair as ivory. "You are always soaring away out of the reach of common mortals. Do you suppose I would counsel any breach of your honor and manliness? But why is it impossible to anticipate a fair share of happiness in a union with your cousin? You certainly cannot cherish a wild, impracticable dream of love, that would fade away and leave you without any basis of mutual respect or comfort! From what I hear Winnifred is too sensible to have her head filled with such romantic stuff. You ask what you have to offer, Bradley. You have yourself. You are incomparable, and I am a

doting old creature to say so. Ah, Bradley, your father had your golden temperament, but it was mixed with some foibles and weaknesses—some dross you do not seem to have inherited."

He rose from his seat and looked at her with an expression intense, ardent, almost imploring.

"We have always been lovers," he said, as he passed around her chair and took her thin, white hand with a pretty, caressing gesture in both his brown ones; "why do you wish to drive me away, mother? Why should we not live on happily together in the old way? We have enough for every comfort—for luxuries even—and the indulgence of our tastes."

Mrs. Halcourt's face changed as if from some inward pang.

"You are as sadly at fault there," she said, in a low, pained voice. "There have been bad investments made; some of the securities I was advised to buy have proved worthless. I found last night on my arrival a letter from my lawyer, with the terrible news that we have only enough left to live on with the strictest economy. I could not break it to you all at once, and this other startling announcement drove it for the moment from my mind."

"So much the better," cried her son, as he threw his arm around her and drew her into a closer embrace. "I will work for you now. I will achieve wonders to make you happy. I have splendid health, plenty of bone and sinew, and energy, too, when it is called out. I will throw off the foolscap and bells, and show myself a resolute man."

"Oh, Bradley," she cried, almost wringing her hands, while real, passionate tears broke through her conventional being. "you do not know me, though you are bone of my bone. I am worldly, I am ambitious, if not vulgarly mercenary. I cannot change my whole nature. For years I have had but one aim, one purpose, to see you righted, to see you in possession of the estate that belongs to you. Bradley," she repeated sinking down, with sobs, upon his shoulder, and lowering her voice to an intense whisper, "if you do not marry your cousin it will break my heart and bring me down a disappointed, miserable old woman to the grave."

All the light, and ardor, and affection, had gone out of his face. It was pale now, and almost stern.

"Mother," he asked slowly, "do you desire this object of your ambition more than my happiness?"

"Why should it be inconsistent with your happiness, Bradley?"

"Because I wish to be free to dispose of my own life, my own heart."

She looked up alarmed, with the tears on her face.

"Do you love another woman?—is that the reason this idea of marrying your cousin Winnifred seems repugnant? Surely, if you are heart free, you might in time come to love a beautiful, spirited creature like that!"

Bradley had withdrawn his arm. He stood back and made no answer to the question for a moment or two. Then he said, with a strange infusion of bitterness, almost of irony, in his tone:

"I will do as you desire, mother, seeing that you desire it more than all other things—that your happiness, your very life depends on it. I will obey the summons to the Hall. I will marry my cousin Winnifred if I can do it consistently with honor—without lying professions of love or an unnecessary display of mercenary meanness. But the result, I must forewarn you, on these conditions is more than doubtful."

She half sprang out of her chair toward him with an unnecessary effusion of gratitude.

"O Bradley, you are my good, reasonable, loving boy. I knew you would come around, for you have never crossed me. I have made myself odious to you, but I am sure the day will come when you will bless me for having secured the happiness of your life."

She would have caressed him, putting her hands upon his shoulders in an old familiar fashion, but there was something repellent and chilling in his air, which she had never felt before in all their years of loving intimacy.

"Now," she continued, trying to resume her sprightliness and old charm of manner, "there is one thing more I must ask of you, Bradley. You know a woman, if you give her an inch, will take an ell. Mademoiselle Duval had better leave the Hall. She ought not to be leading the life of an idle dependent, and Winnifred is too old for a pupil. Virginia has accomplishments that will secure her a good support in her own sphere in life. If you will send her to me I will provide for her future."

"I have no control over Mademoiselle Duval," he answered, coldly. "We cannot move human beings about at will, as if they were pegs in a cribbage-board."

"Nonsense," she cried, still trying to make the spell of playfulness work. "You know that ever since you began to take such a delightfully romantic interest in her affairs, and especially since the search began for that mythical uncle, she has looked up to you as her patron saint and guardian angel. She would be as submissive as a child to any request you might make."

"I cannot take it upon myself to ask her to leave the Hall," said Bradley, as he turned and quitted the room.

Mrs. Halcourt sat gazing after him for a long time. A red, excited spot still lingered on her pale cheek, and many painful chords were vibrating within her. She was a proud woman, and this interview had cost her dear. She sat fingering a fold of her violet cashmere robe with her jeweled hand, while plans and purposes took clear shape in her mind, and then she rose with a half smile on her face, thinking how she would lure her dear boy back again.

In less than two hours Bradley had packed a portmanteau and was on his way to the hill country. The railway journey was devoid of incident, but it was a long one, and afforded too many vacant hours for brooding over troubled thoughts. He sat all night in a corner of the ear, wrapped in a rug, and without catching a single wink of sleep, and early on the afternoon of the following day, stepped out, jaded and travel weary, at the little upland station, five miles from Halcourt Hall. Leaving his portmanteau with the station master, to be called for, he set out on foot over the hills to the old Hall. It was a beautiful September day, the air just crisped and clarified with autumnal freshness. The hills were of a deep, dark blue, glorious and strong, as if freshly buttressed and strengthened in their mighty fortresses. Health and vigor came from the aromatic pine forests and acres of sweet fern that clothed the barrens. Bright tints had begun to kindle at the edges of the wood. Every now and again a partridge started up with a great whirr from some copse, and the nut trees were heavy with rich brown clusters, and the streams, swollen by late rains, came foaming and dashing and tumbling down through the hill gorges.

Bradley was delicately alive to every sensation of physical enjoyment, and as he struck out of the main road into by-paths and forest ways that he remembered exploring in his school-day vacations sometimes spent at the home of his ancestors, the blood tingled down to his healthy finger tips, in spite of a sleepless night and a long fast. He remembered the streams where he had fished, the places in deep, mossy glens where he had watched the habits of wild birds and animals, and the glorious weather and the beautiful scenery helped to shift the dull load of foreboding from his thoughts. His young life had thus far been singularly bright and unclouded. He was so little accustomed to mental disturbance that it seemed like a thorn in his hand, which he must pluck out and be rid of. The feeling of bitterness toward his mother was the most unyielding, the most stubborn and resistant. His heart had smarted and burned with a sense of wrong, the conviction that she was ungenerous and cruel to make use of his affection to force him into a position abhorrent to his nature. It was the first time that a dense shadow had fallen between them. Mrs. Halcourt had always been her boy's playful, indulgent companion, using her wit and culture and grace and wordly wisdom to bridge over the disparity of years, that she might charm and fascinate him into the worship she craved, rather than bind him to her by formal ideas of duty and obedience. Bradley was suffering the pang an ingenuous nature feels when a direct ray is thrown upon the fatal weaknesses of a character it has loved blindly. The clear vision of the present moment made his former security and peace seem almost a mockery.

But he was determined to crush out this mental disturbance, to put it under his feet by vigorous exercise. So he chose the roughest road through the woods, leaping over logs and stones and crashing through undergrowth until he had got into a great glow. He noticed the little curling moss at his feet, the red-berried vines twining about gray rocks; the plump ferns in many-shaded tints of green; the tree branches over his head gathering a sunny glow; and glimpses of the azure hills seen through great tree-boles, and a gleam of the old tranquillity stole back upon his heart. Surely, if his vision was awry, the world was still fair and healthy; the future could not all be hung in sable without a touch of silver lining anywhere.

As he drew nearer to it, he thought of the old Hall as it used to look in his boyhood's days, with sepia touches about the gray roofs and gables, and the long sweep of carriage drive, and the old oak avenue leading up from Glenmere. It seemed to furnish a background for only one picture, the fair, pale face and shy, blue eyes, and sunny hair, and slender figure of a young girl. It came over him for the first time, like a thrill, that he was drawing near to Virginia Duval; that he should see her and hear her speak, and make her look at him in spite of herself, as he had done more than once on the ship. And then he fell into a reverie in which he lived over every little event connected with the young stranger, since she had been thrown so singularly on his care. If a young man, going a wooing, finds the wrong maiden making pictures in his brain, how can he help himself?

When Bradley came to the upper end of Glenmere, the thick woods that clothed its bank were casting dense shadows, and the water lay at his feet in a long, bright line. He remembered poling about this pretty lake in his boyhood on an old raft. He could have gone to the very spot where he had often hidden his poles to prevent his Cousin Winnie from getting drowned in the same kind of

exercise. Now he emerged upon a tiny cove, upon the opposite side of which ran a little green path, turning in and out among the trees. It was not many rods across, and the path was in plain sight from where he stood hidden by the sloping branches of a great hemlock.

As Bradley paused a moment in this place a confused murmur of voices struck his ear. The words were indistinguishable; but a woman was half sobbing or imploring, and when she ceased the sound continued in the heavier tones of a man's voice. The blood rushed back on Bradley's heart, as he seemed to recognize the accents of Virginia, in those low pleadings, from the green path across the little cove. He peeped through the thick branches of the hemlock, and caught the flutter of a light skirt just as it disappeared from view. At the same instant a man emerged from the shadow of the trees. He was tall and slender, with dark hair, and a pale face. He turned and mounted the wooded bank of the lake with a quick, noiseless, stealthy step.

Bradley dashed from his hiding-place, and almost with one bound had struck the path that rounded the little cove like a bent elbow, just where it was joined by a bridle-road that led through the forest, and over the hills, to the Halcourt mines, when Virginia, with her hat off, her hair unloosed, her bosom panting, her face bloodless, and eyes dilated, came flying toward him like a frightened wild bird. In a moment she was almost in his arms, and then she shrank and cowered away, exclaiming:

"Oh, Monsieur Halcourt!"

"Virginia—Miss Duval—what has happened? Were you assaulted? I heard your voice in distress, as I thought, and I was running to the rescue."

She cowered back still farther, and said, as well as she could, in gasping, agitated tones:

"Oh, no, no. I was foolish, nervous. I—I—that is, it was a man from the mines, who spoke to me, but he did not mean to harm me. I was fearful in that lonely place, and I lost my head."

"The miscreant, did he frighten you? Did he threaten violence? I cannot leave you here half fainting from agitation and alarm, or I would go after him and give him a lesson he would not soon forget."

"Oh, no, no," cried Virginia, in agonized tones. "Do not think of it again. It was all my weakness and folly."

"Did he beg of you, the scoundrel?"

"He asked for money, but I had none to give," she said hastily. "But it was all my fault. Do not speak of it to your cousin; it might disturb her?" And again the trembling and shuddering came on more violently than before.

"Do let me support you; you will fall," said Bradley, in an anxious tone. "The villain has given you a shock that may throw you into a fit of illness. You must not go straying alone about this wild country."

He passed his arm around her waist, and Virginia burst into a flood of passionate sobs and tears.

"At that moment Winnifred, with a brilliant, glowing color in her dark cheeks, and mounted on Thunderbolt, came riding down the road from the mines with Edgar Swayne, who had resumed his clerical dress, by her side.

(To be continued.)

#### MADAME SOBIESKI—A NOBLE WIFE.

During the troubles in Poland which followed the revolution of Thaddeus Kosciuszko, many of the truest and the best of the sons of that ill-fated country were forced to flee for their lives, forsaking home and friends. Of those who had been most eager for the liberty of Poland, and most bitter in enmity against Russia and Prussia, was Michael Sobieski, whose ancestor had been a king a hundred and fifty years ago.

Sobieski had three sons in the patriot ranks, and father and sons had been of those who had persisted in what the Russians had been pleased to term rebellion, and a price had been set upon their heads.

The Archduke Constantine was eager to apprehend Michael Sobieski, and learned that the wife of the Polish hero was home in Cracow, and he waited upon her.

"Madame," he said, speaking politely, for the lady was queenly and beautiful, "I think you know where your husband and sons are hiding?"

"I know, sir."

"If you tell me where your husband is, your sons shall be pardoned."

"And shall I be safe?"

"Yes, madame, I swear it. Tell me where your husband is concealed, and both you and your sons shall be safe and unharmed."

"Then, sir," said the noble woman, rising with a dignity sublime, and laying her hand upon her bosom, "he lies concealed here—in the heart of his wife—and you will have to tear this heart out to find him."

Tyrant as he was the Archduke admired the answer, and the spirit which had inspired it, and deeming the goodwill of such a woman worth securing, he forthwith published a full pardon for the father and sons.

## THE Ladies' Floral Cabinet AND PICTORIAL HOME COMPANION.

THE HANDSOMEST ILLUSTRATED JOURNAL OF HOUSEHOLD ART, FLOWERS AND HOME LITERATURE IN AMERICA.

PUBLISHED MONTHLY.

Devoted to Housekeeping, Household Elegancies, Fashions, Music, Ladies' Fancy Work, Social Amusements, Home Pets, Flowers, Window Gardening, Cottages, Garden Decorations, and Illustrated Home Literature.

### SUBSCRIPTION TERMS, 1876 & 1877.

\$1 30 per year, including Steel Plate Engraving, "The Glee Maiden."  
1 50 per year, including also chromo "Gems of the Flower Garden," or "My Window Garden."  
65 cents, six months, without premiums.  
To club of seven, an extra copy of paper with one engraving free to agent.  
These terms include all charges—for mailing and also postage on paper for one year.

#### Back Volumes.

\$1 30 for volume of 1874-1875 or 1876, unbound.  
2 25 " " bound in cloth and mailed.  
1 00 " cover to volume, mailed, postage paid.  
1 50 " portable binder and music portfolio, mailed, postage paid.  
1 00 " volume of 1873, unbound.  
50 " numbers July to Dec., 1872, unbound.  
No numbers for sale previous to July, 1872.  
No volumes bound previous to 1874.

#### Terms for Chromos, Agents' Outfits, &c.

50 cents for agents' outfit of paper, chromos, etc.  
25 " " " " " and engraving.  
Terms to canvassers sent on receipt of P. O. stamp. Agents wanted in every town.  
Address,

HENRY T. WILLIAMS,

Office, Publisher,  
46 Beekman St. P. O. Box 2445, New York.

A CATALOGUE OF BOOKS AND GAMES, published and for sale by HENRY T. WILLIAMS, will be sent free by mail on receipt of 10 ct. stamp.

## MISFIT CARPETS.

ENGLISH BRUSSELS, THREE-PLY, AND INGRAIN, very cheap, at the old place,  
112 Fulton Street, New York.

Send for a price-list. J. A. BENDALL.

## 25 FLOWERING PLANTS FOR \$1.25

BY MAIL, POSTPAID.  
Your choice from over 150 varieties, some of which see below. Abutilons, Achimenes, Bonvardias, Begonias, Callas, Cobaeas, Cypripediums, Coleus, Cactas, Daisies, 3 varieties Dentzias, Fuchsias, Ferns, Geraniums (either Ivy, Silver, or Zonale-leaved sorts), Gladiolus, Hoya, Heliotropes, Ivies, Jasmines, Lantanas, Myrtles, Pansies, Pomegranates, Pilea, Smilax, Stevias, Solanums, Tuberoses, Tulips, Violets, Zephranthes. 10 of the above for 50 cents. Catalogue free. *Hillside Greenhouses, New Brighton, Beaver Co., Pa.*  
THOMAS ELVERSON, Proprietor.

### FLOWERS! FLOWERS!!

Ten beautiful ever-blooming ROSES sent postpaid to any address for \$1. A large collection of all kinds of Greenhouse and Bedding Plants, lower than the lowest. Don't fail to send for my mail catalogue of plants and seeds, in which I offer extraordinary inducements for 1877. Sent free to all. Address, W. H. BRENNEMAN, HARRISBURG, PA.

### PRAY'S GREENHOUSES, CENTRAL FALLS, R. I.

New Catalogue out early in February, send your address for it.

### BEDDING PLANTS, BASKET PLANTS, ROSES, FERNS, FINEST GERMAN PANSIES, ETC.

A specialty of FINE FLOWERY PLANTS, for retail trade only.

#### GERMAN SEED

Selected personally while in Germany, in August and September.

GIVE US A TRIAL.

#### FOUNTAIN PUMP.

GARDEN ENGINE and FIRE EXTINGUISHER. For Washing Windows, Carriages, etc. Protects Buildings from Fire, and Trees, Vines, etc., from Insects. Throws water 50 feet. Easily carried. No Dwelling, Country Home, or Factory should be without the Fountain Pump. Send for Large Illustrated Circular. J. A. WHITMAN, Sole Proprietor and Manufacturer, Providence, R. I.

## GOSSAMER Waterproof Garments.

Get the Genuine! Beware of Worthless Imitations! Ask for the Gossamer Waterproof Garments, and see for yourself that our trade mark, "GOSSAMER WATERPROOF, MANUFACTURED BY GOSSAMER RUBBER CLOTHING CO., BOSTON," is stamped on the loop of the garment. None are genuine without they are so stamped. Our garments never under any exposure, to either cold or warm weather, adhere together, or grow soft and worthless. No Lady or Gentleman should be without one of our Rubber Garments. Weigh from 9 to 16 ounces, can be easily carried in the pocket. Send for Illustrated Circular. GOSSAMER RUBBER CLOTHING CO., 289 Devonshire Street, Boston, Mass.

Prop'rs & Man'rs, 793 Broadway, N. Y.

### BUY THE

## Young Housekeeper's Friend,

BY MRS. CORNELIUS,

and you will save many times its cost every month. It is the acknowledged standard in all matters pertaining to the cooking department and to the duties of the household. It also contains much valuable information as to the management of the sick room, preparation of food for infants and the sick, etc. The book is a work of great value to every housekeeper.

Price \$1.50. Interleaved, \$2.25.

Sent by mail on receipt of price, when not found at the booksellers.

THOMPSON, BROWN & CO., Publishers, BOSTON.

My annual Catalogue of Vegetable and Flower Seed for 1877 will be ready by January, and sent free to all who apply. Customers of last season need not write for it. I offer one of the largest collections of vegetable seed ever sent out by any seed house in America, a large portion of which were grown on my six seed farms. Printed directions for cultivation on every package. All seed sold from my establishment warranted to be both fresh and true to name; so far, that should it prove otherwise I will refund the order gratis. As the original introducer of the Hubbard and Marblehead Squashes, the Marblehead Cabbages, and a score of other new vegetables, I invite the patronage of all who are anxious to have their seed fresh, true, and of the very best strain. New Vegetables a specialty.

JAMES J. H. GREGORY, Marblehead, Mass.

For Use in the Nursery it has No Equal. Worth ten times its cost to every mother and family in Christendom. Sample box containing 3 cakes of 1 oz. each, sent free to any address on receipt of 75 cents.

Address B. T. Babbitt, New York City. For Sale by all Druggists.

NEW YORK, JANUARY, 1877.

## OUT-DOOR RUSTIC WORK.

When Mildred and I visited the city in May, we spent a considerable portion of our time around the different greenhouses, and returned seriously infected with what father termed the "rustic fever." We had a large grassy lawn dotted with shrubs, roses, and roomy beds filled with thrifty plants. But our hearts longed for baskets and vases. A certain vacant spot was exactly fitted for that forty dollar rustic vase we saw at the florist's, and on each side of the verandah steps was a place for those elegant things in iron we so much admired, and in our roomy verandah could swing a dozen lovely terra-cotta pots. But all these expensive articles were beyond our means.

"If this were a laurel-growing country we might make rustic-baskets," I suggested. "Of laurel roots, cedar and pine branches, we are destitute," answered Mildred, "but we have grape-vine and green briar roots, knotted and tangled, and all the unexplored resources of the woods to draw from; let us see what we can do."

It was June before we got fairly started, but in two or three weeks we worked wonders. We read "Window Gardening," and everything else in our reach on the subject of rustic decoration. We observed, questioned and invented. We ransacked the garret and brought out the trash. We explored the woods and returned loaded. All the odds and ends of the earth were to us available. Wooden bowls split or worn through by vigorous chopping, aged keelers and warped peck measures were treasures. Those of suitable size were turned into hanging-baskets, furnished with grape-vine handles, and covered with grape-vine branches and roots, crooked sticks, knots and the roots of green briar and briar-rose. By cleaning the roots thoroughly and finishing with a coat of copal varnish, we managed without laurel roots to equal the rustic baskets of the florists. Other baskets were made of sweet gum balls. We pierced holes through the centre of every ball, strung them on wire, and beginning at the bottom, shaped the string of balls into a basket

fastening it in place by other wires extending from bottom to the top. Baskets of acorns were made in the same manner and varnished.

Of the larger bowls and measures we made vases, ornamenting them as we did the baskets. For stems or standards we got pronged saplings, cut the prongs off so that they rested firmly on the ground as feet, made the upright stems of suitable length, peeled off the bark and nailed the prepared vase to the top. Then grape-vines were twisted about the stem and prongs, and the whole varnished. A handsome double or two-story vase for the verandah was made in this wise; Brother Rob, to whom we appealed all our difficulties, procured a number of maple sticks three inches in diameter, and split off the four sides. Each end of these split pieces was rounded, one end being made thinner and narrower than the other. Then they were nailed to an oval board, bottom sawed slanting, and the tops tacked to a wide strong hoop on the inside, and the result was a flaring basket, fourteen inches deep. It was finished with a grape-vine hoop tacked on the outside at the top and bottom. A peeled three-inch stick, three feet long, was nailed to the centre of the bottom for a stem for the upper vase. This upper vase was a hexagon box of planed oak, ornamented with pine cones and acorns tacked and glued on, and with a pine cone tassel at each corner. The bottom vase and stem were stained as near oak color as possible, and the whole affair varnished. This was filled entirely with ferns with moss at their roots, and partridge berry wandering over the edges.

Another lovely double vase was entirely original, with us at least. A three-inch square post was set firmly standing three feet above the ground, and surmounted by an octagon box. Then we covered both box, and standard with pebbles, stuck in putty, and piled up a small rockery around the base. In the box were Ice and Dew Plants, their succulent leaves harmonizing with the gray pebbles. From a pot, concealed by moss, a small English Ivy vine twined around the standard, and in the crevices of the rocks, well filled with rich earth, flourished Moneywort, Sweet Alyssum, Lobelia, Verbena, Nolana, etc.

Other vases and baskets were formed of rough boxes covered with bark dotted with clusters of lichens and tufts of gray moss. Others were log-cabins made of inch sticks of maple or other wood, with the bark left on and cut into lengths of ten, twelve or more inches, according to the size desired. A gimlet hole was bored an inch from each end of the sticks, and they were laid together, log-cabin fashion, and fastened by passing a wire with a loop on the upper end through the holes and on through corresponding holes in a board-bottom, and clinched on the under side. Because of the interstices, we lined with moss before filling.

Still we had not made anything satisfactory to be placed near the Verandah steps. Something entirely different from the others, and solid-looking, was Mildred's idea. One day she exclaimed, "I have an inspiration! You remember the sanded depot building at L—? If I only could get a foundation to suit me." We needed the aid of a better workman than Rob, and counseled with a carpenter accommodating and inventive. Thrice blest is the woman who can find such a carpenter! In a few days he brought our vases of wood. A handsomely-moulded pedestal supporting an octagonal box, so contrived and finished with moulding as to closely resemble some styles of marble or stone work. We painted them a brownish gray, and sifted fine sand over them while wet. When put in place and filled, our visitors thought that they were of sandstone.

FLORENCE.

## AWARD OF PRIZES.

The Awards of Prizes for Floral and Household Articles has been made as follows:

## FLORAL ARTICLES.

1st Prize—To Mrs. James Stewart, Peabody, Kansas, for article entitled "My Afternoon at Mrs. Briggs'."  
2nd Prize—To Mrs. M. J. Giddings, Weston, Mass., for article entitled "Floral Items."  
3d Prize—To articles as follows: "Flowers for House and Garden," by Eben E. Rexford, "A Bit of Christmas Green," by Mrs. M. F. B. Atkinson, "My Fern Window," by Mrs. R. L. Carter, "My Conservatory," by Mrs. J. H. Biggs, "Flower Fancies," by Mrs. Geo. Katon, "Lily Flowers," by Mrs. Kate Madigan, "Plant Windows and Window Plants," by Jennie M. Chatterton, "Wintering Plants in Cellars," by F. A. Alling, "Floral Decorations in Our Day Window," by Ella S. Helps, "Rustic Work," by Liza Hodgson, "Indoor and Out-door Culture of Window Plants," by L. K. Share.

## HOUSEHOLD ARTICLES.

1st Prize to articles—"Home Furnishing with Small Means," by Mrs. M. Plumstead, Jr.  
2nd Prize—"My Breakfast Shawl and What Became of It," by Mrs. Edward Higby.  
3d Prizes to "Lambrequin," by Mrs. E. R. Barnes, "Our Sitting-Room," by Augusta Delmer, "Our Sewing Bees," by E. M. R., "The Ladies' Floral Cabinet," by Maria S. Fergus, "Some Hints to Country Girls About their Bed-Rooms," by A. P. Blankhead, "Useful Elegancies," by Mrs. J. K. Byrnes, "My Room," by Ellen C. Wright, "My Guest Chamber," by Kate Hilliard, "Pictures as Furniture," by Miss M. C. Emmettrout, "How I Improved Our Home," by Bertie Lucron.

## COOKING RECEIPTS.

The Award of Prizes must be deferred till the February Number. Over 10,000 receipts were forwarded for competition, and it is physically impossible to conclude the work of examination before February. The receipts are all splendid—the best collection ever known to American housekeepers, and we thank our correspondents deeply for their cordial help and interest.

## PUBLISHER'S ANNOUNCEMENTS.

**Back Volumes.**—New subscribers, who are pleased with THE FLORAL CABINET, will find in back volumes an immense fund of delightful reading, pictures, and the choicest of family music; there are single pieces of music so sweet and charming as to be alone worth the price for a volume. We will club these together with subscription for 1877, as follows:

\$2.00 will pay for subscription 1877, the steel plate engraving, and all the back numbers of 1876, January to September.  
3.00 will include all of 1877, 1876, and 1875.

4.00 " " " " " and 1874.  
5.00 " " " " " and 1873.

Bound volumes for each year will cost 65 cts. for each volume in addition to above prices.

**Books on sale Agents Wanted.**—Our Household Books are so popular, and so sure to delight the ladies, that to any subscriber, club agent, or agent, who can sell copies among their friends, we will give special commissions. They may purchase of us, and we will take back all they cannot sell, and refund the money.

**Prizes for Clubs.**—A Prince Parlor Organ, worth \$100, is given to the club agent who gets up largest club for 1877. See Oct. Number and Premium List for other Prizes.

**Back Numbers.**—Many whose subscriptions began with the January Number, and wish back copies from the commencement of the story, "Winnifred's Will," can obtain them for 33 cents.

**No Trial Trip.**—The Trial Trip offer expired Jan. 1st, and is not now open to acceptance. Any one wishing Numbers of this year must remit full price.

## MAGNIFICENT NEW FLORAL PREMIUMS.

**"The Floral Cabinet" Collection of New Seedling Gladiolus.**—This is a new collection, never before offered, grown exclusively for us, which consists of twelve flowering bulbs of Gladiolus, of the finest quality and most exquisite variety of colors. The quality of this collection unequalled, and in every respect, we can safely guarantee them extra choice. The same quality of named varieties of Gladiolus, obtained of reliable seedsmen, would cost \$12. The colors range from the most fiery scarlet to the purest white.

**OFFER No. 1.**—This collection, worth \$12, will be given free to any person who will raise a club of 15 subscribers to the FLORAL CABINET at \$1.30, and also an extra copy of paper 1 year, free to agent.

**OFFER No. 2.**—To any one who will get up a club of 20 subscribers at \$1.30 we will give sufficient bulbs that the members of the club may have each 1 bulb worth \$1, and the club agent the entire set of 12, also with extra copy of paper free 1 year.

**OFFER No. 3.**—One subscription at \$3, will give subscriber the CABINET 1 year and collection free, all worth \$15.

This collection is not for sale by any seed house, and cannot be obtained at any other place, and all are new seedling varieties just originated.

**The Floral Cabinet Collection of Balsams.**—This comprises the best strains of Camellia-flowered Balsams ever offered. The Balsam is a great favorite with the ladies. This collection is the very cream of the extra choicest sorts ever raised. Its value may be judged when the seedsmen have offered 10 cents a seed for all that can be spared. We know there is nothing in Europe or America to equal them. The collection consists of 6 packets, pure white, deep rich purple, brilliant scarlet, crimson spotted, velvet violet spotted, and carnation striped. The flowers are so large and perfect as to be almost equal to roses. The set is worth \$1.50 at least, and can be obtained only on the following terms:

No. 1.—A club of 10 subscribers to FLORAL CABINET, at \$1.30, will entitle club agent to 1 set of above packets, \$1.50, and 1 extra copy of CABINET and engraving free.

No. 2.—A subscription of \$2 to CABINET will entitle subscriber to the paper and collection in addition.

No. 3.—A club of 4 subscribers at \$1.30 will entitle agent to the collection free, as a premium.

No. 4.—A club of 20 subscribers, at \$1.30 each, will entitle club agent to enough packets to present each member of the club with the collection, worth \$1.50, also the CABINET and engraving 1 year, (all together worth \$3.80) and the club agent to extra set of paper, engraving, and collection, free.

The supply is limited, and those who desire them will do well to get clubs in as soon as possible.

These collections of Balsams and Gladiolus are named specially after the FLORAL CABINET, and we are very cautious never to send out anything but just as represented. The good name and fame, and honor of the CABINET is the best endorsement of these new floral collections, which are of extraordinary value.

## Household Topics.

[First Prize for Best Article Household Topics.]

### HOUSE-FURNISHING WITH SMALL MEANS.

Many young people nowadays, when they marry, board instead of going to housekeeping, under the impression that it costs less to board. I think this is a mistaken idea. If they are economically inclined they can get along better, and certainly be happier in a home of their own, even if they have to rent a small house, instead of boarding in a large one. There is my friend Kate Grant, who was married a year ago and went to housekeeping. Her father is a well-to-do merchant, and gave her a pretty French-roofed cottage for a wedding-gift, and it was planned to suit her ideas of convenience. It is not every girl who is so fortunate, I know; still, any girl can make a great many things to beautify a home, even if she does not own a house. Kate had some money laid by, as she had taught school several years. Her husband had just started in business, and needed all his money to invest in it; so they wished to be economical in their furnishing.

Kate set her wits at work to see how many pretty things she could make to beautify her house without laying out much money. How well she succeeded you must judge, when I describe them. But first let me describe the house. It stands back from the street about twenty-five feet, giving room for some nice flower-beds cut in the grass. The front door is in the centre of the house, with a cosy little porch covered with Woodbine and Madeira vine; and I must just stop to speak of the beautiful contrast of the Woodbine, just turning red, and the Madeira vine, still a bright green, with its feathery blossoms. The parlor is on the right-hand side, sitting-room on the left, a bay-window in each; the dining-room opens from the sitting-room. Now, I will begin with the front hall and tell you something about the furnishing. Here is a door at the right, opening into the parlor; at the left, into the sitting-room; at the farther end,

into the dining-room. The stairs go up at the right side and curve around near the top. The walls are covered with plain drab paper; a gilt molding is put up next to the ceiling to hang pictures from; then a plain green velvet border; the same just above the base-board. The doors are painted a very light shade of drab, panels a little darker. The carpet is a green mossy pattern on a drab ground; stairs covered with the same with a narrow border. The narrow windows each side of the front door, have plain white Swiss muslin curtains. In every pane of glass is a

pot of Tradescantia, on the other Coliseum Ivy. Over the dining-room door is the motto, "Welcome," made of ferns in spatter-work. In the corner near the parlor door is a little table with a card-receiver on it, made in imitation coral work, of red sealing-wax. This hall looks very pleasant, and the carpet is the only thing in it that cost much.

Let us enter the parlor. How pleasant it looks! Carpet, curtains, and furniture, all seem to harmonize. Sit down in the easy chair and let us look at the surroundings. The room is about fifteen feet square,

with a bay window on the north side, opposite the door. At the right a window facing east, and the mantle opposite the front window. The walls have the same drab paper as the hall, and the same gilt molding. Just below this is a velvet border of a lovely shade of blue; under this is a narrow gilt beading for a finish, this is repeated just above the base-board. The paint is the same as that in the hall. The carpet is an English Brussels; a light drab ground with figures of blue, black, white, and a little golden yellow, with a border to match. This was a wedding gift from Kate's mother. At the window are plain white shades with drab tassels; over these, lace curtains looped back with blue cord and tassels, finished at the top with a plain gilt cornice. The lace curtains on the bay-window are put up next to the room. Half way up on either side of the casing is a walnut bracket; on it a drab flower-pot, (Made so by a little paint, then a band of silver paper put around the top for ornament.) In it an English Ivy with two branches, trained up

THE CHILDREN'S HOUR.

transparency, made by taking a piece of white tarleton just the size of the glass, and fastening autumn leaves and ferns, and then tacking them to the window at each corner with very small tacks. The tarleton does not show, and the leaves look beautiful through the misty curtains. There is a neat hat-rack, and a couple of rattan chairs cushioned with scarlet rep. On each side of the hat-rack hangs a pretty chromo; underneath each picture is a bracket made of pine wood stained and covered with cones; on one

at the side of the casing until they reach the cornice; then across to the center where they cross and hang down, forming a prettier finish than a lambrequin, I think. The other window has a lambrequin made of white tarleton, cut in three scallops, one large and two small: then pressed green and bleached ferns pinned on, the edge outlined with pressed Hartford ferns. In the bay-window is a fernery, or greenery I should call it, as it is not under glass. It is made of an old-fashioned light

stand with a zinc pan that fits the top, stained and varnished to match the table. It is filled with native ferns, partridge berry vines and mosses; near the edge is planted *Tradescantia*, which conceals the dish. Suspended above this is a hanging basket made of an old-fashioned porcelain gas shade; it has a crocheted cover of stout blue embroidery silk with crystal beads, finished with a handsome tassel of silk and beads; the same for cords to hang it. A small saucer is put in the bottom to cover the hole. It is filled with pressed ferns and long sprays of Ivy put in bottles of water. Near the front window is a bouquet table bought without the marble top; that leaves a hollow place about an inch in depth. Into this is fitted a little wooden tub covered with bark, tacked on; the tacks concealed by bits of moss, glued on; then filled with earth and three English Ivies planted near the outside and twined around the tub, and around the table, until they reach the feet, where they are fastened with green worsted. The surface is covered with moss. In the centre is a tall white vase with the stand broken so it can be pushed into the earth until it stands firm. It is filled with Sweet Peas and Mignonette, and *Maurandia* vines trailing around the vase. Near the bay-window is a similar table; this has a mat fitted into the top made of stout pasteboard, covered with green cambric; then there is moss sewed around the edge about three inches deep; made by knitting shaded green worsted as wide as the moss should be, dampening, pressing, and ravelling it out, then sewing it on to the pasteboard. This imitates moss very well. The dish on it was originally a tall cut-glass preserve dish, but an accident had deprived it of its standard, so it was appropriated to this use. It happened that it broke just where the standard joins the bowl, so it fitted nicely into the mat. There was pounded charcoal put into the bottom, then leaf-mold and sand, and a *Smilax* vine trained around a small green wire cross. Of course this was done last spring, so now the cross stands draped in living green. It is trimmed with red and white Carnations and sweet *Allyssum*; the stem of each is wrapped in a bit of green moss and tied on with green worsted. Kate tells me they will keep fresh in this way several days.

On the mantle (a marble slab supported by bronzed brackets) is a pair of alabaster vases of the antique pitcher-shape, a wedding gift from an uncle; a few feathery pressed ferns, and scarlet bitter-sweet berries, set off the lovely whiteness of the pitchers, and trailing down from the mouth are pressed partridge berry vines. Do you know how lovely these are when pressed? In the centre of the mantle is a photograph framed in blue velvet and gilt, on an easel frame; behind this is a wide-mouthed bottle filled with water, and bits of charcoal to keep it sweet; then long sprays of Madeira vine are put in and trained around the picture. Over the mantle is a life-sized chromo of "Beatrice Cenci" framed in gilt. On each side of the bay-window are bouquets of bright flowers painted in water colors on black grounds and framed in gilt. On the side next the hall is a group of chromos, the center one a winter scene; either side a spring and autumn scene. On a bracket below the winter scene is a white vase filled with *Tradescantia*. In the corners on the bay-window side are brackets; on one is a white wax cross wreathed with colored wax flowers, on the other a bust of "Clytie." I declare! I haven't said one word about the furniture. It is black walnut covered with drab rep with blue gimp and buttons. There is a cosy little *tete-a-tete* sofa across the corner between the bay and front window; a large easy chair on castors, opposite side of the front window; a larger

sofa on the side next the hall. Three smaller chairs on castors, and two after the camp-chair style; no parlor chairs. I asked Kate how she dared have a parlor and not have one of the aforesaid chairs? She replied that "she agreed with Rev. Mr. Murray about parlor chairs, that they were ridiculous," and so on. You remember his comical description of his call on some ladies, and sitting on that kind of a chair, and his feelings on the occasion. I shall never get through if I stop to tell it.

I have not told you of the pretty centre table, bought second hand, but not defaced, excepting some scratches on the top. It has a drab broadcloth cover, with an embroidered border, made of scraps of blue velvet and satin, appliqued with gold colored embroidery silk. It is very handsome. In one corner is a round marble-top table, with a group of "Roger's Statuary" on it, "The Favored Scholar." This was presented by Kate's scholars when she left her school. I must not linger here, but pass across the hall into the pleasant sitting-room. Here is another bay window opposite the door facing south; another window in front; a door at the right opening into the dining-room; then the chimney; the other side of that a book-case fitted into the recess made by the chimney. The paper is plain drab again, same molding, scarlet and black border, same above the baseboard. The carpet is common ingrain white, ground, scarlet and black figures. The furniture Kate said was a second-hand set of black walnut covered with hair-cloth, slippery and dismal, but she bought it very cheap, and thought she could cover it. She bought some plain twilled French cretonne, such as is used for covering furniture, made covers, bound them with scarlet braid, and then ornamented them with "spatter work." The large sofa had a lovely bouquet of ferns and trailing vines on the centre of the back. One easy-chair had a bouquet of maple leaves; another, small-sized oak leaves, and so on. The effect was charming, and as Kate said, "Who knows they are shabby underneath?" White shades, with scarlet and golden border, were at the windows. But the crowning glory of this room is the bay window filled with plants. It is arch-shaped at the top and shut off from the room by a glass door, open in the centre. It is boarded across about eight inches across the window sills, and a zinc pan fitted even with the sills; this makes a sort of sink. The bottom is covered with sand, the pots set in and filled in between with sand, and then moss from the woods on top. This is made even by putting the large pots almost to the bottom of the sand and heaping the sand higher under the smaller ones, so they present an even surface at the top. This is better than planting directly in the soil, as is often done; they can easily be changed so they will not grow one-sided, and most plants blossom better in small pots. There is a little door underneath and a faucet to draw off any extra water. Suspended from the centre overhead is a rustic basket, a *Dracena terminalis* in the centre; near the edge, is an Ice Plant covered with its tiny white blossoms. At the side windows are brackets with pots of pink and white *Maurandia* trained up the sides of the window; each side of the centre window are pots of *Cobaea Scandens* and *Tropaeolum Minus*. Then there are Tricolor Geraniums, Begonias, *Abutilon*, Chinese Primrose, Carnations, *Ageratum*, *Salvia*, *Cyclamen*, *Heliotrope*, and directly in the centre is a splendid specimen of *Cyperus Alternifolius Variegatus*. Some of the grass tufts measure over three feet in height. They all looked finely and not a bug to be seen. I asked Kate how she managed to keep them so free from insects. She said, "When

the weather gets cold I take a kettle of boiling water and pour carefully between the pots, then shut the door tight. This causes the steam to rise and the air keeps moist a long time, and the red spiders and all the rest of the tribe are nowhere; when the water gets cold I draw it off." Each side of the glass door, about halfway up, is a bracket with a pot of English Ivy on it, trained up until they meet in the centre, where they cross and then are trained straight along on the scarlet border. Where they cross is a bracket with a statuette of Flora on it. The book-case I spoke of is built into the wall in the recess formed by the chimney projecting into the room. It is made of black walnut, glass doors, drawers underneath, is about five feet high, and the top projects a little into the room. On it is a bust of Dickens; behind it is a wide-mouthed bottle filled with *Tradescantia*, which droops around the bust. Near by is an open grate, with its cheerful fire; or, rather, an open stove. It looks so like a low-down grate that one can hardly see the difference, and as Kate said, "One can see the difference in the cost." This is eighteen dollars, and the grate, with its accompanying marble mantle, from fifty to seventy-five dollars. There are white vases with scarlet and gold medallions on the mantle, filled with pressed ferns and sumac. There are pictures and brackets. I came near forgetting the front window. There is a black walnut box fitted to it; in each end are two *Smilax* vines trained on strings across to the centre of the window, where they are fastened; then crossed diagonally, then back, forming diamonds and half diamonds. In the centre of the box is a *Dracena*; each side of that is *Abutilon Thomsonii*; around the edge is *Coliseum Ivy* covering the box; overhead, suspended in his cage, is bright little 'Dick, the canary. Kate has a nice piano she has had several years. Over it on a bracket is a vase of something, I could not make out what. She said, "I partly manufactured it and it is partly natural." I took some sprays of oats that had been bleached in the sun, gathered some milk-weed pods before they began to fly open; began at the top of the spray of oats, taking a milk-weed seed with its winged attachment; put a drop of mucilage on it; then held the husk of the oats apart and inserted the seed out of sight, and so on until all was done. I then filled the vase with sand, so that I could arrange them gracefully and keep them steady. They look as if they would fly with every breath of wind, but they can't. I think my room will look warm next summer, there is so much scarlet about it. I'll tell you what I mean to do: After my carpet is shaken and put down again, I will lay down some heavy carpet paper and then some white straw matting; that will make the room look cool and be easy to sweep. Quite a consideration in hot weather, especially when one has to do their own sweeping; in the fall all I will have to do will be to take up the straw matting and paper and my room will be clean.

The dining-room has two windows facing south and one west. There is plain buff paper on the wall; wood-work, chestnut, oiled; floor, chestnut and black walnut, in stripes; the chairs are black walnut with dark green leather covers, studded with brass nails. Kate said they could not afford a woollen carpet and nice chairs, so she chose the latter, they are so durable, and the floor was so easy to keep clean. There is a woollen drugget of oak and green under the table. The window shades are light buff. At one window is a hanging basket made of an old tin pail covered with birch bark and moss filled with German Ivy. At the other window is a white-lead bucket, holding about a quart, painted scarlet, hoops black, filled with Saxi-

frage or Wandering Jew. On the side next the kitchen is a door into the back entry. Here is a washbowl and water faucet; over this is a looking glass: underneath a little closet for boots and rubbers: behind the outside door is an umbrella rack made of a three cornered piece of pine board with holes large enough to admit the umbrellas. A little further along on the same side is a small sliding door that opens into the dish closet, which is in the kitchen; under this slide is a broad marble slab supported by brackets, so the dishes and food can be passed in and out. The pantry opens out of the kitchen on the north side. The kitchen is an L and opens on the other side of the end entry. Kate said, "I want to have my kitchen as convenient as possible, for I want every step to count. You see it is quite small, but that saves steps. On this side I have a number of cupboards, or rather a large one divided. This one is for tins and baking dishes, small but handy; hooks for all things hangable, and shelves for those that don't hang. This cupboard is for wash-day and ironing things; this drawer is for ironing sheet, bosom board, holders, and my white mittens for hanging clothes in cold weather, knit with a finger like the soldiers used to wear. On this shelf above I keep starch, blueing, &c., just room enough this side to hang my clothes-pin bag, the other for my skirtboard. This box beside the stove is for my kettles; you see it is lined with zinc, so there is no danger of fire from hot kettles. When I shut the cover down it makes a good seat. I never could bear a kettle closet under the sink. I think they smell musty. You see mine is open underneath. I had it made of soapstone. I think it keeps clean easier than iron. I have my water handy. This pump is the hard water, and this faucet soft water from the pond. My cooking table is built against the wall between these two windows, so I can have all the light. It is enclosed at the back and ends, has drawers and doors in front. This right hand closet is where I keep my flour barrel, this door open to let the barrel in, this lid opens over the barrel to take the flour out. Here I keep my sieve, scoop, &c. The middle closet is for things I use to cook with. Above the door of this closet is a place made to slip in my bread board when not in use; it has a piece on the end of it with a knob to pull it out by, and slips into place like a drawer. Here are drawers for dish-cloths, holders, and a drawer for cooking knives and spoons."

The floor is hard pine, oiled; woodwork grained; walls painted light buff and varnished. Paper soon spoils with steam, and this is soon cleaned with a damp cloth. There is a small shed opening out of the kitchen where the washing is done. On wash days Kate has a piece of rubber hose she screws on to the kitchen faucet, which carries the water to the tub or boiler without lifting or stopping. If I could stop I could tell you of the pretty chambers and their furnishing, but must defer it until another time.

Lynn, Mass.

M. J. W.

**Papering** and painting are best done in cold weather, especially the latter, for the wood absorbs the oil of paint in warm weather, while in cold weather the oil hardens on the outside, making a coat which will protect the wood instead of soaking into it.

An oaken color can be given to new pine floors and tables by washing them in a solution of copperas dissolved in strong lye, a pound of the former to a gallon of the latter. When dry, this should be oiled, and it will look well for a year or two; then renew the oiling.

### MY BREAKFAST SHAWL, AND WHAT BECAME OF IT.

I thought it was handsome when it was new, but that was a good dozen of years ago. It was none of your machine-woven concerns, but crocheted, of the brightest of scarlet zephyr, with a black and white border, scarlet fringe, and pretty mixed tassels. I came across it one rainy day away down in the bottom of an old trunk, and, as usual, began to consider as to what good use it could be made to serve. I have it, said I, it shall be ravelled and made into a jacket to wear under my cloak in severe cold weather. Full of my new idea I commenced at once, but before I had proceeded far in my work of destruction I began dubiously to shake my head, and by the time I had finished winding my last ball a very emphatic no escaped my lips. It was not strong enough to bear the wear and tear of a tight-fitting jacket, so it was consigned to the old trunk once more.

Not many weeks after this occurrence, by some unfortunate accident, one of my kitchen curtains was completely ruined. My bedroom boasts of but one window, and its curtain matched those in the kitchen. It was the work of only a few moments to take it down and put it into the place of the ruined one; but now the query arose, what shall I get for my bedroom? This room, so far as furnished at all, was furnished well. A chamber set of chestnut, with black walnut trimmings, and a pretty ingrain carpet of scarlet, white, and green. The walls were just as the masons left them, simply lathed and plastered. The paint was white. If I bought a new curtain I must have a pretty one—the old one was not half good enough—but it was hard times, money very scarce, and I wanted a great many things. Thus I pondered, Well, that night I closed the blinds and slept in a curtainless bedroom, but ere the clock had tolled the midnight hour my plans were all arranged.

The morning found me up bright and early, and searching my FLORAL CABINETS for directions for kalsomining. It is fortunate those papers are made of the best of material, for if otherwise I am sure there would not be a piece left of mine. I wonder if every reader peruses them as faithfully as I do! But I am digressing. I found my directions, purchased the material, borrowed a brush, and with my husband's help had that room all kalsomined clear and white before night. I was stiff and sore for a week afterward, but that did not matter.

Now for the curtain. I had a set of three sheets that I never used except in the hottest weather. They were made of very fine and light cotton, and had been washed times enough to be very soft. I took one of them, ripped it through the middle, picked out the stitches, tore a strip lengthwise off each breadth to make a nice hem or facing, tore off ruffles from dainty I had in the house, hemmed and gathered them full enough to flute, set them within the facings, and stitched them on the machine, washed, boiled, starched, ironed and fluted them, and my curtains were finished.

I brought my balls of scarlet wool from out the depths of the old trunk, and crocheted them into a hermitage lambrequin. They were plenty strong enough for that. I cut a stiff paper pattern of lambrequin, and crocheted the wool in the exact shape of pattern, hid the fringe into the edge, and fastened the tassels in their proper places. I lined it with two or three thicknesses of white, starched very stiff, tacking the outside to lining wherever it was necessary. The effect of the white showing through the scarlet was

very pretty. I fastened the curtain to the top of window, the lambrequin I tacked to the cornice, which was made in this wise: I obtained a half-inch pine board long enough to reach to the outside of the framework of window, a small piece was tacked on each end to make the cornice set out the required distance, the top was sawed in fanciful shape, measuring six inches in the widest part, the lower edge was round but straight—that is, the edge of the board was rounded off and a groove cut a little above, to give the appearance of a moulding. I covered the cornice as far down as the groove with smooth brown wrapping paper stained black walnut; the moulding I covered with gold paper. I stained more paper, cut and folded leaves, and tacked them the whole length of upper edge of cornice and down each end, and finished with a good coat of varnish. It was as handsome as carved black walnut. All that remained now to make my window complete was something with which to loop my curtains back. These I made of strips of pasteboard covered with pieces of scarlet cloth, and again with Nottingham lace. My bed was already covered with a white counterpane, and my pillows with shams, tucked and ruffled, with embroidered initial in centre. The little table for lamp I covered with a handsome spread of lace lined with scarlet. My bureau I did the same. A little scarlet wool yet remained, which I speedily converted into a scarlet and white pin-cushion, hair-receiver and hair-pin box. I covered my washstand with white, and put back of it a white splash-cloth bordered with scarlet; hung brackets and pictures on the wall, spread mats on the floor, and my room was finished.

I suppose you think I was proud of it. I am not ashamed to own that I was both proud and satisfied. I had a very attractive room—a room in which everything so blended as to form one harmonious whole, while my purse remained about as full as when I began, which certainly was an important item.

Before closing I would like to describe one of my floor mats. It is wholly of my own invention, one of the wonders of the neighborhood, and has received the name of "Centennial Mat." It is three feet long by two wide, corners rounded. It is made on dark glossy green cloth, and lined with bed ticking. I made flowers, buds, leaves and vines of pieces of straw braid in all colors, both variegated and plain—of course they were perfectly flat. I arranged them as a collection or bed of flowers in centre of mat. Wherever it needed any delicate filling in, finer than I could give in straw, I chain-stitched vines and tendrils on the cloth, tracing the design with a pencil. The material used for the chain-stitch was very fine white and brown mending cotton; a needleful of each threaded into one needle, thus making a variegated stitch. The centre figure measured two feet in length by a little less than one and one-half feet in width. The border of mat consisted of a long coarse piece, half an inch wide, of variegated red and white, variegated green and white, and plain white straw braid, braided very loosely together, and sewed on flat, nearly an inch from the edge of mat. These were stitched firmly on each edge of each braid, making six rows of stitches in the border. Every flower, leaf, bud and vine, was stitched around the edges and back and forth every way through its centre, leaving no possible place for careless feet to damage. The edge of mat was bound with green skirt-braid to match the cloth. It is handsome placed in almost any situation, but its own peculiar sphere is in a summer parlor, furnished in green and white, like the one described in THE FLORAL CABINET of May, 1875. SEAWEED.

## Household Elegancies.

## LAMBREQUINS, BASKETS, ETC.

The illustrations on this page represent several beautiful household ornaments. The Lambrequin is constructed by simply using a board of proper shape, and fastening thereon with glue acorns, leaves, nuts, shells, etc., which can be found in our forests; or it can be constructed of leather, in imitation of the natural. The little hanging corner Book-shelf is exceedingly simple to construct, its size being about fifteen inches in diameter. The Flower-Basket is made of bamboo reeds, and prettily trimmed with cords and tassels. It is about twelve by eighteen inches in diameter, and sufficiently large to hold one large-sized flower-pot and plant. It makes a very simple, pretty and acceptable flower-pot stand for a parlor centre table, or in the window.

## HINTS AND HELPS.

THE CABINET, as it comes to us from month to month, is always a welcome visitor, and so great is the variety and excellence of its contents, that it sometimes seems as if every possible thing of beauty or object of household art, within its province, had been already described in its pages. But each new number, rich in suggestion and helpful hints, reassures its

CORNER BOOK-SHELF.

readers and speaks of a wealth of good things yet to come; and so, doubtless, it will be while busy brains are left to plan and deft fingers to execute the designs of their beauty-loving owners.

Even as I write, I see about me some pretty things which I have never yet seen mentioned, and will try to describe some of them in return for the direction and help received from others.

## WALL POCKET.

A dainty little wall pocket may be made from cigar-

LAMBREQUIN.

lighters. Take twenty-four slips, using the uncolored kind, and interweave them basket-fashion to form a square; make another square like the first and fasten each of three corners of the second square to the middle of a side of the first, respectively. This will cause the second square to round outward somewhat, forming a pocket, of which the first or flat square is the back. One or two trials will show you exactly how to arrange them. Now pass two additional slips through openings in each of the upper corners of the back piece, and interweave the other ends of these four slips to form a pointed top like the tops of the photograph frames made of the cigar-lighters. Make a tiny bouquet of feather-grass and sew it upon the upper corner of the pocket, concealing the ends of the dried grass-stems, which should come down to the middle under a little oval picture or a scarlet rosette tacked on with a few stitches. Put little bows of scarlet satin ribbon on each corner of the back piece and one at the top where the strips cross, by which the wall pocket is suspended.

## A COURT-PLASTER CASE

Is an acceptable Christmas gift to almost any one, and even little fingers can readily make them. Two pieces of perforated card, each two and one-half by three and one-half inches in size, are to be bound with narrow scarlet, blue or green ribbon. In the centre of one, work an initial, on the other the words, "I heal all wounds, save those of love." Cut four pieces of court-plaster of different color three-quarters of an inch smaller each way than the outer pieces and place them between two pieces of Bristol board of the same size. Sew the covers together, leaving them open at one end. Make two holes through the remaining piece, near one end, and pass through these a piece of ribbon, tying the ends in a bow. Insert between the covers the bow at the top, and hang up by a strap of ribbon.

## A PAPER-HOLDER

Well adapted for holding pamphlets and magazines, may be readily constructed out of stiff pasteboard, bleached muslin and a roll of scarlet dress-braid. Cut out from the card-board, two pieces, one for the back twelve inches wide, twenty inches high in the middle, and sloping in deep curves to the sides, where it is but thirteen and one-half inches in height; the bottom is also cut in four scallops, and an inch and a half above; then draw a line across where the bottom of the pocket is to come; the pocket is twelve inches square. Lay these pieces on the muslin, and mark around them with a pencil, but do not cut away the margin until the ornamentation is applied.

Arrange on the front piece a bouquet of ferns, mountain fringe—Adlumna—and yarrow leaves; surround this with a light wreath of partridge-vine and wild elvers, and place in each corner a small, pretty leaf. For the back, place a bouquet of tiny leaves in the upper point; a geranium leaf in each of the lower points, and a small rose leaf in each of the two still below; in the middle, arrange an initial of the smallest fern fronds. When all is arranged and securely fastened, spatter with a brush dipped in India ink and rubbed over a sieve. Afterward, with a brush, delicately vein each leaf. A delicate line of fern fronds is arranged across the bottom of the back piece before spattering. Apply the muslin to the cardboard and bind each piece with scarlet braid. Stitch the front to the back firmly, on the line previously drawn, and lace the pocket to the back piece with braid or scarlet cord.

## PRETTY BASKETS

Can be made of cigar-lighters, interweaving them

FLOWER BASKET.

basket-fashion, fastening them at each point of intersection by a cross stitch of bright worsted, and cutting out bottom ends and sides to make any shaped basket desired.

## Fireside Reading.

Several years ago, while lecturing before a class of ladies, upon chemistry, we had occasion to purify some quicksilver by forcing it through chamois leather. The scrap remained upon the table after the lecture. and an old lady, thinking it would be very nice to wrap her gold spectacles in, accordingly appropriated it to this purpose. The next morning she came to us in great alarm, stating that the gold had mysteriously disappeared, and nothing was left in the parcel but the glasses. Sure enough, the metal remaining in the pores of the leather had amalgamated with the gold, and entirely destroyed the spectacles. It was a mystery which we could never explain to her satisfaction. —*Fireside Science.*

Pat had just seated himself in a Quaker meeting when a young Quaker lately married arose to announce his new relationship. "Brethren," said he, "I have married." Pat's spontaneous mother wit suddenly burst forth involuntarily: "The devil you hev!" The young and blushing bridegroom, imagining that the spirit had suddenly moved some more influential brother, sat down in confusion. In a few moments he rose and essayed again: "Brethren! I have married a daughter of the Lord!" "The devil ye hev!" ejaculated the intensely interested Irishman, "it'll be a long time before you see yer father-in-law!" The shuffling feet and confusion of faces which followed admonished "Patsy" that he had better be "thravelin'," and he was "after gettin' himself out o' that!"

On the North London railway a short time since, a passenger remarked in the hearing of one of the company's servants, how easy it was to "do" the company, and said he often traveled from Broad street to Dalston Junction without a ticket. "Any man can do it. I did it yesterday." When he alighted he was followed by an official, who asked him how it was done. For a consideration he agreed to tell him. This being given, "Now," said the inquirer, "how did you go from Broad street to Dalston Junction yesterday, without a ticket?" "Oh," was the reply, "I walked."

Thackeray, when speaking about fame, would frequently tell the following anecdote: When at dinner in St. Louis, one day, he heard one waiter say to another, "Do you know who that is?" "No," was the reply. "That is the celebrated Mr. Thackeray." "What's he done?" "Blessed if I know."

She was languishing upon a sofa, watching him affectionately as he skipped briskly about the room

and God disposes." "Yes," said a maiden present, "a man proposed to me once; I said no, and have never seen him since, so I thought somebody had disposed of him."

Elizabeth Cady Stanton mentions the fact that certain woman suffragists once picked up an orphan boy, bought him nice clothes, educated him for the ministry, and, when they went to hear his first sermon, were struck with consternation to hear the text: "Let the women keep silent in the church."

A man in Lexington, Ky., bought a turkey said to weigh ten pounds, but on arriving at home he found that it weighed but eight. Going back, he inquired how it happened. The dealer examined the turkey carefully, and then, with a sudden light, exclaimed, "Ah! I see you've lost the gizzard."

Madame X has charming features, charming arms, charming hands—but she has monstrous feet. Just recovering from a long illness, she said recently to one of her friends, "I am still very feeble, but I begin to be able to put one foot before the other." "And that is not saying a little," murmured the excellent friend.

District superintendent in Nova Scotia asked a backwoods teacher at the close of a visit: "What is your postoffice address?" The teacher looked blankly and said, "Sir?" The question was repeated, and after a moment's hesitation the reply was, "Oh, I'm a Roman Catholic." "I did not ask you anything about your religion; I want to know what—is—your—post office—address?" "Oh," said the teacher, a light breaking over his countenance, "oh, sure, I'm an Irishman, sir."

### A Pathetic Appeal.

"Mamma, shall you let me go to the Wilkinsons's ball, if they give one, this winter?" "No, darling!" (A

pause.) "You've been to a great many balls, haven't you, mamma?" "Yes, darling—and I've seen the folly of them all." (Another pause.) "Mightn't I just see the folly of one, mamma?" (A very long pause.)

Young lady—"Well, now, and what did the Israelites do after they crossed the Red Sea?" Sharp girl (eagerly)—Please, they put on their dry things."

"SLY BOOTS."

putting things in order. Finally she said in a low, sweet tone of voice: "Georgie, darling, I don't believe you will ever be a great man." "Why so, love?" he asked, wheeling a chair round on one of its legs, and gracefully stroking it with the duster. "Because great men always have such lazy, good-for-nothing wives."

One evening in company, during conversation, a gentleman quoted the expression, that "Man proposes

## Housekeeping.

## HOW TO ORNAMENT DINNER TABLES.

Housekeeping is simply home making, and the housekeeper who makes the pleasantest home is the best one. The first thing is to provide for the necessities of life, then for the comforts, then ornaments and elegancies. What hungry man or woman would fully appreciate a tastefully arranged bouquet, on a dining table, if the meat itself is ill-cooked and insufficient. First, however humble the meal and unpretentious, the table-cloth should be clean, and put on straight, and the napkins arranged orderly, all the dishes in their proper places, not looking as if they were thrown on, bright spotless silver, and well cooked food, and plenty of it. It is not necessary to have the viands of many varieties, if not desired, or very rich, or of complicated preparation, but good and wholesome, then decorate the table as well as your time, means, and taste will allow. Perhaps a bouquet or two, or some easily produced ornament is as much as one would be justifiable in using for common, but on state occasions for large parties, the floral decorations have become a large item in the programme. Large, almost fabulous prices are paid for the decorations for a single party, yet very fine effects can be produced with very little expense, if taste and ingenuity are used in the arrangement. We will suppose that a large party is to be given, and that the host has a large house, and spacious dining room. The cloth is laid and we will propose a way to produce the required floral decorations. If we have a tall, slender, gold or silver epergne, for the center of the table, we will fill it with drooping sprays of Smilax vine, a few Rose buds, and whatever fine white flowers we find available. If we can obtain it, a large white Lily for the centre. A little way on each side of this we will erect an aquatic bouquet. For this we need two bell glasses of equal size, and as large as we can procure. We will take a nice variety of flowers, and using considerable green, make some not very compact bouquets, which will almost fill the bell glass, when they are inverted over them. Tie a stone of considerable size inside of the stems. Have a dish, a soup plate, or a larger dish, into which the bell glass can be turned, and the edge of the plate come a little beyond and above the edge of the glass. Place the bouquet in this plate, and around the stems of the bouquet arrange moss and shells, to completely hide the plate. Have a tub of water large enough to completely immerse the bell glass. Set the plate, with the bouquet, in the tub and take the glass and put in the water with one side first, so the water will fill it clear to the top; keep turning it down in the water, and over the bouquet, setting it firmly on the plate. Lift the whole carefully from the tub, by the plate, leaving the water around the edge of the plate. Arrange fern fronds and shells to completely hide the edge of the plate. Smaller bouquets in small glasses may be placed around these large ones if desired, of course the process of preparing is materially the same. They should be prepared the day before they are to be shown, as they assume a frosty appearance about that time, that is very charming. Smaller epergnes, or vases with bouquets may be placed at each end of the table. Floral ornaments should be high at the center of the table, and diminish toward each end.

Very pretty ornaments, besides furnishing edibles, are formed by piling oranges in glass dishes, with tall

standards, the oranges first being prepared in the following manner. With a sharp knife first divide the peeling, half way down from one end, into twelve equal parts, then begin at the end and raise the peeling from the oranges as far as it has been cut. Leave every other section only raising it a little from the end. Turn this peeling back, and it gives it somewhat the appearance of a yellow lily, or some singular flower. Fill two other glass dishes with iced fruit, piled on green leaves. This is very beautiful, indeed, and is exceedingly charming when seen by gaslight.

A large napkin is now spread at the head and foot of the table. This is expected to be of the very finest linen, and the monogram beautifully embroidered. When people have arrived at the dignity (?) of adopting a coat of arms, these also are emblazoned upon them.

Sometimes the monogram and crest is woven into the linen, which, of course, must be of the finest and whitest.

The napkins, on grand occasions, should be folded in some elaborate design. Perhaps, the camelia shaped is as pretty as any. Fold into the centre the four corners of the napkin, repeat this for the second time, and again for the third time. You now turn it over. The corners must this time be folded underneath the napkin to the centre, and the upper centre points drawn back, and the corners of the napkin slightly raised, when it will have the appearance of a camelia.

The letters and designs upon table linen should be large and handsome. The linen must be spotless and well arranged, or the ornamentation of flowers and shining silver will be useless, as far as producing a good effect is concerned. The napkins must be arranged in uniform places, and the knife and fork placed on the right side, with edge of the knife turned outward, and the tines of the forks downward. Each article designed for individual use should correspond with the like ones in position to give an air of order to the table, which is one of its greatest charms.

The fashions in china ware are as changeable and arbitrary as in all things else. Just now the rage is for real china, well decorated. "The Centennial" has been the favorite for the past year. It has a century blossom on each piece, and is really very handsome.

All sorts of dishes break out now-a-days in fantastic and singular shapes, so that we almost have to stop and ask what they are for. The shape of some articles have changed very much in the last few years.

For very elaborate occasions a net-work canopy of green moss, and evergreens, and bright colored berries may be erected over the centre of the table. Of course it must be arranged before setting the table. Then the viands themselves must be ornamental to make it all harmonious, cooked in an artistic manner, and brought in on suitable dishes.

One word about dinners should always be remembered. Do not attempt more than you can carry out well; have everything to correspond. Nothing makes articles, which are only passably nice, look so mean as to be surrounded with elegant and costly things. And surely you must not spoil the effect of an elegantly and expensively arranged table by one or two articles of shabby appearance. It takes talent, and thought, and good execution to make a grand dinner a success; and if one lacks the means or ability they should avoid attempting it. A small cozy dinner party is really much more pleasant, and lifts such a burden from the hostess. Everything should be just as perfect in its way, even if no guests are ex-

pected; but such elaborate decorations as a large party demand can be dispensed with. It is very unpleasant for a dining-room to have a cramped appearance after the table is laid. It should be large, and pleasant, and airy, suitably ornamented according to your means and the manner in which the rest of the house is furnished.

In placing the dishes of cooked food upon the table, never set them at the edge of the table, but reserve the spaces between the plates clear for the convenience of cups of tea, dishes of sauce, etc. To see dishes so placed always suggests the possibility of their being brushed with the sleeve of any one who should reach over them. If the table is crowded, leave some of the dishes off sooner than put them on in this way. Always arrange the food in as handsome a manner as possible upon the dishes. Give it a nice pleasing appearance instead of a mussy hurried-up appearance. Then arrange the dishes upon the table in the order in which they belong. Our first endeavor must be to satisfy the appetite, our next to suit the taste, and the next to please the eye. A general satisfaction with our surroundings gives a better relish to our dinner, promotes digestion and increases our health.

## HOUSEHOLD HINTS.

Croup can generally be greatly alleviated, if not cured very speedily, if the following remedy is applied promptly: Take a knife, and grate and shave off in small particles about a teaspoonful of alum; then mix it with twice its quantity of sugar to make it palatable, and administer it as quickly as possible. Almost instantaneous relief will follow.

A small piece of paper or linen, moistened with the spirits of turpentine, and put into a bureau or wardrobe for a single day, two or three times, is said to be a sufficient preservation against moths.

Lemon-juice and glycerine will remove tan and freckles.

Lemon-juice and glycerine will cleanse and soften the hands.

Lunar caustic, carefully applied, so as not to touch the skin, will destroy warts.

To obviate offensive perspiration, wash with soap and diluted spirits of ammonia.

The juice of ripe tomatoes will remove the stain of walnuts from the hands without injury to the skin.

If you are buying carpets for durability, choose small figures.

Benzine and common clay will clean marble.

If your flat-irons are rough, rub them with fine salt, and it will make them smooth.

Castor-oil is an excellent thing to soften leather.

To clean a browned porcelain kettle, boil peeled potatoes in it. The porcelain will be rendered nearly as white as when new.

To ascertain whether a bed be damp or not, after the bed is warmed, put a glass globe in between the sheets, and if the bed be damp, a few drops of wet will appear on the inside of the glass.

A strong solution of carbolic acid and water, poured into holes, kill all the ants it touches, and the survivors immediately take themselves off.

Linen garments, which have become yellow from time, may be whitened by being boiled in a lather made of milk and pure white soap, a pound of the latter to a gallon of the former. After the boiling process the linen should be twice rinsed, a little blue being added to the last water used.

The Twenty-first Edition of our celebrated Seed Catalogue and Amateur's Guide to the Flower and Kitchen Garden, containing upwards of 200 pages, including several hundred finely executed engravings of favorite flowers and vegetables, and a beautifully colored chromo, with a Supplement for 1877, will be ready Jan. 1st, and mailed to all applicants upon receipt of 35 cts. An edition elegantly bound in cloth, \$1.00.

**BLISS'S GARDENERS' ALMANAC**, for 1876, and Abridged Catalogue of Garden and Flower Seeds, contains upwards of 100 pages, and embraces a monthly Calendar of Operations and a price-list of all the leading GARDEN, FIELD and FLOWER SEEDS, with brief directions for their culture. A copy will be mailed to all applicants inclosing ten cents. Address

**B. K. BLISS & SONS,**

**50** ELEGANT CHROMO CARDS, in Card Case (new designs, Flowers and Leaves), suitable for Visiting Cards, Rewards of Merit, Book Marks, &c., sent postpaid for 25 cts., and 3c. stamp, printed, 10 cts. a line extra.  
JEWETT CARD CO., NEW HAVEN, CT.

### TIDY FASTENER,

FOR FASTENING TIDIES UPON SOFAS, CHAIRS, LOUNGES, &c.

The Fastener is a velvet button with a spiral screw, and secures the tidy in its place by a few turns of the fingers, holding it fast. It never pulls out and never tears the furniture. They are made in green, scarlet, cherry, maroon, brown, and blue. Price (sample set 4), postpaid, 25 cents. Specify color wanted. Address,

**ALBERT COGSWELL,**  
46 Beekman St., New York.

### BEAUTIFUL BOOKS FOR LADIES! EVERY LADY IS CHARMED. EVERY HOME NEEDS THEM.

#### HOUSEHOLD ELEGANCIES.

A splendid new book on Household Art, devoted to a multitude of topics, interesting to ladies everywhere. Among the most popular subjects are, Transparencies on Glass, Leaf Work, Autumn Leaves, Wax Work, Painting, Leather Work, Fret Work, Picture Frames, Brackets, Wall Pockets, Work Boxes and Baskets, Skeleton Leaves, Shell Work, Crosses, Spatter Work, Mosses, Cone Work, etc. Hundreds of exquisite illustrations decorate the pages, which are full to overflowing with hints and devices to every lady, how to ornament her home cheaply, tastefully, and delightfully with fancy articles of her own construction. By far the most popular and elegant gift book of the year. 300 pages. Price, \$1.50.

#### WINDOW GARDENING.

An elegant book, with 250 Fine Engravings and 300 pages, containing a Descriptive List of all Plants suitable for Window Culture, Directions for their Treatment, and Practical Information about Plants and Flowers for the Parlor, Conservatory, Wardian Case, Fernery, or Window Garden. Tells all about Bulbs for House Culture, Geraniums, Hanging Baskets, Insects, Plant Decoration of Apartments. The Illustrations are unusually beautiful, and many of them perfect gems of exquisite beauty. Price, \$1.50.

#### EVERY WOMAN HER OWN FLOWER GARDENER.

A delightful little Treatise on Out-Door Gardening for Ladies—practical, timely, charmingly written. Contains valuable information about Pansies, Roses, Geraniums, Climbing Plants, Annuals, Perennials, Fuchsias, Ribbon Beds, etc. Send for it. Printed in excellent taste. Price, 50 cents, postpaid. Bound in cloth, \$1.00.

For sale at all Book Stores, or sent by mail, postpaid, on receipt of price.

Address, **HENRY T. WILLIAMS, Publisher,**  
46 Beekman Street, New York.

### Ornamental Designs for Fret-Sawing.

PART IV. PRICE, FIFTY CENTS.

This is a new volume of Fret-Saw Patterns, by far the most tasteful and artistic in execution of any collection yet offered. Designed by a practical fret-saw artist, who has taken extreme pains and care to have perfect finish and pleasing choice of subjects, they will challenge the admiration of all lovers of fret-saw work. The book contains patterns, which, at usual sheet prices, would be worth \$2.40. All are new, never yet published, designed expressly for this series, and constitute a splendid FRET-SAWYERS' ANNUAL for this season. These patterns are all full size, ready for direct transfer to the wood and immediate use by the sawyer. Every fret-sawyer should have this book, as it contains the latest and best new patterns, and so cheap no one could afford to do without it.

**HENRY T. WILLIAMS, 46 Beekman St., N. Y.**

A beautiful Quarterly Journal, finely illustrated, and containing an elegant colored Flower Plate with the first number. Price only 25c for the year. The first No. for 1877 just issued in German and English.

Vick's Flower & Vegetable Garden, in paper, 50c.; with elegant cloth covers, \$1.00. Vick's Catalogue—300 Illustrations, only 2c. Address, **JAMES VICK, Rochester, N. Y.**

Contains over 1,200 varieties Vegetable and Flower Seeds, COLORED PLATES. Elegant wood-cuts of vegetables and flowers. Handsomest Guide Published! Send for it.

## CHRYSANTHEMUMS IN SICK ROOMS.

Chrysanthemums may be introduced into sick rooms, and by their beautiful colors, please many an invalid. If they are not handled much they give out little or no

good in a room for three weeks or a month. One of the best and most successful growers of Chrysanthemums was in the habit of cutting the flowers days or even weeks before the show or exhibition, and feeding

answer to occasional inquiries, we name the following sweet scented flowers, to which some of our readers may add others: Sweet Violet, Hyacinth, Heliotrope, Pinks, sweet scented Candytuft, Woodbine, Sweet

A SWISS LAKE SCENE.

odor, especially if put into vases in the usual way.

This beautiful winter flower can be enjoyed most if arranged in show stand.

Few or no leaves need then be used. The flowers thus prettily arranged and nicely contrasted as regard colors, look well in this way, and will keep fresh and

them with guano water and other stimulants in their show tubes to increase their size.

**Flowers for Odor.**—The *Country Gentleman* says: "Many cultivators of ornamental plants desire especially to raise those which produce fragrant odors, particularly for bouquets, stands and flower vases. In

Briar, Cabbage Rose, Tea Roses, White Lily, Sweet Alyssum, Mignonette, Sweet Pea, Carnations, Sweet William, and several sweet-scented perpetual roses. Here are enough to fill a room or garden with perfumes rivalling the 'odors from the spicy shores of Araby the blest,' if well managed and cultivated."

## Floral Contributions.

### MY FERN WINDOW.

It is a large bay-window, and in addition to being on the western side of the house, is shaded by a clump of firs which stand about fifteen feet from the central part of it. In days gone by the shutters were kept closed nearly all the time, as the firs shut out everything, except a little light, and we had plenty of that from a sunny south window and an unshaded west one. One day, while having a search in the garret for some odds and ends which were, or were supposed to be, within that garret's sacred precincts, I came across a large old-fashioned mirror, and while gravely contemplating my fair-haired self, an idea, or rather several ideas, came into my head. Forgetting what I had been in search of, I started down-stairs, and after a little delay, found my brother Ernest. We sat down and took counsel together. The result was, that we brought that ancient mirror down from the garret, and, with prudent care, escorted it to Ernest's workshop; there the old tarnished frame was removed and a new one of plain pine prepared for it. This frame was about six inches wide, and after being oiled and thoroughly dried, was decorated with branches from the neighboring woods, as twisted, knotty, and mossy as we could find. These were fastened on with small brads, and projected in every direction, though not in any case more than four inches from the foundation of pine. Then the mirror, securely fastened in its new frame, was placed in the centre of the bay-window, close to the glass, the shutters outside (to the west) remaining closed, as there was sufficient light from the northern and southern angles for our purpose. When placed in position, the mirror and frame exactly filled the central part of the window, except seven inches at the bottom. The next thing was to fill this space. A box, also of pine, three feet five inches long, eight inches wide, and eight deep, was made, and ornamented with small cedar branches with the bark on, split in two and tacked on perpendicularly all around it. This box was filled with leaf mould, mixed with a little sand, and placed on a shelf under the mirror. In each end was planted a German Ivy, in the centre a beautiful *Osmunda Regalis*, a *Polypodium* on each side, and the rest of the box filled in with tiny Ferns, Partridge Vines, and the most beautiful mosses we could find. Two similar boxes were placed under the side-lights of the window, and in the ends next the mirror another German Ivy was planted (we meant to have that mirror framed, you see), and the remainder filled with as many dainty and delicate Ferns and mosses as they would hold. This we considered a good beginning, and the next part was this: My brother made what I shall call a platform, about six inches high, something like a low table, which was set on castors, and would just fit into the window. Then he made a box, about six inches deep, the same size and shape as the platform; this box was lined with zinc, and had two large holes bored in the bottom for drainage. This was placed on the platform, put into position, and a rustic fern stand, thirty inches in length and about eighteen in width, placed in the centre of it. In this fernery, the top of which, I ought to mention, was even with the top of the rustic boxes, was a miniature arch made of beautiful mossy stones, and a tiny pond; albeit, the pond was only an old earthen dish with small pebbles in the bottom and moss shading the edges. The effect was beautiful

among the rich Ferns with which we filled the stand. In the centre of the window, just over the fernery, was suspended a large rustic hanging basket filled with German Ivy. On either side this central basket was a simple and easily constructed hanging basket, which may not be new to some, but it was to me. With a trowel, Ernest carefully removed a flourishing *Polypodium* from its native woods, together with a good-sized ball of the surrounding mould. This was wrapped in a sheet of beautiful green moss, the kind that looks as if composed of hundreds of exquisite little Ferns; then fine wire was twisted around, just enough to hold it in shape, and the whole hung up by a piece of the same wire. When these were finished, there only remained the lower part of our fern window. This was finished by covering the bottom of the zinc pan, or box, with a thin layer of bits of broken crockery, stone, and charcoal, then filling it with leaf mould and sand. Under the boxes, all around the window, we planted a little forest of the Maiden Hair Fern. I must say we were rather doubtful of the success of this last experiment, for it seemed almost too shady for any thing to grow. The bottom of the boxes was only seventeen inches from the earth in the zinc pan, but it was the very place for those Ferns. Then the remaining surface of the mould was covered with green moss, and a large pot of English Ivy placed on each side of the window, next the room, and it was finished. No, not quite finished, for something was needed for the Ivy to cling to. Rustic supports were nailed a little way apart, on each side of the window, and continued across the top of the side lights to enable the Ivy to join its companions around the mirror frame.

I wish you could see that window now. The Ivies have rambléd all about, the most beautiful being the German ones in the central hanging basket; they have twined up the cords they were intended to, thrown out long branches which have encircled the little moss baskets on each side, covered the vines which suspend them, reached out and embraced those around the mirror frame, and followed their own sweet will wherever it has led them. The effect is splendid, for the old mirror reproduces all the lovely forms. I must say a word about one peculiarity of the aforesaid mirror. It does not favor the "human face divine." When you look at yourself in one way, you see yourself as nature intended you to be seen; but looking at it in another way, it is to be hoped others do not see you as you see yourself then; to be plain, there is a decided flaw in it, but in the case of Ferns and Ivy leaves, any such little failing is overlooked. It is very easy to take care of my window. I water the little moss baskets by immersing each one in a deep bowl of warm water, and by standing on a chair, can give all the Ferns, Mosses, and most of the Ivy leaves, a good sprinkling. All the surplus water runs off through the holes in the zinc pan, which, I forgot to say, were also bored through the platform on which it stands, into a pan set underneath. Another advantage is, that I can step on the moss "and leave no sign," or very little, when there are any decayed fronds to be removed. Sometime I shall like to tell you about my south window, which is in the same room, and presents quite a contrast to the cool green of "My Fern Window."

MAMIE.

### CITY GARDENS.

Having enjoyed reading the experience of so many correspondents in regard to the cultivation of flowers, I feel that it is only fair that I should add

mine in regard to the successful cultivation of a city garden.

You are aware that most of the city yards are small, and so shaded by high fences and brick walls that many persons become discouraged in their efforts to cultivate flowers, and are satisfied if their yards only look clean. Again, the soil of those yards is generally poor, and the opportunities of procuring manures so few that they do not try to get them.

Now, those persons who live in the country, and can drive to the woods to get soil and leaves, or to the barn yard to find all the fertilizers they wish, cannot fully sympathize with their city cousins who enjoy none of these privileges or advantages—yet, considering all these obstacles in the way, they can be overcome by energy and perseverance. And, as I live in a city and have to contend with those difficulties, I propose to tell others like situated how they may overcome them.

In the first place my beds all needed filling up, so I waited until the city authorities began to clean the streets, then I appropriated a sufficient quantity of this dirt to do it, having first cleaned it from all rubbish—this dirt I mixed with the original soil, but finding it too sticky, and inclined to bake, I procured a barrel or two of clean white sand that can be procured of builders, or those who cart it around the street for sale, this I mixed with the soil, leaving a fair proportion on the top so as to aid the smallest seed in germinating. After the plants began to grow, I procured a tight barrel, stood it in a corner out of the way, and each wash day had it filled with the strongest suds. With this water I gave the beds a good drenching every evening as long as it lasted, provided it had not rained previously. This water is one of the strongest and cheapest fertilizers one can procure. At the foot of the yard I had space for a bed four feet by twelve feet, which was quite low and not fit for bulbs, unless raised some six or eight inches, which required more dirt than I could procure from the street in time for fall planting, so I saved all my coal ashes until I had a sufficient quantity for my purpose, then dug out this space about twelve inches deep, threw in the ashes and replaced the soil in which I planted the bulbs. I found this plan was a good one, the ashes acting as a drainage. Previous to my planting in the fall I procured some ground bone (ten pounds) from a dealer, and mixed that with the soil. Having procured a quantity of leaves from the street, and a barrel or two of fine stable manure from a cartman, I first spread the leaves over the bed, then threw on the manure, which formed a warm covering for the bulbs. If the leaves are placed on the beds first, they will not only protect the bed from freezing—but, I think, turn the rain, while the manure will prevent the leaves from being blown away, and assist in rotting them. In the spring when I uncover the beds, I work as much of these two articles in the soil as I can, the remainder I either burn on one of the beds, or dig up one of the beds quite deep, throwing it in to lay and rot. Now, one can readily see at a glance that this was all done with less cost of money than personal exertion, and almost any one with ordinary health can do as I did.

My plan for arranging beds is different from any I have seen. The space between each post is used as a bed, and the short walks are convenient for getting at the post, at the same time enable you to reach all parts of the beds without stepping on them.

Hoboken, N. J.

C. W. I.

## Gossip with Correspondents.

**Night-blooming Cereus.**—In the November No. of your paper, I saw an account of the blossoming of a Night-blooming Cereus in Utica, N. Y. as being something rare. Allow me to say that here in Northern Maine they are quite common. I have two that bloomed every year since they were four years old. Last summer they had thirteen flowers—eleven in one week. No other flower that I have ever seen bears any comparison with this in beauty or fragrance.

A LOVER OF FLOWERS.

**Blooming Callas.**—I have been very successful in the cultivation of plants, because my whole heart was in the work. For blooming Callas, I use the soil from the henery; and on cold mornings I pour hot water in the saucers; I have had a bloom from every bulb. As my Fuchsias never grew very large, I put in fresh soil and then used some fine manure from the henery, and before spring it covered the window, with every shoot in full bloom. My Begonia has never failed to bloom.

MRS. E. B.

**Easter Lilies.**—Besides Callas which are grown in immense quantities for Easter decorations in the vicinity of Boston, Liliun Candidum is also forced to bloom for Easter, and, being a true lily, is perhaps better entitled to the name, "Easter Lily."

M. P. G.

**Ferns.**—I should like to say to the person who wishes to know what Ferns can be grown in the house, that I have had for three winters, in a furnace-heated parlor, very handsome plants of Aspidium molle and Adiantum cuneatum; and I have a friend who has Pteris tremula, looking as well as it could in a greenhouse. I also know that Pteris hastata does well in the house; so does the Japanese Climbing Fern and Lygodium scandens. All require to be kept comfortably warm, not too wet, and seldom sprinkled—just often enough to keep them clean. I have found that wetting the foliage often causes it to turn black.

M. P. G.

**Winter Decorations.**—Many people who do not burn coal cannot keep the parlor warm all the time, and, of course, can have no flowers therein. I will give a few hints in the way of brightening up the winter parlor. Take a round, rough board, and make a table of it, by nailing on firmly three legs of as twisted and gnarled roots or limbs as you can find; do not varnish, but have them as rough and mossy as possible; take dry moss—which you can find in the woods and on the trunks of trees, and with glue, stick it all over the bottom of the board; put a large, round, shallow tin on top of the board (which is now a table), and fasten with a round-headed tack; fill with green mosses of all kinds; then stick dry moss all over the space between the tin and the edge of the table. Wet the moss as it needs it; no amount of freezing and thawing will injure this. A vase containing wax autumn leaves adds a bit of color to it, placed in the centre of the moss. Wax branches of autumn leaves, and hang them gracefully, and naturally, over the pictures and curtains; also pressed ferns, and mountain cranberry. The herb commonly called Life-everlasting, is beautiful for winter decorations. The flowers can be dyed any color, and with evergreen, make lovely wreaths, bouquets, etc. A hanging basket containing a deep plate may be filled with moss, and a bouquet of these flowers placed in the centre. A pasteboard, or wooden bracket may be covered with dry moss, in the same manner as the table, and hold a basket of worsted flowers, made with double zephyr like hair flowers. Weave over a lead pencil, cut the worsted, and comb with a fine comb. Copy from nature in making the flowers up, and wind the stems with green split zephyr, or floss. Add little fancy articles, tidies, etc., from the pages of the CABINET, and the room will be cheerful, even in the gloomiest weather.

ANABEL C. ANDREWS.

**Geraniums, Veronica.**—1. What are Zonale Geraniums? 2. Will Veronicas live out through the winter, or would it be best to bring them in the house? 3. How old do Geraniums have to be from the seed before they blossom? I have some planted last spring; do you think they ought to bloom this winter?

State Centre, Iowa.

Mrs. O. J. W.

**Answer.**—1. The typical Zonale Geraniums have a zone of darker color on each leaf; the flowers run through various shades from white to pink, and deep scarlet. 2. The hardy herbaceous varieties will, but not the shrubby sorts. 3. Generally the second year.

**Geraniums.**—In the February number, Lady Cullum speaks of the ever-blooming variety of Geraniums. Will she please give the name; also, will correspondents always give the State they live in, so I may know what kind of a climate the plants are raised in? We lovers of flowers in this far western country, meet with many discouragements in finding flowers that will stand our cold winters. I should like to hear from some of our friends in the north-western part of this state, on the best kind of roses for out door culture.

Magnolia, Iowa.

S. L. B.

**Answer.**—We cordially agree with our correspondent's very sensible remarks.

**Madeira Vine.**—I have a Madeira Vine. One sprout from the bulb has grown quite thrifty, but an offset of the same bulb in the same pot, has sent out one or two small leaves, and there it has remained, just about so for six months; looks fresh and vigorous, as though it must send out some branches. It has the south sun part of the day, and occupies a warm place in my window garden; which, by the way, is a source of great pleasure to me. 1. Would it injure the Madeira Vine to transplant or repot? 2. My Geraniums, of which I have a large number, look a healthy green; but the stem to the leaves grow so long. Could it be caused by too much furnace heat at night? 3. And would pricking back the new shoots be of any use? Joliet, Ill.

MRS. N. E. FULLER.

**Answer.**—1. No. 2. Keep the plants in a more cool and light place. 3. Yes.

**Oxalis.**—1. What shall I do with a white Oxalis that has bloomed all winter, and now shows signs of dying. Should it be taken from the pot and dried. What kind of soil does it require? 2. Are old roses that have bloomed several winters as good as those newly started? 3. When is the best time to renew the soil for Caeti?

MADELIENE.

**Answer.**—1. Stand it out of doors in the pot until fall. Repot in any good soil. The Oxalis is not particular. 2. Yes, if healthy and growing freely. 3. In the spring.

**Geraniums and Fuchsias.**—1. My Geraniums grow very fine and large, but they do not bloom freely. I usually place them in fresh, rich soil, early in the spring; does this interfere with the blooming? 2. What is the name of "a species of the Royal Family," which has large pink flowers? 3. What kind of Geranium has yellow leaves bordered with green? 4. Do Fuchsias require much sun? 5. How can I get my plants to bloom in winter?

FLOWER LOVER.

**Answer.**—1. Try repotting your Geraniums in September, and use less rich soil. 2. Will any of our readers inform our correspondent. 3. Cloth of Gold, and several others. 4. Not in summer. 5. Few plants flower in both winter and summer. It is necessary to grow some specially for winter.

**Cyclamen.**—1. I wish to ask how the Cyclamens are propagated. I saw in the January number of the CABINET that the bulbs must not be divided? 2. How can a Caladium Esculentum, that has the center decayed and has side stems, be managed?

MRS. D. LEONARD.

**Answer.**—1. From seed. 2. Remove offsets and plant separate, or plant the clump entire.

**Ivy and Clanthus.**—1. I enclose a leaf of Ivy, also a leaf and flower of a plant which we have always called Wax plant. The Ivy is a twining plant, with runners from fifteen to twenty feet in length. The leaves drop off every fall, leaving a long space leafless. Please give the reason why, and whether our kind blossoms or not. The Wax plant grows about two feet high, the same form as the leaves that I send. The bulbs live over winter in the earth. Please give correct names of each? 2. This spring we sent for some Clanthus and Lantana seed. They have been in the ground for five weeks. Neither kind are out yet. I fear it is soil, treatment or watching too closely. Please tell us which, and how to treat them, so that they will germinate?

Crarries Mills.

ELLA M. WOOD.

**Answer.**—1. A single leaf is probably the Senecio scandens. The leaves probably drop from the soil being too poor and dry. The flowers are not ornamental. 2. Polygonatum Angustifolium. The seeds probably failed from the dry weather at the time of sowing.

**Prairie Sod for Flowers.**—Will some of your intelligent contributors who have ever had the tough prairie sod of the West to contend with, please tell me what I can do to enhance its richness so that my plants will flourish vigorously. I had much trouble last spring with both my vegetable and flower gardens?

Mt. Ayr, Iowa.

HELEN A. RAINS.

**Answer.**—You will probably have less trouble after the

first year; the soil might be burned. We wish the same tough sod was in our locality, which is sandy.

**Crape Myrtle.**—1. How should a Crape Myrtle be treated during winter (should it be kept growing or put in cellar) in order to have it blossom abundantly in the summer; also the kind of soil the Myrtle requires? 2. Would Tritoma be best kept during winter packed in dry sand or kept dry by laying them in a dry place free from frosts and cold? 3. Also, will it do to start them early in the spring by sprouting same as Dahlias?

OTIS T. CASEY.

**Answer.**—1. In cellar; any good soil. 2. In sand, a moderate frost will not injure the plant. 3. Yes.

**A Dream.**—I have been reading my FLORAL CABINET for November, and had fallen back in my arm chair, rested my feet upon the stool in front of the fire, and lost myself to all around. I saw with my mind's eye, a room facing the north and west; it was carpeted in brown, with a vine stem of darker brown running over it, here and there enlivened with bits of light green leaves, and a few purple berries. It was furnished with a set of plain brown wood, and fine white shades with brown lambrequins. On the dressing case, for 'tis a bedroom, are mats of some white canvas, worked with Pansies and light green leaves. Upon the wall, hang pictures of friends, framed with black walnut; also, a motto done in water color, and in the window, a hanging basket made of beads, and filled with Tradescantia. Under it on a light window stand, is a case of New England Ferns, and the gray moss that grows on rocks; and under the gas fixture was a match scraper, made of white card-board, and on the front a gray tabby cat, with "scratch my back" under it. It is useless to say, of course, that it was lined with sand paper. Something disturbed me; I stirred, and the clock was striking ten; the fire was dead, and I awoke.

ADLINE.

**California Flowers.**—I have often thought I would write the ladies of our interesting paper a short letter, and tell them of some of the pretty places and pretty things that the sun shines on in far off California, and here I wish to tell you some thing that every State cannot boast of, and that is the different climates one can be in. In traveling a few miles, (by a few miles I do not mean fifty); you can be in the valley where the pomegranate tree, lemons and orange, and tobacco, cotton and sweet potatoe flourish in a fine luxuriant growth, and up a short distance in the mountains, the nights are so cool that a pair of blankets and a good quilt are acceptable; and on the summit of these same mountains, snow keeps its whiteness and glitters in the sunshine the year round. The locality is to be found in the county of Tulare, near the town of Visalia. In San Francisco I have seen Fuchsias twelve feet in height, and with a stem between two and three inches in diameter, and with hundreds of blossoms thereon, Hydrangeas as large over as a bushel basket, and what we call Australian Pea covering the fence. Geraniums four and five feet tall, and Callas a mass of leaf and bloom growing out in the open air the year round, without any protection whatever. Here, where I live during the months of May and June, the wild flowers are so pretty and tempting I want to gather them all and preserve them in their beauty forever; I cannot name them as I do not know their botanical name, and we are in the habit of speaking of them by names of our own. I name one as it is so pretty, and that what is called the Vegetable Fire Cracker, or Brodiaea Coccinea, natural order Liliaceae, it is found in gravelly and rocky soils, on mountain tops and in shady cool places, and if kept in cool fresh water it will not wither for several weeks after being detached from the plant. Even to-day, December 11th, there is in bloom in my garden, Seabious, two varieties Marigold, Mignonette, Dianthus, Fish and Zonale Geraniums, Alyssum and Sweet Peas, and also velvety Pansy. I think sometimes the people of the Eastern States enjoy themselves better, and perhaps the society is more settled and possess a greater degree of refinement, but our people are warm hearted, impulsive and generous, and that is quite a recommend, but they are so uneasy, never staying but a few years in one place. There is a great deal of our State unsettled, and mountainous, and the favorite hiding place for deer, and occasionally a bear. Our hills are again getting a faint tinge of green, which is quite welcome to us, as we are not blessed with enough rain in the summer to keep the grass growing, and we get pretty brown and dry, but the soil is rich enough to grow almost anything for those who have the means of irrigation. I hope other writers will not forget to communicate anything of interest in their letters from time to time, as they have done me a great deal of good, and taught me how to make several articles for use and ornament. The questions and answers, and in fact all of the CABINET, is of great benefit to those who wish to know how to grow and cultivate plants.

Mendocino County, California.

AN AMATEUR.

## Flower Culture.

### FLOWERS IN THE HOUSE.

#### PLANTS FOR HOUSE CULTURE.

If you have only an ordinary window in which to keep plants, you can grow about half-a-dozen very satisfactorily, provided they are not large-growing kinds, like Oleanders or Abutilons. Such plants require a bay-window, or conservatory. If you have a bay-window, three times this number can be grown without crowding, and an Oleander, or some other large plant, can be added. Plants should never be crowded. It not only spoils the looks of them to huddle them together, but they do not do well. One reason why so many lose plants which they are trying to grow in windows is, they try to keep too many. Some of them must be crowded away from the sun, and these get sickly, turn yellow, and finally die. One healthy, vigorous plant is worth a thousand poor ones. Better try a few, and aim to have them fine specimens, than to have a dozen spindling, unsatisfactory ones.

Of those best suited to house culture, I have selected as the six best the Calla, Rose Geranium, Zonale Geranium (of this class there is so large a variety that all tastes can be suited as to color, habit of growth, and profusion of bloom), Heliotrope, Fuchsia, and Ivy. If you have a bay-window, or another ordinary window, any of the following will prove very satisfactory: Begonia, Lantana, Eupatorium, Plumbago, Capensis, any of the scented Geraniums, Coleus, Cactus, and, if you are willing to give them all the care they require, Roses, Salvia and Verbenas. For hanging plants, I would recommend Vinca Harrisouii, a beautifully variegated plant, Moneywort, Lysimachia, and Saxifrage. If you want some small-growing plants for brackets, use Oxalis, Chinese Primrose, and the pink-flowered Mesembryanthemum.

#### SOIL FOR POT PLANTS.

I have found the following to be the best soil for plants in pots: One-half fine, fibrous soil from under sods in an old pasture, one-fourth well-rotted barn-yard manure, or leaf-mold, and for the remaining fourth I add clean, sharp sand, and common garden mold, varying the proportion of sand to suit the liking of the plant I intend it for. For Geraniums, I have nearly one-quarter of the soil sand. For Fuchsias, I have also a liberal allowance, and use fibrous earth in place of the garden mold. For Roses, I use more garden mold, and less of the pasture soil. For all the others, the mixture I have spoken of does very well.

#### POTTING.

Don't use too large pots for flowering plants. For scented Geraniums, which are grown for their foliage, use larger pots to encourage a ranker growth. Fuch-

sias need larger pots, in proportion to their amount of stalks and foliage, than most other kinds. Geraniums, the flowering kinds, Heliotropes, Lantanas, and Begonias, will do well in six-inch pots, and they can be changed to eight-inch ones if they seem pot-bound, as they get age. A thrifty Calla should have an eight or ten-inch pot; Fuchsias an inch smaller, while Eupatoriums, Plumbago, Roses, and Coleus will not need larger than seven-inch ones. In potting plants, always put in bits of broken crockery or brick in the bottom of the pot, then fill with soil, rapping the pot well to settle the earth together firmly. After putting in your

again, before giving more. With good drainage, you will never have sour, moldy soil. The Fuchsia needs to be kept quite moist, and will take a liberal allowance of water every day through the growing and blooming season. The Begonia requires more than most other plants, while the Calla likes to be kept very wet. Always have your water for this plant as warm as you can bear your hand in it. Always take the chill from the water you give any of your plants. Cold water checks their growth.

#### REST OF PLANTS.

All plants require rest. They cannot be expected to grow and bloom all the time. When they throw out no more buds, and seem to be inclined to rest, let them. Reduce their usual supply of water, giving them only enough to keep them from wilting. When they are ready to go to work again, and you can tell when that time comes by watching them carefully, increase their supply of water gradually. It is well, at such times, after the plant has been in the same soil for six months or more, to give a little manure-water. These fertilizing liquids are easily made, and stimulate the plants to healthy growth, if too much is not given. For a large pail full of water, use half a pound of guano. After it has dissolved, give from one to two tablespoonsful, twice a week, to each plant, for a month. I know of no better stimulant.

#### PLANT ENEMIES.

If your plants get covered with green lice, fumigate them with tobacco-smoke. Put coarse stems, smoking-tobacco or cigar-ends, on coals in a small dish, and hold it under the plants, over which a newspaper should be thrown to confine the smoke among them until the lice are stupefied; then shake the plants thoroughly, and sweep away all the insects which fall from them. After that, sprinkle them thoroughly, taking care to wet the leaves below as well as above. If the red-spider comes, you must sprinkle your plants daily, being very particular to see that the underside of the leaves are wet, for there is where the spider hides most. If you keep your plants well-sprinkled, they will not be apt to become infested with spiders, and they require sprinkling daily, when grown in a living room, in order to keep healthy. The greatest drawback to growing flowers successfully in houses, is the dry air they usually get there. If worms get

into the soil, dissolve a piece of lime as large as a tea-cup in a pailful of water. Use one-third as much of this solution as you do of clear water, when watering your plants, and I think you will rid them of these pests.

I have tried to give good, practical hints, and I have drawn them from my own experience. I hope they will help others to be as successful in flower-culture as I have been.

EBEN E. REXFORD.

Shiocton, Wis.

THE IPOMOEA LEPTOPHYLLA.

plant and seeing that the earth is well-shaken down about the roots, give it a thorough watering, and keep it from the sun for a few days.

#### WATERING PLANTS.

My rule is, never to water plants, as a general thing, until the surface of the ground seems dry; then give them a thorough watering, enough to run through the soil and out at the bottom of the pot. If it drains off readily, you need not be afraid of bad results from too much watering, if you wait until the surface is dry

[Written specially for the LADIES' FLORAL CABINET.]

## Winnifred's Will.

BY AUGUSTA LARNED.

### CHAPTER V.

"Here's a young maid with travel much oppress'd,  
And faints for succor."

In a moment when the south wind blows, or the rays of June fall more directly upon it, the green calyx of the rose expands, and it becomes a glowing and splendid flower. The transition from green and crude girlhood to ripe womanhood was equally sudden in Winnifred. For a long time she had been loitering on the threshold, full of contradictions, cruel and tender, hard and affectionate, capricious, self-willed, reluctant, and yielding—by turns impetuous and calculating. But the shock of her father's death had altered everything within her, and unconsciously she became self-poised with the power to guide her affairs with a firm hand.

The will-power that had made the old judge a terror to those about him, even when crippled and chained to his chair, came uppermost in her nature, and reduced all the discordant elements to obedience. Physically she gained new expressions. Her picturesque, vivid face took on an added beauty of outline and coloring. Her eyes, of that peculiar changeable gray that ranges in hue from warm hazel to blue, assumed new brilliancy and lustre. Her form, wondrously lithe and willowy, had rounded out into fuller proportions, and lost the meagerness of girlhood. Fate had decreed that Winnifred's first great sorrow should be her introduction into real life. She had grieved passionately for a few hours over the old man's death, but being free from all conventional standards of mourning, she sprang up like a healthy branch that has been beat out of its natural direction.

After that last fatal interview with his girl, the old man never spoke again. He lay upon his bed with the purple flush overspreading his face, and the dreadful stertorous breathing resounding through the house. His hands moved, and vainly clutched the air for relief. It was a dreadful sight, that death-bed, but Winnifred hung over him in an agony of grief and remorse, praying for one last look of forgiveness, which she believed was granted, in a moment of returning consciousness, just before death set its awful seal upon the grey and shrivelled mask of his features.

Edgar Swayne came to Winnie's assistance in those first, distracting, confused hours when Mrs. Braithwaite was only a large, limp bundle of helplessness, and old Nanna went about the house wringing her hands. But Winnie soon rallied from the stupor of her grief. Virginia's sympathy was like a cordial to her sore heart. She roused herself to see that the interment took place in accordance with the old man's wishes. Godless he had lived and died, and without exhortation, or prayer, or psalm, he was laid away in earth.

A moralist might have drawn some pregnant lessons from the barrenness of that intellectual power, unvivified by love, from a life withered and dried up by avarice and suspicion, and selfish lusts, but Winnie, as she stood sole mourner by that grave, felt only passionate sorrow for a father who had been fond of her alone of all the creatures on earth, who had trusted her and believed in her while distrusting all others, and whom she had mortally wounded in his last hours. There arose within her the determination to act on every one of his wishes, though she did not confess it to herself, even the implied wish that she should be hard to her mother.

Superabundant health and vitality asserted themselves, and in a few days a restless activity took possession of Winnifred. She was a little queen, and must set at once about regulating her kingdom.

Virginia had timidly suggested that Bradley be telegraphed for before the day of the funeral. Winnie was then in the first languor of her sadness.

"O, yes," said she, with half querulous indifference, "perhaps it will be best; he must come soon at any rate."

"But will it not be proper to inform him immediately?" Virginia had ventured; "you surely will wish to consult your cousin about many things."

"I never think of what is proper," said Winnie, with a sigh, putting her head back on Virginia's shoulder. "I don't mind about propriety, and I don't suppose Bradley has much of a head for affairs, and there is nothing to consult him about, for Mr. Swayne has made all the arrangements; but if you think he ought to come at once, you can ask Mr. Swayne to telegraph him from Deanport, on the river, where he is going to-night."

It was with a terrible inward protest, almost an execration, that Edgar dispatched the telegram to Bradley Halcourt, whom he disliked with the irrational instinct of a rival. Love is a blind and unreasonable passion, and there were conflicts going on in the soul of the young clergyman-at-large it is impossible to describe. The attractions of his sacred calling which he had once relished with ardor, were opening to him anew, but they grew pallid and bloodless beside this first, great, overmastering, irrational love. He saw in Bradley the man who was to come gaily sailing in on the tide of fortune, and make shipwreck of his life. He could have wished him hump-backed, bent awry, to revolt the eyes of Winnifred, for the hot blood coursing to Edgar's heart had effaced some of those lessons of charity that he once believed were a part of his being.

But days passed, and Bradley did not appear. Edgar dared breathe again. As hope and life revived in her, and the apathy of grief was shaken off, a new and delightful intimacy sprang up between him and Winnifred. She took him into her confidence, and unfolded her pet scheme for a school for the poor miner's children, and a Sunday service in the village, which would restore him to his true vocation. She made him, by subtle means, feel that he was necessary to her, and an organic part of her life-scheme. Her old teasing, mocking air had passed away, and in her presence Edgar breathed the perfume of Paradise.

Winnifred had plunged into affairs. She was now a woman of business, with a clearness of head and soundness of judgment that astonished the Deanport lawyer, her nominal guardian and adviser. When the will was opened it was found that the old judge had left her practically untrammelled, and had shown the utmost confidence in his girl's ability and prudence.

Half the day she was spurring about on Thunderbolt with tireless energy, keenly enjoying the excitement of rapid motion, and the novelty of her new life. Sometimes Edgar rode with her as she dashed off on a visit to the farms, or over the hills to inspect the mines, or went riding into the town, to order a grand, new barouche, or to look at carriage horses. A spirit of change was everywhere at work about the old hall. Men were busy trimming the shrubberies, opening new vistas down to the lake, and rolling and raking the gravel paths. The rubbish was being cleaned out of the greenhouse to make it ready for rare exotics. Carpenters, and decorators, and upholsterers had been engaged, and already piles of brick and mortar blocked the main entrance. Winnie was determined that the great days of the old minister's time should return. She would make her ancestral hall the grand mansion of the countryside.

On the morning of the day of Bradley's arrival, she led Virginia about through the old rooms, some of which had scarcely been opened and aired for years, and were close and musty, with dingy and tattered furnishings that still bore the signs of former luxury.

"This was my Lady Betty's room," said she, pushing open a door and raising a cloud of dust in a large, dark chamber, where the spiders had wrought undisturbed for years, and had festooned everything with cobwebs. "I have told you of Lady Betty, a distant relation of grandpapa's, and a great lady in England in her time. I will open the shutters, so that you can see her picture over the mantelpiece, in the high stays and stomacher, with patches and powder. It was painted by Sir Joshua Reynolds, and

some say I am like her, but I shall never die of love as she did. There was a perfidious man in England who broke her heart, and she came here and slowly wasted away; and after she died, the servants had a superstition that they heard her sighing in this room all night long; but of course that was mere nonsense. You shall have this chamber, Virginia, if you like. It has a pretty view of Gleumere and the hills. I will furnish it with delicious blue chintz and white muslin, and I will take down, Lady Betty and hang the room all round with meek maidens playing on heavenly dulcimers."

"No, no," said Virginia, with a little shudder, as she looked about at the moldering things and great state bed; "I could not sleep where I knew that poor lady had suffered; I should always hear her sigh. Leave me to my own little nest with the narrow bed and the one window, for I am not used to grandeur, and it would not agree with me."

"Well, you shall have your own way, Mousie; but come to my room. I have taken papa's old study for my business office. It has the desks and all other conveniences. I shall have it refitted with fresh paper hangings, walnut and gold, and some fine oak chairs, and a Turkey rug in the middle of the polished floor."

Virginia had never passed that door without a certain dread. Next to it was Mrs. Braithwaite's closed chamber, which she had not left but once or twice since her husband's death; and though not positively ill, she kept her bed from melancholy inactivity; there she would lie and count her beads by the hour. Winnie, in the full tide of her glowing and exultant life, had almost forgotten this faded and feeble existence; but there was one heart that pitied her, that wondered and saddened over the enigma of her strange, colorless, joyless being.

Virginia glanced timidly at the shabby old arm-chair where the judge had been chained so many years. "That is where papa used to sit," said Winnie, following her glance with a sigh, "O, that I could call him back, and see him frowning, and smiling, and scolding his wayward girl all in the same breath."

Virginia could not echo the wish. It made her shiver to think of calling back that dreadful old man, the very tones of whose shrill voice had made her heart stand still. In a moment Winnie began speaking again. "See here," said she, taking up a ledger from the table, "this is my bank-book, and I can draw checks for a large amount. How would you like, Mousie, to have me give you a little bit of paper worth a hundred and fifty dollars to buy a fine gown?"

"No," said Virginia, with emphasis; "I have not earned it; I do not want fine gowns, I only want your love and confidence."

"How silly it is of you to make set speeches, and ask for what you already have in such abundance! But I will give you a mark of my confidence such as I have never given to any one else. Do you see that great safe in the corner yonder? It is where poor papa kept his papers, his bonds, mortgages, and money. It opens by a bit of magic, for if you do not know to what numbers to direct the hand here on the dial-plate, you could no more open it than you could, as mamma believes, get into heaven when St. Peter refuses to unlock the gate. I have learned this witchcraft with great difficulty, and find myself repeating the numbers even in my sleep. I am going to confide them to you, for my memory is provokingly treacherous, and at some critical moment I might forget. You shall help me to keep the secret. I should like to share everything with you."

"Not this," said Virginia, with gentle resistance. "You must not intrust this secret to any one, not even to your lover. A great deal of mischief is done by carelessness. It would be like giving edged tools to a child."

"You are not a child; you are a little female Solomon, and you must help me to keep the secret," she repeated, with affectionate willfulness. "Now say the numbers over slowly after me—24, 36, 48, and see," she continued, bending down, and twirling the index point, "this is the way it opens."

Virginie glanced behind her. "Hush!" she whispered, "the passage-door is open, and I heard that new maid brushing the hall only a moment ago."

"No matter," returned Winnie, carelessly, "I can change the combination at any time, and then I shall only have the trouble of teaching you a new set of numbers."

The door did open at that instant, revealing the monkey face and bushy head of Steenie, who was beaming all over with delight, in the possession of a black velvet jacket and a pair of red stockings which his young mistress had bestowed upon him, for Steenie had been promoted from the position of bootblack and knife-cleaner to that of page.

"Mass'r Edgar's waitin' wid de hosses—has been a waitin' dis half hour," and Steenie rolled up the white of his eyes, and practiced his new bow, bending his supple body with the quick, graceful motion of a cat.

"O, yes," said Winnie, "I had forgotten all about my engagement to ride to the mine with Mr. Swayne. Now I must run and put on my new habit. Will you come and help me with the buttons, Virginie? To-day we will play that you are my maid; I will have a real one from town before long."

"O, let me always be your maid," said Virginie; "it is all I am fit for, and I should delight to dress you."

"No, that is not your mission, Mousie; I have other views for you," tapping Virginie's golden head, as she bent down to fasten a pretty kid boot. "You must make me as fascinating as possible, for I am going to meet that young engineer, and talk over the plan of sinking a new shaft and developing the mine. O, isn't it grand," she cried with a little outburst of triumph, "to be able to influence large things, and get out of the petty contemptible existence of a commonplace woman. Then, you know, there is the school to look after. I expect you to be very much interested in the school, Mousie. You and Mr. Swayne will work together beautifully. There, hand me my hat. This mourning is too dolorous. It would crush me if I did not light it up; so you see I have stuck in a red feather. How comically horrified you look at the idea of my wearing red with my crape," she said, laughing at Virginie's puzzled face; "but doesn't that splendid Prince Hal, in Shakespeare, tell his lady love that they will see new fashions? There, hand me my whip and gloves. Good-bye, Mousie," kissing her, and the bright, audacious creature flashed down the stairs.

Old Nanna stood on the gravel path, in front of the hall, with her broad, black face puckered into a comical look of distress. Nanna's mourning was as nondescript as that of her young mistress, for the suit of sables, laid in many folds about her portly person, was crowned by a turban of flaming colors.

"O, little miss," she began in a half-sobbing tone, as soon as Winnie appeared in the sunshine, "'pears like ole Nanna might jess as well be dead and buried. Honey, dat new cook from de Port, she's mighty gran' and stiff, and ole Nanna's in de way, and ole Nanna's jess no 'count. An' dat new maid is shinin' de silber-plate dat old mass'r kep in bank; an' nobody but Nanna cber had de handlin' ob dat, honey; and dey'll waste, an' dey'll spill, an' she can't even peep uow to save de victuals. Poor miss'ible, wore out old creeter; she might better be under gravel."

Impulsively, Winnie threw her arms around the old woman's neck, while Edgar stood looking on in silence. "They shan't shove you one side," she said. "Do you suppose I am going to let anybody abuse my dear, old mammy? I will have the lodge repaired, down at the gate, that is all covered with white and red roses in June, and you shall live there, looking like a picture, in your bright, little room. Steenie can sleep there nights, and you shall have one of Finster's children to open the gate, and Virginie and I will come and visit you, Nanna, and take tea."

The sunshine in old Nanna's face was again eclipsed. "O, honey," she sobbed, clinging to Winnie's knees, "don't send old Nanna from you; she dotes on you, honey, as do birds dote on de mornin'. 'Pears like she toted Miss Susan, and you too, when you was little. She'll go pinin' away, an' breakin' her ole heart a frettin' after you, ef she's cooped up in a cage by herself. Let me stay, honey, an' wipe de floors wid de hars of my old head, for my beautiful, proud birdie to walk ou."

Winnie lifted up the old woman very tenderly. "I thought you would be delighted with the lodge plan, because it would make you independent, and you could have every thing your own way; but if you are unhappy at the idea of leaving me, you shall stay here at the hall, as long as you live, and have nothing to do but wait upon mamma; I will let you keep the keys, and then the other servants will have to look up to you."

"Bress your heart alive, honey," cried the old creature in a transport of delight, kissing Winnie's feet, as she mounted into the saddle, and in a moment she was cantering down the avenue by Edgar's side, like a fairy princess riding through an enchanted landscape.

Virginie stood in the place where her friend had left her, with a heart ill at ease; for she had carried a secret burden many days. Would not all be changed? she had

asked herself with much perturbation of spirit, when Bradley Halcourt appeared as the affianced husband of Winnifred? Could she remain in that house as the pet and favorite of his proud, young wife? She was haunted by the thought of Winnifred's cold, altered looks, when her love for the stranger had turned to distrust and hate. Though impulsive and affectionate, she knew that Winnifred could be hard, for was she not habitually hard to her mother? Something she had not dared to own to herself rose up to face her, and, with a stifled moan, she put her hands to her eyes, to shut out the golden sunshine, and then suddenly resolved that she would write to the good pastor, Viardot, in Geneva, and ask him to find some asylum for her in her native land; there, engaged in humble toil—it mattered not what—she would try and forget this strange, sad episode in her lonely life.

As she shut herself into her little chamber, she saw lying on the dressing-table a folded letter, and, as her eye fell upon it, an evil foreboding intruded upon her already disturbed mind. The note was not very clean, and it was addressed to her in a hand with which she was unfamiliar. After a moment's hesitation, she took it up, and opened it, and her eyes traced these words:

"MISS VIRGINIE DUVAL: If you wish to hear tidings of your uncle, Walter Freeborn, you will visit the pine grove, at the north end of the lake, this afternoon between the hours of three and four. You are requested to keep this communication secret, and to come alone, or else it will be impossible for the writer to confer with you."

There was no signature, and Virginie, as she read it, experienced a strange tremor, and sinking of the heart, instead of the joy that might have seemed natural at this first token in evidence that her uncle still lived. Since the great blow which his failure to meet her in New York had occasioned, she had thought of the possibility of finding him with inexplicable dread. The mystery thrown around this strange note only added to her disquietude, and she sat for a long time upon her little bed, holding it in her hand, and trying to steady herself with the hope that uncle Walter might be about to appear just at the proper moment to help her solve her life problem.

At three o'clock Winnifred had not returned, and Virginie tied on her hat, resolved to walk to the pine grove. Her face was pale, and the large blue eyes, with a pathetic wistfulness in them, looked as if they had wept. Now, as she left the door, she called to the great hound, Hector, to follow, for, it had occurred to her that in a conference with a stranger, it would be well to have this faithful creature's protection. The autumnal quiet was absolute, for a golden haze brooded over the distant hills, and the waters of the little lake lay smooth as a polished steel mirror, reflecting the sky tints and brilliant foliage in its clear depths.

The path Virginie took in her rapid walk skirted the lake, and passed not far from the fisherman's (Finster) cottage, where a boat was drawn up on the little beach filled with a brood of bareheaded children. Virginie, as she climbed the bank to get into the grove, was hidden by trees, but she had a clear view of the cottage door, and, to her astonishment, she saw the large, slow, heavy form of Mrs. Braithwaite, clad in black, with the slight lameness in the left foot, entering that humble portal. She could hardly credit the evidence of her senses, for it was the first time, to her knowledge, that Mrs. Braithwaite had strayed so far from the Hall for many months.

The pine grove was dense and dark, like a temple devoted to the infernal gods. The tall tree-stems admitted furtive gleams of light that stole along, and were quenched in the deep, green gloom. The mat of pine needles rustled stealthily under Virginie's feet, and the twilight made by the boughs had hardly closed around, when Hector bounded from her side, and, in a moment, a tall, slender man advanced out of the trees, patting the dog's head. He was decently clad, and had a noiseless, cat-like tread. From his supple form, and the character of his dark, watchful face, it was impossible to tell his age. The shining black hair clung close to his temples, and his eyes had a trick of roving about, taking in everything without looking at anything.

"You seem to know my dog," said Virginie, in a low voice, as he came towards her, and raised his hat?

"O, yes, miss; I always make it a point to get acquainted with the large dogs in the neighborhood where I am stopping."

"Did you send me this note?" Virginie asked directly, drawing the scrap of paper out of her pocket.

The man glanced behind him, and drew a step nearer. "Perhaps I did, and perhaps I didn't; at any rate I came here to meet Miss Virginie Duval; and I can assure you," he added, the peculiar smile curling about his thin lips, "that your uncle, Walter Freeborn, is an affectionate uncle, and that he feels the deepest interest in his lovely niece."

Virginie shrank back from any nearer approach, for this man's gallantry was insupportable. "He has a singular mode of showing his interest," said she, in cold, faint tones. "He left me at the moment of my greatest need to the charity of strangers, a prey to the most cruel anxiety as to his fate."

"Now don't be hard on your uncle," the man returned, as if he were coaxing a child. "He would have met you if he could. The fact is, he was detained against his will. Your poor uncle has been very unfortunate."

Virginie could scarcely keep from trembling, visibly. There was a terrible, cold, heavy load upon her heart, but she managed to say, with a touch of resentment, "If my uncle was ill why did he not send me a message? Why did he not write?"

"He was not ill," returned the man slowly, and almost in a whisper, and fixing his strange eyes upon her, with a power she could not resist. "He was detained, I tell you, against his will."

"Where was he detained?"

"Do you wish to know?"

"Yes, tell me all," she faltered.

"He was confined in prison; he could not write to you because he had changed his name, and was not then known as Walter Freeborn; but he has since made his escape. The mistaken zeal of Bradley Halcourt, in trying to find him, in advertising him all over the country, has raised the very devil, and obliged your uncle to keep in hiding much longer than otherwise would have been necessary."

Virginie felt as if she had received a staggering blow. She tottered back and put her hands to her head with a loud moan: "My uncle a convict—a felon?"

"Why do you use such unpleasant words? Your poor uncle was the victim of circumstances; any decent jury would have acquitted him on the ground of emotional insanity. You, at least are bound to be charitable."

"I will not judge him," murmured the poor girl, with blanched cheeks, "until I know of what crime he is accused."

"No, I wouldn't judge him," he returned with a leer. "And it is about time, my pretty little niece, that we dropped this disguise. You must already have suspected who I am. Your affectionate heart must have recognized your foud uncle."

Virginie sprang back with a cry, and her gaze was arrested by the large, shambling form of Father Dooley, who was moving through the trees, at a little distance, and had stopped at the sound of her voice. The three gazed at each other a moment in silence, and then her companion raised his hat, nonchalantly, and the priest passed on.

"The old priest has gone to confess Madame Braithwaite," said the man in a careless tone; "he will have to hold his tongue. You see I am deep in the secrets of the old Hall."

Virginie had already begun to move swiftly out of the shadow of the trees. "I shall make no secret of your arrival," said she, with pale defiance, and the scared look of a hunted animal in her blue eyes; "I shall speak to my friend, Miss Braithwaite, immediately, and I shall send word to Bradley Halcourt."

"O, no you won't." The velvety, treacherous voice was not raised. "It won't be an easy thing to let your fine friends know that your uncle is an escaped convict, is hiding up in a miner's hut, on the mountain. You see I can make it appear that you have had knowledge of me from the first. I can prove to this Bradley, as clear as daylight, that you have wormed yourself into his confidence, and have had secret meetings with me. But I am a loving, kind uncle, and I shan't do it, but you will take good care not to go back on me."

This man filled her with loathing and horror, and the poor girl turned now with a kind of desperate courage, and her voice sounded harsh and strange in her own ears. "What do you want of me?"

"What should I want but a little help and regard from my own niece? You are a deuced attractive girl, and you can make your attractions pay. Already you are in clover, living with a great heiress, who fairly adores you. You can get what you please, and you can wind her about your finger; and you owe it all to me who sent for you to come over, and put you in the way of making your fortune."

"I have never taken money from Miss Braithwaite. I earn nothing. I am simply a dependant in her house. She has given me only a few presents of clothing."

"But you must take money," said he, in his soft, exasperating tones, "and you must come instantly when I send for you. The time may arrive when it will be necessary for you to introduce me to your friends."

Virginie had but one thought, to free herself from that hated presence. She shook off the hand he had laid on her arm, and fled, panting and breathless, down the wood-path, almost into the arms of Bradley Halcourt.

(To be continued.)

#### TRUST.

I cannot see with my small human sight,  
Why God should lead this way or that for me;  
I only know He saith, "Child follow me."  
But I can trust.

I know not why my path should be at times  
So straightly hedged, so strangely barred before;  
I only know God could keep wide the door.  
But I can trust.

Subscribers will confer a favor, if, when answering Advertisements, they will mention "The Floral Cabinet."

## THE EARLIEST TOMATO KNOWN. LITTLE GEM.

This new variety was raised by the originator of the Con-  
queror Tomato, heretofore considered the earliest in cultiva-  
tion. The vines are of medium length, compact growth, and  
excessively loaded with bright red fruit of medium size, of  
round and uniform shape, varying from four to six inches in  
circumference, of superior flavor, either raw or cooked. Its  
bright glossy red color, uniform size, shape, and otherwise  
beautiful appearance, make a dish of the LITTLE GEMs al-  
most as tempting as a plate of strawberries. It may be re-  
lied upon to yield several pickings, a week or ten days earlier  
than any other variety.  
Price, 25 cts. per packet; five packets for \$1.00.

B. K. BLISS & SONS,  
34 Barclay St., New York.

## UTILITY ADJUSTABLE TABLE

In great variety of style, size, shape and price.  
Inclose stamp for Illustrated Book, and mention  
this paper. **LAMBIE & SARGENT,**  
Prop'rs & Man'frs, 793 Broadway, N. Y.

My annual Catalogue of Vegetable and Flower  
Seed for 1877 will be ready by January, and sent  
free to all who apply. Customers of last season  
need not write for it. I offer one of the largest col-  
lections of vegetable seed ever sent out by any seed  
house in America, a large portion of which were  
grown on my six seed farms. Printed directions for  
cultivation on every package. All seed sold from my  
establishment warranted to be both fresh and true  
to name; so far, that should it prove otherwise I  
will refund the order gratis. As the original intro-  
ducer of the Hubbard and Marblehead Squashes,  
the Marblehead Cabbages, and a score of other new  
vegetables. I invite the patronage of all who are  
anxious to have their seed fresh, true, and of the very  
best strain. New Vegetables a specialty.  
JAMES J. H. GREGORY, Marblehead, Mass.

## ROSE GROWER'S COMPANION AND FLORAL GUIDE.

A semi-annual publication of  
GREAT interest to the lovers  
of flowers. Gives new and valu-  
able hints, by following which Tea  
Roses may be SUCCESSFUL-  
LY grown and wintered. Our  
lists of Roses, Geraniums, Fuch-  
sias, Lantanas, Dahlias, &c., are  
very full and complete. We are  
frequent importers of NEW and  
RARE PLANTS from Eng-  
land and France, and each season  
present novelties that have NEV-  
ER BEFORE been OFFER-  
ED in this country. Our scale of  
PRICES is arranged on a new  
and MOST LIBERAL basis, and our Premiums to the  
getters up of Clubs will ensure GOOD PAY FOR ALL  
who choose to work. We are very successful in shipping  
plants and GUARANTEE to deliver THEM at destina-  
tion IN GOOD ORDER, whether sent by mail or express.  
Every amateur grower of plants should send for the Spring  
number. Address  
**A. K. WILLIAMS, Box 1500,**  
(Successor to E. Y. TEAS & CO.)  
**RICHMOND, INDIANA.**

## ROSES

By mail, postpaid (on own roots), 25 cents apiece,  
\$2.00 per dozen. Large plants (budded or on own  
roots) by express at purchasers expense, 50 cents  
apiece, \$4.00 per dozen. The most select col-  
lection in America. Send for Catalogue.

**ELLWANGER & BARRY,** Rochester, N. Y.

## HOVEY & CO.'S

ILLUSTRATED GUIDE AND CATA-  
LOGUE of FLOWER and VEGE-  
TABLE SEEDS.

## Novelties for 1877.

The most comprehensive and reliable guide; gratis,  
and seed free on application.

endom. Sample box containing 3 cakes of 16 ozs. each, sent  
free to any address on receipt of 75 cents.  
Address B. T. Babbitt, New York City.  
For Sale by all Druggists.

NEW YORK, FEBRUARY, 1877.

**"A BIT O' CHRISTMAS GREEN."**

When preparing Christmas decorations, if evergreens are abundant, make plenty of garland trimming. If not, confine your efforts to mottoes, crosses and wreaths, and light trimming for pictures. In making garlands, use strong twine or cord in preference to wire, as the latter is liable to twist. Fasten one end of the cord to some stationary object, and having a supply of evergreens cut into small branches, bind them on the cord one bunch after another with fine twine, one firm twist being sufficient to hold them in place. Cedar, Juniper and Hemlock are generally used for this work, but Spruce, Fir and Laurel will not come amiss, and even Pine can be made effective in skillful hands. To give color, work in occasional clusters of bright berries, American Holly, Winter berries, Burning Bush, Bitter Sweet, or whatever you can find. Generally, the neighboring woods and swamps will furnish something of the kind; if they do not, make imitation berries by stringing three or four soaked peas on fine wire and dipping them in a varnish of red sealing-wax dissolved in spirits of wine. Or tufts of cotton can be fastened to wire and dipped into melted sealing-wax, and molded into berries with the fingers. Everlastings may be used, but are not as appropriate as berries. Above all, those unsightly colored tissue paper flowers sometimes used, should be avoided, though if nothing better can be had to relieve the somber evergreens, little tufts of pure white tissue paper cut fine as for baskets and crimped are admissible. Be careful to make these garlands light and airy, and twine them around columns and railings, attach them along the cornices, and if the ceilings are not too low festoon them from the cornices, looping them up in the centre of the ceiling. Lighter garlands of the same kind should be made for trimming the tops of the doors and windows and the gas fixtures.

Mottoes made of evergreen letters are one of the essentials. Cut the letters of the requisite size and shape from strong straw board and sew or tie on small

branches of evergreens with stout dark thread. The handsomest letters are of rustic text and are covered with Ivy, Laurel or Holly leaves, and a few bright berries mingled in. The beauty of all the decorations mentioned so far can be greatly enhanced by frosting. Brush lightly with liquid gum and sprinkle with glass dust on powdered mica, which may be obtained at a trifling expense. Fragments of glass might be pulverized at home for the purpose, if especial care was taken to protect the eyes. For variety, crest some of the frosting with starch to imitate hoar frost.

Crosses, wreaths, anchors and letters made of moss and everlastings divide the honors with those of frosted evergreens. Procure that moss which grows in large thin sheets on old logs, wash it through two or three waters and dry. With a pair of sharp scissors cut it according to the required designs and fasten it to a pasteboard foundation by winding with dark thread. Cut the stems of the everlasting quite short, about half an inch, dip them in paste or glue and insert in the moss; when dry they will remain secure.

Another charming variety of letters, crosses, etc., is made of gray moss crystalized. Select stiff gray moss of coarse open texture, dampen and sew on a pasteboard foundation. Next prepare a solution of alum, one pound to a quart of hard water, heat gradually in a brass kettle until boiling hot, then allow to cool, when it is ready for use. A little extra care must be taken with the crystalizing. The moss must be perfectly dry; hold the article over the kettle, and with a cup or large spoon repeatedly pour the water over the moss, moistening the pasteboard as little as possible. This process produces more frost-like crystals than the ordinary one of immersion.

But the loveliest, daintiest mottoes of all are of pressed ferns, and are quite easily made. Sketch the motto on Bristol-board with a lead pencil, in any text you like. Choose your smallest, greenest ferns for the capitals, and take the divisions of the fronds for the smaller words. Brush the back of the ferns with gum-arabic, lay carefully in place, and you have a "thing of beauty," which will be a joy as long as it endures.

**A NEW AND BEAUTIFUL FLOWER.**

Several summers when travelling in the Rocky Mountains, we have seen a species of *Ipomœa*, so large and rich in color, growing low and branching over the ground, that it attracted our attention. It was so beautiful and luxuriant that we have often wished it was cultivated in our Eastern flower gardens, like the *Aquilegia Cœrulea*, also a native of the Rocky Mountains, it would be sure of popular favor.

We are glad to learn that, through Mr. Bliss, the seedsman, and his friends, seed collectors, seeds of it have been gathered, and it is thus introduced to flower lovers for the first time. Its botanical name is *Ipomœa leptophylla*, and is thus more particularly described: One of its most striking characteristics is its enormous perennial root. A few years ago a root was sent to the East which was shaped like an enormous rutabaga, and would nearly fill a flour barrel. While the root is decidedly perennial, the stems are annual, two or three feet or more high, and branching from the very base, throwing out great numbers of branches, and forming a bushy mass about as broad as it is high. The leaves are two to four inches long, very narrow, and like the rest of the plant, perfectly smooth. The flowers, either solitary or two or three together on a stalk, are two to two and a half inches long, funnel-form, but less open at

the throat than the common *Ipomœas*, and of a pleasing rose-purple color. The flowers are produced in the greatest profusion, a large plant having the appearance of an immense bouquet. The plant is found on the Platte and Canadian rivers, and also on the table lands of Colorado; as in the last named locality the mercury falls in winter to 20° and 30° below zero, there is no doubt about the hardiness of the plant in any part of the United States, and we deem it worthy to be tried in every flower garden.

See Illustration, page 20.

**AWARD OF PRIZES FOR COOKING RECEIPTS.**

The cooking receipts forwarded to us for competition were submitted for careful examination to other parties than the Editor, so that there might be no awards to his friends or interested acquaintances, and the verdict seems to be unanimous, as follows:

First prize, \$5 to Mrs. W. A. Ramsauer, Lincolnton, N. C.

Second prize, \$10, to Olive E. Chapman, Penn. Mich.

Third prize, \$5, to each of following: C. S. J. and Hortense Share.

The following are mentioned as exceedingly valuable, and they will all be published this year:

Mrs. W. C. Holmes, Leicester Junction, Vt.

Ella S. Phelps, Racine, Wis.

Mrs. H. C. Early, Lynchburg, Va.

Mrs. A. C. Aekerman, 123 Reid avenue, Brooklyn, L. I.

Mrs. Caroline E. Cocks, Fordham P. O., N. Y. City.

Mrs. J. H. Smyth, San Francisco, Cal.

Mrs. J. J. Randall, Winona, Minn.

J. Robertson Archer, Pt. Gibson, Miss.

The following comments are added by the Committee:

COMMENTS UPON MANUSCRIPTS SENT TO COMPETE FOR PRIZES.

In reply to the offer of prizes for the twenty-five best receipts for cooking of all kinds, *manuscripts* have been received at this office from the Atlantic to the Pacific Slope. Not a State in the Union but has sent contributions to our list, making in all *nine thousand six hundred and sixty-six receipts*!

Of course, in so large a number, there have been many *manuscripts* that are almost identical; and the receipts for Chicken Salad, Pressed Chicken, Chicken Cheese, Escalloped Oysters, Pickler House Rolls, &c., Tomato Soup, Oyster Soup, Chow-chow, Pickles of Cucumbers and Tomatoes, Chocolate Cakes and Puddings, Cream Cakes, Snow Pudding and Queen of the Puddings, Jelly Cakes, and Cold and Hot Slaw, have been repeated in hundreds of manuscripts with but little variations in the receipts. Of course, in such cases, those first received and best arranged were selected.

But where all were so good it has not been an easy task to choose those which were most suitable for the prizes, and we can only say with the Irish Bridget—"I have done me endeavor, ma'am, an' troth I'm sorry if it din'na suit ye."

In some *manuscripts* the directions were not attended to, and several kinds of cakes or pies were given, instead of only two. In a few, the pages were written on both sides of the paper, thus making them of no use, as printers cannot use *manuscripts* thus written.

In other cases the location was not given correctly, either the town or State being omitted.

Taken as a whole, however, the receipts were most excellent; and while they show that the delicacies of the table are not confined to any State, they also declare that our Southern and Western sisters excel the Eastern, in some branches of cookery.

An ancient poet of the Elizabethan age wrote:

"The surest road to peoples' hearts, I find,  
Lies through the mouth, or I mistake mankind."

And the maxim holds as true in this 19th century.

Good cooks also make good tempers, for we must allow that the temper of mankind depends greatly upon the state of the digestive organs; and if greasy, leathery, unattractive food is substituted for that which is wholesome and toothsome, we cannot grow either in Christian graces or beauty, without a terrible struggle of both mind and body.

The prizes were awarded because they were each excellent as *collections*, were well arranged, and principally because they contained the most and best of *new recipes*.

**A WORD ABOUT ADVERTISEMENTS.**

We never mean to take any advertisements from any parties but, from the best knowledge and inquiries we can make, seem reliable and will do just as is promised. So far as we know, no swindle or patent medicine has found its way into our columns, and never, knowingly, do we permit anything but is of respectable character.

An advertisement of the Ohio & Kentucky & Texas Land Company was sent us by a reliable agent, who assured us that the matter was all right, and that every word said by the advertiser could be depended upon. We had dealt with this agent for years, and found him and his opinions reliable in the highest degree. We therefore inserted it. Some who patronize it, call us to task, for our responsibility in the matter. We can only say that we took usual care, and asked every one who knew the parties, and they told us that it was a good enterprise. It may or may not be a swindle. No one seems to have positive information, and we have no means of judging. We can only say from complaints received, *do not trust that company any more*.

**A Costly Number.**—This number is a costly one. Upon the opposite page is a perfect copy by electrotpe of a splendid steel plate engraving which cost over \$500; upon the fourteenth page is the \$25 collection of new recipes. Add to this the new music, and the other prize floral and household articles which we publish, and the reader has for the small sum of 11 or 12 cents a value of over \$541.

**New Floral Premium.**—The beautiful flower, *Ipomœa leptophylla* which we illustrate this month, we have made arrangements to give as premium free to any one who being now a subscriber will send us before May 1st one more yearly subscriber, or two six months' subscribers. It is new, never yet introduced. Its flowers are very large and brilliant. It is worth having. Remember, only one new subscription is necessary to secure it free.

**Astonishing Premiums of Flower and Garden Seeds.**—The splendid offer of flower seeds, which we make upon our first page of cover, are open only to the 1st of June, and must in all cases be accompanied with the certificates which are printed on the paper. No order can be filled without the certificate. These offers are made both to encourage our readers to get flower seeds and work for the interest of the *FLORAL CABINET* in extending its good name and fame, and circulation.

MEMORIES OF HAPPY CHILDHOOD.

## Ladies' Boudoir.

## OUR MINISTER'S SERMON.

The minister said last night, says he,  
 "Don't be afraid of givin';  
 If your life ain't worth nothin' to other folks,  
 Why, what's the use of livin'?"  
 And that's what I say to my wife, says I,  
 There's Brown the miserable sinner,  
 He'd sooner a beggar would starve than give  
 A cent towards buyin' a dinner.

I tell you our minister's prime, he is,  
 But I couldn't quite determine,  
 When I heard him a givin' it right and left,  
 Just who was hit by his sermon.  
 Of course there couldn't be no mistake  
 When he talked of long winded prayin',  
 For Peters and Johnson they sot and scowled  
 At every word he was sayin'.

And the minister he went on to say,  
 "There's various kinds of cheatin',  
 And religion's as good for every day  
 As it is to bring to meetin'.  
 I don't think much of the man that gives  
 The loud Amens at my preachin',  
 And spends his time the followin' week  
 In cheatin' and overreachin'."

I guess that dose was bitter enough  
 For a man like Jones to swaller;  
 But I noticed he didn't open his mouth,  
 Not once, after that, to holler;  
 Hurray, says I, for the minister—  
 Of course I said it quiet—  
 Give us some more of this open talk;  
 It's very refreshin' diet.

The minister hit 'em every time;  
 And when he spoke of fashion,  
 And riggin's out in bows and things,  
 As woman's rulin' passion,  
 And comin' to church to see the styles,  
 I couldn't help a winkin'  
 And a nudgin' my wife, and says I, "That's you;"  
 And I guess it sot her thinkin'.

Says I to myself, that sermon is pat,  
 But man is a queer creation,  
 And I'm much afraid that most of the folks  
 Won't make the application.  
 Now, if he had said a word about  
 My personal mode of sinnin',  
 I'd have gone to work to right myself  
 And not set there a-grinnin'.

Just then the minister, says he,  
 "And now I've come to the fellers  
 Who've lost this shower by usin' their friends  
 As a sort o' moral umbrellas.  
 Go home," says he, "and find your faults,  
 Instead of huntin' your brothers';  
 Go home," says he, "and wear the coats  
 You tried to fit for others."

My wife she nudged and Brown he winked,  
 And there were lots o' smilin',  
 And lots o' lookin' at our pew—  
 It sot my blood a bilin'.  
 Says I to myself, our minister  
 Is gottin' a little bitter;  
 I'll tell him, when the meetin's out, that I  
 Ain't at all that kind of a critter!

HINTS TO COUNTRY GIRLS ABOUT  
THEIR BED-ROOMS.

In offering the following homely suggestions, the writer makes no pretension to advancing any very novel ideas, but hopes they may prove useful to some of the *petites soeurs des pauvres*, who may, like herself, be thrown into the country, twenty miles from town, with little to aid in their love for the beautiful, except their native ingenuity, and the necessity that we are told is the mother of invention.

In the first place, the bedstead should be low—I sawed mine off to within a foot of the floor—and the bed evenly and squarely made, and flat on top. Those who live in the country know what high, inaccessible mountains of feathers, heaped up in the centre, generally greet you on entering a country bed-room, hence the suggestion. Large, square pillows look much better than the small ones generally seen; and with these one can dispense with a bolster. As pillow-cases, even when only once used, will look rumpled, pillow-shams add much to the appearance of the bed. They should be large and square—thirty-two by thirty-

four inches is a good size—with ruffle three inches wide after being hemmed. A braided pattern all around is pretty, or, instead, there may be a row of tucks. The centres may have braided or embroidered initials or monograms, six or seven inches long. The braiding pattern can be worked with coarse, black silk, the lines being followed either on the sewing machine or in chain stitch embroidery. The material may be linen, cambric, or plain white cotton; white Swiss muslin is very pretty, lined with bright colored cambric.

Wooden washstands will be much improved by tacking a piece of oil-cloth, which so closely imitates white marble, neatly over the top, taking care to have the edges covered, and the tacks hidden underneath. Mats should be beneath each article on the stand, and these can be easily and prettily made of round pieces of white pique, with crocheted edge of white cotton or red wool. Every washstand should have behind it a small wall-tidy; those of white net are pretty—round-meshed, mosquito net will do—darned with white embroidery cotton in any pretty pattern, and lined with bright cambric, and edged either with a quilling of pinked cambric, or with cheap white lace. White ones are pretty, made of white pique, scalloped around with coarse embroidery cotton, and a braiding pattern stitched with black silk, like the shams; but white tidies do not suit white walls. A very cheap one is made by taking solid, colored calico—one before me is gray—turn over on the right side a hem an inch and a half wide, and stitch with black; then spatter in each corner a cluster of ferns, and in the centre either a monogram or initial, or else a large group of quaintly-shaped leaves, ferns and graceful views. A bow of bright ribbon at the corners is an improvement. Tidies may be made in the same way for the tops of wooden bureaus that have been defaced, and for the backs of chairs.

For cords to hang pictures, homespun yarn can be twisted into looking very respectable, but it must have a strand of twine mixed in.

Amongst the various suggestions about cone work, I have seen no description of the six-pointed, star-shaped frames for small photographs; these are nine inches from point to point, and have a hexagonal opening in the centre for the picture. A small piece of glass must cover the opening, and this and the picture are fastened in by having a piece of stiff paste-board, star-shaped, sewed around the edges. Pretty match receivers to hang on the wall can be made of the same materials; mine is about ten inches long and six wide where the little inch and a half box for matches is sewed on; it narrows to the top, and, above the box, is cut out to imitate carved wood.

If at a loss for vases for your mantel, and you have any of the bluish gray jars in which West India preserves are put up, cut off the straw handles, and, if you can, have a round, funnel-shaped mouth made of tin; paint the whole with asphaltum varnish. These look well without the tin. On my mantel are two of the little white wood cages, not a foot square, in which canaries are sent on their travels; these are lined with dried *ferny*, green moss and grasses, and berries fill the top. They make unique bouquet-holders; they also make beautiful hanging baskets; in one of my windows hangs one filled with green tradescantia; in the other is one filled with tradescantia, zebrina and Keulworth ivy, and it must be seen to be appreciated. Another novel hanging basket can be made of a large gnarled and knotty squash, with top sawed off and cleaned out; one which I used as a pot for a fine scarlet geranium was the admiration of all beholders,

and the plant bloomed profusely. The long, gourd-shaped squashes, with part of the large end sawed off, and suspended by cords, make pretty corner cornucopias for grasses and autumn leaves; sometimes their color needs no change, but if it does, they can be stained and varnished. Here let me say that I stain every thing with asphaltum varnish; as Mrs. Toodles would say, "it is a handy thing to have in the house." With it I've varnished old gilt cornices—leaving portions gilt—until they looked almost new; it will hide ugly scratches on furniture, and will stain any thing you wish a dark color. Ten cents will get enough to last a long time, as it must be diluted with turpentine.

Having seen in an old CABINET that a turtle shell makes a pretty card receiver, I tried to see if one could not be fashioned into a jewel stand, but it was too flat; then one of the farm servants brought a terrapin, which answers nicely since the shell is several inches deep, and is a pretty brown, spotted with yellow. The terrapin must be boiled nearly an hour, until the meat can be pulled out perfectly clean, then a narrow ribbon can be run under the vertebrae, tied in a little bow at each end, and pasted fast. For mine, a friend contributed a little stand of carved walnut, about three inches high, with four little feet to rest on the bureau, and four to support the shell.

Sheepskins cut in rectangular shape make pretty and comfortable rugs, either left white or dyed with aniline, and they can be combed out when washed. One of my rugs is the skin of a red fox, tanned head and all; where fox-hunting is as prevalent as in this part of the world, these are easily procured, and the tanning will cost only a few cents. They must be lined with cloth, cut the shape of the skin, but larger; some that I saw lately at the Centennial, from Norway, were lined with black, and had narrow, pinked strips of red, white and blue flannel or cloth stitched around the edge.

To make a rustic picture, buy a little five cent wicker basket about three inches long, cut in half, handle and all, and sew to a piece of Bristol board; fill the basket with mosses, lichens and tiny pressed ferns, then frame in a deep frame. On the wall I preserve a souvenir from the valley of Chamouni in this shape. I have seen the basket filled with different colored birds' feathers, and the effect is pretty. Above each of my pictures I place small bouquets of grasses, pressed autumn leaves, ferns, berries and everlastings; the sprays of the wild bamboo vine, with its brilliantly blotched leaves and black berries, are specially beautiful. Press the leaves with an iron, leaving the stem to twist its own way. My pressed autumn leaves are dipped in common, yellow, melted wax, then powdered carmine is rubbed on with the finger, and they are as brilliant as before being pressed.

Perhaps it may not be generally known that common glue, dissolved in vinegar, will answer the same purpose as the troublesome contrivance that has to have two vessels; one to contain water; all one has to do is to set it near the fire—not too near—when you wish to use.

If you have ink stains on your furniture, oxalic acid, dissolved in tepid water and left to stand on the one place a short time, will take it entirely out of oiled wood; I have not tried varnished wood. Kerosene, applied with what my mother used to call "elbow grease," will take out white spots from furniture, but only with long and patient rubbing; otherwise it gives a greasy, smeared appearance to the wood.

A VIRGINIA GIRL.

## Household Art.

### AN AFTERNOON CHAT.

"What lovely lambrequins!" exclaimed Mrs. Grey to Mrs. Nelson, one afternoon, when she had dropped in there for a friendly call. "Really I think you are extravagant, to buy new lambrequins when your windows were already so nicely furnished with curtains."

Mrs. Nelson smiled. There was a secret about those lambrequins that she had not intended to disclose to any one; but to be called extravagant, she could not stand that, so she said:

"Oh, those lambrequins were very cheap, in fact, I made them out of some old lace curtains that I never expected to use again. You see I had got tired of my long lace curtains that I had used winter and summer for three years, and longed for a change of some kind; then, you know, we use this room for both parlor and sitting-room; and, in the winter, when my two wide-awake boys were in the house all the time, my poor curtains had a hard time of it, trying to look respectable all winter; the children must see out, and as the curtains were rather voluminous, it was impossible to keep them out of their way. I was going to get some cambric and line some old lace curtains that I have, and make lambrequins that I could use without any curtains underneath them; but husband thought that the times were too hard to admit of our spending even that much for curtains, when we had curtains for our windows, so I had to set my wits to work to accomplish what I wished without calling on this economical husband of mine. I had almost given it up when I was up in the garret and came across these old forgotten curtains—they were much nicer when new than the ones I had intended to use—and as they were close work I thought I could make them do without lining, so I took them down and began with them. I took a needle and some coarse cotton and drew together all the slits that I thought would show; next I washed them, and bleached them by boiling in borax water and drying in the sun; when they were dry, I starched them in hot, thick starch, and after spreading a sheet on the floor in the spare bedroom I pinned them on it, one on top of the other, putting the pins about five inches apart and stretching the curtains pretty well. When they were dry I plaited one side of each in three large box plaits and run a strong string in from the middle of each plait to the other edge, and gathered it up as much as I wanted it, making the string in the middle the shortest. You see I have curved boards at the top of my windows that make curtains stand out from the window in the middle. I tacked the curtains to these boards, and then got out my stock of pressed autumn leaves and ferns, and arranged a bouquet for each plait and a spray for down the middle of each. They looked so pretty, when I had got them done, that I felt paid for all the time and trouble I had expended on them; and when my husband came home, and I saw he was pleased, I was proud. Now, you see, I have no long-looped curtains to bother with; nothing but these plain, white blinds—which, by the way, are made of ten-cent muslin, with a thin stick lashed in each end to fasten them up with and roll them on—and the lambrequins that will stay clean and fresh all winter, because they are out of the children's reach, and I will have my curtains fresh and nice for the summer, when my boys can be out of doors part of the time."

Mrs. Grey looked pleased and thoughtful. After a time she said, "I don't see how you can find time to

fix so many things of that kind, with your little children to attend to. My children are old enough to go to school, and I can scarcely find time to do anything but sew for them, if I want to have them look like other children. And then it seems that I get no thanks for it; they are never willing to spend an evening at home, but always have some place to go to, and I have not the heart to refuse them after they have been housed up all day. Then my husband always seems to have more business to attend to in the evening than at any other time; I never see him before ten o'clock."

Mrs. Nelson knew all this, for she had seen Mrs. Grey's little girls dressed up to every ruffle and tuck of the fashion, even to go to school, and had also seen the bare, cheerless rooms which they called home, and was glad of a chance to give her neighbor an insight into the way she run the machinery of her household.

"Don't you think, Mrs. Grey," she said, "that you could afford to hire some of your sewing, if you have so much to do, and devote the time thus gained to beautifying your home, adding games and amusements for the children, and every thing you can think of that might attract your husband to his home."

"Oh, yes; I suppose I could afford it, but it costs so much to put out sewing, and I want to save all I can."

"Well, take a sewing girl in the house, then, for a few weeks each season, that will be cheaper, perhaps, and if you use your time to advantage, I am sure you will not feel that you are any poorer at the end of the year, and as to having your husband spend all his evenings away from home, why I would not stand it. Now Charlie used to think he could do the same thing, but I soon put a stop to it by showing him that home was the most pleasant and enjoyable place he could find. I always keep a pair of nice slippers for him, and a warm dressing-gown, and have them where they are warm and handy; then I manage to have plenty of late papers and magazines on the table, and keep my guitar strung up, if I have to sacrifice something once in a while to do it. After supper, if he gets his gown and slippers on, and gets to reading once, I am sure of him for that evening at least. Then I get him interested, and ask his help in everything I do, till now he takes as much interest in adorning our home as I do, and he is such a help—a man can do many things very easily that a woman is very awkward about. We make all our own brackets, sawing things out of soft wood, and staining them to imitate any wood we wish. I will be happy to render you any assistance in that line you would want. He made the molds for all the leaves and for the petals of all the flowers I have on my wax cross. You know that kind of work is expensive if you have to buy all the molds. Mr. Grey admired the cross very much when he was in here the other evening, and I will tell you how to make the molds, and help you arrange it all, if you want to make something of that kind to begin with, it would please him I know. To make the molds you must gather the natural leaves of the kind you want to make in wax, and with a brush, cover the under side of them with lard; then mix in a bowl one-half pound of plaster of Paris with enough water to make a stiff batter; dip out quickly, as it soon hardens, and cover each leaf on the under side with a thick coat of the plaster; smooth over with a case knife, then in half an hour turn over the molds, and carefully remove the leaves with a pen-knife; let them stand till they are quite hard and they are ready for use."

"Thank you; I think I will try that, and if George likes it, I may come to you again for help. I would like to do such things if I thought I could, and he would help me. I thought he did not care for such things."

"Well, he does, very much; why, when he came in here about that book the other night, he staid nearly all the evening just because, he said, it was so cozy and comfortable here; and he admired everything of the kind I have in the room, even to those small steel engravings framed in autumn leaves. And he wished me to tell you how I fixed a bottom in that cane rocking-chair and made it so easy. You see the cane that was in when we got it was not very good, and it gave out in a few years. I thought I could not spare the chair, for it is the one Charlie always sits in. There was no one in town could fix it for me, so I had to do it myself. It took some time to study it out, but after a time I had it all planned how I thought we could fix it, and after I had the materials ready, I asked him to help me. We first removed all the cane from the seat of the chair and then took a long piece of whip cord, tied a knot in one end, and drew the string through one of the holes in which the cane had been fastened; then we drew it across to the opposite side of the chair through two holes, then back again, and so on clear across the chair. Then we knew we had a foundation of rope that would never give way. Over this we tacked two pieces of coffee sacking, having the upper one a little larger than the other, and leaving it loose in front. Between these we stuffed ten cents worth of curled hair and then fastened the top down in front. This cushion I covered with scarlet flannel, over which I put a cover of rosettes of old black alpaca, lined with the scarlet flannel; these sewed together show the red flannel in between very nicely, and it matches the tidy that I made of scraps of fine, white muslin, and lined with red flannel, sewed together in the shape of a diamond, and trimmed around the edge with a crochet and fringe of No. 8 cotton. Now the chair looks better, and is much more comfortable than when we first got it."

Mrs. Gray went home, resolved to do what she could to make their home attractive to her loved ones; and we know she will succeed well, for she took Mrs. Nelson's advice, and subscribed for THE LADIES' FLORAL CABINET, to begin with.

MRS. BARNETTE.

### LITTLE THINGS.

For a very pretty bracket, procure a triangular piece of board, slightly rounded in front, for the shelf, and some pieces of old table-cloth, with a pretty pattern; work the pattern in suitable worsteds, fit and tack on the shelf. Cut another piece of the cloth long enough to go around, and three or four inches in depth, and work as before; scallop or point the lower edge; bind with ribbon, and finish each point with bow of ribbon or tassel of worsted. Toilet mats are made of old napkins, worked, and bound or fringed at the edges. Perforated tin is pretty, used instead of perforated paper, and is useful in making presents for tin weddings. A match-safe is made like a cornucopia, worked with a pretty pattern; bind with ribbon; attach ribbons to suspend it, and finish with a bow at the end. One of perforated paper is made in the same manner, but with a small tin spice-box inclosed. They are very pretty to suspend from chandeliers. A wall match-safe is made of the tin; the back piece to be worked with a pretty vine, the safes with flowers; bind with ribbon, and make a loop by which to hang it.

## Household Elegancies.

## AUTUMN LEAF WORK.

In the Autumn kind Nature gently weaves,  
For the dear old year, a crown,  
Of the beautiful ripened leaves,  
Bright red, and yellow, and brown.

Of late years it has become a favorite amusement to gather quantities of the most beautiful autumn leaves, and after carefully pressing them (and varnishing, if you like a glossy surface) to arrange them into wreaths, crosses, bouquets, mottoes, and various devices, which often produce effects as beautiful as a picture from the brush of a skillful painter.

When tastefully arranged in a bouquet, on buff or white card-board, they make beautiful pictures; and when with the leaves a few delicate green and frost-touched ferns are mixed, they are fair and graceful enough to deck the most gorgeous parlor.

When leaves are thoroughly dried they can be attached to a piece of coarse flexible wire, by the help of fine brown cotton-covered wire; and, by intermingling the varied and contrasting colors of the different maples, the oak, beech, &c., with a few green fern fronds, handsome garlands can thus be formed with which to encircle picture frames and mirrors, or to hang in windows. Then, too, some of the prettiest lambrequins one could wish may be made of autumn leaves fastened in graceful figures on to lace, each curtain adorned with but one kind of leaves, with fronds of fern—breathing sweet remembrances of the cool, green, old woods—interspersed among them.

Mottoes, for framing, make beautiful gifts from friend to friend, and are very easily made. As you take your autumn walks, eagerly search for the gayest leaves and ferns with which to fill your vases, and decorate your windows or pictures. Please not forget to take your eyes from the trees now and then, and look carefully on the ground at your feet, or on the small bushes and tiny running vines, for there you will find material for your mottoes. Gather the smallest leaves you can see; the dark, maroon wild rose, bright red huckleberry, the delicate notched miller grape-vine, white and fuzzy as a miller's coat; the clover, toad-sorrel, cinquefoil, and, in fact, any very small ones which your eyes may be so fortunate as to rest upon. Press these carefully. Draw, with a pencil, the outline of your letters on card-board, then carefully stick on the leaves (with common flour paste), and you will have mottoes which, when framed under glass, are far prettier than many of the chromos now so common and so much admired. The word "Welcome!" made in this manner is very pretty to hang in a hall, or in a room facing it.

Bookmarks with motto on one side, and initials on the other, make pretty birthday gifts.

A very tasteful ornament for a bracket consists of a cross made of wood, covered with a coating of mucilage, and marble dust sprinkled carefully over it. Fasten the base of it on to a very thin block of wood or thick card-board, which block cover with green moss. Form a wreath of small leaves, by means of fine wire, and twine up the cross. If marble dust cannot be obtained, coarse sand may be used, or the cross may be covered with gray mosses.

Lovers of the beautiful will find much pleasure in using some of their bright leaves for decorating articles in "Japanese Work," (or "Anglo-Japanese

Work," as it is too often called.) The materials required are some fine black paint, a piece of nice sand-paper, bottle of shellac varnish, a little isinglass, and ferns and leaves. Any article may be ornamented by this "elegant and easy domestic art;" an old work-box, writing-desk, tea-caddy, fire-screen, flower-pots, small tables, wall-pockets, bracelets, &c. Select perfect leaves, carefully pressed and dry; rub the surface of whatever you wish to ornament smooth with sand-paper, cover the surface with black paint; leave this to dry thoroughly; smooth with the sand-paper,

MOTTO IN AUTUMN LEAVES.

if rough at all; add two other coats of paint, then gum your leaves on, after the paint has thoroughly dried. Dissolve a little of the isinglass in hot water, and, with a brush, apply a coat of it while warm. When this is dry, give the work three coats of copal

eigiar-boxes, and ornamented with bouquets or garlands of leaves. Letter-cases and eard-racks are also very elegant done in the same way. Beautiful boxes may be made by taking nice smooth strawberry or oval fig boxes, painting them, arranging a bouquet or wreath on the cover, and a garland around the box. An old table which has been thrown aside for its defacement, can be made into "a thing of beauty," of which the most fastidious may be proud. If it is a round or oval table, fashion a wreath of leaves and ferns; but if square, make a wreath or bouquet in the centre, and pretty figures in the corners. Flower pots look very nicely with a small garland around them, or a single leaf or small cluster on the sides. In fact, many are the beautiful articles of use and adornment which can be made by the aid of this pleasing art. The paint can be obtained already mixed at a paint shop, and either copal or shellac varnish may be used.

Another very elegant use to make of autumn leaves is, to form them into transparencies for hanging in the window. Place your brightest leaves with some delicate grasses and ferns, between two panes of glass; bind the edges first with some old, but strong, cambric; then bind over this with ribbon, leaving a loop at the top with which to hang it up by, or sew a ring on securely through the cambric and ribbon before the paste gets quite dried.

Very handsome crosses, wreaths and anchors are often made for hanging in windows, by sewing leaves on paper or stiff net lace.

An arch made of twigs or stiff wires, on to which leaves, ferns and a few pine cones are secured, and fastened over the mantel, with a small wreath, or basket covered with moss and filled with grasses, suspended from the centre, well repays for the labor of making it.

One more method of using leaves I will give you, and must then say good-bye to this subject, though the half of the beautiful ornaments they suggest are yet unmentioned. Procure a piece of tin, seven by nine, or eight by ten inches square, get an oval aperture cut out of the centre. Next cover the tin with two coats of "black Japan," then arrange little corner pieces of bright leaves, allowing a delicate branch of them to go down the sides and across the ends. Now varnish with two coats, and you have an odd but tasteful frame for some light picture, which I am sure you will like.

MARY I. HERRON.

## A BEAUTIFUL TOILET TABLE.

This beautiful toilet table may be adapted to the size of the room and can be draped to suit the furniture.

An ordinary dry goods packing box will answer for the lower part; to this is screwed two upright strips of wood, four inches wide, six feet long, and one inch thick, placed one-fourth distant from each side of the back; small strips of lath are nailed from each end of the back, diagonally, across these strips, and two end pieces and a back of the inch plank nailed on the box; then a hoop is securely screwed to the top of the two uprights, projecting over towards the front; pieces of wood are nailed on the under four corners and castors inserted in them. This forms the frame-work, which is covered with scarlet or other colored velvet, as also the plain mirror hung between the upright standards. Two short posts, one foot in length, are nailed to the front corners and also velvet covered.

The entire box is next covered with suitable crimson glazed muslin, over which is stretched, in gathered folds, dotted lace or Swiss muslin, edged with lace and a full puff of the thin material. Drapery of the same, with a lined and full-gathered lambrequin, cut with long points finish the latter at the top. Around the table is gracefully looped a long strip of Swiss muslin, held by ribbon bands, the same ornamenting the top. The inside of the box forms a handy receptacle.

The ottoman to match may be made of a section of a barrel lathed over and surmounted by an embroidered cushion, draped with Swiss and lined like the table and similarly puffed around the edge.

The table and stool are exceedingly elegant, and in a small room will be found to be not only attractive but very convenient.

TOILET TABLE.

varnish, allowing ample time for each coat to dry. To make the work look "very Chinese," or Japanese, the leaves are put on in every possible way (with no regular design), but it is much more tasteful and pleasing if the leaves and ferns are arranged in bouquets, clusters, wreaths, or garlands. Exquisite brackets and wall-pockets may be fashioned from

## Fireside Reading.

**No Chance to Ponder.**—The other afternoon the crew of the Cleveland boat, which was to sail that evening, discovered an old chap stowed away among the freight to secure a free trip across the lake. The hose was on and the "pony" working, and the mate sent about fifty gallons of water into the nest of the stowaway. He came out on the gallop, wet to the hide, and charging up to the mate, he shouted: "Who threw that water on me?" "I did," was the reply. "What for?" "To help you ashore." "That's the way," said the old man as he took off his wet coat and held the tails between his knees while he sought to wring the water out of the sleeves and body. "I can't get off by myself anywhere, and begin to ponder on the faded and gone, but a barrel of salt falls on my ear, or some pirate hits me in the back with half of Lake St. Clair."

**Too Polite by Half.**—Pereire, a banker, got a little tired of returning bows of an uncomfortably polite man in his establishment, and finally gave the polite man this conundrum at point-blank range:

"Sir, what would become of the hours if the minute hand stopped to bow to the second hand every time they met?"

**Better than Nothing.**—A good old Methodist lady, very particular and pious, once kept a boarding-house in Boston. Staunch to her principles, she would take no one to board who did not hold to the eternal punishment of a large portion of the race. But the people were more intent on carnal comforts than spiritual health, so that in time her house became empty, much to her grief and alarm. After some time a bluff old sea captain knocked at the door, and the old lady answered the call. "Servant, ma'am. Can you give me board for two or three days? Got my ship here, and shall be off soon as I load." "Wa-al, I don't know," said the old lady. "Oh, house full, eh?" "No, but ——" "But what, ma'am?" "I don't take any unclean or carnal people in my house. What do you believe?" "About what?"

"Why, do you believe that any one will be condemned?" "Oh, thunder! yes." "Do you?" said the good woman, brightening up. "Well, how many souls do you think will be in fire eternally?" "Don't know, ma'am, really—never calculated that." "Can't you guess?" "Can't say—perhaps fifty thousand."

"Wa'al, hom!" mused the good woman: "I guess I'll take you; fifty thousand is better than nothing."

It was a pungent answer given by a Free Kirk member who had deserted his colors and returned to the old faith. The minister bluntly accosted him, "Ay man, John, an' ye've left us; what might be your reason for that?" Did ye think it was na a guid road we was gawn?" "Ou, I dawrsay it was a guid eneuch road and a braw road; but, O minister, the tolls were nneo high."

A good story is told of a parrot who had always lived on board of a ship, but who escaped at some seaport, and took refuge in a church. Soon afterwards the congregation assembled, and the clergyman began preaching, saying that there was no virtue in them; that every one of them would be lost unless they speedily repented. Just as he uttered the sentence, up spoke the parrot from his hiding-place—"All hands below!" To say that "all hands" were startled would be but a mild way of putting it. The peculiar voice, from its unknown source, had much more effect upon them than the parson's voice ever had. He waited a moment, and then, a shade or two paler, he repeated the warning. "All hands below!" again rang out from somewhere. The preacher started from his pulpit, and looked anxiously around, inquiring if anybody had spoken. "All hands below!" was

A BASKET OF ROSES.

the only reply, at which the panic-stricken congregation got up, and a moment after they all bolted for the doors, the preacher trying to be first, and during the time the mischievous bird kept up his yelling "All hands below!" There was one old woman who was lame, and could not get out so fast as the rest, and in a very short time she was left entirely alone. Just as she was about to hobble out, the parrot flew down, and, alighting on her shoulder, yelled in her ear, "All hands below!" No, no, Mister Devil," shrieked the old woman, "you can't mean me. I don't belong here. I go to the other church across the way."

A milk-pitcher thrown by his wife at a Nelson-street man, missed the aim and ruined a handsome frame which inclosed the words, "God bless our home."

A New Englander, riding in a railroad car, seemed particularly anxious to astonish the other passengers with tough stories of Yankeedom. At last he mentioned that one of his neighbors owned an immense dairy, and made a million pounds of butter and a million pounds of cheese yearly. This story produced some sensation; and the Yankee, perceiving that his veracity was in danger of being questioned, appealed to a friend as follows: "True, isn't it, Mr. P.? I speak of Deacon Brown—you know Dea. Brown?" "Y-e-e-s," replied the friend, "that is, yes, I know Deacon Brown; I don't know as I ever heard precisely how many pounds of butter and cheese he makes a year, but I know that he has twelve saw-mills that go by buttermilk."

"Well, uncle, how is the cause of religion getting on in your neighborhood?" "Mighty poor—mighty poor." "No new converts, eh?" "Not a single one—not de sign of one." "What seems to be the matter?" asked the citizen, after a lengthy pause. "De matter is dat some one hez stolen four big watermelons out o' my cart dis afternoon, an' I feel in my bones dat religion is gwine down hill all froo dis locality!"

The motto for the week on a little girl's Sunday-school card was, "Get thee behind me, Satan." There were gooseberries in the garden, but she was forbidden to pluck them. Pluck them she did. "Why didn't you," asked her mother, "when you were tempted to touch them, say, 'Get thee behind me, Satan?'" "I did," she said earnestly, "and he got behind me, and pushed me into the bush."

"Who was the wisest man?" asked a Sunday-school teacher. "Solomon." "Yes; who was the wisest woman?" "Mrs. Isaac." "How so?" "'Cause she euehred her blind husband and got a deed for the old place to her younger son without paying for it." "Correct; who was the meekest man?" "Moses." "Very well; who was the meekest woman?" "Mrs. Lot." "How can you tell?" "'Cause she stood out all night in a thunder shower of fire and brimstone without any umbrel', and never said a word about the ruination of her best hat." "Well, yes; that's so," said the teacher.

A country gentleman was in the habit of entertaining his friends almost weekly, and discovered that regularly some small article of plate was missing, a eastor-pot, a salt-spoon, a napkin-ring, or something of the kind. He suspected his servants, and to make sure, one night when the guests had assembled, he said: "I tell you what! Let's do without servants to-night and wait on ourselves!" The odd suggestion was greeted with applause and peals of laughter. The servants were turned out; the meal was seasoned with sparkling sallies at the expense of the clumsiness of this or that guest, and when they had all gone the host took stock, and discovered that two-thirds of the spoons had gone too.

A farmer's daughter lately put off her wedding-day because eggs were up to 40 cents a dozen, and it would take two dozen for the wedding-cakes.

PRIZE COLLECTION OF HOUSEHOLD  
AND COOKING RECEIPTS.

BY MRS. M. A. RAMSAUER.

To this collection was awarded first prize, \$25, for best collection of  
Cooking Receipts submitted.

## BREAKFAST DISHES.

*Italian Cakes.*—Take one quart of flour, a measure of Horsford's powder, or two teaspoonfuls of cream of tartar, and one of soda, mix them thoroughly through the flour, then work in two ounces of butter, and use water enough to make it into a moderately stiff dough, roll it out about a quarter of an inch thick, cut it out with a biscuit cutter, and fry it in butter until it is a light brown. If you want it purely Italian, fry it in nice salad oil.

*Seasoned Crackers.*—Take half pound of butter, beat it until soft, then beat in the yolks of two eggs, one pint of warm water and yeast, or rising enough to make it rise well; stir in flour enough to make a batter, and pepper to flavor it well; beat the whites of the eggs to a stiff froth, and stir them in. Put in a warm place and let it stand until very light, then knead it into a dough like light bread and let it rise again; when light, make it into crackers, about an inch thick, let them rise again, then bake them of a light brown. Next put them all into a pan and set them again in the oven, and keep them there until they are dry and crisp all through. When wanted for breakfast, pour some boiling water or milk over them, as you prefer, and they will be soft in a few minutes. Use them as a dressing, to be eaten either with meat or gravy; they are also very nice to use instead of bread, to make stuffing for fowls.

*French Hash.*—After dinner, take what meat you have left and cut all the flesh from the bones that you can; pour what gravy you may have over it and set it away. Break the bones and put them on the fire to stew, with sufficient water to cover them, and a little onion; stew them all the afternoon, then strain off the liquor and pour it over your meat; in the morning put it on the fire in a clean saucepan, and let it stew a little; season it well with kitchen salt and thicken it slightly with a little flour. When you dish it up, put some slices of toasted bread in your dish, and pour it on hot. Garnish, if you please, with parsley and hard-boiled eggs cut in half.

*Pancakes.*—Take two teaspoonfuls of flour, and pour over it just enough boiling water to scald it; mix with it a pint of sweet milk, the yolks of two eggs, and then beat in a pint of flour and the whites of the eggs beaten to a stiff froth; bake on a griddle as other pancakes. This same batter is good baked as waffles.

*Grand Breakfast Hash.*—Make pancake batter by the given receipt, and bake them as large as a good sized dinner plate; as soon as you bake one, spread it over with a layer of French hash, then lay on the next, and continue piling them up, with layers of hash between each, until you have a stack five or six inches high, or more; then set it in your oven long enough to heat it well through. When you serve this dish, cut it down through the whole pile. This is a delightful breakfast dish for cold weather.

*Sausage Rolls.*—In the evening, make up about a quart of flour into a dough, exactly as you would for light rolls; set them in a warm place to insure them being light. In the morning, make them into rolls, putting in the middle of each one a piece of sausage meat, about the size of a black walnut; bake as other rolls. Any other meat chopped may be used as a substitute for the sausage.

*Crescent Rolls.*—Take about two pounds of well raised light bread dough. Rub fine on your pastry board, a large teaspoonful of white sugar, and a piece of soda about the size of a large pea, and some flour. Lay your dough on this and stick on it a piece of butter about the size of an egg. Knead it very well and set it to rise again. When well risen, knead it again and roll it out about an inch thick; cut it out with a round biscuit cutter, spread a very little melted butter or lard over the surface, and then lap them over, so that they form a half circle or crescent; let them rise a little while before baking.

## DINNER DISHES.

*Kibbled Mutton or Veal, a Turkish Dish.*—Procure a fine loin of mutton or veal. If mutton, take all the leaf fat out carefully, then separate into chops at every joint, season it with kitchen salt and grate a little nutmeg over each piece; dip them into beaten yolks of eggs and sprinkle them with bread crumbs; then take a long skewer (a wooden one will do), and stick it through each piece so as to bring it to its original shape, as nearly as possible, and bind thread around it to keep it close and compact; then put it in your oven to bake or roast; baste it with butter until it gives out gravy; then keep it well basted with its own gravy, occasionally strewing bread

crumbs over it. When nearly done, pour the gravy into a saucepan, and put the meat back into the oven. Add to your gravy some catsup or Worcester sauce, and if you have any cold or made gravy, add that also; boil this up together. Take up your meat, pour the gravy over it; if it is veal, squeeze some lemon juice over the inside of the loin. Serve as hot as possible.

*Genuine East India Chicken Curry.*—Cut your fowl up in pieces, as for fricassee, fry it of a light brown; then take some gravy, if you have it; if not, substitute a teaspoonful of sweet cream, and as much water, a little onion, and curry powder enough to season it highly, then stew your chicken in this, and when sufficiently done, thicken it with some butter rolled in flour, and a little more cream; put to this enough lemon juice to give it the flavor, and boil it up once. Dish it and garnish it with slices of lemon.

*To Stuff a Leg of Veal or a Fleshy Piece of Beef.*—Grate or break into crumbs a pound loaf of light bread; take a piece of butter the size of a black walnut; two beaten eggs, and work it up with your bread crumbs; season with kitchen salt, and flavor slightly with nutmeg; if it is rather stiff, add a little wine or French brandy to make it sufficiently soft; take a long knife and make an incision around the bone; put your stuffing into it, and sew it up at the top to keep the stuffing in; rub a little butter and kitchen salt over it, and put it on to roast; as soon as any gravy is drawn, keep basting it well; when nearly done, spread over it some butter, and sprinkle bread crumbs over it; put it on again, and roast until well done; garnish with celery or parsley.

*French Fricassee of Beans.*—Take Lima beans (or navy beans will do); boil them until tender enough to eat; put them to drain; then brown some butter in a frying-pan; put in your beans, and fry them till they begin to brown; then put in some finely-chopped onion and parsley, and fry them a few minutes more; now put in a teaspoonful of flour, some boiling water, and season well with kitchen salt, or salt and pepper; let them stew a few minutes, and then add the yolk of an egg, beat up with a spoonful of water, the same of vinegar, and mushroom catsup, if you have it; if not thick enough, add a little flour and a little cream. This is a good way to dress snap beans.

*Stacked Squashes.*—Cut your squashes in slices about a quarter of an inch thick; fry them till brown in butter or lard; while these are frying, prepare a mixture, as follows: beat up two eggs, a teaspoonful of rich, sweet milk, and flour enough to make a thin batter; then stir in bread crumbs enough to make it thick, and season it with pepper and salt; now lay down one slice of squash on a baking-plate, and spread over it a layer of batter; but sprinkle some kitchen salt on the slices of squash as you put them on; continue this until you have a good stack with batter on the top; then bake it until the batter is done. If your oven is hot, it will not take more than fifteen minutes.

*Scalloped Salsify.*—Boil the quantity of salsify you want until very tender; then peel it and cut into pieces about an inch long; if you have a quart of the vegetable, take an equal quantity of bread crumbs or small slices; season with kitchen salt, and cut a piece of butter about the size of an egg into it; now put a layer of salsify in a deep baking-dish; season with pepper and salt; put a sprinkling of the prepared bread over it; continue this till your dish is full, with bread on the top; pour sweet milk, or milk and water, in your dish until it is full, and bake it till nicely brown.

*Spanish Onion Sauce.*—Roast six large onions until nearly done; peel them, and add to them some gravy from any meat you may be cooking; thicken with a little dust of flour; season with kitchen salt, very little cayenne pepper and a glass of wine—port is best; add to this the juice of half a lemon, or a teaspoonful of vinegar; stew them till well done, and mash them up with a little butter. A very excellent sauce for game, or ducks and geese.

## DESSERT DISHES.

*Swedish Blanc Mange.*—Take one ounce of gelatine, pour over it one pint of cold water; let it stand in a pretty warm place for several hours, stirring it occasionally; then pour into it one pint of boiling water, and one-half pound of white sugar; flavor it with bitter almonds, extract of almonds, or peach kernels, as is most convenient. As soon as the gelatine is entirely dissolved, set it away to cool; this had best be done in the afternoon, so as to give it all night to get firm; the next morning put your jelly into a large pan or bowl, and, with a fork, beat it until it is perfectly broken up and light; then take a good pint, or rather more than that, of very rich, thick cream—the richer the better; make it quite sweet, and, with a whisk or egg-beater, beat it until it is very light and frothy; then mix the two together and beat until thoroughly mixed.

*A Grand Trifle.*—As the appearance of a trifle is to be considered, it needs a large glass dish; in the bottom of your dish put a layer of Naples biscuits or sponge cakes, another of ratafias, and then another of macaroons, strewing between each layer some blanched and pounded almonds, a little citron, a little candied orange peel, and a pineapple cut up small; pour half a pint of wine (or

enough to soak the cake)—it should be a nice, light-colored wine—over them; in the mean time have a custard prepared as follows:—Boil a quart of milk and cream mixed in equal quantities; beat up the yolks of six eggs, three ounces of sugar, one tablespoonful of flour or corn starch; when the milk boils, pour it over the eggs, stirring it rapidly; if it does not thicken sufficiently, put it over the fire a few minutes, stirring it all the time, till it comes to a boil; then put it away to cool; flavor it with extract of lemon or orange, and, if you like, a little French brandy; now pour the custard over the cakes, and over that put some apricot or raspberry jam and some nice currant or apple jelly; next take a pint or more of cream, the white of one egg, a glass of white wine, a few drops of extract of lemon, and sugar to taste; churn it with a cream-churn (or you can beat it with a spoon or egg-beater), and as the foam rises, take off and pile it as high as you can on the top of your trifle; it is a good way to take the froth off and leave it in a sieve, so as to let it drip, and then turn it over on your dish, keeping some cream to churn up and lay on, in order to make it a nice shape; you can ornament, if you please, with very tiny sugar plums or comfits, or colored sugars, but it is very beautiful without it.

*Orange Cream.*—Take a pint of orange juice (four oranges are best), put to it the well-beaten yolks of six eggs and the whites of four; beat these well together, and add to it one pound of fine sugar; set it over a slow fire, and put the peel of half an orange in it; keep stirring it all the while one way, and when it is nearly boiling, take out the peel and pour the cream into glasses to cool. This is delightful when frozen.

*Swedish Lent Pudding.*—Make some light rolls, but place them so far apart in your pan that they will not stick together in baking. Let them get old and dry enough to cut well, then cut off the top crust and take out the crumb, leaving the crust whole. Mix a part of the crumb with some beaten almonds, sugar and butter, to suit your taste; then boil new milk to cover them, pour it over, and when well soaked they are ready for use.

## TEA DISHES.

*Delicate North Carolina Biscuits.*—Take one quart of flour, four eggs (beat the whites and yolks separately), a small tablespoonful of butter, a large one of yeast; make all into a rather soft dough with sweet milk, set them in the morning so that they will have time to rise well. Make them out into biscuits, and let them rise a little while before baking.

*Cocoanut Snaps.*—Take the whites of four eggs, beaten to a stiff froth, with three heaping tablespoonfuls of fine sugar and three of flour. Stir in desiccated cocoanut until it is stiff; drop on buttered tins, in any shape you like, and bake. If you prefer using fresh cocoanut, you must put four spoonfuls of sugar with it.

*Ratafia Cake.*—Bake a sponge cake—it is best if several days old—cut off the top crust and take out the inside, as for charlotte russe. Now mix the crumb with some blanched and pounded almonds, and enough bitter almonds—extract of almonds or pounded peach kernels—to flavor it agreeably; add some coarse grained sugar and enough yolk of egg to make it into a soft paste; put this into the crust of your cake and bake a little while. In the mean time, make the whites of your eggs into a nice icing; as soon as your cake has cooled a little pile the icing on it and put it in the oven until it is the least bit browned. This is a delightful cake, and although a sponge cake is to be preferred, any other cake you may have on hand will do, or you can in this way make use of a cake which has been a failure in making.

*Cream Tarts.*—Take a quart of flour, half pound of butter and two well beaten eggs, add cold water enough to make into a paste, and set it away to cool, then cut it into round shapes with a cutter or a tumbler; cut the middle out of half of them with a wine glass, lay one of these rings on a whole one and moisten the paste between the two with a little cold water to make it adhere. Bake them about a quarter of an hour. Beat together one pint of cream, four eggs and four tablespoonfuls of fine sugar, fill the tarts with this, grate a little nutmeg over each, and bake again about ten minutes.

## USEFUL RECEIPTS.

*Kitchen Salt.*—An article that will be found useful for all persons, and a perfect treasure when you have an inexperienced cook, or one who does not season well. Take two teacups of fine salt, the same of sugar, and half a cup of black pepper—if you like a good deal of pepper you may take a whole cup. Mix thoroughly. Use for seasoning soups, hashes, etc.

*Curry Powder.* (This is the genuine East India receipt.)—Take of fennel seed, cummin seed and coriander seed each four ounces, with two ounces of caraway seed, dry them before the fire, then grind and sift them, add to this two ounces of ground turmeric and the same of ground black pepper, one ounce of ground ginger, and half an ounce of Cayenne pepper. Mix well and keep dry and well stopped.

## TREES

We offer for Spring of 1877, the largest and most complete stock in the U. S., of **Fruit Trees, Standard and Dwarf. Ornamental Trees & Shrubs**, deciduous and evergreen. **Roses** a specialty—all the finest sorts. **Green and Hot-House Plants**, including best Novelties. **VINEGAR.** How made in 10 hours from Cider, Wine or Sorghum without using drugs. Name paper and address **F. I. SAGE**, Springfield, Mass.

## CHOICE SEEDS GIVEN AWAY.

A packet of new Japan Cockscorn, the new Phlox Drummondii Grandiflora, and finest mixed Portulacca mailed free to all who send 10c. this month for my Catalogue of Choice Flower Seeds for 1877. **L. W. GOODELL**, Amherst, Mass.

**AMATEUR PRINTERS** buy cards of us. Price per 100 at 1,000 rates post-paid. (600 NEW VAR.) Transparencies, 50 scenes, 35c. Nonpareil Floral, 12 designs, 75c. Samples free. N. E. CARD Co., Woonsocket, R. I.

## MUSIC JUST OUT, VERY CHEAP

These 8 choice 8-page pieces, Vocal and Instrumental, all for 25 cts. Am I still Beloved—Danks. Can you Sweetheart, keep a Secret?—Eastbrooke. From our Home the loved are going—Percy. Haunts of Childhood—Munn. Summer Longings—Dinsmore. Cloud-land Polka—Greenwood. Tam-Tam Galop—Reynolds. Lottie Bell Waltz.  
**EXCELSIOR MUSIC CO.**, 256 Wash. St., Boston.

**Use Corticelli Silk!**  
**IT IS THE BEST.**

\$5 to \$20 per day at home. Samples worth \$5 free. **STINSON & Co.**, Portland, Me.

## Dr. Warner's Health Corset,

With Skirt Supporter and Self-Adjusting Pads.  
Secures **HEALTH** and **COMFORT** of Body, with grace and beauty of Form. Three Garments in one. Approved by all physicians. **AGENTS WANTED.**

Samples by mail, in Coutil, \$2; Sateen, \$1.75. To Agents at 25 cents less. Order size two inches smaller than waist measure over the dress.

**WARNER BROTHERS**,  
763 Broadway, New York.

## \$ ONE DOLLAR. \$

**Spooner's Gardening Guide for 1877.**  
And **Spooner's** special collection, 30 varieties choice **Flower Seeds**, or 25 varieties selected **Vegetable Seeds**, mailed to any address on receipt of \$1.00; or the guide free to applicants.

**WM. H. SPOONER**, Boston, Mass.

## ROSES

PER MAIL.

We offer from our list comprising over 500 varieties, 10,000 well rooted young **Roses**, ready for spring planting:

Our selection, . . . \$1.50 per doz., \$8.00 per 100.  
Buyers' " . . . 2.00 " 10.00 " 100.  
If ordered by the 100, must be sent by express or freight (too heavy for mailing.)

Catalogue sent on receipt of 3c. postage stamp.

**MILLER & HAYES**,

**MOUNT AIRY NURSERIES**, Philadelphia, Pa.

\$66 a week in your own town. Terms and \$5 out fit free. **H. HALLETT & Co.**, Portland, Maine.

## DOBBS'S STARCH POLISH

For polishing Shirt Bosoms, Collars, Lace Curtains, etc., putting on the same gloss and hard pearl finish as when bought at the store new. It enables the most incompetent ironer to compete with any laundry. It makes the clothes clear and white. It makes the clothes iron smooth, and prevents the iron from sticking. It makes old linen look like new. It saves a woman many hours of hard work each week.

A polished shirt bosom, cuff, or collar, keeps clean much longer than linen not polished, for this reason: The enamel fills up the pores, lays down the nap, puts on a hard, pearl gloss, which prevents the dust or dirt from working into the cloth; therefore, by the use of the enamel, clothes can be worn much longer without washing. Price, 25 cents, postage paid. Address,

**Henry T. Williams**, 46 Beekman St., N. Y.

**J.M. THORBURN & CO'S**

**SEED WAREHOUSE**

15 JOHN ST., NEW-YORK.

New Priced Descriptive Catalogues

**VEGETABLE & AGRICULTURAL SEEDS,**  
NEW FLOWER SEED CATALOGUE FOR 1877.  
Ready for Mailing. Free to all Applicants.  
**SEEDS, PLANTS, BULBS, CUTTING SEEDS.**

**EXCELSIOR** Latest Improvement.  
Double Treadle, including one doz. Saws, thirty imitable **Prep Sawing Patterns** and Prepared Wood, to the value of \$4. A new device for tightening Saw, Power Drilling attachment, Wrench, Oil cup, and Screw driver. Speed, 800 strokes per minute. Saws 1 1/2 inch thick. Price, complete, cased and delivered on board cars or at Express office, 12 Dollars.

**SMALL STEAM ENGINES**, with copper boiler, to drive Light Lathes, Scroll Saws, &c. 100 Scroll Work Designs Free on receipt of stamp. Saw only, without Attachments, \$9. **GEORGE PARR**, BUFFALO, N. Y.

## 25 FLOWERING PLANTS FOR \$1.25

BY MAIL, POSTPAID.  
Your choice from over 150 varieties, some of which see below. Abutilons, Achimenes, Bouvardias, Begonias, Callas, Cobaea, Cupheas, Coleus, Cacti, Daisies, 3 varieties **Deutzias**, Fuchsias, Ferns, Geraniums (either Ivy, Silver, or Zonale-leaved sorts), Gladiolus, Hoyas, Heliotropes, Ivies, Jasmines, Lantanas, Myrtles, Pansies, Pomegranates, Pilea, Smilax, Stevias, Solanums, Tuberose, Tulips, Violets, Zephranthes. 10 of the above for 50 cents. Catalogue free. **Hillside Greenhouses**, New Brighton, Co., Pa.  
**THOMAS ELVERSON**, Proprietor.

## FRENCH LAUNDRY STARCH POLISH.

The receipt for making and full directions for using will be sent to any address on receipt of 50 cents. It produces the beautiful gloss finish which is seen on all first-class Laundry work; does not injure the material in the least, and is highly prized by all who have tried it. Address  
**P. O. Box 518. C. A. LANDAU**, Buffalo, N. Y.

**ONLY THE BEST.**

All who have a Garden should send for my Illustrated Catalogue, descriptive of the latest Novelties and choicest Varieties of Vegetable, Field, and Flower Seeds. Free to all on receipt of postage-stamp.

**WM. H. CARSON**,  
SEEDSMAN,  
125 Chambers St., N. Y.,  
(Late of Peter Henderson & Co.)

## FLOWERS

**D.M. FERRY & CO'S**

**NEW ILLUSTRATED**

**SEED ANNUAL**

1877

Will be mailed to all applicants on receipt of 25 cts. This is one of the largest CATALOGUES published, containing about 250 pages, over 600 fine engravings, two elegant colored plates, and gives full descriptions, prices, and directions for planting over 1200 varieties of Vegetable and Flower Seeds, Bedding Plants, Roses, &c., and is invaluable to Farmer, Gardener & Florist. Address, **D. M. FERRY & CO.**, Detroit, Mich.

Our Abridged Priced Catalogue FREE to all Applicants.

**The PERFORMING SKELETON**, 14 inches in height. It will dance in perfect time to any tune; falls down, rises, walks, bows, &c. &c., as requested, seemingly endowed with life; defying detection, it never fails to delight, astonish, and produce a decided sensation. Price reduced to 15 cts. 2 for 25 cts. Mailed, post-paid. Address **EUREKA TRICK AND NOVELTY CO.**, 39 Ann St., New York, Box 4614.

## INVALID RECLINING CHAIR

Occupant can lie down or sit erect in it.  
MADE BY  
**NEW HAVEN FOLDING CHAIR CO.**,  
NEW HAVEN, CONN.  
Sent for Price List. Mention this Journal.  
**\$1** For 25 Cents. **THE EUREKA CABINET.** Containing 1 Chinese "What Is It?" a capital trick—hand it to a person to open and a small needle stabs their finger every time. 1 elegant French bronze Pocket Pencil with adjustable leads. 1 Eureka Camera, shows persons or objects behind you or at your side. 1 Nest of Pharaoh's Serpents Eggs, each egg when ignited produces an immense serpent. 1 Centennial Badge, beautiful designs. The CABINET containing the five articles sent post-paid, for only 25 cents. Address, **Eureka Trick & Novelty Co.**, Box 4614. 39 Ann Street, New York.

BY HENRY T. WILLIAMS.

VOL. VI.

NEW YORK, MARCH, 1877.

No. 63.

PRICE 12 CENTS.

## CITY GARDENS.

There are several advantages in forming small flower beds. You can extend them out from the fence or building, so as to give the sun a better opportunity to reach them, and you can grow the different varieties separate in small quantities without mixing them with others. And you can regulate the early and late blooming ones without damage to each other. For instance, the Verbena and Pinks can, with care, be kept in bloom quite late in the season with the aid of a sack, or even a piece of muslin stretched over them to cover them during the early part. Then again, some plants will thrive best with profuse watering, while others will not under this treatment.

I find that the Verbena, Asters, Phlox Drummond, and Pinks are easily cultivated in masses, and look as well as others, and would advise beginners to try them. The Gladiolus is one of the most beautiful summer flowers; the bulbs can be bought cheap by the quantity, are easily cultivated, and I think give the richest returns for the money invested. Planted

FLOWER BOX AND TREE TRELLIS.

A WINDOW FERNERY AND AQUARIUM.

four inches deep and one foot apart, then scatter a paper of mixed Phlox Drummond among them and you will have as beautiful a show of flowers as you can wish. Plant the small ones first, then every two weeks until all are planted. Be careful to plant your latest in the warmest spot you can, and where you will not want to plant your bulbs. In the fall, say October 1st, I begin to plant my bulbs, and in succession up to December 1st, as my plants cease to bloom. The early plantings give you the early and strongest bloom, as the roots get a good start before the frost touches them. Dig up your beds to the depth of at least one foot, then lay out your beds as you wish to plant them. I find it a good plan to keep a book expressly for the garden. I mark the places, then write the names and location with figures. This will enable you to refer to any spot you wish and ascertain the location of each, in case you wish to plant between them at any time.

In regard to the varieties to plant I will give a single example: In the corner of a bed I plant a Nareissus; between them a Jonquil, then I fill in the border with Crocus, planted two inches apart, or a group of a yellow, blue and white every three inches, setting the bulbs two inches deep. These multiply rapidly, so that in two or three years your borders will be full. Then for the centre I plant a tall growing Lily, such as a Tiger, Candidum or Auratum, then add a few low growing ones, such as the Longiflorum; then fill in every eight inches with Tulips or Hyacinths. The brown Imperial is a good old hardy bulb, so are many others which you will find advertised in the many catalogues. In the spring I scatter a few seed of hardy Annuals among my beds, or set out such plants as I wish to grow, so that by the time the bulbs are done blooming, the others begin to grow finely.

C. W. I.

FLOWER STAND FOR PARLOR WINDOW.

## Floral Contributions.

## FLORAL DECORATIONS IN OUR BAY WINDOW.

The sitting-room coal stove is within eight feet of our bay window, and is the only heat, except that of sunshine, which the plants receive. The window has a southern exposure. Its floor is covered with oil cloth. This, I think, is preferable to either carpeting or matting, as water will not readily penetrate it, and can be easily removed if any happens to drip upon it. The carpet, under any ordinary window which contains plants, should be covered with oil cloth for the same reason. There is only one shelf, extending along the east and south sides of the window, about eight inches above the floor. I prefer to have most of the plants which are not in my window garden box, on brackets and in hanging baskets. These are so much more graceful and ornamental, tastefully disposed, than the stiff-looking rows of shelves, with their precise rows of flower pots.

Two hanging baskets are suspended from fancy hooks above the double window which forms the south part of the bay window. One is filled with German Ivy, which twines around the wires and the hook, and drops over the basket in a bushy mass. This is kept bushy by frequently pinching off the new shoots. The other is filled with a most luxuriant growth of the variegated Tradescantia. A basket of Maurandya is suspended from another hook on the east side of the bay window. On the west side, just above the window garden, are three hanging baskets. One is an imitation log of wood, filled with pink Oxalis. On each side of this is suspended a cocoanut shell, draped with the long grey Spanish moss, each filled with delicate blue Lobelia. Birdie's cage is suspended from the centre of the ceiling.

A little to the north-east and the north-west, and at equal distances from his cage, are suspended round black-walnut hanging baskets in fret work, each containing a fancy red flower pot. One of these flower pots contains a Cigar plant (*Cuphea Platycentra*), the other a winter-blooming Fuchsia. Some of my brackets are of hardware from the manufactory of florist's goods. Others are homemade ones of blackwalnut, made with the bracket saw. Two four-pot florist's brackets are on the south side. One contains the green Tradescantia, a Cyclamen, a white Chrysanthemum, and a pink Begonia. The other, green Tradescantia, a Chinese Primrose, a white Begonia, and a pink Chrysanthemum. Two single florist's brackets, between the double windows, hold pots of Coleus and Rex Begonias.

On the little space of wall in the south-east and south-west out corners are side brackets of black-walnut (four in number). One holds a pot of Ivy Geranium; another, above, a pot of Dew Plant. On the other side, the lower bracket holds a pot of a kind of vine which is much used in rockeries. I do not know its botanical name, but we call it "Creeping Charlie." Above this is a pot of Box. On the east side a pair of two-pot florist's brackets hold four lovely little rose bushes. The arched opening between the window and sitting-room does not comprise the full length of the window, so there is still room left for two little shelves not larger than ordinary brackets. On one is a brown painted box, filled with the Bridal Wreath, which falls gracefully over the north end of the window garden. On the opposite side, the other shelf contains a broken sugar-bowl set in a red flower pot. It is almost con-

cealed with a wreath of Kenilworth Ivy. Two small brackets, supporting pots of Madeira Vine, are fastened to the sides of the opening into the sitting-room. The vine is trained about the arch above, back and forth. You can well imagine, if you are familiar with the vine, what a beautiful tracery of green it makes. On the long single shelf before mentioned, are all my taller plants. There are a scarlet Salvia, a General Grant Geranium, an Abutilon, a Calla, a Heliotrope, an English Ivy, a Rose Geranium, and other large pots of Sweet Alyssums, Garden Pinks, Ten Weeks' Stock, and a good-sized box of Verbenas.

My window garden is a box furnished with table legs and castors. It is stained with raw umber, and varnished with coach varnish. This is much more durable than copal, and does not turn white in blotches where water works into it. The box is two feet by three, and just fits nicely into the west part of the window. The tallest plants it contains (about two feet in height), are a Dusty Miller and a bronze red Coleus. Surrounding these are seven varieties of Geraniums, including nutmeg, rose, silver-leaf and zonales, a Tuberose, a Carnation, a Feverfew, a Lily of the Valley, an Achyranthus, two small Coleus plants, a Lemon Verbena, and four blotched and striped Petunia plants. Tradescantia, green and variegated, vines of Tropæolum and Portulaca droop over the edges. White Candy-tuft, Sweet Alyssum, Gilia (tricolor), and green Mosses, are planted at convenient places along the edges, and as an undergrowth among the larger plants. At the corners of the box are vines of pink and blue Morning Glories, Madeira Vines, and one Smilax. These twine around cords along the west division of the window. Everything in the box presents a most thrifty appearance. Much as I enjoy the culture of plants in pots, much more do I enjoy the results which come from the care of my window garden box. In the first place, a goodly number of plants occupy so much less space than the same number in pots. Then they are so easily showered. All that is necessary is to take from one to two quart dippers of lukewarm water, every evening, and sprinkle the plants as you would clothes. This can be done in a few minutes without moving the box from its cozy nook; whereas flower pots must be carried from and to their usual resting place to undergo a thorough sprinkling. One cannot often spare the time to shower them every day, so much time being required in the removal. I sometimes take small plants, one at a time, and hold it in one hand over the window garden, while sprinkling it with the other. My roses get their bath in this way every day. I find that frequent sprinkling is the best preventive for insects. Where any do dare to intrude, they get Scotch snuff to the right of them, Scotch snuff to the left of them, and Scotch snuff all around them, till the air to them is thick with Scotch snuff, and they probably end their existence by sneezing their little heads off. This I allow to remain a day or two before sprinkling again. The drainage for pots and box consists of pieces of charcoal. The soil is a mixture of leaf-mold and black muck, from the woods, finely pulverized. To this is added a small quantity of sand.

Slips that I wish to root, rarely fail to do their duty. Just insert an oat in the end of the cutting, and plant in rich soil. The oat soon roots, and its vitality is transmitted to the cutting.

Last winter, my General Grant Geranium refused to bloom, though it was "ole enuff, big enuff, and oughter known better than to went"—and refuse to bloom. It was about eighteen inches in height, and grew finely in a six-inch pot. But no wonder it re-

fused! It did well out of doors during the summer. When I took it up in September, I resolved that it should bloom for me this winter, and accordingly placed it in a four-inch pot. It was a fine bushy shrub, which I had previously intended for the central ornament for my window garden, but it threatened to occupy so much space as to exclude other plants which must have a place therein; hence that idea was abandoned. After crowding its roots in the small pot, and trimming several large branches, I found that it was still top-heavy, and couldn't stand alone. Not to be baffled in regard to confining its roots in a small space, I plunged this four-inch pot containing the plant into a six-inch one, and since then it has stood erect, and several buds have appeared, which promise well for this winter's bloom. This appears to me in the light of a success, after last winter's failure.

Smilax once resisted my efforts to make it grow. I wanted it to grow in a four-inch pot, but it wouldn't, in spite of sun, water and fine threads. After giving it a two month's rest in the cellar, and planting it during summer in the open ground under the Morning Glories, it never began to show signs of growth until it was placed in the window garden; and now it begins to act like a Smilax, by twining nicely around threads, and sending out new shoots, as all well-regulated Smilaxes should do. It wanted more room for its feet, in addition to sun, water and thread. Coleus and Achyranthus always made a point of dropping their leaves after being taken from the open ground and placed in pots, until the advent of the window garden, when they were planted in it direct from the garden border, and continued to grow without dropping their leaves; but on the contrary sending forth new shoots and leaves.

Dusty Miller (*Centaurea Candidissima*), never occasioned me any trouble, as I always kept it in a large pot, but it has improved in appearance since its residence in the window garden.

Were you ever distracted by the dust occasioned by sweeping, which would settle upon your floral treasures, unless you took extra pains to remove or cover them during said operation? In order to obviate this difficulty with my plants, I purchased a "Welcome Carpet Sweeper," and have been more than satisfied with the result, both in the saving of physical strength, and with the great decrease of dust upon my plants. I think that much of insect life is engendered in the dust which often rests upon plants. When the nights are extremely cold, I pin newspapers over the windows around my plants, as a means of protection from the frost.

One word now in regard to the three ornamental flower pots in our bay window. In the September (1876) number of Harpers' Magazine, are silhouettes of Dr. Goodall and Dr. Keats, and in one of Gould's catalogues is another of a boy clinging to the mane of a horse flying at a mad rate through the air. These I selected to make grotesque a pair of red painted flower pots. After holding the leaves containing them up to the window glass long enough to trace their outline on white paper, I cut the designs from the white paper, for a pattern, to use for cutting the same out of black silk. The black silk figures and a border of black silk points, for the top of the pots, were fastened on with varnish, and the whole finished with a coat of coach varnish. Another red flower pot was ornamented with a horizontal oval of black silk, surrounded by an oval border of gilt paper scalloped with the pinking iron. On the silk oval were fastened a bouquet of flowers, and pictures of two musicians, and the whole pot varnished.

E. S. P.

## Gossip with Correspondents.

**Our Flower Beds.**—It is quite possible to make the small court yard in front of a city house attractive and pleasing by a judicious grouping of our floral favorites and a little care in keeping them in good health. To have our flower borders look well we must exercise some little taste in the grouping or massing of our plants. A few well arranged and carefully tended specimens will prove much more satisfactory than a large collection of ill-assorted and carelessly arranged ones. How many are there who, about the middle of April or May, will visit the nearest nursery or greenhouse, spend a great amount of money, with no thought as to the beds they have to fill, no idea as to the effect that will be produced, or rather the lack of it, by the indiscriminate mixing up in beds of twenty or thirty different kinds of flowers; Cactus and Lobelia, Caladiums and Sedums, Dahlias and Mignonette side by side, each one lovely in its own place with others of its species, or in well harmonized groups, but lost in its motley surroundings. We cannot all have our lawns and our pleasure grounds, our conservatories and greenhouses, in which to luxuriate both winter and summer, but thousands of us can have one or two flower beds, thank Heaven, whether in city or country; and let us try to arrange them so that they may be "things of beauty" to gladden our eyes until winter again claims our gardens for his own.

First upon the list of bedding plants I should name Coleus. Nothing, perhaps, looks richer than a bed planted in ribbon lines of well contrasted shades and edged with Dusty Miller. Next, a large bed of scarlet Geraniums edged with Sweet Alyssum becomes, by about the end of July, a bit of dazzling brightness. Deep rose pink double and single Geraniums, bordered with first a line of bronze and then of the silver-leaved variety, always look well. Calceolarias of different colors, with an edge of blue Lobelia, will do well if you have a bed on the south side of the house, so that they do not have too much sun; there, too, will flourish best your Fuchsias, Pansies and Forget-me-nots. Verbenas for bedding purposes are unsurpassed. Salvias look best in a large bed on a lawn. For foliage plants on a large scale, where there is plenty of room, Canna Indica, Caladiums, Amaranthus and Japanese Maize are all showy and beautiful if planted in masses. Now for our more humble but scarcely less beautiful annuals. First, Petunias; they will flower oftentimes till November, will load the air with their sweet, delicate fragrance, and will draw all the humming-birds and butterflies in the neighborhood to themselves. Buy a few plants for the centre of your bed and then sow seed all round, but not too near the edge, as they spread very much; thin out well when three inches high, and you will have a succession of bloom all summer. Sow your China Asters in a little cold frame, if you have it, or a wooden box with a pane of glass over it, in April, and transplant as soon as large enough, which will be about the end of May, into the open ground; do the same with your Dwarf Nasturtiums for early blooming. Sow the Dianthus seed in the bed you wish it to remain in, but thin out well. Be sure you have a bed of Drummond Phlox, and also Mignonette. Sow both, as the Dianthus, in their own places; these all dislike transplanting and will do best if their roots are not disturbed. Fill in odd corners of your garden with Sweet Peas; they will climb up a piece of common brush or run up strings. Don't sow them until the weather is quite mild and the ground warm. Zinnias are a showy plant and make a fine bed; sow either in cold frame or ground when you think cold nights are over. Heliotropes, for making up our summer bouquets—they will grow almost in any situation, but are scarcely bright enough for beds; they both grow much to wood, and consequently will bear cutting well. ALA.

**Glimpses into a Country Parsonage.**—I would state at once that I am a minister's wife, and not only a minister's wife, but a Methodist minister's wife, at that. Perhaps you don't think this has anything to do with house furnishing. I guess if you had to undo all you had done every year, or two or three, as the "powers that be" might decree, you'd think it made a great deal of difference. It was just the brightest, most beautiful day of last May that I grew from Miss to Mrs. Miriam, and, with Thaddeus the Wiso (Teddy, for short), journeyed toward the new parsonage home. After the proprieties had been disposed of, the kindly welcome over and the strangers gone, together we made the tour of the rooms. First the library, or, as Teddy said, "our library sitting room." It was a dear little cosy place, with two west and one sunny south window, and connected with a bedroom of the same size by sliding doors, and here was another south window. "What a splendid place for my winter plants!" I exclaimed at once. My first question in regard to the parsonage had been, "Is there a south window for plants?" and my very practical mother said it seemed to make no difference whether there was a kitchen or not, so long as

I had a place for flowers. The dining room was large, nicely papered with a light, cheerful paper, and opening out of that by folding doors was a dear little room with a north window and an eastern door. This soon became, however, the north study, as the warm summer afternoons drove us from the sunnier room. But the parlor! Words almost fail me. The homeliest of homely yellow wall paper with an ugly brown spot in it; the darkest of dark carpets on the floor; a great high black mantel; a black sheet-iron fire-board, cracked and broken, and an open stove-pipe hole to let the swallows out, and black bricks for the fire place; windows high and old-fashioned, with great, barn-like shutters; half a dozen very common chairs and a stray sofa. After taking an inventory I finally gasped, "Oh, Teddy, lets get out. This room must be sacredly set apart for funerals." It was a relief to breathe the air of our cozy kitchen, with its lots of little handy closets. Four bedrooms composed the upstairs; but wait till I come to the furnishing thereof before I tell you of them.

I have taken long for introduction, but I think the getting acquainted and getting to work will take but a short time. THE BIRD'S NEST.

**To Bleach Wax.**—First sheet it; keep it in the sunshine. To half a pound of good white wax add one-quarter ounce balsam of fir. You can guess at the quantity; less will do; if you get in too much it will be sticky. Pour boiling water into the cup and let the wax melt gradually, then put in the balsam; have a dish of hot soapsuds; dip your mould in that, then into the wax quickly, then in cold water, and slip it off.

**Wax Grapes.**—To make wax grapes, take annealed wire that is stiff enough to support it—I don't remember the number—wind a little cotton on one end, double it over to prevent its pulling off; then for what is called Black Hamburg, color common rosin with lamp-black and melt gradually, then dip the cotton end in the rosin, then in cold water and press it tight with the fingers; when it is cold continue to dip it in the rosin, then in the water to cool, until it is as large as wanted, being careful to turn it when just out of the rosin to get the required shape and size; lastly, dip in hot wax previously colored with blue and red paint, and hold grape in cup so it will drain. Each kind has its color of paint. E. C. BIDLAKE.

**Home Made Rugs.**—For those who make drawn-in rugs of rags, I will give two patterns that are very pretty, where the colors are not suitable for flowers, or very elaborate figures. Take an oblong piece of burlap, and fasten it to the frame and draw a line all round the outside as near the edge as you desire to work; then draw a straight line from the middle of each side to the middle of each end, forming a diamond in the centre, and quarter diamonds at each corner. Outline the outside of rug and centre piece with three times round; suitable colors would be one scarlet between two of black, or some shade of yellow between dark blue or maroon; after that draw in different colors in stripes round each piece according to taste, having the centre and corners correspond exactly, or the corners all alike. When the centre is filled up except a small diamond, have that some bright, pretty color, and if shaded, all the better; the corner pieces should correspond also. If attention is paid to contrasting colors, the result is very fine, even if some are rather dull. I have never seen one of this style, except my own, another which I have seen and used is called "hit or miss." The border is generally shaded or drawn in in stripes all round the rug, and the centre is filled in with odds and ends of every color drawn in straight across one after another without much regard to the arrangement, though it is best to have the brightest colors, like scarlet, pretty evenly distributed. Any pieces will do, that when drawn in will make a stripe two inches long, but do not have a stripe of one color more than six inches long in one place. This will work in many beautiful bright bits that are good for nothing else. If sheared it will look more like velvet, but is pretty enough without.

**A Kansas Home.**—My home does not consist of frescoed walls nor stately palaces, it is nothing more than a neat little cottage. I do all I can to make it pleasant and happy. My little daughter gathers wild flowers and ferns for me during the summer. I press them, and after they are dry, I dip them in white wax or varnish them, they will retain their color, and I lay them on black velvet in the shape of a cross, or a wreath, and will then have a beautiful picture. I also make medleys from pictures I preserve. I have a bouquet I made from grass, I got some Venetian red, mazarine blue and some Paris green, at the drug store, and painted them; I then joined them by placing them on a long stick, and it will make a beautiful corner piece; I made Zephyr flowers and placed through it. When Harry came in he was surprised, for I had not let him know I was making it, and he pronounced it perfectly beautiful. I have just completed a tidy made with the Afghan stitch in strips, and narrow it off in points at

the ends, then take red zephyr and work a little vine through it, and a border around it. Now my dear readers these will help ornament your home, and are got up at little expense. NORETA.

**Ferns.**—I frequently see directions for bleaching ferns, but in the fall of the year, here in New Hampshire, we have no difficulty in finding them pretty enough without that trouble. Besides the white, there are straw color, pea-green, and many beautiful shades of brown. Soon after gathering, iron them with a not too hot iron, which has been waxed with common yellow beeswax. If intended to frame or wanted to be perfectly flat, iron until dry. Frame with black velvet or cloth for a background, either with or without a mat. For bouquets for vases or similar decorations, I think they are nicer not to be ironed perfectly dry; they will then be curled and drooping a little, much more graceful and natural, autumn leaves can be treated in the same way and remain on the branches if desired.

**Fancy Work.**—Take a piece of perforated paper five inches square, and work "Scratch my Back," and a border around the edge, of leaves, then tack a piece of sand paper on the back, a quilling of ribbon around the edge, and loop to hang it up. To make vines, take green or red-glazed muslin, and cut the shape of "Ivy," and dip in wax, and lay the wire on the back, and dip a piece of the muslin in the wax, and then lay on the wire, and hold over a lamp-chimney and then press together, and your leaf is done, be careful not to get too much wax on the leaf.

CLEMENCE ST. ONAO.

**Washing Dishes.**—I would like to say a few words to my friendly housekeeper in FLORAL CABINET. I think the best plan is to wash up the dishes nicely after each meal, I always dislike to have dishes left from one meal to another. Her method of washing dishes suits me very well, but never leave your dishes standing from one meal to another. There is another thing I shall speak of; some housekeepers think on washday, they must have everything in an uproar, and themselves attired in a slovenly and unbecoming manner, now I contend this is unnecessary. I always do my morning work on washdays, just the same as other days, make some preparation for dinner so as not to be in a rush at dinner time, wash and comb myself and children, dress them clean just as I would if there was no washing to be done; one does not get at washing so early by doing this, but I find I like it better than to have things upside down while washing. In cooking, always try to have everything palatable. I have been housekeeping only three years, but by taking an interest in my cooking and the CABINET for my counsellor, I find I improve all the time, my husband often tells me so. I always try to have my floor swept clean before arranging my table, then with a nice white table-cloth on my table, I prepare my meal. I think a white table-cloth far nicer than the fashionable colored ones of this day. L. J. C.

**Ancient Gardens.**—"The first notice of a garden in the historical records of Rome, is that of Tarquinius Superbus, five hundred and thirty-four years before the birth of Christ. Livy and Dionysius allude to one which adjoined the royal palace, which was embellished with a profusion of flowers, in which the rose and poppy predominated. Among the paintings found at Herculaneum, are a few tracings of gardens; they are, we are told, small square inclosures formed by trellis work and espaliers, and regularly ornamented with vases, fountains and caryatides, elegantly symmetrical." \* \* \* \* \*

"The gardens of Athens were remarkable for their classic elegance. Adorned with temples, altar, statues and monuments, where some of their departed heroes reposed, it would appear that these gardens had some resemblance to our modern cemeteries. The points to which particular attention was paid, were shade, coolness, fragrance, and repose." \* \* \* \* \*

"Flowers were not merely a luxury to the Grecians, but they were considered absolutely necessary. Flowers, that lovely part of the creation, that serve the very pledges of a father's love, have indeed been associated with the most striking events of life; they are woven into garlands for the happy and prosperous, they are strewn upon the grave of the beloved, the offerings alike of joy and sorrow." \* \*

"Flowers have been made the vehicles for sentiment all over the world. The Persians communicate with the fair sex, by means of bouquets. The poet has made the fond girl depend on the decision of a flower to ascertain whether her affection was returned." \* \* \* \* \*

"The taste for introducing statues and urns in gardens, was revived by Cardinal d'Este. Anxious to design a garden and residence for himself, he took the ground where the Emperor Adrian's villa had stood; there he happened to find a number of antiquities, which he distributed through his gardens, and thus the plan he had accidentally adopted, became the fashion throughout Europe." \* \* \* \*

## Window Gardening.

### MY GERMAN IVY.

Last winter a friend gave me a cutting of German Ivy that was kept in the cellar with my other plants until spring. When removed to the air and sunshine of the outer world, it had two or three little frail branches with a few scattering leaves not larger than a twenty-five cent piece, and was a forlorn hope for the magnificent specimen of which I have read, being trained around a room or festooning a window. I removed the soil, and filled the pot with rich, black mold, taken from a lot that had been used as a wood-pile and a cow-pen for several years, and gave it, the Ivy, a little frame about three feet high, so that if it felt disposed to climb, it might have the opportunity of doing so. In a few days it accepted the invitation, and sent out four vigorous young branches that soon climbed to the top of the frame, and as it seemed too ambitious, I moved the pot up to the side-light on the front veranda, tacking up small cords to support it. Its growth was really astonishing; in a few weeks it had reached to the top of the door. We arched it over the transom and across the door, but when it reached the parallel cords, it would not twine around them of its own free will, but had a habit of growing downward, as if its ambitious spirit wearied of its lofty flight and yearned to touch mother earth again, and my little boy (nearly six feet high), had to mount a table, with a chair on it, to train it in the way it should go, and he often complained of its growing so fast; every two or three days he would have to mount the table and chair to train the delicate branches and prevent them from being cut off when the door was closed. By the opposite side-light I placed another pot containing several Cypress vines. When the Ivy reached the Cypress pot in its downward flight, it measured, each of the four branches, twenty-eight feet, but I dare say, before frost, it was forty or fifty feet long, for after it reached the top of the door in its second flight, we allowed it to follow its own truant will, and it leaped from cord to cord over the transom, mingling its luxuriant leaves, which were larger in circumference than a pint cup, with the delicate fringed foliage of the Cypress, all studded with the crimson stars, and made

of my front door a perfect arbor, which was the admiration of all who beheld it. So simple, so inexpensive, yet so beautiful. No Corinthian column, no Arabian arabesque ever equaled its graceful festoons. When frost came, sometime in October, with many sighs and regrets we cut the Ivy off at the top of the little frame and carried the pot in the house, leaving the vines hanging over the door, thinking they might remain green and fresh for a few days, but to my

When the cold days came, not having a greenhouse or pit, or even a cellar to put them in (they were kept in a neighbor's cellar last year, and I did not like to trouble her with them again), we could not see them all die without making an effort to save at least a few of them, and my same little boy, who is fond of flowers as I am, made a frame of laths, three sides of which we covered with paper, leaving the front and top open, intending, when freezing weather came, to cover them also with paper. Under this frame we put our favorite flowers, the Ivy being among them. It still continues growing, and has twined all over the frame, making a miniature bower of it, and is as handsome an ornament for our sitting-room in the winter as it was for the veranda in summer. L.

BOUQUET OF ORNAMENTAL GRASSES.

astonishment they scarcely seemed to miss their roots, and although the door is due north, and they had very little protection from the cold winds, in December they put forth abundant clusters of yellow flowers. The severe weather we have had recently has withered the leaves somewhat, but at this present writing (Jan. 10), the flowers are as fresh as ever. I counted one cluster just now that contained fifty-four delicate fringe flowers, looking more like a bunch of little yellow tassels than anything else. But that is not all of my Ivy.

cones. Soon after, the little spears of grass will begin to emerge from among the laminæ, forming a beautiful hanging ornament.

Take about twenty wheat ears, with two or three inches of the straw; tie them together, hang them up in a warm place, keep them sprinkled with water, and when they commence to sprout, put them in a celery glass with water; the top will soon become a perfect pyramid of verdure, and will retain its beauty for several weeks.

### Vines For Window Gardening.—The following kinds of plants, says the *Country Gentleman*, can be

easily cultivated and grown in a room not heated more than just to keep out frost: For vines to grow in pots and twine along the inside casing of the window, take the Russian and Giant Ivies; for the borders of pots or boxes, take the different varieties of Sedums—the catalogues will tell you of the colors. Again, as a climber, or trained *en masse* in the center, take *Ampelopsis Veitchii*, which is a miniature foliaged variety of our well-known, hardy Virginia Creeper. *Akebia quinata* is another rapid-growing vine, of neat foliage and large clusters of chocolate, purple-colored flowers, deliciously fragrant. *Anemone japonica nigra* and *alba*, are plants beautiful for pots in winter, being nearly hardy and producing abundance of flowers. And that a pretty ornament for the sitting-room may be formed by taking large pine burs and sprinkling grass-seed of any kind in them, and then place them in a pot of water. When the bur has soaked a few days, it will close up to the form of solid

## Winnifred's Will.

BY AUGUSTA LARNED.

### CHAPTER VI.

"A mad world, my masters."

Bradley Halcourt removed the large meerschaum he was smoking with the air of deliberation that belonged to him, and bent his hazel eyes, gleaming with covert amusement, on old Nanna, who stood before him, arms akimbo, and with a puzzled, mysterious expression on her broad black face.

"A ghost, Nanna!" said he, smiling, and showing his beautiful teeth. "Now that is delightful; I always thought the old Hall ought to have a ghost to make it complete. And you say you have actually seen one?"

"Pears like it was a spook shore enuf, honey; and I seed it plain as day," returned old Nanna, in an awe-struck whisper.

"Perhaps Steenie has been playing a trick on you," Bradley suggested.

"Dat dar chile is up to de debble's shindies," said Nanna, shaking her head, "but he couldn't, nohow some-dever, make hisself six foot tall, wid a face as white as a pocket handkerchief.

"And it wasn't the old judge?" said he, trying another tack.

"What fore, honey, should de ole mass'r come snootin' back from t'oder world 'cept dar was priests gettin' into de house, or he smelt de dishes dat new fangle cook makes in de kitchen? Ef de ole mass'r was to come, shore's you live, he'd cough and knock on de flore wid his stick."

"Well, Nanna, I'll watch to-night for your ghost, and I'll take my uncle's old musket and see if I can't bring him down."

"Shoot, honey! (in a solemn whisper) dem spooks don't mine bullets; dey go right frew without makin' nary hole; an' if you git de spookses ill will, 'pears like dey might trick us all."

"Never fear," said Bradley, laughing gaily, "if I can lodge a bullet in the ghost, he will not trouble you again. But tell me, Nanna, has any one seen it except yourself?"

"Miss Jinny," said the old woman, in the same awesome whisper. "Lass night, jess afore I locked de house, dat furriu gal, as little miss dotes on like de apple ob her eye, she bust in all white, and trembly and shaky like a ole hen afeard for its chicks; an' 'pears like she wouldn't 'fess what was de matter, and when I chafe and chafe her cold han's she jess bust out acryin'. I'se shore she seed de spook, honey."

"Very well," said Bradley, who had become grave and watchful while Nanna was speaking, "if Miss Duval has seen the ghost I can find out all about it, for here she comes with my cousin."

Old Nanna went off through the trees, and Winnie and her friend, with Hector bounding on before them, came down the oak avenue. The day was cool and windy, with scuds of dark and silvery clouds moving rapidly across the sky, and opening at moments to emit floods of brilliant light. Gusts from the clear, cold west swept along, fitfully laden with "the flying gold of the woodland."

Winnie was in the full radiance and glow of health. She had written her business letters, and attended to the upholsterers who were refurbishing the drawing-room. She had given orders to restock the greenhouse with rare plants, and had been to the stable to inspect her new carriage horses, and had directed the men who were cleaning the grounds. All the knowledge she needed for practical affairs seemed to lie at the tips of her fingers.

The day was cool, and she was dressed in a long cloak edged with fur, and a large black hat with a floating plume. Virginia, who was wrapped in a gray shawl, looked pale and fragile beside her brilliant friend. Bradley had remarked with pain, almost with resentment, that ever since his arrival at the Hall, Virginia had avoided him, appearing to dread a chance encounter, and to keep well

out of the way when there was the least likelihood of their being left alone together. The sense of trust in him, and dependence upon him, which she had once expressed in such a sweet, almost childlike, fashion, had now vanished, and he would have felt that he had a right to be more than hurt, if, as he furtively watched her, the conviction that she was suffering from some secret cause had not forced itself upon his mind. But if she was in trouble, to whom ought she so naturally to turn for help as to himself? He was vexed with her want of frankness when he had tried to prove her friend, and yet he would have been the last to claim anything on that ground. He did not want gratitude. What did he want? Pah! he was not in love. As he went about the woods and fields visiting the old familiar spots, he resolved to accept his fate, reserving the privilege of railing at the world afterwards. But his mind was mainly busy with wondering why Virginia avoided him, and what was the meaning of her agitation on the day of his arrival. He would not distrust her. She was as ingenuous and simple-hearted as a child; but some dark secret had come to cloud her young life, and kill her faith in him.

With Winnifred, things had gone more smoothly. There was always plenty of spi y conversation and sparring between the cousins while Virginia sat by tongue-tied; or, if appealed to, answered with a mere monosyllable, as if determined to reduce herself to the position of a formal companion to the young heiress.

Mr. Swayne was absent much of the time, attending to the affairs of the school at the mine, and of his new position as minister-at-large. He came to the Hall at night to sleep, and was occasionally present at meals. It was impossible for him to wholly conceal the almost worshipful deference with which he met Winnifred's slightest look or word. Toward Bradley, his manner was cold, stiff, and formally polite. Bradley, who unconsciously studied the different members of this group with close attention, had remarked Mr. Swayne's treatment of Virginia. He seemed to completely ignore her. Had not his own preoccupation prevented him from penetrating Edgar Swayne's secret, he would have discovered that where Winnifred was no other woman counted for anything in the young parson's eyes. Half falling into the opposite mistake, it had flashed upon him once or twice that the young man's apparent indifference to Virginia might be assumed to cover feelings of quite another nature.

Now, as the two girls came down the avenue together, Bradley determined to make Virginia look him fairly in the face. "Miss Duval?" said he, advancing to meet them. Virginia gave a little start as she heard her name called, and then the blue eyes were raised with a half shy, half timid look of inquiry, and a faint flush overspread her face. "Old Nanna has just been out to coufide to me the startling fact that you have seen a ghost. Now, as I have the greatest desire to learn the secrets of the other world, I beg that you will tell me all about your adventure. The old nurse claims to have seen the apparition herself in the form of a tall man, with a very pale face."

Virginia's cheek blanched, and an involuntary shudder ran through her.

"Don't you see how nervous you have made her by the bare suggestion?" said Winnie. "Nanna has her head stuffed full of superstitious notions about spooks. She has all the credulousness of the negro race, and has been seeing spirits ever since I cau remember."

"I am not at all sure Miss Duval has not seen something uncanny," returned Bradley, pitilessly determined to make Virginia speak and look at him again. "Her lips are quite pale, and they s y that is always a sign."

"I have never seen such things," said Virginia in a low, pained voice, with a deeply serious air. "I have often prayed if such things are possible, that my loved ones would speak to me, or give some sign, but they are silent to my cries and my tears. Last night I was restless, I could not sleep, so I stole down into the grounds, and when Nanna let me in I was perhaps shaking from cold."

"If you could not sleep, why did you not come to my room?" said Winnie, reproachfully. "What was I made

strong for, if not to comfort you, Mousie. She has been ill of late, (turning to Bradley) and it all comes from nursing that Finster boy, Jake, who is down with the measles, and sitting in a stuffy little room where the air is perfectly choking, to tell the freckled-faced, red-headed lad stories and give him cooling drinks; and now, though she is far from well, she is obstinately bent on going again."

"Yes, dear mademoiselle, do let me go. The poor mother has so much to do for her little ones she cannot sit by the lad's bedside. He will be wishing for me." She drew her hand away from Winnie's with a little, gentle violence, and giving her a fond look of farewell, glided down toward the lake.

"What a dear, adorable creature she is," said Winnie, standing still in the road, and looking after her with the deep glow of a smile in her eyes. "I have never been so much attached to any one before, and I am very grateful to you, Bradley, for sending Virginia to me."

"She does not seem a very lively companion," said Bradley, dryly, as he knocked the ashes out of his pipe. "I thought her quite a different sort of person when I knew her on the ship."

"I didn't want a lively companion," returned Winnie with some heat; "I wanted some one to—to love." And the next moment she was ashamed and vexed with herself for having gushed over, and made a confession to Bradley that sounded sentimental and ridiculous in her own ears. She expected a sarcastic reply, but he only glanced at her from under his eyelids and said, "Oh, indeed!"

This seemed to Winnie a very unpromising prelude to the confidential talk with her cousin, as she had planned to have that very day; but her will was predominant, and though she felt a husky, half-choking sensation in her throat, she put it down, and said in her coldest and most assured tones: "Bradley, would you mind walking a little way with me? I have not yet told you anything about poor father."

"If the crisis has come, curse my fate," thought Bradley to himself. He would have been glad to whistle, but he only turned toward her with cold politeness, and said, "I am entirely at your service, Winnifred."

"Well, let us move on," said she with alacrity, feeling that the task she had set herself was a very hard and disagreeable one. It would be easier to get through it creditably if she could walk herself into a glow of exercise; then, perhaps, she might take the leap before her in a handsome and spirited manner.

Bradley removed his meerschaum, and stole a furtive glance at her face. He had not studied his cousin as she deserved since he had come back to Halcourt, and found her a full grown, beautiful woman. He acknowledged secretly that she was handsomer than he had at first thought, and carried herself regally. An intense magnetic life seemed to tingle down to her finger tips. How had such a vivid creature sprung from the union of that bundle of legal lore and malignity—the old judge—with his half moribund aunt? It occurred to Bradley that there were men in the world who would worship the ground on which this superb girl trod, and though she might be a wayward creature, capricious, and undisciplined and crude, she was certainly magnificent. There must be a great power of loving in her. Such richness of coloring is never given to the unimpassioned. These thoughts passed through his mind in the flash of an eye, and then Winnie had begun speaking in rather a higher key than usual, which betokened some suppressed inward excitement. She was walking on the moss-grown border of the road where her dress made a slight rustling among the fallen leaves.

"I have not yet had an opportunity to speak to you, Bradley, about poor father's wishes and feelings concerning you, which he expressed to me very strongly just before he died."

"Indeed," said Bradley, in a cold tone of surprise, "I was not aware that the Judge had any wishes or feelings connected with me except a feeling of disapproval—disgust, perhaps, for the way I have, thus far, lounged through life."

Winnie was nettled by the tone of this reply, which gave her no help or reassurance, but she found relief in a little outburst of unreasonable resentment. "My father was a peculiar man. Of course I know there was never any love between him and some members of the family. You may have done him great injustice, and I will not hear one word against him, for he was always good to me, and I am bound

to take his part, and to strive in every way to fulfil his wishes."

"Don't think, Winnifred, I should have the bad taste to speak against your father in your presence," said Bradley, with a slightly cynical smile curling his lips. "I am sure it is very commendable in you to feel as you do."

This speech sounded patronizing and hypocritical in Winnifred's ears, but it only goaded her on to the aim she had in view. "I think you ought to know," said she, trying to make her voice very strong and assured, and looking straight before her, "that my father had some regrets, some feelings of remorse, for the wrong done my uncle Harold by Grandfather Halcourt's will."

"Well, that is all past and gone, Winnifred. There is no use in raking it up now," returned Bradley with alacrity; "I do not hold the money at a pin's fee. As you were the gainer I think you ought to know this."

"But my uncle Harold did not feel so."

"No, his last years were embittered by what he considered an outrage, almost an act of robbery. But we younger ones are not responsible for the irrevocable things that happened to our elders. We do not think or feel as they did. Their grudges are not ours, and we can well afford to let the old hatreds and heartburnings die out, and to live our own lives in our own way."

"Perhaps it is our duty to try and atone for some of the sins and errors of the past," said Winnie, in a loud voice, for her daring and courage had strangely deserted her. Her eyes were dropped on the ground, but in a moment she rallied. "Your mother, Bradley, must certainly be ambitious for you, if you are not for yourself. I have not seen her since I was a child, but then she seemed to me an intensely proud, high-spirited woman. Perhaps her wishes would coincide with my father's."

A cloud swept over Bradley's face, and there was a strong infusion of bitterness in his tone as he said slowly, "My mother has not changed in any of her aims or purposes. She is far more worldly than I once supposed, though we have always lived together in the closest intimacy. But what were your father's wishes, Winnifred?"

Winnie tried to recover from the almost overwhelming sense of humiliation that fell upon her now. She longed to call up a laugh, a saucy repartee, anything to break the evil spell, and give her back the old feeling of predominance and self-command, by which she could do an audacious, almost shocking thing, in a high-spirited manner. But the power refused to come, and she said in a low, half-pleading voice, "I should think you might guess, Bradley, without forcing me to speak out; he wished to have the family name and estates united. It was his dying wish, his very last request to me, and I gave him a promise"—here she stopped, for it seemed difficult for her to articulate.

A distinct shock ran through Bradley, as if Winnifred had violated the sanctity of her sex, by taking the initiative in a delicate matter, where man has always claimed the right to lead. He unconsciously stopped quite still, and pressed his heel hard into the sod, forgetting, for two or three moments, that he had not spoken; but her voice, more deprecating than before, recalled him to himself.

"My only aim is to keep the promise I gave my father, to—try and right the old wrong. Of course, I do not know how you feel. It may be very unwelcome to you. Perhaps you will not understand or respect my motives, or remember how I have been brought up." The words came with great effort, and a hot, intense blush spread over her face.

Winnifred's confusion brought a reaction in Bradley, and awoke his pity, which was intensified by conscious self-scorn for the part he had agreed to play. He was pale to the very lips as he turned toward her. "Winnifred," said he, "I cannot misunderstand you; but it is right that we should not deceive each other; that all should be open and honest between us. You have been forced into a painful position by your father's dying request, which now seems sacredly binding upon your conscience. But, though you are a very clever girl, you are young in mind; you do not know yourself; you have not seen the great world; and are yet incapable of appreciating the immense advantages your great wealth offers. I should be base to make capital out of our singular relation. I am older than you are; it is my duty to protect you, and to convince you that this promise is not binding upon you. If you put shackles upon yourself before you have attained to self-knowledge, nature, passion, life, will revenge the wrong. But what will you think of me, Winnifred, when I confess with shame that I came here to marry you, if I could; that I promised my mother, whose influence on my life has always been overmastering, to marry you, if I could. I have told you that I do not care for the money; but I do not expect you to believe me. My conduct must seem to you disgustingly mercenary. Our fortune has nearly all been lost in bad speculations. We are now poor; and my mother has assured me that she would die in shame and misery if her luxuries were curtailed, if her pride and ambition are mortified; in short,

if I do not marry you. I have told you this in the boldest way; I have not tried to screen my mother; for I wish you to know us as we are, that you may despise my weakness, and reject me with scorn."

"I do not wish to reject you," said Winnie, in a loud voice, "I am bound by my promise to my father."

"And I am bound by my promise to my mother," said Bradley, "if you will take me after the confession I have made. It seems, Winnifred, we are good, obedient little children, with no wish but to obey our parents. You know, in novels, people who are destined for each other, by the will of their elders, who have outlived the generous instincts of human nature, and forgotten the passions and emotions of their youth, generally rebel and make a deuce of a time. But we have found out a more excellent way, and are bound to please papa and mamma by perfect submission. Look here, Winnifred," with a strange softening in his voice, "nothing shall be done in haste or unadvisedly, and if you wish to break this bond, even when we are standing at the altar, with hands joined, you shall do it freely. I will protect you against myself and all other fortune hunters. You do not know yourself; you are a splendid creature, a magnificent young woman. I did not do you justice years ago. A boy seldom does justice to the possibilities of a romping girl of thirteen, who teases him. But you have turned into something quite wonderful, and you ought to be loved with passionate ardor, and complete consecration. You ought to love, you will love, with all the strength of your rich, fervid, proud nature; and then the bonds that policy or cold scheming have imposed, will snap like withes in the hand of a giant. But I see how it is," he continued, taking on a light, ironical tone. "A great heiress is like a queen; she sacrifices her inclination for reasons of state, and offers herself in marriage; and the prince-consort is commonly something of a tame cat."

A burning, blending blush had overspread Winnie's face and neck; she was tingling in every fibre with a sense of shame—this proud, mettlesome creature, who never had bent her head to any yoke. Bradley's compliments, his tone of talking down to her level, seemed to heap hot coals upon her, so that the force of the last terrible sarcasm was almost lost. She found relief in an angry outburst.

"Don't waste any of your sentiment on me, Bradley. I consider such speeches absolutely insulting."

They had approached now that part of the winding wood walk that skirted the head of Glenmere, near where the mountain road opened its long avenue. It was carpeted with bright leaves, and the wind was making music among the lofty boughs. Just at this point Bradley had met Winnie, on the day of his arrival. As the memory came over him with a warm rush, he half paused in the path.

"Of course, I did not mean to insult you, Winnifred, though the joke was questionable; but there are always conjugal tiffs after marriage, and I suppose this is a little prelude. I shall write to my mother and tell her the arrangement is made—conditionally. Have I your consent?"

It was horrible to Winnie to say yes after what had occurred. Bradley had been offensive all through this strange interview, and had made things as hard as possible, but she did speak the word in the coldest tone she could command. The silence that ensued as they walked along the road, rustling the leaves under their feet, was so oppressive she was fain to break it.

"I want to speak to you about Virginia and the search after her uncle, which I think had better be abandoned. If he should appear to claim her I would not give her up. She is necessary to me, and I have my own plans as to her future."

"And what may they be?" inquired Bradley, with clear, sharp emphasis.

Something in his voice restored Winnie to herself, and gave her the old delightful feeling of assured power.

"O, I shall always keep her near me and care for her like a sister, for her affection is one of the luxuries of my life. She is a little missionary and saint, and perhaps—who knows—some day she may marry Mr. Swayne."

"Marry Swayne!" ejaculated Bradley, with surprise and scorn, as he stopped, rooted to the path. "You must be very crude, Winnifred, to imagine that you can dispose of the lives and fortunes of human beings by a caprice. You must have an exaggerated idea of what mere money can do in the world."

Bradley had been betrayed into emotion, a weakness of which Winnie took immediate advantage.

"O," said she, haughtily, "you can sneer at me and call me crude. I do not mind that, or your thinking that I am vulgarly proud of my money and what I can do. There is nothing at all unreasonable in the idea that Virginia and Mr. Swayne may some day marry. They have the same tastes and interests, they are both of them given to good works, and love to sacrifice themselves, and of course they cannot help being thrown much together."

"Oh!" said Bradley, turning round, and digging the point of his stick savagely into the soft earth, with a look of intense disgust on his face. In a moment he had turned

back, and was speaking almost humbly. "What reason have you to suppose that Miss Duval is—is—partial to this pseudo parson?"

"O, I know that she admires him, for she has told me so. Why, here is Mr. Swayne coming down from the mine."

Edgar was in fact mounted on horseback and proceeding at a good round pace over the forest road. He raised his hat with stiff civility as Bradley glared at him, and then wheeled his horse so that he might address himself exclusively to Winnie.

"I am glad to find you here, Miss Braithwaite. The engineer of the new works has met with some obstruction. He will be obliged to alter the direction of the galleries, which will involve additional expense. He wants to see you."

Winnie was glad to have a practical problem to grapple with after the unpleasantness of the morning. She answered with alacrity:

"I will go at once, and I shall like the long walk in this invigorating air."

"You will excuse me from accompanying you," said Bradley, "I have letters to write, and there is just time to catch the afternoon mail."

Winnie looked at him with a sarcastic smile.

"You are not interested in the dull details of mining?"

"No," said he coldly; "I am well satisfied you should manage all that. You have a splendid head for business, my cousin."

He turned abruptly into the wooded path, and walked rapidly forward, for his brain seemed on fire. During the forepart of this trying interview a burning, smarting sense of injury, inflicted upon him by his mother, had filled his consciousness, but this was completely lost in the suggestion Winnie had thrown out concerning her friend. Why was the thought that Virginia had formed an attachment to this young man so odious, so unendurable to him, at a moment, too, when he had irrevocably fixed his own fate? His heart was torn at the bare possibility, and yet she had been in familiar, daily intercourse with Edgar Swayne for months. It was natural and reasonable to suppose they might marry, as Winnie had said, but he was angry with his cousin, for the unwelcome suggestion. The young men had instinctively disliked each other from the first moment of meeting. Bradley eagerly lived over every look and tone, every expression of Virginia's face since his appearance at the Hall. The memory of her coldness, her shyness, her marked avoidance, almost dislike, of him, only added to the torment of his soul.

He made a long detour through the woods and fields, and it was hours before he reached the Hall, where workmen were busy laying soft gray Axminster carpets on the drawing-room and library, and hanging rich crimson portieres over the old oak doors.

"Looks mighty like a weddin', don't it honey?" said old Nanna, beaming on him in a rich, expansive glow of satisfaction. He pushed past her and got to his own room, where he wrote the following note:

"DEAR MOTHER: My Cousin Winnifred has proposed to me, and the matter you have so much at heart is partially arranged. It has been conducted strictly in a commercial spirit. My cousin is a fine woman, with splendid business capacity. She hates hypocrisy as much as I do, and is free from all sentimental nonsense. I hope you are satisfied with your obedient son, BRADLEY HALCOURT."

At midnight Bradley was pacing up and down the oak avenue. The red spark had died at the end of his cigar, but he was keeping his promise to old Nanna to watch for her ghostly visitant. By the gleam of the setting moon, that silvered the tips of the fir trees, and made the whole scene sweet and solemn, he could see Virginia's window, in an angle of the old Hall. Suddenly there woked a low, cautious rustling among some bushes at the right. Bradley hid himself behind the trunk of a large tree, and watched and waited. The rustling continued, and something larger than a dog was softly creeping forth. Instantly he sprang upon it, clutched it, and found his hand buried in a head of curly wool.

"Who are you, prowling about this place at night?"

"O, Lo'd! O, Lo'd! I'se kotched. I'se no thief. O, Mass'r Bradley, am dat you? Don't whalo me. It's Steenie. Pears like I'se dat scart I shall jess keel up."

"What are you doing at this hour?" shaking the boy soundly, "are you trying to frighten the young ladies, or to fool your old grandmother, and fill her head with ghosts and hobgoblins? I'll take that nonsense out of you, for I have a strong arm."

"O, mass'r, Bradley dont, dont, I knows noffin at all of de spook, I'se innercent as a lam' unb'nd. I did cheat Gandy, for I runned away to tend a shout at Goose Creek, for Ise powerful pious, and it took so long for do sistern and de brederin to tell dar sperience it didn't let out till late, and I was gwine to steal in and sleep in de barn. Don't let on to little Miss. I'll nebber, nebber do so no mo."

(To be continued.)

NEW YORK, MARCH, 1877.

### VERBENAS AS WINDOW PLANTS IN WINTER.

Have the soil, half garden loam, one-fourth each of old barn yard manure and sand; good drainage of charcoal and broken bits of old plaster. In August take strong shoots, three to four inches long, without flower buds, if you can; if not, pinch them out. Be sure to take them with leaves at the lower end of your cuttings; just at the leaves the roots start. Clip off the lower leaves, and plant about an inch or more, in six-inch pots; four cuttings around the edge, and one in the center, each a different kind. Set them in a shady place for a week, where they will get the dew; they root rapidly, if not drowned; but give water as needed, to keep the foliage from wilting; give an hour's morning sun for a week; when growing well, more sun; and so on until all day; as they grow, pinch back; they soon become bushy plants. Leave out as long as possible; when brought in, place in a south window; they love a plenary fullness of sunshine and air. Do not water too much. Watch and pick off the green aphids, if they appear; sometimes I have this to do once. Once or twice a week dip the plants in a bucket of tepid water, or hold sideways and sprinkle thoroughly with the hand. When they form buds, water once a week with weak manure water. One winter I had a fine lot; they commenced budding in February, bloomed all through March and April. March is colder and rougher here than midwinter. They were just glorious—trusses large, colors as brilliant as if grown out of doors. No plant makes a finer show in the window-garden in early spring, and they repay us for all care. The last of May I set them out in a bed of rich soil; they grew right on, were covered with flowers long before the seedlings were in bud, and were the last to succumb to the frost. In warm countries the Verbena is perennial. I have twenty-four kinds in the house now; they will soon bloom.

L. K. SHARE.

### ILLUSTRATIONS OF THE MONTH.

The illustrations on the first page, represent favorite ways of decorating windows with flowers in Germany and England, which we can successfully imitate and adopt here in America.

The Fern Window and Aquarium, is large, and projects outward. The arch frame is also on the outside. The rockery constructed within, is made of natural rock and earth, built and cemented together, and the bottom of the aquarium is covered with loose sand and pebbles. The crevices of the rocks are full of earth, in which grows such ferns as Adiantum, Onychicum, Pteris, Selaginella and Pteris, in any of the varieties. Such a window fernery, however, is permissible in this country, either in mild weather, or in the milder climates.

The illustrations of flower stands, represent pretty boxes, in which bloom and are displayed the striking foliage of Dracaenas, Marantas, Agaves, Pteris, &c., while in the trellis hang the drooping tendrils of the Coebea, or the German Ivy.

Upon pages 36 is an artistic arrangement of the common varieties of ornamental grasses, all of which are described in every seedsmans catalogue.

Upon pages 40, 41 and 45, are family scenes, with incidents of pleasure and taste. The absorbed reader of the book—the bright good morning of the gleeful boy awaiting the return of his father—and the fair artist, both whose work and face are pretty, remind us of home joys, and make home occupation doubly attractive.

THE CHARMED READER.

### PUBLISHER'S ANNOUNCEMENTS.

**Renew, Renew.**—Many thousand subscriptions expire with this number. Renew! Renew!!

**Only One Dollar.**—All the rest of this year's numbers April to December, will be sent for only one dollar, this including also the steel plate engraving, "The Glee Maiden," worth alone \$1.00.

**Get up Clubs.**—To any one who will get up clubs for us this Spring, will be given their commission towards your own paper free.

To every dollar subscription, we will allow 15 cents, or to every subscription at \$1.30, we will allow 20 cents, to be applied towards your own paper free, or any book we offer in our list. These commissions are not cash, but trade towards your own paper or book.

A club of 7 will get you your paper one year; a club of three will pay for nearly six months, but every name you get besides your own, counts in your favor and reduces the cost of your own paper.

**Respecting Certain Advertisements.**—In response to further inquiries of our readers, we will state that the advertisement of the Texas Land Company, was sent us by an agent, Edwin Alden, of Cincinnati. We have always found him and his word reliable. Before inserting it in our journal, we took the trouble to specially ask him if this Company was responsible, and he informed us they were *all right*. As this Company has not proved other than swindlers—both Mr. Alden and ourselves have been deceived, although, we took due caution before hand. Our readers must understand that we did the best we could.

Mr. C. A. Reeser, of Erie, Pa., also last year met with many misfortunes. Hard times took away his business, his landlord shut down and sold him out by Sheriff, stopped his business, and effectually broke up his correspondence. Mr. Reeser had always previously been reliable. We do not know the cause of his misfortune. We do not consider it a deliberate swindle—if so, then as he owes us \$168, we also have been swindled worse than any of our readers. Mr. Reeser has always tried to keep a good name and reputation, but he was unfortunate.

We exercise scrupulous care over our pages that nothing known to be *wrong*, shall be inserted. We can not personally know each party, but do take pains to inquire and try to become satisfied that every advertiser has hitherto always done as he agrees, and is considered able to keep his promises.

**Six Months' Subscriptions.**—By reference to publishers new terms, subscribers are allowed privilege of six months' subscriptions at 65 cents (without Premium), to begin with any number. This will accommodate those who may not be able to pay but for six months at a time. It is better, however, to pay for a full year at one time, and thus save trouble of double remittance and correspondence.

**To Housekeepers.**—Ladies will take note that the Prize Collections of Recipes, which the CABINET publish this year, will be of *immense value to them*. virtually a first-class Cook Book of themselves, worth \$1.50. We do not see how any lady can do without them.

**A Sweet Home Paper.**—The FLORAL CABINET is eminently a practical paper of *Home Work*. It avoids fashions and exciting stories, and considers things of common sense and practical use; but specially teaches ladies *how to beautify their homes*—this is our special mission. We choose flowers as a leading feature, but it is not an exclusive subject. Music, Art, Elegancies, Housekeeping—all we give, have *ideas* which have cost time, dollars, and experience to procure. There are plenty of papers at cheaper price, but none which give more true worth for the money.

**Household Books.—Premiums for Clubs.**—A club of only eight entitles club agent to one of these splendid household books:

"Window Gardening,"	- - -	Retail price, \$1.50
"Household Elegancies,"	- - -	" " 1.50
"Ladies' Fancy Work,"	- - -	" " 1.50

If agent's club is less than eight, 20 cents is allowed towards any book for each name in his club, and he can remit balance in cash. A little effort on the part of each subscriber will enable him to get his book or paper at a reduced price.

### MAGNIFICENT NEW FLORAL PREMIUMS.

**"The Floral Cabinet" Collection of New Seedling Gladiolus.**—This is a new collection, never before offered, grown exclusively for us, which consists of twelve flowering bulbs of Gladiolus, one of the finest quality and most exquisite variety of colors. The quality of this collection is unequalled, and in every respect, we can safely guarantee them extra choice. The same quality of named varieties of Gladiolus, obtained of reliable seedsmen, would cost \$12. The colors range from the most fiery scarlet to the purest white.

**OFFER No. 1.**—This collection, worth \$12, will be given free to any person who will raise a club of 15 subscribers to the FLORAL CABINET at \$1.30, and also an extra copy of paper 1 year, free to agent.

**OFFER No. 2.**—To any one who will get up a club of 20 subscribers at \$1.30 we will give sufficient bulbs that the members of the club may have each 1 bulb worth \$1, and the club agent the entire set of 12, also with extra copy of paper free 1 year.

**OFFER No. 3.**—One subscription at \$3, will give subscriber the CABINET 1 year and collection free, all worth \$15.

This collection is not for sale by any seed house, and cannot be obtained at any other place, and all are new seedling varieties just originated.

**The Floral Cabinet Collection of Balsams.**—This comprises the best strains of Camellia-flowered Balsams ever offered. The Balsam is a great favorite with the ladies. This collection is the very *cream of the extra choicest sorts ever raised*. Its value may be judged when the seedsmen have offered 10 cents a seed for all that can be spared. We know there is nothing in Europe or America to equal them. The collection consists of 6 packets, pure white, deep rich purple, brilliant scarlet, crimson spotted, velvet violet spotted, and carnation striped. The flowers are so large and perfect as to be almost equal to roses. The set is worth \$1.50 at least, and can be obtained only on the following terms:

No. 1.—A club of 10 subscribers to FLORAL CABINET, at \$1.30, will entitle club agent to 1 set of above packets, \$1.50, and 1 extra copy of CABINET and engraving free.

No. 2.—A subscription of \$2 to CABINET will entitle subscriber to the paper and collection in addition.

No. 3.—A club of 4 subscribers at \$1.30 will entitle agent to the collection free, as a premium.

No. 4.—A club of 20 subscribers, at \$1.30 each, will entitle club agent to enough packets to present each member of the club with the collection, worth \$1.50, also the CABINET and engraving 1 year, all together worth \$3.50, and the club agent to extra set of paper, engraving, and collection free.

The supply is limited, and those who desire them will do well to get clubs in as soon as possible.

The collections of Balsams and Gladiolus are named specially after the FLORAL CABINET, and we are very cautious never to send out anything but just as represented. The good name and fame, and honor of the CABINET is the best endorsement of these new floral collections, which are of extraordinary value.

"GOOD MORNING."

## The Household.

## WOOD-VIOLETS.

'Tis but a tiny wood-violet,  
Gathered by childish hands,  
Just in the edge of the forest,  
Where the gnarled old oak tree stands.

Yet it stirreth thought's deepest fountain,  
And turneth my memory back,  
To the years that have flown forever,  
Swift-winged adown time's track.

'Neath the old oak's wide-spreading branches,  
I've lingered in days ago,  
Lingered when day was declining,  
To catch the last glimpse of the sun.

See with what beauty and splendor  
He lit up the western skies,  
Tints no earth painter can rival,  
Are these glorious sunset dyes,

'Mid the hush and the quiet of eve'n,  
And breath of wood-violet sweet,  
For silent self-communings  
This seemeth a place most meet.

Here, lessons of life, and God's wisdom,  
Are 'round upon every hand,  
Plainly writ on the face of all nature,  
Who seeth may understand.

The glorious sun, in beams refulgent,  
Sinks him in the western way,  
To let earth-life, as eve approacheth,  
Its most beauteous hues display.

Well we know by laws of nature,  
Day succeedeth unto day,  
That ere long the sun will greet us  
With his cheering morning ray.

When we've trod the mystic valley,  
May not our proud spirit rise,  
To a morn of life eternal,  
To a home in purer skies.

Dainty violets round us blooming,  
Fill the air with sweet perfume,  
From the seeming death of winter,  
They have risen to beauteous bloom.

So may we, through death's cold winter  
Rise, 'tis the same God controls  
Wild-wood violets in their beauty,  
And bids these "bodies bloom" to souls."

HINDA.

## PICTURES AS FURNITURE.

"I don't know much about pictures, but they do furnish a room beautifully," said a lady one day as we were talking of house furnishing, and many parlors filled with handsome furniture, and with their walls utterly bare and desolate, or else covered with unsuitable, unsightly pictures, illustrate, by most melancholy contrast, the truth of her words.

In furnishing our houses, we usually try to adapt our carpets and furniture to the rooms for which they are intended, but our pictures, bought as they happen to please our fancy, or that of our friends, and too often because they are considered cheap, are usually hung without a thought being given to their fitness for their place, unless we make their size an exception to this rule. They seem frequently to be bought as Mr. Potiphar purchased the books for his library, "by the foot," or because they will fill certain spaces, without any regard to their subjects, or to the general harmony of the room for which they are intended.

Pictures are considered by many as an extravagant luxury, but when the pleasure they give to every one that enters the house is considered, and we compare notes in regard to their price, and that of some other luxuries, specially of tobacco, which gratifies one person alone, and is often very annoying to others, rendering the atmosphere of a room impure and disagreeable, it must be conceded that a taste for pictures is comparatively unselfish and inexpensive. If "my lord" would save his tobacco money, and "my lady" that which she spends for candy in a year, there is no doubt that they might buy, with their savings, two

pictures, that would not only be a pleasing reminder of their self-denial, but be "a joy forever" to them and to their guests. In a family of children the refining and elevating influence of pictures can hardly be over-rated, and they will teach lessons of faith and love, hope, trust, and heroism that will be felt for a lifetime. A house without pictures is almost as cheerless as a house without windows, and many rooms furnished at comparatively little cost, which have beautiful pictures upon their walls, are prettier, and give more pleasure and comfort than rooms filled with costly and expensive furniture without pictures, or else with pictures unfitly chosen.

A lady living in a plainly furnished house, but with some of Brockman's photographs of Raphael's and Holbein's pictures upon its walls, who taught a class in a mission Sunday-school, and was in the habit of inviting her scholars to her house, had occasion to explain in one of her Sunday-school lessons the word palace. She mentioned the handsomest buildings in the city in which she lived, and said that palaces were usually much more beautifully furnished; to which one of the girls, who always had an opinion of her own, responded with an air of the greatest incredulity, "A house nicer than your'n, Miss Mary?" as if such a thing were not to be credited for a moment. If the lady's house had been stripped of its copies of the old masters, we doubt whether her scholars would ever have been impressed by its grandeur.

As it is very easy to furnish a house on paper, a few suggestions in regard to pictures suitable for different rooms may be useful to some reader. In parlors, landscapes and beautiful faces appear to best advantage, oil paintings if we can afford them, if not, photographs or engravings, only let the subjects be pleasant, and let there be uniformity in regard to the style of the picture. Oil paintings and photographs, or engravings, rarely appear to advantage near each other, and as a general rule, ought not to be hung in the same room, never on the same wall or aside of each other. Most persons hang their pictures so high that their visitors can only see them after tiresome and fatiguing effort, and near-sighted persons lose most of the pleasure that pictures afford by reason of their being frequently entirely out of their range of vision. Pictures, as a general rule, should be hung upon a level with the eye, and in that way can hardly fail to give satisfaction. Good oil paintings are an expensive luxury, but good photographs and engravings are within the reach of all, and chromos flood the country. Some of these are not to be despised. Some of Prang's are very pretty, and some chromos of water colors, especially English ones after Birket Foster's pictures, can hardly be distinguished from the pictures after which they are made.

One word for the illuminated texts and mottoes; they certainly show the religious character of a house, and many a guest, careless in regard to sacred things, may, by their silent teachings, be led to a better and purer life.

In a library, historical pictures seem to be most suitable. Pictures that record heroic deeds, or portraits of men and women who have lived noble lives, will teach us as valuable lessons as the books upon our shelves; and they have this advantage over the books, that almost all who see them, even the little ones, can read and comprehend. In our dining-rooms let us have pictures of fruit and flowers, of animals (and I shall add, of game), but our restaurants seem to have the monopoly of pictures of game, and most of us are unwilling to deprive them of their rights in that direction. It is pleasant to enjoy game upon our

tables with our friends; but most repulsive to many, to see pictures of lifeless birds upon our walls. We have even heard of a dining-room that contained a picture of Herodias, with John the Baptist's head in a charger, but the story is almost too marvelous for belief. In sitting-rooms let there be placed portraits of friends and interior views, glimpses into cottages, and happy homes; scenes taken from pleasant books, as "Priscilla," by Margaret Gillies, from the "Courtship of Miles Standish," or Huntingdon's "Mercy's Dream," or "Christiana and her children," from the "Pilgrim's Progress," or Faeds "O Nannie wilt thou gaug wi' me." In the nursery, gather all that is bright and beautiful for the little ones; dogs and kittens, and pretty faces of children, pleasant Bible characters, any picture that will point a moral or adorn a tale; any thing that will make the room bright, cheerful and attractive. Little home pictures like "His only pair," by Thomas Faed, are always pleasing to the little ones. In our bed-rooms let us have pictures of the Saviour, of His mother, and of the saints, no crucifixions or martyrdoms, but pictures which will inspire faith and hope; saintly pictures with a holy repose upon their faces, that has been the fruit of life-long struggle, and unto which we also, striving feebly to follow in their footsteps, may in the end attain.

Verily such pictures, when the toils of the day are over,

— "have power to quiet  
The restless pulse of care,  
And come like the benediction  
That follows after prayer."

Reading, Pa.

M. C. E.

## WORSTED FLOWERS.

Select the finest wire (which can be purchased at any drug store); take a large sewing needle, wrap the wire around it very tight and close; cut the wire any length you desire; for a common-sized leaf I cut the wire two fingers' length; I wrap the wire around the needle; I then slip it off carefully; stretch the wire out a little, then putting the two ends together and twisting them; and then you can bend them in any way you wish; wrap the zephyr from right to left, until you get to the top of the leaf; draw the yarn back under the leaf, and over the top, and back under again. To make buds, I take a hair pin; wrap the zephyr around it; then I cut the wire about one and a half fingers in length, and bend it over the zephyr, and twist it very tight; slip the zephyr off the pin; take the scissors and clip the zephyr the shape you want your buds. Make a group of white buds, they are as pretty as they can be. For another way to make leaves, take about three knitting needles, more or less, if desired; cut your wire five fingers in length; bend it in the middle over needles; then throw the zephyr over the needles; bend the wire from right to left, and so on until you get your wire all used up. I have made some very pretty flowers in this way; they are very much admired by those who have seen them. I cannot tell you how pretty they are. I have fourteen colors of zephyr. When you get your flowers all made, take a wire the size of a coarse knitting needle; wrap it with green zephyr (stems should all be wrapped with green). You then arrange the flowers, and bend your wire the shape you want it, and place your flowers upon it. They are very pretty when framed, and cost but little; my frame is 24x26 inches. If the work is done according to directions, you will have some very pretty flowers. I have quite a variety of flowers, leaves and buds. Hair flowers can be made in the same way.

## Household Art.

## USEFUL ELEGANCIES.

More, perhaps, has been written on the subject of home, how to render it attractive, &c., than almost any other. It would seem that the theme has been well nigh exhausted, so many ways and means have been described by which we can adorn our homes. But ingenious minds are constantly presenting us with some novelty, which keeps up a lively interest in the work, encouraging the practical mind to combine the useful with the elegant. We read of a home rendered so beautiful by artistic female hands, that Titani, herself might preside over it; also of the lowly cot, overrun with graceful vines, bearing a rustic grace as charming as Nature herself in her own untrained wilds. Yet I cannot forbear describing some of the beauties of one, belonging to some friends of my husband and myself. It was a modest one, yet so beautiful in exterior and interior, that it was universally alluded to as "a perfect little Eden," "a real home nest," by the friends and acquaintances of the family. I will tell you of some of the lovely things I saw inside, leaving the outside to some visitor to transcribe for the floral department of our CABINET.

The house, which was an unpretending one, with six rooms, was painted a soft French grey, the door and window facings of a darker shade. It was the delight of Mrs. A—and her grown up daughter to provide it with many ornamental and useful articles, their own handiwork. The word "Welcome," in large evergreen letters, met the eye upon being ushered into the hall. The cosy air of each room, the cordial greeting of the mother, the sparkling face of the daughter, at once convinced the visitor that this was a haven of hospitality.

Over the windows in the parlor were cornices, which I first thought must be antique carving, but found to be made of putty. The cornices were first sawed out in rough wood and covered with putty, prepared as follows: take several pounds of putty, mix in linseed oil until soft, and easily moulded with the hands; if you wish the work to be the color of walnut, mix in lamp-black and Venetian red until the desired color; after it is thoroughly mixed cover the cornice smoothly all over, using a flat utensil, a case knife will do; make a bead work all around the edges; then comes the moulding of buds, leaves and flowers, grapes, vines tendrils, acorns, or anything the fancy may suggest, and herein lies a field for the display of talent, inasmuch as there is a good deal of art in the moulding. First take a large lump of putty, and roll out on a smooth board, until sufficiently thin to form the foliage (a bottle will do for the purpose); gather some leaves from the plant you wish to copy; or, if you cannot procure the natural leaf, cut one out of paper, dip the pattern in water, and lay upon the putty, cut out with a knife, and trace the veins distinctly; arrange on the cornice, putting a small oblong piece of putty under each leaf, curving and turning it any way the taste may dictate; make stems and tendrils by rolling the putty in the hands; roses, tulips and acorns can be made from nature. Let the work get perfectly hard and dry, then varnish; frames, hanging baskets, what-nots and brackets can be made in putty almost any color. There was a frame in the wall enclosing hair flowers, made of putty, painted pure white, and while the varnish was wet, sprinkled with diamond dust. But the beautiful object that attracted my attention was a basket of rosin fruit, on a small stand in a cor-

ner, covered with a shade made of five pieces of glass, four of them 12x14, the top one 12x12. These were joined together by being set in rough wood, and made fast with putty; the wood work was covered with putty, colored ebony with lampblack, and formed into half-blown buds and leaves; this was placed upon a pedestal composed of three graduated steps, covered in the same way, around the shade. The basket was placed on a bed of moss, over which were strewn a few shells; on one side was a tiny lakelet, made of a piece of looking-glass, edged with moss. The fruit was arranged in pyramidal form, the luscious grapes, plums, &c., presenting a most tempting appearance; the very bloom of the grape was ably counterfeited. This is how the fruit is made: Procure from a tinner a nursery lamp, and half a dozen tin cups, in which to melt the rosin (get the finest white virgin rosin); you must have half a pint of alcohol for your lamp, a gill of white demar varnish; about ten cents' worth of each of the following kinds of paint: drop-lake, carmine No. 40, chrome green, Prussian blue, and lamp-black; five cents' worth of wire; have your wire ready cut in five inch lengths; wind a bit of cotton around one end, and fasten; dip in the melted rosin; take out and turn the wire in your hand until a good shape is obtained; drop into a goblet of water to cool; grind the paint in demar varnish, and put in a small quantity at a time; follow nature in size and color; bloom with lily-white and a small portion of the dry paint suitable to the fruit you are making; rub on with a bit of cotton.

In a deep rustic frame was a picture in moss work; it was made by drawing the outline of a landscape on bristol-board, and filled in with moss, gummed on, to represent trees and grass; an old mill was made of bits of bark and tiny boards, overgrown with lichens; the water and sky were made by the pencil, slightly tinted. In another deep frame, was a wreath of wax flowers, lovely enough to deck the brow of Spring; while in still another deep frame, on a background of purple velvet, was a waxen cross, with simply a vine of ivy leaves, climbing from the base, twining around it and over the arms; this was thickly strewn with diamond dust. I thought I never saw anything so purely white and chaste. On the mantel, under a glass globe or shade, was a lyre, made of wax, with a wreath of tiny roses, buds and lilies of the valley, fuschias, in fact, almost every flower was copied in miniature; all pure white, the strings were also of wax: this was admired by all, far and near. Silver dust and gold dust are also very pretty on wax work. Brackets of leather work, and brackets and photograph frames made with a fret saw and a jackknife, on every side, made by my fair young friend, evinced her taste and energy. I could fill much more than my allotted space, describing the beautiful things in this room. I would like to tell you of the beautiful tidies on chairs and sofas, the lovely sea-foam mat under the parlor lamp, the exquisite transparencies in the windows, the sofa cushions, footstools, and hassocks, all elegant, devoid of that homedead look which is so discouraging to beginners. The bedrooms of this house were furnished simply, but so pretty and attractive, so faultlessly neat and without being stiff, was every piece and fold arranged, that it was impossible to take no note of details. The room I occupied during my visit was furnished in oak, with oak and blue carpet on the floor, pure white curtains hung at the windows, with cornices of the long Texas moss, and lambrequins of canton-flannel torn in narrow strips, and each edge ravelled out until only four threads remain in the center. The manner of arranging, I have once seen in these columns, so will not

give it place here. On the bureau lay a set of toilet mats in spatter work (this work has also been described in the CABINET), on Swiss muslin, lined with rose-colored silk, edged with imitation valenciennes lace; a toilet cushion was made of rose-colored velvet in applique; that is, the leaves and flowers were all cut out of stiff paper, and covered in velvet or silk; the flowers are made and arranged in groups and fastened on, the stems are wire wound with green silk; this cushion was oblong, about 12x14 inches; it had a fringe of wax beads falling in heavy tassels at the corners. On the bed, over the snowy counterpane, were pillow and sheet shams, made of fine Lonsdale cambric. The pillow shams had a plain center, scarcely half a yard square, surrounded by two rows of puffing and two rows of tucks, four in a group, edged with a ruffle; sheet sham edged the same way.

KITTIE.

## OUR SEWING BEES.

We had passed an unusually pleasant summer with picnics under the shady old apple trees, with which grandpa's lot was well supplied.

But summer was over, and so were the picnics, for a season at least. We were all sorry.

"I'll tell you, girls," suggested one—we would still be "girls" to each other until we were seventy, I suppose—"you know how we enjoyed the day that we met together and made short clothes for Carrie's twins, and how much we accomplished too; now instead of working away alone at our winter sewing, suppose we cut out a quantity of work, and meet at each other's houses in turn. We could get it done just as well, and more sociably."

"Yes," said another, "and the gentlemen, that is, the fathers, husbands and big brothers, could come at eight o'clock, and from that time until ten we would have games."

The gentlemen approved of the plan, and waited with impatience for the time of our first meeting.

We talked the matter over, and the result of our deliberation was, we would meet every two weeks, on Friday, that being the day we could best spare, as early in the afternoon as possible, and we were to accomplish as much as we could to do it well, working until eight in the evening. The afternoon dress we should wear if at home, was good enough for the "Bee." A plain supper, just what was convenient, and no cake; we would have that with apples after the gentlemen came. There were ten of us, and five places to meet; and we usually kept three sewing machines busy.

Celia was our best tucker; Sallie splendid at button-holes; Emma, Carrie and Tillie, good, either at button-holes or machine sewing. Ettie could fit dresses and sew cotton goods without basting, thereby saving us much time, whilst Mary and Jennie, Aunt Margaret and Aunt Sue, made themselves generally useful.

We were some of us very fond of fancy work, and anything new or pretty, in that line, that we heard of, or saw, we treasured up for the Bee.

New recipes for puddings, that were specially appetizing, or economical, or both; labor-saving ideas of housework, all were freely discussed; and Mary sometimes read us a choice article from one of our latest periodicals.

We found it possible to pass the evenings pleasantly without the aid of cards, dancing, or theatricals. It was the winter that spelling-matches were so fashionable, and one evening we had a spelling-school; sometimes we played "Twenty-questions," "Verbatim" and "Rhyming-answers."

## Household Elegancies.

### DRESSING-TABLE.

Many families have plain wash-stands such as are shown in our illustration, which may be made into charming dressing-tables, in the following manner: Take a piece of plank four inches wide and eight feet long, which screw firmly against the back of the stand; on this nail a circular piece of board, one foot six inches in diameter, around which fasten an umbrella frame, covered with muslin and neatly lined, which will form a scalloped edge, which must be stiffened with wire.

On this is arranged the canopy, made of figured swiss, over pink or blue muslin; plait a circular piece over the top and around the edge, sew a strap twelve inches in width around each edge of it, which are fluted and puffed ruffles; below this depends a curtain one and a half yards long, also ruffled on the edges and drawn up into festoons. Beneath this, around the edge of the frame, is fastened the long curtains, draped back and arranged on the arms or towel rack of the stand, which must first be covered neatly with colored muslin and puffs of swiss.

The table is covered first with a colored cover, and curtains of the lined swiss, finished to correspond with the hangings. This curtain must open in front in order to allow access to the drawer and shelf beneath, which is thus utilized as a receptacle for shoes, &c.; a dressing glass, cushion and toilet set ornament the stand, and bows of ribbon finish the different points where the curtains are fastened. The lambrequin and window curtains are easily understood at a glance.

### A BEAUTIFUL ART—PHOTOGRAPHIC PRINTING.

Among many of the new and fascinating arts which yearly appear to help make home more enjoyable, is the new art of photographic printing, thus described by a California lady, who has succeeded splendidly with the really valuable Christmas gifts; I am now going to describe a process called photographic printing, by which charming pictures may be taken of our lovely wild field plants, for albums, screens, or any other purpose which may suit the fancy of the collector. The beginner had better commence his experiments with leaves alone, afterwards simple plants like nemophilas or gillias can be taken entire. The first step is to lay in a stock of materials.

We must have good, well dried specimens of all the leaves—maple, abutilon, pear, cherry; every kind is desirable; but those in which the veins are well relieved make the best pictures, and ferns are the most beautiful in form. Lay the leaves into an old book, and dry with medium pressure.

Now for the chemicals. We must have a lot of sensitized paper, and had better, for economy, make it ourselves. As soon as this pretty accomplishment becomes fashionable, as it surely will, we shall be able to buy these papers, as we do materials for wax flowers and the like, but at present we cannot. Select a dozen sheets of the best wove letter paper, eschewing cream laid or any which shows the manufacturer's wire marks when held to the light. We shall want a dozen spring clothes, pins or pegs, and a few quarts of rain water. If you have only spring or hard water, this must be distilled before using.

Now put in a medicine bottle, holding at least half a pint, half an ounce (four drachms) of prussiate of potash, in four tablespoonfuls of the rain water. When it is dissolved, so that none is visible in the bottle,

letting it become equally wetted. Then hang it by one of the corners from the edge of a shelf and let it dry. This part of the business must be done in a dark room, by the light of a candle. Candle light does not affect the paper. Daylight would ruin it for this purpose. Now have two sheets of clear glass. Lay on one of them three or four sheets of white blotting paper; upon this the dried and sensitized prussiate of potash paper with the prepared surface uppermost, and upon this place the fern frond or other desired leaf with the back down. (All this, remember, in the dark room.) Then lay on the second sheet of glass, and put the clothes pin clamps on the edges to hold it in place.

Some clear sunshiny day, take your prepared object into the light, and leave it exposed for a half hour or more to the direct rays of the sun. If you watch the paper while nature is printing it, you will observe the part not covered by the leaf changing to a bright blue, deepening with the tint of exposure until it is nearly black. When you take it out of the glasses, you have a yellow leaf on a blue ground. Wash the paper several times in the clear rain water, and every trace of the potash will disappear from the yellow ground.

Freshly sensitized papers are the best, but you can preserve them in absolute darkness if you wish.

These nature-printed photographs may be colored true to nature, in autumn tints, or the vernal hues of spring. There are other methods; one, in which the ordinary albumenized paper of photographers is used, after dipping it into a solution of nitrate of silver, sixty grains to the ounce of distilled water. Float and dry as in the previous case. When the picture is painted, and the glasses removed, wash it in rain water, to remove the nitrate of silver; then wash again in a solution of hyposulphite of soda; strength, two ounces to half a pint of water. You will need to keep the pictures, made with nitrate of silver, immersed in the hyposulphite solution for fifteen minutes, in order that they may be permanent.

A great many impressions can be made in the same day by economizing time and space on the papers. They may be ruled off into sizes fit for album cards, and the leaves selected so as to leave neat margins, before the paper is sensitized, by numbering the squares and specimens, the spaces will be quickly filled, and four or more impressions taken at once. The washing and drying process is thus economized also. It is pleasant to have both the upper and lower sides of some leaves taken. Very thick leaves, like the California laurel, should be rejected. Alfileria is a beautiful leaf for this purpose; so are many of the acacias. The nitrate of silver process is the most perfect, but it is fatal to clothes and delicate hands, and should only be attempted by a careful and dexterous operator. JEANNE C. CARR.

**Handkerchief, cigar and tobacco boxes?** wall pockets, dinner mats, napkin rings, may be all made of tin, worked with a pretty pattern, bound with ribbon, and finished with bows, &c. Tobacco boxes and wall pockets should be lined with cambric. A wall pocket I have is composed of four pieces, front, back, and two long triangular pieces for the sides. The front is worked in a bunch of blue forget-me-nots and daisies; the pieces are lined with blue cambric, bound with ribbon as near the same shade as possible and then joined together; is suspended by ribbons, fastened at the corners back and front, and joined at the top with a bow; each of the four corners of the front are decorated with a little bow of ribbon.

WINDOW DECORATED WITH WORKED BALANCE AND MUSLIN CURTAINS.

DRESSING-TABLE.

pour half of the solution in a dinner plate, and float on its surface a piece of paper of the size intended,

## Hireside Reading.

### A HOME IN THE HEART.

O! ask not a home in the mansions of pride,  
Where marble shines out in the pillars and walls!  
Though the roof be of gold, it is brilliantly cold,  
And joy may not be found in its torch lighted halls.

But seek for a bosom all honest and true,  
Where love, once awakened, will never depart;  
Turn, turn to that breast, like the dove to its nest,  
And you'll find there's no home like a home in the heart.

O, link, but one spirit that's warmly sincere,  
That will brighten your pleasure, and solace your care;  
Find a soul you may trust, as the kind and the great,  
And be sure the wild world holds no treasure so rare!

Then the frowns of misfortune may shadow our lot,  
The cheek-searing tear-drops of sorrow may start,  
But a star never dim sheds a halo for him;  
Who can turn for repose to a home in the heart.

ELIZA COOK.

**What Happened at an Auction.**—An auction sale of old furniture and goods of a hotel, occurred not long since at Colchester, Conn. Part were sold first day, and adjournment made to election day. Those who bought at the first sale found the things so full of bed-bugs, that the second sale looked very hard. The auctioneer came into the Town Hall and invited the people to go over to the auction. He stood on the bench and gave out his invitation, after he got through, a large, tall Dutchman who stood by him, spoke up loud enough for all to hear: "Shentlemen you go over dare, and buys some tings, you gets so many bed-bugs, dey carry your tings home for you. I buys a shtraw tick dare, and gets more bugs than I gets shtraw, you can never more get me to buy some ting there." The roar that followed was tremendous, and not a bid could be got for anything in the house.

Miss Kate Field narrates in *The Graphic* these stories of "The Country Parson:" Two trustworthy men assured me that they have seen the Rev. Dr. Boyd deliver a sermon in white kid-gloves. More than one related to me the following story: Traveling one day in a railway carriage, "The Country Parson" had for his neighbor a plainly dressed but extremely intelligent man, in whose conversation he became much interested. On finding that the stranger intended getting out at the town in which he resided, he expressed his desire to invite the clever unknown to dinner, but added that it would be impossible, as Mrs. Boyd always required gentlemen to dress for dinner. Having made this graceful speech, the parson exchanged cards with the Duke of Argyle! The parson stammered; the parson apologized; the parson was snobbish enough to eat his own words, and beg of the Duke to waive ceremony. It is unnecessary to say that the Duke of Argyle did not waive ceremony, and that the story has flown from one end of Scotland to the other.

"Well, what can I do for you?" said Damon, of the Milwaukee Poor Department to a Ninth ward female all rags and tatters. "I'd like a cord o' wood, a bag o' flour, and if ye don't mind, Mister, a daily paper for six months, jest to see how this Beecher trial is a comin' out, ye see."

A Party of belated gentlemen, about a certain hour, began to think of home and their wives' displeasure, and urge a departure. "Never mind," said one of the guests, "fifteen minutes will make no difference; my wife is as mad now as she can be."

There is still a live law in Massachusetts which fines a young man \$5 if he walks out with his girl after sundown. Those old law-makers didn't know beans about the best time to talk love and eat ice-cream and buy peanuts.

"What are you about?" inquired a lunatic of a cook, who was industriously picking the feathers from a fowl.—"Dressing a chicken," answered the cook.—"I should call that undressing," replied the crazy fellow. The cook looked reflective.

A good deacon making an official visit to a dying neighbor, who was very churlish and universally an unpopular man, put the usual question: Are you willing to go, my friend? "Oh, yes," said the sick man "I am." "Well," said the simple-minded deacon, "I am glad you are, for all the neighbors are willing."

**Gushing Expressions.**—The absurd use of certain words by young ladies is well set forth by the following: Did anybody ever hear a gushing young lady tell what she thought about anything extraordinary? Well, that's nothing to what they write. We have analyzed a short story written by one of them, and find that "splendid" occurs sixty-four times; "beautiful," seventy-seven; "nice," six hundred and eleven; "delightful," sixty-one; and "lovely," sixty-three.

THE FAIR ARTIST.

A Minister was soliciting aid to foreign missions, and applied to a gentleman, who refused him, with the reply, "I don't believe in foreign missions. I want what I give to benefit my neighbors." "Well," replied he, "whom do you regard as your neighbors?" "Why, those around me." "Do you mean those whose land joins yours?" inquired the minister. "Yes." "Well," said the minister, how much land do you own?" "About five hundred acres." "How far down do you own?" "Why, I never thought of it before, but I suppose I own half-way through." "Exactly," said the clergyman; "I suppose you do, and I want this money for the New Zealanders—the men whose land joins yours on the bottom."

It was a rich old widow who wondered that the handsome young man had fallen in love with her. "Yes, it is wonderful," said Mr. Sprucup; "but I do love you to distraction; why, I even love the ground you walk on." "I thought so," observed the widow; "but I am not in want of a landlord at present."

An old colored preacher in Atlanta, Georgia, was lecturing a youth of his fold about the sin of dancing, when the latter protested that the Bible plainly said: "There is a time to dance." "Yes, dar am a time to dance," said the dark divine, "and it's when a boy gits a whippin' for gwine to a ball."

There is a kind of grim humor in the address of a devout deacon to his newly-settled pastor as he gave him the usual welcome: "The Lord keep you humble and we will keep you poor."

A Frenchman learning the English language complained of the irregularity of the verb "to go," the present tense of which some wag had written out for him as follows: "I go; thou startest; he departs; we make tracks; you cut sticks; they absquatulate or skeddadle."

"Who is that a statue of?" asked a lady of her husband, pointing to an Apollo.—"The Apollo Belvidere." "Law! how affectionate you are, my love! And now, darling, who was Apollo Bely?" An explanation on pronunciation followed.

A Voter on a train when asked by the conductor for his ticket, said: "I have (hic) made a d-r-e-f-f-u-l mistake; voted my (hic) railroad ticket 'stead of the (hic) Democratic ticket."

My dear, said a husband to his better half, after a quarrel, "you will never be permitted to go to heaven." "Why not?" "Because you will be wanted as a torment down below."

Labor is sweet, for Thou hast toiled,  
And care is sweet, for Thou hast cared;  
Ah, never let our works be soiled,  
With strife, or by deceit ensnared  
Through life's long day, and death's dark night,  
O, gentle Jesus, be our Light.

## PRIZE COOKING AND HOUSEHOLD RECEIPTS.

BY OLIVIA E. CHAPMAN.

To this article was awarded second prize, \$15.

**Birds' Nest and Eggs.**—Take one dozen lemons or oranges, and with a sharp knife shred off the yellow rind, let the strips be long and slender; make a rich syrup with pure white sugar, flavored with the juice of lemons or oranges. Into this, while boiling, drop the shreds and boil until clear, then remove and cool upon broad dishes. When the syrup has drained off, form the shreds into a nest, in the center of a handsome dish. Take a dozen or more eggs, and cutting off the tip of the small end, extract all the white and yolk; make blanc-mange—yellow and white—yellow with yolks of eggs, and white in the usual way with cornstarch or gelatine, flavoring with vanilla, almond, and other flavoring if desired, separating the mixture and flavoring several different portions; one part should be colored pink and crimson with a decoction of cochineal dissolved in alcohol. While in a half liquid state fill the shells to the top, and allow them to cool. When solid, remove the shells carefully, and beautiful eggs of various shades of color will be formed, with which fill the nest. Dress the dish upon the outside with a green wreath, or set in the midst of branches and sprays of green, intermixed with flowers.

**Cream Cake—The Shells.**—Beat five eggs, yellow and white separately, add to the yolks one cup full of sugar, then the whites whisked until they stand alone; rub half a teaspoonful of soda into one teaspoonful of flour, beat this into the eggs and sugar, and add one full teaspoonful of cream of tartar, beat well, and divide into cakes by dropping a large tablespoonful upon a baking tin, not allowing the drops to touch each other, nor be placed near enough to run together when heated. Gem pans are best to bake them in, the fat circles instead of deep ones. Let the oven be quick, and when the cakes are a light brown remove them, and allow to cool a little, then split them open on one side and drop the cream in the hollow opening.

**For the Cream.**—Boil one pint of new milk, beat the yolks of two eggs, and add a teaspoonful of sugar and enough of cornstarch to thicken, (nearly three tablespoonfuls) stirred smooth in a little cold milk; add to the milk also the whites of the eggs, a teaspoonful extracts of lemon, and one of vanilla, beat well, and as soon as they remove from the fire, allow to cool before placing in the puffs, pinching the parts together after filling. Paint over with the white of an egg and dress plentifully with powdered sugar.

**Canvass-Back Duck to Roast.**—The duck should be young and fat; pick it well, draw and singe carefully; but do not wash it. Dress it, leaving its head on to distinguish it from common game, and place it on the spit before a brisk fire for at least fifteen minutes, or according as your family or friend like them more or less done, which you must inquire; serve it hot, in its own gravy. The head of the Canvass Back is purple and the breast silver color. Other ducks can be served in the same manner, only wild game should not be cooked quite as long, as that peculiar delicate wild flavor so highly prized by epicures would be destroyed. For sauce, currant jelly.

**Broiled Partridge.**—(French method.) After having prepared the bird with great nicety, divided and flattened it, season it with salt and pepper, or Cayenne, dip it into clarified butter, and then into fine bread crumbs, and take care to have it evenly covered; if wanted very nice, dip the second time into the butter and crumbs, place over a very clear fire and broil gently from twenty to thirty minutes; serve with mushroom sauce.

**Bread Jelly for the Sick.**—Cut the crumbs of a penny roll into thin slices, and toast them equally of a pale brown; boil them gently in a quart of water until it will jelly, which may be known by putting a little in a spoon to cool; strain it upon a bit of lemon peel, and sweeten with a little sugar; clearness is very essential in sickness, a dirty cup, or a bit of coal on toast, or in broth, may turn an invalid's stomach.

**Rock Rice.**—Boil a teaspoonful of the best rice till quite soft, in new milk, sweeten with powdered white sugar, and pile it upon a dish; lay all over it lumps of jelly, or preserved fruit of any kind. Beat the whites of three eggs to a stiff froth, add a little sugar, flavor with what you please. Add to this when beaten very stiff, about a tablespoonful of rich cream: drop it over the rice, giving it the appearance of a rock of snow.

**To Prepare Fruit for Dessert.**—Beat well the white of an egg with a little water; dip the fruit in and roll it immediately in fine crushed sugar; place it upon a dish, and leave it five or six hours, then serve. A more sightly or exquisite dessert than a plate of currants thus dressed cannot be had.

**Cookies.**—Two cups of sugar, one cup of butter, one cup of sweet milk, two eggs, four cups of flour, four heaping teaspoonfuls of baking powder. The flour should be measured in a little larger cup than the sugar, mix well, and bake in a quick oven, then spread with the white of an egg well beaten, and sprinkle with sugar; or a quicker way would be to sprinkle well with sugar just before baking.

**To Bake Fish.**—Take two good sized fish, clean and wipe them well in a cloth, but do not wash them; keep the breasts as whole as possible; strew salt over them, and leave upon a board several hours; then wipe the salt from them, cut off the heads and fins, cut the skin through down the back, and take it off neatly, being careful to keep the fish whole. Beat yolks of three eggs, dip the fish in the egg, have ready some bread crumbs mixed with pepper, salt, and chopped parsley, roll the fish in the crumbs, and stuff the heads and breasts with oysters chopped, but not too fine, and bread crumbs mixed with egg. Butter a dish, lay the fish upon it, stick pieces of butter upon each, and bake them. For sauce, take a pint of veal gravy, the same of cream, mix two tablespoonfuls of flour in a little of the cream, cold, and boil until smooth; add a blade of mace, a little nutmeg and salt; some prefer an onion. Lay the heads of the fish at each end of the dish and garnish with lemon.

**A Novel Way of Making Jelly Cake.**—Take the whites of six eggs, one cup of white sugar, same of flour, one tablespoonful of butter, two tablespoonfuls of sweet milk, two teaspoonfuls cream of tartar and one of soda. Bake in a large oblong dripping pan, so the cake will be very thin; meanwhile stir another batch, making just the same, with the exception of using the yolk instead of the whites; when both are done, spread while warm with jelly, or preserves of any kind; put together, bring the largest side of the cake toward you, and roll immediately; or cut in four or eight parts, put together alternately, putting jelly between each layer, and frost lightly over the top. Another method is to make three pans, making the third layer of one-third red sand sugar, proceeding the same as for the other layers; in putting together let the first layer be the yellow, made of the yolks, then the red, and lastly the whites. Nicely frost the top, and you have a beautiful as well as a delicious party cake. They are very pretty made into rolls.

**For Iced Apples.**—Pare and core ten large apples (more or less) of a large tart kind. Bake them until nearly done; put them away to get entirely cold; then prepare some icing as for apple meringue, and first pouring off all the juice, lay the icing thickly on the tops and sides as much as you can. Return them to the oven to just harden and set. Serve with cream.

**Wild Plum Jelly.**—Beautiful jelly can be made from the wild plums so plentiful in some parts of the west; nice marmalade can be made from the same fruit. Pour boiling water over your plums, turning it off immediately—this is for the purpose of extracting the bitter taste in the skins. Steam the plums in a stone jar or covered pan over boiling water until they crack so that the juice runs out. Put them in a colander and allow to drain, but do not press them; boil this juice twenty minutes, meanwhile heating the sugar on plates in the oven (pound for pint) so hot that you cannot bear your hand in it. Put the hot sugar into the boiling juice and boil all together a few minutes. Jelly can be made from any fruit or vegetable from which can be obtained the peculiar principle called pectine. Boiling the sugar with the fruit longer than is necessary for its perfect mixture spoils the flavor. Never put water on fruit and allow it to simmer, will have to be boiled out again. Everything should be very clean and bright.

**Crab-apple Marmalade.**—Sift the steamed apples through a colander; do not pare them, only cut out the blossom ends; a pint of pulp to half a pound of sugar. Boil until you have a clear thick paste.

**To Cook Beans.**—Beans should never be put in cold water to soak, because all the nutritious part of the bean is extracted by the process. They should be washed in warm water, then in cold; be tied loosely in a cloth; be put into boiling water, with a spoonful of dripping and a little salt in it and be kept boiling for four hours. They are excellent if served with gravy and not with melted butter. They serve as garnish for roast mutton or beef, or are excellent served whole as a puree. To make the latter, when the beans are done throw them instantly into cold water, when the skins will slip off; rub the beans through a colander and mix a lump of butter with them. A little milk or cream is good mixed in.

**Hominy Cakes.**—A pint of small hominy, a pint of white Indian meal sifted, a saltspoonful of salt, three large tablespoonfuls of strong yeast, a quart of milk. Having washed the hominy and left it soaking over night, boil it soft, drain, and while hot mix it with meal, adding the salt and butter, then mix gradually with the milk and set away to cool;

beat the eggs very light and add them gradually to the mixture. The whole should make a thick batter. Bake on a griddle.

**Transparent Pudding.**—Beat the yolks of eight eggs and the whites of two, and mix with them half a pound of warmed butter and the same of loaf sugar, pounded; butter cups or moulds, lay at the bottom orange marmalade or preserved apricots, pour the pudding upon the sweetmeats and bake from fifteen to twenty minutes. This is very rich, and should not be eaten by those having weak stomachs.

**Arrow-root Pudding.**—Dissolve four teaspoonfuls of arrow-root in a quart of fresh milk, boil with a few bitter almonds pounded up, or peach leaves to give it a flavor, if you wish; stir it well while it is boiling, or until it becomes a smooth batter; when quite cool add six eggs well beaten, to the batter, then mix with it a quarter of a pound of powdered sugar (if brown is used it spoils the color); grate some lemon peel into the mixture and add a little of the juice. The pudding should be baked an hour and sent to the table cold. Quince, raspberry or strawberry preserves may be served with it, and, to add to the appearance, ornament the top with slices of preserves.

**Mixed Pickle.**—To each gallon of vinegar allow a quarter of a pound of bruised ginger, quarter of a pound of mustard, quarter of a pound of salt, two ounces of mustard seed, one and a half ounces of turmeric, one ounce of ground black pepper, one-quarter ounce of Cayenne; cauliflowers, onions, celery, sliced cucumbers, gherkin, French beans, nasturtions, capsicum. Have a large jar with a tightly fitting lid, in which put as much vinegar as is required, reserving a little to mix the various powders to a smooth paste. Put into a basin the mustard, turmeric, pepper and Cayenne; mix them with vinegar and stir until no lumps remain; add all the ingredients to the vinegar and mix well. Keep this liquor in a warm place and stir thoroughly every morning with a wooden spoon for near a month, when it will be ready for the vegetables to be added. As these come into season have them gathered on a dry day, and, after merely wiping them with a cloth to free them from moisture, put them into the pickle. The cauliflowers should be divided into small bunches. Put all the vegetables into the pickle raw, and at the end of the season, when the vegetables are all procured, store away in jars and tie over with a bladder. As none of the ingredients are boiled, this pickle will not be fit for eating for several months. I will repeat that the contents must be stirred each morning.

**Pickle Chow-Chow.**—Quarter of a peck green tomatoes, the same of white onions and pickling beans, one dozen green cucumbers, one dozen green peppers, one large head of cabbage; season with mustard, celery seed, salt to suit the taste. Cover the mixture with the best cider vinegar. Boil two hours slowly, continually stirring, and add two tablespoonfuls of sweet oil while hot.

**Beef Steak Pie.**—Choose steak that has been long hung; cut into moderately-sized pieces and trim off all the skin or sinews; season them with salt and pepper; put a crust underneath, or in the bottom, then layers of crust, beef and oysters alternately; stew the liquor and beards of oysters with a bit of lemon peel, mace, and a tablespoonful of walnut catsup. When the pie is baked, boil with the above three spoonfuls of cream and one of butter rubbed in flour. For a small pie, a dozen oysters, generally more is better. The pie should be baked near two hours.

**Crust for Tarts.**—Beat the white of an egg to a strong froth, thin it with as much water as will make three-fourths of a pound of fine flour into a very stiff paste; roll it very thin, then lay the third part of half a pound of butter upon it in little bits, dredge it with some flour left out at first and roll up tight; roll it out again and put the same proportion of butter, and so proceed until all be worked in; bake in the form desired and use cranberries for filling.

**Ginger Bread to Keep.**—Rub half a pound of butter into one pound of flour, then rub in half a pound of sugar, two tablespoonfuls of ginger and one of rose water; work it well, roll out, and bake in flat pans in a moderate oven. It will take about half an hour.

**Pumpkin Pie.**—Take out the seeds and pare the pumpkin or squash, but in taking out the seeds do not scrape the inside of the pumpkin; the part nearest the seed is the sweetest; then stew the pumpkin and strain it through a sieve or colander; to a quart of milk for a family pie, three eggs are enough; stir in the stewed pumpkin with your milk and beaten up eggs till it is as thick as you can stir round rapidly and easily. If the pie is wanted richer make it thinner and add sweet cream or another egg or two, but even one egg to one quart of milk makes "very decent pies." Add a little salt, two tablespoonfuls of cinnamon and one of powdered ginger; the peel of a lemon grated gives a pleasant flavor. The more eggs the better pie. Some put an egg to a gill of milk. Bake three-fourths of an hour in deep plates or shallow dishes, without an upper crust, in a hot oven.

# Daisy Darling.

Words by GEORGE COOPER.

Music by H. P. DANKS.

*Dolcemente.*

1. I think of you still, Dai - sy

# THE LADIES' FLORAL CABINET

BY HENRY T. WILLIAMS.

VOL. VI.

NEW YORK, APRIL, 1877.

No. 64.

PRICE 12 CENTS.

## MY FRIEND'S GREENHOUSE.

What to describe first, where all is so wonderfully beautiful and full of interest, is the query; but as my eye always searches out for the choicest flower-gems, I will introduce you at once to the heart of the house, where, half hidden by Callas, Brugmantias, Laurestinus, and other rare things, stands a huge Century Plant. The east wall of the greenhouse is covered with the rarest Begonias that it has ever been my good fortune to see. These Begonias are all planted in old tin fruit cans, white-washed, holes made for drainage, and a perforation in the side for hanging up. It is wonderful how Begonias and Caeti thrive in cans. It must be that the rust in the cans acts as a tonic on the plant. The Begonias fall in abundant drapery over the wall, entirely hiding it from view. Near this tangled mass of Begonias is a beautiful specimen of variegated ivy-leaf Geranium, crimson and gray—it is very lovely. A large Hoya Carnosa trained across the house, and at short distances soft sprays of Smilax caught lovingly at it and fell gracefully from above. Primulas look at us with their bright faces; Jessamines, Mahernias, Ferns, Azaleas, Bouvardias, Coranella, Japonicas, an innumerable variety of Caeti, Sedums, and a large army of choice plants charm our eye. I must not omit to describe the graceful hanging-baskets, home-made, which add greatly to the effect of the scene. These are made by knocking the end out of a fruit can, cutting the sides with sharp shears, or knife, into narrow strips; form these into basket shape, place a wire around the edge and another for a handle; line with moss, and everything planted in them grows as if by magic. If my flower sisters were to try them, they would never throw away an old can while they live! In the beginning of this article I referred to Brugmantias. I am surprised that they are not more extensively cultivated. There is nothing more lovely or ornamental for a lawn. I saw one last summer about seven feet high, on which were two hundred flowers opened at one time. It was beautiful beyond conception. The plant requires but little care, not more than you would bestow on an Oleander; and with its wealth of pure white fragrant flowers hanging

so gracefully among its dark green foliage, no more attractive plant could be placed in your garden. In the north corner of the green-house is a fine specimen of Rhyneospermum, growing in great luxuriance, vying with a large Cape Jessamine for beauty of flower and foliage. The Rhyneospermum is a semi-tropical plant, of easy cultivation, and pays a large dividend to its owner in star-like blossoms. I would advise all

feet. Make incisions in the Cereus with a sharp pen-knife and insert the branches of Crab Cactus, holding them firmly for a few minutes. They will soon grow and need no special care. It is to be regretted that ladies do not learn to graft; they could become quite skilled in it, and would be richly repaid, especially among their roses. They appear to look upon grafting as a thing that belongs exclusively to skilled gardeners, and

by no means attainable by ordinary workers, whereas, the truth is that women are very successful in this branch of gardening when they attempt it. A nice judgment and gentle manipulations are all that are necessary to accomplish this now mysterious art. But I am admonished by the length of this article to leave my friend's treasure-house of flowers brimming with refreshment, and blessing this grim, persistent winter weather, feeling grateful that it has been my privilege to appropriate so much of its perfect loveliness.

In these days of gold and iron how refreshing it is to come across a charming paper like THE LADIES' FLORAL CABINET, around which is ever floating an atmosphere of Apple-blossoms, Roses and all the fragrant favorites of the flower-garden. I never think of the CABINET but visions of the beautiful float o'er my brain, and I have derived so much information and pleasure from its perusal that I feel under an obligation for the value of the benefit, and would like to requite the obligation.

LIBONIA FLORIBUNDA.

A FIREPLACE DECORATED WITH FLOWERS.

flower lovers to invest in one. The sweet Bard of Avon assures us it—

"Is wasteful and ridiculous excess  
To gild refined gold, to paint the lily,  
To throw a perfume o'er the violet."

And so I have felt it to be in this attempted description of my friend's lovely flowers. I would describe to your readers a Cactus which elicits much admiration, and which, I am sure, would lead many to imitate. A Cereus grafted with innumerable branches of Crab Cactus. The process is easy and the effect per-

fect. The love for flowers and children is a redeeming feature in the Turkish character. The swarthiest and coarsest soldier wears a nosegay in his button-hole and cultivates the ground about the guard-house, or fills its windows with pots of flowers in full bloom, and his hard, stern face relaxes into a smile of tenderness as he lifts a little child into a carriage or a boat.—From "Romance of Missions," by Miss West.

## Floral Contributions.

### GET A GARDEN.

There is one thing that I have long been wishing to tell the readers of the CABINET, and that is the way that many ladies can make themselves happy, and at the same time save doctor's bills. I can talk on this subject all the better, because I have tried it myself. My recipe is summed up in these few words—Get a garden. I very often see ladies, white, weak, and wan, nothing particular the matter, and yet never well; to these I say, only try my plan, and see for yourselves how superior it is to all the apothecaries under the sun. I myself was one of these much to be pitied ladies until, by the advice and aid of a kind friend, a little square of twenty-five feet, near our house, was dug up, laid out, and became a garden. During the whole of one summer, for about an hour every morning before breakfast, I worked diligently in my garden, and I was amply rewarded for my pains. The flowers thrived, and with them my strength. By the next summer I increased my boundaries to fifty feet square, and in a very few years I felt myself equal to even more than that, so now the garden measures one hundred by fifty feet in flowers, besides a small vegetable garden. Of course it is not so easy to make a garden as to write about it, but with a little help from the stronger sex in the beginning, the difficulties were soon overcome, and then came the pleasures. My garden was in the midst of the pine woods, where neither plow nor hoe had ever broken the earth before, so there was much to do in the way of digging up roots, pulverizing the soil and laying out beds. When one gets through this much, there is no further use for men then, unless, indeed, to amuse us or to admire. To begin in systematic style, we must first enrich our garden. For this, nothing in the world is so good as the earth from some old rubbish hole. In every country lot, probably, there is such a hole, where the sweepings of the yard and the scraps from the kitchen are all thrown to be out of sight. All gardeners possessing such a hole are rich, and those who do not, will, if they take our advice, set to work at once to make one. As soon as the decayed contents are evenly laid over the flower-beds, we begin to fill up our hole again with the same material, so keeping up a constant supply of fresh food for another season. Flowers do not require strong manures; it makes them grow too much to bush, fresh mold and decayed vegetable matter being the food they delight in: Roses especially luxuriate on this sort of diet. Another excellent fertilizer is the greasy, soapy water that the plates and dishes are washed in. Annuals in particular improve on this, and a bed of Petunias will beam out their thanks for such a treat in countless blossoms and the brightest leaves. In fact, I do not know any plant that will not grow and thrive for a bucket of greasy water occasionally. Guano and bone-dust are both fine, but one does not always have them at hand; and to country people, they are sometimes impossibilities. For Violets, I think nothing better as an enricher than thoroughly decayed wood-dust. After the garden is once set going, it is but little trouble to keep it up. Seeds of annuals and perennials are so cheap in these days, and reproduce themselves so rapidly and easily, and even Roses cost so few cents, that one wonders why so few people have gardens, surely it must be because they do not know the pleasures to be derived therefrom. For several years our

church has been dressed on every Sunday from my garden, so that the pleasure has been shared by many. I often think of the refining power that flowers yield. They make a sympathy where nothing else can.

There is another mode of cultivating flowers which is very delightful, although, perhaps, not so healthful as out-door exercise in the garden. I mean house-plants, and these are open to everybody who possesses at least one window, be that window north, south, east, or west, for there are many plants that will flourish in a shady northern window as well as in warm southern one. The way I grow my plants, which are Geraniums, Pelargoniums, Begonias, Callas, Libonias, Azalias, Fuchsias, and Lobelias, is very simple. I have neither hot-house nor green-house, and as I believe more than half the lovers of flowers are in the same condition as myself, they will be the better able to appreciate my plan. I will begin by telling of my proceedings in the fall, as that season always seems to be the beginning of the plant year. As soon as October's winds begin to chill the weather, I commence to cut down the plants, not merely trimming them, but cutting them down until only two or three inches are above the ground. They are then set aside to rest, for rest they must have as well as ourselves. Soon they begin to put out new, fresh leaves, and some would even bloom, but it is not good to encourage them in this, for if we want a fine spring and summer show, we must now keep them from exhausting themselves. If a winter bloom is desired, we must have a set of cuttings from the summer before. From this time, until January or February, they require but little care. A moderately warm room, say not below forty-one degrees at night, a plenty of bright sunlight in the day, an airing by raising the glasses when it is pleasant, and just enough water to keep the earth from drying hard, is all that they ask of us. But in February comes the great work on which the bloom of the whole year depends. We now get a barrowful of earth from the same valuable rubbish hole that we feed the garden with, or if there is no rubbish hole, any good garden soil with a little leaf mold will answer the purpose. Each plant is then taken carefully up, the dead earth shaken off gently, and the roots dipped into a tub of water until they are clean. Then set the plant nicely into the new earth, spreading out the tender little roots and gradually filling up the jar and pressing down the earth firmly. We then give each plant two or three spoonfuls of chicken manure, laid on the top of the earth, a good watering, and then set the jar where it is to remain. Occasionally the jars must be turned round to the light, otherwise the plant will grow to an ugly one-sided shape. I particularly recommend chicken manure as the best fertilizer that I know; some like to use it in liquid form, but I find my way the best and least troublesome. Just lay it on top, and every time the plant is watered, a little of the strength is carried down to the roots, and the bloom will be constant and magnificent. Your plants will soon begin to show you their gratitude for this refreshment, and in a very few weeks they will be covered with buds and bright blossoms, which I will warrant to continue until the "melancholy days" come round again, when once more they must be divested of their tops and put to rest. Surely this is not very hard work, my friends, and think how much we are repaid for it. I must not forget to say that Geraniums do best always in small jars, and the younger the plant the finer the bloom. Keep new cuttings, therefore, going all the time, and I promise you there will never be any lack of flowers. Remember to keep the jars bright and clean on the outside. In my opinion,

this is far more important as a drainage than the broken crocks inside. There is another class of plants I am surprised not to see mentioned more frequently; I refer to those charming bulbs, Achimenes; they are the easiest things in the world to cultivate, and humble little beauties, they ask no better habitation than an old tomato can. Indeed, they seem to delight in old tins. The truth is, they must have moisture, and the cans retain the dampness longer than small jars. In the spring I set out my Achimenes in a compost of one-third sand, one-third leaf mold, and one-third well-rotted manure; then put the cans in some half shady spot of the piazza, and leave alone until they begin to come up. In a short time after the plants commence growing, they will begin to put out their lovely flowers, and continue to do so until late in the fall. As soon as they cease blooming, discontinue watering, and when the tops are quite dry, lift the roots and store in thoroughly dried sand until another spring. If my lady friends will only follow these easy rules, there is no reason why they cannot have an abundance of beautiful flowers and much real enjoyment, not to speak of the greatest of all blessings, good health. You will learn to love your flowers more and more as you continue to cultivate them, and in time find in them a gentle, silent companionship that is welcome, even at that time when the expression of human sympathy is unavailing. Very often some plant will take a history to itself that will enhance its value many fold. For instance, this Rose Geranium. It is but a poor little plant, and yet we prize it above rubies. Simply for this: two little hands that we loved, once tended it, and we laid some of its fragrant leaves and delicate blossoms on the gentle, young breast when it had "fallen asleep."

C. P. W.

### BEDDING OUT WINDOW PLANTS.

Last spring I was like "the old woman who lived in a shoe;" had more plants than the flower stands would hold; so I prepared early an oval bed on the east side of the house, ten feet from it; this bed was ten feet wide and eighteen feet long. Removed the largest sods, spaded under the lightest; after this it rained, froze and thawed—making the ground very mellow. Then I wheeled on rich, well-rotted manure, two barrows of fine chip dirt, one of manure from the hen house, one of sand, spaded all in and raked smoothly. This was the third of June. In the morning I had given the plants selected a good watering, so they turned out of the pots easily. It was a dry time; into each hole I poured two quarts of water, letting it sink before planting. As I finished each plant I drew the dry earth around it. Was from three o'clock until nearly dark setting thirty plants. When done, showered with a watering pot. Next day made paper caps for all, taking them off at night. For four weeks we had no rain; I watered twice a week, drawing the dirt away, then covering with dry earth; kept them in their paper caps for ten days; after that, they had the sun every day until two o'clock, P. M. They never wilted, and how they grew!

Three times a week I stirred the soil with a push hoe. As it grew cooler, with plenty of rain, the whole was a mass of verdure and bloom! We had no killing frost until the night of September 26. The day before I had taken up the plants I wished to keep over, I trimmed and planted them in boxes of earth, putting them in a dark frost-proof cellar. In August, I took cuttings of all; they are now fine plants in the window garden.

L. K. SHARE.

## Gossip with Correspondents.

**Plants in the Sun.**—It is a mistake to suppose that plants will not flourish except when exposed to the direct rays of the sun, as I have a conservatory on the north side of my house, with a glass roof, in which I have had many varieties of plants in bloom all winter. My Geraniums and Camellias have done splendidly; my Daphne blossomed profusely, and my Fuchsia and Bouvardia are blooming away finely; besides, I have a Hydrangea and Oxalis in bud. I have also a conservatory heated by pipes from the same hot water apparatus that warms the one on the north, on the south side of my house, but which has not the light overhead, in which though I have plants in bloom, they have not done nearly as well as in the one on the north side. I have a large yellow Jasmine vine planted outdoors on the south side, the lower part of which is protected by an oilcloth covering; it had a flower in bloom near the top, while many of the buds are ready to burst forth.

Brooklyn, N. Y.

W. L. COCHRAN.

**Cactus.**—I have long looked for and anxiously expected some of our flower lovers to write a treatise on the Cactus. It is a family of plants that I have a great partiality for. I have many times thought if some scientific man, such as the author of the *Rose Manual*, could be induced to write such a treatise on the Cactus, it would be hailed with great pleasure by many flower-loving friends. I should be willing to pay any price for such a treatise as I know he could write, his descriptions are so plain and easy to understand; and as I see from a catalogue I received from him last spring that he has retired from business, I have thought he might be induced to write a treatise on the Cactus, its classifications and descriptions, with embellishments and cultivation.

I have quite a collection of plants; some of them I bought of R. Buist more than ten years ago, such as Azaleas, Camellias, Dracaenas, Clerodendron, and many other plants too numerous to mention. Among the rest I have about thirty species of Cactus; many of them I do not know to what family they belong. I have some of the Cereus family, one Night Blooming Cereus Grandiflorus, Cereus Heptagonus, and others that I do not know the names. I have several of the Epiphyllums; one is night blooming, the others are scarlet, white, and pink. I have three of the Crab or Lobster family, some of the Mammillarias, and many others that I do not know what family they belong, except Melocactus, three species.

Some of the species that I have I collected some four years ago while in Texas; I found them on the prairie in the suburbs of San Antonio; they grew here to great perfection. I there saw the Century plant twenty feet high growing in the cemetery, and it was just opening its bloom buds and had a majestic appearance, grand, but not beautiful. Does the Aloe belong to the Cactus family? I cannot find that it does. Now, my dear floral friends, will you join me in asking Mr. Buist to write us another book, and let its chief topic be on the Cactus, and if he wishes other newly introduced plants, such as the Palms, Ferns, and Lycopodium, such a work I think would be well appreciated both by florists and amateurs.

Petersburg, Ill.

M. L. FISHER.

**Pot Plants.**—A friend asks advice about pot plants, and you are very welcome to my experience. In the first place, I think more depends upon the earth than anything else. I begin in this way: As early in

May we have warm days, but cool nights, I put my plants out during the day and shelter them at night; in this way they become gradually accustomed to the air. Next, I slip all that I can to start anew, cutting as near the roots as possible, as they have more vitality; and, as regards soil for slips, take salt boxes, and bore a few holes in the bottom for drainage, then put in first an inch or two of charcoal, next sand, and last a layer of earth. Place the box in the shade for a week, then give it moderate sun, and not too much water.

My large plants I cut down considerably, and if they bud I snip them. You will see by this that I do not always put my Geraniums in the garden to continue their bloom, for I like to retain some old plants to winter in my windows. The same with Fuchsias and Heliotropes. As early as July I prepare my soil, and repot and renew the earth of many of my plants; that is, I take out of such plants as Heliotropes and Fuchsias from one to two inches of old soil to replace with new. In that way the tender roots are not disturbed. If possible I get the mold of decayed trees, as that is excellent; if I cannot get this, I go into the woods and scrape away from the trunks of trees the soil that clings around them. This I sift through a fine sieve, adding loam from the garden; and lastly, I take it to kill all insects that may be in it. You may say that this is a great deal of work; but what can we have without care and trouble? I am fully repaid for my work, as my plants are a perpetual joy. Now that my earth is prepared, I repot every day, and very early in September I move all my plants under cover. I think the earlier they are settled for the winter, and commence growing, all the sooner you will have blooming plants.

I like to cut back Petunias at the same time with Geraniums and Heliotropes. The last two require a great deal of water and sun. I wish I could show you mine; but do not feel discouraged, yours will look just as well, with care. Water your plants with warm water every morning before the sun is shining warmly upon them. Hanging plants require more water than others. I use liquid manure twice a week, and to make the leaves green and the blossoms bright I use pounded charcoal. I also use this in potting plants instead of pot shreds. Keep plants and pots clean, as it is a great preventative of insects.

Perhaps you have the great desire of my heart—a bay-window? But next best to that are my two southwestern exposures, eight feet broad, with shelves and brackets. I accommodate fifty plants. With me this has been a splendid winter for blossoms; one of my red Geraniums has eight large clusters, another four, and so on. Petunias, Heliotropes, Abutilons, Mignonette, yellow and pink Oxalis, and even my Dutchman's Pipe has blossoms. Have patience and do not be discouraged; with sun and care your plants will look as well, if not better, than mine.

H. C. H.

**Flower Pots.**—I would like to say a few words to the readers of the CABINET about flower pots. We are often told in horticultural books and papers that plants will not thrive so well in glazed pots as in the common unglazed ones. I think this is a mistake. I have kept house plants for nearly twenty years, using both kinds of pots, and my experience is that plants will grow and blossom in glazed pots as well as in those that look moldy or discolored, even if washed every day. Within a short time I have learned to improve common pots, so that they will not grow moldy. First scrub them, inside and out, until perfectly clean; then dry them perfectly. If any are

new enough so that they are not discolored, give them one or two coats of shellac inside and out. It is much cheaper to buy the shellac dry and dissolve in alcohol; apply with a brush. Some pots that are discolored I give a coat of black-walnut stain, made by mixing burnt umber with spirits of turpentine; when this is dry, apply a coat of shellac inside and out, putting the stain only on the outside. Sometimes I have painted pots with green paint, but they need a coat of shellac inside and out first to prevent the moisture of the soil from taking the paint off.

AUNT FANNY.

**Lantana Seed.**—I see complaint is made in the last number about Lantana seed not growing. Please state that the seed must have boiling water poured over them, and soak a while before planting.

C. L. F.

## LILIES.

The Lily has for all time the first rank in Flora's diadem. No other flower has been so long admired and universally cultivated. It has rightly been christened the "Queen of Flowers," and no other, except the regal Rose, has ever attempted the usurpation of its title. Within the last half century many new members of this family have been introduced to the floral world. Many of these new subjects have at once taken leading ranks among cultivators. With the introduction of these new varieties there became a small mania for the possession of some or all of them; as a natural result, many who bought bulbs at high prices met with failure, their bulbs living perhaps a year and then dying. This at once had the effect of killing the mania. The cause of these failures were that people, thinking they needed the same culture as the old sorts then known, owing to belonging to the same family, gave them similar treatment, and the consequence was—failure. Cultivators who desire to have success with new Lilies, should find out how they grew in their native places, and treat them accordingly. If they grew in warm, dry places, they should be grown in a dry, warm place; if they grew in a moist, shaded place, they should have a similar place in your gardens.

## CULTURE.

A few general remarks on the cultivation of Lilies may be useful to some of the CABINET readers.

All Lilies should be planted from six to ten inches deep, and twelve inches would be better for the Auratum and the California Lilies; the roots that support the flowers and stem grow above the bulb; the roots below the bulb only nourish the bulb; therefore, if the bulb is planted shallow, there is not sufficient soil to allow the roots supporting the flowers to do their duty; and not only this, but the hot sun burns them up. The soil should be cultivated well and deep, and moderately rich, but not freshly manured—fresh manure will kill Lily bulbs—if the soil is very rich, put a little sand or poorer soil around the bulb. The bulbs should be planted in the fall or early spring, not later than April if you wish flowers. After planting it will not be necessary to move them; in fact it will be better not to for three or four years. In moving them be very careful in lifting them not to break or bruise the roots at the base of the bulb; if these are injured, it may cause the bulb not to bloom for the next season, or perhaps to decay. The best time for moving is in September, or just as soon as the stem is ripe after flowering. In some future number I will tell the CABINET readers how to treat the new California Lilies, now becoming so popular.

WM. C. L. DREW.

## Flower Gardening.

### FLOWER FANCIES.

"That's a fine garden," said one gentleman to another, as they drove past our place one morning while I was staking my Gladioli. "Ye-es," said the other, a Mr. Bullion, who bows in adoration to the almighty dollar, and whose taste is limited to tobacco and "beef critters," "but I think that patch 'd better be planted to potatoes, and she a hoe'n' in of 'em." And he chuckled at his sagacity, and I pondered the ways of men, and took an inventory of my plant family to find Mr. Bullion's affinity, for I often please myself by studying the habits and dispositions of plants and tracing a similarity to corresponding classes of the human family. For instance: Look at that bed of Tulips. How gorgeous! what a self-satisfied air they have, and how defiantly they flaunt their gaudy colors, as if to challenge admiration. Are you not reminded of the gaudily-attired female who ransacks dry goods establishments, jewelry stores, and millinery shops, in quest of personal adornments? Your mind follows her out of one place, in at another, you catch momentary glimpses of steady-going business men, or sober matrons with a gleam of reproof or indignation in their eyes; and one horny-handed old farmer turns to look, and mutters to himself, "That's the way the money goes." It is pitiful, too. You look in her vapid, inane face, and you see behind those expressionless eyes great mental cobwebs that gather dust and hang in unsightly festoons in the poorly furnished attic. You glance at the flounces, ruffles, ribbons and laces, brooches, bracelets, ear-rings, and chains, at the barbaric display generally, and with that glance you have fathomed the character and rendered the verdict, "More money than brains." Poor human Tulip!

But here is a contrast—they are what we used to call Honeysuckles, or Columbines; now they are named Aquilegias. How prim they are, with straight, stiff flower-stems surmounted by white, purple, or pink heads, with faces turned downward; admiring humility, they clothe themselves in it and carry our thoughts away back to the time of our great-grandmothers, who spent so many days and weeks at the loom weaving linen for their own households, and filling chests, presses, and drawers with the work of their hands, to be handed down to posterity and valued as precious heirlooms. And here is a highly respectable representative of the floral kingdom; it comes of a very aristocratic family, and is called *Lilium Auratum*; when it was first introduced it commanded high prices, five dollars a bulb being readily paid for it. The florists all declared that no garden should be without it, and so all of us lady amateurs were unhappy until we possessed one. But they had come from a far off country, and were not acclimated; some of them sent up a sickly little stalk, and were petted and nursed to death; others sent up no stalk at all, but rotted in the earth, heart-sick and disgusted, making no effort to live, and taking no thought of the care and expense that had been lavished upon them; perhaps one in a hundred had survived the perilous voyage and transplanting process, and made glad the hearts of their owners by blossoming and sending out a rare perfume, once inhaled, never forgotten. We have all seen their human compeers. Some of them are university graduates, who look down from the sublime heights of a Greek lexicon and point their fingers in disgust at a Roman capital. They are our lawyers, and doctors, and theologians, in an embryotic condition. They

are our white-handed clerks and perfumed exquisites, who spring up in the social hot-bed of caste and distinction. It is the *Lilium Auratum* that our girls think of when they declare they won't marry a farmer. Many a young lady has made a wreck of her life by indulging in these expensive fancies; too often the investment has proved the counterpart of these same

WATER LILY GARDEN.

*Auratum*s. Dry rot, a failure to send up even one green leaf, a sickly little effort to fight the battle of life, and they are overcome in the unequal struggle. Better by far, be content with the prosy Sweet Williams, and stout-hearted Hollyhocks, than to sigh after the unreliable *Auratum*s. And here are the Balsams, so improved by cultivation that a novice would never dream they were the lineal descendants of the old-fashioned Lady's Slipper, but here they are reminding you of your fat, good-natured aunt sitting on the kitchen door-step shelling peas for dinner.

RUSTIC FLOWER DECORATION.

Here are the Violets, too—Johnny-jump-ups, we used to call them; little dandies, with hair parted in the middle, twirling a cane and inditing verses to Angelina Evalina, sentimental youths—they claim priority of acquaintance and kinship with the royal Pausy. Yes, here they are, a great bed of them. "O-o-o-o-h." To be sure, that's just what everybody says—in fact

that is about the only expressive one is capable of making at first sight of them. The next is, "How do you grow them so large?" or, "Why don't you take them to the fair?" My dear friend, my ambition is satisfied in that respect, for I took the first premium at the State fair last year; and now I'll tell you how I manage Pansies: I get first-class seed, and sow about the last of April in pans or shallow boxes in the house, transplanting when they have four or six leaves, into a bed composed of two-thirds leaf mold and one-third good garden soil. You see my bed is located where they get the shade of that young apple tree at midday, but far enough out to escape the drippings of rain or dew that fall from it; and my leaf mold is never composed of oak or beech leaves. Pansies and tannin don't assimilate, no how. These are for fall blooming. For spring flowers, I grow seed in August, and cover the young plants with leaves for winter protection. Dahlias? yes, born to command. Give them a deep, rich soil, a plenty of liquid manure, and you shall see regality of form and demeanor. And see my Verbenas. I never fail of a fine show of these; and this is my secret: I sow the seed early in April in a shallow box, and do not allow the earth to become dry until the young plants appear. Almost every seed will germinate, and once they are up they are hardy enough, and bear transplanting with the fortitude of veterans. The Pansies make a fine display, but they are the Aldermen, the Tweeds of society; and the Marigolds, coarse-grained creatures of the plebeian origin, no amount of cultivation will ever refine them. They have daily intercourse with the elegant Lilies, the delicate Daisies, and the beautiful Roses, but none of their graces ever stick to the Marigolds. One is reminded of the old sayings, "You can't make a whistle of a pig's tail," "Can't silver scour a pewter spoon," etc., and you compare them to Mrs. Jones, who has gradually risen from the position of servant to be the mistress of a fine house of her own, fine furniture, fine dress, fine equipage, but who, although she has very good associates, hasn't the tact or capability of filling the position with honor to herself or family.

MRS. GEORGE KATOR.

### MY LILY GARDEN.

I wish to tell the readers of the FLORAL CABINET that I had splendid success in cultivating Water Lily, *Nympha Odorata*, last summer. The roots were sent me by express from Massachusetts, the 9th of June. I had sawed into a large barrel a rustic band of braided twigs, with the bark on around the top, and a handle of the same material. In the centre of the handle I placed an urn-shaped wire basket lined with moss and filled with earth, and some very lovely plants. The tub sat on a stone foundation two feet high; surrounding that, a mound of earth covered with scarlet and white Verbenas and Pansies. I filled in good rich soil to the depth of six inches; set out the roots and filled in the water gradually with a sprinkler, or watering-pot. I trained vines of Star Ipomoea over the rustic handle. The 9th of August the first blossoms opened, it was a beautiful little picture; people came for miles around to see it.

MRS. WM. H. MABEE.

### RUSTIC FLOWER-STAND.

A few summers since we obtained from the forest the top of a chestnut tree; shortened the main stem until four and a half feet in length, leaving five or six of the top branches projecting above and outward from three to four and a half feet. This was firmly inserted in the ground, fronting the house. Upon the main stem was placed a damaged wooden bowl of eighteen inches diameter, and to each of the branches was attached, by screws, a pint tin basin, painted green. After filling with rich soil, Strawberry Geraniums, and various running plants, with fine, delicate foliage, were placed in each, and soon presented a beautiful and novel appearance.

## Winnifred's Will.

By AUGUSTA LARNED.

### CHAPTER VII.

"O Love, what is it in this world of ours  
Which makes it fatal to be loved?"

The Fortescues had come up to Cloverbrook for the autumn, and there were greetings between their cottage and the Hall in these latter days of October. The two young ladies were plain, and wore eye-glasses, but they had the reputation of being very clever. They had read Mill and Herbert Spencer, and could converse about evolution. They came and played wonderful fantasias and sonatas on Winnifred's new grand piano, while their brother Charley sauntered languidly about the drawing-room, making eyes at the young heiress, to convey to her the fact that he considered her "a deuced fine girl." Mrs. Fortescue, a fussy little matron in gray puffs, and with a set smile on her false teeth, overflowed with compliments and caresses toward her dear, darling Winnifred.

Mrs. Halcourt had dispatched an exquisite little perfumed note to her friend, announcing the fact that matters were satisfactorily arranged between Bradley and his cousin, and congratulations quite in order. Bradley had not behaved very well in company since the arrival of the Fortescues, and the whole family voted that his indifference to Winnifred was simply brutal, and anything that could rescue the dear girl and her money from such a marriage, might be looked upon in the light of providential interference.

To Winnifred, in those days, the Fortescues seemed a welcome resource. She was fitfully feverish and restless in all her moods, hurrying things on to a certain point, and then losing interest in them from mere whim and caprice. Her unnatural gaiety was succeeded by petulance and irritability, which every one felt except Virginia, towards whom she was uniformly tender and considerate. In her hoydenish days she had snubbed Charley Fortescue unmercifully, but now she showered her favors upon him, until the foolish youth's curly blonde head was almost turned.

One morning nearly all the inmates of the old Hall were assembled in the fine old dining-room, which the young heiress had refitted in a very good style. Though an untutored girl, without artistic cultivation, she had a feeling for harmonious adornment. The old fireplace was a delight to Bradley. It was a great roomy cavern, large enough to sit in, and finished with picture-panels which his diplomatic ancestor had brought from abroad; the walls of the room had been tinted a cool gray, and Winnifred had hung about upon them some of the oldest and mellowest of the family pictures. There were heavy crimson curtains at the windows, and the great mahogany side-board was weighed down by a burden of antique silver. Now a cheery wood fire crackled and snapped between the hand-irons, and Hector lay stretched out at full length on the tiger-skin rug.

Winnie enjoyed presiding at her own board, and ordering Steenie and the new maid, and she did the honors with a touch of pretty imperiousness that was not unbecoming. Bradley occupied the head of the table, and Edgar Swayne sat opposite Virginia, who was pale and listless, making the merest show of appetite over her tea and toast.

"What were you telling me just now, Mr. Swayne," Winnie inquired from behind the tray, "about those masked burglars at Deanport?"

Virginia felt a quiver run through her, and as she looked up she caught Bradley's eye, and a wave of conscious color dyed her cheek. Edgar answered with the stiff punctilious politeness he always assumed in Bradley's presence, "It was a bad case, Miss Braithwaite, and may involve serious consequences. The Deanport people are thoroughly aroused, and there are detectives out in several directions. This Mrs. Stanley, whose house was entered, is a nervous invalid. Her husband was absent on business, and she was alone in the house with the servants. The burglars obliged her to rise, gagged her, and bound her to a chair, while they rifled the drawers and boxes. Of course they escaped with their booty, and now the poor woman is lying very low indeed."

Virginia felt a creeping, cold sensation, mount from her feet to her vitals, why, she could not tell; and she seemed to hear Winnie's voice far off through a roaring of waters, as she said, "O, how dreadful! Have they any idea where the robbers are hiding?"

"There is a shrewd suspicion that a gang has been organized in this neighborhood, and every effort will be made to unearth them."

"You make me quite nervous," exclaimed Winnie, "talking about an organized gang," though in fact she half enjoyed the spice of danger. "I shall have new chain bolts put upon the doors, and the window fastenings must

be looked to. For outside protection we can depend on old Hector, and within doors I suppose two brave gallants will suffice."

"Don't trust too much to my prowess," said Bradley, who had not spoken before. "I sleep like the dead. I would advise you to get a small dog that can rouse the house by vociferous barking."

"It would be well to have a burglar alarm put in your bed-room," suggested Edgar.

"Yes, and to sleep with a brace of pistols under my pillow," said Winnie, laughing gaily. "Your suggestions are very kind, and prove your courage. But perhaps you will try and prevent the masked gentry from visiting us by exerting yourselves to detect them."

"I thought I had got on the trail of one of them yesterday," said Edgar, as he helped himself to another muffin. "There has been a suspicious character lurking about the mine for some weeks. He has been seen lying in bed in the day-time in Smoky Duff's cabin, so I was told by little Ben Harding, a very sharp boy, who lives next door to Duff's. Duff's wife is a virago. I could get nothing out of her, and she abused me like a pickpocket, when I went to her door. But Ben tells me he believes the man was playing possum, lying in bed, and pretending to be sick, for he has caught him once or twice prowling about at night. He describes him as a tall man, with a dark, watchful face, and black hair, very noiseless and stealthy in his motions."

"I am convinced he is one of the gang," said Winnie with animation. "His hiding in a miner's hut, shows he was on an evil errand. If you can catch him, Mr. Swayne, it will be a feather in your cap."

Virginia's face had grown miserably pallid, even to the lips, and her eyes had a hunted, despairing look they sometimes wore now. Bradley had watched her cautiously, though listening with keen interest to what Edgar was saying. He trembled lest she would faint, or break out into hysterical weeping. She did neither, but sat rigidly in her place. The girl had a power of self-control for which he had not given her credit, and happily, just at that moment, there came a diversion. Much to the surprise of every one present, Mrs. Braithwaite entered the room. Her black dress was huddled carelessly upon her, and her gray locks tucked away under a soiled morning cap. But there was an unusual look of determination and energy in her heavy face.

"Why, mamma," exclaimed Winnie, in a tone tinged with annoyance, as Mrs. Braithwaite stood defiantly still, and gazed about as if seeking to discover her place at the table, "this is an unexpected favor. You have not breakfasted with us before for ages."

"I have not been asked to take my rightful place at this table," said Mrs. Braithwaite, her voice breaking into a quaver of resentment. "I have been ignored and slighted in this house, where I was born, for many a long year. Your father did it before you, and now you are carrying out his policy."

Winnie colored high with anger, in spite of her determination to put down a scene with a strong hand. "I am sure you are at home here, mamma. It is not my place to point out what it is proper for you to do. I have always supposed that you consulted your own ease and comfort in staying in bed until late, and I have instructed Nanna to attend to your every want. If you have any complaints to make of me, this is certainly not the time to make them."

Both Bradley and Edgar had risen and offered the lady a chair. She took her place beside Bradley, and replied, with snuffing, but increased acrimony, "I shall choose my own time for making complaints. The strangers here are not of my inviting, but Bradley Halcourt is my own nephew, and it is right he should know all I have endured. I am willing he should judge between us."

Bradley looked at his aunt, to whose almost squalid figure an exalted sense of injury could not add one touch of dignity, with unmixed dismay. The appeal she had made to him against her own child, the woman he was in a manner pledged to marry, opened up vistas that it required a stone heart to contemplate. Edgar and Virginia had left the room, and at that moment Steenie entered with a card on a salver.

"Mr. Fortescue has called," said Winnie, as she took it up with an immense sense of relief. "If you would like to see him, Bradley, perhaps mamma will defer setting forth my high crimes and misdemeanors until a more convenient season."

"He is no friend of mine," returned Bradley. "I have nothing to say to him."

"I know by your tone you do not approve of poor Charley."

"What matters it so long as he is a favorite of yours?"

Winnie gave an expressive little twist to her shoulders, and went sailing out of the breakfast-room with mixed emotions. There were disagreeable things in her triumphant young life that had to be put down, or crushed; but deeper than all lurked a feeling of resentment toward Bradley, who refused to be piqued with her—who received all her doings and sayings with cold imperturbability, or

sarcastic silence. But why should she wish to pique Bradley? If he had remonstrated with her it would have been to save an appearance of decorum and propriety before the world, and for this Winnie had nothing but scorn. In the hall she encountered Virginia, who had her hat on for the daily visit to the Finster cottage, where little Jake still lay ill. Winnie ran and clasped her arm about her friend's waist.

"What on earth put it into mamma's head to make such a scene," said she in a whisper. "She must be plotting something or other in which she wants Bradley's assistance. Do you know I am so oppressed by her presence that I cannot stay in the room where she is five minutes at a time. It was shameful for her to come down in that untidy dress; and I shall scold Nanna, and tell her not to let the thing happen again. She must lock the chamber door if necessary."

Virginia lifted her clasped hands with a pretty, imploring gesture. "Pardon, mademoiselle; would it not be better to try and win madam by kindness and gentleness, to try and make her life a little less *triste*. Forgive me, but she is your mother, and that is a holy name."

The sensitive mouth began to tremble, and Winnie took her playfully by the chin and kissed her.

"You have been reared so differently you cannot understand things, Virginia. You have never known anything about fighting and contending. But I cannot shut my eyes to facts—I cannot be hypocritical, and I do not see why one's life should be spoiled by disagreeable things one is not to blame for."

"But, dear mademoiselle, is there not such a thing as duty?" and the great blue eyes were lifted to her's.

"Yes, I suppose so; but I cannot stop to discuss it now, for I hear Charley Fortescue romping around in the drawing-room like an impatient bear. You know he was a kind of beau of mine once, and I used to treat him abominably."

"Why does he come back again now? Why do you waste time on him?"

"O, one must amuse one's self, as the French say," and she gave her friend another kiss and ran away to engage in lively nonsense with the young loungee in the drawing-room.

Meantime Bradley was closeted with Mrs. Braithwaite. The poor woman had fallen into a very lachrymose condition, and the flesh of her heavy cheeks and chin trembled visibly.

"So you are going to marry Winnifred?" she asked.

"I believe so," he answered somberly, with his hands in his pockets and his legs stretched out under the table. "Things have been arranged between Winnifred and me partly to that effect."

"I suppose your mother has played her cards," said Mrs. Braithwaite, with a gleam of shrewdness coming into her dull face. "She always had an eye on the property."

Bradley did not answer, but he winced under the imputation. "Well," Mrs. Braithwaite went on, "I am glad you are going to marry her; things will be better for me than if a stranger was to come in here. They might lock me in a lunatic asylum, who knows. But you are my nephew, and bound to take my part. You ought to have the money if you want it, for I am sure Harold was cheated by the old judge. Nobody knows the life I led those days when poor father lay dying. It's perfectly natural that you and your mother should want to get the property back again, and I suppose there is no other way but to marry Winnifred. She is just like her father—heartless and hard, though she does fawn over that foreign girl. Folks may think I have been so crushed and beaten down I have got no natural feelings, but wouldn't a stone feel to be deprived of every right and title? I brought all the money to the Braithwaites. This house was mine, but I have no more authority in it than a dog. My wishes are never consulted, my spiritual adviser can't darken the door, and I am put down and disgraced in the eyes of menials. But when you are married, Bradley, you can make things better for me. Promise me that you will try."

Bradley was deeply shamed by his aunt's rather coarse speech, so far as it bore upon his own motives. A sense of repugnance and loathing made him sick at heart. He seemed to see what a poor creature he was in other people's eyes; but it was useless to deny anything that might be imputed to him, so he sat some instants in silence with a black cloud on his face, and then said very slowly and coldly, "You are very much mistaken, aunt, if you suppose I shall ever have control of the Halcourt estates. Winnifred's fortune is settled on herself, and should we marry, I shall be only one of her appendages."

"I don't know anything how it was left," said the poor woman, shaking her head helplessly; "I haven't the faintest idea what I am entitled to. That Deanport lawyer came here and talked a rigmarole I couldn't understand, and then he made me sign some papers, and that is all I know. But I thought if you got the handling of the money perhaps you could persuade Winnifred to let Father Dooley come to the house without setting the dog on him. Now she has taken a whim to have schools, and a Sunday

preaching, and a parson of her own, and it is cruel to deny me my only consolation," and the poor woman broke down into a snuffling exhibition of her wrongs.

"I can do what you request in regard to Father Dooley," said her nephew, who really pitied her, "but I must tell you before-hand that it will be in vain, for I have no influence with Winnifred."

"Perhaps not," said his aunt, with a dolorous sigh; "she's that wilful that she'll break her neck to get her own way. But I think, Bradley, you ought to do what you can to have that French girl sent away. Her coming to this house was your doing, and I've a presentiment that she will bring trouble. Winnifred is ready to eat her up now, but one day she will hate her—mark me, she will hate her."

Bradley was shocked by his aunt's narrowness and suspicion. "Nonsense," he muttered between his teeth as he rose to his feet.

"There is another thing, Bradley," Mrs. Braithwaite continued in a half whisper, not minding his exclamation; "I do not feel at liberty to mention it to anybody but you; that girl has held secret meetings with a suspicious character—a strange man."

"O, I know all about that," returned the young man eagerly, catching at any straw that would save him from committal to a distinct course of action in reference to Virginia; "she told me herself. A stranger met her by accident in the pine grove and spoke to her, and she was very much frightened. It happened the day I came."

Mrs. Braithwaite shook her head, and settled down heavily into herself. "That ain't all, Bradley; you don't know the whole story."

"I'll tell you what," Bradley resumed after a moment of serious reflection, "if you will promise not to persecute Virginia, and will put by your cruel suspicions of the poor girl, I will do all I can to induce Winnifred to let Father Dooley visit you here at the Hall."

Mrs. Braithwaite looked at him with a glimmer of surprise in her leaden eyes. "It seems strange that you should want to keep that girl here when I am sure she will only do harm by staying. But perhaps you know best, Bradley. I have always thought you were good ever since you were a little boy."

Bradley received this declaration with a black scowl on his face. "No, aunt, I am not good, but I want to be just, and I will stake my life and soul that Virginia Duval is a pure, noble-minded girl." Then he turned abruptly on his heel and walked out of the room. Just as he had taken his hat with the design of escaping from the house, Winnie opened the drawing-room door and came hurriedly toward him in her white morning-gown. There was a defiant, playful light in her eyes, but the expression on Bradley's face was peculiarly discouraging.

"Mr. Fortescue has asked me to ride over to the fair at Clovernook, Bradley, and I thought perhaps your highness might be induced to join us. I can mount you tolerably well already, and as the fair is a horse and cattle show, you will have an opportunity to select a steed for yourself. The stables are not half filled, and you can indulge your taste in horses to almost any extent, and oblige me at the same time."

Bradley grew as cold and rigid as stone. "No, I thank you," said he hastily; "I do not care for horse exercise, and you will excuse me from accompanying you to Clovernook, as you already have an escort."

Bradley's tone was like sleet beating on her face. A vista strange and bleak and desolate seemed to open for a moment before the young girl's eyes. She felt hot tears burning against her lids, but she nerved herself instantly. "I suppose it is your absurd prejudice against Charley Fortescue. You disapprove my knowing him."

"I have no prejudice against Fortescue, Winnifred. He does not interest me; but if you like his society, there is no reason why you should not enjoy it. Be assured I shall never attempt to interfere with your friendships."

An unreasonable feeling of indignation came to sustain the girl, as often happened. "You want to exhibit your lofty pride and wise prudence to show me that you will take no favors from my hand. As I do not care to have mine go begging, I will not intrude them again."

"Yes, I will ask one favor of you, Winnifred," and his whole manner changed and softened. "It may make you angry, I presume it will, but I shall do it because it is right."

"What is it you will deign to ask of me, Bradley?" looking up at him with surprise.

"I will ask you to treat your mother with more consideration—to give her the place she is entitled to by age and circumstances."

A fiery, red tide suffused Winnifred's face. "It is just what I have expected," she cried, with bitter scorn; "you have espoused mamma's cause, and taken sides against me. Now I suppose you will ask to have that disgusting, dirty old priest let into the house, though mamma knows she can have the carriage to go to chapel whenever she chooses. You will not interfere with my friendships, but you will come and preach to me about my duties and obli-

gations, and I shall tell you plainly that I hate preaching and canting."

"It would seem that a daughter's heart would teach her all she ought to feel toward a mother," he said in a low voice, "without forcing upon any one such a disagreeable and thankless task."

"Yes, of course," returned Winnifred resentfully; "you think me hard and unnatural and monstrous, but I cannot help it. That old priest shall not darken this door. I gave papa my word for it, and I will keep it."

Bradley turned upon his heel and walked off without another word, and that same morning when Winnifred rode away to Clovernook Fair, she almost hated herself. A sense of personal loathing had come over her, mingled with burning indignation toward Bradley. She knew she was right, but the world had changed and grown perverse and hard and unlovely. The old buoyant, brilliant consciousness of life and power was clouded over; but a sharp canter of several miles and a great deal of high-spirited, soulless banter poured out on Charley Fortescue would surely set her up again.

The October day was mild and still as it drew toward noon, with a golden haze netting up fields and farms and woods and waters in a symphony of exquisite color. Bradley wandered along the lakeside and started up a partridge now and then from the cover. By circling nearly the whole sheet, he came to the north end, and was soon clambering up the high bank in among the dark Druidical pine trees, where he wandered about for a time over the pale red needles, and at last emerged at a point where Finster's cottage was visible, and seated himself on a mossy log. The voices of the children playing around the door came softened to his ear, and he idly watched the ducks making circles in the water near where the fisherman's boat was drawn up on the sand.

Long time he watched and waited, for Bradley had great capacity of patience in him, until at last the cottage appeared to exercise an attractive power he could not resist, and slowly descending the bank, he came to a little unfenced cabbage patch. The place was only one room high on that side, where a window stood partly open. Bradley approached and peeped through the light screen of withering morning glories and scarlet runners that shaded it, and there he saw this picture: Virginia sat by a low cot with her hat off, and her golden hair making a dim glory in the shady room. She was reading to the sick child, a freckle-faced, sandy-headed lad of eight or nine. The boy's little brown fist was clasped in her hand, and the story was in French, which she turned into English as she went along. The child's eyes, large from illness, devoured her face, and now and then he broke into a weak, gurgling laugh, for the tale was a merry one.

Bradley watched this scene for some instants, and then gently shook the sash and spoke her name. Virginia raised her head. She could not see him through the screen of leaves, but she knew his voice, and it thrilled through her. She put down the book and went to the window.

"You look worn and pale, and the air of that little den is stifling. Do come out and let me row you round the lake in Finster's boat; I want to speak with you."

"Where is mademoiselle, your cousin?"

"She has gone to Clovernook Fair with Fortescue. Do come out," he pleaded in a whisper.

Virginia went slowly back to the cot, stooped down and spoke to the sick boy, and kissed his freckled face. Then she tied on her hat, and another moment was embarking in Finster's boat with Bradley Halcourt.

"I'm glad you're going to give her a mouthful of fresh air," said the slatternly, easy-going Mrs. Finster with her heavy baby hanging on her shoulder like a bag of beans. "She's stuck to little Jake as if he was her own; beats all how he dotes on her. If the child gets well, it will be her party face as has cured him, and not the doctor stuff."

Bradley pushed off into the middle of the calm lake. He had seated Virginia in the stern so that she could not avoid meeting his glance when she raised her eyes. He knew not what he meant to do or say, for he seemed carried along by an irresistible tide. For some moments nothing was heard but the light splash of the oars, but at last Bradley spoke in rather a constrained tone of voice.

"Did you tell me, Miss Duval, that you wish the search for your uncle definitively abandoned?"

"Yes," said she, with a little shudder; "he is dead to me."

"I have been surprised," returned Bradley, assuming a cold air of grievance that seemed to fortify him, "to see that you evidently wish to avoid me."

"O, monsieur!" in a low, pleading tone of remonstrance.

"Yes," said Bradley, not daring to look at her for fear his coldness would melt, "there is some mystery enveloping you; something is troubling or perplexing your mind. I dared once to hope that I might win the right to a little more frankness—the right to help you if it lay in my power."

"Monsieur does not trust me," she said, with a low

half sob; "he has suspicions like madame. I do not wonder, for monsieur has been all kindness, all goodness. It is monstrous in me to seem ungrateful."

"I have no suspicions," he exclaimed, dropping the oar, now. "I do trust you, Virginia, with all my heart and soul, but will you give me the right to ask one question: Is it true there are thoughts of—of marriage between you and Mr. Swayne?"

She gave a little cry of surprise, and clasped her hands. "Marriage between me and Mr. Swayne! Monsieur must know, he must surely have seen, that the poor young man has a hopeless passion for mademoiselle. You are betrothed to her, and you have no cause for anxiety. She is a glorious being, monsieur. I know that her heart is noble and true, and I have reason to worship the ground where she walks."

Bradley sat with his face quite pale, a troubled gleam in his eyes, and his arms hanging at his side, for he had let the boat drift as it would. "If what you say is true," he returned, "things are more inextricably tangled up than I had supposed. But I cannot think of my cousin now. I am mad, perhaps, Virginia. I am out of my senses, but I must speak. It has made me desperate and reckless to see you suffer. I have not slept, and am not myself. But why should I keep up this miserable mockery and pretense, when I know now that I love you better than life?"

Virginia gave a low, despairing moan, and covered her face with her hands. "O, monsieur," she sobbed brokenly, "you do not respect me, and I have revered you as a superior being far, far above me; but you have forgotten your honor or my helpless and dependent state, else you could not speak thus, knowing what I owe to my generous, kind friend, who has so loved and trusted in me."

Bradley was bowed down to the depths of contrition by the sight of her grief. He went over to her and knelt before her, and took one of her cold, small hands in his. "O, forgive me," he cried. "Do not misjudge me so cruelly. I do reverence you like a saint in heaven. No wonder you are shocked, for my conduct has seemed weak and strange and inconsistent and unmanly. I was led to make a wicked promise to my mother before I knew the strength of my feeling toward you. But the tie that binds me to my cousin is only a business arrangement—a matter of expediency, of convenience and cursed family pride. I will break it, and follow the dictates of my own heart."

"You do not know the truth, monsieur," said she, raising her head with the tears streaming over her pale cheeks. "Your cousin loves you, though, perhaps, unconsciously."

"God forbid," said Bradley, with an incredulous smile. "That is a strange delusion of your's, Virginia; she loves only her own way and the power to rule."

Virginia shook her head mournfully, and gently withdrew her hand. "Monsieur is noble; he will put by this delirium and let me land here in the little cove, and forget all that has passed in this mad hour. I am going away, for I have only done harm in this place. I am going back to the good pastor Viardot at Geneva. I put myself under your protection while I remain, monsieur. Do not let them think me a mere adventuress. Do not let your cousin believe herself deceived and wronged by me, and that I have returned evil for her good. O, monsieur, I beseech you save me from every breath of suspicion and reproach."

"Wherever you go," said Bradley doggedly, "I shall follow, unless you tell me distinctly that you do not love me. You will draw me to you by an irresistible attraction."

She put her hands again over her eyes and began to tremble. "O, have mercy, monsieur; be not pitiless!"

He had possessed himself of one of her hands again, and covered it with kisses. "You do love me, Virginia; I know it now. I will obey you like a dog, and never pain you again."

"You will be docile if I tell you we must part forever," she whispered.

"O, my God, Virginia," he groaned, "these are hard words. Do not give me over to despair. I will do nothing unworthy of you or of myself, nothing to pain or trouble you. But trust me, believe in me, my love. If we belong to each other, who shall part us? Virginia, I saw you stoop and kiss that boy in the cottage. I would give five years of my life for a touch of your lips."

Virginia's face was pale; she did not blush at his words. Her eyes had a depth of solemn meaning as she said, "It will be the first and last time." And just as the keel of the boat grated on the sand of the little cove, Bradley folded her in his arms.

(To be continued.)

#### LOST.

Somewhere between sunrise and sunset,  
Two golden hours,  
Each set with sixty diamond minutes;  
No reward is offered  
As they are lost forever.

AND SUMMER FLOWERING BULBS.

W. C. Wilson & Co. have taken great pains in putting up the following collections, and they guarantee them to be in every respect as represented. These collections are made up of the choicest Seeds and Bulbs, and must not be confounded with miserable trash offered at a mere nothing.

**FLOWER SEEDS**—25 packets of the choicest sorts for \$1. This collection includes Balsams, Pansies, Phlox, Cyclamens, Hollyhock, Petunia, Penstemon, Salvia, Zinnias, Verbenas, etc.  
**GLADIOLUS**—12 New Seedlings, extra choice, \$1.50 per doz.; 12 New Seedlings, 2d quality, \$1 per doz.; 12 Mixed Sorts, Large Bulbs, 75c. per doz.; 12 Mixed Sorts, 2d size, 50c.

**DOUBLE TUBEROSES**—12 Extra Large Bulbs, \$1.50; 12, 2d size, \$1; 12, 3d size, 75c.

**W. C. WILSON & CO.,**  
45 West 14th St., New York.

**\$55 & \$77** a Week to Agents, \$10 outfit FREE.  
P. O. VICKERY, Augusta, Maine.  
Plants, Spring Lists free. F. K. Trees, PHOENIX, Bloomington Nursery, Ill.

**25** Elegant Cards 20 styles, with name, 10c., post-paid. Geo. I. REED & Co., Nassau N. Y.

## TREES

We offer for Spring of 1877, the largest and most complete stock in the U. S., of  
**Fruit Trees, Standard and Dwarf, Ornamental Trees & Shrubs, deciduous and evergreen.**

Roses a specialty—all the finest sorts.  
**Green and Hot-House Plants, including best Novelties.**

Descriptive and Illustrated priced Catalogues sent prepaid to customers, free, to others, on receipt of stamps, as follows:

No. 1. Fruits, with colored plate, 15c.; plain, 10c.  
No. 2. Ornamental Trees, colored plate, 25c.; plain, 15c.  
No. 3. Greenhouse, Free. No. 4. Wholesale, Free. No. 5. List of New Roses, Free.

Small parcels forwarded by mail when desired. Address,

**ELLWANGER & BARRY,** Rochester, N. Y.

**JOHN SAUL'S**  
Catalogue of New, Rare, and Beautiful Plants,  
WILL BE READY IN FEBRUARY, WITH A COLORED PLATE OF THE

**NEW STRIPED ROSE,**  
BEAUTY OF GLAZENWOOD.

"A Rose of golden-yellow, striped and flaked with scarlet or vermillion, sounds like a dream or a fairy tale; it is, nevertheless, a reality."—H. CURTIS, in *The Garden*.

Free to all my customers, to others, price 10c., or a plain copy free.

**Washington City, D. C.**

**DREER'S GARDEN SEEDS**  
ALWAYS FRESH & RELIABLE.

**1877 DREER'S GARDEN CALENDAR, 1877**  
Contains descriptive and price list of Vegetable, Flower and Grass Seeds, Plants, Bulbs, Novelties, and every GARDEN REQUISITE. Beautifully illustrated, containing 192 pages. Send 2 or 3 ct. stamps for postage. **HENRY A. DREER,** 714 Chestnut Street, Philadelphia.

**TREES**  
500,000 Fruit, 250,000 Evergreens, 500,000 Greenhouse, Bedding Plants, &c.  
Three Catalogues free. 234 year. 400 Acres. 13 Greenhouses.  
**STORRS, HARRISON & CO.,** Painesville, Lake Co., Ohio.

## ROSES

PER MAIL.

We offer from our list comprising over 500 varieties, 10,000 well rooted young roses, ready for spring planting.

Our selection, \$1.50 per doz. \$8.00 per 100.

Buyers' selection, \$2.00 per doz. \$10.00 per 100.

If ordered by the 100, must be sent by express or freight (too heavy for mailing.)

Catalogue sent on receipt of 3c. postage stamp.

—MILLER & HAYES,  
MOUNT AIRY NURSERIES, Philadelphia, Pa.

**\$66** a week in your own town. Terms and \$5 outfit free. H. HALLETT & Co., Portland, Maine.

**YOUR NAME PRINTED ON 40 Mixed Cards** for 10c. STEVENS BROS., Northford, Conn.

**VINEGAR.** How made in 10 hours from Cider, Wine or Sorghum without using drugs. Name paper and address F. I. SAGE, Springfield, Mass.

**Use Corticelli Silk!**  
IT IS THE BEST.

**SEEDS FREE**—Six sample packets Farm Seeds for two 8c. stamps. Our 1877 Combined Catalogue of *Reliable Seeds*, Plants, and Blooded Stock mailed free. Benson & Purpee's Seed Warehouse, Phila.

**FOR \$5.00 I WILL SEND FREE**  
12 Monthly Roses, pot-grown bloom this summer; 12 Verbenas, assorted colors; 12 Geraniums, assorted colors; 12 Foliage Plants, assorted colors. One-half of the above, \$3.00.  
**B. P. CRITCHELL,** Cincinnati, O.

**FUN** 1 pack acquaintance cards, 1 pack hdkf flirtation, 1 pack scroll, all 3 sent for only 10c. & stp. Fun Card Co. Middleboro, Mass.

## COLGATE & CO.'S VIOLET TOILET WATER.

My annual Catalogue of Vegetable and Flower Seed for 1877 will be ready by January, and sent free to all who apply. Customers of last season need not write for it. I offer one of the largest collections of vegetable seed ever sent out by any seed house in America, a large portion of which were grown on my six seed farms. Printed directions for cultivation on every package. All seed sold from my establishment warranted to be both fresh and true to name; so far, that should it prove otherwise I will refund the order gratis. As the original introducer of the Hubbard and Marblehead Squashes, the Marblehead Cabbages, and a score of other new vegetables, I invite the patronage of all who are anxious to have their seed fresh, true, and of the very best strain. New Vegetables a specialty.

**JAMES J. H. GREGORY,** Marblehead, Mass.

**ROSES** Fine ever-blooming and other Roses sent by mail post-paid everywhere, and their safe arrival guaranteed. 6 for \$1; 14 for \$2; 30 for \$4. Purchaser's choice of nearly 600 varieties of Roses and other plants, carefully labeled. Fine Premium Rose with each package when 10 cents are added. Catalogue free. Address **JOS. T. PHILLIPS & SON,** West Grove, Chester Co., Pa.

**MISFIT CARPETS.**

ENGLISH BRUSSELS, THREE-PLY, AND INGRAIN, very cheap, at the old place,  
**112 Fulton Street, New York.**

Send for a price-list. **J. A. BENDALL.**

**\$12** a day at home. Agents wanted. Outfit and terms free. **TRUE & CO.,** Augusta, Maine.

**Fresh Choice Flower Seeds.**

We send by mail postage free, on receipt of the money, as follows:

5 fine varieties in separate papers for . . . \$0 25  
10 " " " " " " . . . . . 50  
25 " " " " " " . . . . . 1.00

Each package has printed directions how to grow. These seeds are all of our own importation, and carefully selected. In ordering, state P. O. address plainly, with County and State.

**AUGUST RÖLKER & SONS,**  
P. O. Box 899 32 READE ST., NEW YORK

Plants, etc., sent safely by mail 2000 miles, postage free; 12 Roses, \$1.00, 20 Verbenas, \$1.00, 15 Baskets of Bedding Plants, \$1.00, 10 Geraniums, \$1.00. A 76-page Catalogue, free. 100 other things, cheap. Also, all sorts of Fruit and Ornamental Trees, Shrubs, etc. A 64-page Catalogue, free. 234 year. 400 acres. 13 greenhouses.  
**STORRS, HARRISON & CO.,** Painesville, Lake Co., Ohio.

**Aster, Zinnia, Pink, Phlox, Pansy.**  
Packets of each of these very choicest seeds mailed to new customers for trial for only 10c. and stamp. Catalogue free. Send for it. Prices moderate, packets large, quality unexcelled. A trial will prove. Address E. WYMAN, JR. Florist, ROCKFORD, ILL.

**White Water Lilies.**  
(NYMPHIA ODORATA.)

I will send roots bearing these beautiful and fragrant flowers to any address postpaid, with instructions to grow them, for 25c. each, or \$2.50 per dozen. They can be grown in ponds or tubs.

Address **B. K. LANGWORTHY,**  
Rockville, Wash. Co., R. I.

**ONLY THE BEST,**

**CARSON'S COMPLETE COLLECTION OF CHOICE VEGETABLE SEEDS, \$5.**

12 Varieties of  
**SELECT FLOWER SEEDS, 50 cts.,**  
25 Varieties for \$1.00.

Send Postage Stamp for my illustrated Catalogue, and Guide to the Vegetable and Flower Garden.

**WM. H. CARSON,**  
125 CHAMBERS ST., N. Y.  
(Late of Peter Henderson & Co.)

## BRIGHTON GRAPE VINES

This new variety has proved a very strong grower, and perfectly hardy. Fruit ripens just before the Delaware; is double the size, and fully equal in quality for table use. It is as great an acquisition to our list of Grapes as the Concord was to varieties previously grown. I offer strong plants, propagated from the original vine owned by me, postpaid, by mail, or to the trade in quantities. Send for a Circular. **H. E. HOOKER,**  
Hooker Nurseries, Rochester, N. Y.

**POND LILIES AT HOME.**

**READER,** if you want, this coming summer, a tub of aquatic flowers like the above engraving beautiful and fragrant as the rose, easy to grow, send \$2 to my address and I will forward you free of charge, one-half doz. strong blooming roots of *Nympha odorata* White Water Lilies and two roots of *Pontederia Cordata* with instructions for growing them in ponds, tubs or aquariums. Single roots 35 cents each. Will send roots as soon as weather will permit. Please mention this paper.

**J. E. S. CRANDALL,**  
Rockville, Washington Co., R. I.  
P. O. money orders may be sent to Westerly, R. I.

**THE DINGEE & CONARD CO'S**  
BEAUTIFUL EVER-BLOOMING

## ROSES

**Strong Pot Plants,** suitable for immediate flowering, sent safely by mail, postpaid. 5 splendid varieties, your choice, all labeled, for \$1; 12 for \$2; 19 for \$3; 26 for \$4; 35 for \$5. For 10 cents each additional, one **Magnificent Premium Rose** to every dollar's worth ordered. Send for our **NEW GUIDE TO ROSE CULTURE**, and choose from over 300 finest sorts. We make Roses a **Great Specialty**, and are the largest Rose-growers in America. Refer to 100,000 customers in the United States and Canada. **THE DINGEE & CONARD CO.,** ROSE GROWERS, West Grove, Chester Co., Pa.

**A NEW DEPARTURE. TRAVELING**  
men wanted. STAPLE GOODS. NO PEDDLING. Salary \$75 a month. Hotel and traveling expenses paid. S. A. GRANT & CO., manufacturers of ENVELOPES and PAPER, 2, 4, 6, and 8 Home St., CINCINNATI, OHIO.

NEW YORK, APRIL, 1877.

## FLORAL DECORATIONS.

The illustration represented upon the first page is a floral arrangement which is often used at an occasion of a French party, for hiding a doorway or large fireplace. Tall panels filled with mirrors are placed in such situations. At the base is a marble slab; and within the fender are grouped varying collections of plants in bloom. The mode of arrangement is as follows: A double row is necessary, the taller plants standing at the back, as indicated by the uneven numbers, the lower ones being placed between each of the large flower-pots. Roses, Arum Lilies, beautiful tree Ferns, Marantas, and Azaleas, are used to form the background, the tallest and most erect being placed in the centre, and the most sweeping away at the end.

1 3 5 7 9 11  
2 4 6 8 10

For edging, nothing is so pretty as the *Isolepis gracilis*, a little hanging grass, which grows naturally and in extreme profusion. For grouping amidst the grass, low-growing ferns are chosen. Such flowers as Lilies of the Valley, blue Lobelias, double Violets, Forget-me-nots, white Anemone, and Campanulas, both white and blue. For training up the sides, use Passion flower vine, a honeysuckle, or the hop vine. The design on first page is only slight indication of possible achievements. In the back are tall Lilies, Penstemons; in front, Geraniums, Deutzias, Violets, etc. A suite of rooms was so well decorated with this plan of floral arrangements that it seemed double in size, and another suite, a perfect counterpart, appeared to extend on beyond. One of the immense pier-glasses, so much used abroad, was placed so as to occupy the end of the

drawing-room; at each side of this were tall thickets of shrubs and flowers, filling up the interstices between it and the walls. These thickets of shrubs came down in the segment of a circle at the base, so that the effect was perfect of another room, separated only by a mass of most lovely flowers.

Upon this page is a sketch of a Fender Basket. The front is constructed of wicker work. A zinc or tin tray is made so as to fit the basket. The ends rise slightly; the centre should be quite low. The fire-place is fitted with a mirror which reaches from the floor to the mantel. The fender basket, or tray, is filled with a mass of moss, arranged to form a soft swelling bank, rising very gradually. Either a heap of moss, or a mass of sand or cocoanut fibre, can be used to fill up the tin tray all around the flower pots, and the interstices between. The illustration shows Callas, Fuchsias, Begonias, as the principal plants; but to these might be easily added Palms, Acacias, Roses, and large ferns, if the fender basket is of sufficient width. All these form ideas upon which those fond of floral decorations can build and construct to ornament their fire-places, their mantels, mirrors, and doorways between rooms and niches and bay windows. If the zinc tray is properly made of sufficient depth, it can be filled with earth and sand, covered with moss, and the plants grow therein without pots.

Upon page 57 is an illustration of a beautiful combined aquarium and plant case. Suitable rock work is provided within, and cemented together. At the sides, corners and back are planted lovely plants and grasses which will grow in moist places. The plants most suitable for this purpose are the following: Vallisnerias, Anacharis, Charas, the pigmy-blossomed Water Lily, the hawthorn-scented Aponogeton distachyon, fresh green disk-shaped sheath-rooted Duck Weed, pontederia crassipes, the hollow petioles of which are smaller, and filled with air. The only earth necessary is

A FENDER BASKET.

fibrous peat, and fresh living sphagnum, or moss. In the aquarium can be placed lizards, golden trout, frogs, and a multitude of other fish or water inhabitants. While flitting from branch to flower overhead may be butterflies and birds. The aquarium and plant case is very large, at least six to eight feet long and wide, and ten feet high.

## PUBLISHER'S ANNOUNCEMENTS.

**Fire, Snow, Post Office.**—Within the past three months a combination of fire in our office, a missing bag of papers delivered to the post office, and the extraordinary delays occasioned by snows, and mails (often days and weeks behind), have utterly prevented exact promptness in filling orders. We usually are able to fill every order within forty-eight hours, but must confess, in such a combination of circumstances, our readers must exercise charity. In January, letters from our subscribers were two weeks in reaching us—and even in case we filled the order the day received, still the blockaded condition of the railroads made another delay of two weeks in delivering papers to subscribers. Our office, also, within the past month, was burned with a serious fire, and created serious interference. Also a bag of mail matter to subscribers was sent to the post office, which must have been lost, for we cannot otherwise explain delay of some in receiving their January No. But all difficulties have been overcome, and everything now is again "on time."

**Steel Plate Engraving, "The Home of Washington."**—We have the past month become possessors of the plate and copyright of this splendid and expensive Steel Plate Engraving. The cost of it, together with the original oil painting, has been \$8,000. Wishing all the subscribers of the FLORAL CABINET to have a copy of it, as it is really a gem of art, we will present a copy to every one now a subscriber, who will enclose to us the certificate printed upon our first page cover, before July 1st, and also remit 50 cents. This sum hardly pays expense and labor of forwarding; as all our subscribers know that we never offer a poor article, and in almost every case the *real worth* is from *two to ten times the sum we ask*, we feel sure our announcement of the privilege of obtaining a copy of "The Home of Washington" will attract confidence and attention. We guarantee perfect copies, printed directly by hand from the plate, equal in all respects to the best \$25 engraving sold in this city. And if any one does not find it a "real treasure," we will refund the money. Any one who, at this time, is a subscriber to any of our papers, for any length of time, or has been in the past a purchaser of any of our books, etc., has the privilege of procuring a copy.

**Chromo, "Gems of the Flower Garden."**—All editions of this are exhausted, and we cannot supply if any more. Subscribers will therefore be supplied instead with "My Window Garden"; or, "The Easter Cross," a new and most beautiful cross of flowers.

**Renew, Renew.**—Many thousand subscriptions expire with this number. Renew! Renew!!

**Only One Dollar.**—All the rest of this year's numbers, April to December, will be sent for only one dollar, this including also the steel plate engraving, "The Glee Maiden," worth alone \$1.00.

**Get up Clubs.**—To any one who will get up clubs for us this Spring, will be given these commissions towards your own paper free.

To every dollar subscription, we will allow 15 cents, or to every subscription at \$1.30, we will allow 20 cents, to be applied towards your own paper free, or any book we offer in our list. These commissions are not cash, but trade towards your own paper or book.

A club of 7 will get you your paper one year; a club of three will pay for nearly six months, but every name you get besides your own, counts in your favor and reduces the cost of your own paper.

## MAGNIFICENT NEW FLORAL PREMIUMS.

**"The Floral Cabinet" Collection of New Seedling Gladiolus.**—This is a new collection, never before offered, grown exclusively for us, which consists of twelve flowering bulbs of Gladiolus, one of the finest quality and most exquisite variety of colors. The quality of this collection is unequalled, and in every respect, we can safely guarantee them extra choice. The same quality of named varieties of Gladiolus, obtained of reliable seedsmen, would cost \$12. The colors range from the most fiery scarlet to the purest white.

**OFFER No. 1.**—This collection, worth \$12, will be given free to any person who will raise a club of 15 subscribers to the FLORAL CABINET at \$1.30, and also an extra copy of paper 1 year, free to agent.

**OFFER No. 2.**—To any one who will get up a club of 20 subscribers at \$1.30 we will give sufficient bulbs that the members of the club may have each 1 bulb worth \$1, and the club agent the entire set of 12, also with extra copy of paper free 1 year.

**OFFER No. 3.**—One subscription at \$3, will give subscriber the CABINET 1 year and collection free, all worth \$15.

This collection is not for sale by any seed house, and cannot be obtained at any other place, and all are new seedling varieties just originated.

**The Floral Cabinet Collection of Balsams.**—This comprises the best strains of Camellia-flowered Balsams ever offered. The Balsam is a great favorite with the ladies. This collection is the very cream of the extra choicest sorts ever raised. Its value may be judged when the seedsmen have offered 10 cents a seed for all that can be spared. We know there is nothing in Europe or America to equal them. The collection consists of 6 packets, pure white, deep, rich purple, brilliant scarlet, crimson spotted, velvet violet spotted, and carnation striped. The flowers are so large and perfect as to be almost equal to roses. The set is worth \$1.50 at least, and can be obtained only on the following terms:

**No. 1.**—A club of 10 subscribers to FLORAL CABINET, at \$1.30, will entitle club agent to 1 set of above packets, \$1.50, and 1 extra copy of CABINET and engraving free.

**No. 2.**—A subscription of \$2 to CABINET will entitle subscriber to the paper and collection in addition.

**No. 3.**—A club of 4 subscribers at \$1.30 will entitle agent to the collection free, as a premium.

**No. 4.**—A club of 20 subscribers, at \$1.30 each, will entitle club agent to enough packets to present each member of the club with the collection, worth \$1.50, also the CABINET and engraving 1 year, all together worth \$3.80, and the club agent to extra set of paper, engraving, and collection free.

The supply is limited, and those who desire them will do well to get clubs in as soon as possible.

The collections of balsams and Gladiolus are named specially after the FLORAL CABINET, and we are very cautious never to send out anything but just as represented. The good name and fame, and honor of the CABINET is the best endorsement of these new floral collections, which are of extraordinary value.

### BIRD HOUSES.

Birds appreciate houses and other artificial shelter, and will usually accept any accommodations we may provide for them; but they have their preferences, and while perfectly indifferent to the fashion and beauty of their habitations, they naturally seek for retirement and secrecy. Consequently, a dilapidated stove-pipe hat, with a hole in the top and nailed against a retired wall, will be more readily occupied than the most wonderfully-carved and highly-colored pagoda perched prominently on a pole. The less conspicuous bird houses are, the better; all elaborate, gaudy affairs in imitation of temples and other buildings are to be condemned, both as unsuitable and as contrary to good taste.

The most artistic bird houses are of rustic construction. A strong, rain-proof box of rough boards serves as a foundation. The size and shape of the box is simply a matter of taste and convenience, but it must be provided with a roof. Shed and gable roofs are most easily made, but curved or gambrel, and hip or four-sided roofs are more fanciful. The floor of the house should project an inch or two beyond the walls, making a sort of step or perch. Two round or oval holes two inches in diameter must be made for doors, and the house is ready to be covered with strips of bark or of some straight splitting wood nailed on. The "rustic" appearance is further increased by nailing on crooked twigs or roots. A very beautiful house could be made by covering it with pieces of bark from which bits of grayish-green dry moss are growing, and adding tufts of the same kind of moss here and there. In fact, any kind of rustic work used for hanging baskets is suitable for bird houses. An ordinary paint-keg, stood on end with a hole in the side, and a gable roof, makes a very good house. It can be painted, or covered with bark and twigs.

To make a nice martin house, take two soap-boxes, and put two cross partitions in each, dividing each box into four rooms. Nail one of the boxes on a board of sufficient size to allow a two-inch projection all around.

Prepare the other box in the same manner, and nail its bottom to the top of the other box. Put a piece on each side of the house to fit it properly for the roof, and with two boards make a gable roof. Furnish each room with a two-inch door, and the house is complete, except the outdoor finish. Paint a deep brown or slate, or sand it over with clean, dark sand, or cover it in rustic style.

Old tin pans, nailed against the walls of out-build-

they be mounted on poles, fastened against walls, or suspended from limbs of trees. MRS. M. F. A.

### STATUARY TRANSPARENCY.

A beautiful and striking statuary transparency that I recently saw hanging in a parlor window is different from anything I have noticed described in the CABINET. The method of preparing it is quite simple, but calls for tolerable skill in drawing.

Wash a piece of ground glass clean with soap and water, rinse thoroughly and dry with a towel. Fix it firmly in some way convenient for drawing, and clearly trace the outlines of a group of statuary on the ground side. If expert at drawing you may design your own group, or copy from some good model, directly on the glass. If not sufficiently skilled for this, place a wood-cut, photograph, or drawing on the smooth side of the glass, with the face of the picture next to the glass. The picture will show through distinctly, and the outlines can be easily traced correctly. Shade carefully with soft drawing pencils, and touch the high lights with pure mastic varnish, and if there is anything of the artist in your nature, you will be able to produce the true statuary effect. When finished satisfactorily, fill in the groundwork of the glass with opaque black, either water colors or oil, or with any of the transparent oil colors. Prussian blue, crimson or scarlet lake, or purple (by mixing crimson lake with Prussian blue). Exercise the greatest care when applying the color around the edges of the picture that the sharp, clear outline may not be disturbed. When dry, take a piece of plain glass of the same size and place it over the painted side, and bind

the two together by gumming narrow strips of paper or ribbon over the edges. MRS. M. F. ADKINSON.

In washing windows, a narrow-bladed wooden knife, sharply pointed, will take out the dust that hardens in the corners of the sash. Dry whiting will polish the glass, which should first be washed with weak black tea mixed with a little alcohol.

AQUARIUM AND PLANT CASE.

ings and painted brown, are not disdained by the birds for housekeeping purposes. Large sized tin fruit-cans, placed on the side and securely held in place by wires or other means, are also acceptable. Care must be taken not to put tin houses where the sun's ray will strike them long, as the reflection will make it too hot for the birdlings. Attention must also be given to placing the bird houses out of the reach of cats, whether

## Ladies' Boudoir.

## MY COZY ROOM.

"O, May, what a cosy room," said my friend Stella Moore, as I led her to my own special sanetum, on the occasion of her first visit to me.

We had been room-mates at a celebrated seminary, and had left school just one year before this time. Our situations in life were very different. She was the only daughter of a wealthy city merchant, while I was the child of a country physician, and had numerous brothers and sisters. Although we were intimate friends, it was with some misgivings that I invited her to spend a few weeks of the summer with me, for my home, though pleasant, was plainly furnished. I wished much to have my own room pretty and cosy, and lay wondering many a night how to accomplish it. At last a plan came to me, and only confiding it to my mother, I set about it, and now, as it is all complete, perhaps some of the readers of the CABINET would like to have a description of it.

It contained two large windows; it was a few feet longer than it was wide, and there were two doors. My first move was to purchase a white straw matting for the floor; next I papered the walls with pretty gilt paper, touching the top with a blue and gold border. At my window I hung plain, full white muslin curtains, looping them back with blue ribbons, and hanging over them lambrequins of delicate blue chintz. Then came a bold move. I went to a furniture dealers and purchased an unpainted bedstead, dressing-case, commode, two chairs, and a rocking-chair; at a paint-shop I bought some very delicate blue paint, and by dint of much patience, painted and varnished my set myself. When perfectly dry, I relieved its very blue look by ornamenting it with lovely landscapes in decalcomanie. So far, very well; but I needed a table and two more chairs. In the attic I found an old stand with two drawers, just the thing for my purpose, but it was a woeful sight. I, however, with soap and water and sand-paper, washed and rubbed off much of the dirt and old paint. I then applied several coats of my blue paint, and with a cloth of blue flannel pinked around the edges, and braided with gold braid—behold a charming stand. On this I placed my writing-desk, my albums, and my few choice books. For my chairs, a barrel with the top sawed off, so as to form an easy back, and nicely cushioned and stuffed, made a comfortable seat, and when covered with chintz to match my lambrequins, was very pleasing to the eye. For the other, I got an unpainted camp-stool, painted it blue, and an old bit of tapestry carpeting, nailed on with brass nails, did admirably for a seat.

Thus my principal furniture was complete. Now for the ornaments. I took two pieces of wood about two inches thick and circular shape, put a broom-handle through the centre of each piece about two and a half feet apart; I covered it with chintz and tied a band of blue ribbon round the belt. Around its top were pockets of the chintz, with blue bows, and on it stood my basket of work. Over my commode I hung a curtain of white rubber cloth, piuked round the edges, and ornamented in the centre and each of the four corners, with sprays of flowers and grasses in decalcomanie. The commode was covered with a white cloth, and mats, crocheted in cotton yarn over lamp-wicking, were under the bowl and pitcher. Two small mats of the same were on the small shelves. Under the mantel stood a box covered with chintz; its

cover was put on with hinges, a broad knife-plaited ruffle finished the edge. This was a pleasant seat, being nicely stuffed, and also a convenient receptacle for soiled clothes. The mantle itself was a piece of plain board painted blue, and set on iron brackets. Around this hung a curtain of Java canvas, white, on which was worked a broad, handsome pattern with the shades of blue worsted; its edge was a shaded blue fringe. On the mantel stood two hollow wood frames (sawed by myself with a friend's bracket saw), holding photographs of two friends. These frames rested on two rose mats made of blue and white split zephyr. In the centre was a Parian vase filled with autumn leaves made in wax. Over this hung a picture of Evangeline in a gilt frame, which no one would guess was very much worn, for it was covered with straw-colored tarlatan prettily falled over it. My dressing-case held a toilet set of white honeycomb canvas, worked with blue worsted in Grecian pattern, and consisting of a large mat, two small ones, and a cushion. A handkerchief box, made of pieces of glass, cut to fit each other, and bound together with narrow blue ribbon, a hair-pin basket, long and narrow. A hair receiver of silver paper, embroidered with blue floss, and lined with blue silk, hung from one knob, and from the other a watch-case of blue velvet embroidered with a raised pattern of beads. My pretty trinkets, gifts of friends, were scattered around, with here and there a picture; most of them drawings or paintings of my own. Several brackets were fastened on the walls; one bore a cross of wax twined with ivy, another sea-shells and moss. Hassoeks made of odds and ends of silk and worsted goods pieced together, offered easy resting places for the tired feet. The straw matting was relieved by mats made from old coffee-bags, and worked in various patterns suitable for canvas with bright colored Germantown wools.

ELLEN C. WRIGHT.

## MY GUEST CHAMBER.

A large chamber with three pleasant windows, two looking south and one west, curtained with plain white shades. On the floor a carpet decidedly the worse for wear, hardly a square yard guiltless of a darn, a cot-tage bedstead of dark stained wood, a bureau of ditto, surmounted by a small, dull looking-glass, a wash-stand of the same gloomy color, and three straight cane-seated chairs with one rocking-chair; a table of the hour-glass description, covered with white, and standing at the head of the bed, completed the list of furniture.

This was my guest chamber, which I had just entered. We were poor and could not afford to spend money save for those things which were absolutely needful.

A bad debt, as my husband had always considered it, of fifty dollars, had been paid to him the night before, and he had given me half of it, to do as I pleased.

As a result of my cogitations, I bought a dollar's worth of white paint, into which I stirred a very little lamp-black, making a light French gray. With this I painted all my furniture excepting the bedstead. I wished for a French bedstead, and by going to a manufactory obtained one, unpainted, for four dollars. The man of whom I bought it cautioned me to shellac all the knots in the first place, as otherwise they would make their appearance through the paint. I put on three coats of paint, and no one could have suspected what was underneath. After it was all dry my John took a small paint brush, and after putting more lampblack into the paint, and making it very dark, he drew

lines, straight and curved, where they were necessary to give a finished look.

I had bought a dollar's worth of decalcomanie pictures, groups of flowers, of three sizes. The largest I put on the bedstead, one on the inside of the head-board, two on the foot-board, one inside and one outside, and a medium-sized one on the lower part of the foot-board. On each large bureau drawer I placed a medium-sized picture, and a small one on each small drawer, also one at the top and bottom of the looking-glass. For the wash-stand I used medium-sized, and on the top of each chair a small one. I then varnished all the furniture, and with immense pride regarded my work. It was an experiment, and I had felt so doubtful of success that I had chosen to do it first; now, however, with renewed courage, I set about considering what I could do for the rest of the room. The ceiling was clean and white, so was the paint, and the paper was likewise respectable, being delicate in tint, with an unobtrusive small figure, so I merely got a cheap blue border—I had decided on having a "blue room"—and that part of the work was over.

Twenty yards of white straw matting, at twenty-five cents a yard, made me a carpet. I had once heard of putting wall paper on the floor, giving it one or two coats of varnish after it was down, and was tempted to try that economical arrangement, but refrained, not having much faith in such a carpet.

When bright colors were worn for dresses, I possessed a blue, all-wool delaine of a light and exceedingly bright shade. I had not liked to wear it for years, so it had hung undisturbed in the attic. Now I thought that I saw an opportunity of utilizing it, as there was a good quantity of material in it; so I took it, bought ten yards of curtain lace, which is very wide, for thirty cents a yard, to put over it, and made my lambrequins. I lined them with old white cotton, putting between the lining and delaine thick brown paper, through which the sun could not shine and fade the blue. I made my pillow shams in the same way, finishing them around the edge with a narrow plaiting of tarlatan, as I also did the lambrequins and a splasher for my wash-stand. Next, I got John to make me a rough table, with a frame work at the back four feet high, and rounding over at the top. I covered this plainly with the blue delaine, and over it falled the lace, excepting on the top of the table, where I drew it smoothly across. For two dollars I bought a good-sized looking-glass with a white pine frame, which my husband fastened on the back of the table. I pasted gilt paper nicely over the pine, and arranged the draperies to fall over in such a manner that it looked like a gilt frame—which it surely was! My supply of delaine was exhausted by this time, else I should have liked to make a barrel chair, upholstering it like the toilet table, but I drew consolation from the reflection that lace would hardly make a durable chair covering. I bought, for a dollar and a quarter, a pretty towel rack, a bracket for a dollar, and with another dollar, a pretty little Parian head to put on the bracket. I still had about five dollars left, with which I purchased two photographs and one chromo, unframed, black walnut molding enough for the frames of the photographs and gilt for the chromo. John made the frames himself, and very creditable frames they were too. And now, when I had added a few finishing touches, such as a toilet cushion and mats, hair-pin drum, cornucopia, etc., my work was done, and the room which had been a source of such dissatisfaction to me, had become the pride of my heart, for without a single costly article in it, the effect of the whole was very pleasing.

KATE HILLARD.

## Household Art.

## ONE SITTING-ROOM.

A few weeks since I visited an old schoolmate for the first time since her marriage. She had been in a home of her own some six months, and everything in it had been arranged by her own hands and as her taste dictated. Such a cosy, restful home feeling came over me as I entered the sitting-room. I involuntarily exclaimed, "How beautiful you have made your home!" As I realized how much of its beauty was due to her own labor, I wondered how she ever found the time in which to accomplish so much, and putting my wonderings into the form of a question one day, she replied: "By employing the odd minutes." That answer set me to thinking; and as I staid there day after day the fitness of things impressed me so very much, "the spirit moved" me to tell the CABINET readers about this home. As I can describe only one room now, I have decided that that shall be the living room, and promise at some future time to give you a sight of the rest of the house. I can only hint at its beauties; but I know that hints can be caught up and worked out so as to form many beautiful creations; and thus I may help some house-keeper to be a home-keeper too.

The woodwork of the room was black walnut, and was simply oiled; and just here I cannot refrain from saying that I wish house builders would use in the finishing of rooms those woods which need only to be oiled or stained instead of painted. No paint can give such soft, beautiful shades of colors. My friend had chosen for the walls a plain paper of a delicate shade of drab, and a wide, handsome bordering of gilt and dark, brilliant scarlet. The carpet was one of those lovely all-wools which are now made with vines and flowers scattered over it in no set pattern. The color of the ground was drab, of a shade matching the wall paper, which set off the green of the vines and the pink and scarlet of the buds and roses to perfection. A lounge covered with green terry filled the space between two windows. The chairs were of different patterns and all invited you to rest; while once in them you felt that their looks were a faithful index of their characters. Did you ever realize how very much chairs differ in degree of comfortability? Entering the door from the hall, the first thing to attract notice would be the bright, cheery wood-fire, which sparkled and sent out a warm welcome from an open grate. A broad black walnut shelf, directly above, held various ornaments; in the centre a pure white dove seemed the very embodiment of peace; on one side a tiny vase held small pressed Ferns and Sumac leaves; a large one held *Tradescantia Zebrina*, which drooped over the shelf and lay on it in beautiful gracefulness. On the side were two vases, each large, one filled with *Tradescantia Vulgaris*, the long shoots of which completely enveloped its receptacle and ran riot over and on the shelf; the other held pressed Ferns, autumn leaves and vines, the whole forming a handsome bouquet. Two large butterflies seemed to have just alighted on one of the Ferns a moment to rest themselves. The *Tradescantia* had been growing in moist sand some months and was very thrifty-looking. Suspended from the wall, midway of the space above the shelf, was Vick's chromo, "Winter, indoors and out." The frame was of pine and on the plain surface were glued grapevine tendrils, the whole stained with burnt umber and varnished. Up the cords and around the frame a lovely Madeira vine clustered, which was

growing in a large-mouthed bottle filled with rich earth and suspended from the back of the frame in such a manner as to be entirely concealed from view. One corner of the room held a bracket constructed of dark scarlet velvet cut in the shape of a very large maple leaf, and over it was worked a vine of small leaves done in white glass beads. On this was placed a handsome pot containing a root of English Ivy, the vine having gone two-thirds of the distance round the room, the branches shooting here and there down the cords of some pictures, up those of others, and twined around a few of their frames. It was held in position by very small tacks, and no one would suppose it grew in any way or place other than it pleased. One vine which was used much with ferns and leaves to decorate picture cords I had never seen, and my friend told me to "guess;" but I had to give it up. It was the common running blackberry vine, gathered just after the frost had turned the leaves so many brilliant hues, and pressed carefully and thoroughly with a quite warm flat iron. It was very lovely.

Another corner was filled by a bracket of various colored worsted worked into canvas in such pattern as to form a bouquet of beautiful colored flowers, buds and leaves. This held a wax cross which had leaves and flowers made of feathers falling over the base and twining up the body and over the arms. I think nothing can exceed the airy grace of feather flowers. A third corner was occupied by a black walnut bracket of three shelves, and the two lower and larger of these held the books which were in daily use, while on the small upper shelf was placed a bust of Dickens. Suspended directly over this bracket was an engraving of Longfellow. How fitting that these two, so eminent in fiction and song, should watch and guard over those volumes which did so very much to elevate and purify the taste of their owners!

The remaining corner was rendered beautiful by a bracket made of white bristol board cut in fanciful shape, on which seaweed had been secured in the form of a vine. This shelf supported a quite large branch of red coral, and around that were grouped many handsome sea shells. Above this hung a picture entitled "Noon on the Sea-shore." Whenever my eyes rested on these suggestions of "Old Ocean," how my heart bounded, and pleasant thought came scattering all cares and anxieties!

I liked this idea of filling up the corners of a room, for I found it helps largely towards cosiness. I will say nothing of the lamp-mats and tidies which were in every proper and available place, because everyone knows so well how to fashion beautiful ones, except that all were of dark scarlet color mingled with drab or white. The bay window I must not neglect to mention, for the taste displayed in the arrangement of the curtains, plants, &c., which were therein. The curtains at this window, as well as the other two in the room, were of lace; the cornices were embroidered bands of various colored wools on drab rep, so combined as to form a lovely vine of leaves and rosebuds. The holders were like the the cornices, and the lambrequins of green terry matching the cover of the lounge and some of the chairs in shade. In the centre of the bay window was a low stand supporting an aquarium, in the middle of which rose a stately calla lily, the roots held firmly by sand and a little rich earth. A few sea-shells were grouped together so as to form two little grottoes, and among many small plants, other shells and pretty pebbles were scattered. Among and over all this prettiness darted and played three gold-fishes. On either side of this miniature lake was a small fernery with round base containing

blooming plants and creeping vines. Up the sides of the window were plant brackets of black walnut on which were plants of brilliant foliage.

Directly over the stand hung Birdie's cage, and from the same hook was suspended a basket made of hoopskirt wires and scarlet worsted. Growing in the centre of this was a Mrs. Pollock geranium, clustering around that were five Chinese primroses, all of different colored bloom, while at the edge was coliseum ivy growing so luxuriantly as to cover the supports of the basket and fall over the edge, twining in, out and over the canary's home, thus making for him a perfect bower.

But time and space both failing, I must bring my description to an end, feeling that the half has not been told. However, I cannot refrain from begging some tired and almost homesick housewife to employ a few of her spare moments now and then in beautifying the living-room at least with some of the many pretty things which are costless. I know too well that many people think the time spent in making and arranging these articles is wasted time; but doesn't such help to cultivate a taste for the beautiful wherever found, and thus help the soul to fit itself for the enjoyment of its life after it has gone from the life of earth? If we like not lovely surroundings here, how can we enjoy them there? Then, too, our husbands and children like a cosy, restful room much better than any other place, and I feel sure that they will gladly come to such a home, and that they will prefer no other place to it.

## FOOT MATS.

Cut woolen and flannel pieces of cloth into strips three inches long and half an inch wide. Get a pair of very coarse steel knitting needles and some jute twine—no other will answer—the same that is used in making gunny-sacks, and can always be obtained where they are made, if not at the shops. Set up fifteen stitches on the needles, and knit once across; knit the first stitch on the second row, and between the needles put a piece of the cloth at right angles with the stitch, and knit another stitch; then turn the end of the cloth that points toward you out between the needles, so that the ends will be even, and so on clear across, two stitches for every piece of cloth; then knit across again plain to get back to the side where you began. The ends of the cloth must always point from you as you knit them in.

I knit one for my phaeton one yard in length and five strips wide, sewed together with jute, over and over stitch. They are very warm for the feet and are very pretty, and it is a good way to use up discarded coats, vests and pants. The cloth must not be too thick; broadcloth, waterproof, ladies' cloth, &c., are the best for the purpose. Mine is really very pretty; the centre is orange and black mixed waterproof and a border of black, brightened up with tufts of scarlet flannel.

MRS. J. H. S.

**Preventing Wood from Cracking.**—A correspondent of the *English Mechanic*, writing of a good mode of seasoning wood, says: Having a great deal to do with the seasoning of the harder and better kinds of wood, I find that they are all liable to crack badly at the ends. I generally give them three or four coats of glue on the ends only, which I find is a sure preventive, till the wood is well dry, and then cut on the quarter.

Gray marble hearths can be rubbed with linseed oil, and no spots will show.

## Household Elegancies.

## PEN-WIPERS AND SCISSORS' SHEATH.

## FEATHER PEN-WIPER.

This elegant little article is composed of a pigeon's wing, blue, scarlet, and black cloth, and a bit of scarlet ribbon. Take a strip of black cloth fifteen inches long and two and a half inches wide; gather it round the top, and sew it up in the centre of the back neatly, so as to give it a bell shape; then take a strip of red

cloth two inches longer and a little wider than the black, and one of blue cloth the same length and half the width; scallop and pink them round the edges; gather and sew together the scarlet strip like the black, arrange over it and then add the blue, done in the same manner, next the wing, to which all should be sewed firmly; then a scarlet or black ribbon is tied around and arranged in a pretty bow in front, to hide the joinings of the cloth to the wing.

## BUTTERFLY PEN-WIPER.

This shape is easily made, and looks quite pretty. First cut out a piece of black velvet the shape of the butterfly's wings; buttonhole stitch all round the outside of the wings with bright gold-colored sewing silk, and do the chain-stitch lines with the same. For the straight bars on the wings, use red sewing silk, and sew on small gilt beads, according to the figure. For the body, cut out another piece of velvet the size you require; sew it up, over and over, and stuff with cotton wool; twist round the neck a piece of red silk, cross the same over the back and again round the end,

and fasten it off, putting two beads in the head for eyes. The inside leaves must be made of black cloth, two or three thicknesses, and the back of another piece of plain black velvet; then stitch together neatly through the wings each side of the body. Light drab velvet is also pretty for these pen-wipers.

## GAUNTLET PEN-WIPERS.

This pretty method of constructing pen-wipers must not be left from our list, as they are really worth the trouble of making them. Cut two pieces of black cloth the shape of a gauntlet glove; sew over and over around the edges to the wrist, which leave open down the sides; now back-stitch together the two pieces where the fingers would be separated in a real glove. Chain-stitch with bright-colored silk, three round the back of the hand; then take some wicking,

attach a small darning-needle threaded with common thread to the end, run the needle successively up through the hand and out at the tip of the fingers, drawing the thread tight until the wicking fills up to the end of the finger, leaving the lower ends to stuff out the hand as far as the wrist. A little cotton wool besides, will be needed to fill out the hand. Cut sev-

eral pieces of old black silk or thin cloth, and fasten firmly between the two outside pieces of the wrist, to wipe the pen on. Put a piece of ribbon around at the wrist the color of the chain stitching on the back, and finish with a small bow on the back of the wrist.

## OAK-LEAF PEN-WIPER.

The materials for this nice pen-wiper are green, brown or red cloth for the outside, black for the inside, and brown or green zephyr worsted. Cut two shapes like the pattern, of either color of cloth mentioned; buttonhole stitch around the edges with sewing silk of a shade darker than the cloth; embroider the acorns

with either brown or green zephyr by taking the stitches the long way, very closely together. Form the cups of brown zephyr by small French knots, and sew the stems neatly over and over with zephyr the color of the leaf; this is for the upper side; for the under side the leaf may be simply veined. Cut three or four leaves of black cloth a trifle smaller than the outside ones, and without the upper stem; point these,

and laying them between the outside ones, fasten together neatly at each side of the centre stem for a short distance from the top, and you have a nice little gift for some friend's writing-desk.

There are many other pretty ways of making these useful additions to a secretary or desk, one of which is made by cutting three pieces of broadcloth about two and a half inches square; fold these together, and sew them down the centre, so as to form a shape like the pattern below. The first three can be simply sewed together with black silk, and a little figure worked near the top with bright zephyr or silk; now cut three

more pieces about two inches square; work them down the centre, after folding like the first, with bright zephyr or silk, in herring-bone stitch; also work little figure near top like pattern. Either point or buttonhole stitch the upper edges. Fasten the three larger pieces together at the lower points, and at the sides, so as to form a fan shape; then fasten the other three in like manner; place over the larger ones and fasten at the lower, and near the upper points; finish off at the lower points by a fancy button on each side, or a little bow of ribbon. Another method is to cut circular pieces of card-board, cover with velvet or silk; cut three or four pieces of black cloth, point them finely; place them between the covers, and fasten a fancy button on either side; or cut circular pieces of black cloth, and fasten all over them small round pieces of bright-colored cloth about the size of a wafer, laid one over the other, like the scales of a fish. Place several pieces of cloth cut round, folded together in centre, then again, and fastened together at the points, between these outside pieces.

## EMBROIDERED SCISSORS' SHEATH.

The materials for this useful article for the work-box, are gray, blue or black kid, gold thread, or saddlers' silk of different colors, silk cord or chenille, card-board, white kid, grey sewing silk. Cut two pieces of card-board the shape of the pattern, covered outside with the embroidered kid and inside with white kid; sew together over and overstitch. Trim the edge with silk cord or chenille. Instead of kid, nice cloth, thick silk, or velvet can be used, and the embroidery—worked in satin stitch—may be done with gold thread, chenille, or saddlers' silk of various colors. I have made them without any embroidery, and trimmed the edge with chenille, forming it into three leaves in centre of each side at the top, and they are very neat, done in this manner.

MRS. MARY I. HERRON.

## Hireside Reading.

### A DELIGHTFUL LEGEND.

There is a beautiful legend connected with the site on which the Temple of Solomon was erected. It is said to have been occupied in common by two brothers, one of whom had a family, but the other had none. On the spot was a field of wheat. On the evening succeeding the harvest, the wheat having been gathered in shocks, the elder brother said to his wife:

"My younger brother is unable to bear the burden and heat of the day. I will arise, take off my shocks and place them with his, without his knowledge."

The younger brother, being actuated by the same benevolent motives, said within himself:

"My elder brother has a family, and I have none. I will contribute to their support. I will arise, take off my shocks and place them with his, without his knowledge."

Judge of their astonishment when, on the following morning, they found that their respective shocks were undiminished. This course of events transpired for several nights, when each resolved in his own mind to stand guard, and, if possible, solve the mystery. They did so, when, on the following night, they met each other half way between their respective shocks, with their arms full.

Upon ground hallowed by such associations as this was the Temple of King Solomon erected—so spacious, so magnificent, the wonder and admiration of the world. Alas! in these days, how many would sooner steal their brother's whole shocks than add to a single sheaf!

### SELF-SACRIFICING.

This is a true story. The circumstances occurred the other evening. He escorted her to and from church, and upon arriving at her home their discussion of the sermon and the extreme heat suggested an invitation, readily accepted by Charles, that they step into the house and partake of a cooling glass of lemonade. She led him to the dining-room, and there found naughty brother Ben about to squeeze the last lemon in the house for his own individual benefit! Calling him aside, she induced Ben, by means of sundry threats and promises, to dissect that lemon and make Charlie and herself a glass. A self-sacrificing thought struck her! "No, Ben," said she, "put the juice of the whole lemon into Charlie's glass, and bring me a glass of water. He won't notice it—there is no light in the parlor!"

Ben was making one good strong lemonade, as directed, when Charlie quietly slipped out and re-

marked: "I say, Ben! put the juice of the entire lemon in your sister's glass, and bring me some ice water—there is no light in the parlor, and she won't notice it!"

Ben's forte is in obeying orders.

With a merry twinkle in his eye he drank the lemonade, then carried them each a glass of water, which they drank with much apparent relish, asking each other, between the sips, "if it was sweet enough!" And naughty brother Ben, with the taste of that lemonade in his mouth, stood out in the hall and laughed till his sides ached, to hear them assure each other that it was "just right! so palatable and refreshing!"

The late Dr. ——— did not satisfy, by his preach-

parents live on Myrtle avenue, entered the house the other day and remarked to his mother: "Is dinner ready, and if not, why in t. (thunder) and l. (lightning) ain't it?" "What do you mean?" she slowly inquired. "I mean that you had better t. a. l. (tread around lively)" he answered. She didn't say any more, but when the father came home to dinner she quietly informed him that young Napoleon was picking up slang. "Is, eh? I'll see about that," and he called the boy and inquired: "Napoleon, where were you last evening?" "Oh, down at the c. g. for a little while." "What do you mean by c. g.?" demanded the father. "Why, corner grocery, of course. You see, I have g. t. h. (got the habit) of abbreviating my words!" "I see you have,"

mused the father, as he rose up. "You will p. a. m. (please accompany me) to the woodshed!" They had a little physical exercise out there, the father holding the balance of power, and the son doing all the high stepping and side dancing. When the show had adjourned, the father said: "Now, d. l. m. (don't let me) ever hear any more of your slang." "Not a. b. w. (another blessed word), sighed the boy, and he sat down on a lump of Briar Hill and wiped his tears away.

Pigeon English is all the rage with Boston girls, and, when an escort leaves one of them at her papa's front steps, he is startled to hear something like this: "Hoop-la—Melican man he heap uuch nice—fetches me home alle light, top-side up on slippely walk—buy gum dlops—comee you alle same 'gin sometime—you savey, eh, John?" And she disappears within the storm-doors, leaving the perplexed young man slowly muttering, "Well—I'll—be—heap—much—blowed—alle—same—if I know what that charming creature is driving at."

The Cincinnati Saturday Night relates the following: "A young woman recently answered an advertisement for a dining-room girl, and the lady of the house seemed pleased with her. But before engaging her there were some questions to ask. 'Suppose,' said the lady—'now only suppose, under-

stand—that you were carrying a piece of steak from the kitchen, and by accident should let it slip from the plate to the floor, what would you do in such a case?' The girl looked the lady square in the eye for a moment before asking, 'Is it a private family, or are there boarders?' 'Boarders,' answered the lady. 'Pick it up and put it back on the plate,' firmly replied the girl. She was engaged."

Sometime ago a pupil in a deaf and dumb asylum in New England read a portion of the Book of Job; when asked to write out his understanding of Job's sufferings, he wrote: "The Lord boiled Job seven days."

THE WEDDING.

ing, the Calvinistic portion of his flock. "Why, sir," said they, "we think you dinna tell us enough about renouncing our ain righteousness." "Renouncing your ain righteousness!" vociferated the astonished doctor; "I never saw any ye had to renounce."

Under the head of "D.D. (Domestic Difficulty)," the Detroit Press Press recounts the following: It is all right for the Hon. Bardwell Slote to lug his "Mighty Dollar" around the country and say g. f. for good fellow, c. d. for cash down, and s. m. for sour mash, but such little eccentricities don't wear well in the family circle. A forward youth of fourteen, whose

PRIZE COLLECTION OF HOUSEHOLD  
AND COOKING RECEIPTS.

BY HORTENSE SHARE.

To this collection was awarded a third prize.

**French Rolls.**—Of light bread dough take as much as will make one loaf. Work into this one egg, one heaped tablespoonful of lard, two of white sugar. Set in a warm place to rise. When light, work down, knead again. When very light and puffy, roll out. Cut with a biscuit cutter. When raised, bake twenty minutes in a quick oven.

**Indian Bread.**—Two-thirds pint of corn meal, one pint sweet milk, two tablespoons flour, one of sugar, two eggs, lump of butter size of an egg, one small teaspoon soda, two of tartar or one tablespoonful vinegar, pinch of salt—tartar mixed in the meal, soda in the milk. Beat sugar, butter and yolks of eggs together; add the milk. Beat whites and stir in last. Bake half or three-quarters of an hour in a quick oven. Makes a delicious cake if one cup of sugar is used. Good hot or cold.

**Noodle or "Nudla" Soup.**—Three hours before dinner, take three eggs, teaspoonful salt, mix with as much flour as will make a very stiff dough. Beat well with the rolling-pin—the more the better. Cut into four pieces, roll each as thinly as possible—keep on rolling till as thin as paper. Spread on a paper to dry—but do not leave till so dry as to break when rolled into long rolls to cut. With a sharp knife slice into rings no thicker than a broom-splint. Spread out to dry, shaking them out well. Fifteen minutes before dinner, shake them lightly into five quarts of the boiling liquor in which a fat chicken or piece of fat, fresh beef has been cooked, the broth having been well skimmed. Add salt and pepper to taste, cup of sweet milk or cream, pinch of parsley or saffron. Boil up two or three times and serve.

**"Smeltz de Nudla."**—The noodles made same as for soup. When cut and dry, boiled five minutes in clear (boiling) water with a little salt. Have ready in a skillet a teaspoonful of bread crumbs browned in butter size of an egg. Skim out the noodles into the bread crumbs. Pour over them a cupful of sweet milk or cream; let it heat. Send to table hot with bits of butter strewn over the top. This is a stand-by in the spring when winter vegetables are gone and we are tired of canned things. Noodles can be made in quantity, well dried, put in a jar, covered tight, keeping for months to be used as wanted. (Both these recipes have been in use in our family over a hundred years.)

**Cucumber Salad.**—Two hours before dinner, slice on a slaw-cutter four full-grown, but not yellow, cucumbers; salt, and leave stand in an earthen dish. Half an hour before dinner drain in a colander or squeeze out the juice with the hand. While they are draining, peel and slice two onions and fry in a spoonful of lard. Beat together the yolk of an egg, half a teacup sweet cream and two spoonfuls of water. Put the drained cucumber in a porcelain kettle with the onion, pour on the beaten mixture, dredge over a little flour, add half teacup sharp vinegar. Boil up five minutes. Serve hot.

**Potatoe Salad.**—Boil until soft two pints of pared and sliced potatoes, fry two onions in one spoonful of lard, skim out the potatoes into the onion, beat the yolk of one egg with a cup of sweet milk and half cup of vinegar; pour over the potatoes. A little flour to thicken. Boil two minutes, serve very hot.

**Spiced Hash.**—Take bits of cold beef, or any other kinds of roasted or boiled meats, and hash fine. Mix with potatoe mashed well, as much potatoe as meat. Add two beaten eggs. Season with salt, pepper, cloves, summer savory—any or all as you like. Shape into a loaf and bake brown. Good hot, or as a relish cold.

**Egg and Bacon Pie.**—Beat together six eggs, mix two and a quarter pints of milk. Put a rim of pie-crust at the side—none at the bottom—of a deep earthen dish. Cut some bacon or ham into small bits and lay over the bottom. A little pepper, no salt. Make no vent in the top crust or the egg will boil out.

**Egg Omelette.**—One pint rich, sweet milk, three table-spoons of flour, three eggs well beaten, half teaspoon salt, pinch of pepper, and some parsley or summer savory, if liked. Stir flour and milk smooth, add the eggs. Melt a large tablespoon of butter in a baking pan, pour in, and bake twenty minutes.

**Transparent Pies.**—Yolks of eight eggs, quarter pound butter, half pound sugar, beaten together. This will make

two pies. Make only bottom crust. Bake about as long as eustards. They are nice baked in shells for tarts.

**Baked Flour Pudding.**—Mix smoothly one cup of flour with one cup of sour cream, then pour in one cup of sweet milk. Beat separately three eggs, and stir in one teaspoon salt and not quite one teaspoonful of soda. Bake in a quick oven. Don't think the batter too thin; it will come out right. For sauce to it, boil two cups of sweet milk and thicken with a tablespoon of flour. Add half cup white sugar, butter size of an egg.

**Boiled Flour Pudding.**—One quart flour, one quart milk, five eggs, one teaspoonful salt, one of tartar, half teaspoonful soda. Boil in a bag one and a quarter hours. For sauce, sweet milk and sugar and nutmeg, or six spoonful sugar and three of butter, worked until very light. Flavor with lemon or vanilla.

**Sweet Pickled Pears.**—Pare, halve, core and boil the pears till soft enough to run a straw through. To seven pounds of pears, three pounds sugar, one quart vinegar (cider). Use root ginger and stick cinnamon. Tie in bags, boil them in the syrup. Put the pears in jars, pour over the syrup, and lay the spice-bags in with the fruit. Boil syrup two mornings. Keep in sealed jars.

**Sweet Pickle—Nutmeg Melon.**—Take the melons when just ripe, pare, take out the seed, cut in any shape or size. Put them in a pan, cover with weak alum water; let stand twenty-four hours. Drain well, pour on vinegar to cover, pour it off and measure it. To each quart take two pounds of sugar, add two tablespoonfuls of mace; no other spice. Put on the syrup, boil fast, skimming well, then put in the fruit; boil five minutes. Pour into a large jar, leave stand twenty-four hours. Boil the syrup without the fruit eight mornings, then once together. If too much juice to cover, boil down. Keeps in unsealed jars.

**Peach Custard.**—Cover a pie dish with bottom crust. Into this place the halves of ripe freestone peaches that have been pared, until the bottom is covered. Fill each half with sugar. Make a custard of one pint sweet milk, three eggs and three tablespoonfuls sugar. Pour over and bake.

**Custard Tarts.**—Four eggs, quarter pound butter, quarter pound sugar beaten together. Line tart shells with puff-paste. Put a little jam of any kind on the bottom of each tart, pour the mixture on top, and bake.

**Centennial Pound Cake.**—(Been in use 100 years.)—Twelve eggs, leaving out three yolks. Beat separately. Three-quarters pound butter, one pound sugar. Sugar and butter worked together with the hand. Then add the yolks, next the flour, lastly the whites. Flavor with rose, lemon or vanilla.

**French Sponge Cake.**—Half or three-quarters pound of flour, one pound white sugar, one teaspoonful vinegar or small teaspoon cream tartar, one teaspoonful of salt, twelve eggs beaten separately. After the yolks and sugar are well beaten in a bucket, beat in the whites, stirring slowly while sifting in the flour.

**Spiced Plums.**—Four pounds brown sugar, seven pounds plums, one pint cider vinegar, one nutmeg grated, one tablespoonful each of cinnamon, cloves, allspice. Boil all slowly two hours.

**Plum Jelly.**—Boil the plums until soft in enough water to cover them. Pour into a jelly bag, and drain over night. Then strain through a flannel bag. Boil this juice twenty minutes, skimming well. Take off, measure it; to each pint of juice add one and a half pints of white sugar, and boil, one pint of juice at a time, seven minutes. Pour into cups. When cold, paste papers over, and brush all over with white of egg.

**Lemon Conserve.**—One pound powdered white sugar, quarter pound fresh butter, six eggs, leaving out the whites of two, adding the juice and grated rind of three fine lemons. Put all into a saucepan, stir the whole gently over a slow fire until it gets thick as honey. A delicious spread for bread, biscuit or rolls.

**French Croul.**—Cut fine a common-sized cabbage, add one tablespoonful ground mustard, one of black pepper, one of salt, one teacup of white sugar, two beaten eggs, one teacup sweet cream, and one of vinegar, all warmed before stirring. Excellent for dinner.

**Candied Orange Peel.**—Orange peel boiled in a thick syrup of white sugar until it granulates; packed in jars and syrup poured over. Keeps well, and is excellent for fruit cake or in puddings, or eaten with rice cups.

**"Slippitie."**—Take two quarts of pared, quartered and cored green sweet apples, or one quart of unpeeled dried sweet apples, and boil till tender. Thicken the juice with a tablespoon of flour smoothly mixed with cold water. Then set on the back of the stove where it will keep hot, but not boil. Tart, dried apples can be used, but they must be well sugared as soon as they begin to boil to keep them

whole. Have ready in a kettle three quarts of boiling water, into which stir wheat-flour until as thick as corn-meal mush. Boil three minutes. Brown a handful of fine bread-crumbs (in a skillet) in butter or lard size of an egg. With a tablespoon drop one spoonful at a time of the wheat-mush in the browned crumbs, turning it over, and place on a hot platter until full, dipping the spoon each time in water so it will slip off easily. Dish the apples in a separate dish, send to table hot, eat together, and see if this old German dish is not good. (100 years old.)

**French Cream.**—Half box of gelatine, cold water to dissolve, one quart sweet milk, one cup white sugar, yolks of three or four eggs. Beat sugar and yolks together, then add gelatine. Have the milk boiling and cook as custard. Beat the whites to a froth. When the mixture is cool—about luke-warm—stir in the whites lightly, flavoring first with vanilla. Put in moulds. Makes a handsome, delicious dish for tea or dessert.

**A Delicate Custard.**—Take the yolks of two eggs, two spoonfuls of sugar, and one large cupful of milk. Beat the yolks and sugar well, add the milk and flavor with lemon or orange. Bake in a tin plate on paste in a moderately hot oven. Beat the whites to a stiff froth, and add two teaspoonfuls sugar. When the custard is done, cover with the white and set in the oven a few minutes to brown slightly.

**To make nice Syllabub.**—Take a quart cream, sweeten, and add the wine; put it in an old-fashioned churn and churn it until it thickens, and you will have syllabub that will not be all froth. If the cream is not new, or it is allowed to get too warm, it will make butter if made in summer.

**Fricassee Chicken with Green Corn.**—Cut the green corn from the cob, put it in the pot with water enough to cover it, let it stew until the corn is nearly done; then cut up the chicken, put it with the corn and let them stew together about half an hour; put in a few whole grains of pepper, with a teacupful of cream or milk; thicken with two tablespoonfuls of flour stirred in a lump of butter; add the salt last.

**To Stew Mushrooms.**—The large buttons are the best for this purpose, and the small flaps while the fur is still red. Rub the buttons with salt and a bit of flannel; cut out the fur, and take off the skin from the others; put them into a stew-pan with a little lemon juice, pepper, salt, and a small piece of fresh butter, and let the whole simmer slowly until done; then put a small bit of butter and flour with two spoonfuls of cream; just boil and serve with sippets of bread. We do not believe mushrooms nutritive, and anyone knows they are dangerously poison—the un-catchable kind, we mean—and cooks should be perfectly acquainted with them before attempting to present to epicures.

**Scandinavian Sausage** (quite equal to the best Bologna).—Take twenty pounds of the best beef, carefully cut away all the fat and sinews, cut it up and run it three times through a sausage cutter, put it in a cool place. Now take ten pounds of fat side pork, remove all the lean and skin; with a sharp knife cut your pork into very small square bits, and as you cut it up throw it into a pail of cold water, then beat it so that the pieces are separate from each other. Take the beef and put with it one pound of salt, three ounces of black pepper and sixty ground cloves; knead it like dough for an hour, then drain the pork, put it with the beef and knead again for twenty-five minutes. Stuff very closely in cloth bags about three inches in diameter; rub the outside of the bags well with powdered saltpetre, lay them on a table or shelf, lay a board over them on which put a heavy weight; let them remain for three days, then smoke quickly.

**Heat is a perfect antidote** to taint in milk in all its phases. Passing milk through charcoal will remove taint from warm milk, and give it a most delicious flavor. Cold will silence the activity of the yeast, but will not kill it, and acidity will neutralize the oil for a time, but it will assert its sway upon the first favorable opportunity. In the treatment of milk, airing is a more efficient antidote.

**Meat boiled for table use** should be plunged at once into boiling water, as the heat contracts the outer surfaces, and coagulates the albumen, thus preventing the escape of the juices. Prepared for stock or broth it should be placed on the fire in cold water, as then unconfined juices are free to pass into the liquor surrounding it.

**Until the kitchen becomes** thoroughly and systematically organized, and is regarded as one of the most—if not the most—important of household departments, there can be no such thing as habitual health in the family. Bad cooking poisons more persons than all the nauseous drugs ever administered to poor humanity, and it affords the remote cause for the employment of two-thirds of all the divorce lawyers in existence.

## BEAUTIFUL FLOWERS

BY MAIL.

EACH COLLECTION, 50c. ANY 4 PLANTS, 50c.  
2 Carnations, 1 Rose, 1 Scented Geranium.  
2 Fuchsias, 1 Begonia, 1 Coleus.  
2 Double Geraniums, 1 Heliotrope, 1 Musk Plant.  
2 Pansies, 1 Lemon Verbena, 1 Pink, double.  
6 Fine Basket Plants.  
2 Honeysuckles, 1 Weigelia, 1 Spirea.  
2 Altheas, double, 1 Forsythia, 1 Tamarix.  
2 Junipers, 1 Sib Arbor Vita, 1 Tree Box.

A large and fine collection of Greenhouse and hardy flowers. Roses, Small Evergreen Trees, Small Fruits, &c. Catalogues free to all.

No. 65.

PRICE 12 CENTS.

## DESIGN FOR RURAL COTTAGE.

We present this month a cottage, costing \$3,850, containing, we think, a good deal of accommodation for the money, there being four rooms on the first floor. The parlor, dining and sitting rooms are connected by sliding doors. There are three rooms and bath on second floor, and two good rooms in third story. The room over the kitchen is intended for servant's bedroom—reached by a private staircase from kitchen. All the rooms are of good size for this class of house. Each room is lighted from two sides, thus insuring coolness in warm weather.

The exterior, although plain, has, we think, a pleasing appearance, with its broad, comfortable verandas and carriage porch, and liberally projected roof at eaves and gables, casting deep, pleasant shadows.

The house is intended to be well built. To be sheathed and papered before clapboards are put on. The interior to be neatly and plainly finished. The bathroom has closet, tub and bowl. Butler's pantry has copper sink. Kitchen has sink, and pump to supply tank in third story from cistern.

The architects assure us that the above quotation of cost is not guesswork, but that they have a builder who stands ready to build the house for the sum of \$3,850, in the vicinity of Newark.

## LILY OF THE VALLEY, Etc.

The Lily of the Valley—emblem of happiness and innocence! Dear to the hearts of all lovers of nature! The opportunity of raising those tiny bells of beauty should never be omitted. The process of forcing them, that they will beautify our homes in the dreary winter months, is extremely easy. I have never failed once, and I would that those who think the garden the only proper home for these bulbs would allow them a secluded corner of the window-garden, for I am sure they would appreciate them much more as a house-plant than ever be-

fore as a hardy one. I force them in this manner. About the middle of December I plant them, allowing eight or ten bulbs in a seven-inch pot. As they are

time after, and keep them at a very high temperature by giving bottom heat, which may be accomplished by placing in a basin of water and setting them upon the back part of the stove, and keeping the water at 100°, having the soil thoroughly moist. Very soon tiny green spears will appear from each bulb. It is then time to lower the temperature a little each day. After the second leaves have expanded, and buds appear, they should be removed to the window-garden and frequently watered with liquid manure. The snowy, perfumed bells, in contrast with their bright green protecting leaves, will rival many of their gorgeous companions, and you will surely be rewarded for your trouble in the enjoyment of their perfect beauty and fragrance. After blossoming, deprive gradually of water and light, and lay away in the dry soil to rest until another autumn.

Snow-drops, Crocus, Narcissus, and all hardy bulbs, with few exceptions, may be forced in the same manner and with as much success as the Lily of the Valley.

The Oxalis is a bulb requiring little care, as is well known to all flower-growers, and there are few small plants which furnish us a greater number of blossoms than these "gems of Erin," and it gives us much greater satisfaction if we allow it complete rest during the summer months. I treat it as other bulbs, quite similar to Calla Lilies, except it does not require forcing by hot water. They grow nicely in a north window, but they enjoy occasional glimpses of sunshine, and if placed in a sunny location for a short time each day the flowers will appear more rapidly, and seem to smile and thank us for our thoughtful kindness. Every winter its pink and white foliage afford me much pleasure. I treat Hyacinths in the same way as Callas, and each bulb repays me

with two or three spikes of immense and perfect flowers. If amply supplied with liquid manure, the bulb is very much strengthened and beautified. IVYLIN.

DESIGN FOR RURAL COTTAGE.

very economical, and will flourish as well in loose, sandy soil. I am not as particular in regard to that. I leave out doors to freeze well. I bring them in any

## Floral Contributions.

### LILY'S FLOWERS.

Let me preface by saying that Lily was one of that large class of persons who hug the delusion that they are unfortunate in their undertakings in general, and in particular if they presume to meddle with any of the enchanted subjects of Flora's fairy realm. "One must have natural genius to succeed with flowers," is the favorite saying of these self-tormentors, forgetting the fact that genius, like faith, is not effective without "good works." My heroine's belief in this species of fatalism was fostered by several untoward ventures in gardening in early youth. When a little girl at school in the "centennial" city, each member of her class was given the care of one plant. Lily being an adorer of flowers (I speak advisedly), and not comprehending the needs of her deities, killed hers with kindness. It was watered several times a day with ice water—"it is so refreshing in hot weather"—the earth dug up around the roots, and last, but not least, was repotted three times in as many days, owing to the breakage of the pot in being carried all over the portions of the house to which she had access. Fortunately her zeal could not extend to the other plants, much as she pitied their apparently neglected condition, and they were flourishing finely. This failure caused many tears, but failed as a lesson, the moral not being understood. A second attempt fared still worse, as she redoubled her attentions and succeeded in killing it in a shorter time. She now fully believed that she was not of the "circumcised," and was not to approach the "Holy of Holies," but to worship afar off. Many years after, while riding in the suburbs of a western city, the sign "Selling out below cost," on the grounds of a nursery and greenhouse, attracted her attention. This temptation could not fail to capture any woman of sense, and Lily went boldly in. The surly florist's good little wife—to whom "ladies who did not know what they wanted" were turned over—was patient, and explained the needs of many of the plants so clearly that Lily felt emboldened to try again. Of course her first selections were blooming Geraniums, Fuchsias, Heliotropes and Roses. "They were so easy of culture," the woman had told her. "In winter, give all the sun you can get, water once a day with tepid water—Heliotropes and Fuchsias more if they appear dry—once a week a little, a very little, ammonia in the water; wash the plants once a week, being careful to handle gently, so as not to disturb the roots, and do not repot until you understand more about them; better let them remain root-bound than attempt repotting in the hit or miss style." This last counsel was very difficult to obey, as Lily's first thought was to put her plants in nice large pots, their present quarters being so crowded they would surely be grateful for the change. On intimating this idea to the florist he smiled and advised her to do as she thought best, and not fail to let him know the result. This decided her to follow the advice of the wife, and "understand more about them" before making any changes. She accordingly set to work industriously to learn about the care of flowers, consulted newspapers and magazines for floral subjects (the CABINET was not issued at that time), cultivated the acquaintance of successful amateur florists, interested her friends in the good work, and finally succeeded in raising flowers to her own satisfaction—and surprise—and that of many grateful recipients of her floral bounty.

Those little pots troubled her so much, that her first

care was to acquire a proper knowledge of the soil. The first ingredient, with the majority of authorities, was leaf mold. This necessitates many delightful trips to an old forest about five miles from the city. The giant old trees, almost falling to pieces with age, had stood sentinel for years over the swift flow of the grand old "Father of Waters." No young growth had been presuming enough to force its way among these patriarchs, and they stood alone without descendants on whom their mantles of watchfulness could fall. The ferns here, starting up among the mossy, gnarled old roots, were finer and more delicate than their high-priced exotic sisters, and on being transplanted to the sitting-room, accommodated themselves wonderfully to their changed quarters—lying down, it is true, but after a month's rest starting up again as airy and delicate as Titania's veil. The sand was the next desideratum. It must be silver sand, if there is a cave in the bluff opening on the river bank to go to; common sharp sand may answer even better, if found by a sparkling brook or lonely lake where Lilies grow. Distance, which lends enchantment to the view, confers also virtues and powers on sand—for flowers. Good garden soil and a little old manure for many kinds were the remaining ingredients for a good soil. By this time Lily's knowledge had so increased, that small pots were no longer a bugbear, and the long deferred repotting did not result in the sacrifice of the blooms to "plenty of root room." The exceptions were foliage plants and Chinese Primrose. A paper of seed of these latter planted in a cigar box during the last of March, in the aforesaid good soil, produces a great many little plants. During the hot weather in May (the upper Mississippi region is famous for arid heats before the leaves appear on the trees), the box was placed on the north side of the house, when it was observed that the little plants were rapidly disappearing under the ravages of a little fly. They were then removed to the house where the remaining fourteen were carefully watched, and transplanted into small pots until July, when they were again repotted in pots of four different sizes, the largest being six-inch pots. This experiment resulted as follows: the six-inch pots produced luxuriant foliage and flowers, the next in size gave flowers somewhat smaller, and so on in the order of size; the smaller the pot the smaller the flowers. A ten-cent paper of Cyclamen seed produced six little bulbs, which withstood all the snares with which the path of young plants are beset. One needs more patience with these than with the Primrose, as only an occasional one blooms the first year. *Cobæa Scandens* had been tried three years without success, and when at last two little plants made their appearance, great was the rejoicing. Lily attributed her final success to the fact of watering only once a week before the plants were up. The seeds rot if kept as moist as is necessary for other seeds. These plants, set out in the open ground in June, attained a height of twenty feet when an early and severe frost in September killed them when covered with buds. Lily soon discovered that a common collection of plants will endure an occasional pinch of frost without permanent injury. During one winter, all her plants were frozen three times. On one occasion the earth in the pots was frozen solid, and yet she did not lose one. The frozen plants were immediately taken to a very dark cellar and left to thaw out slowly—some taking a whole week—and afterward introduced gradually to light and warmth. Callas and Heliotrope suffered most, but all were finally restored.

Cuttings of Geraniums and Fuchsias grew under any kind of treatment short of total neglect; Roses,

Heliotropes and Begonias somewhat more difficult, and requiring constant watchfulness. A box two feet square with panes of glass fitted into top and sides served to cover them and bring back vitality on the slightest appearance of wilting. Nothing was found as fine as the vines Major Variegatissima for a lawn vase or large hanging basket; the roots endure any amount of frost apparently without injury.

Her final success in having blooming flowers during the winter is attributed to the weekly washings, the amount of light, and the comparatively low temperature which are secured by means of a large bay window separated by sliding doors of glass from the sitting-room. These can be closed during sweeping or when the temperature is too high for the plants. The temperature in this miniature conservatory rarely rose above sixty-five degrees during the day, and frequently fell to forty degrees in the night. Lily's experience with the more tender exotics was attended with many failures as well as successes, of which more anon.

FORGET-ME-NOT.

### TREATMENT OF CALLAS.

I have found that the secret of successful bulb culture of every kind is in granting them a season of complete rest—which means, gradually depriving them of all moisture and light—this period commencing after blossoming.

The Calla Lily being one of my favorite plants, I was determined to learn by experience a successful method of treating this bulb. The following way is precisely as I proceeded, resulting in the most admirable success. My Callas always blossom from December until May. Almost immediately after, the leaves, one by one, show signs of decay. I then place them in a shady location, a north window being desirable, and water about every two or three days for three weeks, and finally once a week until all the leaves have withered away. Then I place them on their sides in a totally dark place (for if exposed at all to the light they lose their strength by throwing up small unsightly leaves). I allow them to rest undisturbed until the middle of September, when I exchange the dry, exhausted soil for a mixture of equal parts of sand, garden mold, and well decayed cow-manure. After thoroughly washing the pot, and covering the bottom an inch deep with charcoal (to procure a good drainage and insure health to the roots), I fill the pot with the prepared soil. I then plant the bulb, breaking from it the small tubers, and supply with water and light as gradually as it was before deprived of it. The sunlight and moist soil soon awaken it from its unbroken slumber, and the broad glossy leaves burst from their confinement and unfold at an astonishing rapidity, and before we are aware, our labors are rewarded by a bud which soon unfolds its banner of purity and loveliness. As soon as the bud appears, or when one is expected, I set the pot in a basin of hot water, removing when it becomes cold; and if convenient to repeat it frequently, the plant will grow with greater luxuriance. The average size of my Lily leaves is eleven inches in length and eight inches in width. I also use liquid manure nearly every time I water them, not forgetting to shower the leaves as often as they become dusty. I would add that the small tubers, broken from the bulb at the time of repotting, should be treated in the same manner as the parent bulb. If those who have not been successful in the past with their Callas will strictly follow the above rules, I know that failure will be as unknown to them as it has been to me.

IVYLIN.

## The Home Circle.

As correspondents desire our field widened to include other topics as well as flowers, we have done so, and now call it The Home Circle, and welcome all items of interest and sentiment.

Every subscriber and friend is invited to make this department the medium of communicating any and every thing that can give pleasure, instruction or entertainment, and also to ask questions regarding those subjects upon which we have spoken. Either the editor or "Aunt Carrie" (C. S. J.) will reply.

**Book-Case.**—Can any of your readers tell me how to make a book-case? I have a great many books, but have not the means to buy a book-case, but still would not like to have them spoilt by the dust; also how to make ottomans of round and square boxes; also how to make scrap-jars. By so doing you will oblige a young housekeeper who is inexperienced, and though anxious to beautify her home, has not the means to buy expensive articles. PEARL PRICE.

**Answer**—The best book-case you can make, that will protect your books, is as follows: Get a set of brackets—either iron or wood, simple triangular pieces answering very well—and nail two of them against studding on the wall, six feet from the floor, and about five feet apart; another pair six or eight inches below these; again another ten or twelve inches below. In order to accommodate books of different sizes, about one foot from the floor place the last set, and on these nail plain pine shelves, neatly stained—as also the brackets, if of wood—in imitation of walnut, oak or mahogany, and when dry, varnish. Along the edges fasten strips of scarlet cloth or leather, pinked out on each side, with brass-headed tacks along the centre. In front, against each corner of the top shelf, fasten picture nails, and around them twist the ends of a strong piece of wire, on which hang curtains, with small rings along the top so they will slide easily back and forth. Here you will have a cheap yet most stylish arrangement, for such cases, hung with rich tapestry, are now very fashionable in England. The cases are low, and extend round the room in all blank spaces. On the top place a set of jars—hereafter described—or plaster busts. Tycoon reps will make really rich-looking hangings, and cost a mere trifle.

If you wish to use doors, get more frames made the length and half the width of your shelves, and tack green baize, moreen, or even colored glazed muslin, over with brass-headed tacks.

To make ottomans, take any boxes available, and, turning them upside down, fasten casters or round, smooth drawer-knobs on each corner; cover the sides smoothly with any material convenient; make a deep cushion size of top, and, with pieces of zephyr twisted round the finger, and a long mattress needle, make the tufted appearance seen in upholsterers' work, by buttoning through in regular divisions.

Make a puff or two ruffles, and fasten round the upper edge with brass-headed tacks, and you will have a neat ottoman. Cheese-boxes answer well for round ones, and an entire set of large and small ones, with a divan made in the same manner, but finished with a set of cushions and a couple of barrel chairs, will give a room quite a luxurious appearance.

Now for your jars, my pearl, visit some crockery store, and select one or more common earthenware jars, of as quaint or graceful form as you can find; rub off all rough places with fine ashes or rotten stone. Then decide on what kind of china you wish to imitate—ancient Egyptian, toile Indienne, Japan-

ese, Rose-du-Barry, or Pelissy styles of Sevres china; Wedgewood, or Minton-ware—and tell me in a postal, when you shall have a full description next month.

**Affghan Stitch.**—"Y." With regard to the affghan stitch for bag—make a row of chain stitches the width of article desired, then take up each one of these chain stitches, keeping them on the needle to end of row; you will now have a long row of stitches on your needle, the point or hook of which will be at your left hand; now "drop off" these stitches one by one, until you get to the right-hand end again; now begin taking up these stitches as before, keeping them all on the needle, by slipping your needle-hook *only* under the little straight threads of the former row, which are plainly visible. This is the peculiarity of this stitch, and which gives the canvas-like appearance, so requires particular attention. When you arrive at the left end again, commence and drop off as before; and when to the right end, take up again. This is all there is in affghan stitch, and it is very simple. I hope you will find I have made it plain.

**Washing and Churning.**—I have wished, oh, so very much, dear Mrs. R. W.—e, that I could give you a call and have a chat regarding all those matters which so trouble you. I have long promised to get up a good practical book on housekeeping and cooking, and have them well forwarded; then you shall learn many things you do not yet appear to understand, and which so earnest a seeker after knowledge certainly deserves to know. You will make a fine housekeeper, I feel sure. As regards clothes-washing—there was a season, during our sad war, when I was obliged to perform my own household labor, even to the washing and ironing, and I feel sure it is a woman's duty to make these laborious operations as easy as possible, either for herself or her servant. The first thing I did was to purchase a good wringer, washing-machine, and a little kerosene stove with patent flat-irons, having moveable wooden handle. On Monday I gathered together the clothes, assorted them into three lots—fine, middle and coarse—which I put loosely into coarse muslin sacks. I then made a boilerfull of suds, using one cake of any good washing soap, and two cupfuls of the following: sal soda, 1 lb.; stone lime,  $\frac{1}{2}$  lb.; water, five quarts; boil, stirring constantly, five minutes; then let it settle, and boil slowly a short time; pour off the clear liquid and put into a tight jug. Let the water boil; stir and divide—if the clothes are in separate tubs—using cold water until the suds are only quite warm, and covering deeply. They remained in this until Tuesday morning, then I made another boiler of hot water and added until that in the first tub was pleasant to the touch, rubbed through the washing-machine—in which most of the clothes in my case were soaked—passed through the wringer, then just scalded in weak suds, examined, and after rinsing through a clear and blue water, starched where necessary and hung out—generally before nine o'clock in summer and eleven in winter. Used the first warm suds for flannels. Dried these in a warm place.

When ready, sprinkled with a whisk-broom and packed in a basket until the following morning; seated myself before the ironing-board or table, and with the little stove at my right hand, made play of the work of ironing.

All this may appear extremely troublesome, but it really occupied very little time, considering the work, and required no serious wear and tear of muscle or energy.

Now about the churning. This winter I have churned generally once each week or ten days; kept the milk until *almost* turned, in a closet in the kitchen, cold at night; the day before churning stood the cream

jar behind the dining-room stove, and had churning done in the afternoon, the butter invariably "coming" in twenty minutes—often in ten; if slow, stand the jar in a pail of warm water.

**Chocolate** is made thus: to each quart take half a cake of baker's chocolate, finely grated; boil one pint water, and mixing the chocolate to a paste with a little cold, add it, and boil steadily a half hour; then add one pint of rich milk, and boil for ten minutes longer; sweeten to taste, and pour into a pot kept expressly for the purpose; serve in hot cups.

**Graham Bread.**—Prepare a sponge, as for wheat bread, and mix into a very soft dough, but knead long and thoroughly. Wheat bread, when put to rise, should have a towel put over the mass, dredging first lightly with flour, then place a tray so as to cover completely. When made into rolls have a bread napkin and a warm tea or breakfast plate to cover over each loaf; before placing in the oven dip a feather or brush in melted butter or lard and lightly paint the top, and your bread will never "crust." When removed from the oven wrap in a sprinkled towel, place each loaf on end against the kneading-board, and throw the blanket or towel lightly over the whole. In summer place the loaves to rise away from the stove, but in cold weather cover warmly and place behind the stove each time.

The oven should not be too hot. If you cannot count thirty while you hold your bare elbow in it, it is too hot; but keep the heat steady for one hour for a pan holding three pints. Rolls and biscuit both require a quick oven, and should not remain in more than fifteen to twenty minutes or they will become hard. Corn bread requires a quick, steady oven.

Some varieties of potato require cold, others boiling water; when done, pour off all water, place on the stove and watch closely while the steam passes off, no cover on, of course. If boiled with skins on, press each one in a towel between the hands.

**Beefsteak.**—The gridirons with covers prevent smoke escaping, but I do not like them particularly. Take a "tenderer," or a dull knife, and, *before cooking*, pound the entire steak, not allowing the tenth of an inch between the strokes. Use clear coals, on which sprinkle a little salt; use no salt on the meat. Turn constantly for twelve to fifteen minutes; then place between hot plates, covering the meat first with bits of butter in which pepper, salt and a dust of flour have been rubbed; turn over twice in the gravy thus made, and if no chafing-dish is used, send to table between the hot platters, with a napkin over. Never "back" while cooking. Will give mince-meat recipe among recipes.

**To Can Peaches.**—If possible procure the large, firm, white freestone varieties, but we have put up even little seedlings that were delicious and kept for three years. Sugar over night, or for several hours at least prior to cooking, putting eight pounds of sugar to one bushel of fruit; put on and let the kettlefull come gradually to a boil, removing all "scum"; have your glass jars on a stand or table, with wet towels placed beneath them, and with a jar-funnel and small dipper fill the cans with fruit and syrup; wipe the mouth and screw down the lids, or put on the cap and cement if used. Our peaches are beautifully white and sufficiently sweet to require no more sugar. Canning may be made a tremendous operation, or merely a pleasant morning's work, as you carry it out. There is no need to annoy yourself by any such process as you mention. Tomatoes peel after scalding. Put on in own juice; as soon as the kettle comes to a boil, can in tin as quickly as you conveniently can.

## Flower Gardening.

## SEED-SOWING.

"A wonderful thing is a seed—  
The one thing deathless forever!  
The one thing changeless—utterly true—  
Forever old and forever new,  
And fickle and faithless never."

You hold in your hand a tiny seed. Very small, you say; but what possibilities are wrapped up within the little brown atom! There lies the germ of a plant, the leaves, the blossoms, the flowers, and the next generation of seeds. Were we to see the process of germination and development for the first time, we would all exclaim: "A miracle!" But it is repeated so constantly before our eyes, that we cease to regard it as any thing marvelous, and forget that in this process we have one of the most striking evidences of Divine agency upon the earth. As each season fulfills its mission in the growth and maturing of vegetation, it yields us from its garnered store the seeds of numberless varieties and classes of plants that, although the parent plants may be cut down by the breath of the Frost King, they may live again the next summer in the forms of their offspring.

Seeds vary indefinitely in form, size, and natural tendencies, and require a great diversity of treatment. The seeds of plants indigenous to the soil, like our weeds, will grow under almost any circumstances, and in spite of neglect and abuse. But we desire to possess the floral and vegetable treasures of all climes, and therefore if we expect our foreign favorites to gladden us with successful growth, we must study the natural conditions under which each thrives in its native soil, and, as far as may be, fulfill those conditions. Some general directions, however, may be given, that will aid us in our efforts to make beautiful our flower-beds, or our garden successful.

First, our plans must be laid in good season. It requires faith to lay out flower-beds and garden-walks, even in imagination, while February winds are whistling and snow-drifts hide the face of Mother Earth. But it must be done, and preparations made for the summer beauty we covet, if we expect any measure of success. In February, then, make out your lists. If you are supplied with seed of the varieties you desire, well and good; if not, study your seed-catalogue, make out your order, and send to your florist at once.

Of the rarer species of flowers, especially the double varieties, it is more satisfactory to get seed from the florist every year, as those saved by the unskilled grower are apt to be semi-double. Flowers growing near each other are very liable to mix, and deteriorate in many ways. This is well illustrated by self-sown pansies, which in blooming often show the strangest markings, the result of mixture from the different varieties. Therefore, if pure varieties of choice

species are desired, get fresh seed from headquarters every year.

Having received your seed, it will be necessary to turn your attention to planting such as need to borrow time from the early spring, to be ready to bloom in due season in the summer. Do not plant all varieties indiscriminately, as soon as received; for while some need the longest time you can give them, others do not thrive when planted too early. Your floral catalogues will give the needed information on this subject, and they cannot be studied too carefully. As a general rule, annuals desired for early bloom will need an early start in the house. A few varieties have long tap roots, which do not bear transplanting well; these should be sown when they are to flower, when the season is sufficiently advanced.

Having obtained all the information possible in regard to your seeds, you are ready to begin operations. It is supposed that you have a box of rich, fine-sifted earth, taken from around some old barn or hen-park

over each other in their eagerness. Then the flannel was removed, the little seedlings given air and sunlight by day, and a warm corner by night, constant care being taken that they should not be chilled.

My experience with cypress seeds was very peculiar. It was quite late in the season, and they were needed to fill a vacant spot in a flower-bed. I put them in hot camphorated water, and left them for twenty-four hours. At the end of that time I found them sprouted, many of them with shoots half an inch long. I planted them in the bed, and in less than a week they were up, and growing finely.

Smilax seeds are among the slow germinators. I have had them lie dormant two or three months before putting in an appearance, but camphor helps them forward wonderfully. It is also of great value in restoring the vitality to old seeds, often proving efficacious in very doubtful cases.

All seeds planted in the house do better if covered with flannel until they come up; it protects them from

changes of temperature, and keeps them moist. Light is not necessary to germination, but as soon as the young shoot is in sight, then sunshine and air are indispensable to healthy growth.

Too much water is nearly as prejudicial to seeds as too little. Never pour water over the earth in which they are planted, but sprinkle the dirt carefully, so as to keep up a gentle moisture.

Much more might be said upon this subject, but space forbids. These few practical directions have been written for women who cannot command a hotbed in which to start their flowers and early vegetables, but who, with limited appliances, desire to enjoy these beauties and luxuries. If these few suggestions, born of earnest effort and varied experience, shall help any to even a measure of success, their object will have been gained.

And, dear sisters, let us remember that we are continually "seed-sowers," and that the fruits of our daily sowing will spring up in our homes, and wherever our lives touch other lives.

"Plant blessings, and blessings will bloom;  
Plant hate, and hate will grow;  
You can sow to-day—to-morrow will bring  
The blossom that proves what sort of a thing  
Is the seed—the seed that you sow."

MRS. S. B. TITTERINGTON.

**Vines for Shaded Places.**—I had a north wall, from which high, projecting buildings on the east and west shut out the sun entirely, and German ivy grew over it twenty feet high, forming a mass of most thrifty green. I procured the ivy from the florist the 1st of May, well rooted, and with vines a yard long. I cut it back closely when I transferred it from the pots to the ground, watered freely all summer, and twined the vines on twine. The soil was half sand and half garden loam. I also had Madeira vines grow in the same location, but not very thriftily. The Bignonia or trumpet vine will also grow in the shade. M. L. A.

AN ORIENTAL VINE-COVERED COURT.

in the fall, and stored in the cellar for the spring's use. Cigar, pipe, candy boxes, square oyster cans, with one of the sides removed, are excellent to plant seeds in, as they are shallow, light, and easily handled.

A very important point is the preparation of seeds for planting. Most varieties are hastened in their germination by soaking over night in warm water. A bit of personal experience may not be amiss. Several years ago there appeared in Scribner's Magazine an item regarding the effect of camphor upon seeds, and experimenting with the idea thus gained, I obtained wonderful results. Taking tomato seeds, which every one knows to be slow in starting, I poured boiling water upon them, putting in two drops of camphor, and letting them soak in a warm place until the next day. Then I planted them in well warmed earth, covered them with several thicknesses of flannel, and set them directly under a large stove, in which fire was kept night and day. They were not allowed to get dry, but were watered occasionally with quite warm water. On the morning of the fifth day, the little loops came hurrying up, helter skelter, almost tumbling

[Written specially for the LADIES' FLORAL CABINET.]

## Winnifred's Will.

BY AUGUSTA LARNED.

## CHAPTER VIII.

"There are points from which we can command our life,  
When the soul sweeps the future like a glass."

Virginia got out of the boat in the little wooded cove and began to walk rapidly back toward the Hall. She had forgotten the sick boy who was awaiting her return, for she was completely absorbed in the idea of escape from a menacing danger. She shrank back from herself with a feeling that the time might come when she could no longer control her life. She must fly while strength yet remained. Her heart fluttered like a frightened bird with the thought of those impetuous, burning words of love that had been poured into her ears. She had given her heart ignorantly and unconsciously, but now the knowledge that she was loved brought no joy, only despair and anguish. She felt basely wicked. What was there in loving or being loved that could atone for the sin of treachery to the friend who had trusted her with such generous, open-hearted confidence?

For a long time Virginia had been secretly determined to leave the Hall, and her thoughts and plans had all looked to that end. She had written to Pastor Viardot, but a fortnight must elapse before his answer could arrive, and now she was without means to make the journey back to Geneva. Her uncle, who filled her with fear and loathing, and who yet possessed a strange power over the poor girl, had by mysterious missives summoned her to more than one secret interview since their first meeting in the pine grove. She dared not expose him to her friends, and his covert threats filled her with shuddering dread for their safety. She had given him nearly all the gold pieces in her little purse at an interview in the grounds. And it was from this interview, late in the evening, that Nanna had let her into the house looking white and scared.

Although Freeborn had grumbled at the small sum which the little purse contained, and had accused her of a deplorable want of all proper affection and feeling for him, in not bleeding Miss Braithwaite, he had promised to leave the neighborhood. His lurking presence near the Hall filled Virginia with a creeping terror, for she was sure this sinister man had possessed himself of every secret connected with the place, and a vague sense of danger hovering over her kind friends and protectors destroyed sleep and appetite. She seemed held in the grasp of a nightmare, and yet the time that must elapse before an answer could come from Pastor Viardot brought a certain relief, for it gave her the power to watch over the safety of the house, and to assure herself that Walter Freeborn had actually quit the country. Night after night she lay broad awake, with a painful tension of the nerves, waiting, watching, dreading she knew not what.

For several days past he had left her unmolested, and she was beginning to breathe a little more freely, when Edgar Swayne's account of the burglary at Deanport had brought all the old terror back with tenfold force upon her heart. She had nearly fainted at the breakfast table, and it was impossible to conceal her agitation from Bradley, whose eye she had felt searching down into her secret. Those moments when Edgar was detailing his suspicions about the mysterious stranger at the mine were terrible to live through, but as well as the confusion of her senses would allow her to gather, she heard that the man had disappeared, and it seemed to give a gleam of hope in the darkness. It was horrible to be made an accomplice in the man's crime, to have guilty suspicions polluting her pure bosom, for it was impossible not to believe the worst of Walter Freeborn.

If he had participated in the Deanport affair, the country now being roused, the mine would no longer be a safe hiding place. Virginia had pondered sadly upon this all the morning, and now the scene with Bradley in the boat had brought a new and overpowering sense of danger and shame, and though almost penniless, she was prepared for immediate departure from the Hall. The place was fresh with subdued gold, and frescoing, and crimson carpets, soft to the feet, and with the scent of varnish on the new, rich upholstery. Virginia arrested her steps at the sight of a pile of letters on the lobby table. She had no correspondents in this country, but the thought occurred to her that Parson Viardot's message might have come sooner than she had calculated, and she saw amid the heap a long, slender envelope addressed in her name. It bore no foreign postmark, and Virginia took it up shudderingly, foreboding a mysterious summons to her uncle's new place of concealment. She ran with it up the stairs, and locked herself in her own room.

The letter when torn open revealed a sheet of exquisite scented note-paper, traced in the finest feminine hand.

"Dear Mademoiselle Duval," it ran, "you will be sur-

prised to receive a letter from one so nearly a stranger to you as I am. Our intercourse on the steamer was very slight, but having heard from my son of the great disappointment which attended your arrival in this country, my interest in you could not fail to be awakened. Your residence at Halcourt Hall has doubtless been of benefit both to yourself and to my niece Winnifred, but by putting myself sympathetically in your situation, I am confident that a mere life of dependence will not long satisfy one who has the power to place herself in a more becoming and congenial sphere of life and duty.

"I know, dear mademoiselle, that you are amply qualified, both in mind and manners, being well versed in music and the modern languages, to fill the place of governess in one of our best families. Such a position involves little hardship, and the young person who occupies it is generally treated with more kindness and consideration than in a similar position in the old world.

"With an instinctive regard for the scruples that must arise in a mind as delicate as your own, and a knowledge of the various annoyances that a sensitive spirit is subjected to when in a state of dependence, even among attached friends, I have ventured to proffer my services in procuring for you a pleasant home, where none of these burdens need be felt. If you will come to my house here, it is freely open to you for any length of time you may find it agreeable to remain, while we compare ideas as to what will best render your future both useful and happy. I will add that I have now in mind a dear friend in Maryland, who would gladly receive you into her beautiful home, and give you the educational charge of her children. That your movements may be quite unembarrassed, I will send a sum to defray the expense of your journey, as soon as I hear that the plan meets your approbation. Do not hesitate about using it, dear mademoiselle, for you can return it at your own convenience.

"Of course you are well aware that my son is betrothed to his cousin. When the marriage takes place their establishment will necessarily be put on a different footing, and perhaps it may be agreeable to you to have settled plans and prospects in life before the event occurs. I shall be more than glad to occupy toward you the position of friend and helper which my son undertook to fill. He would befriend any woman, however poor or old, who needed assistance, but new affections and duties may cause him to overlook your interests, and I have therefore taken the liberty of volunteering my aid and friendship.

"Believe me ever sincerely yours,

"EDITH HALCOURT."

Virginia, already crushed and beaten down to the earth, felt this new humiliation to be more than she could bear. Gentle as she was, her pale face burned with anger and shame, as she crumpled the hateful letter in her hand, and longed to fling it back in the face of the hard, cold, elegant woman of the world who had tried to cover up her selfish designs with smooth words and proffers of friendship.

Though inexperienced in the ways of life, she felt the covert insult in nearly every line, and penetrated the motives of the writer. This woman had extorted from her son a promise blighting to all his hopes of happiness, and now she would sweep out of her path every obstacle in the way of her ambition. No, she would never put herself in Mrs. Halcourt's power, and allow her to probe down to the sad, hopeless secret hidden in her heart.

Then came a great revulsion of feeling, and the memory of the wrong she had done, the deceit she had practiced toward Winnifred, swept over and humbled her to the dust. She would force herself to accept Mrs. Halcourt's proffered aid, as a penance for her sin—at least until the way opened for her return to Geneva. Then for a long hour she lay with her face buried in the pillow, crying out, in the depths of her loneliness and friendlessness, to God and the good angels, to her dear dead parents, to keep her safe from temptation and life-long remorse. If the love in her heart could slay her and do no harm to others, she would welcome death as a blessed relief.

At last Virginia arose, and, heavy eyed and pale, but tearless, seated herself at her little table and penned a cold and formal note to Mrs. Halcourt, in which she thanked her, and accepted the situation in Maryland, saying that she would go directly to the place as soon as she received directions for the journey. The money for her expenses she would also take, with the understanding that it was to be paid out of her first quarter's salary. Virginia paused, counting the days; two, at least, perhaps three must elapse before an answer could reach her. How could she remain at the Hall and meet Bradley Halcourt with the knowledge that lay between them, and be tortured by the unconscious endearments and caresses of Winnifred? What could she do—where spend the interval? Suddenly there occurred to her the name of Hopedale, a little village among the hills, that lay upon the railroad some ten or fifteen miles from Halcourt. She had never been there with Winnifred, no one would recognize her as belonging to the Hall, but she knew it lay to the north, and was reached by the rugged mountain roads. She could make the journey on foot, and if one day did not suffice she would stop over night at

some friendly farm-house. There was still enough money remaining in the little purse to pay her way for a few days in a cheap country place. At the bottom of her note Virginia appended the request that Mrs. Halcourt would direct to Hopedale. For the evening she determined to feign illness and lock herself in her room, not even admitting old Nanna with her tea. Poor child, there was no need of feigning. Such nights and days had told terribly upon her delicate frame, and now she felt a strange lethargy creeping into her limbs, and a dullness stealing over her brain. But it was settled firmly in her mind that she would escape out of the house early next morning, before any soul was stirring, and leave behind her a note for Winnifred.

Nothing remained now but to carry the letter to the post-office. As she tied on her hat she felt glad that it was all settled, and there was no longer occasion to think. She was almost past that now. O, if she could only creep away into the dark and sleep forever!

Virginia had completely forgotten the sick boy, and now the memory came back with a pang of reproach, through the dull aching that filled her, as she saw Mrs. Finster watching in the path, the heavy baby in her arms, and her slatternly dress looking as if it might any moment slip off her form, totally devoid of hips.

"O! what has kept you so, miss?" she began, in a querulous tone of remonstrance, which Virginia's kindness had given her the right to use. "Jakey has fretted himself most out of his mind. I'm 'fraid the fever and light-headedness is comin' on again. He just needs you as he does the air he breathes. I had no idea you was a-going to do more than take a row round the lake with that young man, Miss Braithwaite's intended, and when you didn't come back I was just beat."

"I am so sorry Jakey has needed me," said Virginia, with deep humility. "I had to go up to the Hall, and there I found a letter that required answering at once, and now I must walk to the post-office in time for the mail. Tell Jakey I will hasten back as soon as possible, and will not leave him again to-day. If I can find an orange over at the store he shall have it."

Mrs. Finster could not help noticing the heavy-lidded eyes and pitiful, wan face, framed in a mist of golden hair.

"You look sick yourself, miss," said she, beating up the baby as if he had been a feather pillow, "and not fit to drag over to the post-office. Let Hendrick take the letter. He's got a nimble pair of legs and would get over the ground quicker nor what you would. I'll time him by the clock so that he can't play truems. Poor Jake would be so done up not to see you now, and him with his tongue parched up in his mouth like a bit of dry luther."

"I will gladly let Hendrick carry the letter," said Virginia, with an immense sense of relief, for her feet were like two lumps of lead. She paused a moment and looked at Mrs. Finster. "Could you keep me here to-night? If it is not inconvenient I will stay by little Jake and nurse him for you."

"O, how kind you be to the likes of us, miss! I could worship the very ground you step on! But it's poor pickin' you'll have here; I do the best as ever I can with such a pack o' children, and the wind has been contrary for a few days and the fish won't bite, and Finster's such a soft-hearted creeter when the children are sick and things go wrong, he has to drown his sorrow at the tavern. Miss Braithwaite has promised to do fine things for us, now she's rollin' in money, and could ride in a gold coach. But I s'pose she's all high-tighty took up with her beau, that handsome young man. No matter; I'm too proud-spered to ask help, and now there ain't a dust of tea in the house. But I'll send up sly to old Nanna and borry a drawing on account of you."

"No," said Virginia, putting her hand in her pocket; "I have money, and Kendrick shall buy a pound of the best they have at the store, and there will be a little sum left to get Jakey an orange."

"Never mind the orange, Miss, and God bless you; the poor boy don't want nothing but the light of your face. There, I hear him groavin'. Come right in."

Bradley brought the boat to shore and fastened it high and dry on Finster's beach, but he made no explanation as to the disappearance of Virginia, for at that moment the mother was within doors attending to her sick boy. The tumult of his feelings was an exquisite kind of intoxication. He lost sight of everything but the knowledge that Virginia loved him, and that awoke a passionate awe, a deep religious sense of bliss that brought tears welling up into his eyes. He wandered about in an aimless way, lost in his sensations, not thinking or caring where his feet might take him, when he found himself at the junction of the wooded path with the hill road, at the very spot where Virginia had flown almost into his arms like a frightened bird on the day of his arrival.

Bradley had been walking in a magic wood, while a strange, unreal happiness thrilled his frame, and he was now brought back to reality by the shock of remembrance. He had slowly and patiently put together all the signs of Virginia's secret trouble, until something like the truth

dawned upon his mind. The scene at the breakfast-table only confirmed his suspicions that she had been dogged and frightened by a man claiming to be, or who really was, her lost uncle, and who had insured silence by threats and violence. It was a joy to feel that now he had the right to free her from this mysterious torture, that his arm and his heart were a shield for the poor, sad girl's defense, her deliverance from the baleful influence that of late had been disturbing her pure life and troubling her sensitive conscience. Edgar Swayne's account of the stranger lurking about the mines had given him the clue he needed. He could think of only the one woman that the world held for him, and what he would do in her cause. All else had shriveled into insignificance. He meant to break the conventional tie that bound him to Winnifred at once, confident that the rupture would only wound his cousin's pride. He would renounce mother, fortune, friends, all if need be, to cleave unto the one God and nature had made his.

It was a steep climb up that hill path, and suddenly, about half way to the top, the road emerged from the woods upon a broad, black track, where the coal-trucks were coming and going in endless procession. The land had a blasted look, with scrubby oak patches and ferruginous rocks cropping out, for here the coal measures lay close to the iron. The entrance to the mine lay a little over the mountain ridge, in a sheltered hollow, where the miners' cabins were grouped about a quarter of a mile apart from the black sheds and buildings connected with the works. Now many laborers were engaged in the slow business of sinking a new shaft, and in extending and repairing some of the old disused galleries. The creaking of machinery was constantly heard, while the pumps poured out streams of water that made dirty yellow brooks and runlets, and great piles of *d bris* were heaped about the pit's mouth.

Bradley, in his boyhood, had been very familiar with the mine, which he had explored from end to end in company with a friendly old guide, who told him wonderful yarns of his early days passed in the deep Cornish mines. Now, as he threaded the dirty wet lane that ran between two rows of wretched miners' cabins, picking his steps among fowls and garbage heaps, he looked about for the little lad known as Sharp Ben, who had given Edgar Swayne his information concerning the stranger. But at that moment the boy was picking and sorting coal, with his grimy fingers, a toil to which he was doomed except for a few hours daily, when Winnifred had decreed that all children under a certain age should attend the school—her new pet—which she had just set up. There had been no end of grumbling among the parents at this attempt, as they judged it, to take bread out of their children's mouths, by "putting a little useless book-learnin' into their noddles." But Winnifred had persisted, and the youngest workers were paid for full time, and received their schooling gratis.

The temple of learning, where Mr. Swayne was working very bravely and devotedly, was a mere rough shed, hastily altered; but Winnifred had already secured plans for a new building, which, besides its main purpose, could be used for Sunday services, social meetings and lectures. All this was included in her plan of civilizing the rough people brutalized more or less by their hard lives, and which she had talked over and arranged with Edgar Swayne.

Among the houses where the women were washing, cooking, scrubbing and clattering pots and pans, while the wee little ones, too small to pick coal, stared at him with round-eyed wonder as he passed, Bradley sought for a particular cabin, with which he had once been familiar. He stopped at last before a door where a gigantic, bony, north of England woman was standing to cool herself, and to escape the smudge she had raised in the interior of her room. Her hands were propped upon her hips, and her face was bold and red and defiant. The old judge had imported a number of these miners from the great coal and iron district, the black country, as it is called.

"Does old Nat Driver live here?" Bradley inquired, in a civil tone.

"Hoot, mon! old Daddy Driver's been dead and buried these three year gone. He got full drunk one day and slipped down the pit's mou h and broke his neck. Me and my mon, Smoky Duff, and our gell ten year old come Michaelmas have lived here risin' of two years, and a poor place it is," she grumbled, "with the rain beating in through the roof. The old boss wouldn't give a board or a penny worth o' nails to save a body's life, and here's the young missus up in arins about the schule, and comin' to meddle and make in things no business of her'n, takin' the callants from their work and payin' full time, as if ever a body should hear the like of that onreasonableness. She's overbearin' and masterfull, puttin' down her foot to say what shall and what shan't; but they do say she's goin' to get married, and have grand doin's down to the great house, and then she'll fash her head no more about the mines, and things 'll be harder than ever. They allus is harder after a let-up. But I shan't cry to have the schule shet. I'se no scholar myself; nuther's my mon. I've never heard that schulin' helped a mon to save his light, or kep' him from swallerin' the damp, or helped him at heavin'; but our gell Polly is so took up about learnin' and readin'

books, and that fulcishness, my mon and me thinks most likely she'll turn out bad."

"I have heard of you and your husband, Smoky Duff," said Bradley, as he stepped inside the cottage, "and also of the gentleman who has been lodging with you for a few weeks past."

The woman started back into the gloom of the cabin with a gesture of surprise and anger. "If you've come pryin' and peepin', begone with you, and all I can say is that you've put your head in the wrong trap. I wouldn't have yon parson-schulemaster sneakin' around the place. When he come pokin' his nose into my business I drove him off with my tongue. Next time I'll take a broom or a jug of hot water to him."

Bradley seated himself on a stool near the truckle-bed with the coolest nonchalance. "Why do you get angry and accuse me of prying into your affairs because I spoke of this stranger? I have come to you as a friend."

The virago looked darkly for a moment at his half-smiling unconcerned face, and then her scowl began to clear. "Hoot, mon, how should I know friend from foe when there's rumors of robberies abroad in yon town, and if it was known we had lodged a stranger, me and Smoky might be suspicioned for aidin' and abettin', as it's called; but you do look like a fine young gentleman, as wouldn't dirty your white hands with sich work. Mayhap you're the friend the doctor spoke of. He said he was expecting to get some money from a friend, and then he would pay me for his lodging, and keep, and his bit of washing."

Bradley clasped his hands around his knee and laughed lightly. "So you took me for a sheriff's officer, or a spy, when I am the most harmless man alive. I have no ill designs against you or the doctor either."

"Well, now," returned Nancy Duff, still more mollified, "I thought you must be a friend of his'n. Poor gentleman, it's a shame to suspicion him. He was poorly when he first came, and staid in bed a good deal, and took his porridge as quiet as a lamb. He was that peacable I never did see, and he took a great shine to our little Poll, and of an evening helped her figure on her slate, and the drops he gave Smoky did him a sight of good for the cricket in his back."

"Drops?" repeated Bradley, interrogatively.

"He peddles his doctor stuff round the country now you know. Fash my head, what do he call 'em? But I can show you the bottle."

"Do," said Bradley, with quiet alertness.

Mrs. Duff went to a dark corner cupboard, and brought back a little vial with a printed label, which announced that "Dr. Walters' Universal Panacea and Elixir, for the cure of all known diseases, was prepared and sold exclusively by himself." He took the vial, a harmless looking thing, and turned it about in his hand. The virago, whose confidence he had won, turned her broad back toward him for a moment, to stir some mess that was cooking over the fire. There was a little piece of writing-paper wrapped around the cork to hold it fast. It was in fact the end of an old letter. Bradley turned toward the window, and, drawing it dextrously out, smoothed the scrap of stained, crumpled paper in his hand. It was that thin, sheer kind used mostly for foreign letters, and on the inside of it were traced a few faint lines in a feminine hand. They were quite sufficient. Bradley stood still for a moment without attending to Nancy Duff's remarks, which had run on in an uninterrupted stream.

"I do know Dr. Walters," said he, turning round, and then he stepped to the cabin door and closed it quietly, and returning, faced Nancy Duff, who had eyed his movements with gathering astonishment and suspicion. Bradley took from his pocket a little roll of money and slowly unfolded it.

"You have been kind to this man," said he, facing Smoky Duff's wife, "and I want to reward you. Take this and answer me one or two questions."

"O, your honor," cried Nancy, "I'm an honest woman, 'deed I am, and if harm should come along of the money to me, or my mon, or little Poll!"

"No harm can come," said Bradley, with quiet decision. "Take it and keep your own counsel. Now tell me when Dr. Walters left this place. It is absolutely necessary that I should know to insure you and your husband from trouble."

Mrs. Duff hesitated and scanned his face with her keen eyes, then she glanced at the money in her hand.

"Three days ago, your honor."

"And you do not look for his return?"

Again she faltered, but the money and Bradley's eye were potent charms. "I can't say for dead sure. He may, your honor, to-night, seeing he left the medicine-box and some of his clothes in the attic where he slept."

Bradley took a little diary from his pocket and rapidly traced with a pencil on one of the blank leaves the following words:

"You are strongly suspected of complicity with the Deanport masked burglars. You are watched, and will be arrested on suspicion if you remain in this place another night. This is from a friend, who warns you of your

danger and advises you to instantly quit the neighborhood."

He tore out the leaf, folded it, and gave it into Nancy's hand. "Give that to the doctor immediately when he comes, and if you should happen to know where he is at this moment, convey it to him at once. But not a word, not a breath to your husband, or that bright girl, Polly. If you follow my directions to the letter you shall be liberally rewarded. Do you hear?"

Nancy Duff seized the paper, gave him a significant look, nodded three times, and Bradley was gone. He walked rapidly away out of the cluster of miners' huts, glad to feel the cool air blowing on his face, for his mental excitement was intense, and he wanted time to recover himself and to think clearly again. As he struck into the path that led down the mountain there was the sound of rapid steps behind him, and some one called his name. He turned and saw Edgar Swayne dashing along over the slope.

"Pardon me for troubling you, Mr. Halcourt," said he, as soon as he could recover his breath. "I saw you coming away from the miners' village, and it seemed quite providential, for I have been in urgent need of some safe and secret means to send a message to the telegraph station at the depot. I should go down myself but Bob Smithers' wife has just lost her baby. She is a good, gentle, patient soul, and it is pitiful to hear her moan and sob over the empty cradle. The young ladies at the Hall took a kindly interest in her last summer, and I have promised to hold a little service this afternoon. You will see by the message to Dalrymple that I have got hold of what I believe to be important testimony in reference to the burglary. There is not a moment to lose, and if this man is secured probably it will lead to the capture of the whole gang. I shall tell Miss Braithwaite all about it when I see her, but I must remain here to night, for there may be lively work. If you will personally see that this is sent to the sheriff at Deanport by telegraph, I think you will be doing a service to the public."

"I will attend to the matter," said Bradley, curtly, as he took the open envelope from Mr. Swayne's hand, and received that gentleman's thanks, given less coldly than any words he had ever spoken to him before. Edgar turned hastily back, and Bradley stopped in the path feeling sick and giddy from a sense of something that had stolen away the strength of his manhood. What had inspired Swayne with such a diabolical zeal in the public cause? Slowly he opened the message and read as follows:

"HALCOURT MINES, October 18th, 18—.

"ALFRED DALRYMPLE, Sheriff of Deanport: A stranger calling himself Walters, and purporting to be a quack doctor, has been lurking for some weeks about the Halcourt mines. He has been recognized as a notorious character, who has figured under various aliases, and it seems probable that he was the ringleader in the recent burglary committed in your town. He has a confederate here, the wife of a miner named Smoky Duff, in whose cabin he has lodged. He will be here to-night. Send up by the late train a sufficient force to surround the cottage. A wagon will meet your men at the station, and I will be here to guide them to the place."

"EDGAR SWAYNE,

"Schoolmaster at the mines."

Bradley's knees seemed to give way, and he sat down on a log by the roadside, for the light had suddenly darkened before his eyes. Should he, a gentleman, who had always prized his honor before his life, betray a trust, and help to shield a criminal from justice? Then there swept past him the vision of a sad, wan face, framed in a mist of golden hair, that seemed to implore him with wide open, pitiful blue eyes. He must shield her from shame; he must save her from being dragged into the courts. Nothing had as yet been proven against this man. It might not be wrong to give him a chance to escape. Bradley rose to his feet, looking strangely haggard. He seemed to have grown old in a moment of time. Slowly he tore the dispatch into bits, and scattered it to the winds.

(To be continued.)

[For the FLORAL CABINET.]

#### CYPRESS VINE.

Leaning gently from my window,  
Swaying softly in the breeze,  
Is my pretty cypress, growing  
With a modest, graceful ease.

One by one the buds are peeping  
Through the fragile, leafy vines,  
Fairest beauty now unfolding,  
While around the frame it twines.

How I prize its tiny blossom,  
As I watch it day by day;  
Cheering me in lonely moments,  
By its little petals gay.

Tendrils clasping one another  
With a sister-like embrace—  
Teaching me a noble lesson,  
As its tenderness I trace.

VICKIE BLUE.

NEW YORK, MAY, 1877.

## BULBS.

I have had such good success with a few bulbs, for the past two winters, that I must call upon the flower-loving sisters to rejoice with me. Crocuses are not much of a comfort out of doors—the stems are so very short, one has to get down on the ground to see them; and then they are sure to open upon some deceitful sunny day, and we run out without a shawl to look at them, and are chilled to the bone, by the searching wind, before we can take refuge in the house again; but when they are in pots, we are masters of the situation. I get the bulbs as early as possible in the fall, buying named bulbs always; plant three of a kind in a four-inch pot, water them well, and placing the pots in the hot-bed, have them covered six inches deep with tan bark. There they must remain until winter sets in—two months is about right, to develop roots.

Their winter quarters is an east window in a hall which is warmed by a drum; there are also two warmed bedrooms opening into it, the doors of which always stand open; but as the window is at least twenty-five feet from either of them, it can't be overly warm. A board just wide enough to hold the pots is laid down, and the four Crocus pots and one of Due Van Thol tulips stand upon it, from the time they are brought into the house until they are turned into the ground in the spring. On cold nights the board is lifted upon a chair in the corner near the drum—it takes but a moment, and is easier than to carry two pots at a time; if the days are very cold, a newspaper is laid between the pots and the window—but it is not often necessary. In about two months, they commence blooming, and all come out together—solid purple, white, purple and white striped Crocus, and the three red Tulips for a contrast. The yellow Crocus I cannot recommend; they won't grow over three inches high, and soon fade; but the others are just lovely—from six to eight inches high, large blossoms, each remaining fresh at least five days, and a number of flowers from each bulb—one white one has had seven blooms; the brilliancy and delicacy of their colors is astonish-

ing, when one considers how little sun they get. A thrifty hanging-basket of Coliseum Ivy hangs in this window to add to its attractions, and it has been greatly admired by visitors, as well as a source of much enjoyment to ourselves.

In a south window in my bedroom, I have another board, on which are two superb Hyacinths—a white one, with two stalks, and a red one—also a pot of lemon-colored dwarf Tulips, and two pots of Sweet Violets, that won't bloom. I wonder if anybody does manage to have Violets bloom in the house—but the Hyacinths console me for this failure. While I was in Chicago I took pains to look in the windows of the florists, but saw no Hyacinths that would compare with ours; we have two or three in the conservatory, also, but these are the finest. This room is considerably warmer than the hall—but as we open the window a little ways at night, usually, the board is moved upon the chair with the others. Of course, the pots are watered when they need it, and they take considerable water when in bloom, and very little until they do so. We do not ask these bulbs to bloom again in the house; Crocuses, especially, are so inexpensive that we think they have given us the full value of our money, so get new ones every fall.

Dyer, Ind.

Mrs. J. M. B.

## HINTS AND EXPEDIENTS.

The rose-queens, robed in silken white, pink, yellow and deepest crimson and velvety purple, had fluttered away to the silent chambers in which they hide from all the months but June, except Prairie Queen; she swung her last bells merrily in the first July sunshine. Most of the spring and early summer flowers had gone, and the later ones had not yet bloomed; but beds of Phlox, Portulaca and such perishable flowers were in their prime.

Church bouquets were wanted, and what could they be made of? Certainly nothing in the garden was suitable but the Prairie Queen. Early Saturday morning, with the aid of waterproof and rubbers, the question was solved. Walking over the hill, with that open-eyed loitering most apt to lead to woodland discoveries, (which are so often only a comprehensive sight of what we pass every day), there was a sudden glimpse of white among the scattering bushes, which proved to be the snowy spikes of Indigo Plant. They were soon cut with long stems and put into the basket.

Now which way? A few moments' hesitation, then the inevitable turning toward the hill of resonances, one of those occasional hilltops where all manner of flowers and vines and shrubs grow in loving company, though in other localities they only grow isolated. Just in the edge of the swamp at the foot of the hill was a single wild Lily, which soon nestled in the basket with the other flowers. The lower edge of the hill was widely bordered with a shining mass of mandrake leaves, spreading eagerly and crowding each other to hide their one precious jewel of a flower, trying to burst its wrappings. Above there were tangling vines and quaint shrubs and stately grasses. The handsomest vine-sprays and handfulls of a tall nodding grass soon filled the basket. Down in the swamp there were faint bits of red to be seen. More Lilies? Yes, and for every one reached two or three more were in sight.

Turning homeward with laden arms and basket, the vivid Lilies nodding softly against the dewy grass at every step, brought to mind their text, "consider the lilies of the field, for they toil not, neither do they spin." No toiling or spinning, yet what secrets they have of subtle chemistry, baffling our senses after all labored investigations and theories.

An hour after returning home the bouquet was completed. In the centre was a single stem of three lilies, thickly encircled with the tall nodding grass; then a row of the spikes of snowy, pea-like blossoms; more nodding grass; then a heavy row of lilies glowing radiantly behind the veil of the fine, misty grass; then short spikes of the white flowers and the heavy grass, finished with the vine sprays and the most perfect Peony leaves. The bouquet was large and loose, that each flower might assume a natural position, yet firmly confined by the stems.

With such large bouquets, and, indeed, many smaller ones, it is a good plan to make them *upside down*, holding the stems firmly with the fingers of the left hand, while adding to the bouquet with the right, turn it slowly around as you work. It can thus be made much more even and easily.

For an edging Peony leaves can hardly be surpassed. They should be selected as mature and perfect as possible, and arranged in a close circle around the bouquet, leaving the pointed ends to extend out beyond the bouquet a little ways. Peony leaves are also fine to put into the bouquets of some flowers.

After the large bouquet was finished, the "Prairie Queens" were made in two round bouquets, with nothing but Peony leaves for filling and edging.

To remedy the water-lilies' habit of closing at night and so hiding their beauty, the outer green petals may be neatly plucked off, leaving large, white, waxy buds that can be used very effectively. If for daytime, Phlox (annual) and such flowers may be used, when they would be insignificant in the evening.

A large ornamental vase may be filled in this way: fit a common milk-pan in it so the edge of the pan is level with that of the vase; fill the pan half full with water, then swath the vase from brim to pedestal with the thick, handsome wild vine called "Sarsaparilla," or some other equally luxuriant; put the stems carefully under water and weight them down with small stones; arrange the delicate curling ends artistically around the pedestal, and take care that all the leaves face outward, and the whole vine looks natural; hide the brim of the vase with a thick row of Peony leaves; in the middle of the pan set a basin on the stones, so that its edge may be an inch or two above that of the pan; in the middle of the basin set a round tin can or tumbler. A rather rough outline of a pyramid is thus formed. Putting in enough water, commence at the outer edge and fill in with a row of darkest Phlox, then one of variegated or ornamental leaves, and so on alternately until pan and basin are full; then in the tin can put a cluster of bold leaves, such as those of the variegated Calla, and a bright truss or two of Geranium. The color in the rows of Phlox should grow lighter from the outer edge, until the last is white. Both flowers and leaves should be so smoothly arranged as to hide the unsightly dishes and make a low, perfect pyramid. Now decorate the whole by putting the stems of several long trails of Smilax in the tin can and winding the vines carelessly but artistically around and over the flowers, letting the ends drop lightly over the vase edge on the heavier vine beneath. Finish with heavy grass in the centre around the Calla leaves, and weave a fine mist of more delicate grasses over the whole vase. The stems can be inserted without disturbing the flowers. Grass is not used as much as it might be, and when used is apt to be introduced formally. If used naturally it enhances the beauty of flowers as much as moss does that of moss-roses.

Thus, with a little ingenuity, and an humble attention to that most perfect artist, Nature, we need never despise any material.

THE PROPOSAL AND ACCEPTANCE.

## Household Art.

## SOME NEW IDEAS FOR THE PARLOR.

Nothing so much destroys the look of parlor as suits of furniture and angular arrangements. It is far better to have pieces of two or even three sets of parlor furniture, if you will buy furniture in suits. The arrangement of furniture in this show-room, as a rule, reflects the mind of the owner. The crotchets, kinks, or go-by-a-line woman will arrange her apartment after the fashion of her mind. There is no end to the fine effect that may be produced; it is a question of money as to the richness and magnificence of the room; but the beauty and artistic feeling of the room is not a question of cash. There are parlors and parlors. The amount of money lavished on them is not a test of merit, and every man and woman with a maximum of taste and a minimum of money, by clever arrangement of common things, can vie with upper-ten neighbors. In a case of this kind artistic feeling and common sense has the advantage of surplus cash. The writer will not attempt a model parlor, but simply suggest novel treatments, from which the housekeeper can select such ideas as will please the owner or will best suit the conditions of the apartment.

A novel effect can be made by the use of cheap, gaudily painted Japanese fans. Three of the same general tone of color, spread open-spaced in a circle around the chandelier and against the ceiling, will make a handsome centre-piece. The butts of the fans will have to be sawed off some distance from the handle and then tacked to the wall. To hide the jointure, they should be pushed under the brass washer. They can also be used with effect to cover an unsightly pipe-hole, provided it is equi-distant from the side walls.

There is a general tendency to overcrowd the wall with pictures. Better a very few large pictures than a number of small ones, in considering the general make-up of the room. Paintings and engravings should not be indiscriminately mixed in groups, and small pictures should be grouped together rather than hang unaccompanied on the wall. Family portraits, unless possessed of intrinsic merit, become the sitting-room or bed-chamber, but not the parlor. Some pictures may be suspended by the artificial vines of ivy or autumn leaves, advertised nearly everywhere. Behind others a bottle of water standing on a shelf or supported by a string, in which living vines can be planted, in time will twine up the cord and around the picture-frame. One of the most artistic methods of bestowing a picture, especially if it be the gem of your collection, is to place it upon an easel made of some dark wood. Your carpenter can make one for you at a trifling cost, out of pine, if better wood cannot be obtained, which may be stained in imitation of some of the handsomer species.

One great rule to be observed is to avoid the littering up of the mantel-piece with a variety of small articles, such as mugs, plaster casts and china figures. A couple of long vases of odd pattern, with a handsome clock, or some of the many unique articles of *vertu* which have become so abundant is much more tasteful. A multitude of books or daguerreotype cases generally find their way to the mantels or centre-table in the hamlets and villages, and are out of place, and help to mar many an otherwise pretty room. One handsomely illustrated volume, or two at the most, are in better taste. The appearance of the card-case and imitation receiver savors too much of affectation to ever be allowed in the parlor. A vase

for cut flowers, which is always better with the flowers arranged in seeming confusion, and vines trailing to the floor and over the table edge, may in the winter be replaced by a wax bouquet, if the owner can make up her mind to do without the glass cover and can submit to their transfer. What-nots are a nuisance after the admirable designs of Mr. Clarence Cook for curiosities, and small fry generally, which of course do not belong to a parlor at all, but rather to the library, music, or billiard-room. If you have nothing but a small mirror, do without any in the parlor. Japanese scrolls, hung on rollers, can be used with effect, especially if the tendency of the room is too dark or subdued. Better one large than two or three small ones.

The fireplace may be filled with rockery, or an old stump with ferns, ivies and moss. A bright-plumaged specimen of the taxidermist's skill adds greatly to the picture. I know of no one thing in a parlor, among the many devices in ferns, etc., that can at all compare with this design, if carried out with proper spirit.

A remarkably handsome mantel-piece or framing to doors and windows may be made by using unpainted pine framework throughout. Over the fireplace a sentence in German text may be drawn in pencil, and in other places geometrical designs or arabesques in bold, decided figures; or vines and flowers with an occasional bird or two may be attempted if the person who executes the drawing is a free hand, otherwise you had far better stick to angular figures. Then with a steady brush go over the whole work, filling around the pencil mark, and not inside of it. The best coloring matter to use for this purpose is the finest kind of black varnish, shading inside the lines with india ink and camel-hair brushes. After this is thoroughly dried, several coats of the very best carriage varnish. The richness of the unpainted pine may be much heightened by sandpapering the varnish off a couple of times; but the tendency is to blur the outlines, and unless great care and dexterity be observed your work is irretrievably spoiled. The naked wood, after this treatment, will very closely resemble inlaid gold work. In a room, however, art would be best served by attempting the mantel-piece alone. The same principle we have applied to furniture, etc., with most excellent effect. Little conception of the richness and high tone of the wood can be had until the work is seen.

A white-painted mantel-piece is an abomination; better plain black or stained wood. A few hassocks and rich rugs may be distributed around. In this, as with many other articles, if the tone of the walls and carpet is dark, the minor articles should be bright, which will greatly diminish the sombre tendency. The rugs and stools, under ordinary circumstances, should not be of shade or color of the carpet and walls, but will look well if they match in a general way the lambrequins, or if the pattern is the same as that of the carpet in different colors, especially if in bold geometrical figures. Gracefully hung curtains suspended on brass rods or rings have a much handsomer effect than the very finest blinds, even should the former be of the plainest material.

Singing birds are a nuisance in the parlor, their proper habitation being the veranda or sitting-room. Wardian cases, aquaria and ferneries add to the beauty of a room. A handsome bookcase may be placed in the parlor, especially if ornamented with busts and protected by curtains instead of glass doors. In place of the vase of flowers, or additional thereto, a very pretty ornament may be made by using a high wicker sewing stand and filling it with cut flowers; or for a small sum you can purchase a photographer's head-

rest, and attaching a basket or metal pan to the top of the movable iron rod, fill it with cut or living flowers, vines, etc. The rod can then be raised or lowered to suit the growing foliage. A few large brackets may be placed in odd corners rather than in the broad side wall, on which to place such nick-nacks as generally find a place on the what-not.

The corners of the room deserve attention, especially in a sparsely furnished room, and are susceptible of many different treatments, some of those suggested by Mr. Clarence Cook being of the greatest variety. A bust on a bracket or pedestal fills a corner nicely, and handsomely if the bust or statuette is rather large and of rare workmanship, and will admit of curtains divided in the middle and drawn back at the sides with cord and tassel. Light rose or blue curtain with silver or yellow fringe or Grecian border, should be suspended on a half circular rod and topped off with a Moorish cap of the same material, with border or fringe at the juncture of the same. The background of the figure should be maroon, or possibly black, in order that it may stand out better. A handsome vase might be used in the same method, but the effect is not as good. A trophy corner has also a fine effect in a room. Brightly burnished arms and flags may be effectively grouped in a corner, either based on a small pedestal or half way up the wall and standing out from them; crossed cutlasses, Turkish arms and an ancient shield, spears, bows, arrows and the like, make a bizarre design for a centre-piece over the mantel or between windows, or better still, in the library.

As before remarked, all these, or modifications of them, will go far to make your best room a pleasure to the eye. There is great danger of overdoing the adornment; the more so if the room be small, and great care should be taken not to overload the walls or the floor with an incongruous collection of hangings and furniture. There are very few who are gifted with good taste and judgment sufficient to handle a mass of material and reduce it to a happy adjustment. The general tone of the best room in summer should be airy, comfortable and restful to the eye. The winter parlor should be very warm in tone and fill the eye with color. Easily overturned tables, chairs and unsubstantially fastened brackets, pictures, etc., should ever be guarded against. One wants to take in pleasure through the eye as well as in conversation, and a well arranged apartment is a great quickener of conversation and happy thoughts. The parlor should be unique as well as suggestive to the organs of sight. One delights to see something in the general outfit that is different from the ordinary imbecilities of house-furnishing. Then, too, the room is taken as a reflex of the owner's tastes and habits. If he or she be gifted with romance, it crops out in furniture, carpets, pictures, and *bric-a-brac*. It is a criterion of taste and artistic sensibility, and the owner of a fine parlor compliments the world at large in preparing a fine apartment wherewith to please all other eyes besides his own; for, say what you will, all of us live, more or less, in fear of the censure, and covetous of the praise, of all the rest of mankind, even down to such a practical matter as the appearance of our shabbiest room, to say nothing of our best. The parlor should not be too fine and handboxy, so as to oppress mankind with the length of your purse; nor so fine as to make it uncomfortable for your own family; and your friends fearful of motion in the grand chamber, lest all the magnificence should come tumbling about their ears. The sight of magnificent furniture, wrapped in the swaddling clothes of brown holland, is a melancholy one.

## ZEPHYR-WORK.

I have been a subscriber for the FLORAL CABINET for several years, but have never, as yet, seen anything in its columns about zephyr-work. I think if some of its readers could see my wreath, they would desire to have one also. It has been admired by many. To those who understand making hair-work it will appear very simple to do, as the weaving is done almost the same in one as in the other. The only difference is, that the wire is crossed on the top of whatever you are weaving on, instead of underneath. But for the benefit of those who do not understand what we mean by weaving, I will endeavor to make my explanations as clear as possible, so that they may feel able to undertake the work. The materials used are: zephyr of different colors, fine hair wire, a smooth stick of about three-fourths of an inch in diameter, scissors, gum-arabic, a table-knife and a fine-tooth comb. Cut your zephyr into pieces of about a yard in length, and your wire into pieces about ten inches in length. Now we are ready to begin. Double your wire into two equal pieces. Place the wire at the point where it is doubled on the top of your stick, holding the stick in such a manner that your thumb will be on top of the wire on the upper side of the stick; now take a piece of zephyr and place one end between your thumb and the wire, wind it once around the stick, winding from you, and throw the end over the hand; then take and cross your wire by drawing one end toward you and the other end from you, drawing tight and firm under your thumb; again take your zephyr and wind it around your stick and your wire as before, making sure to cross the wire at every winding. Each winding is called a stitch. After you have woven the required number of stitches, twist your wire two or three times tight to the zephyr, so as to keep the stitches from coming open. Then draw your work off of your stick and cut each stitch in half. Smooth it out carefully on your knee so that there may be as many half stitches on one side of the wire as on the other. Place your forefinger firmly on the wire and begin to comb with your fine-tooth comb; commence at the edge and comb into the wire very slowly; comb each side until no more wool combs from the zephyr. Care must be taken in the weaving to have the wire crossed tight to the zephyr, else, in combing, whole threads of zephyr will comb out, which will spoil the appearance of your work. Next take and hold the wire between the thumb and forefinger at the point where you twisted it when you were done weaving, and comb it all over in the direction of the wire so that the wire is completely hid. After you have all combed, place it carefully in a book and under a heavy press for about twenty-four hours; then you can take it out again. Have your gum-arabic prepared, and, with your table-knife, spread the under side of each piece—that is, the side with the wire on—with the prepared gum. The next day you may trim the pieces into leaves of the desired shape.

To make white lilies, cast on twenty stitches of white and five stitches of yellow zephyr. To make yellow lilies, take one strand of yellow and five stitches of white zephyr. To make red lilies, take one strand of scarlet and five stitches of white zephyr. Trim all the leaves to resemble the petals of a lily—long and pointed—and bend so as to curve backwards. For stamens, cut four pieces of yellow zephyr of about half

an inch in length, and tie them into two equal parts by twisting the wire firmly. Have four stamens in each lily. To make pansies, make three weaves of royal purple and two weaves of canary yellow of five stitches each, also five weaves of purple and yellow mixed, made by casting on three stitches of purple and two stitches of yellow. In forming your pansies, take your two petals of canary yellow and three petals of your mixed weaves for one. For the other, take three petals of royal purple and two petals of the mixed weaves. I think the lilies and the pansies are the prettiest flower that can be made in zephyr work. To make a Star of Bethlehem, make three weaves of nine petals each, trim to a point, and join together. In making pink roses, cast on six stitches of white and twelve stitches of pink zephyr, trim the ends round, and form your rose as you would a wax one. For red roses it is not necessary to use any white; only the plain scarlet zephyr of eighteen stitches in each weave. I have in my wreath three Stars of Bethlehem of each of the different colors, pink, white and blue, two pansies, one of each of the different lilies, one white, one pink and one red rose, and a few buds. On both sides of the wreath is a row of plain green leaves. At each end is a small bunch of grapes, one bunch being made of purple and the other bunch of green zephyr. The grapes are made the same as you make small balls, using wire for tying instead of zephyr. Flowers made in this way may also be arranged very prettily in a bouquet.

Last summer we altered our sitting-room. On one side there had been a large cupboard, which we removed, leaving a portion of the wall to be replastered. On the day the plastering was to be done, father was called away on business which could not be postponed, leaving the plasterers to do their work alone. As is often the case, when men are left to do their work without an overseer, so it was in this case. The plaster was laid on unevenly, and in some places, where old plastering had remained, instead of taking that off they plastered right over it. You may imagine what an eyesore that wall was to us. We placed a large bookcase in front of it; still all around it the wall showed. We were determined not to have it that way. We went to the woods, gathered a quantity of the different kinds of moss, and in the fall a large variety of autumn leaves, taking care to procure a number of pretty small ones. Then we persuaded father to cut us out two pretty brackets of half-inch pine boards; also, two picture-frames. We then covered the brackets and frames with moss and made a moss cross, twining them all with pretty autumn leaves. On one side of the bookcase we hung a bracket, with the cross over; on the other side a bracket, with a picture over. Above the bookcase we hung a very pretty motto, in a moss frame. Then from the motto down each side of the bookcase, to meet with the cross and picture, we trimmed the wall with ferns and autumn leaves, forming an arch around the bookcase, and completely hiding the ungainly wall. On each of the brackets we placed a small vase holding a few feather flowers, autumn leaves and Egyptian wheat. I obtained my idea of making moss brackets and frames from Mr. Williams' book on "Household Elegancies." But in that it said the moss should be pasted on. I tried pasting but could not get it to stick, so I tied the moss on with fine thread. The thread sunk into the moss and did not show.

Persons living in the country or in small villages can obtain a number of beautiful things in the fall from the woods and surrounding country that can be made into ornaments for decorating their homes. I

have a grass basket which is quite a thing of beauty; it is composed of wheat, oats, and a species of fine brown grass gathered in the summer and put away for winter use; also some fall weeds, skeleton leaves, bachelors' buttons, seeds from the cotton plant, &c. Another very pretty ornament is to make a cross or anchor of white paper stars and twine them full of small ferns. Last winter I made two small picture frames of colored stars, which are very much admired. A beautiful way of trimming an oval frame is to have a card tacked on the back of the frame about an inch from the edge, and then place ferns all around the frame, sticking the stems under the cord to hold them in place. After you have the frame trimmed, hang it up and trim the long cord with ferns.

E. A. R.

## VARIOUS KNICKKNACKS.

The well known sponge garden sprinkled with hemp or canary seed, can be made more ornamental in this way. Make a card-board basket in any graceful shape you like, and cover it by gluing on rosettes of tissue paper fringe. The fringe is made by taking strips about an inch and a half wide and then cutting them fine crosswise, leaving a piece on one side a quarter of an inch wide for a heading. Each strip of fringe can be readily twisted into a rosette. The paper may be pink, pure white, or shades of green in imitation of moss. Set a glass or earthen dish in the basket, and in it place your sponge.

## A DRUM MATCH SAFE

Is quite an oddity, readily fashioned by deft fingers. Make a round box of stiff card-board, three inches in height and the same in diameter. Line the inside with tinted paper, and bind the edges by pasting over a narrow bias strip of brown silk or muslin. Fasten in a bottom to the box, pasting sand-paper on the outside, and tinted paper on the inner side. Next, cut a strip of firm muslin, one and three-fourths of an inch wide and long enough to reach around the box. On this paste triangular points of red and white cloth; each triangle should be one and three-fourth inches long and an inch wide at the base; place the points of the white triangles at the base of the red ones, and cover the edges where they join with gold cord fastened with cross stitches of black silk. Now, paste this prepared strip around the middle of the box and border each edge with a cord or fold of brown silk. Make two rings of card-board three-fourths of an inch wide, and fitting closely over the box; cover with brown silk, pasting the edges down smoothly on the under side. On the outside stitch fine gold cord in a series of points from edge to edge, and fasten with cross stitches of black silk, as before. Put one of these rings on each end of the box, just so as to cover the raw edge of the brown silk cord, and hold in place by pasting. For a cover, cut a round piece of card-board, fitting into the ring, paste sand-paper on the under side and cover the outside with white leather, which must come over the edges; a bit of white kid glove will answer if well cleaned. Make too tiny drum-sticks of wood, cross them and fasten securely to the cover, so that they may serve as a handle.

M. F. B. ADKINSON.

Spots can be taken out of marble with finely powdered pumicestone mixed with verjuice (juice of sour fruits). Cover the spots and allow the stuff to remain for twelve hours; then rub clean, dry and rinse.

## Household Elegancies.

## WINDOW WITH DOUBLE CURTAINS.

The curtains and lambrequins shown in our illustration are of figured damask—of cigar color—with plain damask, richly embroidered, for the lambrequin. The lace curtains are of costly point, with under shade of fine muslin and embroidery.

The majority of people who have means will purchase them from some upholsterer, but there is a great body of families who will prefer to do the work themselves, and save the large expense.

To do this, first procure, of some one of the pretty woolen stuffs now to be bought for a comparatively small sum, sufficient to make the curtains, reaching from the top of the window to the floor; and should the window be small, better to measure far above it, which will give the impression of greater size; if the material is of double fold, one width on each side will be all-sufficient, and if the material is not unusually heavy, it might better be lined throughout, purchasing a bolt or two of colored cambric, and thus obtaining it much cheaper. Procure also a few yards of plain material, matching the ground of the color somewhat; this for the lambrequins and border to the curtains. Get also an entire piece (or two, perhaps,) of coarse Swiss muslin, or neat, small-figured Nottingham lace curtains. Now we have our materials, and will proceed to make up the curtains; but first, perhaps, we might better make the cornice, which is easily done by using carved ornamental pieces, first preparing a strip of wood, five inches wide, on which the ornaments are fastened. If desired particularly elegant, the wood and carvings may be ebonized and gilded; or if preferred the entire work may be enameled and gilded.

The under shade is made of Swiss, and is prettily finished with a fluted ruffle and gathered into long puffs from top to bottom.

The curtain trim with a band of the plain material, on which large figures of black velvet are fastened with application embroidery, using gold-colored braid on the edge, or button-hole stitching of yellow silk. Instead of lace curtains, take a half width of Swiss muslin, trim the edge with fluted ruffles, and fasten on the inside of the heavy curtains.

The effect is precisely the same as though the entire curtain now hung beneath, and, as will be seen, with far less expense.

The lambrequin is "shaped," as shown in the illustration, from the plain goods, and a design cut from black or other colored velvet is embroidered in application work of chain or button-hole stitches, or edged with yellow braid. The lining is put in after this is done. Heavy woolen fringe finishes the lambrequin and curtains. Cords and tassels drape back the curtains on each side.

## BEDSTEAD WITH CANOPY.

The charming effect given to the pretty bedstead presented in our illustration makes one willing to take some little trouble to produce such a result. Neither is it so difficult a matter that any one need fear to undertake it.

The bedstead itself is really a most simple affair, and our model was made for the small sum of *ten dol-*

*lars!* though a home-made one, consisting merely of a box of proper size, with plain board head and foot-

WINDOW WITH DOUBLE CURTAINS.

BEDSTEAD WITH CANOPY.

boards, are all that is necessary, as the entire wood-work is covered with a neat quilted rug, edged with a

border, embroidered and finished with woolen fringe. This cover may be of silk or any goods preferred, and is made to fit the frame, with a roll bolster fastened on the head-board; a frame of half-circular form, placed on two brackets, is fastened against the wall, ten feet from the floor, in the centre of the side of the bedstead, and sustains the curtains and lambrequin of the canopy, the form of which is shown in the illustration. This frame should be sufficiently deep to extend across the bedstead for several feet. The curtains are held gracefully back by ornamented curtain-bands.

## CHROMO PAINTING.

BY MRS. E. B. GONZALES.

Most ladies are fond of "household elegancies," but many have the mistaken idea that to obtain them one must spend a great deal of money, or be possessed of marvelous skill. But a little money and more perseverance will accomplish wonders. People that are fond of pictures may have as many as they like—pretty ones, too—and at the same time cultivate their taste and utilize every engraving that falls into their hands.

Get a carpenter to make a stretcher the desired size, (bookbinders' pasteboard will do for a small picture); stretch some coarse, unbleached muslin over the frame; tack it firmly; great care should be taken to draw the muslin tightly, that dampness may not affect the picture when completed. Make some flour paste; strain; wet the muslin thoroughly; lay the engraving on a table; cover it smoothly with paste; mount on the stretcher; raise the ends alternately, and with a hair-brush press the air from under the picture. Dry twenty-four hours. Boil equal parts of linseed oil and beeswax; cool in a cake; warm the wax slightly, and

rub the picture until it is glazed. Run the fingers over the surface, that you may be positive that it is well covered. The following articles are required for chromo-painting: Palette and knife, (for these a piece of glass and a well-worn tea-knife may be substituted), artist's brushes of various sizes, some spirits turpentine for cleaning purposes. If the paint becomes dry on the glasses, they may be readily cleaned by boiling in a solution of potash; put them into the liquid when cold. If care is taken to rub them often with a cloth wet with turpentine, the necessity for boiling will seldom occur. Macguilp is made of equal portions of mastic-varnish and turpentine, and strong English drying-oil, and is used for moistening colors when painting; standing in the sun for a few days improves it.

In painting, commence at the top and paint downward. Lay the dark colors on that part of the picture most heavily shaded; the lighter any part of a picture may be, the more delicate must be the tint applied. The colors required are silver-white, flake-white, Naples yellow, yellow ochre, king's yellow, raw sienna, burnt sienna, vandyke brown, ivory-black, vermilion, Prussian blue, ultramarine, carmine, yellow lake, chrome yellow, three shades of chrome green, chrome orange. Carmine and vermilion mixed make an intense red. By mixing these colors any shade desired may be produced; for instance, carmine, blue and white make purple. A little experience will teach the amateur how to modify shades.

It is cheaper to buy black, white, and burnt sienna in pound cans, for obvious reasons.

## Fireside Reading.

### THE DAIRY MAID.

The girl engaged in molding bread  
Shall make some sweetheart flutter  
With hope to get the dairy maid  
To make his bread and butter.

She may not play the game croquet,  
Or French and German stutter,  
If well she knows the curd from whey,  
And makes sweet bread and butter.

In meal and cream she's elbow deep,  
And cannot stop to putter;  
But says if he will sow and reap,  
She'll make his bread and butter.

The dairy maid, the farmer's wife,  
Shall be the toast we utter;  
Alone, man leads a crusty life,  
Without good bread and butter.

**A Thick-headed Husband.**—A pious old lady, who was too unwell to attend her meetings, used to send her thick-headed husband to church to find out the text the preacher selected as the foundation of his discourse. The poor dunce was rarely fortunate enough to remember the words of the text, or even the chapter and verse where they could be found; but one Sabbath he ran home in hot haste, and, with a smirk of self-satisfaction on his face, informed his wife that he could repeat every word, without missing a syllable.

The words were, "An angel came down from heaven and took a live coal from the altar."

"Well, let us have the text," remarked the good woman.

"I know every word," replied the husband.

"I am very anxious to hear it," continued the wife.

"They are very nice words," observed the husband.

"I am glad your memory is improving; but don't keep me in suspense, dear."

Just get your big Bible, and I will say the words, for I know them by heart. Why, I said them a hundred times on my way home."

"Well, now, let's hear them."

"Ahem. An Ingen came down from New Haven and took a live colt by the tail and jerked him out of the halter."

**Prof. Elicott Evans** tells this story concerning his grand-uncle, Joseph Elicott, and the chief Red Jacket: The two having met at Tonawanda Swamp, they sat down on a log which happened to be convenient, both being near the middle. Presently Red Jacket said, in his almost unintelligible English: "Move along, Jo." Elicott did so, and the sachem moved up to him. In a few minutes came another request: "Move along, Jo," and again the agent complied and the chief followed. Scarcely had this been done when Red Jacket again said: "Move along, Jo."

Much annoyed, but willing to humor him, and not seeing what he meant, Elicott complied, this time reaching the end of the log. But that was not enough, and presently the request was repeated for the fourth time: "Move along, Jo." "Why man," angrily replied the agent, "I can't move any further without getting off from the log into the mud." "Ugh! Just so white man. Want Indian move along—move along. Can't go no further, but he say—'move along.'"

**The Sister.**—No household is complete without a sister. She gives the finish to the family. A sister's love, a sister's influence—what can be more hallowed? A sister's watchful care—can anything be more tender? A sister's kindness—does the world show us anything more pure? Who would live without a sister? A sister that is a sister in fidelity, in purity, in love, is a sort of guardian angel in the home circle. Her presence condemns vice. She is the quickener of good resolutions, the sunshine in the pathway of home. To every brother she is a light and life. Her heart is the treasure-house of confidence. In her he finds a

fulness to the juvenile who informed, a large bunch of the purple plumes was presented, while he, on rejoining his incensed comrades, with that same smile called childlike and bland, merely remarked, "If I was too little to climb, I wasn't too little to tell on you."

"What exquisite preserves, Mrs. Smoothly! How do you have such splendid luck with every thing you put up?" complimented one of the ladies at the tea-table. "What are they, by the way?" Mrs. Smoothly is taken by surprise, but recovers herself and calls the servant. "I have not tasted them yet," she said, "and have really forgotten what I ordered the girl to put on for you. Bridget, what are these preserves?" "Thin, ma'am? Thirty-five cents a can; sorry the nickel less wud the grocer take, and thim big green things in the dish beyant is fifty cents for a little glass jar." Tableau of silence, and a good-hearted, honest girl out of a job two hours later.

**A strange clock** is said to have once belonged to a Hindoo prince. In front of the clock's disk was a gong swung upon poles, and near it was a pile of artificial human limbs.

The pile was made up of the number of parts necessary to constitute twelve perfect bodies, but all lay heaped together in apparent confusion. When the hands of the clock indicated the hour of one, out from the pile crawled just the number of parts needed to form the frame of one man, part coming to part with a quick click; when completed the figure sprang up, seized a mallet, and walking up to the gong, struck one blow. This done, he returned to the pile and fell apart again. When two o'clock came, two men arose and did

A QUIET NOOK.

fast friend; a charitable, tender, forgiving, though often severe friend. In her he finds a ready companion. Her sympathy is as open as day, and sweet as the fragrance of flowers. We pity the brother who has no sister, no sister's love; we feel sorry for the home which is not enlivened by a sister's presence. A sister's office is a noble and gentle one. It is her's to persuade to virtue, to win to wisdom's ways; gently to lead where duty calls; to guard the citadel of home with sleepless vigilance and virtue; to gather graces and strew flowers around the home altar. To be a sister is to hold a sweet place in the heart of home. It is to minister in a holy office.

**He was only a four-year old** who pulled the door-bell the other day, and upon the lady of the house answering the call the innocent remarked: "Please, ma'am, but I came to tell you some fellows are stealing your lilacs." Somewhat like Tennyson's Maud, this information caused her into the garden to go, where she surprised these felonious florists, and caused them to hurry over the fence. In token of her thank-

likewise; and at the hours of noon and midnight the entire heap sprang up, and marching to the gong, one struck, after the other, his blow, making twelve in all; then returning, fell to pieces as before.

**A fond father** sent his young hopeful of four into an adjoining room to get a book. The boy came back and said it wasn't there. "Yes it is, my son," said the father; "it's on the table." The boy went back and reported again that there was no book there. The father got impatient and sent another child for the book, and in the mean time the mother brought the book from a different room, with the remark, "Here's your book; it was on the mantelpiece." The gentleman composed himself to read, and about ten minutes afterward discovered young hopeful still standing by his chair. "Father," he said, solemnly, "there's a fib about somewhere, and I didn't tell it."

**Walter Savage Landor**, it is said, entering a ball-room, saw therein a young lady who pleased his eye. He cried, "The prettiest girl in the room; I'll marry her!" And marry her he did, straightway.

## Housekeeping.

## PRIZE RECEIPTS FOR COOKING.

BY AN OLD HOUSEKEEPER.

*Bread.*—(Including two receipts for yeast—two for bread, &c.) The mysteries of “panification,” as the scientific cooks term bread-making, are few and simple, but requires more attention and judgment than any other branch of cooking.

One rule I would advise every housekeeper to establish from the very beginning, as “unalterable as the laws of the Medes and Persians which changeth not,” and that is, never to allow poor flour to be used for any purpose whatever, especially for bread-making, for unless this one article be of the best quality, baking after baking will prove but failures, and a vexation of spirit to the ambitious baker.

Give me nice Graham flour, if you see proper, and I will make you sweet, light, brown bread therefrom; but no sticky, blue, plaster-like “white” flour, that when squeezed in the hand, forms a tough-ball; on the other hand let it be of a rich yellowish-white tinge, have an oily feeling under pressure, rolling off from the hand in feathery flakes.

The second point of importance in bread-making is the yeast; and herein are more failures than can be attributed even to poor flour, for a wise housewife will insist upon having fine flour, when perhaps she will not be so careful with her yeast, and will either from carelessness or ignorance, utterly fail. I say ignorance because so many even experienced housekeepers are constantly asking the question “How do you judge yeast? by what means can you tell whether it is ‘lively’ as you term it?”

My answer is—by taste and smell! If good, the taste if a little is touched to the tongue, will be rather biting, not sour by any means, but quick and somewhat pungent; while the odor is that of weak ammonia or fresh ginger-beer, and the color, the opposite to “leaden”—a clear yellowish-white. If sour, blue, and lifeless, like unleavened buckwheat batter, empty the jar, and at once make a fresh supply with “rising” from some other source.

*Hop and Potato Yeast.* (No. 1.)—There are many varieties of yeast—hop, potato, milk, corn-meal, salt, &c., but the one old receipt handed down in my own family for many years, has, I believe, no equal. It is this:

Take eight good-sized potatoes, peel and slice into cold water, put three coffee cupfuls of loose, or half-cake of pressed hops into a thin bag, tie securely and boil for half an hour in three quarts of water, with the potatoes. When soft, remove the potatoes, mash them in a paste with one pint of flour, adding one teaspoonful ground ginger, and when cool, beat well in one large cup of yeast, or one cake of leaven, soaked in tepid water. Cover closely and place in a warm spot to “rise” for twenty-four hours, when turn into jars which can be closed air-tight, but do not fasten down the cover, or cork tightly until it has ceased to “work” lest the bottles be broken. (I have used the Mason self-sealing glass jars for several years past, and nothing can be better for keeping yeast pure and sweet.) Place the jars, after tightening the lids, in a cool place. This yeast will keep for two weeks in winter, but in summer it should be made weekly.

*Yeast—Self-Working.* (No. 2.)—I said I never used any but the above receipt for yeast, but I have a few times in my life been so situated that my yeast ran out, and I had no opportunity of obtaining any from other sources, in which case I have made the following with perfect success.

Take two handfuls of good hops, which tie in a bag and boil in one gallon of soft water for an hour or more. Allow it to cool and with it make a batter of three coffee cups of flour, beating until perfectly smooth, and gradually adding half a pound of brown sugar, one tablespoonful of ginger, and one handful of salt. Put into a shallow vessel, cover lightly and place in a constantly and uniformly warm spot for two or three days. On the fourth morning, peel a dozen potatoes, parboil them, and grate into the batter, and allow to stand another day, stirring occasionally. Then put into jars and fasten the covers securely, placing in a cool cellar or refrigerator. This yeast will remain sweet for a length of time, and is excellent.

*To make good Family Bread.* (No. 1.)—For a family of six, where warm bread is used for breakfast, and baking is done other times weekly, take about one gallon of fine flour, or less if measured before sifting, put it in to a large pan, or kneading bowl, and with a strong spoon, hollow out a well in the middle, using care to leave a quantity of flour on the bottom, or the sponge will stick to the vessel, which will give trouble. Next take one quart of warm milk and water, equal parts, and six teaspoonfuls or one teacupful of lively yeast, which stir together; adding one small teaspoonful bi-carb. soda dissolved in water, and pouring the mixture into the cavity in the flour, turn in as much of the flour as will make a thick batter, beating it perfectly smooth. Strew flour quickly over the top, cover with a cloth, and place in a warm spot in winter, and a cool one in summer, over night. Should this be done during the day, however, allow to remain until the flour on the top is seamed with cracks, and the bubbling sponge breaks through the openings. Next place the vessel on a low table, or strong bench, and with a spoon stir in all the flour possible, wipe the spoon out clean with the fingers, and laying it aside, sprinkle in one handful of salt, throw on a handful of flour, and with hands and fists, proceed to work, and knead in as much flour as will make a rather soft dough, which test by thrusting one finger into the mass, to which it should not cling. Now if you are not strong, or feel weary by this time, instead of continuing to work, and knead this batch, take a hash-chopper, hatchet, or even a large knife, and chopping or dashing the whole mass, double it together, and again use the chopper, thus continuing for fifteen minutes, by which time the air-bubbles will all have been opened, and the dough in proper condition to rise. Form it into one large ball, which place in a pan, well greased or floured, and pressing the fist down into the centre, cover with bread-blanket and towel; turning a warm plate on top, place behind the stove until it has risen; which will be known by the indentation on the top, becoming obliterated, and cracks appearing on the surface. This, if it has been made up at ten o'clock in the morning, will probably be about twelve, when the mass must be again turned out on the moulding-board and cutting it into three loaves, work and chop each one a few minutes, until a smooth loaf is formed, which turn into well-greased tin pans, circular or box shaped as convenient, again press in the centre with the fist, and covering the blanket and towel over the loaves, turn a tea-plate on each one and place behind the stove again, for about one hour or less, when with a sharp knife make a cross-cut slash across the centre of each loaf, and place in a moderately heated oven, quickening the fire towards the latter part of the baking, which for such loaves will require about three-quarters to an hour. When done, if the crust appears hard, rub a piece of nice suet or butter over it, and always wrap in damp towels, with the blanket thrown loosely over, placing the loaves against the moulding-board on the back of the table, until cool, when put into tin or wooden boxes, keep the bread towels around each loaf. It is my custom to use the third piece of dough for tea rolls; working in a piece of shortening butter, sweet lard or beef drippings, the size of an egg. This place in a kitchen closet until one hour before tea-time, when roll out and cut with a biscuit cutter, or rubbing the palms of the hands with butter or lard, take up a piece of dough and knead it into round balls, which place closely side by side, in shallow tin pans, and covering, as with bread, set to rise for three quarters of an hour, then stab each one with a fork, and place in a quick oven for fifteen minutes. When done proceed as with the bread, sending to table between napkins.

In winter, I frequently add another pint of flour, and mixing a larger amount of sponge, set this at six o'clock in the evening, making up the dough about ten o'clock, place it in a moderately warm room to rise, along with a breakfast loaf, made by cutting off a piece of the dough sufficient to fill a quart bowl, and moulding it into an oblong or round cake, about one or one and a half inches thick, which is turned into a baking-pan well greased, and covered with blankets, and another pan of the same size turned over it. In the morning score the top with a sharp knife, forming squares; which will allow breaking after baking. Bake in a quick oven, and when done proceed as with rolls. I have here given the quantity of bread required for a family of six persons; when the baking is done on

Tuesday, Thursday, and Saturday, and waffles, muffins, &c., are used each day for breakfast, I prefer small oblong pans with perpendicular sides, though when the baking is necessarily large, it becomes necessary to make four or five long-shaped loaves, placing them side by side in a large baking pan, rub lard or dripping on the edges to prevent the loaves adhering.

*Brown Bread* (No. 2). The sponge for this is the same as for white bread, which, having risen, put into the pan, or kneading bowl, three quarts Graham flour, one quart wheat and one pint of corn meal, a handful of salt and the sponge; into which stir one small teaspoonful of molasses, merely to impart a general sweetness to the flour, not by any means rendering the bread what might be called sweet. This dough should be like a thick batter (just beyond the point of stirring with a spoon), which may require the addition of a little more lukewarm milk and water. It should be made over night, as it requires long rising. Make into round loaves and bake each one in a separate pan, well greased. Bake in a moderate oven and for a long time, allowing perhaps an hour for a quart-pan loaf. If well kneaded and nicely baked this delicious bread will amply repay for the sticky hands, and should be found on every table, where there are children and dyspeptics especially.

*Brown Flour Rolls* (No. 1). Take off a piece of the dough, as with wheat bread, and work into it a tablespoonful of shortening. Make into long narrow rolls and allow to rise for two hours; then with a sharp knife score each one longitudinally and rub melted butter over the surface of each one. Bake in a moderate oven, quickened towards the last; cover closely in a damp towel for five minutes, and send to table covered with a napkin.

*Light Rolls* (No. 2). Set a sponge with one pint milk, made sufficiently warm to melt one cup butter; one teaspoonful salt, two eggs, one tablespoonful white sugar, pulverized, and one small teaspoonful bi-carb. soda, in sufficient flour to make a batter; beat briskly for ten minutes, adding four tablespoonfuls of lively yeast; cover warmly for several hours, or until the flour on top cracks; then add flour to form a soft dough, which knead and work until perfectly smooth; or better still, chop or gash it as before described until all air-bubbles disappear; place in a quick oven and bake for fifteen or twenty minutes; paint the crust with a piece of butter rubbed quickly over; cover with a damp towel for a few moments to soften the crust, and cover with a cozy napkin before sending to table. These are the French rolls which have been enjoyed in the cafe in Paris and our own Centennial, and if properly made will be quite as delicious to the taste and beautiful to the sight.

A very nice roll, much esteemed in our own family, is made by turning dough that has risen twenty-four hours on to the board, and rolling very lightly until half an inch thick; cut with a cake-cutter into small rounds and fold one half over the other, somewhat in turn-over style, rubbing a little melted butter or lard on the parts folded; then putting to rise for another half hour, or more perhaps; then baking as before directed. These rolls appear well when nicely done, and if desired, the lid may be raised and a piece of butter placed between the fold.

*Bread Napkins* are made of two half yard squares of linen, or damask, quilted together in squares and trimmed around the edges with fringe, lace or scallops in embroidery. They may be made extremely ornamental, and should be placed not only over hot bread, such as rolls, twist, etc., but on the cold loaf, usually placed on the wooden trencher, though it should not hang so low as to hide the beauty of this, when handsomely carved. C. S. J.

**Vegetables** should never be washed until immediately before prepared for the table. Lettuce is made almost worthless in flavor by dipping it in water some hours before it is served. Potatoes suffer even more than other vegetables through the washing process. They should not be put in water till just ready for boiling.

**Before** washing almost any colored fabrics soak them in water, to each gallon of which a spoonful of oxgall has been added. A teacupful of lye in a pail of water is said to improve the color of black goods. A strong tea of common hay will improve the color of French linens.

## MUSIC BOOKS.

### GOOD NEWS! GOOD NEWS!

A Sabbath School Song Book of great beauty, by R. M. McINTOSH, is undeniably one of the best, and is already popular. Price 35 cts.

**SARONI'S THEORY OF HARMONY.** (\$1.25). Just out. A thorough and excellent work. Is commended to all who wish to study the science, as the maker has, in a large degree, the talent of making difficult things easy to understand.

### THE SCHOOL SONG BOOK.

A new and superior Class-Book for Normal Schools and Female Seminaries, is compiled by one perfectly familiar with the needs of such schools. By C. EVEREST. Price 60 cts; \$6 per doz.

**JOSEPH'S BONDAGE.** By J. M. Chadwick. Just out. Is a bright and attractive short Oratorio or Cantata. Sure to please, from the beauty of the story, as well as the attractive music. (\$1.25 Bds.; \$1 Paper.)

Either book mailed, post-free, for Retail Price.

**OLIVER DITSON & CO., Boston.**

C. H. Ditson & Co. 843 Broadway, NEW YORK. J. E. Ditson & Co. Successors to Lee & Walker PHILADELPHIA.

**40** Finely Printed Visiting Cards (9 tints) with your name on them all for only 10c. STAR PRINTING CO., Northford, Conn.

**Lightning Needle Sharpener,** for all Sewing Machines. Sells at sight. 35 cts. Agents wanted. J. J. GREEN, Boonton, N. J.

## THE FLORENCE OIL STOVE,

For Heating or Cooking.

TWO STOVES IN ONE.

**Safe, Odorless and Durable.** Can be used without chimney-flues, as it generates no smoke or noxious gases. Meats and Bread cooked by this stove are better flavored and more digestible than when cooked by coal or wood.

**THE HEATER** furnishes an abundant supply of pure, moist heat, easily regulated to any desired temperature.

The **FLORENCE** received the **only** Centennial Medal awarded to Oil Stoves. Report of the Judges: "It is simple in construction, easily managed, and well adapted to its intended purpose."

MADE BY THE **FLORENCE SEWING MACHINE CO.** FLORENCE, MASS., Manufacturers of **THE BEST SEWING MACHINES.** General Agencies—39 Union Square, New York; 476 Washington St., Boston; 66 Lake St., Chicago. Agents Wanted Everywhere.

**THE AMERICAN CAT TEASER.** Will keep Cats off from fences and protect flower gardens. SOLD AT HARDWARE STORES. Seven feet, (6 strips) sent by mail, for 40 cents. F. BALDWIN, 81 Reade St., N. Y.

## INVALID RECLINING CHAIR ON WHEELS.

Occupant can lie down or sit erect in it. MADE BY NEW HAVEN FOLDING CHAIR CO., NEW HAVEN, CONN.

SEND FOR PRICE LIST. Mention this Journal.

## GOSSAMER Waterproof Garments

Get the Genuine! Beware of Worthless Imitations! Ask for the Gossamer Waterproof Garments, and see for yourself that our trade mark, "GOSSAMER WATERPROOF," MANUFACTURED BY GOSSAMER RUBBER CLOTHING CO., BOSTON, is stamped on the loop of the garment. None are genuine without they are so stamped. Our garments never under any exposure, to either cold or warm weather, adhere together, or grow soft and worthless. No Lady or Gentleman should be without one of our Rubber Garments. Weigh from 9 to 16 ounces, can be easily carried in the pocket. Send for Illustrated circular. GOSSAMER RUBBER CLOTHING CO., 289 Devonshire Street, Boston, Mass.

Mention Floral Cabinet.

## Madame FOY'S CORSET SKIRT SUPPORTER

Increases in Popularity every year. And for HEALTH, COMFORT, and STYLE, is acknowledged the BEST ARTICLE of the kind ever made. For sale by all leading jobbers and retailers. Beware of imitations and infringements. MANUFACTURED SOLELY BY FOY & HARMON, New Haven, Ct.

**50** VISITING CARDS handsomely printed, 10 cents and 3 cent stamp by return mail. No nicer ones in the world at any price. One agent writes: "I know about fifty places to get cards, and like yours the best." "Neatest and best we ever saw." "Never so well suited before"—or similar expressions, come by nearly every mail. My list of 2,267 kinds of cards, 103 samples of type, agents' list, etc., with each order. Write names plainly, and if you are not more than suited, I will refill your order or refund your money. W. C. CANNON, 712 Washington St., BOSTON, MASS.

**FUN** 1 pk. acquaintance cards, 1 pk. hdkf. imitation, 1 pk. scroll, all sorts, for 10 cents and stamp. Fun Card Co., Middleboro, Mass.

**Leamon's Dyes Color Silks.**  
**Leamon's Dyes Color Woollens.**  
**Leamon's Dyes Color Cottons.**  
**Leamon's Dyes Color Anything.**

Crimson, Violet, Yellow, Purple, Green, Maroon, Scarlet, Slate, Brown, Black, Blue, Red.

Each Dye colors from one to two pounds of goods any shade, with certain success. Warranted to be the best and cheapest colors for family and fancy dyeing.

ANY CHILD CAN USE THEM!

A book giving full directions for all uses, with a beautiful sample card, showing how to make 36 colors, sent to any address for a 8-cent stamp, or the same with a package of any color on receipt of 25 cts.

**WELLS, RICHARDSON & CO., BURLINGTON, VT.**

**FUN** 1 package comic Envelopes, pk. comic Cards, pk. Scroll Cards, 24 p. Book of Fun; all for 10 cts. and stamp. Novelty Co., Middleboro, Mass.

**Dr. Warner's Health Corset,** With Skirt Supporter and Self-Adjusting Pads. Secures HEALTH and COMFORT of Body, with grace and beauty of Form. Three Garments in one. Approved by all physicians. **AGENTS WANTED.** Samples by mail, in Court, \$2; Fat-teen, \$1.75. To Agents at 25 cents less. Order size two inches smaller than waist measure over the dress. **WARNER BROTHERS, 763 Broadway, New York.**

**WORLD'S SOLE MANUFACTURER OF WHEEL CHAIRS** ALL Styles and Sizes For INVALIDS & CRIPPLES. Easily propelled, in or out-doors, by any one having the use of hands. Send stamp for Illustrated Catalogue, and prices of different styles. Designer and manuf. of the "Rolling Chair" at the Centennial. **HERBERT S. SMITH, 32 Platt Street, New York.** Mention this paper.

# Grandest Offer Ever Made TO LOVERS OF FLOWERS.

W. C. WILSON & CO., have taken great pains in putting up the following collections, and they guarantee them to be in every respect as represented. The quality of our Seeds and Bulbs is not to be excelled by any in the world. The quality being considered, we challenge any seed establishment to offer as large packets for the money. Send for our Illustrated Catalogue, mailed free.

W. C. WILSON, W. S. ALLEN.

### FLOWER SEEDS.

THE FOLLOWING SUPERB COLLECTION OF 25 SORTS FOR \$1.00.

One packet each Aster, Alyssum, Balsam, Amaranthus, Double Daisy, Convolvulus, Candytuft, Cyclamen, Cypress Vine, Dianthus, Globe Amaranthus, Hollyhock, Marigold, Mignonette, Musk Plant, Nasturtium, Pansy, Sweet Peas, Phlox Drummondii, Petunia, Penstemons, Portulaca, Verbena, Primula, Ice Plant. No substitution allowed.

### GLADIOLUS.

The new American Seeding Gladiolus, "Isaac Buchanan," is the finest Gladiolus ever introduced—color, pure bright yellow, each \$1.00.

12 extra choice Seedlings, - - -	\$1 50.	12 extra fine mixed sorts, - - -	75c.
12 " " " 2d size, - - -	1 00.	12 " " " 2d size, - - -	50c.
12 superb named sorts, - - -	1 00.		

For every bulb that fails to give satisfaction we will gladly replace.

### DOUBLE TUBEROSES.

12 Pearl Tuberoses, fine bulbs, - - -	\$1 00.	12 Bulbs, 2d size, - - -	75c.
12 extra large size bulbs, - - -	1 00.		

### DAHLIAS.

12 ex. choice named sorts, large flow'g. \$1 25.	12 ex. ch. named sorts, Bouquet or Pomfere, \$1 25
12 " " mixed sorts, - - -	1 00.
12 " " mixed sorts, - - -	1 00.

Our collection of Dahlias cannot be surpassed. The above are first class young plants that will prove equally as fine as large roots which are much more expensive.

### LILIES.

Lilium Auratum (very scarce), extra large bulbs, measuring 2 1/2 inches in diameter, each - - -	\$1 00
2d size, - - -	50c.
Lilium Rubrum, fine bulbs, - - -	20

Other sorts too far grown to offer.

### MISCELLANEOUS.

Amaryllis Johnsonii, magnificent bulbs, already started, each - - -	\$2 00
Vallota purpurea Superba, 35 cents each, 3 fine bulbs, - - -	1 00
Calathea Esulentum, each - - -	50
Tigridia, 1 each Pavonia, Grandiflora, Conchiflora, - - -	25
Canna, large root, - - -	25

### PLANTS.

The following collections are offered at the under mentioned cheap rates on the condition that the selection is left entirely with us.

50 Fine Budding Plants, - - -	\$5 00.	200 Fine Budding Plants, - - -	\$15 00
100 " " " - - -	10 00.	300 " " " - - -	25 00

**W. C. WILSON & CO.,**

45 West 14th Street, New York.

## DOUBLE TUBEROSE BULBS.

Superior in Quality and Size.

First Quality Large Flower-Doz. 100. 1000.	
ing Bulbs, - - -	\$ 75 \$4 00 \$30 00
Second Quality Flowering Bulbs, - - -	50 3 00 20 00
A few hundred EXTRA Large Bulbs, - - -	1 00 5 00
Dwarf Pearl, first quality Flowering Bulbs, - - -	1 50 10 00

If sent by Mail, 25 cents per dozen EXTRA.

**MILLER & HAYES,**

5774 Germantown Ave., Philadelphia, Pa.

25 Elegant Cards, 20 styles, with name, 10 cents, post-paid. GEO. I. REED & CO., Nassau, N. Y. YOUR NAME on 40 mixed cards for 10 cts. and stamp. CLINTON BROS., Clintonville, Ct.

**JUST PUBLISHED.** WOODWARD'S Ornamental & Fancy Alphabets. Three parts, fifty cents each, postpaid. Order catalogue of new books on Art, Architecture and Agriculture. Geo. E. Woodward, 136 Chambers Street, NEW YORK.

**FLOWERS** Strong Plants delivered, free of cost, safely per mail at your door. Satisfaction guaranteed. Splendid assortment of ROSES 6 for \$1; 13 for \$2. Send for New Catalogue of Plants. HOOPER, BRO. & THOMAS, Cherry Hill Nurseries, West Chester, Pa.

# A Splendid Pocket Book

WITH YOUR NAME IN GOLD, PRESENTED TO EVERY SUBSCRIBER.

A splendid Russia Leather Pocket Book, of handsome red or black color, as fine as Morocco, with patent clasp or elastic, with your Name beautifully engraved in full in gold letters, will be sent to every Subscriber of this Paper, upon cutting out within Subscriber's Certificate, and sending it to the address below. These Pocket Books are "LITTLE BEAUTIES," most elegant in manufacture. Others, no better, have been hitherto sold as high as \$3 or \$5 each. Perfect satisfaction is guaranteed or money refunded. Three styles made, "Ladies," "Gentlemen," "Children." Please state your preference of styles and colors.

60 Cents.	<b>CUT THIS OUT.</b>	With Your Name
	<b>Subscriber's Certificate.</b>	
	This Certificate entitles the sender, as a subscriber of this paper, to one ELEGANT POCKET BOOK, upon enclosing 60 CENTS for expenses of mailing and engraving. For 75 CENTS a Pocket Book of very much finer quality will be sent, also with your name beautifully engraved in gold.	

This Conpon is good only for 60 days from this date, is limited to those who are subscribers of this Journal, and will not be published again. CUT IT OUT, PRESERVE IT, and enclose it with your remittance. Address your Certificate to the Manufacturer,

**HENRY T. WILLIAMS, 46 Beekman St., N. Y.**

Subscribers to the CABINET need not cut out the above Certificate, but merely mention they are subscribers.

# THE LADIES' **Floral Calendar**

BY HENRY T. WILLIAMS.

VOL. VI.

NEW YORK, JUNE, 1877.

No. 66.

PRICE 12 CENTS.

## SKETCH OF A SUMMER HOUSE.

The sketch upon this page is one of a Rustic Summer House, erected at River Edge, N. J., upon the grounds of William S. Carman.

It is made of heavy red cedar, with the bark left on, and even the branches for several inches, except upon the inside.

At one side of this summer house, and extending half around it, is a rock work well filled with Sedum, Echeveria, Cactus, Aloe, Plumbago, Lobelia, Ivy, etc., etc. The upright poles, as well as those of the roof and peak of the summer house, are reversed, so that the larger ends are placed where the smaller ones usually are in structures of this kind.

A substantial—almost massive—look is thus produced. The vines spread over a greater part of the roof, and, ascending the peak, attach themselves to the twigs of the trees near by, or flow back again upon the arbor in festoons, quite in keeping with the disorderly beauty that this intricate piece of gardening has been designed to display.

Between the summer house and the rock work, a deeply shaded space of several feet is filled with hardy Ferns, Pansies, and Violets.

On the back and the other side, a connecting semi-circular plot is filled with Rhododendrons, Kalhmias, Mahernias, Azaleas, and Roses. These, exposed partly to the east, partly to the south, and planted in muck, taken from what is now the lake, mixed with ordinary garden soil, grow satisfactorily and bloom abundantly.

A part of the summer house on this side is reserved for rapid-growing summer vines, such as Cobœa and Maurandya.

Plants started in the house and put out in spring, very soon cover the space, and add a freshness and variety of bloom and foliage that cannot be produced when hardy vines alone are employed.

**Roses.**—The best soil for Roses is a strong loam; the deeper it is the better. It should be well drained.

## THE FUCHSIA.

BY W. C. L. DREW.

For natural elegance and beauty, I know of no flower which equals the Fuchsia. It is eminently the flower for amateurs, whether for summer or winter decoration. There is no flower of equal pretensions so easy of culture and propagation, and so adapted to a widely diversified range of circumstances.

The Fuchsia is of South American origin. There

slips at a very high price to a nurseryman of her village, who made a fortune out of it.

Fuchsias are propagated from slips and seed. Slips are the surest and best way, and where plants true to color are desired, are the only sure way. All the new varieties are originated by seeds.

### PROPAGATING BY SLIPS.

As this is the best way, a few words on the method will not be out of place. No secrets are required, no hothouse or greenhouse is necessary; an amateur can succeed as well as a nurseryman.

Take your slips off with a heel; that is, break them off where they branch out from the main stem, slipping, not cutting, them off. Have ready a box of very fine, nice soil, composed of sand, garden soil and manure well rotted, or leaf mould, which is better; have it well mixed, plant the slips with two or more leaf joints under ground; water them with lukewarm water; never let the soil get dry, and nearly every slip will grow. From April to October is the best time to slip.

Many people complain that Fuchsias are hard to start from slips; this is owing to cutting slips off without regard; they should never be cut, but slipped off with a heel attached.

Having started them, they will need attention as to training, which can be done in any manner to suit the fancy. A neat little trellis may be made or bought, over which it may be trained, or they may be made into neat little bushes by nipping out the centre shoot when about a foot high, which causes side shoots to start, which should have their tops nipped

out again when of proper height.

Some varieties make excellent winter bloomers, but as they are classed separately in nearly all catalogues, it will not be necessary to give a list of them.

If a window or greenhouse is not convenient for saving the plants over winter, in October they may be taken up, the soil shaken off, and placed in a box of dry sawdust over winter.

SKETCH OF A SUMMER-HOUSE.

is a very pretty story as to its introduction, telling how a young sailor boy, leaving home against his mother's will, at the last moment promised to bring her a handsome present. As he was about to start for home, from a South American port, he remembered his promise, and obtained a Fuchsia plant, which he carefully tended on the home voyage, and gave to his mother on his return: how she cherished it, and sold

## Floral Contributions.

### SUMMER TREATMENT OF WINTER-BLOOMING PLANTS.

The plants that have brightened our homes and lives when all without was bleak and bare, are certainly entitled to kind care in return, especially if we wish a continuance of their well-doing. That which would be beneficial for one, would be sure death to another, and, having tried this treatment many summers successfully, can truly say, go do thou likewise.

We will begin with the ever-faithful cheery Primrose; they have a way of growing up out of the earth like an onion, and seem to have but a slender hold; at the least touch they sway back and forth. Remove from the earth, and shake all from it; with a sharp knife cut the lower part of the long root, provided there are enough of fine fibrous roots near the crown; if not, use a larger sized flower-pot and set deeper; do not give rich earth, for it will cause luxuriance of foliage and but few flowers; water well and keep shaded a few days; then either sink the pot in a cool shaded spot in the garden, or keep on a shady piazza, and give but little water all summer. The last of May they can be put out, and returned to winter quarters by Sept. 1st.

Oxalis should be dried off in April, taken from the earth, and kept in a dark, dry place; replant the last of August.

Carnations that have blossomed all winter might be planted in the ground, first cutting well back, and those cuttings will make nice plants for winter. They do not force well a second winter.

Roses that have bloomed freely should be shaken out of the earth and dipped root and branch into water and washed; cut severely back, and repot in fresh soil; after a rest of at least two weeks in a cool place away from sunlight, take them to a bright sunny place in the garden and sink the pots. This can be done any time in May; water whenever dry.

The soft, feathery blooming Stevia and Eupatorium have most likely grown to be great bushes, taking up more than their share of room. Cut the tops nearly to the earth, shake off the dirt, and cut a good portion of their roots. Treat them in like manner with the Roses, only give less sun. If young plants are started, keep pinching all summer; in that way you will have double the quantity of bloom. Bring in before frost.

From the Callas we will remove all the earth; wash the roots, cutting away all decayed substances, and most of the young bulbs; repot in rich earth; water well, and stand them under the shade of a tree, keeping them dry all summer. About the last of August bring them on to a piazza, and water freely, if you would have them bloom by November.

Bouvardias should be well cut back, given fresh earth, and when the roots become well established, say in two weeks, plant in the ground any time after the 10th of May. During the month of August, the roots need a little protection by mulching. They do not fancy the cool nights and mornings, and should be in the house by the second week of September.

Cyclamens, when through blooming, give them but little water: repot them in new soil, and treat in like manner as the Primrose.

My Laurestinus for a long time proved very ungrateful for all the good care I bestowed, and refused to repay me with one blossom. I had done just what

I should not have done. After changing the earth and giving a chance to recover its disturbance, sink the pot in the sunniest spot the garden affords, and by Thanksgiving it will greet you with its beautiful pearly flowers.

There is no plant more showy or attractive than the Azaleas. They require great care and close attention all summer; the soil should be light, mixed with a little peat, but they do not need replanting every year, and only a little trimming to keep in shape. It is safest to keep them on the stand on the porch; they require more water while resting than any other plant. Should they by accident become very dry, set the plants into a tub of water for a good soak, for its roots are such a bunch of knots, that it requires a great deal to reach the inner ones.

Euphorbias and Poinsetias are of one family; are tender hot-house plants. About the 1st of June repot the plants in a size smaller pot than they have been growing in; they revel in heat, so give them plenty of sun; water whenever dry. If they become waterlogged, they yellow their leaves, and if too dry, they wither. Bring in early and then give larger pots. Many advise planting them both in the ground; but it is so difficult to lift them successfully, I have been afraid to try.

In sinking these pot-plants, always put either coal-ashes, brick, or broken glass underneath, to keep the angle-worms from taking up their quarters for the winter and making themselves troublesome.

Jessamines, both yellow and white, plant in the ground.

Of all the varieties of foliage plants, the Gesneria is the most exquisite; its leaves are like embossed velvet. This is a bulb, and needs to be entirely dried off; leave in the pot where grown; keep dry and from the nice. About the 1st of August they will plainly show their rest is at an end, and they want to fulfil their beautiful mission. Replant in peaty earth; give but little water until the leaves are well grown, and keep shaded from the strong sunlight.

Of the varieties mentioned, the most of these will be found in any choice collection, but like a family of children, all cannot be reared or governed alike. Through the interchange of plans and thoughts valuable aid we may gain. Tears even, like raindrops, have oftentimes fallen to the ground and come up in flowers.

IRENE H. WILLIAMS.

### THE NIGHT-BLOOMING CEREUS.

We have just been introduced to THE LADIES' FLORAL CABINET, and it was while engaged in cultivating the acquaintance so fortunately begun—for we vote this latest acquisition to the circle of our friends as marvelously congenial—that memory brought forth from among her carefully preserved art-treasures, one of the rarest pictures in all her choice collection, and, holding it up before us, challenged for it anew our delighted admiration.

To begin at the beginning and tell you how it chanced that Memory's halls became enriched by a thing at once so beautiful and so rare, it will be necessary to relate a little personal experience.

While on a visit to friends in Chicago last summer, callers came in one evening, and amid the animated conversation that followed, our attention was suddenly arrested by the words: "It bloomed this evening." "What is it?" we eagerly questioned, and after hearing the magic name, two other important queries fol-

lowed: "How far is it from here?" and "Can't we go and see it?"

Our kind friends were only too glad to give us a pleasure, and in a few moments we were on our way.

Upon entering the grounds where this magnificent display was made, we saw a group of people collected about a man holding aloft a good-sized lantern that cast a brilliant light over a plant placed just outside the green-house door upon a stand elevated two feet, perhaps, from the ground, and appearing, at that distance, to bear the disks of four large sunflowers!

Shades of Flora and all the Graces! How our excited imagination lashed herself in self-imposed penance for the exultation of ten minutes before.

A sense of disappointment, almost of chagrin, stole chillingly over us, but we meekly permitted our friends to draw us through the crowd until we felt ourself face to face with the object of our interest.

A faint, subtle, indescribable perfume admonishing us, we raised half-reluctant, half-eager eyes, and, oh! Were they flowers or fairies? Do blossoms live and move and have a conscious being? Then we are sure that these were whispering and nodding to each other and to us, under the very gaze of mortals.

We stood spell-bound and only dimly conscious of the remarks and comments of our friends.

There were threatening indications of a storm about us, and the evening air was full of weird murmurings, in which these singular creatures—each one a royal prince in Flora's kingdom—seemed to share.

For the first time in our life, we were thrilled through and through by, what seemed to us, a responsive intelligence in flowers, and experienced a slight embarrassment, as if guilty of taking a liberty in coming there to examine these exquisite beings with bold and curious glances.

The plant itself resembles, to some extent, the Snake Cactus, and can lay no claim to beauty on its own behalf. This one had an interlaced network of growth, perhaps a foot and a half broad, and somewhat more than a foot high, supported by a light framework of wood.

The blossoms reared aloft their queenly heads with very little to show that they had other support than their own fairy lightness.

There were four of them. One or two had blossomed the previous evening, and there were still one large and one small bud remaining. Unprepossessing prophecies of future loveliness.

Had the outer row of petals upon these flowers extended outward instead of curling gracefully backward as they did, we dare not say how much each blossom would have measured. In their natural form the smallest of the group could not have been less than seven inches across; but they were very nearly the same size.

The outer row of petals are long and narrow; the exact shade of color known to fashionable ladies as *ecru*. The inner row are short and wide, like the white petals of the water-lily, which they resembled in tint and texture. These extend forward and hold the richest store of golden stamens.

The pistil divides—if my memory-picture is true to life—into three parts, each exquisitely delicate flue bending lightly backward in dainty, creamy contrast to the white petals and bright golden stamens surrounding and enclosing their base. These long, feathery flues could not have measured less than five or six inches in length, and were the crowning beauty of what seemed absolutely perfect before.

BEULAH.

## Gossip with Correspondents.

**A Flower Garden of Herbaceous Perennials.**—The first day of May, and my flower-garden is ablaze with beauty! Snowdrops, Bulbocodiums, Crocuses, and Scillas, have passed away and the Hyacinths are come! "Red, white, and blue," royal purple, yellow and rose, both single and double! Added to them are the early Van Thol tulips, scarlet, white, rose, yellow, and red, and the double Tournesol gorgeous in rich and yellow! The native Mertensia virginica is very beautiful; with its long, gracefully-drooping racemes, which are rosy purple before opening into a lovely cerulean blue! But the most regal plant among them all, is a single red-brown Imperial, that is three feet high with ten large bells upon each stalk! One must peer into its cups to realize all its beauty, the beautiful markings of the flower and the pearl lying at the base of each petal.

A mass of blue grape Hyacinths have been in bloom some time, and now the dwarf blue Isis is added to the display. The large family of Narcissus, the Lily of the Valley, Snow-flakes, and the Parrot and late Tulips are coming on. The curious fall Crocus, that ripens its seed in spring and blooms in the fall; the Lily family, hardy Gladiolus, the Ornithogalum tribe are all fully represented. Seven varieties of Peonies, and as many of German Ives adorn my garden. The Hemerocallis and Funkias are also here. A bee Larkspur stands in one corner, and aside from its flowers, it is an elegant plant.

I have five other varieties of Delphiniums besides; D. Formosum is splendid, and a double celestial blue, with white centre, is especially lovely. Campanula grandiflora and Pentstemon grandiflora are both very desirable, the latter with its spikes of large lilac flowers renders it a conspicuous plant, and with us it is a biennial. Scarlet perennial Poppy is showy, but ephemeral. Lychnis Haageana is a favorite of mine; the plant is dwarf, but has such large vermilion-colored blooms.

Of Aquilegias or Columbines, I have more than a half dozen colors, both double and single. One curious variety is entirely without nectaries, and as double as a rose. For several years the "yellow birds" have taken all the seed. I find the "early bird gets" the seed as well as the "worm." Both white and rose-colored perennial Peas give me much satisfaction. All the above, from bee Larkspur, I grew from seed.

Of trailers, the creeping Phlox, Moneywort, and Vinca minor (Periwinkle, or Myrtle), and, I am sorry to add, ground ivy. Monkshood and Lamium variegata, have pretty foliage, but the latter is anything but sweet-smelling.

When the covering was raked off the flower-beds in March, the blue perennial Flax, Verbena Montana, white Lily, and three sorts of Sedum were fresh and green. White and purple perennial Phloxes, Ranunculus (buttercups), Blackberry Lily, (mine is from seed, a pretty, graceful, reflexed little lily, but not a lily, either), and Achillea millefolia, with its fern-like foliage and corymbs of crimson flowers edged with white, closes the list of my plants. Gypsophila paniculata must not be excluded, for it adds to a bouquet (as a writer in the CABINET said), what a bit of rare lace does to a dress.

In a sheltered spot is my "wild garden," composed of Solomon's seal, "Jacks in the pulpit," clumps of both crimson and white Hepaticas, the spotted-leaved Erythronium, and last, Dodecatheon Media, the Queen

of prairie flowers. Flower-seeds, like corn, were a failure in Illinois last year, as one Canterbury Bell, varieties of Dianthus, and my "Hollyhock walk," alone show that any were sowed the past summer.

Did not space forbid, I should like to tell of my success with window-plants, tender bulbs and Cacti. My plants have been collected from the east and the west, north and south, from seeds, bulbs, roots and cuttings, all through exchanges, that have brought me likewise many pleasant correspondents. Many of them, both friends and flowers, I owe to the FLORAL CABINET, for which I am sincerely grateful.

MRS. KATE SHERMAN.

**Rustic Baskets.**—I have not seen any mention made of rustic baskets like mine; so I will describe them, as they have been very much admired. I have two, one in front of each front window, made of small branches of trees, about half as large as a man's wrist, driven into the ground and grape vines woven in and out until it is about two feet high and then filled with rich soil. Two vines twisted together form the handles. Of course you can make them any size you like; mine are about three feet in diameter. I have a bed of pink Verbena in one and scarlet in the other, and in addition, I sow flower-seeds every spring. These, with my box plants, are all I can undertake to keep alive through the summer. CLEAR LAKE.

**My Flower-Garden.**—Last summer my flower-bed was three feet wide and reached two-thirds across the garden, which is a large one. In it was planted three rows of seed; in the middle was planted London Pride, Zinnia, variegated Petunia, Mignonette, red and white Petunia, Pearl and variegated Balsam. In one row was Verbena, Antirrhinum (Snap-Dragon), Sweet Alyssum, Phlox Drummondii of different colors, Diadem Dianthus, Cacalia, single Portulaca, Amaranthus, and Candytuft. On the other side is Sweet Alyssum, Dianthus, Hedderwigii, Pot Marigold, Sweet William, Acroclinium, German Asters, Dianthus Laciniatus, and mixed Balsam; also a small bed along the grape vine, which is lengthwise of the garden; this is a bed of Petunia, a perfect mat of sixteen different shades, with now and then a Canterbury Bell. Dianthus, Sweet Alyssum, and Candytuft; it was a perfect beauty, covered with bloom all summer and till the first of November, and even at the middle of the month I picked a bouquet of Petunia, Sweet Alyssum, Dianthus, and Chrysanthemum. I gathered bouquets of Verbena, Sweet Alyssum, and Mignonette on the first of November.

My friends that visited me through the summer, admired my flowers very much, and thought it must take all my time to take care of them. When I tell them it takes only one hour a day, they are surprised, the flowers look so thrifty, and the ground is so mellow and clear of weeds.

When I go into the garden they seem to nod their graceful heads in thankfulness for the care that is bestowed on them; this pays me well for my hour's work each day. It being a damp summer, I did not have to carry very much water; but when I did, I watered them in the evening and in the morning; they look so bright and fresh, it rewards me well for all my trouble.

It is better to have a few flowers well cared for; they make our homes seem so bright and cheerful. I cannot see why all people do not love flowers, their pretty bright faces peeping up at us, continually thanking us for the few moments of care we give them each day. I think they are a blessing each and every home ought to be adorned with. X. N. SUBSCRIBER.

**Rugs.**—I have made some articles recently that differ somewhat from any I have seen described in the CABINET, and may assist some farmer's wife, like myself, to make home more attractive, while employing leisure moments. The first I made was two pulled rugs, woollen rags pulled up through coarse coffee sacking, differing from those described in the CABINET. In design, No. 1 has a large black eagle, with wings expanded as though flying, for a centre; the rug being two feet wide and three and a half feet long; three inches from the edge I drew a line, but instead of leaving square corners, as on the outside edge, I made each corner to form a scollop rounding toward centre of rug; now from this line to the eagle I filled in with hit or miss stripes, and from the line to the outer edge (for the border) I filled in with scarlet stripes. This rug is called pretty.

No. 2 has a small circle for centre, in which, as though swimming on light blue water, streaked with white foam, is a white swan, with gray wing, yellow beak, and black eye; the circle is made distinct by pulling in two rows of black, then three rows of red rays; at a pretty distance from the circle is an oval ring of purple, black and red, so this circle seems to lay in the oval; from one to the other is filled with hit or miss stripes. This rug is the same size as the first, and filled from the oval to the edge with black, and a fringe adds much to the beauty of each.

Next I made a card-basket composed of eight sections, of pretty shape, and medium size; I bound each section to make it more easy to join them when covered; covered them with points made from blue tinted ribbon paper, in the same manner as the corn-husk work described in the CABINET last year; line each section and the bottom with white merino, sewing in with each piece of lining a heavy green silk cord; make the handle in the same manner, cording it the same, and sew quite fast to the basket; now in the small space in the centre of each section and handle sew a straw flower, if you have a pretty rose, and three green leaves, for each place, and embroider a rose and leaves on the white lining at bottom of basket, and for each section. Your basket will be very pretty. Mine is simply corded and trimmed with straw flowers.

I have made two pretty rugs from cotton cloth. Braided rugs, I call them. Take three strips of cotton cloth; calico and muslin do nicely. Braid them the same as you would straws, only sew the pieces when joining them. Knit a strip three inches wide and one foot and a half long for the centre. Knit this of one color; around this sew three rows of the braid, cutting and laying one over the other where they meet; these rows should be bright colors; then three rows of plain, or one colored, braids, and add them in this manner until your rug assumes the desired size. These make pretty oval shaped rugs and look well when placed beside a bed, if the carpet should be a "rug carpet."

My mind is still stored with knowledge concerning numerous articles to be found in my rooms, but this chat with the CABINET readers has now grown too lengthy. At some future time perhaps I may tell you more about housekeeping in the Old Rock House.

MRS. EMMA TREICHLER.

**Water for Plants.**—The best for the gardener's purpose is rain water, preserved in tanks sunk in the earth, and rendered tight either by puddling, or bricks covered with cement. To keep these tanks replenished, gutters should run round the eaves of every structure in the garden, and communicate with them.

E. L. B.

## Flower Gardening.

## A LOVELY FLOWER GARDEN.

During a pleasant walk upon a lovely day last summer, when earth and sky were radiant with beauty, I passed a small but neatly arranged flower-garden, and stopped for a moment to enjoy its beauties; but among all the fair blossoms that met my gaze, my attention was most drawn to a bed of lovely Pansies. Lifting their large beautiful heads above the mass of dark green foliage, royal in purple and gold, and running through all the degrees of shade to the palest violet, it was a picture to become ineffaceably fixed in my mind, and has made me richer and happier for its possession, and I still often turn back to it with the greatest pleasure.

I have often, when weary with toil and laden with care, found rest and strength, and drank in deep draughts of delight, in gazing for a few moments upon the unfolding beauties of my own loved flowers. What a pleasure to watch the gradual development from the tiny shoot to the full-grown plant with its wealth of leaves and blossoms, often filling the air with exquisite fragrance. What more beautiful sight can there be than a bed of gorgeous Verbeenas, glowing in all the shades of scarlet, crimson and purple, intermingled, with here and there starry clusters of pure white; or of velvety Petunias with their rich coloring and delicate veinings and shadings, such as only the hand of the great Artist could pencil.

But radiant as are these summer beauties, there are so many choice and beautiful perennials that adorn our gardens that we must give them their due share of admiration; and almost unrivaled among them stand the Lilies, the queenly lilies. Surely, Solomon, in all his glory, was not arrayed like one of these. Tall and stately, some waving their yellow cups like golden censers in the summer air, some gleaming out white and pure as some fair spirit, so filling all the air with their fragrance, while others lift their royal heads, so glorious with brilliant coloring of scarlet and purple and gold, as to transcend all powers of description.

Of these lovely flowers, I have several varieties in my own garden, some of which are common and old-fashioned, and others more rare, but all are very beautiful to me.

And now I must say a few words for the Roses, for among all the gems of the flower-garden, these are, to me, the fairest and sweetest. So rich are they in perfume, so perfect in form and coloring, combining so many rare and delicate tints, and possessing so many excellencies, that they stand almost alone in their beauty. Could I have but one kind or class of flowers for out-door culture, I should prefer Roses to all others. But dearly as I love them, from some unknown cause I have not been very successful in the culture, especially house Roses. Some time ago, I purchased of a well known florist, several varieties, mostly Tea. After recovering from the effects of their long journey, they grew rapidly, putting out the most luxuriant foliage, and nearly all blossomed. Never will I forget my delight in watching the unfolding of those exquisite buds into the perfect flower, and inhaling their delicious fragrance.

There was a Washington, with its clusters of snowy white; a Madame Damazin, with its delicate creamy petals, softly tinted with rose; a Louis Philippe, of the richest, deepest crimson; a Madame Margotten, throwing out magnificent blossoms of golden yellow, with a deep pink centre, and a Duchess de Brabant,

blushing very lovely amid the bright green foliage, and others that I will not take time to mention.

But perhaps I bestowed too much care and attention upon my favorites, for they were frail as fair, and very short-lived indeed. During the winter they began to droop, and lose their leaves, and pine away in spite of all my efforts to save them, until nearly all were dead; only my Marechal Neil and Duchess de Brabant remaining. These both produced some splendid blossoms in the summer, for all their slender and not very thrifty appearance, that were as beautiful as heart could wish.

I have been quite successful with my house plants this year, and though my collection is not very large, I have some fine plants, and they are a source of much pleasure to me, brightening many a lonely hour, while they furnish food for thought and study in their varied forms, habits, and needs for promoting growth and beauty.

My plants are not numerous, it is true, but a few choice and well cared for, are preferable to a great number of worthless ones. I have an Aechyranthus which has been especially admired by everyone. It is a large bushy plant, more than two feet in height, and combining every shade in its large beautiful leaves, from the palest pink to the darkest crimson and maroon. It is, without exaggeration, a magnificent plant. I have some half dozen varieties of Fuchsias which are great favorites; a lovely double white, and one a soft pink and crimson, which, with its luxuriant growth and rich masses of dark shining foliage, is something truly splendid; and several others of the various shades of purple and crimson, which have paid well with their constant abundance of rich blossoms.

My Geraniums also have been a source of both pride and pleasure. The beautiful tricolor, Mrs. Pollock, and the ivy-leaved Holly-wreath, and most lovely of all, a double one of the brightest and purest pink, the florets of which were each a perfect little rose, measuring nearly an inch and a half in diameter. I have quite a variety of Zonales, part of which are seedlings of my own raising, and are very beautiful both in leaf and flower; a few other pretty foliage plants, some seedling Heliotropes, a scarlet Salvia, and Chinese Primrose, with some baskets of drooping vines, make up my small collection. As to their culture, so many useful suggestions and excellent methods have been given through the pages of the CABINET, that I could tell nothing new, and will only say that I pot them in good rich soil, and water whenever the earth is dry, and the plants show a need of it (not at any regular times), using soft warm water, adding a little ammonia occasionally, and stirring the earth about the roots frequently to keep it mellow.

And now I would only say to every weary, toiling one, to all who have many cares, and but few pleasures, and still possess a love for the beautiful, if you have a spare foot of earth, or one sunny window, cultivate a few flowers, if it is only two or three varieties, and you will be amply repaid for all your trouble in their unfolding beauties. You will find rest and refreshment for both body and mind, and in caring for them you will find only a pleasure, and better still, something that will lift the thoughts higher, and make them purer for their refining influence. May we all, whatever be our mission in life, do our work well and nobly, and at the same time not forget to love and cherish the beautiful things spread out before us in the great realm of matter, that a loving Father has so kindly and lavishly bestowed, and thus be drawn nearer to Him who has made them all and clothed the earth with such wondrous beauty. M.

[Written specially for the LADIES' FLORAL CABINET.]

## Winnifred's Will.

BY AUGUSTA LARNED.

## CHAPTER IX.

"The many-colored threads of fate  
Are weaving webs of strange device."

It was near midnight in Finster's cottage, and the tired mother lay asleep with her children, while Virginie kept watch by the bedside of the sick boy. He had been restless and wakeful for hours, and the patient nurse had smoothed his pillow and given him cooling drinks, singing to him in a voice as low and sweet as the cooing of a dove. She had quieted the fever, at last, by her gentle, magnetic touch, and he was sleeping with the faintest dew of perspiration on his forehead, and one little hot hand clasped in hers.

The shaded kerosene lamp burned low in a corner of the room. Virginie sat in Mrs. Finster's rocking-chair with her light hair unbound and falling about her shoulders. Her great blue eyes, so weary with weeping and watching, were wide open staring at the bickering shadows. She wondered if she should ever sleep again. How many hours was it since Bradley Halcourt had spoken those rash words that burned in her brain and throbbed through her whole being? She was praying in a confused, frightened way, "Keep me from temptation. Deliver me from evil." How could she ever again meet the frank, true eyes of her friend, with the memory of those words of love and that kiss tingling on her lips? Her heart was so full of shame and contrition she could have fallen at Winnifred's feet and bathed them with tears of repentance.

Virginie might have stolen out of the cottage and fled away into the night had not reason and reflection still been strong in her. Mrs. Halcourt's letter could not reach Hopdale before Thursday night. It was now Tuesday. Might she not venture to remain secluded in the fisherman's cottage, nursing little Jake, over the next day? Minnie was too busy and too happy to miss her, and she would rely with all her soul upon the promise of protection which she had extorted from Bradley. It was a great comfort to put off the necessity of immediate action—of thinking what she would do—even for a few hours, for her frame seemed drugged with languor, and only by a strong effort of will could she exert herself at all. Thus she sat outwardly pale and calm, trying to bear, and to be patient until daylight came.

The moon had risen, but it gleamed out fitfully between heavy masses of dark cloud, and a sad low wind began to wail in the forest bordering the lake, while the little waves rippled mournfully against the shore. Between two blasts that scattered showers of dead leaves, Virginie first heard a low tapping at the pane. She bent forward, and grasped the arms of her chair, her lips apart, her cheek blanched, while her heart seemed to stop beating. It was the same signal by which Bradley had summoned her in the morning. She did not answer, but sat gazing into space as if petrified. But the tapping continued, and a voice said in a half whisper, "Mousie, are you there?"

It was not Bradley's voice, and she rose reluctantly, and went forward, and softly raised the sash.

On the other side of the screen of leaves which the night-wind was rustling, stood Winnie, wrapped in her great furled cloak, with the hood drawn over her head, and looking preternaturally tall and shadowy.

"I must speak to you," said she, in a penetrating whisper; "I have Hector with me, and you need not wait to get a wrap; my cloak is big enough to cover us both."

The boy was still sleeping; Virginie stole back to the bed to assure herself of the fact, and then crept out of the house through a little passage. She shivered as Winnie embraced her, and drew her in under the shelter of the big warm cloak, and in silence they began to climb the bank with Hector's feet pattering on behind them. Among the trees it was almost palpably dark with faint patches of moonlight here and there cast down from between the shifting clouds. But Winnie, by a kind of cat-like instinct, kept to the path until they had got into the black shelter of the great pines, and below their eyes could discern the glimmer of the lake that lay spread out in a vague, whitish expanse. Then she sat down on the pine needles and drew her friend into her strong arms, while the dog kept rustling here and there, and the great boughs sighed overhead.

"Why do you tremble so?" she asked in a whisper "Are you afraid? That cry is only the hooting of a screech-owl."

Virginie lounged to shrink away from the warm protecting clasp, but she seemed held in a vise, and with a deadly sinking of the heart, she murmured, "No, I am not afraid; but why have you come out here in the night?"

"I could not sleep, Mousie. I was wretched, and terribly nervous, and when I found you were away from home I was just ready to raise the roof. I wandered like a lost spirit into Lady Betty's room, and all over the old Hall, and had more than half a mind to send and have you fetched back. But then I decided to come for you myself, so I waited until all the people were abed and asleep, and then I stole out for I knew the night air would do me good."

"Are you ill, dear mademoiselle?" Virginia asked in a whisper, shivering and cowering in the dark, for the wind had brought down a great dead limb with a sharp crack.

"No, no, I am never ill," Winnie answered, hurriedly. "I am only restless and out of sorts. Oh, Virginia, I don't know what ails me. I believe I am a fool, an idiot. I hate and despise myself, and I could never speak to you as I do if it wasn't for the dark that hides my face," and suddenly she dropped her head on her companion's shoulder, and gave way to a violent outburst of tears and sobs, frightful as such an explosion always is from one who cries hard.

Virginia felt that constriction of the heart that presses the life and hope out of young bosoms. Her exclamation was a sob of agony. "Oh, mademoiselle, what has happened? Is it Mr. Fortescue?"

"Don't name that creature," cried Winnie, as soon as she could get her voice. "I loath the very thought of him, and have told him never to come near me again."

"But why?" and the whisper in the dark faltered.

"Why, darling, my love," sobbed Winnie, as the confession was wrung out of her, and feeling her face burn in the dark. "You are so pure-hearted, so true, you will never understand it, and you will despise me as I despise myself."

"No, no," said Virginia, making a great effort over the words. "It is I that ought to get down and cling to your knees for pardon."

Winnie was absorbed in what was passing within her to the exclusion of all else. Her voice broke and she seemed strangely humble. "I have only allowed that ape-faced Fortescue to dangle after me, and whisper silly nothings, because I hoped it would vex Bradley."

"And your cousin has scolded?" gasped Virginia.

"No, no," with another passionate outburst of grief and impatience, "he does not care; he is as indifferent as a marble statue. You do not understand, you cannot know, you have never felt as I do. I thought I was strong, but I am miserably weak. I meant to rule myself, and never give way to this folly and madness," she moaned on in the darkness.

"And your cousin?" returned Virginia, holding out through these moments of torture she knew not how. "He has made a scene, perhaps?"

"No, no," sighed Winnie; "he does not care enough for that. He would not mind if I was lying dead at his feet. I believe he would be glad, for this marriage must seem odious to him. He never would have consented except for the promise he made his mother. I believe he hates me, Virginia. And how can we go on in this way years and years? Oh, it is hideous to think of. I hate myself because I cannot give him up, and tell him to go out of my sight."

The last drop had been shed into poor Virginia's cup, but the crisis seemed to calm and steady her, and she said, in a tone that sounded sharp, almost shrill, in her own ears:

"You love him dearly, with your whole heart and soul?"

"Do not ask me," groaned Winnie, "I am beside myself. Did I not vow never to pine away, a love-lorn thing, like the Lady Betty? I am too young and strong to die, and I shall not go mad, but I may turn wicked, Virginia, unless you help me. I have only you in the world to cling to now. Can't you comfort me a little, and show me a gleam of hope? Maybe in time, in a great many years, he might come to feel differently. I would not expect much. I would be humble. I would subdue my pride and break my will. I would think only of pleasing him. But to have him dislike me always, and grow harder and colder, oh, that is too dreadful to bear."

Winnie's tone of pleading and entreaty, not unmingled with tears, was a prayer for consolation poured into her friend's ear, and she clung more convulsively than ever to her side, almost hurting her with her strong arm.

The pause before Virginia could gain power to speak seemed simply horrible, and at last when the words came, they were very cold and measured:

"I am sure your cousin will love you sometime, mademoiselle. You are worthy of his love."

Winnie heeded nothing but the import of the words. Though poor and scant, they were like the bread of life to her.

"Oh, say that again, Virginia; say it every day and every hour. I can live on the least crumb of hope, and you shall teach me how to win him; you shall make me all over. I know men don't like women who assert themselves. You shall teach me to be gentle and docile. Do you know a horrible fear has sometimes come over me; the fear that he loves another. It was like fire on my

bare flesh. If he is heart-free why shouldn't I win him in time?"

"Oh, you will win him in time," repeated Virginia, mechanically, and then with a kind of wrench, she broke away from her companion's arm, and rose up before her from the place where they were sitting. Her face was deathly pale, and just at that moment the moon shone out upon it between dark clouds, and upon the long fair hair streaming over her shoulders. She looked more like a spirit than a mortal.

Winnie felt a little creeping fear of her that was quite a new sensation.

"You are ill," said she, tenderly, getting up, and standing beside her. "How selfish I have been not to find it out before! You are killing yourself nursing that red-headed boy, and I am to blame for permitting such a sacrifice. Come, we will go call up his mother, and then you shall come home and sleep in my bed, and I will take care of you."

Virginia rejected her friend's supporting arm, and even the clasp of her hand.

"I cannot go back to that house," she said, in an unnatural, sharp tone. "I must return to the boy, for I have promised to watch with him, and he needs me."

For an instant, Winnie stood rooted to the ground with surprise and consternation. She had never before heard such a tone issue from Virginia's lips. When she spoke, it was more in grief and remonstrance than in anger.

But Virginia had turned and begun to thread her way through the trees.

"Do you care more for that boy than you do for me?" cried Winnie, following down the path. "He is in no sort of danger, and I have shown you how much I need you. I have laid bare my heart's core. And you only seem bent on killing yourself. This is not kind, Virginia. It is not like you. I never saw you perverse before. I thought you had the temper of an angel, for you never gave me a single pang. Now I am shocked that you should treat me in this way."

They had descended the bank very rapidly, and Virginia was again in dense shadow. She stopped and her voice was forced and strange:

"Think of me as you will, mademoiselle, I cannot go back to that house to-night."

"You have given me a blow in my heart," gasped Winnie, in a voice thrilling with sorrow and reproach. "No human being but yourself could have made me believe it possible."

Virginia did not stay to hear more; she fled over the cabbage patch into the cottage, and her friend was left outside alone in the night, stunned by the blow that had fallen upon her, not knowing why it had been dealt, or what it meant. She stood a minute or two rooted to the ground, gazing blankly at the dark outline of the fisherman's house. Something cold and moist insinuated itself into her hand. It was old Hector's muzzle, for the faithful creature was rubbing himself affectionately against her dress. He recalled Winnie to reality. She found that the earth had not given way under her feet; that the heavens were still stable. All was calm and still, for the wind had gone down, and the moon coming out again cast weird shadows down the old oak avenue.

Winnie crept slowly through the trees, for this new trouble had awed her restless mood into silence. She let herself into the dark house at a little side door of which she kept the key, and, taking off her shoes, stole noiselessly to her room.

Winnie's strong nature had quivered under this shock to her tenderest affections. For hours she lay in bed staring before her with eyes propped wide open, torturing her self with conjectures and surmises as to the reason of Virginia's strange behavior.

She dreaded the coming of light; she dreaded to have to meet her again. Her heart was bruised and sore, for all the happy past seemed shivered to pieces at one stroke. Everything was changed between them, and why was it so? The words that had been spoken were nothing, but an indefinable change in Virginia had impressed itself upon her never to be effaced. It was the cold shade of death that had crept between them.

Sometimes Winnie sobbed in her hard, violent way. She could not have it so. It was too dreadful. All her world, so rich and splendid, seemed crumbling to pieces.

Once a serpent crept into her bosom, and stung her. Perhaps a serpent loved Bradley; had learned to love him on the steamer. But Winnie was loyal to her friend's truth, though suffering from this change in her affections, and she put the creeping thing away as if it had polluted her heart.

Truth and health triumphed over this tumult of feeling, and, at length, far on toward morning, Winnie fell into a deep sleep. She was intensely interested in a vivid dream which she could never recall, but all the time there was the sound of knocking upon her door; that kind of knocking which we hear in sleep, but do not heed. However, the knocking increased. She opened her eyes to find the sun shining in between the curtains of her windows, and

with a mist of sleep hanging round her she got up, slipped on a dressing gown, and opened the door to encounter the broad figure and perturbed countenance of old black Nanna.

"Oh, little Miss, dat furrin gal," the old woman whimpered. "I dreamt of snakes las' night, honey, an' I knowed suffun was wrong."

"What about Virginia?" the young mistress asked sharply, now broad awake.

"Pears like I've scart you, honey. You's pale as bleacin' cloth. Dat yaller-haired gal is like de apple in yore eye. Dat pore white trash, Finster's wife, she sent up to say how as Miss Jinny was took bad in de night, and has gone off light-headed, and is cryin' for you dat are put out wid her, honey, and won't forgive her nohow."

Winnie leaned for a moment against the wall. She was weak from the rush of emotions that had come into her heart. Pity, love, and sorrow were struggling there, but thankfulness was uppermost.

It was all plain to her now. The delirium was coming. It had made poor Virginia appear strange and unnatural, but she had been too selfish and purblind not to perceive the cause. Winnie felt an impulse to pray, though she had never been taught to pray. The instinct arose within her, and bedewed her heart, and made it soft. When she opened her eyes they were full of tears.

"Get the carriage instantly," said she, in her clear, decisive tones. "We will fetch Virginia home."

Mrs. Finster was on the lookout, with the heavy baby sucking its thumb over her shoulder, and the rest of the children huddled together in an awed, little group when the carriage drove up to the door.

"It's a mercy you've come," she began in a very lachrymose tone. "I never was so beat in my life as when I found her lying on the floor at the foot of Jake's bed, with her head burning hot, and her eyes staring wide open, but not knowing me more than the dead. And then how she did talk, and sing, and laugh? It would have just broke your heart to hear her. Now she has fallen into a stupor like, and I routed Finster out of the house, and made up the bed clean with the only whole sheets I've got; and there she is breathing and moaning in her sleep, so it's dreadful to hear. Poor Jake has took on so about her, I thought he'd have a collapse himself."

Winnie cut short Mrs. Finster's lamentations by pushing past her into the low, untidy room, in one corner of which stood the bed, where Virginia lay with a purple, congested flush on her face, her baked lips wide apart, and the sunny hair scattered over the coarse pillow. It was a sight to wring Winnie's heart, but at that moment she must not give way; she must act. Motioning Nanna to the bed-side, she said in a low voice, "You and I can lift her easily to the carriage."

Softly as the words were spoken, they seemed to thrill through Virginia. For an instant the lethargy was shaken off. She shuddered and covered away from Winnie's touch, and moaned out, "Don't take me away from here. Let me stay here and rest."

But Nanna, with one firm movement, lifted her in her arms, and laid her drooping head down on her broad, motherly bosom, and thus she lushed and soothed her all the way, like a sick baby. She even carried her, unaided, up the broad staircase at the Hall, declaring she was only a feather in weight.

"Take her into my room," whispered Winnie, as they were going up.

Virginia opened her eyes full and wide, and the same shuddering and shrinking came over her. "Put me in my own bed," she half sobbed. "I shall die if you lay me there."

Winnie knew she ought not to be hurt by the poor girl's ravings, in her delirium; but somehow she was. It recalled all she had suffered during the night. She was glad there was no time to brood over her thoughts. So Virginia was laid in her own little bed; and for two days she knew not what was happening about her.

Bradley had passed a wretched, sleepless night between hours of self torture, and irrational gleams of joy awakened by the consciousness that Virginia loved him. Haggard and unrefreshed, he arose just at dawn to nerve himself by a few hours in the fresh air for the interview with his cousin, in which he meant to break with all his past, and set his face toward a new life. He would tell her the truth, and throw himself upon her generosity. It was maddening to think that any imputation of evil would be cast on Virginia; but he was there to guard and shield her.

This step he meant to take without her knowledge, for he knew he could never gain her consent, and it was impossible for him to carry longer a load of deceit. He was about to take his fate into his own hands. And the resolution once formed, he was calm and almost joyful.

When he returned to the house, Winnie stood in the great entrance hall, holding an earnest half-whispered conference with the country doctor. He was rooted to the ground by the first words that reached his ear.

"And you think it won't be necessary to cut off her hair?"

"No; I hardly think it will go the length of brain fever. There are some ugly symptoms, but the leeches will likely check them. The young lady must have had some kind of a shock; bad news from home, perhaps. I understand she don't belong round here."

"Oh, no," returned Winnie, positively, "nothing of the sort. I think she has got some malarial poison in her system. She has been nursing a sick boy down in a cottage by the lake where it is damp and unhealthy."

"Oh! ah!" returned the shrewd, farmer-like doctor. "I never knew malaria to produce just such effects; but I will call again this afternoon. Be particular to apply the ice, and give the medicine as ordered."

Bradley stood rigid and motionless until his cousin had accompanied the doctor to the door, and then she turned and approached him with a half timid air quite new to her.

"Have you heard about poor Virginia? You know she was taken very bad down at Finster's. We brought her home in a high fever, and at times she is dreadfully delirious. I felt sure she was killing herself, and I tried to make her come away last night; but she was dreadfully perverse. I never knew her so before. It was this coming on."

Bradley felt such a grip upon his heart he could not speak, but he was conscious of making an almost superhuman effort at self control.

"Does the doctor think her in danger?"

"Yes, he thinks there is danger, but he is more encouraging than we could expect. She is so young perhaps she may throw off the brain trouble in a few hours."

Bradley's manner was colder and more impassive than before, as he said, "Had I not better go and summon a doctor from Deanport?"

"No, I think not," returned Winnie. "Dr. Rudd is said to be quite skillful. Papa hated the whole tribe, and would not let one of them into the house, and I have never been sick in my life; but somehow he has inspired me with confidence. He says if there is not a decided change for the better by to-morrow morning, he will call a consultation of physicians."

"Let me know if I can be of any service," said Bradley, as he hurried away, feeling that he could bear up no longer. This new and consuming anxiety had obliterated every other thought.

Winnie was vexed with him for receiving the news so coldly.

"He looks fagged to death," she thought, "but he has no more heart than a stone." However, she had reason to change her mind, for though Bradley was obliged to turn away to hide his anguish of heart, when he had recovered a little from the shock he could do nothing but wait and watch for his cousin's emergence from the sick-room to get reports of Virginia's condition. His whole manner had changed. It was so gentle, so humble, that a new hope fluttered in her heart. Surely, they were drawing a little nearer to each other. Bradley, though his face was haggard, had never seemed so kind as on that day, and the next, when the whispered conferences were going on about the hall and staircases.

The poor girl's delirium was at its height, but she was very gentle and pathetic—in fancy wandering with her dead mother over the Alpine pastures, gathering harebells, and listening to the bleat of flocks, and the song of birds. She was away back in her happy lost childhood, and spoke only in French, sometimes singing snatches of the songs her father had taught her. Bradley heard these bursts of delirious singing as he hung about the passage, or set his door open to listen. He was reduced to a pitiable and abject state of misery, and sometimes he secretly waylaid old Nanna on her way to and from the sick-room. The old darkey shook her head, and her eyes were full of tears:

"De pore lam' is mighty bad, Mass'r Bradley; but de Lord transposes, and I se prayin' for her powerful strong. De Lord can hear old black Nanna. He's no suspecter of pions, an' I neber prayed in faith, believin', dat I didn't git an answer shore, for honey, I allus prays 'de Lord's will be done,' an' whichever way it turns, it's de Lord's will; don't ye see dat, honey."

The hours wore on without any perceptible change. The doctor came and stayed most of the night. He was confident a favorable crisis would occur in the morning. Bradley never knew how he got through the time. He sat up all night in his dark room, ill with anxiety and dread, and constant smoking only made him worse. A slight nausea stole over him, and just at daybreak he crept out into the fresh air. The sunrise was sweet and calm, shining goldenly through the bare trees.

He wandered about without aim or purpose through the paths, not knowing or caring where he went, when he saw Edgar Swayne ride up to the stable-yard gate and dismount. Everything had been swept from Bradley's mind by the crushing anxiety and suspense of the past day; but now as he saw the stern light in Edgar's eye, their interview at the mine came rushing back upon his memory, and he advanced to meet him.

The question came abruptly and without preface, "Mr. Halcourt, did you send the message I intrusted to you for the sheriff of Deanport?"

"No; I did not?"

"Will you please to explain, sir, why you did not?"

"No, I cannot do that, at least not at present. I owe you an apology for what may appear strange conduct, and that apology, full and ample, you shall have in time. At present I must allow you to think of me what you please. I can only say that I withheld the message in order to protect an innocent person."

"And I can tell you that your conduct has been basely dishonorable," cried Edgar. "You have connived at the escape of a criminal, and are answerable to the law. I had everything prepared for the capture of that man, the leader of the gang that has infested this neighborhood, and you have defeated me for reasons best known to yourself. But all who have had a hand in this thing shall yet be brought to justice. I have tracked that man through all his aliases—Dr. Walters, Charles Meadows, Long Andrew, and he has been notorious through them all."

"And his real name," said Bradley, eyeing him, and not allowing a sign of emotion to escape.

"His real name I do not yet know; but I shall find it out."

Suddenly a new thought seemed to strike him, and he turned squarely upon Bradley:

"Perhaps you may know this man's true name?"

Bradley did not answer. He stood in a quiet attitude, one hand thrust into his pocket, and the other holding a long-handled meerschaum. Thus they stood, taking each other's measure, Bradley pale, Edgar flushed and excited, until the latter's hostility could no longer restrain itself. "If I thought you knew that man's true name, I would force you to reveal it."

"Oh, is that it?" returned Bradley, looking down from his broad-shouldered height on the slight, nervous student form before him. "Are you a fighting parson of the church militant? I should hate to handle a man of your cloth, and a smaller man than myself, too. You see with just one blow of my fist I could hurl you into those bushes yonder."

"Don't mind my cloth," cried Edgar, quite beside himself now. "I will meet you as man to man, as foe to foe."

Bradley's placable temper asserted itself more and more as Edgar's wrath was gathering.

"No," said he, "I have no quarrel with you, Mr. Swayne. That is all bunkum. I owe you an apology, and an explanation which you shall one day have. You have heaped some injurious words upon me, and if you think I will bear imputations upon my honor more patiently than another man, you are mistaken. But you are angry, and there is some color for your anger, and I will not take advantage of it. A contest of fists between us would be too unequal. If you are determined to regard me in the light of an enemy, and wish to attack me, you must pop away with a pistol from behind some tree. I shall not molest you."

Bradley turned on his heel and walked away, triumphing as the strong man does triumph who has the advantage of coolness and self-control. Edgar before had hated him, now his breast seemed full of hissing serpents. He leaned a moment on the gate for support, and then almost groped his way toward the Hall. Hardly had he entered and thrown himself upon a sofa, still quivering with rage and pain, when Winnie came flying down the staircase, in a white wrapper, and with such a tender glad light in her eyes, in spite of weariness and watching, as seldom had been seen there. Virginia was better; the blessed crisis had come. She had fallen into a peaceful slumber, and a cool dew of perspiration was beading her forehead.

Winnie had flown down the stairs to find Bradley, that she might pour the good news into his sympathetic ear. Her cousin's changed manner, and his gentle kindness had made these confidences sweet to her; but in the hall she encountered Edgar.

"Oh, Mr. Swayne, you will be so glad to hear that Virginia is better. You know how ill she has been. At one time we thought her case almost hopeless; but the crisis has come and she is asleep."

Edgar looked up with a miserably pale, haggard face, his eyes blood-shot and burning, and forced himself to say, "I am very sorry she has been so ill."

"It is a blessed thing you were not here during the worst," Winnie returned, "for I see how you have suffered."

Edgar looked at her steadily, entranced by the splendor of her eyes.

"Miss Braithwaite, what do you mean? I do not understand you."

"Mean, Mr. Swayne? Why, nothing, only that I see you have been very unhappy about poor Virginia."

"You are laboring under a strange delusion," said he, in a low voice, standing before her, and keeping his eyes riveted upon her face in a way that made her very uncomfortable.

"I have not been unhappy about your friend. I did not even know that she was ill until you told me."

A crimson flood came slowly up and suffused Winnie's

face. She was deeply vexed and ashamed that she had made this mistake; and, moreover, the young man would not take his burning eyes from off her face, while she seemed powerless to move.

"Miss Braithwaite,"—in the same low voice—"did you, could you, for a moment suppose that I was in love with your friend?"

Winnie, brave as she was, opened her lips, but only gasped. There was something impending she would have given worlds to avert, and her own little schemes all seemed tumbling about her ears.

Edgar put his hands over his face for an instant, and was trembling visibly.

"Oh," said he, in a muffled, choked voice, the sentences coming out disjointedly, "I meant to keep silence. I vowed I would not speak to you. I have been a fool, or something worse, for I have forgotten conscience and duty, even God himself, in the mad intoxication of loving you. You can never know how I have suffered, how I have struggled with myself. You can have no conception of what has gone on within me. Sometimes you have seemed to lure me on, and then again you have treated me with haughty coldness, almost scorn. But it made no difference. I could not help worshipping you blindly, for I only lived when I was in your presence. But it was madness to suppose I could stay here and endure the sight of that man who is so unworthy of you."

"Have you and Bradley quarrelled?" Winnie asked in a timid whisper, feeling that the vigor had gone out of her strong, young frame.

"Yes," he groaned, "we have quarrelled; there can be only one long, eternal quarrel between us. I will tell you the truth, though you may think I am goaded on by insane, jealous rage: that man is base and dishonorable."

Winnie recovered herself instantly, drew up her tall form to its extreme height, and said with cold hauteur, "Mr. Swayne, you forget yourself. I will not hear one word against my cousin, not one word. You may upbraid me, if you will. I have wounded and hurt you with my teasing, girlish caprices, and my thoughtlessness," and suddenly melting with the tears filling her eyes, "I beg your pardon for the pain I have inflicted. I could beg it on my knees."

"Oh, Miss Braithwaite! Winnie!" he cried, in heart-broken tones. "You will remember some day that I would give my life to save you one pang."

Winnie was sobbing passionately; she had utterly broken down.

"Oh, forgive me, forgive," she cried, putting out her clasped hands, "if I have crossed and marred your life. It is dreadful to think of."

He caught her hands in his, and pressed them fervently to his lips.

"Oh, Mr. Swayne," she went on, in a broken, pleading voice, "if we love truly, and grandly, even though that love be unhappy, ought it not to make us nobler? You may scorn me for what I have done, but do not go away from those poor people up at the mine. They need you. Is it not wrong for us to run from our natural and proper work because life has not given us what we cry for? Promise me that you will not go."

He looked at her with an indescribable expression of hopeless misery.

"I cannot answer now," said he; "I must have time to reflect," and he rushed out of the house.

Winnie fell sobbing upon the sofa and buried her face in the cushions. Where was now her self-satisfaction, and little cut-and-dried schemes that were to make everybody comfortable? It seemed as though the illusions of her crude girlhood had been shattered to pieces by one touch of passion and truth, and were lying in confused fragments at her feet.

(To be continued.)

**Our Tell-Tale Lips.**—I have observed that lips become more or less contracted in the course of years, in proportion as they are accustomed to express good humor and generosity, or peevishness and a contracted mind. Remark the effect which a moment of ill-temper or grudgingness has upon the lips, and judge what may be expected for an habitual series of such movements. Remark the reverse and make a similar judgment. The mouth is the frankest part of the face; it can't in the least conceal its sensations. We can neither hide ill-temper with it, nor good; we may effect what we please, but affection will not help us. In a wrong cause it will only make our observers resent the endeavor to impose upon them. The mouth is the seat of one class of emotions, as the eyes are of another; or, rather it expresses the same emotions, but in greater detail, and with a more irrepressible tendency to be in motion. It is the region of smiles and dimples, and of a trembling tenderness; of a sharp sorrow, or a full breathing joy; of candor, of reserve, of anxious care, or liberal sympathy. The mouth, out of its many sensibilities, may be fancied throwing up one great expression into the eye—as many lights in a city reflect a broad luster into the heavens.

No. 11 Clinton Place  
New York.

NEW YORK, JUNE, 1877.

**A SUCCESSION OF FLOWERS.**

I am no advocate for an indiscriminate planting of flowers. A few well cared for and set out with an intelligent idea of their requirements, will give far more satisfactory results than a host set out for the sake of having everything that Mrs. Grundy has, and a little more.

The plants with which we beautify our grounds require as great diversity of soil and care as do the cereals that our farmers raise. No wise farmer would think of raising Indian corn on ground that was only fit for a crop of white beans, or vice versa. Just so with our Geraniums and Roses. While the former do well in a clay soil and partial shade, the latter require a deep, rich soil and full sunshine. The same holds true with regard to our window-pets. It is folly to expect Begonias, Bonvardias, Heliotrope, or Coleus to thrive in temperature that suits best Azaleas, Camellias, Geraniums, etc. The former requiring a night temperature of from sixty to seventy degrees and a day temperature of from ten to twenty degrees higher, while the latter will do well with a night temperature of from forty to fifty degrees, with a correspondingly high day temperature.

By a proper selection, and in a moderate season, we may enjoy a succession of bloom in the open air from the first of March until the first of December. Our earliest floral treasures are the Snowdrops, Crocuses, and sweet-scented Violets, soon followed by Tulips, Hyacinths and Lilies of the Valley. Before these are ready for their season of rest, we have the Pyrus Japonica, or Japan Quince, Lilacs, Deutzias, Weigelia-roseas, Spireas in variety, and the old-fashioned, but never-to-be-despised Snowball.

By the time the glory of these has departed, our annual Roses should be opening. Then we have ten days or two weeks of beauty and fragrance, provided we have been able to circumvent the slugs which in years past have been so destructive to the queen of flowers.

Dusting the bushes, when wet with dew, with white

hellebore, plaster, or wood ashes, are said to be infallible remedies.

For those desiring the hybrid perpetuals, the following list is recommended as the best one dozen, by four of our prominent florists: Gen. Washington, Caroline de Sansal, La Reine, John Hopper, Victor Verdier, Gen. Jacqueminot, Baron Prevost, Annie de Diesbach, Mad. Alfred de Roquemonte, Triomphe de l'Exposition and Sidonie. But to my mind, nothing can excel the ever-blooming Roses. They are exquisite in form, color and perfume. In our climate it is hardly safe to winter them without some protection, but one is amply repaid for the slight trouble. I would recommend the following dozen: Herinosa, Bon Silene, Malmaison, Safrano, Isabella Sprunt, Agrippina, Bella, Duchess de Brabant, Devouienensis, Louis Phillippe, Sanquaea, and Woodland Margaret.

For bedding plants, none make a finer display than Jessamines. Probably the scarlet gives the best satisfaction of any other; but in the great variety offered by our florists, and the ease with which they may be propagated, we need only limit the number by the size of the bed.

Then we have Verbenas in countless variety, every shade and marking, except the coveted yellow, and that, I suppose, is only desirable because it is unattainable. Of course, we cannot spare the Heliotrope and Mignonette, so lovely in their modest bearing and delightful fragrance.

For those that wish a larger collection, there are the Pink, Carnation, and China Pansies, Ten-week-stock, Nasturtiums, Asters, Petunias, Phlox Drummondii, Salvias, and Chrysanthemums. Our list would not be complete without some permanent vines. Clematis and Wistaria are both beautiful climbers. Then there are the Honeysuckles; the coral and sweet scented varieties; these with a few running Roses, such as Queen of the Prairie, Baltimore Belle, Multiflora, should be enough to satisfy the most avaricious.

There is another family of vines that I cannot forbear mentioning, although they are not ornamental as bloomers. I refer to the Ampelopsis. First we have Ampelopsis Quinquifolia, or five-leaved Ivy, also called Virginia Creeper. This, in common with the poison vine, or three-leaved Ivy, grows in our woods and by the wayside, and is never more beautiful than in the fall, when its foliage is a brilliant scarlet. Ampelopsis Veitchii is a miniature variety. The young growth during the summer is a dark purple, and changes in the fall to the brightest tints of scarlet, crimson and orange.

Ampelopsis tri-color is a rapid grower, and the young leaves are beautifully variegated with pink, white and green. There is nothing more desirable for covering unsightly buildings, rock-work, old trees, etc., and these vines, unlike our English ivies, have the merit of being quite hardy.

MRS. E. G. BONHAM.

**HARDY PLANTS AND VINES.**

I will tell you first of the Pansy, as that is a favorite flower of mine, and I have been very successful in its cultivation. These lovely and popular flowers are the true Violets, they all being descended from the well known Heartsease, which is known as Viola tri-color. The Heartsease will grow by itself, and care for itself, increase by self-sown seed, and bloom from January until December in sheltered situations. Not so its high-born relative, the Pansy. Its culture is very difficult, unless you pursue the proper mode of treatment.

As I have succeeded so well, let me tell you my method. A year ago last spring, I thought I would make an effort to have a nice bed of Pansies. I procured a paper of mixed seeds and planted them in the house in pots; in March they came up beautifully, grew well, and by the time the ground was ready to receive them they were fit to be transplanted. I set them out where the house shaded them in the afternoon, as they will not bear constant sunshine, neither will they grow under the shade of trees. I watered them every evening, and by the first of July they were blooming beautifully, and in great variety; and often when weary with the cares of life, how they delighted my heart as I gazed upon their beautiful up-turned faces, some of them looking so saucy and others so modest, and all so grateful and lovely, (I suppose you all know the Pansy has expression). Well, they bloomed and ripened seeds until I had enough for myself and friends.

When cold weather came the question was, What shall I do to preserve them in their beauty? How cruel to let Jack Frost nip them, they looked so intelligent and so much as if they would like to be cared for. And as I had often tried to preserve them by covering them with leaves and boards, and failed, I thought I would try another plan, and give them a cold frame. So I hunted up some boards, got out my saw, and a window-sash that had been left when we were changing some windows, sawed my boards the proper length and width, nailed them together at the corners, placed the frame over the bed higher at one end than the other, banked the earth well around it, laid on my sash, and had as nice a cold frame as any person could wish, with very little trouble and no expense.

In very severe weather, I threw some old carpet over it and let it alone for the winter. I continued to gather flowers all the early part of the winter, and on New Year's Day made some lovely button-hole bouquets for friends. As soon as the heavy frosts were over in the spring, I removed the glass, and what a glorious bed of flowers I had. People came from all parts of the town to see them, and the Pansy fever raged; all wanted seed, and I gave until the supply was exhausted. I pulled hundreds of flowers some days, and still there was plenty left. And so they bloomed on, until late in the summer they showed signs of exhaustion; then I took my seedlings and fixed up another bed, and in the middle of November, I had my glass on, and expected a repetition of last year's profusion. I have been very particular in regard to details, so that no one need fail. And if this article will induce any lover of flowers to go and do likewise, I will be amply repaid.

And now let me tell you about a vine that is so beautiful that everybody should have it. Cissus Quinquifolia variegata; it is very rare; I have never seen it offered in but one catalogue. It is perfectly hardy in the latitude of West Virginia, Pennsylvania, and Ohio. The leaf is something like a grape leaf, but much more delicate, and beautifully marbled with white. The blossom is insignificant, but the berries are the crowning beauty, the clusters of which are red, blue, and green, all on one bunch, and looking as if they were varnished, and they remain so all the season, and when flowers are scarce, they are a splendid substitute, with which to ornament the parlor or dining-room.

WEST VIRGINIA.

**The Home of Washington.**—Subscribers wishing for this splendid steel-plate Engraving, will take special notice that the limit of our offer to them expires with July 1st. This is far the finest premium we have ever offered, and the certificate for it which we published in March is very valuable. It is well worth \$25.

CAUGHT IN THE ACT.

## Household Enjoyments.

## OLD AND NEW.

About two years ago, soon after my young friends Adolphus and Dulciphina were married, and had set up their household gods in a cottage on Willow Avenue, I recollect making them a visit. Being a friend as well as a distant relative—unfortunately the terms are not synonymous—the bride so kindly pressed me to remain, that an intended morning call was lengthened to an all-day's stay, which included, as a matter of course, a thorough inspection of the new home.

It was pretty, elegant even, overflowing with all of the comforts and many of the luxuries of life, and abounded, as usual, with all the dainty knick-knacks that modern young ladies construct so skillfully; besides there were books, plants, and pictures; not in profusion, but in sufficient number to indicate the tastes of the occupants. A new, nicely furnished and convenient modern house has a great charm for me before the tins lose their shininess and the coal gets low in the bin, and, in short, the saw-dust filling of life crops out everywhere. But after dinner, as we sat in the parlor, a doubt crept into my mind, and I said to my pretty hostess:

"Dulcie, I want to ask you a very impertinent question?"

"Oh, you careful soul!" she exclaimed, laughing, "I only wish you would—a dozen of them; but I haven't the slightest hope of it. Nothing of that sort will ever proceed out of your mouth. What is it?"

"Have you any bed-quilts?"

Dulcie lay back in her easy-chair and laughed till the tears came.

"I knew that was it," she said, "I felt a presentiment of it all the time. No, Cousin Hesah, my bed-quilts are not anywhere just now; and why should they be? I don't want them;" and she recommenced rocking in a slightly defiant manner.

"I think you will," I said, meekly, (for I well knew the modern prejudice against tearing calico in pieces to sew it together again), "and I am sure you will be of my opinion before the year is out. Quilts are far better than your heavy comfortables for summer, not as easily soiled as spreads, and, to my taste, quite as pretty."

Here Dulcie began to laugh again.

"I am so sorry, Cousin, that I haven't a rising sun or a blazing star in the house; I must commence at once, I see, on an elegant log-cabin, like the one that nearly ruined my best hat at the last fair, if I expect you to visit me often."

"I did not mean to defend such inanities," I commenced—but just then visitors were announced, and the subject was dropped.

Early the next summer I received the following note, which explains itself:

No. 9 Willow Avenue, June, 2, 1875.

Dear Cousin Hesah:

If you can look in upon me some day this week I shall be very glad. I am suffering from that contagious but not dangerous disease, the bed-quilt mania, and entreat you to fly to my relief.

Distractedly, yours,

DULCIPHINA SMITH.

Half an hour afterward, I rang the bell at No. 9, but before the maid could show me into the parlor, Dulcie appeared at the top of the stairs.

"Come up here," said she: "I am quite unable to

leave my room except to call people into it," and, upon following her in, I did not wonder. Upon the floor and bed lay five discarded summer suits in almost their pristine freshness, each perfectly lovely once, but hideous now, according to the decree of fashion: a buff linen lawn, a white pique, and three cambrics; a gaily-flowered Dolly Varden, a blue spotted with white, and a green and white striped one.

"What am I to do with them?" said poor Dulcie; "I can't make them over, for no two will go together, nor wear them mornings, for they are unsuitable. If I attempt to bestow them upon the poor, they will be sure to object to the style, and I have about concluded to make a bed-quilt or two, and finish off by inviting all my friends to an old-style quilting, with pumpkin pie and cheese for refreshments. What do you say to it?"

"Capital," said I. "Where shall we begin?"

After much deliberation, we decided upon a "sash-work" quilt of the green striped cambric and the pique, and a star pattern of the buff and blue dresses—buff stars upon a blue ground. For the sash-work we cut the white cloth into blocks eight inches square; there were some half-blocks to come at the sides, and four quarter-blocks for the corners. The green stripes were about an inch and a half wide.

Commencing with a quarter section, I basted a green strip across the straight edge and cut their ends slanting outward. Dulcie stitched this across on the machine, while I took a half-block of white, basted a strip of green across the perpendicular edge, then joined a plain white block to the green, another green strip to the white block, and finished with another half-block of white. When Dulcie had sewed these seams, I joined the row to the corner and they were stitched together.

We went on in this way till the side of the quilt measured eight feet in length, and then we finished the middle row, running from corner to corner, with a quarter-block at each end, and in each succeeding row left out one white block till we, as Dulcie said, "narrowed it off." When we had finished, there were quite enough of the green stripes left for two more quilts. Dulcie bestowed part of them upon an admiring lady friend who dropped in while we were at work one morning,—it is my private opinion that she put them in the rag-bag on reaching home, but I never expect to know,—and laid the remainder aside to go with the Dolly Varden.

Dulcie was a little dubious about the buff and blue.

"I know," she said, "it will be patriotic and Revolutionary, and very much like the flag of our country forever, but it's too much to expect it to be pretty, too; besides I don't want it to give my guests the nightmare and have them celebrating the Fourth of July in their dreams."

But as there appeared to be nothing else to do, she was finally persuaded to set about it, though regarding the task a little unkindly. When done, she acknowledged it to be quite pretty. The buff stars were eight-pointed, made of four double, diamond-shaped pieces, and around each we put alternate squares and half-squares of blue, thus making a square block; these were joined to each other by plain blocks of the blue. There were about fifty of the star-blocks in the quilt when completed.

After both were finished, we held a council of war, at which Adolphus was permitted to assist, and it was decided that the quilting should come off on the Fourth of July. Thirty invitations or more, printed upon brown paper in ye olden style, were duly sent out, and the thirty expert needlewomen who received them re-

turned immediate acceptances; about the same number of gentlemen who were bidden to the "frolic" in the evening, responded "aye" to a man.

The eventful day—a cool one, fortunately—beheld the front and back parlor cleared for action, each containing a quilt, stretched, however, upon such patent frames as our grandmothers—unfortunate souls!—never dreamed of; and at two P. M., precisely, eight maids and matrons, in costumes suited to the occasion, took their seats at each. Martha Washington, I am happy to say, worked with a royal will; one or two more made their appearance presently, and seemed willing to do likewise, as did Abigail Adams, Mrs. Kuox, and many others whom we read of. We were greatly entertained by Mistress Dorothy Dudley, who performed Washington's March with much grace and spirit upon an ancient spinnet, borrowed for the occasion from a music store; and a dulcimer, on which Adolphus' great aunt Keziah had made melody in the days of her youth, was vigorously thumped by nearly all the quilters in succession.

After an hour's steady work, the first set of quilters were relieved and bidden to amuse themselves with games of croquet, etc. while others took their places. So well did this plan work, that by seven o'clock, the hour at which the gentlemen were to appear, the ladies were at liberty, and the two quilts neatly folded and laid away.

At about eight o'clock Samuel Adams, who had been hovering around most of the afternoon, led the way to the dining-room, where a "goodie collation" was set forth. I fear the domine's grace before meat was of modern length, but it suited well the sharp appetites of the hungry quilters. As the tea was passed in tiny, ancient cups, I overheard Mrs. Abigail A—remark to her nearest neighbor, that a rare packet of it, sent by husband from Philadelphia as a present to herself, had been mistakenly appropriated by Mrs. Samuel, but, as it was all in the family, she should never mention it; no, indeed!

Time would fail me to tell of all the good things set before the company. Pumpkin pies had been found a possibility, as Adolphus had discovered at a farm-house a few miles off a supply of that useful vegetable, dried.

Lemonade and coffee, doughnuts and cheese, election cake, boiled ham, yellow pickles, sandwiches of brown bread spread with butter and honey—does not one cry enough! just to read of them? And afterward? There were old-time games, a few worldlie songs, and a reel or two, walked through in the manner supposed to have been *en regle* at the Republican Court to music supplied by a very squeaky fife.

At ten o'clock the domine and his lady took a ceremonious leave, and the remainder of the guests soon followed, the gentlemen all declaring that somebody ought to have a quilting every year, but for some reason the ladies did not echo the sentiment as strongly as they might.

HESAH BROWN.

CANARIES.—Make just half the fuss directed in the bird-book over the matter, and you will have, doubtless, better success in raising birds. Never give them sugar, but all the red pepper they will eat. It is the best thing for them. And if your bird feels hoarse at any time, put a piece of fat salt pork in the cage, and see how the little fellow will enjoy it. Give him flaxseed once in a while, and if he appears dumpy, occasionally give a diet of bread and water, with red pepper sprinkled in.

## Household Art.

## MY SLEEPING-ROOM.

My sleeping-room has received so many compliments, and so many have asked me how I made the many fancy articles which add so much to the beauty of a room, and which find a prominent place in the room in question, that I will endeavor to describe it in order that the readers of the CABINET may have the benefit of the description.

Blue and white are the predominating colors, but it may be copied in blue and drab, or any colors desired. I bought some turquoise blue paper and papered the wall two and one-half feet above the mop-board; separated it into panels, with strips of white satin paper one and one-half inches wide; I raised the bands with papier-mache, rounding with the finger. I then procured some embossed designs of flowers, pure white, and pasted them on the centre of each panel, raising as the bands. I had the wall above the panels tinted with blue, finished with border of blue and white, the panels being furnished with silver mouldings.

My carpet is blue and white. I made curtains of white Swiss, taking two widths for each window, trimming with fluted ruffle; over these I have curtains of blue brocade. I made lambrequins by cutting a strip of the muslin fifteen inches wide, trimming with fluted ruffle; then I cut a strip of the brocade, the same width, cut in points three inches deep, fastened this over the white and finished with moulding. I fastened the curtains back with fastenings made to match the lambrequins. I fastened my curtains together about fifteen inches from the top, pinned on a small chromo, framed with a wreath of white leaves made by cutting them from white velvet in the shape of ivy leaves. I then cut leaves the same shape from crown muslin, stiffening them with gum arabic; I pasted them to the under side of the other leaves, at the same time fastening a wire through the centre; fastened them to a large wire wound with velvet, brushed the leaves lightly with liquid gum and dusted with glass-dust.

I made a little stand, two and one-half feet high; covered the top with blue cambric, then with white muslin trimmed with fluted ruffle; the sides I covered with blue cambric, then with gathered muslin. I have hangings of white Swiss, fastened above the glass, and one either side of the stand. Under the glass I have a bracket made serviceable as a comb-case; it is made of perforated paper, worked with blue worsted and silver paper placed underneath; half the pasteboard cover is made to lift up; the whole cover is concealed by a moss mat of blue and white: the top and sides are trimmed with silvered bugles. On either side the glass I have a match receiver, one for used and the other for unused matches. These I made by cutting petals from blue and white velvet like those of a lily; brushed the wrong side of them with gum arabic; fastened together, using white petals for the inside and blue for the outside. For toilet set mats, I cut rounds of blue velvet two inches larger than the bottles, cut the edges in points; made wreaths, as directed above, just large enough to allow the bottles to stand inside and fastened them to the mats. Made a pinecushion of blue silk, put a side-plaited ruffle around the sides, and finished the top with white leaves, made same as before, with exception of the glass-dust.

My handkerchief box I made by cutting two squares, for top and bottom, of pasteboard, also strips for the sides two inches wide; the inside I covered first with

a layer of cotton batting, then with white silk quilted with blue; the outside I covered with blue velvet trimmed with a wreath of white leaves, shaped like maple. My glove-box is made to correspond with handkerchief-box. For hair-pin box I cut a large maple leaf from blue velvet, stiffening it the same as white leaves, brushed it lightly with liquid gum, and dusted it with glass-dust; I also fastened a small pasteboard box to the back of it; this makes a very pretty ornament, as the leaf lying carelessly on the side completely hides the box.

I made a washstand the same height as toilet stand, covered the sides with blue cambric gathered under white Swiss, left open through the centre, the opening being hidden by ruffles. The space under the stand will be found very convenient. The top is covered with white oilcloth, the edge cut in points; a star cut out of each point and blue cambric pasted underneath; for splash cloth I took a square of oilcloth pinked around the edge; covered this with paper, excepting two inches for border and an oval space in the centre in which was placed a group of ferns, spattered with blue ink and removed the paper. I made mats to correspond for soap-dish, bowl, etc. I also made two barrel chairs. I need not give full directions for those, as they have probably been given many times; one is upholstered with blue, the other with white over blue cambric; made footstools to match. Also a tidy for blue chair of white canvas; worked a wreath of three shades of blue; worked around the edge and fringed out; tidies for the arms to match; and a tidy for the white chair of blue worsted.

I made my pillow-shams of Lonsdale cambric, trimmed with fluted ruffle; cut a piece of bobbinet fourteen inches long by seven wide, darned it with linen floss, and inserted it in the centre of the shams; darned a strip two and a half inches wide, which I inserted in the shams two inches from centre piece; placed blue cambric under the bobbinet, with sheet-shams to match.

Owing to the limited space, I must omit the description of the remaining furniture, pictures, etc., which complete the arrangement of my room.

MRS. NEIL C. UPHAM.

## AN OLD-FASHIONED ROOM MADE BEAUTIFUL.

I want to tell the readers of the CABINET how to make even an old-fashioned room pleasant; yes, I might say almost beautiful. I am a reader of the CABINET, and as I glance over some of the titles, I see in many, "How to Make Our Homes Pleasant."

I am one of the rather unfortunate ones, as far as Johns and Isaacs are concerned, having neither one nor the other. I also live in one of those old-fashioned houses, so what I write about will be from experience.

I do not remember seeing anything about making straw brackets. I have just finished one, and those that see it say it is beautiful. Take two pieces of pasteboard six inches broad at the top and tapering to a point, for the sides, (this is for a corner) and sew them together at the back, then take another piece for the top, or shelf, five inches long in front or for face; then sew on straws lengthwise, letting them come below the foundation: after covering with straw, brush them over with black-walnut stain and varnish. It looks like ornamental carved work.

We have two south windows filled with flowers, and they are things of beauty. I think you would laugh to see the dishes and pots that hold them, that is, if you saw them as they were originally. They

are what used to be meat cans, neatly painted, and perhaps a picture now and then to brighten them. When I have tinfoil, I paste that on my rusty dishes and immediately they are transformed into silver ones. I had a plant given me one day, but could not find an empty dish to put it in. I searched for a long time, and found nothing but an old coffee pot.

"Oh, dear!" says sister Nettie, "do for pity's sake find something better than that."

But I already had an idea ("a bright idee," as grandpa says). I took the pot—a tin one—made some holes in the bottom, filled it with earth, and then began work in earnest. I painted it drab, with a rim or edge of red; but still there was the spout to be seen sticking out on one side. It did not look right, so putting a small tunnel in the spout, I filled that with earth, and painted it to correspond; then taking an old tin cup, I wired that to the handle and finished with the others. I planted ivy and yellow myrtle in the small dishes and a scarlet geranium in the centre. I have never been ashamed of my novel arrangement in regard to that dish.

But I want to tell you how I treat my ivy. I had one last winter that ran seventy-two feet, which I looped or festooned all around the room. I take hen manure, sand, and good rich earth in equal parts, mix thoroughly. I think there is nothing better.

But I will return to my subject. Did any of my readers ever make husk-mats? I have made two. Take the inner husks of Indian corn, then with a common table fork split the stiff ends as finely as convenient; then braid, leaving the fringed edge out about two inches to form a soft-looking surface. I colored mine blue and red, dipping the ends in dyes made as for ribbons, etc. I used aniline dyes. I have also made a hanging-basket of husks. I think it is quite equal to the phantom-basket. I have in my mind a pretty picture frame made from them. I have not made it yet, but think I can. I have been making some pretty frames of straw which I colored at the same time.

I hope you have all tried the barrel chairs. I think every one ought to make one at least. I often read of some one that has made this thing, and that thing, but such almost always have a John to do the carpentering. Now, I have to do all this myself. I have learned to saw by a mark, and get it straight, too. I have been making a table from a wooden box in the garret. I have not had it on exhibition yet, but think I will for the benefit of the readers of the CABINET. I had a cunning little bracket given me to hold a vase of grasses. I prized my gift, but had no ornamental vase to put there. I did not have a chance to get one, so I had to make one. I took some pasteboard, wet it with warm water, and pressed it on to the sides of a wine glass, that is, so the sides would just meet nicely, and left them to dry. After this was perfectly dry, I covered it with tinfoil and made the standard stiff by pressing some putty on the inside. I have never been ashamed of it, although placed in a room with things of more value. When this is filled with pressed maple leaves, with a few stalks of oats and grass, I think you would say it was pretty enough for anyone.

I found some green moss in a kind of spring or shallow well. I spread it on paper and dried it, and it has kept its color for a whole year. I used mine for a mat for a fern basket. I took common shavings from pine or cedar and braided: then formed into a basket and sewed it.

I hope the readers of this paper will try these things. Homely though they may seem, I am sure they will be fully repaid.

AUNT SUE.

## Household Elegancies.

## GARDEN WORK-BASKET.

This square basket of white wicker-work, provided with two handles, a cover, and a loop for closing the latter, is seven inches high, eleven and a half inches long, and seven inches wide. Unbleached percale in two shades is used for the trimming. The outer decoration consists of two flounces, respectively two and one-fifth and four and one-fifth inches deep, scalloped at the bottom and edged with white tatting. The flounces would look equally pretty embroidered with button-hole stitch in black or white. The cover, which is provided in the centre with a pin-cushion four and four-fifths inches long and two inches wide, is decorated with ruchings two inches wide, of two shades of percale, scalloped on each side. The two handles are affixed beneath a bow of percale. Line the inside of the basket smoothly with percale, and fasten at each corner a long strip of muslin finished with a gimp at the top, thus providing the basket with four pockets. Affix to the cover, which is one inch thick, a piece of card-board of the same size, covered with percale, and provided with straps of muslin, and cord (as plainly shown in the engraving) for the reception of scissors, fan, thimble, cotton, etc.

GARDEN WORK-BASKET.

## FOOT-STOOL OF PLUSH EMBROIDERY, WITH WOODEN FRAME.

Materials, a piece of canvas seventeen inches square, double zephyr in four shades of cherry color, card-board, twisted fringe, etc. This sort of embroidery is very practical, as neither brushing nor pressure will hurt its appearance. According to the following directions and the clear illustration, it is very easily comprehended. The frame consists of four boards, each four inches high and about fourteen inches long.

EMBROIDERED FOOT-STOOL.

Of course it may be made larger or smaller, but then the embroidery must be arranged to correspond. The engraving represents a part of the embroidery full size; the letters *a*, *b*, *c*, *d*, indicate the gradual manner in which each stripe is worked; four of these stripes, each worked of one shade, constitute a square. Our model consists of twenty-five such squares. Various colors may be taken instead of different shades of one color; it is best to choose them to harmonize with the furniture of the room.

Although the work is executed of double zephyr, the canvas taken must not be any coarser than represented in the engraving; it is even better to take it a little finer. The closer the threads of worsted adjoin each other, the more beautiful and durable is the em-

broidery. Each stripe is worked over six squares of the canvas. Begin in the centre of the stripe and work a row of twelve cross-stitches, each stitch passing over two squares of canvas; a thread of worsted is inserted beneath the cross-stitches. The manner in which this is done is clearly shown in the engraving at the letter *a*. A strip of card-board, cut as wide as four squares of canvas, is placed over the row of cross-stitches, and over this another row of cross-stitches is worked as shown at the letter *b*. This is succeeded by still another row, worked over the full width of the stripe, as indicated at the letter *c*. Letter *d* represents a completed stripe, and the manner in which it is cut open, the scissors passing beneath the stitches, close to the card-board, which is then removed. The three remaining stripes of the square are worked in the same manner, each of one shade. The engraving clearly represents the arrangement of the various squares. However, the stripes must not be cut open until the whole embroidery is completed, as otherwise the open threads would be very much in the way, as also liable to be mussed by the constant turning of the work, which is unavoidable while in process of construction.

When cut open, hold the work over hot, steaming water, which will cause the open threads of worsted to join evenly, and give the whole a beautiful finished appearance. The frame, consisting of four boards, is crossed over on one side by wide belting, then covered by white muslin. A cushion is affixed at the top, over which the embroidery is stretched. The stool is finished off all around by a heavy twisted fringe about four inches deep. Tassels may be added at the corners. A loop of cord affixed on the sides is extremely convenient for pulling the stool about.

## LIGHT SCREEN—EMBROIDERY OF BEADS AND CRAPE.

Materials, a piece of green silk sixteen inches long and fourteen two-fifths inches wide, pieces of black crape, black silk soutache, very fine black woolen

cord, round black beads in two sizes, steel, glass, milk-white and chalk-white beads, etc. This screen is a very practical defence against the sunlight as well as the lamp-light. The stand, very simply constructed of brass, may be ordered of any tinker. It is twenty and four-fifths inches high, and thirteen and three-fifths inches wide. The height of the frame is fifteen and one-fifth inches. The embroidery within the frame, worked of crape and beads on a ground of pale-green silk, has a beautiful effect against the light. It is best to work it in a frame. Stretch the silk in a frame, after having drawn the outlines of the design and lined the silk with thin white gauze. The leaves are filled in with chain stitches of white cotton, and then worked of the various colored white beads. Veins, tendrils, and stems are made of steel beads, and the black beads, which are arranged like bunches of grapes, have each two steel beads attached as calyxes. The petals of the flowers are of crape, and very easy to make. Each consists of a square piece of crape, folded over into a triangle and gathered in at the open sides.

For the large rose three sizes of petals are requisite; the largest two inches square; the next, one and three-fifths inches square, and the smallest, one and one-fifth inches square. The smaller roses have but two rows of petals, and for these the largest size is left out. For the blossoms, only the smallest size of petals is used. Standing loops of steel beads, and several large black beads, constitute the centres of the larger flowers; for the small roses, a large black bead, surrounded by a ring of steel beads, suffices. The arabesque border is worked

LIGHT SCREEN.

with black silk soutache, the inner row decorated with steel beads. A large black bead, enclosed by a ring of steel beads, marks each corner; the winding border all around is made of glass beads. Green silk lining covers the stitches on the wrong side. The lining and embroidered part are connected by means of a fine woolen cord.

## Fireside Reading.

### DON'T STAY TOO LATE.

BY AUNT JEMIMA.

One of the advantages of being "about thirty" is that one now and then can put in a word of good, motherly advice to the other sex. So I'll begin at once, and say to any single gentleman reader who chooses to listen—Don't stay too late.

At the store or office? No. You know very well I don't mean that. I am not fighting imaginary dangers, but real ones, I mean simply, don't stay too late when you go to spend a quiet evening with a young lady. It is not fair; it is short-sighted, and it is pretty sure to wear out your welcome. Even if the poor thing is eventually to allow you to stop until death doth part, that is no reason why you should bestow too much of your tediousness upon her at the outset. When she really wishes your visits to be longer, you'll know it; even then be chary of the moments after eleven. At any rate, don't suffer yourself to be misled by the usual commonplace forms of detention that, in nine cases out of ten, arise from a sudden consciousness on the lady's part that she may have been betraying her weariness rather too plainly.

It won't hurt you at all to be longed for after you are gone; but beware of ever causing a girl to give a sigh of relief when the hall door closes after you. There is a sandman for the parlor as well as for the nursery; and after a certain hour, except in special cases, whenever he finds the eyes too well drilled to succumb to his attacks, he sprinkles his sand around the hearth. After that, your best efforts to please are wasted. Every word will grate, every winning attempt be met only with the silicate of emotion.

I know all about it. I've received young gentlemen visitors in my day; yes, and enjoyed receiving them, if ever a girl did. I'd think all day that perhaps John, for instance, might come in the evening; and on these occasions I've come down to tea with a rosebud in my hair, and a happy flutter in my heart. Yes, and I've started at the knock at the front door,

and when at last he came in, smiling and bowing, I've looked just as if I didn't care a single bit. There were others, too—not Johns, by any means, but friends who were always welcome, and whom it was right good and pleasant to see. But that fact did not make null and void all somnific law; it didn't make father and mother willing that the house should be open till midnight; it didn't make it desirable that I should feel a rebuke in everybody's "Good morning!" when, with throbbing head, I came down late to breakfast. No, you may be sure it didn't.

Therefore, I learned soon to honor those who knew that it was time to go when half-past ten came; while those who didn't know were the bane of my existence. Now, never think that these friends stayed from kindness to their weary hostess—not at all. They stayed probably because they had not the taste to go. They

GRANDPA'S CHAIR.

liked the warm room, perhaps, and dreaded the cold street; but beyond that they lacked the simple grace of taking themselves off promptly and handsomely. Ah! what a gift that is in a man or woman, to know when to go, and knowing it, to stand not upon the order of going, but go at once. I know a few such persons. They radiate peace and restfulness, or they sparkle and scintillate, or they arouse and inspire you, as the case may be.

An hour glides away, then another, and in the midst of another you are conscious only of a gentle "Good-bye" flash and they are gone. Then a hundred things rush upon you—you wish you had asked them this, or told them that; you think how pleasant it was to meet them, and you long to see them again.

So, dear single gentlemen, whoever and wherever you are, the next time you go out to spend a quiet evening with a lady, remember my words. Young girls are human; they require rest and sleep; they are amenable to the benefits of domestic system and order; they have a precious heritage of strength, health, and good looks to guard.

Don't go too late, and don't go by inches. "Good-bye" is the flower of a welcome. If you wish it to retain its aroma, the fewer leaves it sheds the better.

**Pretty Speeches.**—To be able readily, and without premeditation, to say the right thing is an enviable gift, and may be made a wonderful instrument of conciliation and pacification. Ladies are the fair and proper recipients of pretty speeches. The Due de Nievernois made an ingenious one to Madame du

Barri, who was endeavoring to persuade him to withdraw his opposition to some measure she had set her heart on.

"It is of no use, Monsieur le Duc," she said, "you are only injuring your influence, for the king has made up his mind, and I myself heard him say that he will never change."

"Ah, madame, he was looking at you," replied the duke. Could any but a Frenchman have ever conveyed determined resistance in so polite a form?

There was an ingenious amount of devotion implied in the remark of a lovesick millionaire, when the object of his affections became ecstatic over the beauty of the evening star.

"Oh, do not praise it like that!" he cried, "I cannot get it for you."

It is no wonder that Tom Moore was such a general favorite, if he often said such charming little things as he wrote. We think the very prettiest, quaintest quip ever penned is in one of his love-songs.

"The lesson of sweet enrapturing lore  
I have never forgot, I'll allow;  
I have had it *by vote* very often before,  
But never *by heart* until now."

Irishmen generally do manage to say prettier things than others can. They have a certain confidence or assurance which enables them to blurt out whatever comes uppermost in their minds; that is why they make bulls. A man who is always shooting must miss sometimes.

## Housekeeping.

## PRIZE RECEIPTS FOR COOKING.

BY MRS. J. J. RANDALL.

**Hop Yeast—Self-Working.**—Boil two ounces of hops in four quarts of water for thirty minutes; strain it, and let the liquor cool down to new milk warmth, then put in a small handful of salt, and one-half pound of sugar; beat up one pound of the best flour with some of the liquor, then mix all well together. The third day, add three pounds of potatoes, boiled and then mashed; let it stand till the next day; then strain and put it into bottles, and it is ready for use. It must be stirred frequently while making and kept near the fire. Before using shake the bottle well. It will keep in a cool place for two months, and grows better with age.

**India Pickles.**—One oz. West India pepper, one oz. black Spanish pepper, two oz. white pepper, four oz. allspice, four oz. ginger root, four oz. cayenne, and one pound best English Mustard.

**Recipe for Making Six Gallons of Pickles.**—First cure vegetables in brine about three weeks, cauliflower, small onions and cucumbers; when cured take them out of brine and place in crocks. Boil all of the spices except mustard, in two gallons of vinegar for thirty minutes; mix the mustard in a little cold vinegar and put it in with the boiling vinegar; then pour over the vegetables while hot. The spices should be tied in a small bag before putting in the vinegar, and if you have several crocks they should be divided equally and tied in as many bags, and when boiled a sack left in each crock; use best cider vinegar if you can get it.

**Neapolitan Cake.—Black Cake.**—One cup butter, two cups brown sugar, one cup molasses, one cup strong coffee, four and a half cups sifted flour, four eggs, two teaspoonfuls of soda, two of cinnamon, two of cloves, one of mace, one pound raisins, one pound currants, and quarter pound citron. **White Cake.**—One cup butter, four cups white sugar, two cups sweet milk, two cups cornstarch mixed with four and a half cups sifted flour, whites of eight eggs, two tablespoonfuls of baking powder, one half teaspoonful extract of bitter almonds. Bake the cakes in round pans with straight edges; the loaves should be one and a half inches in thickness; after baking, when the cake is all cold, each black loaf should be spread with a thick coating of lemon and sugar made as follows: the white of one egg thoroughly beaten, the grated rind of two and the juice of three lemons, and powdered sugar enough to make a thick frosting, then lay a white loaf on each black one, and frost as you would any other one.

**Spiced Currants.**—One peck of currants carefully picked over; not necessary to strip from the stems. Heat them and strain through a sieve, so as to get juice and pulp; scald the pulp just long enough for the scum to rise; add equal quantities of sugar. Two tablespoonfuls of ground cinnamon; two of ground cloves tied in a muslin bag; four lemons sliced thin and the seeds taken out; boil until reduced one-third; boil slowly; then add two pounds of raisins stoned and stewed tender in a very little water; let it cook a few minutes longer; bottle and seal tight.

**Blueberry Cake.**—Two cups sugar, one cup sour cream, three eggs, four and a half cups sifted flour, one teaspoonful of soda, half cup melted butter stirred in the last thing; dredge one pint of blueberries with flour; stir in carefully to prevent them from breaking. It can be made of all cream and no butter; or all milk and a half cup of butter. Bake in shallow tins to be eaten warm for breakfast or tea. It is also a good dessert eaten with cream and sugar.

**Boiled Icing.**—Two-thirds of a cup of granulated sugar; two tablespoonfuls of water. Boil until the syrup begins to thicken or hair a little; while hot beat in the white of an egg beaten to a stiff froth.

**Doughnuts.**—One cup sugar, one tablespoonful butter, two eggs, one cup sweet milk, one-fourth of a nutmeg, one quart of flour, one tablespoonful of baking powder. Stir the butter and sugar together; beat

the whites and the yolk separately, and add to the butter and sugar; then stir in the milk. Sift the flour and baking powder together, and stir the other ingredients into the flour. Take out on kneading-board; roll out and cut into rounds; make a small hole in the centre of each; let them lie about fifteen minutes and fry in hot lard.

**Baked Beans—Without Pork.**—Pick over one pint of small white beans and parboil, then turn off the water, and pour boiling water over them; let them steam very slowly on top of the stove all the afternoon; then put in the baking dish—iron is best—and season with pepper and salt, a tablespoonful of syrup and a lump of butter as large as an egg; pour on just enough water to float them, and bake an hour or two; then finish baking them in the morning.

**Graham Pudding.**—One and a half cups sifted graham flour, half cup molasses, quarter cup butter, half cup sour milk, one egg, half cup raisins, half cup currants, one teaspoonful soda, spiced to taste; steam in a buttered pudding mould two and a half hours.

**Corn Starch Cookies.**—One half pound sugar, half a pound corn starch, a little less than half a pound butter, one cup sweet milk, one teaspoonful of baking powder, one of essence of lemon.

**Stewed Pigeons and Cabbage.**—Prepare pigeons for stewing, and put on just enough water to cook them tender. When the water has all boiled away add a large piece of butter, and let them brown a few minutes; have some cabbage shaved fine to lay under the pigeons after they are browned, and pour on just enough water to cook it. When done, add a cup of cream, and season; boil up once and serve. Veal stew is good cooked in the same way.

**Roast Goose.**—After cleaning rub thoroughly with soda and pour boiling water over it. It takes away any strong taste or smell of goose, and renders it more tender. For the dressing, butter slices of bread and season with salt and pepper; beat up one egg, pour in a little milk, and moisten the bread. Season the goose inside and out, stuff and lay in a baking pan with a little water. When it begins to bake baste very often, first with butter, afterwards with the drippings in the pan.

**Lemon Pie.**—The juice and grated rind of one lemon, one cup sugar, one cup boiling water, one teaspoonful butter, one teaspoonful corn starch, and one egg; stir the butter and sugar together; beat in the yolk of the egg, wet the corn starch with a very little cold water, and then pour on a cup of boiling water and add to the other ingredients. Cook over a kettle of boiling water; make a nice pie-crust and bake. When both are cold put together and frost with the white of an egg and two tablespoonfuls of sugar. Place in the oven a few moments after the frosting is on.

**Pudding Sauce.**—One-half pint syrup, juice of two lemons; simmer fifteen minutes; add half of a grated nutmeg and half of a cup butter; stir smooth.

**German Bread.**—One pint of milk, one cup sugar, two tablespoonfuls butter; two-thirds cup yeast; make a rising with the milk, yeast, and a little flour; when light, add the sugar, butter, and flour, enough to make a soft dough. Flour the paste-board well; roll out half an inch thick, put into pans and spread a little butter over the top. Sift over the whole one tablespoonful of sugar, one tablespoonful of cinnamon. Let it stand for a second rising, and when perfectly light, bake in a quick oven. To be eaten with coffee.

**To Cook Eggs.**—Put in a pail, pour boiling water over them and cover; let them stand where they will keep hot, but not boil, for fifteen minutes. They have a rich, creamy taste which cannot be obtained by cooking any other way.

**Lemon Snaps.**—One large cup sugar, three-fourths cup butter, two eggs, two teaspoonfuls of hot water, half a teaspoonful soda. The juice and grated rind of one lemon; flour to make stiff enough to roll. Roll very thin, cut in shape, and bake in a moderately hot oven.

**Potatoe Balls.**—Mash potatoes in the usual way, make into balls, and dip in beaten egg; lay on a buttered plate and brown in a hot oven. They cook nicely laid around roast beef.

**Cream Cakes.**—One cup sugar, four eggs, one large cup flour; beat the sugar and yolks together until very light; add the beaten whites and the flour; stir all together for fifteen minutes. Try them dropped on buttered paper, if they do not run; bake a light brown. If not stiff enough, add a little more flour; scrape out a little of the inside of each cake, and fill with whipped cream; then put the two flat sides together.

**Cream for the Cakes.**—One pint of cream whipped light, half an oz. of gelatine dissolved in one gill of hot milk, whites of two eggs beaten to a stiff froth, one small teacup of powdered sugar; flavor with lemon; mix the cream, eggs, and sugar together; flavor, and beat in the gelatine and milk last. They should be quite cold before adding.

**Beet and Cabbage Salad.**—Equal quantities of boiled beets and raw cabbage chopped fine; season with salt and pepper.

**Dressing.**—One cup vinegar, half a cup sugar, one tablespoonful butter, two eggs; stir the butter and sugar together, add the beaten eggs, stir in the vinegar, boil one minute and turn over the salad.

**Graham Muffins.**—Two cups sifted graham flour, one cup sifted white flour; rub into the flour a piece of butter the size of an egg; sift in one teaspoonful baking powder, half a cup sugar, one and a half cups sour milk, two eggs, one small teaspoonful soda, dissolved in hot water, add the last thing; bake in iron pans heated smoking hot before you put in the batter.

**Corn Meal Muffins.**—Two cups sifted corn meal, one cup sifted white flour, piece of butter the size of an egg, one teaspoonful baking powder, half a cup sugar, two eggs, one and a half cups sour milk, one small teaspoonful soda, dissolved in hot water, put in the last thing; bake in iron pans.

**Stewed Onions.**—Young onions should always be cooked in this way: cut off the tops and skin them; cook in just water enough to cover them until half done; turn off this water, and add enough hot water to cook them tender; salt the last water; when done drain and put on milk enough to float them when the milk is hot; add a tablespoonful of flour, stirred smooth, seasoned with salt and pepper.

**Stewed Cabbage.**—Chop young cabbage and cook in two waters; when tender, drain and add milk or cream about half a cupful; season, and let stand on back part of stove and stew gently for ten minutes.

**Oyster Soup.**—For one can of oysters use one quart of water, two tablespoonfuls of butter, two tablespoonfuls of rolled crackers, one and a half tablespoonfuls of milk for each person; heat the water and juice of the oysters; when it boils add the oysters, and season with salt, pepper, and butter. When it commences to boil again, count thirty seconds and it is done. Put the milk and crackers in a tureen, and pour the soup over them.

**Baked Tomatoes.**—To two quarts ripe tomatoes (scalded and peeled) take one pint bread crumbs, one tablespoonful butter, and half a pound sugar; put a layer of tomatoes in an earthen dish, or baking-pau, then sprinkle crumbs and sugar, then tomatoes and crumbs alternately till the dish is filled, and bake well.

**Tomatoes for Breakfast.**—Have ready boiling water; throw in the ripe tomatoes; let them remain a few minutes, say five, then remove the skins, and season with butter, pepper and salt. Another way of cooking tomatoes is to slice and fry them (dipped in bread crumbs) like apples.

**Onion Sauce.**—Boil eight large white onions, change the water several times while they are boiling; when done, chop them on a board; to keep them a good color, put them in a sauce-pan with one-fourth pound butter and two tablespoonfuls of rich cream; boil them a little, and serve in a sauce-boat.

**Easy Muffins.**—One quart flour, two teaspoonfuls (level) of soda; one teaspoonful salt, two well-beaten eggs, one tablespoonful butter; mix with butter, milk, or clabber, and bake quick.

**Window Gardening.**

By HENRY T. WILLIAMS,

Editor Ladies' Floral Cabinet, N. Y.

**RICHLY ILLUSTRATED WITH EXQUISITE ENGRAVINGS.**

An Elegant Book, with 250 Fine Engravings and 300 Pages,

Containing a Descriptive List of all Plants Suitable for Window Culture.

A ready and invaluable aid to all who  
wish to adorn their houses in the easiest  
and most successful manner with plants  
or vines, or flowers. Instructions are  
given as to the best selection of plants for  
Baskets or Ferneries and Wardian Cases.  
Several chapters are devoted to Hanging  
Baskets, Climbing Vines, Smilax, and the  
Ivy, for decorative purposes. Bulbs for  
House Culture are fully described; also  
ornamental Plants for Dinner Table  
Decoration. Other topics are well con-  
sidered, such as Balcony Gardens, House  
Top Gardening, Watering Plants, Home  
Conservatories, Fountains, Vases, Flower  
Stands, Soil, Air, Temperature, Propaga-  
tion, Floral Boxes, the Aquarium, Rustic  
Conveniences for Household Ornament,  
and directions in detail for the general  
management of in-door plants for the  
entire year throughout the winter, spring,  
summer and fall. The volume is pro-  
fusely illustrated with choice engravings,  
and pains have been taken to make it one  
of the most attractive books ever issued  
from the American Press. For sale or  
supplied by Bookstores everywhere, or  
sent postpaid by mail on receipt of price.

Price \$1.50.

**Every Woman Her Own Flower  
Gardener.**

By Daisy Eyebright (Mrs. S. O. Johnson.)

A delightful little volume, written by a  
lady fond of flowers, as a special help and  
assistance to others interested in out-door  
flower gardening. Simple directions are  
given, how to lay out and plant Flower Borders, Ribbon Beds, and arrange ornamental plants.  
Among the topics treated are Geraniums, Fuchsias, Bulbs, Ornamental Flowering Shrubs, Ever-  
lasting Flowers, Ornamental Grasses, Coleus, Pæonies, Shade Trees, Garden Vegetables, Old  
Fashioned Flowers, Annual Flowers, Perennials, Ornamental Vines, Lawns, Insects, Manures,  
Watering Soils, When and How to Plant, Dahlias, Lilies, Gladiolus, Verbenas, Cannas, Balsams,  
Portulacae, and nearly all the popular varieties of flowers and shrubs. The book contains 148  
pages, is charmingly written by one deeply in love with the subject, who appreciates the tastes of  
ladies and aims to do good with agreeable, kindly advice on home gardening. For sale or sup-  
plied by Bookstores everywhere.

Price, in handsome Pamphlet Covers, 50 cents; bound in Cloth, \$1; postpaid by mail.

**Beautiful Books for Every Home.**

THE HANDSOMEST LADIES' BOOKS PUBLISHED.

Every Lady should get them for her Work Basket or Parlor.

**HOUSEHOLD ELEGANCIES.**

VOL. II. WILLIAMS' HOUSEHOLD SERIES.

A splendid new book on Household Art, de-  
voted to a multitude of topics, interesting to  
ladies everywhere. Among the most popular  
subjects are Transparencies on Glass, Leaf Work,  
Autumn Leaves, Wax Work, Painting, Leather  
Work, Fret Work, Picture Frames, Brackets,  
Wall Pockets, Work Boxes and Baskets, Straw  
Work, Skeleton Leaves, Hair Work, Shell Work,  
Mosaic, Crosses, Cardboard Work, Worsted Work,  
Spatter Work, Mosses, Cone Work, etc. Hun-  
dreds of exquisite illustrations decorate the pages  
which are full to overflowing with hints and de-  
vices to every lady, how to ornament her home  
cheaply, tastefully, and delightfully with fancy  
articles of her own construction. By far the  
most popular and elegant gift-book of the year—  
300 pages, Price \$1.50. Sent postpaid by mail.

**LADIES' FANCY WORK**

OR,

HOME RECREATIONS IN

**Art and Household Taste.**

VOLUME THREE OF

WILLIAMS' HOUSEHOLD SERIES.

Just published, a Charming New Book, with above title. A Companion Volume to "HOUSEHOLD  
ELEGANCIES AND WINDOW GARDENING," issued in same size and style, profusely illus-  
trated with engravings of superior execution, and devoted to many topics of Household Taste, Fancy Work  
for the ladies, and containing hundreds of suggestions of Home Decorations.

**CONTENTS.**—Among the topics which "Ladies' Fancy Work" treats of, are:—Feather Work, Paper  
Flowers, Fire Screens, Shrines, Rustic Pictures, a charming series of designs for Easter Crosses, Straw Orna-  
ments, Shell Flowers and Shell Work, Bead Mosaic, and Fish Scale Embroidery, Hair Work, Card-board  
Ornaments, Fancy Rubber Work, Cottage Foot Rests, Window Garden Decorations, Crochet Work, design  
in Embroidery, and an immense number of designs of other Fancy Work to delight all lovers of Household  
Art and recreation. Price, sent postpaid by mail, \$1.50.

**A Splendid Pocket Book**

WITH YOUR NAME IN GOLD,  
PRESENTED TO EVERY SUBSCRIBER.

A splendid Russia Leather Pocket Book, of handsome red or black color, as fine as Morocco,  
with patent clasp or elastic, with your Name beautifully engraved in full in gold letters, will  
be sent to every Subscriber of this Paper, upon cutting out within Subscriber's Certificate, and  
sending it to the address below. These Pocket Books are "LITTLE BEAUTIES," most  
elegant in manufacture. Others, no better, have been hitherto sold as high as \$3 or \$5 each.  
Perfect satisfaction is guaranteed or money refunded. Three styles made, "Ladies,"  
"Gentlemen," "Children." Please state your preference of styles and colors.

60 Cents.	<b>CUT THIS OUT.</b>	With Your Name
	<b>Subscriber's Certificate.</b>	
	This Certificate entitles the sender, as a subscriber of this paper, to one <b>ELEGANT POCKET BOOK,</b> upon enclosing <b>60 CENTS</b> for expenses of mailing and engraving. For <b>75 CENTS</b> a Pocket Book of very much finer quality will be sent, also with your name beautifully engraved in gold.	

This Coupon is good only for 60 days from this date, is limited to those who are sub-  
scribers of this Journal, and will not be published again. **CUT IT OUT, PRESERVE IT,**  
and enclose it with your remittance. Address your Certificate to the Manufacturer,

HENRY T. WILLIAMS, 46 Beekman St., N. Y.

Subscribers to the CABINET need not cut out the above Certificate, but merely mention they are subscribers.

## FOUNTAINS IN A SPANISH PARK.

About thirty miles to the south of Madrid, the capital of Spain, lies a princely domain surrounding a magnificent country mansion. This is Aranjuez, the summer residence of the King. It was designed and constructed under the directions of Philip the Second,

Triton fountain, which stands in a shady and secluded spot. The arrangement of the water jets and of the bronze and marble sculpture is exceedingly artistic and effective. Broad double avenues of elms traverse the park, leading to the centre; and the walks are lined with box and laurel hedges. The purple buds of the cactus and aloe stand out against the green of

in a common sitting-room. I have one which measures four feet and five inches from top of soil; the largest leaves are four and one-fourth by three and three-eighths inches. Another measures thirty-eight inches, and has been loaded with buds and blossoms since the first of March. I don't know as they are anything unusual, but I never chanced to see as fine specimens

FOUNTAIN IN THE PARK OF THE KING OF SPAIN.

and is reached by a well-constructed road connecting it with the capital, as well as by the Madrid and Alicante railway. The palace of Aranjuez contains many noble works of art; but the chief attraction to natives as well as visitors is the park, with its ornamental gardens and fountains. Our engraving represents the

the rare shrubs; and the air is filled with the fragrance of the orange blossom.

### FUCHSIA.

I want to tell the readers of the CABINET about my Fuchsias, which surpass anything I ever saw grown

grown in one winter in a common room. I have a Begonia that grows finely and looks thrifty, but some of the leaves when about half grown begin to dry at the ends and finally drop. Can you tell me the cause? It has good drainage. It is want of root room?

## Floral Contributions.

## FLOWER-GARDENING FOR COTTAGE HOMES.

The object of this article is to endeavor to assist that woman who is her own flower-gardener, in order that she may be enabled to make the best and longest display of bloom, with the least amount of trouble, or expenditure of time, energy and money. Without any desire to appear hypercritical, I would say that the many illy-planned, badly-planted gardens scattered over our country, may be attributed to the undertaking too much, and the not doing well what is undertaken.

Whether our "piece of pleasure-ground" be park or court-yard, lawn or garden, the most important points are to arrange it judiciously, and secure, by wise planting, a constant display of verdure and bloom. We will suppose there is a three-feet border running around the hedge of flowering-shrubs which gives such a charming finish to the boundary-line; also that one or several ornamental beds are arranged as jardinetts on the grass-plots. Now we may at once secure a vast amount of bloom and the loveliest verdure by utilizing the edges of both beds and borders, and instead of following the example of Mrs. Golden, and ordering costly tile borders, we will form rustic ones, made of mossy stones, white clinkers, bits of rock, stumps and roots, all artistically arranged and filled in with pockets of light, rich soil, and according to the prescribed form of the terra-cotta jardinetts, we will arrange, in place of the prominent receptacles for conspicuous plants, that number of tubs or kegs, covered tastefully with gnarled roots and branches in the usual "rustic" style. Perhaps some may not be acquainted with the jardinet, and I will therefore describe the manner of forming what I term my "cottage jardinet." First measure off upon the turf a circular or other form of bed, as large as desired, and having dug it to the depth of three or four feet, spread over it a foot of old, well-rotted manure, and again dig it thoroughly, mixing in sand or wood ashes, thoroughly leached, if the soil is not light and pliable; this should give a bed raised about two feet above the surface, around which a wall is built, rising a few inches above the surface of the bed, and with the four rustic tubs securely planted among the stones, one on each side, and ends equidistant, allowing them to project above the wall, and extend out a few inches beyond it.

Though there are numerous elegant and attractive edgings for beds and borders, I have never seen one that exceeded this simple one of "rock and root work," after being covered with

## PERMANENT EDGINGS.

To establish attractive borders for our beds, is an important consideration with the "rough-and-ready" gardener, whose time is generally so precious as to be counted by the moments, and to obtain a permanent one that is indeed worthy of attention, the following is the one we will adopt:

Into those pockets and crevices, between the stones and rocks, and in the hollows of stumps, where the nice, light soil has been carefully packed, we will plant all those lovely trailing beauties, which are so dear to the artistic eye of the truly fine in taste; only using care to cover the edge next to a carpet of turf with yellow, white, or deep-colored foliage, while along a bright yellow gravel-walk, silver and gray, or some delicate tints, with rich greens and browns, must be established; here we may use for instance the blue Lobelia, Perilla, Amaranthus (Melancholicus), etc.;

the deep dark tints of which are wondrously effective. I cannot imagine a more chaste, more sparkling, more altogether attractive and classical plant for this purpose, however, than the Ivy, and that prettiest of all Ivies, *Hedera helix marginata* (Silver-leaved Ivy); but the deep green of the *Hedera helix*, and the white and yellow varieties of the variegated Ivies prove equally imposing in proper positions.

For a rich, dense edge of silvery foliage, nothing can excel that treasure *Juniperus Alpina* (Canadian Trailing Juniper), or for a deep rich green, *J. Prostrata*, which by pegging down the shoots, will spread in wide, waving circles, beautiful to behold. These possess, too, the advantage of being evergreens, affording beauty even during winter, while through the summer they may be further beautified by mixing with thin *Sempervivum Californicum*, *Antennaria tomentosa*, *Saxifraga umbrosa* (London Pride), *Sempervivum tetorum*, *Sedum aere*, *S. aere variegata*, and *Stachys lanata*, *Lysimachia nummularia* (Moneywort), *Trostula orina glauca*, *Tussilago farfara variegata* (Colt's foot), *Vinea major*, *V. minor*, *V. minor variegata*, and *Lonicera braehypoda aurea* (Golden Japan Honeysuckle). Many scores more of lovely creepers might be added, but I give only those which may be relied on, as permanent plants of easiest culture.

Our edgings and borders finished, we fill the four tubs in our jardinet with some imposing plants suited to the season, or establish one of the exquisite dwarf evergreens in each, such as that precious little novelty, the round *Arbor Vitæ*—a chance seedling of peculiar beauty—*Globe Arbor Vitæ*, another treasure of surpassing beauty; the Hedge-hog Juniper, smallest of all conifers, forming a dense ball of glaucous green foliage one foot in diameter. In lieu of these, plunge pot-plants into the soil, commencing with the early Spring bulbs or shrubs, such as the *Deutzia graealis*, *Spiræa*, etc., etc., vases, baskets, etc.

The center of each jardinet affords a fine position for some prominent adornment, such as a pedestal, made of a section of tree-trunk, or wooden post, covered with rustic work, and surmounted by a vase or basket of corresponding character filled with plants.

No more imposing object can be imagined than a mossy tree trunk, five feet in height, partially covered with some delicate vines, as the *Akebia quinata*, *Adlumia virrhosa* (Silkvine) or Ivy (all hardy), supporting a rustic basket, made by nailing one or three common peach-baskets on the flat horizontal surface of the trunk, then with pliable wire (taken from discarded broom stumps, perhaps), fastening pieces of crooked, gnarled, and twisted branches over the sides, nailing pieces of mossy bark here and there, and finally twining grape vines around the bottom and across the top in lieu of a handle.

These baskets, grouped as one, present a most tasteful appearance in the early spring, and by sowing seeds of annuals among the bulbs, intermixed with Ivy (which will hang over the sides and twine round the handle), it presents a most attractive appearance, and may be kept in constant bloom throughout the season.

A beautiful effect is given by making a variety of such embellishments, using baskets of different forms, and vases made by covering boxes, pails, and kegs, which will form designs quite artistic in character if carefully manipulated. With a large cheese-box, a good imitation of the Roman vase may be made, that is in form, preserving the rustic character throughout. A Grecian vase, stand on a solid square block of wood (which cover neatly with bark alone), arranging on each face the chaplet of bay leaves, cut four pieces of

mossy bark, and arrange so that the small leaves almost meet at the top, overlapping each other from top to bottom where a knot, made of shavings, tacked firmly on the pedestal, will continue perfect for an entire season. The large projecting handles, extending high above the rim on each side, are best made of curved branches selected with care for the purpose.

Our next step is to stock the borders and beds, so that a continuous bloom is secured, and this I would advise to be effected by means of the "plunging system," so far as bedding plants are concerned, for by raising a good supply of *Geraniums*, *Salvias*, *Fuchsias*, *Ageratums*, etc., from cuttings, the beds may be kept gay during the entire season; therefore we should first fill our beds with *Hyacinths*, *Tulips*, *Narcissus*, *Jonquils*, *Iris*, *Crocus*, *Snow-drops* and *Dracænas*, with the dwarfest of the Evergreens and low-growing, blooming shrubs; then the spring flowers passing away, the summer blooms "take up the pleasing tale," and *Asters*, *Campanulas*, *Balsams*, *Clarkias*, and a host of other beauties give forth their perfume and display their gorgeous colors beneath the summer sky.

## A CHEAP DISPLAY OF ANNUALS.

Though large sums are expended each year in the purchase of flower seeds, it must be admitted that we but seldom see the flowers raised therefrom turned to the best advantage. To do justice to this class of plants, the soil must be light and rich, that is, the best of them require such food, and will not do their best without it. After finishing our beds and borders as just advised, there will be found much space, among the bulbs and around the little evergreens and shrubs, for many a clump of annuals, and if well selected, a charming display of color will well repay the cost of seed and slight labor of sowing. My first suggestion is, use a few fine varieties, rather than a mixed host of poor kinds; next plant with a view to fine effects and follow the "clumping" system thus: Red clumps, sow *Rose of Heaven* (*Agrostemma-rosa*), using seed plentifully, *Crimson Candytuft*, *Clarkia Elegans* (*Dianthus Chinensis*), *Indian Pink*, *Taponaria Calabireia*, *Silene pendula*, and *Viscaria oculata*. These will form bright Magenta-colored clumps: White Candytuft, white; *Malcolmia maritima*, white; Sweet Alyssum, white *Verbena*; *Pyrethrum*, dwarf; *Phlox Drummondii*, white; *Collinsia bicolor*, white; *Geraniums*, white.

Yellow—*Athanasia anovna*, (for a high central clump); *Bartonia aurea*, *Calendula officinalis superba*; *Erysimum Perofskianum*, (the finest yellow flowering annual known) giving its rich golden orange blooms, all the season (sow seed in March) *Eschscholtzia Californica*, and *Septosiphon aurea*.

Blue—*Campanula carpatia*, *Eutoca viscida*, *Gilia achilleæfolia* and *G. minima cœrulea*; *Kaulfussia omelloides*, *Lupinus subcaruosus*; *Veronica glauca* and *Myosotis*.

For large masses, use Dwarf *Tropæolums* *Anterhinums*, and *Scarlet Flax* (which is a gorgeous plant for our "rough and ready" garden; make a rich spot and sow seed in March in lines; cover lightly and protect until well established, then let alone, and you will have a rich treat that will dazzle you in June;) *Peony-flowered Poppy*, *Sweet Peas*, *Portulacæas*, *Sanvitalia procumbens*, *Stocks* in variety "dwarf Bouquet" being best, *Viola Cœlea* and *V. cornuta*; *Nemophila*, *Abrona*, and *Pansies*, use as medium clumps.

CALLA.

## Answers to Correspondents.

**Passiflora Cœrulea.**—How can I grow *Passiflora Cœrulea*? I have one ten years old which has not yet flowered.  
ABBIE FRENCH.

**Answer.**—Very few of the Passion flowers bloom until they are old; then they seldom fail to give an abundance of flowers. We suppose your plant is out of doors, (for this species is hardly worth growing in a greenhouse, as there are so many finer species which occupy no more room), therefore grow it well in rich soil, with plenty of water, and as soon as the plant has a woody stem it will give you plenty of bloom. Prune in early spring. The flower is on the young growth.

**Growing Mareschal Niel Rose.**—How shall I treat the Mareschal Niel Rose? Mine died last year with my best care.  
MRS. L. W. F. MANTENE.

**Answer.**—There is no special treatment required. Give a rich soil, well drained, and the plant will soon grow large. This rose to do well should be planted out, as it is too rampant a grower for pot culture. When it attains size it blooms very freely. If budded on a strong stock it blooms more freely than when on its own root.

**Name of Plant. Libonia Floribunda.**—Can you give me the name of the plant which I inclose? It began to bloom about Christmas, and will it continue through the winter?  
MRS. L. S. PAGE.  
Woodstock, McHenry County, Ill.

**Answer.**—It is *Libonia Floribunda*, a very pretty and free-blooming greenhouse plant. If well grown it covers itself with a profusion of bright yellow and red flowers which last well on the plant, but are not of value as cut flowers as they wither rapidly. Common greenhouse culture is all the plant requires.

**Where to Obtain Mistletoe.**—Can any of your readers inform me where I can get some Mistletoe? At our next "Yule Log" we wish to revive an old-time custom, just to please the young people.  
ANNA H. STOREY.

**Answer.**—The true Mistletoe (*Viscum*) is not a native of America, but about Christmas is often imported from England by florists. The American Mistletoe (*Phorodendron*) is native south of New Jersey, growing usually on elms and hickories. If you have friends at the south you might obtain this. The berries are white, and we suppose the effect of the "young people" passing under it would be the same and as satisfactory as if you had the true mistletoe.

**Day Lilies in the Parlor.**—Can the Day Lily be grown in pots for the house? I have nice south windows. Please tell me how to treat them, soil, sun, temperature.  
NELLIE.  
Ayer, Mass.

**Answer.**—There are two species of plants commonly called Day Lily, *Hemerocallis*, with yellow or orange-colored flowers, and *Funkia*, with white or blue flowers. Both are hardy herbaceous plants. We have seen the light yellow *Hemerocallis* forced in a greenhouse, and the flowers were quite as fragrant and more delicate than in the garden. We do not remember having seen *Funkias* forced. We fear under house culture you would not succeed in obtaining early bloom, say April for the *Hemerocallis*, and May for the *Funkia*. The culture would be: Pot the roots from the garden in common soil just before the ground freezes up, choosing the round thick crowns; let the

pots stand in a shed or cellar (if they get frozen it will not injure and may benefit them); after January first bring the pots into the room and give all the light and heat possible. Do not give much water until the plants begin to grow, but keep them moist. When growing do not allow them to become dry. If you try the experiment, the CABINET would be pleased with a report.

**Peony Growing.**—Two years since I got some fine Peonies, and though I have done all I could to make them flourish, I cannot get them to bloom. They come up every spring; but soon die down without blooming. Can you tell me what to do?  
LELA EASTLAND.

**Answer.**—Your Peonies are in too light a soil. The plants are hard to kill, and will come up year after year, but unless they have a rich soil they do not bloom well. Dig in well rotted manure around your plants in the autumn, and keep the soil rich so the crowns may become strong, and they will bloom every year.

**White Worms on Anemones and Lily of the Valley. Treatment of Cactus after blooming.**—My Anemones and Lily of the Valley are literally eaten up by small transparent worms whose presence I cannot account for, having baked soil before planting them. Have noticed small black flies around plants this winter.

What treatment does a "Swallow-tail" Cactus require after flowering at Christmas profusely?

**Answer.**—1. It is easier to suggest a remedy for the worms than to find the cause. The flies may have laid eggs which hatched into worms. Shake out the tubers carefully, wash them with luke warm water, and repot in fresh soil (which is not improved by baking). If any of the tubers are decayed, cut out the diseased part if desirable to save the plant; but it would be best to throw away your plants and get new ones. Worms seldom attack a healthy bulb or tuber.

2. By "Swallow-tail" Cactus you mean *Epiphyllum truncatum*. After flowering, keep it rather dry till towards spring, then as it begins to grow repot it in sandy loam with good drainage.

**Slugs, Snails, and Ants in Ferneries.**—My Fernery looks well but will get slugs and snails in it which eat the plants, also small flies and black ants. Can you tell me how to kill them?  
Philadelphia.  
HARRY W. SIMON.

**Answer.**—Cut potatoes or yellow turnips in halves, scoop out the pieces and lay them in the Fernery. The slugs and snails will go to them, and are easily caught. Sprinkle a little fine sugar through a dry coarse sponge; the ants will go into the sponge and are easily destroyed by putting the sponge in hot water. We do not think the flies do any injury to your plants.

**Destroying White Earth Worms.**—Please tell me how to destroy the white earth worms which are killing my plants. I have tried strong lime and tobacco water without success.  
Tyrone, Pa.  
MRS. J. G.  
and  
Peru, Clinton Co., N. Y.  
H. J. F.

**Answer.**—The best way would be to repot your plants in fresh soil, draining the pots well. The worms do not eat the roots unless they are diseased. Cut off all dead roots; shade the plants for a few days until they recover from the repotting. We wonder "tobacco water" did not kill your plants.

**Flowers for Vases.**—What flowers shall I plant in vases that have the sun on them from ten in the morning until it sets?  
MRS. JANE.

Washington, D. C.

**Answer.**—For the centre, *Canna Adele* Levallois, which is low growing and has dazzling crimson flowers, or *Dracæna ferrea* or *terminalis*, then *Centaurea candidissima* or *Cineraria maritima*, both white foliaged plants; next *Coleus* or *Achyranthus*, this in any variety (both to be kept low by pinching), then edge with *Gazania splendens*, *Othonna crassifolia*, or *Mesembryanthemum cordifolium variegatum*. If more common plants are required, let the centre be *Coleus* and fill in with gay-colored *Petunias*. In any case, give plenty of water; the cause of failure in vase planting is that the plants are allowed to dry up.

**The Christmas Rose—*Olea fragrans*.**—Can you tell me, through your paper, about the Christmas Rose, and where I can get it? Where can I find *Olea fragrans*? Is it a good house plant?  
Alleghany City, Pa. MRS. J. W. ELVERHART.

**Answer.**—The Christmas Rose is botanically *Helleberus niger*. The leaves are evergreen, the flowers very large white or pinkish, produced in November and December. The plant is hardy, but the flowers are apt to be injured by early snow, therefore it is better to grow the plants in a cold frame. In England it is very generally grown, and plants may be imported from Messrs. Backhouse, of York, for about \$20 per hundred. We do not remember seeing it for sale in this country; perhaps Louis Menand, Albany, N. Y., could supply it. There was formerly plenty at the Botanic Garden, Cambridge, Mass; the gardener might supply it in exchange.

*Olea fragrans* is a neat, rather tall growing greenhouse plant, with foliage resembling a *Camellia*. The flowers are very small in clusters, while turning yellow as they fade, exquisitely fragrant. It would do well as a parlor plant, but there are many things much more showy. The flowers of the *Olea* only last a short time, in early spring, and the rest of the year there is only foliage. Plants can probably be obtained at any of the large greenhouses, as the plant is not uncommon.

**Answers to Correspondents.**—The readers of the FLORAL CABINET will realize something of the popularity of this department, when we inform them there are waiting publication over 300 letters, all asking questions. It is not in the bounds of possibility to answer a question the same month received, but every question shall have attention and a reply and be published as soon as we can. There are 20 printed pages full, each as large as this, waiting their turn to be published.

**Exchanging Plants.**—We discontinued publishing offers of subscribers to exchange plants, bulbs, etc., with each other because in every case the rush of applicants was so far beyond the capacity of the subscriber to supply, that the offer at last became an annoyance, and the offerer always writes to us to stop it. Any one who offers to exchange must expect to receive 200 to 500 replies. Few realize how large our circulation is, or how eager people are to get things free.

**Names of Plants.**—Many plants are sent to us for names. We regret want of time to answer by personal letter, and think it better to send to nearest florist. Most sent to us come in bad order, and our space is really too limited to be filled up with other than the most necessary information, most agreeable to the largest number of readers.

## Flower Gardening.

## A GARDEN OF MY OWN.

I always admired flowers, and longed for a flower-bed of my own. I had read many lengthy articles about raising flower seeds—all good no doubt—but they were beyond my reach. Now, a hot bed, or a cold frame is a great help if you can have one, and not very expensive if you have a father, husband, or brother who will make you one; but I am aware of the fact that there are a great many families where the men are always too busy for such things. Do not be discouraged ye lovers of flowers; I have never had a hot bed or cold frame; but I have had beautiful flowers. I found some old boxes, nailed some strips of leather on the ends for handles to move them with. I then filled them nearly full with light sandy soil, which consisted of decayed sod and sand; then sowed the seeds in rows in the boxes, and took an old sieve and sifted some soil to cover them with. My reasons for sifting the soil is, the seeds can be more evenly covered. Many of the smaller seeds when covered with soil that is lumpy spend all of their vitality in trying to reach the light; and when they do reach it their strength is exhausted, and they turn yellow and die; or if they do manage to live, they are sickly-looking plants, and the flowers they produce, if any, are small and stunted.

Some of you may say, "That is all sham, I have just as nice flowers as anybody and I don't sift the soil either."

Remember, friend, that "there are exceptions to all rules." I had reference to the small seeds produced by some of our tender flowers.

After covering the seeds I cover the boxes with glass, and set them on the veranda, which is on the east side of the house. If the nights are very cool I bring them into the house; if the sun shines very hot I raise the glass from the boxes, just a little, to prevent the seeds from scorching. I do not have the boxes quite full, leaving two or three inches so that the plants can get a good start before I have to remove the glass. I have thus been enabled to have good strong, thrifty plants ready for the border as soon as the weather will permit me to transplant them.

I find that I can take better care of the young plants, if I sow seeds that require about the same length of time to germinate in the same base. The Asters, Phlox Drummondii, Nemophila and Cockscomb require from four to ten days in a favorable situation. The Calceolarias, Datura, Verbena, Tropæolum, and others require from twelve to eighteen days. If you are just commencing the culture of flowers do not try to do too much.

A few thrifty plants of the hardier flowers well cared for will give you more pleasure than a garden overstocked with pale sickly plants of the choicer varieties. In order to make a wise selection it is essential to know the habits of the different flowers, and also what place you wish them to occupy. The Sweet Pea will make a beautiful hedge; but if planted in a bed of Asters or Phlox it will only disappoint you. A nice bed of Pansies we all admire; but if they are planted in a hot, dry place they will prove a failure; and we will be no nearer success if we assign the Par-tulacca to some shady place; exchange their positions and you will be surprised with your success.

When preparing a place for your Pansies in some cool shady nook do not forget to leave a corner for the

little Nemophila; for treatment that will secure success with one will prove equally successful with the other. You must have a bed of Phlox Drummondii. I think there is no flower that surpasses it in brilliancy when cultivated for a mass of colors. This little flower is a native of America, and was first discovered forty-one years ago in Texas, by Drummond, a collector sent out by the Glasgow Botanical Society. The bud before opening resembles a flame, hence the name Phlox, or Flame.

If you wish a showy bed on the lawn with but little labor, you may have it by obtaining a few Striped Petunia seeds. Do not leave the Asters out of your collection. I had some beautiful ones this summer. For the background I had the Washington, one of the largest varieties, next the Inbrique Pampan, and then the Dwarf Bouquet.

For baskets, I think the Tropæolums are excellent, T. Peregrinum being my favorite. In making your collection for the garden, do not forget to select a few with which to brighten your home during the winter. Vines are indispensable in this collection. We all know the value of Ivies. The Madeira vines are also excellent, thriving under adverse treatment. The Cobea Scandens is another of my favorites, it grows so rapidly and bears such a profusion of large bell-shaped flowers.

I have often heard people speak of the difficulty in starting these seeds. I will tell you how I start them. Fill a box with light sandy soil; then take the seeds, which are large and flat, and press them edgewise into the soil; cover the box with glass, and do not water them until they start, unless the soil gets very dry. I had a Geranium (General Graut) which I raised from seed; it grew five feet high, and had numerous branches. It continued in bloom all last winter and summer. I also had one which I started from a slip that was over seven feet high.

I think if we had a little more botany in our paper it would benefit many of our readers. Friends, if you want good, reliable instruction about the cultivation of flowers, save your pennies until you get one dollar and thirty cents, and then send for the THE LADIES' FLORAL CABINET, which also contains excellent recipes, and many valuable hints for beautifying our homes.

MARY J. SEWARD.

## CHURCH FLOWERS.

In a back number of the CABINET, Mitchellia Repens, in an article on Church flowers, asks what she shall use for green for her bouquets. For the past four or five years I have furnished most of the flowers for the church in our village, and of course anything that is written in regard to bouquet-making is of unusual interest to me. Believing that what is worth doing at all is worth doing well in bouquet-making as much as other things, I have studied and toiled to do it well, and while not pretending to have reached perfection, yet, whereas once it seemed a disagreeable duty, by practice and a more extended knowledge of plants and flowers, it is now a labor of love.

For green, I use Hemlock, Asparagus, and Ground Pine, Lycopodium, which in this section—Central Massachusetts—grows plentifully in the woods. I gather it in handfuls and keep it in the cellar where it will keep for weeks without wilting. There is no plant that I know of that is so useful for keeping flowers from crowding each other and for the borders of bouquets as this.

KALMIA CATIFOLIA.

[Written specially for the LADIES' FLORAL CABINET.]

## Winnifred's Will.

BY AUGUSTA LARNED.

## CHAPTER X.

"Oh, yet we trust that some how good  
Will be the final goal of ill,  
To paings of nature, sins of will,  
Defects of doubt, and taints of blood."

It was a moonless November night with a creeping chill in the air, and hoar frost sparkling on the grass borders. Stars trembled above the bare tree tops in the clear dark, and the wall-clock had just chimed midnight, when a slight, girlish figure crept down the great staircase. She slipped ghost-like along through the shadows, close to the wall of the passage, and noiselessly undid a side door and let herself out into the night. There in the darkness arose the sound of a half-stifled sob, that seemed to come from a breaking heart. She took hold of the porch railing, for her knees were weak from recent illness, and seemed to totter under her. Then suddenly she cast herself down and kissed the threshold, with a heart bursting with sorrow, while she prayed for the dear sleepers under that roof she was leaving forever.

Poor Virginie! there was still great confusion in her ideas. She did not well know how her sickness had come to pass, or how long she had lain unconscious on the floor by little Jakes's bed, before they carried her to her own room in the Hall, where she found herself on waking from delirium.

She shrank with terror from the thought of what she had probably revealed in her moments of wandering. All her thoughts were hurried. She tried in vain to get hold of the right end of things, but only two scenes stood out in her memory like points of flame: the interview with Bradley in the boat, and the confession Winnie had made to her in the pine grove seemed burned into her brain.

The doctor had enjoined the most perfect quiet, and for several days and nights she rested with her eyes closed in a dim twilight state, though vaguely conscious of all that was going on about her. She remembered that she had spoken harsh, abrupt words to her friend that fatal night, but what they were it seemed impossible to recall. So she dwelt upon the old, deeply-rooted impression that Winnie would change to her, with the dim consciousness that she had changed.

But Winnie was her constant, untiring nurse, hovering about her bed at all hours of the day and night. As she grew stronger, she strove to repress the impulse to shrink away from her touch and her caresses, but the pale lids quivered while she pressed back hot, hopeless tears.

As memory asserted itself, at moments, the past rushed back upon her with a weight of agony she could not bear. She tried with all her feeble strength to put it by, and set herself toward the resolve to leave the Hall, which had once been thwarted. Now she would go if force was given her to crawl on hands and knees.

For some days she had been convalescent, and a faint relish for gruel and toast was reviving in her. The doctor gave permission for her to get up and walk about a little, and sit well wrapped up in the sunshine. But Virginie feigned a weakness she did not feel, and resisted every effort to remove her from her own room. Winnie was tender and affectionate, but she did not importune her with conversation, for the doctor had given strict orders that the patient must not be excited. But the sick girl saw an unwonted glow of joy and hope in her friend's face, and felt a new magnetic life tingling in the tips of her warm fingers.

It was at night, with scalding tears welling from her eyes, that Virginie perfected her plans for escape. She had no attendance but old Nanna, and was left more and more to herself. All through the burning fever, except in the hours of delirium, she had been conscious of Bradley hovering near her. With her quickened sense she had heard him steal to her door to listen to her breathing. The low, anxious tones of his voice came to her from the hall where he waylaid the doctor, or old Nanna. She knew he had shot the birds which were served up in her sick-room,

and that the consuming trouble of his mind would not let him sleep at night, for she heard him moving restlessly in his own room, or trampling the gravel paths long after the others were asleep. Her mind was filled with pity, and love, and inexpressible dread of what might happen. It was this which had led her to creep out under the stars that still November night.

Virginia held clasped in her hand a scrap of paper which had come to her wrapped around the stalks of a little nosegay of blush roses, borne in on the tray by old Nanna, when she brought her tea.

"Dar's a posey for you, honey," said the old woman, beaming on her with maternal fondness. "Mass'r Bradley sent it. He's a notion you're powerful lonesome; and little Miss says she'll have you toted down stairs to-morrow and took a drive in de kerridge. Don't look so peaked and scart like, honey. I'd be a-thinkin' you was a mighty sight better ef I could see you larf. Your eyes are too big and solemn. 'Twont do to be allus a-thinkin' and a-thinkin', and a-broodin' and a-broodin'," and the great black hand caressed the little wan cheek.

As soon as she had trotted away, Virginia with trembling fingers unwound the thin paper from the flower-stalks, and saw that there were words written upon it. As well as her agitation would allow, she read as follows:

"Dearest, if you do not see and speak to me, I shall break bounds. I cannot longer endure this state of agony and suspense. I dared not speak to W. while you were lying low, but now she must learn that I am yours, body and soul, for life and death. It was like the torture of the doomed to be kept away from you in your delirium. I thought I should go mad, and now I abhor myself for the part I have to play. Oh, my darling! my life! my love! have pity on me. Send me a single word by old Nanna, whom you may trust, and earn my eternal gratitude."

How could she leave him and break his noble, generous heart! But through all the agony of that hour she still meant to be true to herself, and loyal to what seemed her duty to her friend. With heart breaking prayers and sobs, the poor child crept down the avenue under the dark trees, that stretched out menacing arms, and made shadows that frightened her. She carried a little bag too heavy for her feeble strength, and in shifting it from one hand to the other, felt something rough and hairy thrust itself up against her side.

"Hector, is it you, dear old fellow?" He gave a leap and a quick glad bark. She remembered that since the alarm of burglars, he had been let out of the kennel to protect the place at night. "Go back, sir," she said in a firm, low voice, but the creature would not leave her; he leapt to her shoulder and caressed her face, and at last she was fain to let him trot beside her, thinking he would soon turn homeward.

The Finster cottage was there before her with no light in the dark window, for Jake was out again; and had crawled up to the Hall once or twice to inquire after his friend. She thought, with a pang, that this poor boy was the only being who had loved her there she had not harmed. Ill and weak, and out alone in the darkness, oh, how she longed for a haven of rest. Life had been unkind to linger on in her when she yearned for the sleep that knows no waking. Her heart was torn in pieces by pity and love and remorse; her strength was sorely broken, but still she kept on through the ghostly trees, terrified with every sound, but resolute to crawl forward while breath remained.

She could hear the lapping of the waves against the shingle, and once the temptation came to end all by a leap in the dark water; but she put it away with a shudder as she hurried on as rapidly as her feebleness would allow. She felt her knees tottering under her, and there were strange dizzy turns, and flashes of pain through her head, and creeping chills, and tremors in her limbs. Sometimes she laid hold of the bushes by the way, or stopped to pant, and clasp her throbbing side.

There was a little flask of wine in her bag, some of that which the doctor had ordered. She felt for it once or twice, and put it to her lips, hardly conscious that old Hector was still pattering along by her side.

Virginia was no courageous heroine, but a weak, timorous girl, frightened by the moaning of the night wind, and the step of any small woodland creature that came across her path; but as she went forward through the darkness, all fear was taken away, and she seemed walking through the valley of the shadow of death, with her mother's hand clasped in hers. She looked up at the stars that sparkled with frosty brightness, and reassured herself by keeping her face steadily fixed toward Hopedale, the little town on the railroad ten miles distant, where she had told Mrs. Walcott to direct her letter. She had never been to that remote village, but she knew the road that led there. It was a place with which Winnifred had no associations.

The road was not hard to find even in the dark. She took the right hand turn and skirted some fields and fences until the path struck into a little travelled highway partly

grown up to grass. The country was wild and lonely, one of those rough mountain sides that had been run over by a great fire, and had grown up to bushes. Here and there, at long intervals, there was a rude clearing, and the cabin of a wood-chopper, or an Irish settler. The way was vague and spectral, and dim in the night, and Virginia felt less protected than she had done in the thick wood, but Hector was still trotting cheerfully along beside her, wondering, perhaps, in his canine mind, as to the meaning of this strange, nocturnal excursion, but determined to see it out.

The air freshened as it drew toward morning, but exercise over the hard road brought the blood into her chilly finger tips. She wondered that so much life still remained in her, and at the strength of youth. She was not aware that in the darkness she had made a wrong turning. Her heart felt a little lighter as she tried to forget herself, and to urge her slow steps on, counting the trees, the crooked lines in the brush fences, and the dreary stone heaps. She tried vainly to estimate how many of these would make a mile, but with every device her progress was snail-like, and when the pallid dawn came up over the fields, revealing the dim outlines of this rugged country, she found herself in the edge of a clearing, where stumps and felled trees and piles of brush and corded wood were heaped confusedly together.

A woolly mist began to curl up from the frosty earth, but there were as yet no weak red streaks in the east. Now the heaviness of her limbs, and the faintness in her brain made the thought of creeping in among the timber to rest awhile most grateful. Perhaps in an hour's time some farmer would come along in his wagon, of whom she could beg a ride. If not, she would go over the fields and make a long detour to Hopedale, stopping at the first house to buy a piece of bread and a cup of milk.

Virginia crept in among the timber, and sought among the chips and dead leaves for a dry bit of ground. She folded her gray shawl closely about her, and made a pillow of her little bag. Hector had been drawn away by the scent of some wild creature among the brush. At the moment when an irrepressible drowsiness, deep, sweet and dreamless, like oblivion, began to steal over Virginia, there struck upon her dulled ear the sound of a man running up the hill road with short, quick pants in his breath, his iron heel striking sharp sounds out of the flints. There was something menacing in the sound, and a thrill went through her and brought her to consciousness. She staggered up to her feet, peered around the corner of the timber pile, and saw the man running along the road clearly in the early dawn—she saw what she could never forget to her dying day. His head was bare, and he had pulled off his coat and was carrying it upon his arm. He got over the ground with wonderful celerity. His eyes were blood-shot but watchful and alert, as if ready to stand at bay like a savage beast; but in his dark face there was the sinister, baleful light of triumph. In an instant, almost in the flash of an eye, he had passed.

Virginia stood reeling upon her feet, and raised her hands despairingly to her head, while a stifled cry broke from her heart.

What had she done to leave the Hall unprotected, the door unbarred, to allow the watch-dog to follow her? What had happened down there? Was it robbery, was it murder? Was Bradley wounded, dead perhaps, shot through the heart by that perfidious man, whom she had believed to be in hiding far away, but who like a fiend had waited and watched, and at last had accomplished his fell purpose.

She knew she would be sought for now; there was no getting away. She would be accused and reviled, and must meet those she had wronged. She turned instinctively to go back, but there was a ringing in her ears, a confused throbbing in her brain. She sank to her knees and crept a little way along the ground, and then the blackness of darkness came over her, and she fell forward prone upon her face.

The old Hall did not get up very early of a morning. It was too slow and stately to bestir itself until sometime after sunrise. Winnie loved her luxurious morning nap, but on this November morning, which was sunless and gray, she seemed, in her dreams, to feel an ominous wave of excitement throb through the house. Drowsily she heard the opening and shutting of doors, the sound of hurried footsteps, the whispers of the women servants, and the deeper tones of the coachman and gardener, until suddenly roused to the fact that something had gone wrong, she sprang to her feet, slipped into her dressing-gown, and opening her door confronted a group of terrified faces.

Nanna began wringing her hands and vociferating:

"Oh, little Missy, don't scold ole Nanna. I'se dat weak you could knock me ober wid a feder, honey."

"Is Virginia worse?" cried Jinnie. "Why in Heaven's name didn't you call me in the night?"

"Taint Miss Jinny, honey, she's sleepin' like a kitten in wool; but," catching her breath, and turning a peculiar dusky pallor, she half-whispered, "it's de safe in ole mass'r's room."

"The burglars broke in last night," said the gardener, cutting Nanna short, "and they have robbed the safe."

Winnie advanced into the hall without speaking. "Robbed the safe," she repeated at last, "and not a soul of you were awakened by the noise?"

"Must have been de debble in carnal," said Nanna, "come stealin' in wid a stockin' on his cloven huff, for de souf door was wide open, an' I locked it las night, an' put up de chain good an' fast."

Winnie looked about her half-bewildered, and at that moment Bradley hearing the unusual sounds, and anxious about Virginia, descended from his room on the floor above, while Mrs. Braithwaite, with an architectural night-cap on her head and her dress huddled all awry, came hastily out of her bedroom.

"The burglars were here last night," said Winnie, addressing Bradley, with her voice keyed high with excitement, "and they have rifled the safe in papa's room. Only two days ago I got home a considerable sum of money from the bank to pay for the new works at the mine. The place must have been shadowed who knows how long? Poor old Hector, I wonder if they fed him poisoned meat?"

Bradley was stunned even before he could take in the meaning of her words. He grasped the banisters for support, and for a moment the power of speech seemed absolutely gone.

"Oh, dear," groaned Mrs. Braithwaite, sinking down heavily, like a middle-aged ungrammatical Cassandra, "I always told you things would go wrong if you insisted on keeping strangers in the house, and now they has gone wrong."

"Have you examined the safe to see how much is missing?" Bradley asked, as he at last rallied his voice, though there was a deadly sinking at his heart.

"Come with me," she exclaimed, and then turned and imperiously dismissed the servants: "Go about your business at once; you need not idly here; Mr. Halcourt will do all that is necessary."

She ran to her father's room, the long dark hair enveloping her shoulders like a cloud. Mrs. Braithwaite came limping on behind into that chamber which, during her husband's lifetime, she had never entered without dread. The safe door stood open, and only the large package of bank notes was missing; not even a tin box containing some valuable heirlooms of the Halcourt family had been touched, and all the papers remained in their places neatly docketed and tied up with red tape, just as the old judge had left them. Bradley bent down to examine the lock. It was perfect and entire.

"There are no signs of violence," said he, slowly, "neither of detonating powder or prying instruments. The person who opened this safe must have known the combination of the lock. Have you ever confided it to any one, Winnifred?"

"No," and then she started as the scene with Virginia flashed back upon her mind. "Yes," reluctantly, "I did tell Virginia the numbers that she might help me remember."

"It's that girl," shrilled out Mrs. Braithwaite, exultantly. "I shouldn't be a bit surprised, for I never had any kind of confidence in her."

"You are wicked to say so," cried Winnie, turning fiercely round upon her mother. "It is simply infamous to accuse a poor, defenceless, sick girl of a crime like this. I will venture my life upon it that Virginia knows no more of the robbery than I do. I will confront you with her, and prove to you that she is as innocent as an angel of light. If she tells me she has never confided this secret to another, I will believe her against the whole world."

A gleam of adoring gratitude shot from Bradley's eyes. He did justice to his cousin now; she was a noble creature. But he was so sick at heart, so burdened with dread that he could scarcely follow Winnie as she ran to her friend's door, and standing there in the passage with the heavy masses of her hair sweeping in a dark cloud around her, her face pale, and eyes glittering with excitement, she tapped on the panel.

"How soundly she sleeps!" She tapped louder. There was no summons. With a frightened face, glancing back at her cousin, she turned the handle. It yielded; the door opened, but the room was empty. Winnie stood, with Bradley and her mother behind her, as one stupefied, gazing vacantly at the little white bed with its undinted pillows, the small neat table with a few flowers in a glass, the chair where she had sat looking so pale and pretty in her blue wrapper only last night. Then she raised her hands to her head with a groan, wrung out of her very soul, as the truth forced itself upon her.

"Tell me where she has gone," she cried, turning desperately upon Bradley. "You know very well she was sick and weak and could not walk far. She must have wandered off when the delirium came upon her in the night, and we shall find her lying dead perhaps down by the lake, or under the trees. The idea of Virginia robbing me is preposterous"—taking refuge in a burst of scorn. "She know she could have anything I possess;

she was too scrupulous to take even the price of a gown. I tell you she has wandered away ill, and out of her mind."

Bradley, through this passionate and tender outburst, had not spoken, scarcely breathed, for the shock of Virginia's flight had fallen upon him with stunning force. Now his eyes fell on a piece of folded paper that lay on the table, and he took it up mechanically and placed it in Winnie's hand. As she unfolded the scrap which was traced with weak wavering lines, and literally blistered with tears, she read the following:

"Try to forgive and to forget me. I have not meant to do you wrong, for I have loved you dearly. I have prayed and wept and struggled against temptation, but I am weak, and must fly, for sooner would I die a thousand deaths than harm a hair of your head. You may revile me and scorn me, but my heart will always adore your goodness, and breathe out prayers for your welfare. Farewell forever. VIRGINIE."

Winnie's hands trembled so violently that the paper fluttered down to the floor.

"What does she mean by doing me wrong, and fleeing from temptation?" she asked, with a convulsed face. "What is this mystery that is enveloping me on every side?"

Bradley had turned his face to the wall; he could not speak, and the misery of his weak conduct in paltering with truth planted its fangs deep in his soul. Winnie seemed to tower far above him; he dared not meet her eye; and seeing him thus crushed and beaten down with a secret load of grief and remorse, she cried out passionately:

"Why in Heaven's name don't you speak?"

"I thought it was strange he should want to keep that girl in the house," volunteered Mrs. Braithwaite, filling the doorway with her bulk, "and I told him so, but I suppose he was taken in by her, just as you were, Winnifred?"

"Do be still, mamma," cried Winnie, with hopeless impatience. "I won't hear Virginia accused of any crime; but there is something behind all this, and I will know the truth."

Edgar Swayne had come up the stairs unheeded in the excitement of the moment. His face was haggard, and his great-coat was splashed with mud, as if he had ridden hard. Now he pushed past Mrs. Braithwaite's form, and presented himself to Winnie.

"Miss Braithwaite," said he, abruptly, "I have just heard of the robbery from the gardener, and I think I can tell you who it was that rifled your safe last night. If it had not been for that man," pointing with undisguised scorn at Bradley Falconer, "who stepped in to shield a criminal from justice, I should have had him behind prison bars before he found the opportunity to rob you."

"Who are you speaking of?" Bradley asked, facing him with haughty coldness, though pale as ashes.

"Of Walter Freeborn."

"Walter Freeborn?" repeated Winnifred, in a dazed, bewildered tone. "Why, that is the name of Virginia's uncle."

"Yes; and do you want to know who Walter Freeborn is?" returned Edgar. "He is an escaped convict who broke prison more than six months ago, and for the past few weeks has been skulking about this place, holding secret interviews with his niece; and now it would appear that she has become an accomplice in his crime. It was doubtless through her aid that he rifled the safe, and then they decamped together."

"You lie in your throat," cried Bradley, turning upon him as if he would rend him.

"Oh, Bradley," cried Winnifred, joyfully, springing between them, "how glad I am to hear you defend her. But why," wringing her hands, "did she not tell me the truth about this dreadful uncle? Why did she deceive me? I would have forgiven anything. I never would have thought evil of her. I would have sheltered her in my arms, and saved her from him. Oh, why has she gone away with these terrible suspicious clinging to her skirts?"

"She did not confess to you," said Bradley, "I am as sure of it as I am that I live, because that man terrified her into silence with threats and menaces. I aided his escape because I detected this dreadful secret, and knew that the horror and fear shadowing her life were killing her. I divined it, though she never told me the truth."

The color left Winnie's lips. Something in Bradley's tone had struck an icy foreboding to her heart.

"But why did she go away?" asked Winnie faintly. "Why, if she was innocent of all complicity with this man, as I believe before heaven she was, did she steal out of the house like a culprit in the middle of the night?"

Bradley felt pushed to the edge of the precipice; he must take the fatal leap. He nerved himself for it, and was outwardly almost calm, as he turned and said in a low voice, low but distinct to every one present:

"She went away because I love her with my whole heart, and soul, and strength. I told her of my love when

I knew it at last. I did not mean to tell her," he added, humbly, "and it was a fatal act. It has driven her out of this house, God knows where, when she was ill, and scarce able to drag herself away, because she would not stay here to wrong you, and her conscience was killing her. I am the criminal, but she is guiltless before heaven. If she is found dead in the fields, it is my selfishness that has done it. Oh, my God!"

The burning tears welled up into his eyes, his voice was choked with sobs.

The effect of this revelation on the different faces of the group was a strange study; but everything swam in blackness before Winnie's eyes. A thunderbolt had crashed down on her proud young head, as it falls on the leafy top of a stalwart young oak in the forest. It was such a moment as makes a vigorous creature suddenly old, hurling a life out of self-satisfaction, and false security and triumph, into an abyss of pain and despair. She covered her face with her hands, and tottered forward to a chair. In a moment she had started to her feet again with a sharp lonely cry of anguish:

"You duped me, you cheated me, oh, fool, fool that I have been! You have carried on a love intrigue with her, my friend, here in this house, while presenting yourself before the world as my affianced husband. And she listened, well pleased, to your love tale, and responded to it, while I betrayed myself, all unconscious, in her bosom. Oh, my God! who would have thought I should live to see this hour? Oh, it was cruel, cruel."

Again she sank down and covered her face, and terrible resistant sobs shook her whole frame.

Bradley stood almost over her, pleading in tones of passionate entreaty.

"When you have calmed yourself, Winnifred, you will see all this sad story in a different light. You are noble and generous, and the time will come when you will be just to her, when you will even pity her for the terrible struggle through which she has passed in trying to be true to you. For myself, I expect nothing but your scorn and contempt. I cannot make you understand my cruel position. You have loved her dearly, but there is no such feeling in your heart to plead forgiveness for me."

Winnie was crushed as by a sudden stroke, and she trembled convulsively through her whole body.

"I do not understand you, Bradley," she said, in a strange tone; "my brain seems frozen."

"I mean," he returned with gentle sadness, "that there was no question of love between us. Our union would be merely a marriage of expediency, a thing that nature abhors. I meant to show you my heart that day Virginia was taken ill—to throw myself entirely on your generosity, and to ask you to release me from an artificial bond that would soon gall you as it galled me. I told you when we talked of this that I would release you from your obligation, should you desire it, even were we standing at the altar. I had not waked then to the meaning of my feeling for her. The knowledge came when I saw her suffering. But now I claim your generous forbearance. I ask you with deep contrition for the pain I have caused you, to let me go in search of her, that I may prove to you and to the whole world that she is the innocent victim of a base man, and no less," he added, in a stifled voice, "the victim of my love."

Winnifred was stunned and almost incapable of motion. The life had ebbed out of her, and Bradley's words appeared to come from a long distance. But pride and will were still alive. She struggled up to her feet, rigid and erect, looking taller than her wont, her face like marble, and her eyes shooting out terrible glances of scorn.

"Go," said she emphatically. "You have cheated, and tricked, and deceived me; now go to her. I will not detain you longer."

The strength went out of her limbs, and slowly she sank down fainting and almost insensible. The mute signs of suffering were so visible in her, that Bradley paused with a terrible cloud of pain sweeping before his eyes.

"Winnie," said he, in tones of entreaty, "if what I did not dream of is true, if I have wounded more than your woman's pride, I beg your pardon even on my knees. No, it cannot be that you are suffering the pangs of unrequited love. Oh, Winnie, I am all unworthy of you! Hate me! scorn me! revile me!"

The hard sobs again convulsed her bosom. She did not weep easily, and the emotion seemed to rend its way outward.

She made a sign with her hand that he should leave her, and slowly turning with one long, sad look, he went away. Edgar had rushed out of the house the moment of Bradley's declaration of his love for Virginia, and now when the numbness and the sense of shock had a little passed by, Winnie lifted her head and gazed about her. The daylight hurt her eyeballs, and shot sharp darts of pain through her brain. Slowly she got upon her feet, almost groping forward with a sense that all support was gone. The old satisfaction and feeling of predominance, the old triumphant self-confidence had been struck away. She was alone save that her mother still sat there in heavy

silence, with her large helpless hands crossed in her lap, and a bewildered look of stupor, a dim groping kind of distress glimmering in her face.

Winnie looked around. Bradley was gone. Virginia was gone. They were both lost to her forever. As the terrible consciousness swept over her, her eye fell on her mother, and suddenly she tottered forward, and fell on the floor near her, and clasped her knees, and laid her head in her mother's lap. By an instinct long unused, the poor dull-witted woman put her arms around her child, the beautiful, brilliant, triumphant creature, who, after years of indifference, had at last come creeping as a suppliant to her knees! With plaintive murmurs she timidly touched her hair and chafed her cold hands.

"There, don't cry, don't cry, Winnie. I always knew that foreign girl would bring harm. I said so from the first, when you began doting on her. But I am beat about Bradley. He was the best little boy I ever knew; but it did seem strange he should want that girl kept here; and I suppose all along she was using her arts to get him away from you."

"Don't, don't," said Winnie, weeping, as if the blundering speech had stung her. "You can't understand that, mamma, and I cannot explain. But you see how I am beaten down to the earth. Love me a little, and comfort me if you can, mamma. I have been wicked to you, and have neglected and hurt you. This is my punishment. Can you forgive your child? Oh, this trouble is heavier than I can bear."

The poor woman began to sob, and her face worked with unwonted emotion. Some frozen feelings were again softening her poor, lonely old heart.

"You were a pretty baby," said she, simply going back into the dim past. "You were fond of me then; and I often wake nights and think I feel your little soft hand against my face. But when you got old enough to sense things your father took you away from me, and I never had any more comfort. I was your own mother just the same, though," with a pathetic touch of humility. "I never did pretend to be quick about things, but I had human feelings for all that."

"Don't, don't," cried Winnie, moaning out her despair. "All the past has been hideously wrong. I have made you suffer, and I am sorry, but I can't think of it now. Love me a little if you can. Let me feel that all is not taken away, that there is something human to cling to even if I have been wicked."

A new strength and purpose seemed to come into the poor mother's soul, and she lifted up her child, and took her in her arms, and laid her head down on her bosom, where it had not rested for years. Furtively she put her lips to Winnie's forehead, and smoothed the rich dark hair, and an hour passed and still the girl was lying in her mother's arms.

At last she was roused out of her lethargy by the sobs and groans, and loud laments of old Nanna, as she came in hauling Steenie by the arm, though he resisted this violence with all his might. His frightened wool stood more on end than ever, and a pale ashen hue had overspread his face.

"Oh, little Miss, I knowed if dar was mischief goin' dis him of Satan must be in it shore. I kotched him chokin' over his brekfust. He couldn't swaller a mossle, honey, and den I sarched him, as wid de bosom of 'struction, and look here, honey," letting the whites of her eyes go into total eclipse, while she opened her great black hand, and displayed an elegant little lady's watch, enamelled in blue, and with a spray of diamonds on the cover. "I foun' dis on his pusson, honey, and he's got his foot in wid de bug-hums, shore. Git down on your knees to your missus and 'fess," and she pushed the boy down trembling and shivering in every limb, and held him with her strong hands.

Winnie roused herself in a bewildered way, and took the little watch.

"Where did you get this watch, Steenie?"

"He gived it to me," his teeth chattering as if they would fall out of their sockets.

"And who is he?"

"Dat dar stranger man. Oh, you'll have me hung on de galluses like Gandy says. Oh, oh!"

"Stop crying this minute, and tell me where you got the watch, or I shall send for an officer."

"Oh, don't send for no ossifer. I'll tell, I'll 'fess de livin' truf. Dat man gived it to me in de barn; an' he gived me suffin sweet to drink—rum mebbe; an' he scart Gandy about de spooks; an' he got me to put notes in Miss Jinny's room; an' he coaxed me to tell him dem figgers on de safe. I heard you tellin' 'em over to Miss Jinny, an' I knowed well enuff what dey meant; an' den he gi' me de watch."

Winnifred stood holding the watch in her hand.

"Oh, Virginia!" the cry seemed to escape her involuntarily. Then she rallied her forces, and pushed back the long dark hair from her face. "Something must be done," she said, half to herself. "My God where shall I find help?"

## THE LANGUAGE OF FLOWERS.

BY UNCLE CHARLIE.

This elegant book, during the past year, has found many admirers, and is now sent out in its second edition, enlarged and improved. The Poetical Selections are from the best authors, and the section devoted to Floral Conversation, among other good things, contains a most fascinating story.

There is also a section devoted to the Sentiments of Flowers, which gives a list of all known Flowers and their meaning, and another to Floral Decorations, in which the subject is treated in reference to special occasions, such as Thanksgiving Day, Christmas, Easter, Decoration Day, Birthday celebrations, Weddings, Funeral ceremonies, the Church, etc.; there is also a chapter on Cemetery Decorations, and others on preparing skeleton leaves, drying flowers with their natural colors, autumn leaves, sea mosses, etc.

It is issued in two different styles to suit purchasers—in neat, enameled paper, at 25 cents per copy; for those wishing a handsome gift-book or table ornament, it is beautifully bound in extra cloth, and sold at 50 cents. Will be sent by mail, postpaid, on receipt of price. Address,

**HENRY T. WILLIAMS,**  
46 Beekman St., New York City.

## THE DINGEE & CONARD CO'S BEAUTIFUL EVER-BLOOMING

### ROSES

**Strong Pot Plants**, suitable for immediate flowering, sent safely by mail, postpaid, 5 splendid varieties, your choice, all labeled, for \$1; 12 for \$2; 19 for \$3; 26 for \$4; 35 for \$5. For 10 cents each additional, one Magnificent Premium Rose to every dollar's worth ordered. Send for our NEW GUIDE TO ROSE CULTURE, and choose from over 300 finest sorts. We make Roses a Great Specialty, and are the largest Rose-growers in America. Refer to 100,000 customers in the United States and Canada. Want SALESMEN on a regular salary of a month and expenses, to sell our WE CIGARS. Send 2c. stamp to insure answer. S. FOSTER & CO. Cincinnati, O. **\$85**

NEW YORK, JULY, 1877.

## VALUABLE NOTES FOR FLOWER GROWERS.

**Moist Air for House Plants.**—Every florist and plant-grower (says the *American Garden*), will answer the often repeated question, "How can I make my Window Plants flourish?" by saying, "You must keep the air moist." How to do this is, however, a troublesome and unsolved problem. We have found by experience that the simplest solution to the problem is the use of a common whisk-broom. Take a pail of tepid water every evening; dip your broom in it and whisk it over the plants till everything is moist. Your plants will enjoy this bath and the insects will not. Insects dislike nothing so much as abundant dampness. The most troublesome enemy of all—the red spider—will soon leave for dryer quarters.

"But," says some nice housekeeper, "I shall spoil my carpet if I keep up such a daily showering." So you will if you do not protect it, but, with a good sized piece of oil cloth under your plant-stand, as there always should be, you may spatter away as much as you like.

**Success with Calla Lilies.** "Aunt Addie" in the *New York Tribune* thus tells her success with Calla Lilies:

In almost every collection of house plants may be found the Calla Lilly. Ladies call attention to "my Calla" with affection and pride in their tone. It is justly a favorite with all amateur floriculturists. The little care it needs, its indifference to ordinary atmospheric changes, its large, showy leaves, and the purity and grace of its flowers render it certainly a highly-to-be-desired plant. And then again it never says die. No matter how puny its foliage or how white or spindling it may grow, it presents a pleasing appearance, and gives one some little space for hope. But in very many instances we see thrifty, healthy-looking plants that we are told cannot be made to bloom. They put

forth leaf after leaf of rich dark green, satiny-looking organs, but no bud of promise appears to gladden the eye and the heart of the anxious watcher. I speak feelingly, from experience. I have tested all the many directions which have come under my observation, but all with like results—no buds. Even the entire-rest plan did not succeed with me, for Easter came and not one Lily. Disgusted, I determined to try a little private judgment. Knowing the decided distaste most bulbs have to being removed, I put my Callas in a pot filled two inches up with pieces of broken crocks and charcoal, then used light rich soil, with plenty of sand and black muck, watering with very warm water. I set the pot in a dish three inches deep, poured off the water that drained through, and poured very hot in it so as to get as much bottom heat as possible. This was for winter treatment.

During the summer months I took the pot out of the saucer and set it in the flower bed, on the shady side of my garden. In the winter I stood it on a table by itself, in a sunny window, with these results: My plant is over three feet tall, and thirty-eight leaves on it, one fine lily and two buds. The young bulbs are doing beautifully also. During the last summer I had a lily each month, much to my friends' and my own surprise. The pot is very nearly concealed by luxuriantly growing *Crassifolia*.

**Used-up Hyacinths.**—A good many persons, says the *Gardeners' Chronicle*, are at a loss to know what to do with the Hyacinths and Narcissi that have gone out of flower. They don't like the idea of throwing them away, and they are disfigurements in the greenhouse.

Two or three courses can be recommended: one is to open a trench in any spare corner of the garden, and plant them in it, turning the bulk of earth out of the pots without disturbing the roots and simply remove the crocks.

Some fine mould should be placed about the bulbs, and the soil put back and firmly pressed about them. Treated in this way, the Hyacinths, Tulips, Narcissi, etc., will ripen their bulbs and growth, and come in very useful next autumn for planting out in beds or borders. They will, however, need to be watered in dry, hot weather.

Another good mode is to open holes along the fringe of a shrubbery border, almost beneath the lowermost branches, and plant out for permanent effect. In such a spot they come into flower early in the spring, and they are sufficiently out of the way not to interfere with the summer planting, if the margin of any shrubbery border admits of its being done.

**Treatment of Cyclamens.**—In answer to the questions how Cyclamens should be treated until they are potted off for flowering, when this should be done, and in what soil, the *Villa Gardener* says:

Cyclamens do not do well because they are badly treated. The neglect begins as soon as they have finished flowering. The idea prevails that the moment the last flower fades the plants should be dried off. If growers would only bear in mind that the chief mode of increasing the number of Cyclamens is by seed, that alone would save the plants from treatment so unreasonable and ruinous to next year's flowers. These flowers are formed by the leaves after the current year's blossoms have faded. Hence, the importance of carefully tending, watering, and, if need be, feeding the foliage till fully grown, or till it begins to fade in course of nature. The best place for completing and maturing growth is a cold frame or a sunny corner out of doors. After the leaves fade, the

Cyclamen will take a period of rest without forcing it by total dryness.

The best plan for resting Cyclamens, is to plunge them in a cold frame, alike sheltered from heavy rains, and the roots kept from being burnt by the sun on the sides. Opinions may also differ as to the best season for potting Cyclamens. Some pot just as the flowers begin to come up; others as the corns manifest symptoms of starting in the autumn or early winter.

The first course is perhaps the best. The soil that suits them best is a mixture of loam, leaf mould, and decomposed manure, freely sanded into openness and grittiness.

The drainage should be perfect, as stagnant water at base of bulb is fatal to Cyclamens. The best season to sow Cyclamens is February. As soon as the plants are up they should be picked off, and then shifted on in succession as soon as they fill the pots with roots. If this is properly attended to, and the young plants are pushed on in a bottom and surface heat of 60 to 65 deg. the plants may be made to flower within the year.

**Flowering of Sweet Peas.**—A correspondent of Mr. Vick says he meets with extraordinary success as follows:

I prepare a trench eighteen inches deep, and fill with ordinary garden soil enriched with perfectly rotted stable manure. About the first of December I sow the seeds in this trench, eight inches deep—that is, the seeds are eight inches under ground, when the trench is quite filled. Over the trench I place a foot of fresh stable dung, which is removed about the first of April. The plants appear a few days later, having been apparently growing through the winter, and are then treated in the usual manner. My plants bloom in extraordinary abundance, from June until September. My soil is a heavy loam abounding in the various salts of lime, and this, doubtless, accounts in a great measure for my success. But the chief cause, I think, arises from the fact that the roots do not suffer from drought, as they would if nearer to the surface, and also from my diligently picking off every bloom as soon as it begins to fade. Once allow the energy of the plant to expend itself in forming seeds, and the bloom then is comparatively over. I may add that I deluge with water once a week during the hot weather.

**A Good Way to Start Tuberoses.**—Another correspondent of Mr. Vick says:

I have hit on a good way to start Tuberoses. I plant them in old tomato cans, without punching any holes for drainage, set them on the mantel over the kitchen range, and keep warm and wet. When well started I move them to a cooler place, and at the proper time set them out in the garden. In this way I have raised during the past two years vigorous plants, yielding from twenty to thirty-five blossoms each. Contrary to the teachings of at least some of the books, the Trailing Arbutus (*Epigaea repens*), can be brought into bloom at any time during the winter. I have had beautiful bunches of flowers at Christmas. The simple plan is to take them up late in the fall—December will do if the ground is open—and plant them in a fernery or warden case. They will take care of themselves. The common ferns of the woods, too, will push up, and unroll their fronds, the scarlet berries of the Wintergreen and the Partridge berry will swell, and remain fresh all winter, and the evergreen vines of the woods will grow as if it were spring. I always go to the woods for the contents of my fernery.

### BURMESE COURTSHIP.

The Burmese are Buddhists, and Buddhism has nothing to do with marriage. In other words, marriage is contrary to the principles of the Buddhist religion. The true Buddhist is supposed to endeavor to escape from the universe of being; from a succession of transmigration of the soul which would otherwise continue forever. The Buddhist priest not only leads a life of celibacy, but will not sanctify the marriage tie by his presence at a wedding. He has too much

pity for those who marry or are given in marriage, and who are thus unable to escape from unending transmigrations. The result is that the young people have it all their own way, and the parents as little as the priests prevent their thoroughly enjoying themselves after their own ideas of admiring and being admired, loving and being loved. Consequently, Burmese courtships are about the pleasantest things in their way which are to be found in all the semi-civilized world, from Mandalay to May Fair. They have nothing to do with capture, purchase, or dowry; with Welsh bundling or Scotch whistling. They are always nice, generally strictly proper, although not unfrequently accompanied by very serious quarrels, when different gentlemen aspire to the same fair hand.

A Burmese damsel is demure, laughter-loving, and self-reliant. Her manner is graceful and pleasing. She wears a bright silk petticoat, a white jacket, a gold necklace, and has glossy black hair decked with flowers. She often smokes a green cheroot. Of course she has admirers, and she gives them all a fair chance. Every evening she receives a visit from all these young gentlemen; and such is the waywardness of human nature that the same swain will often pay similar visits on the same evening to other young ladies of the same village or township. Thus courtship is always going on, and courting time has been an acknowledged institution from time immemorial.

Here some explanation is necessary. The Burmese evening is divided into three watches—namely, children's bed-time, old folk bed-time, and young folk bed-time. Children's bed-time is sunset, or shortly afterward. Courting time begins soon after children's bed-time, and continues long after old folk bed-time, which is about nine o'clock. Young folk bed-time depends a great deal upon the will and pleasure of the

young people in question; say about eleven o'clock. When the hour of courting approaches, the young lady trims her little lamp, so that it gleams through the window, and takes her seat upon a mat on the floor. Meantime the young gentlemen have been putting on their best bright silk putzoos, a nondescript garment something between a pair of trousers and a petticoat, have donned their clean white jackets, have tied colored silk handkerchiefs on their heads in the most approved style, and have turned out altogether

over. How the lady receives each lover, especially in the presence of other lovers, is more than we can describe. She herself requires considerable attention, and the old people never interfere. Indeed, why should the old folk interfere? The young folk can take care of themselves, and are only doing what they themselves did in the days when they were young.

These evening gatherings are generally very innocent, and the marriages which follow them are generally

very happy, although sanctified by no priest, and only held together by the ties of mutual affection or the obligations of civil law. Jealousy, however, is a master passion in Burmah, and if a damsel is too kind to one of her admirers, the chances are that the offending lover is stabbed, speared, or shot. Indeed, a jealous rival, who suspects that the object of his affections is alone with another rival, will not unfrequently astonish the happy pair by running a spear through the floor of matting on which they may be reposing, and then there is a regular Burmese row, terminating very seriously sometimes.

This courting time in Burmah is nothing more than a relic of the old Hindoo institution known as the swayamvara, or choice of a husband by a maiden. This swayamvara was once practiced by the old military caste in Hindustan, but has long since passed away from the shores of India. No doubt it was one of the Kshatriya customs, which the Buddhists carried with them to Burmah when they were expelled from India by the wars and persecutions of the Brahmans some ten or twelve centuries ago. Thus the world moves on, and doubtless it will be discovered in due time that other old Kshatriya customs may still be found in Burmah. Gambling away a wife, which is often mentioned in Sanskrit tradition, and would be impossible in the India of the present day, has not unfrequently occurred in Burmah.

"I WONDER IF I COULD DANCE?"

in the height of Burmese fashion. They enter, they seat themselves on the mats round the fair one, and then the "chaffing" begins. If a gallant has been unsuccessful in a boat-race, or has tumbled into the water, or has paid too much attention to another damsel, or has been deserted by another damsel, or has made himself ridiculous in any other way, the chances are that his feelings will be hurt before the evening is

He was an applicant for the position of writing teacher in one of the public schools. They gave him a copy-book, and asked him for a specimen of what he could do. He took up the pen, and, in a handwriting that looked like a flash of lightning that had mistaken the direct road, wrote as follows: "Sorrer doesn't kill folkes as fast as green gooseburys."

## Household Topics.

## "ORDER IS HEAVEN'S FIRST LAW."

"Dear me, there goes the door-bell! Girls, quick, help me put this room to rights. Sarah, take the bread-pan into the kitchen, and Mattie, do arrange the books and papers on that table." So nervous little Mrs. Watson bustled about, trying to do a dozen things in a few minutes, and, as a consequence, the front door was not opened until the visitors had rung twice, and were getting to be impatient. They were two young ladies and their brother from a neighboring house, who, knowing that the Watson's had a young lady visiting them from a distance, had come to call upon her.

It being a cold winter's night, and no fire in the parlor, of course the callers must be shown into the sitting-room, which, it must be confessed, had a decidedly upset appearance. Little Charley, the five year old, had been building houses and then tearing them down, so that his blocks were scattered in every direction about the floor, ready to trip up the unwary. Mr. W. had taken off his boots and set them carefully behind the stove, while he replaced them with his slippers. One of the boys had been whittling, and the chips had flown hither and yon. Some one had brought in a quantity of stockings to be mended, thrown them into a chair, and there they still lay. In fact, the chairs had to be cleared of their contents before there were enough for the use of the company. The sewing machine had almost disappeared underneath an accumulation of unfinished work, an open piano was strewn with sheet music, and so on, *ad infinitum*.

But who does not know how soon even an orderly room will become disarranged after the family has taken possession of it for the evening? And in this case the room could not have been called tidy when they came in from supper. After the callers had been seated, and introductions given to the visitor, Miss Laura Ellison, Mrs. Watson felt called upon to apologize for the disorder by saying it was the family room, and it was impossible to keep it tidy at all times. This created rather an uncomfortable feeling all round, most certainly to the hostess, and to the callers themselves, who could not, most assuredly, in the face of the disorder, make any disclaimer to Mrs. Watson's words.

However, the conversation soon became general, and Mrs. W. having busied herself in picking up one thing and another, took Charley up stairs to bed. Mr. Watson had betaken himself to his newspapers, and before long, the young people had some music. Then the callers took their leave, and, after lingering by the fire a few minutes, Mattie proposed retiring. "For see, girls," said she, "it is after ten o'clock, and I for one am sleepy."

So without doing anything towards righting the still disorderly room, she started upstairs, her sister and their guest soon following. But while preparing for bed, she remarked, "I don't know when I have been so mortified as I was to-night, to think that Louisa Ward and her brother and sister should come in upon us, and find us in such a heap! How do you manage, Laura, at your house to always keep everything in such nice order? If we could only have a fire in the parlor, and use it evenings, we never should be caught so; but father thinks it is a great waste of fuel, and that is why we moved the piano into the sitting-room. Of course, in the evenings we do have a warm parlor, we are sure not to have any callers."

"It used to be just so at our house," replied her friend, "until at last I took the matter in hand out of sheer desperation, and by seeing to things myself, I generally manage to keep the sitting-room ready for company at any time. But it was only by constantly picking up and putting away, and by 'line upon line and precept upon precept' to the boys, that I could get them to look after their own things and put them away when they were through with them."

"Well, to-morrow I will take some lessons from you, if you are willing," said Mattie.

"Certainly," Laura replied, "and, excuse me, Mattie, but I noticed both nights I have been here that you did not close the piano. Now, that is one of the things which mother required of me when we first bought ours, to see that it was closed every night, and at the same time, I put the cover on the sewing machine and lock it down."

"That is a good idea," said Mattie, "and to-morrow I will begin to be orderly. But I am too sleepy to talk or even to think any more."

True to her promise, Mattie began after breakfast the next morning her task of "arranging things." In the first place she attacked the sewing machine, folding up and putting in a large wash-basket in the closet all the unfinished work. After fastening down the cover she looked around to see what to do next.

"If mother did not have to have so many plants," sighed she. "They take up so much room, and there is not a window left to look out of."

Here Laura came to her rescue by saying:

"Why don't you get your father to make a box to fit before one of the windows, and fasten it upon legs like a table; then you can put in a layer of earth, and set the flower-pots in it. You would be surprised to see how many plants could be crowded in. Mother had one made, and we like it better than any plant-stand we ever had."

Mattie doubted if her father could be prevailed upon to make one, but said she would see about it.

Just then Sarah said, coming in from the kitchen with a woful face:

"We shall have heavy bread again to-day. It did not get a good start last night, for it had to be put off in the cold when the company came, and it has not caught up. But I have got to bake it whether or no before dinner, and trust to luck to do better next time."

Mattie looked at Laura, and said:

"That is another objection to turning a sitting-room into a parlor. A bread-pan standing behind the stove is a rather unsightly object, is it not? But when the fire is out in the kitchen, what can we do?"

Laura replied:

"That very thing puzzled me, too, for some time until I invented a crocheted cover for it. Mother mixes her bread in a large wooden bowl, and we draw down the cover. (it is scarlet and black), and then we have a cane-seated stool which we put behind the stove, and after the bread and its cover are placed upon it, it looks quite ornamental. The only trouble is, I have to watch when strangers are present for fear they should mistake it for an ottoman, and sit down on it!"

"Well," exclaimed the girls, "you are a genius. Who would have thought of that but you, Laura?"

"Why," she replied, laughing. "I had so many times been mortified by that dingy looking bread-bowl, that I tried to think of something to hide it. And I made another knitted cover, smaller round, but longer, like a bag, to slip over the jar which mother uses to mix our buckwheat cakes in."

"I will make one for mother for Christmas, if you will show me how, Laura," said Mattie.

"With pleasure," replied Laura, "and if you have any flower-pots that look shabbily, I can show you how to make some pretty covers for them out of bed-ticking and blue or scarlet worsted braid."

So Mattie was fairly started in the good work of keeping things in order. Her sister Sarah was her mother's assistant in the kitchen, but Mattie's health never having been strong, she was spared any heavy work, and had been considered the "young lady of leisure" of the family. But her new object of interest took up much of her time, and she did not rest until she had taught her brothers, what her mother, with all her desire for order, had failed to establish, and that was, that each one was responsible for his own belongings. She looked up a pretty box for Charley's toys and blocks, which she deposited in a corner of the closet, and taught him to put his playthings there when not using them.

Finding she could not prevail upon her father to help her in the matter of a plant-box, she saved up her money for a month, and then had one made to order. Mrs. Watson was much pleased, and in "the new departure" all the family found themselves more comfortable.

Mattie now has a house of her own, and it is as neat and tidy as one could wish to find. MRS. M. H.

## HOME-MADE LOUNGES.

Many pretty and useful articles can be made for home comfort and adornment, if one only knows how to go to work. Mrs. Henry Ward Beecher, in the *Christian Union*, gives some instructions about making lounges and brackets, which we copy for the benefit of our readers:

Very pretty and comfortable lounges can be manufactured at home with very little trouble or expense. If the husband or sons have any spare hours, or skill with saw, hammer, and nails, they can snatch leisure moments, now and then, and make the frame; or, if they are not skilful, a carpenter, in an hour or two, could make it, and give it a proper shape to suit the part of the room where it will be put. After the slats are nailed on, if there is any place near by where a few springs can be obtained, they will make the lounge much more comfortable. Over the springs cotton batting, hair, or moss, should be laid, then a thick, strong canvas or bagging, that the springs may not wear the outside cover. When this is nailed down smooth and tight, taking care that the stuffing is spread on evenly, without lumps or hard spots, put on the cretonne chintz or woolen outside cover, and nail it down strong. Finish by nailing with brass or black nails, a gimp and fringe plaiting or ruffle to cover the edge, and you have a neat lounge, quite as comfortable as most that you buy. Three large, square pillows, filled with feathers, hair, moss, or "excelsior" (a kind of poplar shaving made expressly to pack furniture in), and covered to match the lounge, are a great convenience for a straight lounge, placed, as it should be, close to the wall.

Pretty and very useful corner brackets can be shaped and made without difficulty, and covered with embroidery, damask, or reps. Round the shelf or bracket a piece of the same material with the furniture cover or lambrequin may be cut in points, or scalloped and finished with heavy fringe. These pieces are often beautifully embroidered on Java canvas, and the brackets, when finished, are quite ornamental as well as useful. Leather work, or pine cones, varnished, are often worked up into very fanciful brackets, and are quite strong and durable.

## Housefurnishing.

### HINTS FOR HOUSE-FURNISHING.

Perhaps some of the readers of the CABINET have a room which they would like to have furnished, yet they have so little money they think it will be impossible to do it. A room furnished according to the following hints would look home-like and comfortable at very little expense.

If you cannot afford to buy a carpet, oil the floor with good linseed oil, and lay down rugs wherever you can find a place for one. One way to make a pretty rug is to braid rags, sew the braids together in strips, then put a border around this of a contrasting color; or make a round one by sewing the braid round and round in the old-fashioned way until the rug is large enough.

Another way is to take burlap, cut it any size you wish, fringe out the edges, work a border around it with double worsted in some contrasting color; the Roman key or the Grecian braid are pretty patterns for a border. Work a monogram or a figure in the centre, and your rug is completed. Instead of zephyr you can ravel out an old scarf or "cloud;" color it some bright color, and it will be far cheaper than worsted. Then there are rugs made by drawing carpet rags, cut on the bias, through burlap and then shearing. Another way is to take a piece of dark cloth (an old coat will do nicely); cut it any shape you choose and apply figures cut out of bright colored flannel; sew these on in button-hole stitch; or, instead of applying figures, cut circular pieces out of variously colored flannel; have some larger than the others; place a large circle of light-colored cloth on the black, on top of this a smaller one, and then a still smaller one; tack these firmly in place. If carefully made these are very pretty.

Paper or tint the room if you can; if you cannot, do the next best thing, which is to cover the walls as much as possible with pretty things. Wind a rope with cedar, or sew autumn leaves on a strip of cotton; put this up as a cornice; have the same around the window and door casings; make wreaths, crosses, anchors, harps, etc., of cedar and autumn leaves, which are to be put wherever there is a vacant space on the wall.

I made a pretty cross by sewing green moss on stiff paper cut in the shape I wished; on a strip of calico I sewed pressed ferns and autumn leaves; this I twined around the cross gracefully, allowing one end to droop over one arm. I cut letters out of stiff paper and sewed on them the dry moss which grows on the roots of trees in swampy places; these I tacked on the wall over the door. My motto was "Welcome." Sprays of cedar are pretty over doors and windows, as well as bouquets and wreaths of autumn leaves.

You will want a lounge; which may be made by taking a box of the proper size; have a strong cover put on with hinges, as your lounge will be a good receptacle for bedding and articles not in constant use; pad the top well with curled hair, hay, or cotton batting; cover smoothly with calico, put a curtain around it; add one or two large square pillows covered with the same material, and a strong loop to raise the cover by, and your lounge is finished. Several smaller boxes covered in the same way will make nice ottomans. Old chairs which have been put away as too shabby to use, mended and covered to hide defects, are as easy as new chairs. Barrel chairs are made by cutting a barrel into the shape of a chair;

rope is then put across bed-cord fashion to form the seat, the back and sides are padded, and then it is all covered smoothly with enameled cloth, calico or worsted goods; a cushion is made of the same material.

If you have not got an old table which you can spare for your room, "John" can make one, if he is at all handy with tools, which, when varnished and covered with a large table cover, will answer every purpose. I am not much of a carpenter, but I made a toilet table by setting an old shoe-box on end and nailing on the top of this a board of the right length and width. I padded this, put a curtain around it, and it was finished; one or two shelves in the box would be convenient.

If you have pictures which can be framed, your walls need not look bare long; you can make cone frames by gluing cones on a foundation; moss or lichen frames by sewing the moss on stiff pasteboard; rustic frames, by gluing bits of bark, twigs, etc., on a foundation, or by taking wood with the bark left on, cutting the proper length and width and fitting carefully at the corners so they will be true. Then there are frames made of paper stars, of perforated paper worked with worsted, and frames of different kinds of seeds and grain; yellow corn makes a pretty frame, and also rice sprinkled thickly over a frame made of pasteboard; then color with stain varnish; and any one can make straw frames. Many fancy articles can be made of straw by soaking the straw in warm water and then flattening them and glueing them on your foundation.

In this way you can make baskets, letter-cases, wall-pockets, paper-racks, boxes, brush, comb, and card-cases, brackets and many other articles. Of the bark of white birch you can make many fancy articles besides those of which I have just spoken. Twigs of the Norway spruce also make up very prettily. Those fungi which grow on the trunks of trees make nice brackets by simply varnishing them and nailing a strip of leather on the back by which they can be suspended.

For a corner bracket cut a piece of wood in a three-cornered shape, only rounded on the outer edge; nail pieces on the side of this, by which it can be fastened to the wall; stain the top a dark color; make a lambrequin by working a pretty pattern on canvas cut in deep scallops; put on the edge a heavy bead fringe, and tack to the bracket with ornamental tacks. A simple way to make a lambrequin is to cut a piece of rep or flannel in deep scallops, pink the edges, cut leaves out of black velvet or cloth of a contrasting color, and apply them to the rep with button-hole stitch.

Other brackets may be made of very heavy pasteboard cut in fanciful designs, and covered with rice, cones, or almost any kind of seed, glued on in fanciful designs. If you can, get John to make brackets of cigar boxes, and have him put up a mantel-shelf; stain the top; then make a deep lambrequin to hide the supports, which of course will not look as well as they would if made by a professional cabinet-maker.

Then by all means have some flowering plants in the window. By the way, tin fruit cans make nice flower-pots; cover them with lichen, moss, or bark. Crocheted covers are pretty; crochet them the right size and shape; starch very stiff, and dry on the pot they are intended to cover; then varnish with stain varnish.

Much more might be said on this subject of home-furnishing, but I see that this article is long enough. I hope some of you will try these suggestions; if you

do you will be surprised to see how comfortable and home-like your room will look at little expense.

With best wishes for your success in this undertaking, I remain your friend in all matters pertaining to fancy work and home decoration. MARY E. MURRY.

### PICTURE FRAMES.

Every one wants picture frames. I scarcely ever go in a house, that some one does not tell me of some picture they have, but can't use them because they cannot afford to buy frames; and such was my trouble for a long time; but now I make them, even for very large pictures, and every one pronounces them beautiful. Some, indeed a great many, have taken them for handsome carved walnut frames.

My method is very simple and easy. I first have a rough wooden frame made, no matter how rough, and cover it with dark brown cambrie or calico; when that is dry, lay it flat on a table, and glue on it the scaly bark from the sycamore tree. After you have covered your frame in this way, varnish it with copal varnish. Then cut small slips of wood with the edges rounded off, and cover with gilt paper, to look like the moulding in walnut frames; be sure to cut the pieces to fit exactly, and tack them on your frame. If in glueing on the bark it should curl, tack it on with a small tack.

A pretty ornament for a parlor is very easily made in this way: Have a wooden cross made of timber, one and three-fourths inches square; make the cross eighteen inches high by twelve inches across the arms; then place it on a base formed of two pieces of board about an inch in thickness; the top piece must extend out around the cross some distance. A good size for the proportions above named is one and a half inches by five inches; the second board must be placed under this, and must be one and a half square inches larger, so it will form a base, like two steps, leading to the cross. In the centre of the base cut a hole and fix in the cross firmly; when this is completed, cover it over with white paper without lines; then spatter it over until it is quite dark—almost as dark as granite—with India ink; dissolve some India ink in a saucer, dip an old tooth brush in it, and pass it lightly over a hair-pin; this will cause the ink to fall in tiny spatters on the cross. It takes some time to make it really dark, but if you persevere, your patience will be rewarded. When this is done, take the brightest autumn leaves you can get, and form into a wreath; begin down on the base with quite a cluster, as if it was growing there; place a small tack now and then under the leaves, and use fine wire in forming your wreath. This can be worked over the tacks, and not be seen; commence, as I said before, at the bottom of the base, down low, rather to one side, and bring around the cross, then under the arm, and over the top, falling gracefully over and below the other arm. You can't think how beautiful it is, and how rich and gorgeously the leaves look. I made one some time ago; it brightened the whole room in which I placed it. If your leaves should curl or fade, you know they can be easily replaced every fall; but they last for months. E. W. H.

**Oatmeal for the Complexion.**—A writer in the *Household* says that she uses oatmeal twice a day to make her face smooth and rosy. Take the dry meal, a little on a preserve plate, pour on just enough cold water to make thin, strain through a little sieve, and dipping a cloth into the water, wash over the face once or twice and let it dry. The result will be a beautiful complexion.

## Household Elegancies.

## A BEAUTIFUL PORTFOLIO FOR PRESERVING PRESSED LEAVES AND GRASS.

A pretty and substantial method for preserving leaves and grasses is shown in our illustrations:

Cream tinted paper of moderate thickness is cut into as many pages of uniform size as may be desired, and upon one side of each page the leaves and sprays are fastened with floss silk or the narrowest ribbon. The cover is composed of card-board, and ornamented with spatter work; two loops of cord extend from the lower cover at each side, and are caught over buttons upon the upper one, holding the edges firmly and closely together.

Another mode shows the pages arranged in one continuous strip, and then folded to the size of the cover; the method first described, however, will be found preferable.

shape. Sew it on to pasteboard of the same shape; bend this rounding. Cut out a back to fit it, and let the back extend up and form a cross; cover the cross with black velvet; cut a strip of white perforated card-board somewhat narrower than the cross; one for the standard, one for the arm, and one for above the arm; sew these on as they will not stick fast to the velvet with mucilage; then cut strips a little narrower than the first ones, and so on until you fill out the whole cross; these can be fastened on with mucilage. For the front part where it is sewed together, cut a strip of tin foil an inch and a half in width; with small scissors

PORTFOLIO FOR PRESERVING LEAVES, ETC.

sors cut a fringe on both sides, leaving enough in the centre to stick it on by; place five of these strips on, having every one a little narrower than the preceding one; then take a small natural leaf, cut some by it out of the green part of the curtain; vein them with a brown crayon pencil; wind some wire with green zephyr; lay a small pleat in each leaf, sew them on the wire, make a few small flowers to imitate vine flowers, fasten them on, sew the bottom of the wire in each corner of the pocket, and make a small loop to hang it up by.

A handsome card-basket can be made, having the foundation of stiff pasteboard; cut a strip a finger wide and three-quarters of a yard in length; join together and scallop the top; cut a bottom to fit and join together; gather some sweet corn husks, the inside ones are best; color some of them pink with ani-

trim the top of it with husk work, line the under side with white silk, also inside of basket with white silk. Sew a cluster of preserved autumn leaves on top in the centre of the handle. The husks make much richer work than paper does.

A delicate and pretty hanging basket for corner of a room may be made in the following manner:

Make the foundation of pasteboard, in the shape of a bird's nest, only larger and longer. Take a strip of tissue paper, double it four times, having it three or four inches in width after being doubled; cut a fringe on one side, leaving enough on the other side to stick it on by; with a knife crimp the fringe; then pick it apart. Begin at the bottom and paste it on, always fastening one strip a little above the other, and so on until you fill the basket up to the top. As you get near the top make the fringe shorter. Put an artificial rose and leaves in the centre of the basket, on one side, for the front. Make quite a long handle to hang it up by; taking a strip of pasteboard, cover it entirely with the fringe; arrange a few buds and leaves on top of the handle so as to droop forward toward the front of the basket.

Phantom baskets are pretty made of raveled cloth, red, white, and blue.

You can make a rich-looking hanging basket for vines by taking a large cocoa-nut shell and gluing small cones all over the outside surface; glue a strip of grape vine on to hang it up by.

A toilet stand for bed room of simple materials: Plain thin white muslin, over pink cambric, will produce a pretty effect at little cost. Take a box the size of a washstand bureau; set it up lengthwise, with the open side toward the wall; cover it smoothly with the cambric; then with the muslin, laying a box pleat about seven inches apart, letting them extend the length of the box; place small pink bows between the pleats, seven inches apart. Cover the top the same as the sides. Finish the edge with a box pleated ruching. Place a bow on each corner.

**JARDINIERE.**

The framework is of bamboo. These frames are sold at most fancy-work shops, with a tin tray to put the flower-pots into. To hide the tray, drapes of embroidered cloth are placed in each division; these are pinked or cut in points at the edges, and ornamented round with simple design in embroidery. A scroll in braid or embroidery ornaments the middle of each drape.

## HOME-MADE ARTICLES.

Why not make them? Any one that has any ingenuity can, by saving pieces and bits of this and that, form them into beautiful things which will make any home pleasanter.

A very rich lamp mat can be made by taking a piece of dark red velvet, cut it round, (I prefer it quite

PORTFOLIO FOR PRESERVING LEAVES.

large), scallop it around the edge, sew a red worsted rose, a shade lighter than the velvet, in every other scallop, and in every other one a fringe over an inch wide, knit of green variegated zephyr, to imitate moss.

Wall pockets are pretty made out of soiled oil cloth curtains. Cut out a design in one of the corners, (you will surely find one bright corner), in some fanciful

line, and some green; cut a piece an inch square, double it in the centre, then double again. Enough has been said in the CABINET in regard to paper work to enable any one to know how to make and arrange it.

Always dip them in water so as to make them pliable before cutting them. Sew them on, overlapping each other, in forms you like best. Make a handle,

Make two catchalls, one for the waste matches, one for the others, by taking two goose eggs, or gourds; break at one end, empty out the contents. With sharp scissors cut off three-quarters of an inch. Crochet covers to fit them, out of pink zephyr; run a cord around near the top, fasten a cord on to hang it by, sew a bow on each side and three ball tassels on the bottom.

P. C. W.

JARDINIERE.

## Fireside Reading.

### A NEGRO CAMP-MEETING HYMN.

Why don't you do as Peter did,  
A-walking on the sea?  
He throwed both arms above his head,  
Crying, "Good Lord, remember me."  
Then remember the rich and remember the poor,  
And remember the bound and the free,  
And when you are done remembering around,  
Then, good Lord, remember me.

If I could stand where Moses stood,  
And view the landscape o'er,  
I'd throw these legs as fast as I could—  
And I'd go for the milk-white shore.  
Then remember the rich and remember the poor,  
And remember the bound and the free,  
And when you are done remembering around,  
Then, good Lord, remember me.—*Chicago Tribune.*

**Lively Butter.**—There is an old goat owned in Detroit which has received a great deal of training from the boys. Last Fourth of July they discovered that if they stuck a fire-cracker in the end of a cane and held it at William, he would lower his head and go for them; and they have practiced the trick so much that the goat will tackle any human being who points a stick at him. A few days ago he was loafing near the corner of Third and Lewis streets, when a corpulent citizen came up and stopped to talk with a friend. They happened to speak of sidewalks, when the corpulent citizen pointed his cane just to the left of the goat, and said:

"That's the worst piece of sidewalk in this town."

The goat had been eyeing the cane, and the moment it came up he lowered his head, made six or eight jumps, and his head struck the corpulent citizen just on "the belt." The man went over into a mass of old tin, dilapidated

butter kegs and abandoned hoop skirts, and the goat turned a somersault the other way, while slim citizen threw stones at a boy seated on a doorstep, who was laughing tears as big as chestnuts, and crying out:

"Oh, it's 'nuff to kill a feller!"

**Preaching Politics.**—A worthy deacon hired a journeyman farmer from a neighboring town for the summer, and induced him—although he was unaccustomed to church-going—to accompany the family to church on the first Sabbath of his stay. Upon their return to the deacon's house, he asked his hired man how he liked the sermon. He replied:

"I don't like to hear any man preach politics."

"I am very sure you heard no minister preach politics to-day," said the deacon.

"I am sure that I did," said the man.

"Mention the passage," said the deacon.

"I will," he said. "If the Republicans scarcely are saved, where will the Democrats appear?"

"Ah," said the deacon, "you mistake; these were the words, 'If the righteous scarcely are saved, how will the ungodly and wicked appear?'"

"Oh, yes," said the man, "he might have used those words, but I know mighty well *what he meant.*"

**Cyrus, King of Persia,** when a boy, was asked what was the first thing that he learned. In reply, he said: "To speak the truth." This is one of the most important lessons of life, and cannot be learned too early. There is no attribute of our being more beautiful than truthfulness; it sheds a glory upon the whole character; it does away with all distrust, inspiring, in its stead, sentiments of faith and confidence.

A story is told of a shrewish Scotchwoman who tried to wean her husband from the public house by employing her brother to act the part of a ghost and

**Spoilt his Poetry.**—There are few jokes that make better fun than secretly piecing out a friend's unfinished line. The trick is a practical and verbal joke in one, and harmless—unless a sacred beginning is burlesqued by a ridiculous sequel.

It is related of Dr. Mansel that when an undergraduate of Trinity College, Cambridge, he chanced to call at the rooms of a brother Cantab, who was absent, but who had left on his table the opening of a poem, which was in the following lofty strain:—

"The sun's perpendicular rays  
Illumine the depths of the sea,"—

Here the flight of the poet, by some cause, stopped short; but Mansel, who enjoyed a joke, completed the stanza thus:—

"And the fishes, beginning to sweat,  
Cried, 'Goodness! how hot we shall be!'"

**On the Wrong Lay.**—A certain Lincoln county huckster, who deals principally in butter and poultry, invariably asks a little more for these luxuries than any of his neighbors. When asked his reasons for so doing, he always replies after this fashion:

"Well, sir, that's an extra quality of butter: it was made by my wife's aunt, sir—one of the best housekeepers in the State. Those chickens are a superior article, sir; they were raised by my wife's aunt, sir, and what she doesn't know about raising chickens ain't worth knowing, sir."

This peculiarity has been remarked by his customers, and they are in the habit of commenting on it quite freely behind his back. The other day a very solemn-looking individual entered the store, and, walking up to a basket of eggs, inquired:

"What do you ask for eggs?"

"Fifteen cents a dozen," was the bland reply.

"Fifteen cents?" exclaimed the melancholy customer. "Why, I can buy them anywhere at ten—but, may be your wife's aunt laid these eggs!"

The owner of the hen fruit hung his head, looked thoughtful for a moment, and replied:

"Take 'em along at ten!"

A letter from one tramp to another was picked up in Fair Haven, Vt., the other day, which closed as follows: "u won't ketch me in this stat agin, my advise to u iz to go bak to york stat, ceep elere of vermont for it iz not a good hum fur a sensativ tramp."

"Skip the hard words, honey, dear," said an Irish school-mistress to one of her pupils; "they are only the names of foreign countries, and you will never be in them."

GRANDMOTHER'S TEA-PARTY.

frighten John on his way home. "Wha are you?" said the guidman, as the apparition rose before him from behind a bush. "I am Auld Nick," was the reply. "Come awa' man," said John, nothing daunted; "gie's a shake o' your hand—I am married tae a sister o' yours."

A learned and eloquent bishop was very anxious to convert a Parsee, who was making some stay in London. "I cannot think," said he, "how any man of intelligence and education, whose mind has been enlarged by travel and association with men of different opinions, can worship a created object, such as the sun." "Oh, my lord bishop," returned the Parsee, who had not been fortunate in the weather since his arrival in England, "you should see it; you have no idea what a glorious object it is."

## Housekeeping.

## PRIZE RECEIPTS FOR COOKING.

BY MRS. CAROLINE E. COCKS.

*Aunt Sophia's Plain Wheat Pudding.*—One quart of sweet milk, one pint of flour, five eggs, half a teaspoonful of salt. Wet the flour gradually with the milk, add the salt, then the eggs, beaten very light. Bake in a quick oven three-quarters of an hour. Eat with hard sauce.

*Hard Sauce.*—One teacup of light brown sugar, half a teacup of butter, one teaspoonful of milk, flavor with lemon or vanilla, cream the butter, add the sugar, milk and essence, and stir until white and frothy.

*Aunt Jany's Plum Pudding.*—One pint of milk, two eggs, half a pound of beef suet, one pound of currants, one pound of raisins, quarter pound of citron, one teaspoonful of soda, one of cinnamon, one of cloves, one-half of salt; flour sufficient to make a stiff dough; mince the suet very fine; beat the eggs; then rub the flour and suet together; add the other ingredients. It is best to mix it over night. Boil three hours and eat with hard sauce. (See Hard Sauce.)

*Breakfast Dish.*—Half a pound of smoked beef cut thin, one pint of milk, one egg, sprinkle of pepper; cover beef with cold water; let it simmer five minutes, then pour off most of the water; add the milk and beaten egg; simmer one minute, and you have a fine dish for breakfast or lunch.

*Ham Omelette.*—Five eggs, one-fourth pound of ham, three-fourths cup of milk, one tablespoonful of flour; first cut the fat of the ham in very small pieces, and put them in the omelette pan; cook a few minutes, then add the lean ham cut in the same way. Be careful not to burn while cooking. Mix the flour and milk together, a little milk at a time; beat the flour and milk together, add the beaten eggs, and pour all on ham in the pan; do not stir it, but let it remain on a moderate fire until nicely brown. Run a knife round the edge, put a plate on the top, and turn it out.

*Tomato Soup.*—One quart can of tomatoes, one quart of milk, one pint of water, half a teaspoonful of soda, five soda crackers, one tablespoonful of butter; let the tomatoes boil five minutes; season with salt and pepper, add the water and milk, with soda in the milk. After coming to a boil put in crackers rolled very fine, and the soup is finished fifteen minutes from the time commenced. Eaten with crackers the taste is almost equal to oyster stew.

*Clam Soup.*—Fifty hard clams, one quart of milk, five soda crackers, one tablespoonful of butter; wash the clams well in two or three waters, put in a pot with one quart of water; cover close; when open take out of shells, settle and strain the juice; put it in a pot with the clams; boil ten minutes; add milk, pepper, butter, crackers rolled fine, and boil one minute.

*Beefsteak and Onions.*—One and a half pounds of beefsteak, one-fourth pound of beef suet, one quart of onions; cut the suet in thin pieces; lay on the bottom of a flat pan; put in the steak cut about three inches square; peel the onions, cut in thin slices and lay on the meat. Sprinkle with salt and pepper, cover tight, and cook over a slow fire for one hour.

*Breakfast Dish.*—When you have beefsteak left from dinner, cut it in small pieces; to one teacup of this put two teacups of onions cut in slices, three cups of potatoes cut in small chunks; sprinkle with a little

salt and pepper; cover with boiling water, and let it simmer one hour over a moderate fire.

*Codfish.*—One pound of salt codfish, one egg, one pint of milk, one tablespoonful of butter; pepper; soak codfish twenty-four hours before using; change the water twice; put on fire and let it remain twenty minutes; pick it very fine; add the milk and beaten eggs; sprinkle of pepper; butter, and let it simmer five minutes.

*Fresh Mackerel.*—Wash the fish clean, dry with a cloth, sprinkle with salt and pepper, and rub a little flour on them, have your pan hot, put in a spoonful of lard, lay the mackerel in, skin up, and fry a nice brown; turn over; when brown on both sides, serve on a dish.

*Corn Fritters.*—Twenty-five ears of corn grated, one egg, two tablespoonfuls of flour, one cup of milk, one teaspoonful of salt; mix the flour and milk and beaten eggs well together; heat your pan hot and fry in hot lard.

*Potatoe Fritters.*—Fifteen potatoes, one pint of milk, four eggs; boil your potatoes and mash them fine as possible; then add a lump of butter the size of an egg, a little salt, the milk and eggs and thicken with a little flour; drop with a spoon in boiling lard and brown on both sides.

*Strawberry Shortcake.*—Five cups of prepared flour, one cup of butter, half a cup of sugar, one pint sweet milk; rub the butter in the flour, making it like tea-biscuit, with the milk after adding the sugar; bake in jelly pans; cut in thin slices; butter each slice; have the strawberries well sugared; put them between and on top; eat with cream and sugar.

*Economy Cake.*—Three cups of sugar, two cups of sweet milk, four cups of flour, two eggs, four tablespoonfuls of butter, two teaspoonfuls of soda, four of cream of tartar, half a nutmeg.

*Ginger Nuts.*—One teacup of butter, two of molasses, one tablespoonful of ginger, half a tablespoonful of soda; sufficient flour to mix stiff; cut in cakes and bake quickly.

*Corn Bread.*—Four cups of Indian meal, two of flour, one-fourth cup of molasses, one teaspoonful of salt, one of soda, one or two eggs; mix well and bake three-quarters of an hour.

*Wheat Pancakes.*—Three eggs, one pint of milk, one tablespoonful of butter, one teaspoonful of soda, one of salt; flour to make a batter; mix well together; have ready a round pan with hot lard; put in four tablespoonfuls of batter; brown on both sides; put on a hot plate; spread with butter, sugar, and a little nutmeg; make another one in the same way and lay on top of first one, and so on till all the batter is used. Cut in pieces as you would a pie.

*Buckwheat Cakes.*—Five cups of buckwheat, one and a half cups of Indian meal, half a cup of wheat flour, one cup of yeast, one teaspoonful of salt; mix over night with sufficient warm water to make a batter.

*Rusk.* One pint of sweet milk, half a pound of sugar, half a pound of butter; warm the milk; melt the butter and sugar in it; add two tablespoonfuls of good yeast, a little salt; add flour enough to make it as thick as cake; when light, knead it again a little stiffer; when again light, knead over; cut in cakes; put in your pan; let it rise again, bake about twenty minutes. Take it out, wet the top with a mixture of brown sugar and water, or syrup and water.

*Biscuit.*—When your bread is light take off a piece of your dough; roll it out, dot it with butter; turn it over and roll the butter in well; let it rise again, make out in cakes and bake in a hot oven fifteen minutes.

*Meat Croquets.*—Take any cold waste meat, or beefsteak, cut off all gristle, etc., chop the remainder very fine, add twice as much mashed potatoes, one egg, a little butter, salt, pepper, and a small quantity of allspice; work thoroughly together; make into small cakes and fry in hot lard.

*Meringue Pie.*—Three lemons, two tablespoonfuls of corn starch, six yolks of eggs, one tablespoonful of butter, two teacups of white sugar; take out the seeds from the lemons, grate the rinds, chop the remainder very fine; wet the corn starch with a little cold water, then pour on to it two teacups of boiling water; let it come to a boil; add the sugar, and when it is cool put in the yolks of the eggs, the chopped lemons, juice, and butter, stirring all together. Line two pie plates with crust; pour in and bake; beat the whites to a froth, adding six tablespoonfuls of sugar; pour over the pies while hot, and bake two or three minutes till a light brown; be careful not to burn.

*Pumpkin Pie.*—One large cup of cooked pumpkin, one egg, one pint of milk, one teaspoonful of salt, one tablespoonful of ginger; sweeten to taste; mix thoroughly and bake with an under crust.

*Recipe for Mangoes.*—Take mangoes, cucumbers, snap-beans, radish pods, and gherkins for the pickles. Cut a slice from the side of each mango and remove every seed. Put them all in a jar, and having boiled as much strong salt and water as will cover them, pour it on them hot, and cover them thickly with grape leaves. Do this every morning till they are quite green, and then every other morning till you are ready to put them in vinegar. They will at first be yellow, but will turn green after repeated scaldings. Make a stuffing for the mangoes as follows: twelve ounces ginger, half a pound garlic, one pound or less of horse-radish, one pound white mustard seed, two ounces cloves, two ounces black pepper, two ounces allspice, two ounces celery seed, the whole mixed into a paste with sweet oil. The ginger should be crushed in a mortar, the horse-radish scraped, and cut into small pieces. After stuffing the mangoes, sew in the slices that were taken out, put them and the other pickles in a jar, sprinkling the stuffing that may be left between them, fill the jar with cold vinegar, and in three weeks pour that from them, and fill the jar again with strong cold vinegar.

*To Make Souse of Hogs or Pigs.*—Select as many heads and feet as you wish to souse; the whitest are the best; put them in cold water and let them remain a day or night. Then remove and have them nicely cleaned; cut off the ears and have them cleaned also. Put them again in water, sprinkle with salt; shift or change the water twice a day. Let them soak till they look white, but not till they smell in the least, which is likely, unless they are strictly attended to. When sufficiently soaked, remove, clean again nicely, and boil in plenty of water till well cooked. Then remove all the bones from the heads and feet, chop the meat well, season with salt, black pepper, and allspice to your taste, and while hot press it into dishes or pans and place weights on each till cold. When ready for use, slice and eat with vinegar. A very nice way is to slice it, dip into batter and fry. In seasoning the souse, also put in vinegar with pepper and salt, and set the vessel on the fire. Stir the whole well together, and press into cakes as above.

### Madame FOY'S CORSET SKIRT SUPPORTER

Increases in Popularity every year,  
And for HEALTH, COMFORT and STYLE, is acknowledged the BEST ARTICLE of the kind ever made. For sale by all leading jobbers and retailers. Beware of imitations and infringements.  
MANUFACTURED SOLELY BY  
FOY & HARMON, New Haven, Ct.

**50** VISITING CARDS handsomely printed, 10 cents and 3 cent stamp by return mail. No nicer ones in the world at any price. One agent writes: "I know about fifty places to get cards, and like yours the best." "Neatest and best we ever saw." "Never so well suited before"—or similar expressions, come by nearly every mail. My list of 2,267 kinds of cards, 103 samples of type, agents' list, etc., with each order. Write names plainly, and if you are not more than suited, I will refill your order or refund your money.

BOSTON, MASS.

### INVALID RECLINING CHAIR ON WHEELS.

Occupant can lie down or sit erect in it.

MADE BY  
NEW HAVEN FOLDING CHAIR CO.,  
NEW HAVEN, CONN.

## MUSIC BOOKS! THE SHINING RIVER

Of this and similar books for Sabbath Schools it may be said, that most of the hymns are equally good for Adults, and for more youthful singers. There is no "age" about them. Do not fail to add the pure and sweet contents of this collection to what you love and use in public and at home. Price **35 cts.** Reduction for quantities.

### MRS. VAN COTT'S PRAISE BOOK!

This new book is to take its part in the future work of a most successful revivalist, and it will be used by all denominations. Price **35 cts.** Reduction for quantities.

### GOOD NEWS! GOOD NEWS!

All have not yet heard it, but all should do so. A charming collection of lyrics for Sabbath School or other meetings. Don't sing in one good book forever, but try the new books and the new authors. Price **35 cts.** Reduction for quantities.

### Ditson & Co's Musical Monthly

20 pages of Music, Sheet Music size. Choice and new pieces, Vocal and Instrumental. For sale by all Music and News Dealers.

Any book sent by mail, post-free, on receipt of price.

# Window Gardening.

By HENRY T. WILLIAMS,

Editor Ladies' Floral Cabinet, N. Y.

## RICHLY ILLUSTRATED WITH EXQUISITE ENGRAVINGS.

An Elegant Book, with 250 Fine Engravings and 300 Pages,

Containing a Descriptive List of all Plants Suitable for Window Culture.

A ready and invaluable aid to all who wish to adorn their houses in the easiest and most successful manner with plants or vines, or flowers. Instructions are given as to the best selection of plants for Baskets or Ferneries and Wardian Cases. Several chapters are devoted to Hanging Baskets, Climbing Vines, Smilax, and the Ivy, for decorative purposes. Bulbs for House Culture are fully described; also ornamental Plants for Dinner Table Decoration. Other topics are well considered, such as Balcony Gardens, House Top Gardening, Watering Plants, Home Conservatories, Fountains, Vases, Flower Stands, Soil, Air, Temperature, Propagation, Floral Boxes, the Aquarium, Rustic Conveniences for Household Ornament, and directions in detail for the general management of in-door plants for the entire year throughout the winter, spring, summer and fall. The volume is profusely illustrated with choice engravings, and pains have been taken to make it one of the most attractive books ever issued from the American Press. For sale or supplied by Bookstores everywhere, or sent postpaid by mail on receipt of price.

Price **\$1.50.**

### Every Woman Her Own Flower Gardener.

By Daisy Eyebright (Mrs. S. O. Johnson.)

A delightful little volume, written by a lady fond of flowers, as a special help and assistance to others interested in out-door flower gardening. Simple directions are given, how to lay out and plant Flower Borders, Ribbon Beds, and arrange ornamental plants. Among the topics treated are Geraniums, Fuchsias, Bulbs, Ornamental Flowering Shrubs, Everlasting Flowers, Ornamental Grasses, Coleus, Paeonies, Shade Trees, Garden Vegetables, Old Fashioned Flowers, Annual Flowers, Perennials, Ornamental Vines, Lawns, Insects, Manures, Watering Soils, When and How to Plant, Dahlias, Lilies, Gladiolus, Verbenas, Cannas, Balsams, Portulacas, and nearly all the popular varieties of flowers and shrubs. The book contains 148 pages, is charmingly written by one deeply in love with the subject, who appreciates the tastes of ladies and aims to do good with agreeable, kindly advice on home gardening. For sale or supplied by Bookstores everywhere.

Price, in handsome Pamphlet Covers, 50 cents; bound in Cloth, \$1; postpaid by mail.

## Floral Contributions.

## SOMETHING ABOUT PLANTS.

Naturally, I have quite a love for plants, and during the last four years circumstances have caused that love to develop into a grand passion. The circumstances were these:

One morning, about four years ago, I realized the fact, which my friends had realized for some time previous, that I had a disease about me which would render me an invalid for life and that my life might stretch over many years. Only those who have been in like distress can even imagine the extreme bitterness which mingled with all my thoughts that morning. At length I resolved that my living should not be wholly disagreeable to others as well as to myself, and that the way to help myself overcome the fretfulness and general disagreeableness incident to sickness was to keep the mind fully occupied with other thoughts than of self. I caused my sick-room to hold as many plants as it had places for, and obtained works upon plant-life, thus studying their individual needs. I soon found that while I ministered to them they gave happiness to me in tenfold measure.

This year I have been able to cultivate them out of doors as well as indoors; and while remembering the days of pain they have helped me so much to bear in a less fretful way, I thank the Giver of all good things that He gave us plants and gave me a sense of appreciation of their wonderful life and beauty.

Very many people who came into my room said to me, "I don't wonder you are sick, with so many plants about you!" How could I explain to such what they were to me? How much of happiness and consequent health they gave me? They ought to have known as well as I that only flowers, stems and leaves which are decaying give out poisonous gases. I was careful to have all such picked off and to keep the plants in a perfect state of health.

I think that vegetation is a sure index of the healthfulness of a room; where that will flourish the human life will flourish, too, and, *vice versa*.

On the stove was always a shallow dish which was kept full of water, thus providing a moist atmosphere; once a week every plant had a bath in warm water. This is very easily accomplished by fitting a damp cloth over the earth to prevent its shattering off; while holding the cloth firmly the pot can be tipped in any position desired. If any should become infested with any of the many plant enemies—which is very seldom—dip them in a strong tea made of tobacco leaves; this will give their foliage a bright, fresh greenness, besides killing insects.

Three years ago I sent to a florist for a small quantity of tobacco seed, and since it has sown itself, and, if let alone, a sufficiency for such purposes will grow and mature. Gathered before the frosts come and placed "up attic," one need never dread the care of plants.

Those which have rough leaves and stems, like Chinese Primroses, showy-leaved Begonias, and some Coleus, do not like "dipping;" so the dust can be blown off such. Just here I must tell you how I succeeded with Chinese Primroses, both plants and seeds. Last spring I sent to a florist and obtained three different varieties, and after potting them, seemed to do well until at the end of two weeks I noticed that they were decaying at the tops. I never had seen anything like it before, so I went to books for information, and I concluded it must be that mildew had attacked them.

I dosed them with sulphur, both plants and earth, but all proved of no avail, and in about two months after getting them they were all dead.

Determined not to be beaten in that way, I then procured a package of seeds containing mixed varieties, and sowed every seed, as I supposed I should probably have only a few plants from all. When I wish to germinate choice seed, I fill a box about six inches deep with soil composed of one-third part each of good garden soil, which has been sifted to free it from all stones, and dirt found in decayed apple trees, and fine cow manure; to this mixture I add enough sand to give it a slight sandy appearance. On this I place my seeds, sift just enough soil over to cover them—they are of quite good size—and water with warm water until the earth is soaked; place a glass over the box, and set it on the top of the sitting-room stove. I did this way with my Primroses, and in a week they began to show their tiny leaflets; the next day I removed them to a sunny window and took off the glass, remembering to replace it evenings to remain over them until the next morning.

Plant after plant showed itself, and as fast as any of them attained their fourth leaf, I transplanted them into the same kind of soil with more sand added. When the weather was warm enough, I put the pots out in the garden under a tree, and there they have lived and flourished all summer; this fall they were transplanted where they were to grow through the winter, and finding I had no room for all, curiosity prompted me to count them, and I found there were sixty-eight.

Many of them have gone into other homes to cheer our northern winter-life, but I took good care that they all went where they would be well cared for. I never had plants of any kind do better, and I found them very tenacious of life under adverse circumstances, have crowded them in among other plants, and have them alone, and either way they do equally well, always remembering, however, that they do not like the full blaze of the sun, are impatient of heat, and do not like water on the leaves or stalks. At present more than two-thirds of mine are budded, and many of them are just ready to expand into full bloom.

I think that the best success is had with all choice plants outside of a greenhouse, when they are raised from seeds, or cuttings rooted in the same house where they are to be grown. Then they have the same air from the commencement of their lives.

Cuttings of Verbenas must be rooted and started in September to insure an abundance of bloom during the winter months. They, too, like a very sandy soil, but little water and all the sun they can possibly get. Fuchsias seldom get as much richness of soil as they like; they are capable of attaining great size, and will grow fast and bloom abundantly eight months of a year if given very rich soil and manure; water as often as once a week, always remembering to provide plenty of water for them to drink.

After the season of bloom is past, they want rest and will provide it for themselves by refusing to put forth new leaves, and look much as sleepy children do when forced to stay awake—very uninteresting. I put mine down cellar—the Fuchsias, not the children—the first of November, and water the earth while they are there only enough to keep them from drying out utterly, and bring them to the light and heat the middle of January.

I wish I could induce every woman to have just a few plants, if no more than a few can be taken care of well. Their growth is a curiosity, and if one cares for them, one notes the minutest and most delicate

changes of leaf, bud and blossom, and thus they not only fill the mind with other cares such as those of life's daily routine, but they must elevate the thoughts—lead their owners to think of the Creator's creative power and goodness. Who, other than He, had the skill to plan such variety?

A Fernery, after it is filled, is very little care and trouble. I put a thick layer of dry moss in the bottom of mine for the purpose of absorbing all superfluous moisture; above this, small pieces of wood coal to the depth of an inch, and over this the soil, in which can be planted Achyranthes, Begonias, Ivies, any and all pretty creeping vines from the woods, Coleus, Ferns, and almost all tender kinds of plants.

Have the glass case fit tightly; give air by raising this case about ten minutes each day, and give water only when no moisture gathers on the glass, which latter case will not occur oftener than three or four weeks. If the plants cannot have the sun they do not mind, but keep on flourishing, blooming and thanking their owners for giving them such nice, comfortable quarters during the chilly months when their out-of-door companions are forced to cover up their heads lest Jack Frost should behead them some night.

Another combination of plants, whereby space and care are economized, is to put many in the bowl of a rustic stand, or, having had a tinsmith fit to the top of some old stand a zinc pan, arrange them in that. If casters are on the feet of the stand it can be easily moved to suit the convenience of its owner, and by pushing into the soil four small sticks, each a little taller than the tallest plants, newspapers can be readily placed over the whole on those cold nights when protection is needed. Nothing equals paper for that purpose. If any of my pets are particularly tender, I enfold each separately, then placing all together, enclose them in one immense paper covering.

Glazed pots are the only kinds I use; they are always clean-looking, while the unglazed require much washing to keep them presentable, and those which are painted, however handsome they may be at first, in a year or two become unsightly objects. I think any particular kind of plant-holder is not essential to their well-being.

I always insure good drainage by the use of wood-coal broken into bits, and think it preferable to anything else, as, if too much water should chance to remain in the soil, it corrects any acidity that may occur. All plants need iron in the earth from which they derive their life; a small quantity of refuse iron chips or filings, which any blacksmith will be glad to have taken from his shop, dug into the top soil will assist them much to put forth vigorous, healthy-looking leaves, and will deepen and intensify all the hues of colored flowers.

"Your voiceless lips, O flowers, are living preachers,  
Each cup a pulpit, and each leaf a book."

A. D.

**Cypress Seed.**—Every person that has ever planted Cypress seed knows that it takes a long time for it to germinate, and it frequently does not come at all, especially if the ground is not kept very moist. My method of sprouting it is a very simple and successful one. I take a large spoonful of cold coffee grounds and put them in a cup, then sprinkle the seed over these grounds, and cover them with coffee grounds, and in from two to four days the seed will all be sprouted, when they can be planted out, and they will grow rapidly. I have used this plan for years.

MARY B. McMILLIN.

## Answers to Correspondents.

**Black Flies on Plants.—The Best Window for Plants.—Should Plants be Grown in Bed-rooms?**—How shall I get rid of the little black flies on my plants? Is it healthy to have plants in a bed-room? Which is best for plants, a western or eastern exposure?

JENNIE ELDERA.

Rome, Mich.

**Answer.**—Tobacco smoke will kill the flies; put the plants under a barrel and throw some damp plug tobacco on some hot coals. Let the plants remain in the fumes about ten minutes, then syringe or water the branches. The best exposure or window for plants is east. One hour of morning sun is worth two of afternoon. Window plants should have as much sun as possible. It is not unhealthy to have plants in a bed-room, unless they are in such quantity as to produce dampness. Plants exhale oxygen and inhale carbonic acid. Animals do just the reverse.

**Begonias for Fernery.**—What species of Begonias are best for a Fernery?

Ravenswood, Ill.

MRS. W. VAN HORN.

**Answer.**—Any of the Begonias with large ornamental foliage do well in a Fernery. Some varieties can be found at any greenhouse. The Fernery should be aired occasionally and not be kept very wet or the Begonias will rot. By ornamental leaved we mean Begonia Rex and its many seedling varieties.

**Soil, etc.**—What kind of soil is best for Calceolaria? How deep shall I cover the seed? Is Clematis cirrhosa an annual? Will Cobaea scandens sprout in the spring from an old root?

Briscoe Run.

MRS. J. P. JOHNSON.

**Answer.**—Calceolaria seed is very small and should be sown as lightly as possible, on the surface of the ground; if watered afterwards, will often sufficiently cover it. The soil should be very fine sandy loam. Clematis cirrhosa is a perennial. Cobaea scandens will not sprout from the root, but if a portion of stem is left, eyes will break. The plant is not hardy where there is frost.

**Jasmine Treatment.**—Please tell me whether Jasminum grandiflorum should be put in the cellar after it has finished blooming, or remain where it will continue to grow? I have kept mine on the plant-stand where it will grow, but the leaves and branches dry up.

MRS. J. L. ANDREWS.

**Answer.**—You would probably lose your plant if you put it in the cellar. The fault in your culture is the air of the room is too dry, and perhaps you do not water enough. The tropical Jasmynes are all evergreen, and do not require drying off.

**Begonias.**—What can be the trouble with my trailing Begonia? It hung in a wire basket covered with moss, and grew beautifully all summer, but ceased blooming in June. Now (Jan. '77) it is beginning to bloom again; but when the leaves are nearly half grown they are covered with little watery looking spots, and drop off.

Cincinnati, O.

ESTHER W. HENDERSON.

**Answer.**—You are probably keeping your plant too cold and wet. If grown in heat this species will bear any amount of water, but it requires more heat than most Begonias.

**Billbergia fasciata.**—Coleus turning black.—When does Billbergia fasciata bloom? Are there

more colors than one? What is the treatment? Why do Coleus begin getting black at the top and continue so downward until they die away?

Galena, Ill.

JOHN F. BRENDEN.

**Answer.**—All the Billbergias bloom as soon as the crowns are strong; the season is usually summer and autumn, but some remain in perfection a long time. We know only one color of B. fasciata. From your description, we think your Coleus must have been frost-bitten. The Coleus is a very tender plant, originally native of the hot island of Java, and it is not well to plant any of the varieties in the garden before all danger of frost is past.

**Temperature for Plants.—Coal Ashes.**—What is the temperature for plants in a sitting-room warmed by a coal stove? Of what use are coal ashes?

H. J. F.

Penn, Clinton Co., N. Y.

**Answer.**—The temperature may rise as high as you would generally keep it, if you keep the air moist. It is dry heat which injures plants. Coal ashes are of no horticultural value.

**Turk's Head Cactus, etc.**—Why does not my Turk's Head Cactus bloom? It is thirteen years old, six inches high, fourteen inches in circumference? When does it bloom, and what flower does it have? A neighbor has had a Bridal Rose for three years, and an Amaryllis for seven years, which have not bloomed. Why is it?

E. J. L. C.

East Haddam.

**Answer.**—The Turk's Head Cactus grows to a great size and does not bloom until old; from the size, yours should bloom; but when it does you will be disappointed. The flowers are very small, in a circle near the top, and are pink, red, yellowish, or white. The Bridal Rose is not a rose, but a double flowering Bramble. It should bloom on the young wood very freely. Probably the shoots are too weak; repot it in good soil and give it plenty of sun. The Amaryllis should be dried off in autumn and allowed to rest all winter. Repot it in the spring, and it will probably bloom.

**A Rockery.**—Our house is on a side hill, and we are obliged to terrace the front. I am anxious to save a large maple tree, the roots of which are somewhat exposed and present a rough appearance, which I think may be improved by a rockery being built under it. Please give me your assistance.

Ottumwa, Iowa.

MRS. J. I. DOUGLASS.

**Answer.**—By piling up rugged, angular rocks in a rude way under the roots of the tree, it can doubtless be saved and many delicate plants could be grown in the chinks of the rocks. Make the arrangement as natural as possible, that is, avoid all formal arrangement. The effect you should aim to produce is that the tree sprung from them. Let the chinks between the rocks be deep and filled with good soil. Many plants which seem to grow on bare rocks send their roots far below the surface and feed upon the alluvial deposit in some chink of the rock, where the lower soil is always moist, no matter how dry the surface may be. The maple tree will in time, however, send out roots which will appropriate your whole rockery. The masses of rock or heaps of stone which we often see as "rockeries" have no beauty and only serve more conspicuously to display the misery of the stunted plants placed upon them.

**Lily of the Valley.—Keeping Geraniums.**—Why cannot I succeed in getting Lily of the Valley to bloom? Out of forty stalks but one has a flower-stem. Can you give me any experience as to keeping Geraniums through the winter tied up in bundles with the dirt removed? What kinds will keep in that way? Would they not do better dried off in the pots? Should the cellar be damp or dry?

Laclede, Ind.

MRS. LUCIE A. SCHROCK.

**Answer.**—Probably the soil is too poor for your Lily of the Valley. The tubers need to be well grown to bloom. In a garden bed probably not one in ten flowers. Manure the bed well with well rotted manure in autumn or early spring; do not let the ground become very dry, and you will get bloom. The flower is worth all the care you can give it. The Zonale or Horseshoe Geraniums will live shaken out in autumn and hung up in a cool, frost-proof dry cellar; but they do quite as well dried off in the pots. Neither mode is the best for keeping them, for they make very good window plants for winter, and do not require annual rest.

**Heliotrope root-bound.**—Does the Heliotrope do well when root-bound?

FLOWER LOVER.

Osborn, Green Co., O.

**Answer.**—It certainly will not succeed. Give it a good soil and repot, as the plant grows large, and the larger the plant the more flowers.

**Culture of Hydrangea, etc.**—What should be the treatment of Hydrangea? Should it be in sun or shade—in wet or dry soil? Should Lilies be set in the open ground, and how early in the season? What should be done with the bulbs after blooming?

Milwaukee, Wis.

MRS. A. C. ALLEN.

**Answer.**—If you mean Hydrangea Hortensia, the plants are best grown in large pots or tubs, as they are not hardy. Let the soil be rich, and give the plants an abundance of water. Set the tubs on a piazza or in the garden in the sun; they will bloom all summer. Let the frost kill the foliage, and then keep the plants in the tubs through the winter in the house cellar. Lilies should be planted in a deep, rich, well drained soil in the garden in autumn or as early in the spring as possible. The depth should vary from two to five inches, according to the size of the bulb. They need not be disturbed for years, and will each year grow stronger and give better flowers. Most Lilies are hardy, but all the species are injured by keeping the bulbs out of the ground. If planted in a very exposed situation, a covering of litter over the bed during the winter is advantageous. A Lily bed should be of rich light soil, never very wet or very dry.

**Aquariums.**—How can I construct an aquarium? Is there any way to prevent the cement detaching itself from the glass?

MRS. J. E. L.

Ada, O.

**Answer.**—A very simple and pretty aquarium may be made by procuring a large glass confectionery case cover, and fixing it upside down in a stand. The best are made of stone, with the glass glazed in lead or set in an iron frame; but they are expensive. If the cement detaches itself from the glass it was not properly mixed.

**Names of Plants.**—Answer to Annie E. Syanes, Lynchburg, Texas. The two small white and blue flowers are species of Vetch (vicia). The larger blue flower we cannot name, but it is not an Ageratum or a Forget-me-not (Myosotis).

## VERBENAS.

No plant excels the Verbena for planting, either in masses or bedding. Its bright colors contrast finely with the green grass of the lawn. It is a universal favorite with all flower lovers. Indeed, no lawn or flower-garden is complete without its bed of Verbenas. They are beautiful both in foliage and flower. Although they are but half hardy perennials, they bloom the first season. And they are so easily grown. The seed falling on the ground, will, if not picked up by the little birds, remain unimpaired through the entire winter, coming up quite thickly the following spring. I got the earliest and strongest plants from self-sown seed; but I always save seed from selected colors, as they range in colors from the brightest red, and a dark blue and purple, to a pure white; and then we have them with such a variety of markings.

Two years ago I procured a variety of striped Verbena plants; and from a particularly choice one, I saved the seed for the next year's planting, and from those seed I had quite a variety. Some were self-colored, and some were striped, and some were speckled and mottled in various ways. Some plants would have a tuss all of a color and another one with a single floweret of another color in the same tuss. The contrast was quite pleasing. While some are delightfully fragrant, others are entirely devoid of any fragrance whatever. I find the light colored ones the most fragrant.

The original plant from which the seed was saved, was white, striped with red. The Verbena has some enemies. The aphid or green lice sometimes attack it, and there is a kind of white lice that work on the roots, sometimes causing the plant to wither and die. For the first named pest, I make use of the dirty suds in washing. Give them a good showering in the evening. It not only rids the plants of the pest, but it is beneficial in the growth of the Verbena. For the ones on the roots a preventive is a little lime or wood ashes mixed in the soil before setting the plants, as they are somewhat hard to get rid of after planting. Occasionally there will be a plant diseased, which can always be told by its puny growth. Better pull it up and give the vigorous ones more room.

The Verbena delights in the bright sunshine. And I have better success with it of a dry season than almost any other bedding plants unless it is the Portulacas. Like Purslane, it will flourish wet or dry. The Verbena does best in a sandy soil. I mix one-fourth sand, an equal amount of well rotted hot-bed manure and soil from the woods, or sods rotted. The ground should be spaded one foot deep and then set the plants two feet apart. Keep the ground loose and peg down the straggling shoots, which will cause them to root at the joints where they come in contact with the soil, and the bed will soon become a perfect mat of bloom. And the more you pluck off the flowers, the more they bloom.

We have one kind of Verbena that is entirely hardy here with us, in latitude thirty-nine degrees north. It is called Verbena Montana in the florists' catalogues. Young plants of it will bloom all the summer. The older ones bloom earlier. They bloom along with the Tulips. The color is a red, changing to a rosy purple. The foliage is of a lighter green than the tender varieties. It is said to be a native of the Rocky Mountains. I don't know of more than the one kind that is hardy here. I don't know whether the tender kinds will mix with the hardy one. I have grown in the same bed, side by side with each other, the two kinds, and saved seed from both, but never could get but the one color.

The Verbena, although a favorite, is not a good house plant in an ordinary dwelling. It is a little "miffy" about being kept in the heated atmosphere of a room.

The Verbena is propagated either by layering, rooting in a saucer of wet sand, or from fresh slips in water. I have grown them frequently from slips in bouquets. I have seen them grown as basket plants, and as pot plants, but they are not at home outside of a bed or mound, where they can roam at will.

[Written specially for the LADIES' FLORAL CABINET.]

## Winnifred's Will.

BY AUGUSTA LARNED.

## CHAPTER XI.

"What God hath joined let not man put asunder."

"She's coming to," said the man in a half whisper, as he bent down over the unconscious burden on the earth. "Look to the dorg, Ben. If he hadn't howled so distressed like, we might ha' passed her by on the road."

The speaker stripped off his miner's jacket, and rolled it in a bundle to support the girl's head.

GROUP OF WINDOW PLANTS.

"Run down to yon spring under the edge of the hill," again addressing the lad, "and fetch some water in yer cap. I wish we had a drop o' whiskey to put in it; 'twould bring her to quicker nor anything."

The boy, who was no other than Sharp Ben, ran down the hill like a squirrel, and was back again in a moment with his cap half full of water.

A HALL WINDOW.

"She's a comely, pale young thing," said the man in a not un pitying tone, though his voice was rough, "and her clothes shows she comes of good folks. I wonder what took her out wandering in the night time."

"There! she's give a big sigh," said Ben, as he helped sprinkle the water with a vigorous hand. "When I tuk a close squint I knowd that dorg, and uow I know the young

'ooman. She's the young 'ooman as com'd up to the mine with the new missis, old Boss's darter. I seed her a-ridin' in the coach, and first I disremembered her yaller hair."

"Hoot!" said the man, drawing himself up straight with astonishment. "That would be a nice fix if you're dead shore you've seen her with the missis. Summats gone wrong at the big house. She's out o' her head, poor thing, for she looks weakly, and they'll be sore perplexed to know what has happened. You're spry in the heels, Ben; and if you take the dorg and carry the news to the young missis, belike she'll warm your pocket with summat handsome. But lend a hand first, Ben, to get the gall into the cart."

Virginie opened her bewildered and unseeing eyes.

"Come, miss," said he in an encouraging tone of voice, "you're a bit faintish, but bear up now, and we'll lift you into the cart."

She gazed at him with woeful, blank, blue eyes, devoid of any sign of consciousness, though she did feebly strive to struggle up into a sitting posture, and was lifted into the cart that stood near, by the man and boy. They moved the cans of explosive material which they had brought up from below for blasting the new works, into the farthest corner, and laying the sick girl on a horse-blanket, placed the folded jacket under her head. The man was deliberate in his movements. He took out a black cutty pipe and proceeded to fill it.

"Here's a bag," sung out Ben, who had been exploring the bushes, "and here's the gall's hat."

"Gie me the hat," returned the man, reaching down for it from where he was perched; "you take the bag back to the big house. It's all you want to prove you true. I've a bit of twine here in my breeches pocket. You can make a noose round yon dorg's neck, so that he don't give you the slip. Tell the missis she'll find the young 'ooman at Mary Smithers's."

This was indeed Mary Smithers's husband, a reticent man and slow of speech.

Old Hector had been sitting on his haunches looking with sad and solemn eye at the proceedings just narrated. When Ben tried to put the string around his neck, he haughtily refused the indignity, but, as if he knew what belonged to a reasonable being, turned and followed the boy down the mountain.

There was a sharp climb over the brow, and then a rough and broken descent of a mile, down which the cart slowly jolted. Smithers puffed away at his pipe, turning now and then to glance at the motionless form that lay as still and pale as a corpse, though even under the gray shawl he could detect a slight heaving of the chest. The day was joyless, and gray, and very still. "Fixing for a snow storm," thought Bob, as he puffed away at his pipe and let the lean cart horse scramble in his own fashion over the rugged ground.

When the slow vehicle did at last approach the hamlet Bob made a short circuit by a side lane in order to enter the little zig-zag street of miners' cabins without attracting all the eyes in the place. But the precaution was needless, for the street was empty. Nearly every door stood open, and a few hens were picking about, but men, women, and children had all run to the mine. Bob could see the crowd huddled about the shaft's mouth, and at once divined disaster and death.

"Belike someun's tumbled down the pit," he thought, "or the old south gallery has caved. There's been danger ever since the digging commenced, and ingineer said a man's foot might bring down the timber work." But Bob was a phlegmatic man, and the suspicion that the timberwork of the abandoned gallery had fallen and buried a dozen of his comrades did not quicken his motions. He had stopped the cart in front of his own cottage, which was tidier than the rest, as could be seen through the open door, which afforded a good view of the interior. There was a high bed made up with a neat patched quilt, and white pillows; at the foot stood the empty cradle which his wife could not yet put away out of her sight. Bob let down the end piece of his cart, and, taking the unconscious girl in his arms, laid her down gently on the bed, and drew the quilt over her.

Then he softly shut the door, and, taking his horse by the head, led him over toward the group of people at the works. The women, with children clinging to them, were vociferating and talking loud, especially one little, wiry, black-eyed woman with a lame boy in her arms, who had worked her way to the inner circle. The men stood mainly sullen and silent. They were clad in their grimy working clothes, some of them with lamps in their caps, and picks in their hands. The young engineer was talking to one or two of the men apart from the others. Unfortunately,

the superintendent had been called away on business, and was now absent.

"We won't go down inter no death-trap like that," broke out a fierce little man, with flaming red whiskers, "no, not for no stranger as ventured where he'd no business. I was the first as see him, and I sung out at the top of my lungs, but he kep' right on, and then come the dull heavy sound as if a mountain had slid down the pit's mouth."

"'Twas only the side wall as fell," remarked another. "I went in as far as I could crawl on hands and knees, and the roof was hanging by a hair; a sneeze would bring it down."

"It didn't cave reg'lar," remarked he of the burning whiskers, "and I call it the meanest kind of a death-trap; but if it was a miner in the way of getting bread for wife and weans, as was ketched in a hole like a rat, ropes couldn't hold us back from digging him out, if we knowed we'd be buried forty miles deep in the bowhills of the arth."

A murmur of approval ran through the crowd, that held its ground more doggedly than ever. The pit's mouth had an awful fascination when a human being was walled up or perishing in its black depths.

"He had no belongings with us," said another man, gloomily. "He was suspicioned for a thief, and was likely hiding away from the sheriff and poss, as they call it. But Smoky Duff was his friend, and Smoky's the man to git him out of yon hole."

Smoky had kept himself in the background with his cap slouched over his eyes.

"He wern't no friend o' mine," he muttered. "My woman took him in to lodge and feed for pay, and I knowed nought about it."

Nancy Duff had wisely absented herself from the scene. "I wouldn't have thought, men, you were all cowards," said the engineer, coming toward the larger group, "you whose trade it is to look death in the face every day in the year, and yet you will let a fellow-being perish down there without putting forth one effort to save him."

The swart faces, begrimed with coal-dust, looked only the more dark, and sullen, and glum at these words; but one great giant of a man, known as Long Bill, visibly winced under the imputation of cowardice.

"It's wife and weans as makes a man hang back," he muttered. "The feel of their arms round your neck when you're going down the man-lines, takes the spirit out of you."

"You shan't stir one step," cried the giant's wife, the same little wiry, black-eyed woman who had been stirring up the others to resistance. She thought she had discerned signs of weakening in Long Bill's voice, and now thrust the pale-faced, deformed little boy into his arms. "Have you a spark of human feeling," she cried, turning fiercely upon the others, to be persuadin' my mou into danger, when he has got a ricketty baby, and me with only ono pair of hands, and three others under ten year old to support? Why don't you go yourself?" addressing the young engineer, "and you no chick or child to lave behind. Let the boss go!" raising her shrill voice and looking around triumphantly.

It was now the young engineer's turn to wince. He had no "chick or child," as the woman had said, but there was a six months' bride waiting for him down in a lowland city. He was no craven, but he, too, might feel a pair of arms clinging to his neck as he went down to probable death.

"What good would it do for me to risk my life alone," he said, in a low voice, "when the men refuse to follow?"

"Try us and see," was the ready response from more than one surly throat. "If the Boss leads, we're not so slow to go arter him. When he resks his bones, and thinks they're no better than our necks, tain't in us to hang back."

A glance of dismay shot out of the black eye of Long Bill's wife. She had miscalculated the effect of her eloquence. But the engineer roused himself, and looking about with a business air, said in a brisk tone:

"Come, come my men, you are not going to let a fellow-creature perish without one effort to save him, even if he is a doubtful character. Of course you don't mean to go down there without a reward; but I will promise a hundred dollars in Miss Braithwaite's name to the first man that offers."

"Hoot!" cried Long Bill, thrusting his hands more doggedly than before into his breeches pockets. "You don't ketch us with mouldy cheese. Old Boss was tight as glue. How can we be shore the young missis don't take arter him? Don't offer other folks' money; offer yourself, mon, your own blood and bones, and sec if we don't foller where you lead, if it's down to hell."

The engineer turned slightly pale and stood silent with his eyes cast down.

"Who's a coward now?" cried Bill's wife, with a taunting laugh, in which the others grimly joined.

Bob, leading his cart, had approached the edge of the

crowd where his wife stood with her apron flung over her head.

"Is't the choke damp?" he asked, jerking his thumb forward.

She shook her head.

"The old gallery they've been undermining. A strange mon got down there, and the old rotten timber-work gave way, so he's buried alive, and the rest of the timber only hangs by a hair. They say a whisper will bring it down."

Bob took off his cap, and scratched his head.

"What 'casion had a strange mon for to go into the gallery?" he asked.

"They say he was trying to hide," she returned in a whisper. "There's officers out searching for him."

Bob nodded slowly, "I knows him, Smoky Duff's chicken. But go to the house, Mary. I brought company home wid me."

"Company!"

"A gall I picked up by the roadside. She was laying in a swoon, white and limp as a wet linen rag. I brought her in the cart and laid her on the bed in the house."

"Poor thing! how comed she faintin' by the roadside?"

"Dunno. Passes me. Ben Harding, as I had wid me in the cart, says it's the young miss that old Judge's darter had wid her last summer, when she comed to the mine."

"Oh, no," cried Mary, putting up her hands. "It can't be the pretty, pale-faced, yellow-haired young ledly that spoke to me so kind, and took such notice of the babby. 'Twas she, Bob, as made the little frocks—the very ono my lamb was laid out in."

Mary turned to furtively wipe away the tears with her apron, and then ran hastily down the path toward her own house.

Bradley had rushed out of the Hall half maddened by the crisis of his fate. His brain was confused, and his face ghastly in its desperate misery. A wild tumult raged within him, and nothing was clear but the determination to search for Virginia. An insane notion had full possession of his mind that he should find her dead in the grounds, lying pale and stark under some tree or hedge, with her golden hair dabbled by the night dews.

He sought with feverish eagerness through the shrubbery; he rushed along the borders of the lake, gazing with despair into the clear waters, and looking with sick dread for small footprints in the sand. He found himself in among the dense forest trees, not knowing where he was, or how he came there; but the terrible agonizing quest went on, while his heart tortured itself with reproaches. He had killed her. He was worse than a murderer. He had driven her out to suffering, and privation, perhaps to death.

Hours seemed to have passed in a ghastly dream, when accident guided his footsteps not far from the highway that led to the little hamlet of Halcourt Centre. He knew where he was, and a clear rational thought struck like a sunbeam through the confusion of his ideas. He had been a fool, a madman, not to go at once to the telegraph office, and dispatch to Deanport for aid in rousing the country. He could have cursed himself for the precious time he had wasted. At that moment an impulse seized him to cry aloud for help; but the place was very lonely. The crows were cawing drearily overhead in the sunless, windless morning air. Though an age seemed to have elapsed since he first heard of Virginia's flight, when he looked at his watch he was surprised to find that it was not yet eight o'clock.

The autumn stillness was profound and solemn, and the gray vaporous curtain of the atmosphere transmitted sound from a great distance. As he paused for an instant on the other side of the screen of trees that divided him from the highway, the rhythmic beat of a horse's hoofs, galloping down the road, struck his ear. Here, perhaps, were tidings. In that unreasoning state of mind he leaped over the brush fence, and, taking his hat off, waved it at the advancing horseman. His pale face, blood-shot eyes, and dishevelled dress gave him the air of a madman.

"Stop!" he shouted as the rider came on at full speed.

"Have you any news?"

"Yes, I have news," yelled the youth on horseback, without slackening his pace, "I am taking it down to Halcourt Hall."

"Where is she?" cried Bradley, making a spring at the bridle rein, and almost unseating the rider, who was no other than the superintendent's clerk, mounted on his master's horse.

"Where's who? D— you, let go the rein. You must be crazy. Who are you talking about?"

"Miss Duval, the young lady who escaped last night from the Hall in a fit of delirium."

"Oh," returned the youth, unbending with a swift gleam of recognition. "You are Mr. Halcourt. Excuse me, I did not recognize you at first, it was all so sudden. I had not heard of the young lady's disappearance. I was going to the Hall to carry the news of an accident at the mine. There is a man buried in one of the old disused galleries,

that has caved, and the men refuse to go down and dig him out, partly because it is a dangerous piece of work, and partly because he is a stranger of doubtful reputation."

"Who is he?"

"He is called Dr. Walters, but that is not his real name. According to report he is a desperate character, the leader of a gang of burglars. He doubtless took refuge in the old south gallery as a hiding-place, and not knowing the kind of trap he was to fall into."

Bradley stood for a moment silent and immovable, capable now of reflection, for a new turn had been given to all his ideas. This man must not die. He must snatch him out of the pit to wring from him a confession of Virginia's innocence. He must vindicate the honor of the woman he loved whether alive or dead.

"Get off your horse," at last Bradley spoke with authority, and I will take him and go to the mine, while you make your way across to the Hall on foot. But stop a moment; you must first leave this message at the telegraph office at Halcourt Centre, and he hastily wrote a few lines in his pocket diary, and tore out the leaf and folded it.

The young man obeyed meekly; he knew the person before him would one day be master of Halcourt, and deemed it best to conciliate the coming man. Bradley sprang into the saddle, and the horse darted away up the road like a flash of lightning.

The men were still hanging in groups about the shaft, half-ashamed and thoroughly sulky. Some had lighted pipes and seated themselves on the timber piles and heaps of debris, and were smoking in sullen silence. Most of the women had gone back to their houses, but Long Bill's wife was still mounting guard over her son of Anak.

"Why, there's him," she exclaimed, turning round at the clatter of a horse's hoofs. "There's the young missis intended, and he looks stern as a meat-axe. There'll be some big orderin' now, I'll warrant. Bill, don't you put down Charley; don't you dare stir one step."

Bradley sprang from his panting horse, flicked about the nostrils with foam, and looked at the group of miners with bitter contempt.

"Are you men," said he, "to let a fellow-being perish down in that black murder-hole without raising a finger to save him?"

A hoarse, guttural murmur, unintelligible in words, ran through the crowd as it shifted and swayed.

"I shall not stay here to reason with you, or try to persuade you into mere decency," he added with biting scorn. "You are not human beings, but heartless brutes." He flung off his coat. "Give me a lamp and pick," he cried, and his feet were already on the descent.

"Stop! for Heaven's sake!" cried the engineer, who had laid hold of his arm. "An attempt must be made to prop the roof with timbers, or the whole thing will give way and crush you like a worm. One man can do nothing alone; and any attempt will be perilous, but it may perhaps succeed."

"Then, why in God's name don't you come along?" shouted Bradley. "Why do you hang back like a miserable poltroon?"

"I'm coming, sir," said the young man, with a blush of shame on his face. "God knows I'm willing to risk my life if you are."

The dark crowd of miners hustled and shouldered each other, and then made a simultaneous rush forward. Long Bill set the little deformed boy down by his mother's feet, though she screeched out after him in vain.

"We are ready to go with you," cried the hoarse voices, touched with some new and genuine emotion, "we'll go willing as water, but we didn't want to be druv into no slaughter pen like so many dumb critters."

"I'm glad if you have waked up to your duty," Bradley cried out to them. "It may not yet be too late to save life. I shall take the lead here, and I expect to be obeyed."

"Ay, sir, ay, sir," sounded from all sides, and in a moment more the perilous work had begun.

The women all ran back to the pit's mouth and set up a doleful wailing; most of them had babies in their arms, and older bairns clinging to their skirts. Long Bill's wife was dry-eyed and vociferous, but the others only wept, and moaned, and finally settled down into patient dumb endurance.

Into the midst of this group Winnifred suddenly came spurring on the back of Thunderbolt. She had not waited to put on her habit, but had thrown the great furred cloak over her morning attire. The proud young face, so beautiful in its bloom and glow, so assured in its glance, so self-possessed in its authority, was familiar enough to the miners' women. They had watched her at a distance with a wondering awe; they had criticised her, too, in their own rude fashion. She seldom went into their cabins, or conciliated them with familiar, kindly chat; even when she wished to do them a favor, which in their ignorance they resisted, as in the case of the school, she carried it with a high hand, and by the force of an imperious will. She

was not a favorite, but she was always an object of interest.

But now her ashy pale face, with the lips apart, and eyes so full of misery, woke their compassion.

"She looks quite beat down from her grand airs," whispered one to another, as Winnie alighted, and gave Thunderbolt into the care of a lad. "And him such a handsome young man. I wonder if she knows?"

"What are you whispering about?" Winnie cried. "Tell me what they are doing in the mine."

The women with dull, sad faces looked askance and nudged each other.

"You tell," muttered one. "She don't know he's gone down."

"No, you tell."

At last Long Bill's wife spoke up:

"Does seem as if you ought to know, miss. That young man, your sweetheart, so they say, has gone down to help dig out the man that's buried under part of the old gallery. And the roof is like to fall and crush him, and the hands as has gone down along with him. No more than a chance if they ever crawl out alive."

Winnie did not cry out. She put her hand to her side, and bent over as if a sharp pain had gone through it.

"Poor thing!" murmured one of the women, "she'll take it hard if worse comes to worst."

"Tain't no worse for her nor the rest of us," responded another under her breath.

"Nothing like so bad," was the speedy answer. "She's rollin' in money, and there's as good fish in the sea as ever was ketched, but we and our children will be left to starve if any ill chance befalls the men."

Low as the words were spoken, they came to Winnie's ears.

"What is that you are saying?—that you and your children will be left to starve if your husbands die along with him? God avert the calamity, but if anything happens down there, you shall be to me as my sisters."

Long Bill's wife had begun to sob now in a hard, dry way.

"That's fine to say, miss, but a grand young leddy like you can't be expected to remember all her words."

"So you doubt me?" with a kind of pitying vehemence, while a rush of emotion brought a cool flood against her burning eyeballs, and imparted a sense of relief. "You think I shall forget you, and what has happened to-day? If I do, may God forget me in my need."

She sat down on the end of a stick of timber, and joined the heart-sick, weary vigil of the other women. Little Charley, the deformed boy, attracted by the grand-looking, pale lady, hitched himself along the ground, and began furtively feeling of the fur on her cloak.

"Come here; she don't want you," his mother cried sharply, but Winnie took him up in her lap and nursed him, and the touch of his tiny hand, and the little, pallid, pinched face smiling shyly up in hers, helped her to bear the agony of that hour. At last word came up the shaft that the danger was still great, but not so great as it had been. The men were all at work under Mr. Halcourt's directions; and he was doing wonders.

Winnifred felt a glow of pride warm her heart. Bradley was a hero after all, and worthy of any woman's love. She was glad even if she had lost him forever, and soul and flesh quivered with the agony of that loss.

Time went by uncounted while the work progressed down in the darkness, and life and death hung on a thread. Little Charley had gone to sleep in her arms, and was nestled in the warm folds of the cloak. Winnie sat dry-eyed, but with her face marble-pale, every sense strained in the agonized intensity of waiting and watching and listening for tidings from below. The poor women forgot their own trouble to cast pitying glances at her.

"Poor thing! she can't cry," one whispered to another. "It will break her heart if anything happens."

At length something came and touched Winnie's shoulder, where she was seated on the timber, a little apart from the others. She turned mechanically and saw a decent, mild-faced young woman standing near her.

"I thought I must come and tell you, miss, that the young leddy is very bad, and quite gone out of her mind."

Winnie roused herself by an effort, and looked in the woman's face.

"What do you mean?"

"Why, the young leddy, your friend. My mon found her lying 'long side the road, and first off he thought she was clean gone. But she come to a little, and he brought her in the cart to my cabin. There she lies just sensin' nothing at all, and 'twould move a stone to hear her piteous talk. She calls on you, miss, and," sinking her voice, "on the young man down yon with the miners."

Winnifred experienced a great shock, for recollection came rushing back upon her like a boiling torrent through the bed of a dried up river. She had forgotten that Virginia was lost, for her whole being hung on Bradley's fate. Now the terrible past was revealed as by a sheet of lightning, and her heart seemed torn in two. How could she

leave that spot while his life still hung in the balance? and yet she must go.

She raised her hands to her head and moaned. Then she slowly rose, put down the sleeping child in its mother's lap, and mechanically dragged her steps to Mary Smith's door. Pushing it open, the bed was before her where the poor girl lay with wild dilated eyes, her bosom heaving with thick pants, and the bale fires of fever burning in her face. Instantly she rushed forward and took the sick girl in her arms. Virginia crept and clung convulsively to her bosom, as before she had covered away. She seemed to devour her face, pressing hot kisses on her hands, and calling her sometimes mother, sometimes by her own name, with every term of passionate endearment.

Winnifred held her close, and the tears that had so long refused to come rained down in a hot shower. Along with the capacity to suffer, a great well of tenderness had opened in her nature. Indescribable thoughts and feelings rushed over her, and years of intense life seemed compressed into a moment of time. The familiar presence acted like a sedative on Virginia's excited brain, and soothed and quieted, with her head on Winnie's shoulder, she sank into a half lethargic sleep, in which old memories were mingled with murmurs of Bradley's name, and broken accounts of her wanderings. She slept for half an hour and then her eyes opened with a saner look. Winnie bent down and put her lips to her ear.

"Hush, my darling," she whispered; "be quiet, and I will find Bradley and bring him to you."

The words were a powerful charm. Virginia's weary, flower-like head fell back upon the coarse pillow, her lips parted in a sweet smile, and some lovely vision seemed to float before her half-closed eyes.

Winnie shuddered at the thought of what she had promised. Would it be her cruel task to lay Bradley, maimed and dying, at the feet of his love? A great pang shot through her, for even in death he would belong to another. And then Virginia would escape out of life like a bird with both wings broken; and the future opened before the young girl's lovely eyes like a vast desert tract where no green thing could ever grow.

Now that Virginia was sleeping, she stole out of the cabin into the fresh air. Off at the pit's mouth she could discern a group of dusky miners. Others were coming out, and women and children were running wildly about. Winnie's heart beat thick as if it would burst through her side. She began to run, but stumbled and almost fell. Still she kept on, and when she reached the shaft, quite pale and breathless, the miners made way respectfully.

The cage was coming up, and Bradley with it. She was startled at the sight of him, for he was like a spectre. His coat and hat were off, and his white shirt and other clothes were torn, and grimed with clay, and bloody from a wound in the temple, of which he seemed unconscious. In the bottom of the cage lay something huddled together, a mere mass crushed and disfigured out of all semblance to a human form. One of the men had considerably thrown his jacket over the bruised face.

Winnie pressed toward her cousin.

"Are you hurt, Bradley?" she asked, noticing the wound on his temple.

"No," said he, and then he raised his hand; "or if I am, it is a mere scratch. The men maintained a respectful silence. 'We found that poor creature dead,' he added, as he turned and pointed to the cage." He had been dead for hours." Then he approached Winnie, with a look of dumb entreaty and dread.

"For God's sake tell me what you know about her. Is she alive? Do not fear to let me know the worst."

"She is alive," said Winnie, controlling and steadying her voice. "She is here waiting for you."

Bradley could have covered her feet with kisses. At that moment the young engineer, who had done yeoman's service in the dangerous work of digging out, drew near and saluted Winnifred politely.

"You know, Miss Braithwaite," said he, "that these remains must lie where they are until the coroner can be fetched from Deanport."

Winnifred drew herself up to her full height. A haughty light shot from her eye, and her tone had its old assured ring. "I know, Mr. Elicott, that these remains will not stay where they are. I am sole mistress of Halcourt mine, and shall have the body removed immediately to the school-house and prepared for burial."

"But pardon me, Miss Braithwaite, you will be amenable to the law. A lady might not understand what is required in such cases."

"Some ladies might be grateful for your instructions, but I am not," returned Winnie defiantly. "Nobody but myself can suffer. I am full and complete owner of this place, and what is done is done by my orders. Look here, my men," turning to the group of miners, "prepare a litter of some sort, as soon as possible, and take up this body and carry it to the school-house."

"Yes, mum; we'll do it," returned Long Bill and Smithers almost simultaneously, "that is," added Bill, turning toward Bradley, "if his honor says so."

Bradley nodded his head, and in less than five minutes the litter was prepared, and the mangled remains laid upon it, and the little cortege began to move slowly toward the school-house with Winnifred and Bradley at its head, and the miners and their wives and children straggling on behind.

"Lay it here," said Winnie, when she had improvised a sort of bier with two or three of the school benches. They obeyed her orders in silence. The tattered jacket was still over the face, and when the body had been put down, she turned and said resolutely to the men:

"That will do; now you may go out; I will take charge here myself."

A puzzled, surprised look came into the rough faces. The men hesitated and hung back.

"Do you hear me?" Winnie cried, with an imperious gesture. "Now begone."

"Tain't fit for the likes of you, miss, to be left here with such a one as him, if I may make bold to say so, is it your Honor?" Long Bill ventured to say, humbly appealing to Bradley for a confirmation of his opinion.

But Bradley motioned him to go out, and followed himself and shut the door behind him.

Then Winnie was left alone with that thing, lying still and stark upon the rude bier. She walked to the door and locked it, for the key remained on the inside, and then turned with a shudder. Could she approach, could she look on that face ghastly and livid in death, which she had never seen in life, the face of one so strangely mingled with her fate?

She thought of all poor Virginia had suffered, and in spite of her own pangs, her own terrible sense of bereavement, she was glad the stricken girl had been spared this hour. Cowering for a moment, she hid her face, for it was a ghastly, an almost loathsome task she had set herself to do. But Winnifred was a brave girl.

The struggle ended, she went forward and raised the jacket and looked steadily at the dead, discolored countenance with all semblance of humanity crushed out of it. An awful and swift doom had fallen upon the sinner. One long glance sufficed, and then she dropped the covering and went forward with her work.

For the sake of the living, it was her duty to see that no damning evidence of guilt remained on the dead body. Close hidden in the breast she found what she was in search of, and at the end of five minutes opened the school-house door holding a small packet in her hand.

Bradley was awaiting her outside. He had tied a handkerchief about his head to stanch the bleeding of his wound. Mr. Elicott, the young engineer, had joined him with a dissatisfied countenance. He was kicking a bit of turf with the toe of his boot. Winnifred's defiance of law and order still weighed upon his mind.

"Smoky Duff and his wife ought to be made to testify," he was saying just as Winnie approached them.

"Mr. Elicott," Winnie returned with some asperity, "I beg you not to concern yourself about Smoky Duff and his wife. If an investigation is necessary, be sure I shall do all in my power to further it. Meantime, I must request you to distribute to the miners this packet of money, reserving for yourself one-quarter of the whole sum. I give it to them and to you as a reward for your brave conduct."

The young man was almost stunned by the magnitude of the sum which he saw Winnifred had thrust into his hand.

"Why, Miss Braithwaite, this is a great deal of money. You cannot mean to give the whole."

"Every penny of it," she replied and turned her back.

Bradley motioned her one side with his hand.

"Don't you mean to tell me where she is? I am suffering the tortures of the damned."

"I will take you to her now," she answered, "but first there was a duty to perform."

They walked together through the little dirty lane of cabins in silence, but with hearts beating tumultuously. The women had collected about their doors, and were gossiping in groups. When they approached the Smithers cottage, Mary ran out to meet them with a tremulous ray of joy in her face.

"Oh, miss, I think she's a little better, 'deed, I do. She's quieted down wonderful and ain't near so wild. But the doctor you sent for, he couldn't be found, miss. He was off Basset way tending a man in a fit."

"No matter," said Winnie, with a grave smile, "I have brought a better physician along with me."

She paused an instant, for a rush of wings seemed to up-bear her like a strong inspiration. She was no longer an actor in the scene, but an observer of a strange and beautiful drama. Her heart was melted within her; for the first time the meaning of life, and the blessedness of sacrifice came over her to lift her out of self up to some higher level. Softly she opened the cabin door and whispered to Bradley as she gently pushed him forward.

"Go in and save her, for you belong to each other, and she is as innocent as an angel."

(To be continued.)

# The Ladies' Floral Cabinet and Pictorial Home Companion.

Subscribers will confer a favor, if, when answering Advertisements, they will mention "The Floral Cabinet."

## THE Ladies' Floral Cabinet

AND  
PICTORIAL HOME COMPANION,

## THE LANGUAGE OF FLOWERS.

BY UNCLE CHARLIE.

This elegant book, during the past year, has found many admirers, and is now sent out in its second edition, enlarged and improved. The Poetical Selections are from the best authors, and the section devoted to Floral Conversation, among other good things, contains a most fascinating story.

There is also a section devoted to the Sentiments of Flowers, which gives a list of all known Flowers and their meaning, and another to Floral Decorations, in which the subject is treated in reference to special occasions, such as Thanksgiving Day, Christmas, Easter, Decoration Day, Birthday celebrations, Weddings, Funeral ceremonies, the Church, etc.; there is also a chapter on Cemetery Decorations, and others on preparing skeleton leaves, drying flowers with their natural colors, autumn leaves, sea mosses, etc.

It is issued in two different styles to suit purchasers—in neat, enameled paper, at 25 cents per copy; for those wishing a handsome gift-book or table ornament, it is beautifully bound in extra cloth, and sold at 50 cents. Will be sent by mail, postpaid, on receipt of price. Address,

HENRY T. WILLIAMS,

46 Beekman St., New York City.

## THE DINGEE & CONARD CO'S BEAUTIFUL EVER-BLOOMING ROSES

## BOUQUETS.

Any one can make a bouquet; but by our own observation we know that not every one can make pretty ones, and to a lover of flowers, what is more annoying than to see flowers, which are in themselves beautiful, so grouped together that all harmony of color is lost, and their beauty, form, and symmetry destroyed.

A few general hints before taking up particular kinds of bouquets:

I find that many fail in making bouquets from a lack of green and white, the two essentials of a handsome bouquet. How often have I seen friends gather their flowers—beautiful ones, too—and then say, "Oh, dear! I must get a little green," pick half-a-dozen Geranium leaves, or a few sprigs of some other green, make their bouquet and fuss over it half an hour, and then wonder why their bouquet was not prettier.

Plenty of green must be your first requisite, and I would recommend a variety. Geraniums, that is, sweet-scented of all kinds, of course; then nothing is prettier than the young Rose shoots, common Asparagus is not to be despised; pretty grass is also a great ornament; parsley is exquisite, the bright green contrasting so well with the darker green of Rose leaves; then always try to have sprays of some kind of vine. Among what we call weeds, wild buckwheat is extremely pretty for bouquets for brackets or where it can be trained up in picture cords. Now I will proceed to particular kinds of bouquets.

First, taking those for large vases, or anything requiring more than two or three flowers. How your bouquet shall be made must depend on the number and kind of your flowers. If you have but very few, I would recommend placing sprays of green in your vase and then disposing of your flowers to suit your own taste. If you have a moderate number of flowers a loose bouquet is prettiest, placing your flowers and green so that they will not have an inclination to lop this way and that, but will stay in place. Any flowers of moderate size look well made in this kind of a bouquet, and it is much easier made than elaborate ones.

Nothing is handsomer than a large vase filled with handsome sprays of green of different shades, and one Lily, whether the common white, the Auratum or any of the more rare Lilies. It makes "a thing of beauty." If something more is wanted, say with a common white Lily place a row of scarlet Geraniums around, and the effect cannot fail to please.

Now for the style of bouquet known as pyramidal. To make these satisfactorily, you need a slim stick the same length as from the bottom of your vase to the top of your bouquet. Good taste, an abundance of flowers, and plenty of string, and some time are needed. The first consideration is, what to begin with, few flowers being appropriate, many giving a flattened appearance to the top. Spirea is one of the prettiest, as that nearly always comes to a pretty point; Snap-Dragon and Sweet Peas, also among common flowers, do very well. The next step is to surround the top with some delicate feathery green, and then work downward, mixing in flowers and green as they look best, winding them firmly around the stick, but being careful not to wind the stems too tightly, as that makes them droop very soon.

Care should be taken that none of the flowers are crowded, as that entirely spoils the effect; the last thing, a row of Geranium leaves should be placed around. Many prefer to make their whole bouquet of alternate rows of flowers and green; I have seen a few handsome bouquets made so; for instance, one began with a scarlet Salvia with a row of delicate green, then white Candytuft, next green, then scarlet Geranium, etc.

But of all varieties of bouquets, my favorite is that made in some flat dish or in some out-of-the-way thing that one would not mistrust you could put to such a use. I take a common coffee cup and saucer, fill the saucer with moss or sand, place flowers and green loosely in the cup and a few flowers in the moss, or if you have sand, it must be entirely covered with them and green; then you have a lovely little mound. A glass sauce dish placed on a large deep plate furnishes another splendid receptacle for flowers, while no lovelier place can be found for our floral treasures than a wire basket lined with moss with a bowl set in and filled in around with moss until firm, then bowl and moss filled with vines and flowers.

Some flowers are suitable for nothing but flat bouquets; Balsams may be so arranged beautifully, and in no other way do Pansies show their lovely faces to such advantage. Button-hole bouquets are prettiest when most simple; my favorite is one dark rich Pansy encircled with the light purple Heliotrope, the whole framed in with rich green; or if that is too sober, break off two or three separate flowers from a truss of double pink or scarlet Geranium; wind each one separately on a piece of broom-straw and then arrange in a bouquet.

Well, I fear our kind Editor will weary of my commonplace remarks, which will probably all be old stories, so I will stop with one last general bit of advice: Have flowers somewhere or somehow; if you can't have them in Sevres china, cut-glass, majolica, or silver, nor yet in our common vases, put them in a teacup, or a bottle, but have them somewhere and you will be the happier and better for it.

MRS. W. C. HOLMES.

## THE TRAILING ARBUTUS.

Among the numberless flowers of the wildwood, the Epigæa, or Trailing Arbutus, is acknowledged by all to bear off the palm for beauty and fragrance. So modest and unpretending, infinitely more so than the

oft-praised Violet, for the Violet presents its bright face fearlessly to the gaze of men, while the modest, shrinking Arbutus hides its charms in chaste obscurity under a covering of forest leaves.

But it does not remain long "unseen by man's disturbing eye," for its admirers "watch and wait" for April to come so they can gather these fragrant and beautiful blossoms, and transfer them to their homes to charm the eye of loved ones. It is only the blossoms that can be coaxed into our homes, the plant refusing to live with our garden favorites. No instance is known, I believe, of the Arbutus being cultivated successfully. It has been tried repeatedly, but without success.

An old farmer in Chester Valley, who loved flowers with a species of idolatry, and had a garden stored with plants rich, rare, and beautiful, an humble, conscientious follower of George Fox, but who, like our charming Quaker poet, Whittier, is full and fond of the beautiful in Nature, informed me that he had tried for years to coax the Arbutus from its woodland home; had taken it up in late autumn, with an abundance of its own soil, and planted it with a covering of leaves, but when spring came no flowers appeared; tried it in spring-time, placing it in a great variety of situations, but failure attended every attempt, and, to use his quaint words, as he once apostrophized a basket of blossoms, "Thou art a winsome, but wilful beauty, scorning all my proffers of love and kindness!" If any of the readers of the FLORAL CABINET have had a different experience, I should like to know of it, and the method they adopted.

The season of the flowering of the Trailing Arbutus is almost a festival in our family, and many an excursion is gotten up to gather these sweet flowerets to gladden the æsthetic tastes of friends. Does not God teach us a lesson in these blossoms—a lesson of love and tenderness to earth's humble ones? How often have we moralized over this, as, in brushing aside the crisp, dried, faded leaves, the starry-eyed, "incense breathing" flower was disclosed in all its loveliness. How many beautiful souls surround our pathway in life, so covered with earthly mould, and the faded, tattered garments of poverty and want, that we fail to recognize their value. Nevertheless, it is there, and if we could remove the outside covering we would find souls so pure and true, spirits so humble and loving, looking heavenward for a crown that never fades, despite the unkindness and neglect of earth. How often the beautiful flowers might teach us lessons of love and wisdom if we obeyed Christ's injunction to "Consider the lilies of the field." C. M. T.

**Tradescantia.**—Perhaps some of the readers of the CABINET will be interested to know that the common green Tradescantia—commonly known about here by the names of Inch Plant, Joint Plant, Wandering Jew, Jacob's Ladder, etc.—bears a pretty white flower, in shape and size similar to that of the striped variety, T. Zebrina. After cultivating the plant for years, I was surprised last winter to find it in bloom. M. P. G.

**One of Nature's Handiworks.**—In the doorway of an up-town pharmacy, on the evening of the 22d of July, a plant reared its single flower which had just bloomed and was of singular beauty and at least six inches in diameter. The sepals were of a delicate pink which in the petals faded into the purest white. Within, the pistil and stamens almost cast a halo with their rich golden color. The plant is a variety of the *Cerens triangularis*, but its real name is not known.

## JAPANESE FANS.

In Japan the fan which opens and shuts, called the *agi*, belongs exclusively to the men; and the flat fan, called *uchiwa*, is used only by women. For a Japanese gentleman to carry an *uchiwa* in the street would be such a dire breach of etiquette that I doubt whether any sane one ever did such a thing. Moreover, it is exceedingly impolite to use a flat fan in the presence of a Japanese gentleman, and neither by man nor woman must a flat fan be taken out-of-doors. The masculine native of the "Land of the Gods" invariably carries a fan in his girdle or in the bosom of his flowing dress in hot weather; and not a few carry them all the year round. Among the lower classes the fan is stuck in the back or over the neck under the collar, and is even safely stowed under the projecting cue of hair which lies like a gun-barrel on the smooth-shaven scalp. Formerly, all Japanese gentlemen wore two swords in their girdle. The custom was abolished in 1872; but not a few of them, being long used to their swords, and feeling the absolute need of something to thrust in their place, bought fans on purpose to have one always in their belt.

It is very probable that at least sixty million fans are made in Japan every year. They have now become an article of export to many countries. They are cheap editions of Japanese works of art for the rich and poor of all the world to look at. Some people have an idea that the pictures on them are exaggerations or mere imagination. This is not so. In general, the representations are strictly true to life. The Japanese have no immense manufactories employing hundreds of operatives; no centralized capital; and the division-of-labor principle is hardly known among them. Hence, fans are made by thousands of independent workers all over the country, in hundreds of cities and villages. The place most noted for its production in this line, however, is Nagoya, in the province of Owari. Most of those which come to England are from this fourth largest city in Japan. Kioto is famous for very fine fans, and her artists excel in delicacy of tints and richness of coloring. Tokio (formerly called Yeddo) also produces several millions annually. Ivory boned and handled fans, made for foreign ladies, and richly adorned with gold lacquer, mosaic, silk, cord, etc., are especially made in Tokio.

There are a great many varieties of fans, and they are put to a great many and curious uses. Besides those in common use, the umpire at wrestling and fencing matches uses a heavy one, shaped like a huge butterfly, the handle being the body, and rendered imposing by heavy cords of silk. The various motions of this fan constitute a language which the wrestlers—fat fellows, who look as though stuffed with blubber by means of a sausage-blower—fully understand and appreciate. Formerly, in time of war, the Japanese army-commanders used a large fan, having a frame of

made of waterproof paper, which can be dipped in water, and which creates greater coolness by evaporation, without wetting the clothes. The *uchiwa*, or flat fan, is frequently made of feathers, leaves, or fine silk. It is oftener made of rough paper, and used as a grain-winnow, to blow the charcoal fires, and as a dust-pan. Probably it is on this account that it holds the lowest grade in the caste of fashion.

The Japanese gentleman—I mean one of the old school—who never wears a hat, uses his fan to shield his eyes from the sun. His head, bare from childhood, hardly needs shade, and when it does he spreads an umbrella. With his fan he directs his servants, and saves talking. Within-doors the graces of the Japanese maiden, and the dignity of the wife, are enhanced by the fan. To the Japanese actor the fan is indispensable, and he brings down the house by the deftness displayed in opening or shutting it. The Japanese dancing-girl makes the fan a very part of herself, and most graceful motions being performed by its help. To the juggler the fan is a necessity, many of his cleverest tricks, including that in which he makes a butterfly hover up and down the edge of a sword, being performed with bits of paper and a fan.

In Japan, people are continually making presents to each other, though the gifts are usually very small. A fan is always a proper gift. In nearly every house are one or more fan-cases leaning or hung against the wall. They are of all kinds, from the cheap tube of bamboo and lacquered wood up to the splendidly-gilt and inlaid case, costing many dollars. In these cases are holes, in which the handles of the fans are put, or silver hooks, between which they hang. On marriage occasions, friends offer costly gifts; those who are acquaintances merely, usually send a fan, on

which are written congratulations. They are often used as cards by proxy callers on New Year's Day.

When a young man attains to office, or an officer is promoted, a fan with a line or two of writing sent him is the equivalent for congratulations in person. It is the custom to ask friends or distinguished persons to write their names, or some original poetry, or classic quotation, on fans, thus filling the place occupied by our mother's, or father's, or our own youthful "albums."

ENJOYING THEIR LETTERS.

iron covered with thick paper. In the centre of the fan was a red ball, on a golden or silver field. The red ball represented the sun, the martial symbol of the Japanese nation. The fans of the present day, having a large, red, silver, or golden ball on a colored or white field, are in imitation of the old war-fan with which the Japanese hero used to signal in the field. In cases of danger it could be shut, and a blow from its iron bones was no light affair.

All the varieties of fans known among us have been made for centuries in Japan. One notable variety is

## Household Topics.

## LITTLE THINGS WORTH KNOWING.

Some things I have learned during my twelve years experience of housekeeping, that I think may be of some service to my sisters of the CABINET, and, with our Editor's permission, I shall try to help others over some of the hard places over which I have been helped. Mrs. Croesus and Mrs. Dives can know nothing of the trial it is to find the beauty, if not the usefulness of some long coveted article, obtained by many little self-denials, and after long and patient waiting, apparently ruined by some untoward accident, while it is still fresh and new to us; nor with what joy we, who are obliged to count not only our dimes but our pennies, hail a remedy for our mishaps.

For a long time I had wished for a new carpet for our sitting-room to replace one robbed, by years of faithful service, of its beauty. At last my desire was gratified, and a new one whose scarlet ground, covered with brown and mossy-green figures, delighted my eyes, replaced the old. Alas, in its first freshness, an awkward hand upset an inkstand, and streams of Stygian blackness rolled over its bright colors. Then how to remedy it.

Instantly I recalled reading of a similar accident, and the remedy, which I had never had occasion to use before. I at once applied it. Hastily getting a saucer and silver spoon, I at once took up from the carpet all ink possible in that way. Then mixing, in equal quantities, salt and black pepper, I covered all the inked portion with it with a liberal hand. Waiting for a few moments for it to absorb all it would, I then brushed the mixture lightly off, and again applied more, this time rubbing it faithfully in; again waited and brushed it off thoroughly, when to my joy not a vestige of the ink appeared.

Since then, I have had need to use it, till now fresh ink, ink I mean before it has had time to dry, on woolen articles of any description, has no terrors for me if I can only get at my remedy. After it has dried it would not answer. And the remedy is one at every body's ready command.

Brightly polished furniture and picture frames add such an inviting look to the house that the little additional labor required to secure them is well expended. Give all black walnut furniture, whether varnished or oiled, an annual rubbing with linseed oil and a flannel rag, polishing off with another and clean flannel, and if you have not tried it, the new look it will assume will both surprise and delight you. Put but little oil at a time on the rag, and rub till the wood seems moistened with it, then rub well with the clean flannel and there will be no oiliness perceptible. For picture frames, and indeed all except French polished furniture, if marred by fly-specks, I wash them well first with cold tea, dry them, and then treat as above with the oil. Care must be taken to avoid touching the gilt bands near the picture, as they would be spoiled. And after you finish rubbing the furniture, be sure to burn the oiled flannels. Chemists say many a fire supposed to have been the work of an incendiary, owed its origin to the leaving about of oiled woolen cloths; as they will often burn spontaneously. Very inferior walnut frames thus treated, darken and become quite presentable.

I spoke of using cold tea for removing specks from the frames of pictures. I also wish to speak of its good qualities in cleansing all kinds of varnished and grained woodwork, not only from fly-specks, but all kinds of soil. It seems to possess the cleansing power

of soap without its injurious effects. I learned its use from an English publication, and I would not be without a knowledge of its good properties for more than the cost of the whole book. I have used it on all but my piano (that is French polished, and all the rest I have is either oiled or varnished wood) as need required, with good effects, nothing receiving injury from it. Soap is ruinous to varnish, and the tea seems to have for it all the good effects without any bad ones. In cleaning it is always much better, it seems to me, to rub the way of the grain of the wood; to wet a small portion at a time and dry with another cloth at once.

In washing mirrors, be sure to use only a damp cloth, at least one that will not by pressure let drops of water run down, getting under the frame and causing dampness, as that will affect the quicksilver all mirrors are coated with on the backs, and discolored spots and smeary, cloudy glass will be the result. I have often seen coarse cloths used to clean them. Nothing but fine soft ones are fit. I like to clean them first with a damp cloth, followed by another moistened with alcohol, finishing off with chamois. It gives them a nice polish. With them, as with wood, I like to rub in straight lines. The direct rays of the sun, and the heat from lamps striking on them is said to be injurious to them, as it is for oil paintings and chromos.

Possessed of very little strength, and liking my table to be well appointed, it was a trial to me to know how to attain the desired end. To clean the silver was out of my power; *not* to make the table pretty with it was a constant eyesore. Tarnished silver was worse than none, and to trust it to be cleaned to the ordinary Irish girl seemed to be the ready way to unfit it for use, sure. Gradually pieces were withdrawn to be used occasionally only, when I could get them properly cared for. Then I read of a way to cleanse it easily and rapidly by the use of a solution of cyanide of potassium. Believe me, I would not even mention it here, did I not fear others might see it as I did without a word of caution as to its dangerous nature. So I want to say it is one of the deadliest poisons, and to be kept with as much care as dynamite. And for the safety of the public, to prevent accidents of a heartrending nature, I do wish that all publishers would always make an explicit statement of the dangerous nature of the various chemicals one often sees recommended for various domestic purposes, when they are so, as many might use them ignorantly or unthinkingly.

To return from this digression. I did send for some, intending to use it only myself, and with all possible precautions. The very gentlemanly druggist of whom I ordered it, sent it to me, at the same time sending me a box of a preparation used by himself in keeping articles bright, with the wish that I would try it. I did so, and have used it with satisfaction from that day to this—more than a year—and do not know as there is anything objectionable about it. It cleanses easily and quickly the silver, giving it a good polish. Its name is Oriental Polish, and a very good thing I have found it. I run no risks with the other, and I can now gratify my love of bright silver, not being obliged to call in aid other than my own.

From silver to table cutlery, is but a step. Those who use silver-plated cutlery will not need to know that finely sifted wood ashes sprinkled over carefully polished and thoroughly dried steel knives will keep them from rust, which is so apt to mar cutlery not in daily use; others will value the knowledge. My way is to give them all a thorough wiping, expose them

to the sun's rays or gentle heat, to be sure every bit of moisture is absent, then avoiding breathing on the blades, or touching aught but the handles, to wrap them separately in thick brown paper, as when they came from the store, sprinkling ashes over each. Then put in a knife box in a dry closet. I have kept them months free from rust and tarnish, as I could not previously. A wipe on a towel when wanted and they are fit for the table.

Straw mattings are commonly used in many chambers, and I prefer it in summer for my dining room, it is so easily kept clean. The white seems most desirable to me, as the colored soon fades. Sweep clean; have ready a pail of warm water with a handful of fine salt dissolved in it, and a plate of Indian meal, no soap, as that turns the straw yellow. With a moderately wet cloth covered with the meal, scour well the matting, rinsing it up with the salt water, and even a very dirty matting will look quite fresh. Do but a small piece at a time; use a small quantity of water at a time so as not to soak through, and wipe dry, and your carpet will look almost like new. The little meal left on will sweep off when dry. That takes the place of soap, and the salt restores the green color seen in new mattings.

I wish to say that I have kept for more than a year in fine condition, without once scalding, preserves and jellies put up in this way: I put them in small bottles, like horseradish and pickle bottles, have ready cut from soft, white paper two covers for each bottle; also the whites of eggs, observing to use only the thin, watery part of the white. Fill the bottles hot from the kettle as you would for canning fruit; as soon as one is filled, moisten one of the covers, which should be cut to fit, on the under side with the white of the egg. Cover the top of the bottle with it smoothly and tightly, holding it in position for a moment, when the heat will dry it; then do the other and larger cover in the same way; apply on top of the other, and at once, for greater security, with fine soft cord; tie tightly to the bottle's neck. It is hard on the fingers, the bottles are so very hot, but the end justifies the slight pain. The preserves are air-tight and will keep good any reasonable length of time. All preserves should be kept in a dry, cool place, and if dark, so much the better.

The above is not written for Mrs. Notable and her model daughters, but hoping the hints may be of some service to those like myself, who have had to pick up their knowledge of housekeeping under many difficulties and discouragements, I am, theirs and the CABINET'S warm friend. COUSIN MADELEINE.

**Foot Mats.**—Cut all your woolen scraps of cloth and flannel into pieces half an inch wide and three inches long. Black, white, and colored—a great many. Get a ball of jute twine for ten cents, and set up on strong steel knitting needles, five stitches, and knit one row. Knit the first stitch on the second row, and between the needles, at right angles with the stitch, put a piece of your cloth, and knit another stitch. Then turn the end of the cloth that points toward you out between the needles, leaving both ends of the cloth sticking from you, and so all the way across, two stitches for every tuft of cloth. Having knit one row of tufts, knit one plain row of the twine to get back again to the side of the mat where you began. The ends of the cloth must be from you as you put them in.

My mat is one yard square. The centre is of black and the border of bright colors, knit in strips, nineteen inches and nine tufts, one hundred rows of tufts in length. It is inexpensive, all it costs being the twine. Be sure you ask for jute string. ANNA.

## Household Art.

### ON HOUSEHOLD SUBJECTS.

If you wish to have your walls tinted, put indigo or Barlow's bluing in your prepared whitewash; if blue tint is wished, a few cents' worth of glue dissolved in water, and salt added to the whitewash, will prevent it rubbing off. A bright pretty border will add very much to the looks of your room.

#### A SLEEPY HOLLOW CHAIR

will add very much to the comfort and looks. Take a barrel and draw with chalk or pencil the shape desired for your chair; then bore holes to admit a fine saw, and saw around, following the marks. Bore holes one foot and six inches from the bottom for the seat and draw strong wire or rope through as many times as you think necessary to hold the cushions. An old bed-quilt will do to cover it first; cover it all over. An old Dolly Varden dress will be pretty to cover it, or pretty chintz; and blue cambric is nice. For economy, two partly worn sheets, bleached nice and white, and blued considerably; starch and iron nicely; then measure off the length of your chair, and pleat all one way about two inches between pleats, or closer if desired, and pleat in this way around the chair. Sew on the quilt that has been previously tacked on. A pleating or ruffle around the seat, and a fold of the cambric or cord, will furnish it nicely.

#### TO MAKE SHELVES OR WHAT-NOTS.

Saw shelves the desired size and bore holes in the corners; take wire or strong cord and fasten your lower shelf on first by fastening large buttons with strong eyes on the wire first to prevent the wire drawing through; then string empty spools on, the largest on the bottom; then put on your second shelf, and you may in that way have as many as you wish. Suspend it with spools or cord, and you have shelves strong enough to hold books or any other articles. Spools can be had of dressmakers, or have friends save them for you.

If you wish lambrequins for your shelves, the embroidered ones are very nice, or spatterwork on green, blue, or white velveteen, is beautiful, pinked or fringed around. A more economical way is to take old pieces of black broadcloth, cut in scallops or points, the longest in the centre; then notch or pink around the edge; some pretty embroidery pattern can be traced with chalk or pencil in vines and flowers; then cut out in long notches or round holes, following the pattern traced; longer slits for flowers, leaves, etc. Put blue or red cambric under it, and the pattern will show off nicely; any color is nice under it, or leaves, vines and flowers can be cut out of bright colored velveteen and chain-stitched on the broadcloth or ladies' cloth. Spatterwork lambrequins are nice made of buff silesia, such as is used to line coat-sleeves, and the delicate buff harmonizes beautifully with blue.

#### A WASHSTAND OR DRESSING-TABLE

can be made of a common dry goods box the right size, or a half oval pine table. I have seen one made of a barrel set on end and a board two feet wide by three feet long placed on it and covered with cambric, or a sheet can be used. Gather or pleat it, then tack it on the edge of the stand; on the bottom put a ruffle. You can get for thirty or forty cents enough marbled oil-cloth for the top of your stand or table. It is wide enough to cover your table and make a splash mat to put against the wall to protect it. A half yard will

be enough for both, as it is wide. The upper corner of the mat is to be rounded off, and pink it all around, if you cannot paint flowers, vines, etc. on it. The pretty decalcomonie pictures are very nice transferred on the mat. The oil cloth is much nicer than anything else, as it is so easily cleaned when soiled. A shelf, if a box is used, is very handy to place rubbers, shoes, soiled clothes, etc., on.

An ottoman can be made of a tea chest or box; if a tea chest is used, cut strips of leather from old boot tops or shoes and tack on the cover, then to the chest, and the inside of the chest serves for a receptacle for soiled clothes, or shoes, slippers, etc. Pad the top with cotton or pieces of bed-quilts that are too much worn for use; then cover over that a pieced top of bits of silk or velvet. A pretty cover is made of black cloth, and take nicely shaped oak leaves and cut out leaves of velvet on any bright colored material; then chain-stitch them on the black with gold-colored silk, and the veins of brown silk; for the sides you can take the best breadths of an old black dress, or color some if you have no black; then pleat it, and fasten the pleats at the bottom. A cord could be put around the box about an inch from the bottom and it will form a pretty edge, a piece about two or three inches wide to be kilt-pleated and tacked to the cover. A nice ottoman can be made of a small tobacco caddy, which can be had of any grocer. Made same as the chest, except the kilt-pleating on the cover; in place of the pleating make a puff by making reverse pleating about three inches wide. The covering can be made of the best parts of old coats or pants.

#### A KNITTED CARPET.

Knit on strong wooden needles, or it could be crocheted in breadths half a yard wide and sewed together; it makes quite a pretty carpet for a bed-room. The cost is trifling to make and have wove a rag carpet with bright pretty colors; old calico dresses can be colored a pretty tan color, with blue and twisted stripe of black and white, or any color fancy may dictate. Three or four dollars will cover all the expense for a bed-room carpet.

#### MATS FOR THE FLOOR

are nice made of coffee sacks; one sack is large enough for two; get scarlet or blue, or clouded Germantown yarn, and work a Grecian pattern for the border; in the centre is the word "Welcome." Some have large initials worked. Take four threads in working same as for Java canvas. A nice rug is made by piecing blocks, same as for the log cabin bed-quilt. Sew enough together for a nice sized rug; then sew all around on canvas, or something heavy, for a lining and to hold it in place; a strip of red flannel about three inches wide is pinked both edges, and a narrower piece of black cloth is pinked the same, and stitched on the red around the rug. Another rug is made of odd pieces of cloth cut octagon shape and sewed together. Ball-stitch with coarse Germantown yarn, and a pleated border around the rug of any color desired.

#### A WORK-BASKET

is very pretty made of strong wire; take four pieces from two and a half to three feet long; string spools, the largest at the bottom, until the wire is covered; then from the bottom curve the wire nicely in and then out large enough to admit a work-basket; if a pretty basket is not attainable, take a small sized peach basket, cover it inside and out with a bright, pretty color; make pockets outside and small ones inside for thread, buttons, balls, etc.; pleat braid around

the bottom and top, and you will be surprised to see what a pretty work-basket you will have, with your nice standard of spools; paint with burnt umber and varnish.

#### A WALL-POCKET

for combs and brushes is made of pasteboard from old boxes; cover it smooth with blue or pink cambric; pleat muslin in fine pleats and put over the cambric; finish top and bottom of the pocket with a ruffle two inches wide, each edge rolled and overcast with blue or pink zephyr, in quite long stitches, then gather half an inch from the top and sew it around; have pieces of the same to hang it by; finish it with bows at the corners and where it hangs on the nail.

#### A TOILET SET.

A very nice toilet set can be made of marbled oil-cloth. Cut out a piece large enough for the wash-bowl, and a piece for soap-tray and other articles; pink all around or bind with ribbon or braid stitched on; then with water colors, or oil paints, paint a vine with flowers around; it makes a nicer set for a wash-stand than crochet ones, as it saves washing; when soiled it can be wiped off.

A great many things can be made of marbled oil cloth that are useful as well as ornamental. I covered a wash-stand which was very much soiled, the varnish was rubbed off, and it was scratched badly. I cut the oil-cloth large enough to tack under the edge, and it looks much better than before. It is nice cut and fitted on pantry shelves; also to spread on the table for children. Take four pieces, ten inches long by three inches wide, cut one end of each to a point; bind around with bright ribbon, and paint some pretty autumn leaves, vines, or flowers in each one; then sew all together; the pointed ends for the bottom, and you have an elegant scrap bag. It also makes an elegant portfolio cover, painted in delicate colors, either a head or flowers, vines and leaves, lined with silk and bound all around; or if preferred, black can be used instead of white oil-cloth, and painted the same.

#### MATCH RECEIVERS, ETC.

Tin spice boxes make very pretty hanging receptacles for burnt matches; crochet covers for them, with crochet cord and tassels to hang by. Another pretty way is to take a piece of perforated cardboard, enough to cover the tin box, and work a pretty pattern on and crochet a bottom to the cardboard and slip the box in; they are very pretty indeed and so little work; the bright tin shines through and gives it a pretty effect. They make pretty hair-pin boxes made just the same, except they are covered on the top; fill with curled hair or combings; crochet a ruffle around the top and bottom. Hair receivers can be made of the large sized baking powder cans, with crochet covers, or covered with cardboard worked with border and initials, or "Hair Receiver" worked on it. Take a square piece of perforated cardboard, work a neat border around and fasten a piece of sand paper a little smaller on the back to scratch matches on; then on the cardboard work the sentence, "Scratch My Back," or work the figure of an old man with the same words; crochet of the color used a cord to hang it up; hang it under your lamp. Photo-holders to hang on the wall made of perforated cardboard, and picture frames also, are very nice. A nice photo-frame is made by cutting four strips of cardboard to fit the photo and an inch longer; then cut eight pieces three times as long as the strips are wide, and cross the pieces on with a long stitch, in any colored zephyr; cross the corners just the same, with a long stitch; it makes a very pretty frame.

## Household Elegancies.

## WALL-POCKET—NETTING, AND BRAIDING.

Materials: stout gray twisted cotton; black, green, and gray leather; lining; green worsted braid an inch in width; narrow green braid. This wall-pocket is netted of gray yarn and thickly intertwined with strips of colored leather. It requires a piece twenty-three inches long and eleven and a half inches wide, and two small side parts. The network is done of stout gray twisted cotton over a flat stick two-fifths of an inch wide. Begin with two loops and increase one in each row by knotting two into the last loop of each preceding row until a width of thirty loops is attained. Continue then to increase one loop in each row, but only on one side of the work, at the same time dropping one loop on the opposite side—by knotting two together—so that the width of thirty loops is uniformly retained. When fifty rows have been netted in this manner, the missing corner is finally added by dropping the stitches on the requisite side. The two side parts consist of strips each five loops in width and sixteen in length, worked in like manner.

The netted foundation is now ready, and is intertwined by strips of gray, black, and green leather, one-third of an inch wide. The strips are first drawn through lengthwise, a gray and green alternately, and then across, a gray and black alternately. As shown in the illustration, the cross-strips lie on top. After the parts have been provided with a thin black lining they are placed together in the manner indicated by the illustration. The upper part is turned over to the right side far enough to reach the pocket, and fastened to the lining at the back by means of narrow green braid. The pocket is decorated by runings of green worsted braid an inch wide, and tassels of gray yarn. It is hung up by means of narrow green braid.

## WALL-POCKET FOR DOLL-HOUSE, OF PERFORATED CARDBOARD.

For the construction of this pocket cut a piece of perforated cardboard three and three-fifths inches long

WALL-POCKET FOR DOLL-HOUSE.

and two inches wide, taper to a point at one end, and break over the opposite end to a depth of one and one-fifth of an inch, thus shaping the pocket out of one piece. Now cut out on both parts, front and back, with a sharp penknife, the neat little pattern indicated in the illustration, to which a fine effect is given by colored silk lining. As plainly shown in the illustration, front and back parts are connected by means of loose stitches of floss silk, tassels of which serve to finish off the lower ends.

## NEEDLE-BOOK OF PERFORATED CARDBOARD.

The covers of this book consist of two equal strips of cardboard, each three and one-fifth inches long and two and two-fifths inches wide. These are decorated in the centre with a bouquet of violets painted or em-

WALL-POCKET; NETTING AND BRAIDING.

broidered in the requisite colors with silk. A cretonne flower or decalcomanie may be used instead. A neat little border of purple sewing silk decorates the edge, and the parts are lined with purple silk. The book to be inserted, and which serves for the reception of needles, and is provided with leaves of white flannel, consists of two parts of perforated cardboard, each two and two-fifths inches long and two inches wide, lined with white flannel, finished off at the edges with button-hole stitches of purple silk, and joined together by overhand stitches. Bows of narrow purple satin ribbon complete the book.

## FISH-SCALE JEWELRY AND ORNAMENTS.

It was my good fortune to spend a part of last winter in Jacksonville, Florida. Going into one of the large jewelry establishments one day, my attention was attracted to a show-case, lined with blue satin, which contained what I supposed to be a fine collection of white wax flowers.

I asked permission to examine some of them, and was surprised to learn that they were not wax, but were made of fish scales.

They were made up into sets of jewelry, wreaths, and sprays for the hair. Wishing to carry some little "curiosity" home to some of my lady friends, and knowing how abundantly we were supplied with fish, I thought now here is something that cannot be expensive, and yet they are very beautiful. I decided to make some purchases. I selected a set of jewelry composed of rose leaves and buds, and asked the price. Seven dollars was the price named. I told the obliging clerk he might put them back, I thought I would not take them.

After reaching my boarding-place, I kept thinking how much they resembled wax flowers, and understanding the art of making them, I decided to try the fish scales. Going in search of Edmund, the colored

man, whose duty I knew it was each morning to prepare the fish for breakfast. I explained my errand and got the promise of the scales, which I found just outside my door the next morning. I washed them two or three times in warm water; then wiped each scale dry on a clean cloth. This removed all the sticky substance adhering to them.

While they were drying, I went back to the jewelry store and purchased a spool of No. 16 silver wire, and the mountings for a set of jewelry, which consisted of a silver pin, resembling somewhat a common safety pin, and the wires for the ear-rings. Paid fifty cents for the set. I will now tell the readers of the CABINET how to make a few of the flowers. Gather natural flowers and pick them to pieces to get patterns, and cut the scales as near like them as possible. For a rose, after cutting the leaves, bend them over the finger to shape them. With a sharp-pointed awl or needle make a hole in each leaf near its base. Cut some of the silver wire in pieces an inch or two long, and wire each one. A little notch cut in the leaf where the wire is twisted together will keep it from slipping back and forth.

After preparing enough for a rose, commence putting it together. Taking three or four leaves, place them properly and wind them tightly with fine white thread or silk; add more leaves and continue to fasten in the same way. Use wire long enough for a stem in three or four of the outside leaves. Twist all the wires together and wind them smoothly with white embroidery silk, which can be split and untwisted for the purpose.

For a bud use leaves same as for rose, cut the calyx, wire, and bend over the finger to shape; put four of these on each bud. To make rose leaves, cut out the leaf, then nicely notch the edges. Make a hole near the base and another near the point. Take a piece of wire three or four inches long, put it through the hole at the base and bring the end up the back of the leaf and put it through the hole near the point; bring it down the front and put it back through the first hole. The wire forms a vein for the centre of the leaf. Take the same wire and again bring it up the back of the leaf; when half way up the leaf, bring it over to the front between two of the notches on the edge, and then put it back through the same hole. This gives you a side vein. Wire the other side of the leaf to match. Twist the two wires together for a stem.

NEEDLE-BOOK OF PERFORATED CARDBOARD.

A pansy is easily made, and is one of the prettiest of the collection. In each leaf make three holes; the centre one about two-thirds of the way up the leaf, and one each side a little lower down. Put a wire through each of these holes, and twist all together at the base. This forms a veining. If you can get small rice shells, wire one for the centre of the flower. If they cannot be had, a glass bead wired will answer the purpose. Place the leaves around this in their proper order; hold firmly and wind tightly. K.

## Hireside Reading.

**Whittier Telling at School.**—A correspondent of the Cincinnati *Enquirer* tells this anecdote of the poet Whittier's success in aiding a little girl at a school examination :

You know Whittier's love for children. The aged poet this winter has renewed his youth, like the eagle's, in a handsome overcoat of the purest Ulster pattern, elad upon with which he attended last week's school examination up among the Berkshire hills, so dear to him. He was standing beside the teacher, who was catechising a dimpled little dot in geography.

"What are the provinces of Ireland?" asked the teacher.

"Potatoes, whiskey, aldermen, patriotism, and—" began the child.

"No, no," interrupted the teacher; "I didn't mean products; I said provinces."

"Oh," said the girl, "Connaught, Leinster, Munster, and—and—" Here she stuck, put her chubby finger in her rosebud mouth, and sought inspiration successively in her toes, the corner of her apron, the ceiling and the poet. All children love the dear old Quaker poet's kindly face. He smiled; her face brightened sympathetically. The *entente cordiale* had been established between them. He patted his coat significantly; she looked at him inquiringly; he nodded, and she burst out—

"Oh, Miss Simmons, I know now. They are Connaught, Leinster, Munster, and Overcoat!"

The first time that General Custer set his handsome eyes upon his future wife was when he was fifteen years old, and going to school in Monroe, Mich. Going along the street one day, the rough, flaxen-headed, freckled-faced boy passed a little black-eyed, eight-year-old girl swinging on a gate. She was a pretty little creature, her father's pet, an only child, and naturally spoiled. She said archly, her little face dimpling with smiles:

"Hello! you Custer boy!"

Then, frightened at her own temerity, turned and fled into the house. It was love at first sight with the wild young savage of fifteen, and he then and there vowed that some day that small girl should be his wife. And so she was, but only after many lovers' woes; for Judge Bacon, pretty Lizzie's father, was for a long time obdurate toward the young man who he feared was fickle and unstable, and his daughter and her suitor submitted most patiently to his will until at last he relented.

A friar, when preaching in a nunnery, observed to his females auditors: "Be not too proud that our blessed Lord paid your sex the distinguished honor of

appearing first to a female after the resurrection, for it was done that the glad tidings might spread the sooner."

The was a young lady from the city, and he asked her if she would partake of an ice-cream. She gently answered: "If it's good, square confectioner's cream, I'm there; but if it's picnic or strawberry-festival slush, count me out!"

A clerical candidate for a lectureship somewhere in England was called upon to deliver a discourse before the trustees of the endowment, and in order to show his cleverness he took for his text the single word "but." He thereupon proceeded to show that no po-

that pass for cherubs in painting and sculpture. Going out a-gunning together, one of them shot a bird, and the other ran to secure the trophy. Coming near where it had fallen, he found a white owl so sprawled in the grass, as to present to his view only a head with staring eyes and a pair of wings attached. Instantly he shouted in dismay: "Ye're in for it now, Jock, ye've shot a cherubin!"

A gentleman had occasion to correct his daughter, aged four, recently. After it was over, and she had sat awhile, she went to her mother and inquired:—"Don't you think it would do papa good to go outdoors?"

"You politicians are queer people," said an old business man to an impecunious partisan. "How so?" asked the politician. "Why, because you trouble yourselves more about the payment of the debts of the State than you do about your own!"

An Irishman to whom some wonderful story was told on the authority of a penny paper, declined to believe it, saying he distrusted all he saw in the "cheap prints." "Why shouldn't you believe the cheap papers," he was asked, "as soon as any other?" "Because," was his ready answer, "I don't think they can afford to speak the truth for the money."

A stout German in the beer industry to an unprofitable customer: "Here, now, you took dose doors und walk owet mid your ears, eh?" (He doesn't.) "Heim, you don't got out? Vell, you waits a minute und I gets a man dot vill!"

"Oh, heavens, save my wife!" shouted a man whose wife had fallen overboard in the Hudson river, recently. They succeeded in rescuing her. And her husband tenderly embraced her, saying, "My dear, if you'd been drowned, what should I have done? I ain't going to let you carry the pocketbook again."

A Chinese laundry man died of starvation at Louisville, the other day, with these pathetic and expressive words on his lips: "Bes' thing Chinaman do in

Kentuckee he die—flee weeke—only washee lun shirtee—him get no payee—heap starve on nothing."

Junior, translating the passage from the modern German comedy: "*Als ich meine eleganteste Shawl aus der Wasche ziehe*—" looks at the notes, and finding "*shawl*: anglicism," renders: "When I took my most elegant anglicism out of the wardrobe."

A young gentleman who moves in the best society of San Antonio, said the other evening to a young lady, "The foliage is much more exuberant this year than usual." "Yes," she answered, thoughtfully, "All them imported fruits is cheaper than they used to be."

"WHEN THE SWALLOWS HOMEWARD FLY."

sition in life is without corresponding cross or opposite trial, and illustrated his text by many passages of Scripture. Naaman was a mighty man of valor, but he was a leper. The five cities of the plain were fruitful, but the men of Sodom were awful sinners. I called, but you answered not, and etc. When the candidate came down from the pulpit and entered the vestry, the senior trustee politely remarked, "Sir, you gave us a most ingenious discourse, and we are much obliged to you; but we don't think you are the preacher for us."

There is a story told of two Scotch lads who knew little of gunnery and natural history, but were familiar with King James's Bible and with the winged heads

## Housekeeping.

## RECEIPTS FROM CHLOE'S COOK-BOOK.

*Tomato Soup.*—Two quarts of sweet milk and two quarts of water; when boiling add one quart of cooked tomatoes, into which has first been well stirred one-half teaspoonful soda. Add pulverized crackers and butter; salt and pepper to taste.

*Veal Loaf.*—Three pounds of veal off the ham; three slices salt pork, chopped fine, add three eggs well beaten, one-half cup sweet cream, one tablespoonful each of sage, salt, and pepper. Stir well together, and bake one and a half hours. Best when cold.

*Bouilli Beef.*—Put a part of a brisket of beef, weighing six pounds, into a sauce-pan, and cold water enough to cover it. Let it boil until the scum rises, and skim it nicely; add two carrots, two turnips and one onion, cut in dice form; one-half can tomatoes; stick an onion full of cloves. Let all simmer three hours. Add one tumbler full of red wine, two teaspoonfuls mixed mustard, one tablespoonful of salt. Let it simmer one hour. When done sprinkle over it some pickled cucumber cut very fine. Stir a little flour into the gravy; give one boil; turn it into the dish with the meat and send to table very hot.

*Fried Chicken.*—Cut up young chickens; put them in a pan with a very little water; cover closely and put them in a hot oven; let them cook until tender; then remove; roll them well in flour, and brown nicely in butter in frying pan on top of stove.

*Fried Oysters.*—Take large oysters drained well. Roll some crackers fine, season them with pepper and salt. Have ready some boiling lard and some beaten eggs. Dip the oysters first in the cracker then in the egg, and then into the cracker again; drop them in the hot lard; let them brown, and skim out in a colander to drain. Should be served hot.

*Chicken Salad.*—Take the meat of a boiled chicken, mince and add an equal quantity of chopped celery. Prepare the following dressing and pour over it. Yolks of two hard boiled eggs, two teaspoonfuls of mustard, two of salt, a little pepper; yolk of a raw egg and a little sugar, one pint of cream, and vinegar to the taste.

*Potatoe Puff.*—Two cupfuls cold mashed potatoe, two tablespoonfuls melted butter beaten together till light; beat in two eggs, one cupful of milk and a little salt; turn into a buttered dish and bake in a quick oven till well browned.

*Escaloped Tomatoes.*—Skin some tomatoes; take a baking dish and put in the bottom a layer of rolled cracker and small pieces of butter; then a layer of tomatoes sliced; add another layer of cracker and butter, with pepper and salt to the taste; then a layer of green corn cut from the cob. Repeat until the dish is filled. Bake three-quarters of an hour.

*Mince Meat.*—Four pounds round of beef, boiled tender and chopped fine, twice the quantity of chopped apple, three pints of boiled cider, one quart of the water the meat was boiled in, three cups of molasses; stir well together and boil half an hour; let cool and add two pounds chopped raisins, one pound of currants, one pint brandy, four cups of sugar, half a pound of melted butter, four tablespoonfuls of cinnamon, two of cloves, two grated nutmegs, and a little pepper.

*Pie Plant Custard Pie.*—To one cup stewed pie-plant use one cup of sugar, one tablespoonful of flour, yolks of three eggs and a small piece of butter, bake with only an under crust, and when done put on the top the three whites beaten to a foam with three tablespoonfuls powdered sugar; place in an oven for a few minutes to stiffen.

*Plum Pudding.*—Soak over night ten crackers in three pints of milk. In the morning add five eggs, one cup of sugar, two cups of raisins, one pint of milk, a little salt and nutmeg; bake four or five hours; stir twice while baking.

*Amherst Pudding.*—Three cups of flour, one cup of suet chopped fine, one cup of milk, one cup of molasses, one cup of raisins chopped, one egg, half a teaspoonful soda, one teaspoonful of salt, two teaspoonfuls of cinnamon, one teaspoonful of cloves; boil or steam three hours.

*Orange Custard.*—Pare and slice six oranges and lay in a deep dish. Take one pint of milk, two tablespoonfuls corn starch, yolks of three eggs, a little piece of butter and half a cup of sugar, and make a boiled custard; put one cup pulverized sugar over the sliced oranges and then pour over them the custard. Make a meringue of the whites and place over the custard; place in the oven for a few moments.

*Lemon Cream.*—Into one and a half cups of boiling water stir two tablespoonfuls of corn starch wet with water and the juice of one large lemon, beaten yolks of three eggs and one cup of sugar; boil five minutes, then stir in the whites beaten stiff; pour in small glasses and serve cold, with whipped cream on top of each glass.

*Fried Cakes.*—Three eggs, one coffee cup sugar, one cup of milk, three tablespoonfuls melted butter, five teaspoonfuls baking powder. Flour enough to roll out soft.

*Molasses Cookies.*—One cup of molasses, one cup of sugar, one cup of butter, two eggs, one tablespoonful of soda, one teaspoonful of salt, one teaspoonful of ginger, one teaspoonful of cinnamon, one teaspoonful of grated alum. Dissolve both soda and alum in half a cup of boiling water and pour into the molasses. Use flour enough to mix very stiff, and knead well.

*Sugar Cookies.*—One cup of butter, two cups of sugar, four eggs, flavor to taste; soften the butter and pour it on two cups of flour; beat the eggs up light and then beat the sugar into them and pour that in with the butter. Dissolve one teaspoonful of soda in two tablespoonfuls of milk, and pour that over the rest; mix up lightly with the hand and then mix in a little flour with two teaspoonfuls cream tartar stirred in it; roll out very soft and bake very quick.

*Boston Brown Bread.*—One quart sour milk, one cup molasses, two cups rye flour, four cups Indian meal, two even teaspoonfuls soda. Steam three hours and then bake half an hour in a hot oven.

*Yeast Biscuit.*—At noon boil three medium sized potatoes; wash them, add three tablespoonfuls flour, and one each of salt and sugar; over the whole pour one pint of boiling water; when cool add half a cup yeast; home-made preferred. At night stir in about half a cup of lard, a little salt and flour to make a stiff batter. In the morning knead well and put in all the flour needed; let it rise again, and knead lightly, using as little flour as possible; make into biscuits; let them rise well, and bake in a very hot, quick oven.

*Baking Powder Muffins.*—One-half cup sugar, half a cup butter, one cup milk, three cups flour, three teaspoonfuls baking powder, and three eggs. Put the materials together the same as for cake; bake quick and well, and place them on the table hot.

*Hickory Nut Cake.*—One cup of butter, two cups sugar, half a cup milk, three cups flour, four eggs, one teaspoonful cream tartar, half a teaspoonful soda, one cup dried currants, and one and a half cups hickory nut meats.

*Almond Cake.*—Two and a half cups of sugar, one and one-eighth cups butter, one cup milk, four cups flour, whites of ten eggs, four teaspoonfuls baking powder, one pound blanched almonds.

*Sweet Tomato Pickles.*—Slice six or eight onions, and one peck of green tomatoes and scatter over them one cup of salt; let stand twelve hours, then boil them fifteen minutes in two quarts water and one quart vinegar. Skim out the pickles and put them with four quarts fresh vinegar, two pounds sugar, two large spoonfuls each of allspice, cloves, and cinnamon, and half a pound of white mustard seed. Simmer all together for fifteen minutes.

*Yeast that Will Keep a Month.*—One quart water in porcelain kettle, six good sized potatoes grated raw and stirred in the boiling water, then add half a cup each of salt and sugar and the water in which a handful of hops has been steeped. Remove from the fire and when cool add half a cup of yeast. Use a large spoonful to a loaf.

*Canned Corn.*—Dissolve one and one-quarter ounces of tartaric acid in half a pint of water. Cut the corn from the cob and boil half an hour in plenty water; add to each quart of corn, as cut from the cob, two tablespoonfuls of the acid solution; boil a few minutes and can in glass cans. When used put half a teaspoonful of soda to one quart of corn; let it stand for three hours before using, and cook well. I have tried canning in this way for three years and guarantee it.

*Tomato Catsup.*—One gallon of tomatoes cooked and strained, two large tablespoonfuls of salt, one teaspoonful of cayenne pepper, two of mace, two of cloves, one tablespoonful of allspice, one quart of vinegar; put the tomatoes and ground spices together; let them boil one hour; add the vinegar; let it cool, and bottle; cork well. MRS. B. N. W.

*Chicken Croquets.*—Take an ordinary sized chicken; let it be tender; boil in as little water as possible until done; reduce the broth to about a cup full, after you have taken up the fowl. Mince the meat of the fowl very fine, rejecting all the skin. Chop very fine one very small onion and fry in two ounces of butter and a tablespoonful of flour; stir three minutes, add the meat, broth, one teaspoonful fine chopped parsley, half a chopped sweet bread, or as much calf's brains, previously boiled, salt, pepper, twenty drops of extract of nutmeg; stir all together three minutes over the fire. Take up and stir in the yolks of three raw eggs until it is a gelatinous mass. Spread out in a dish and when entirely cold mold into forms, using one tablespoonful for each. You may form them like a sausage, a small biscuit, or a tiny sugar loaf. Dip them into beaten egg and roll into very fine bread crumbs. Drop carefully into boiling lard. Be very sure the lard is at the very boiling point, and be cautious not to let them stay in only until they are a light brown; then they will be crisp outside and soft inside. Serve on a white napkin garnished with sprigs of parsley.

# Window Gardening.

By HENRY T. WILLIAMS,

Editor Ladies' Floral Cabinet, N. Y.

**RICHLy ILLUSTRATED WITH EXQUISITE ENGRAVINGS.**

An Elegant Book, with 250 Fine Engravings and 300 Pages,

Containing a Descriptive List of all Plants Suitable for Window Culture.

A ready and invaluable aid to all who  
wish to adorn their houses in the easiest  
and most successful manner with plants  
or vines, or flowers. Instructions are  
given as to the best selection of plants for  
Baskets or Ferneries and Warden Cases.  
Several chapters are devoted to Hanging  
Baskets, Climbing Vines, Smilax, and the  
Ivy, for decorative purposes. Bulbs for  
House Culture are fully described; also  
ornamental Plants for Dinner Table  
Decoration. Other topics are well con-  
sidered, such as Balcony Gardens, House  
Top Gardening, Watering Plants, Home  
Conservatories, Fountains, Vases, Flower  
Stands, Soil, Air, Temperature, Propaga-  
tion, Floral Boxes, the Aquarium, Rustic  
Conveniences for Household Ornament,  
and directions in detail for the general  
management of in-door plants for the  
entire year throughout the winter, spring,  
summer and fall. The volume is pro-  
fusely illustrated with choice engravings,  
and pains have been taken to make it one  
of the most attractive books ever issued  
from the American Press. For sale or  
supplied by Bookstores everywhere, or  
sent postpaid by mail on receipt of price.

Price **\$1.50.**

Every Woman Her Own Flower  
Gardener.

By Daisy Eyebright (Mrs. S. O. Johnson)

A delightful little volume, written by a  
lady fond of flowers, as a special help and  
assistance to others interested in out-door  
flower gardening. Simple directions are  
given, how to lay out and plant Flower Borders, Ribbon Beds, and arrange ornamental plants.  
Among the topics treated are Geraniums, Fuchsias, Bulbs, Ornamental Flowering Shrubs, Ever-  
lasting Flowers, Ornamental Grasses, Coleus, Paeonies, Shade Trees, Garden Vegetables, Old  
Fashioned Flowers, Annual Flowers, Perennials, Ornamental Vines, Lawns, Insects, Manures,  
Watering Soils, When and How to Plant, Dahlias, Lilies, Gladiolus, Verbenas, Canias, Balsams,  
Portulacas, and nearly all the popular varieties of flowers and shrubs. The book contains 148  
pages, is charmingly written by one deeply in love with the subject, who appreciates the tastes of  
ladies and aims to do good with agreeable, kindly advice on home gardening. For sale or sup-  
plied by Bookstores everywhere.  
Price, in handsome Pamphlet Covers, 50 cents; bound in Cloth, \$1; postpaid by mail.

No. 68.

PRICE 12 CENTS.

## WINDOW, FIRE-PLACE AND MIRROR DECORATIONS.

Upon this page we illustrate several very charming devices for ornamenting windows and rooms. The flower stand and hanging baskets are made of an article called virgin cork, which any one can take and construct into a hundred beautiful forms. By the use of the knife, and cementing the pieces together, floral ornaments of an inconceivable variety can be made, which are elegant in appearance and of great durability. This article, virgin cork, is hardly known yet in the United States, and yet has been very popular for years in England.

During the summer time, when our fire-places are not in use, it is the taste of many ladies to decorate them with floral and woodland treasures. The wicker basket seen in this illustration is filled with moss, having at bottom a large pan with abundance of earth, and in it are placed a great variety of plants, which do well in the shade.

FLORAL STAND.

HANGING-BASKET.

Another long basket or tray is put on the mantle, wherein are growing flowering plants, with vines at either end, and ferns at the back next to the glass. A beautiful way to finish the decorations of such a mantle is to take the tips of fern leaves, and, sticking their stems into the wicker basket, let them point outward and hang down. It gives a finish far beyond anything of artificial manufacture.

## FLOWERS IN WINTER IN THE SIERRAS.

I will tell you a little about the winter of the Sierras. It is very dull here in consequence of the deep snows that fall during the wet season. It snowed fourteen days at one time in January; the snow was twelve feet deep when the storm was over; but it has settled down to ten feet. The sun is so hot, that the snow is soon packed down solid. When we want to go out, we have to go on snow-shoes; they are from four to fourteen feet long, arranged to suit the size of the person. Boys and girls from five to seven, wear them from four to five feet long; twelve and fourteen years old, from seven to nine feet, etc. They are made of very light wood, and painted; nice leather slippers in the centre to place your foot, and a pole with a wooden button on the lower end to support or help your progress up hill. Every afternoon the boys and girls have a splendid time snow-shoeing. We sometimes

go head over heels; but we do not hurt ourselves as the snow is soft. My shoes are seven feet and a half long.

Well, away up here, in this isolated region, we try to have flowers. At the east window we have a table filled with beauties. The Oleander is just bursting, a delicate pink flower and very double. Black-eyed Susie is full of flowers, orange color. A daily Rose, with eight roses of very delicate shade of pink; after white we expect the Red Rose. Fuchsia has grown eight feet and a half high, scarlet, and is very beautiful when drooping with flowers. A Mauranda vine runs over a trellis frame, then up a cord ten feet. We train it up to the ceiling, then around a picture called Faith and Hope, which hangs over the organ. We have three varieties of Pinks; some are in bud. Geraniums are doing well. Petunia is just putting out buds. Pepper-tree five feet high; leaves are handsome. Two hanging baskets, one of Wandering Jew, the other of Ivy Geranium, and the grass found on the hill-sides. ARABELLA M. STORER.

FIRE-PLACE AND MIRROR DECORATION.

## Floral Contributions.

### A PRETTY PLANT STAND.

Among the many tables and stands for plants described in the CABINET, I find my own is decidedly unique. It was designed by our house architect for a bay window eight feet in width, and as plants and stands can be more easily attended by leaving space to walk around them, I resolved, like those people in cities who are compelled to build upward in order to obtain room, to have an addition to its height; so I have a two-story stand.

Its depth at the bottom, from front to back, is two feet, and the width of the whole about five. The lower part consists of four steps or shelves reaching by graduated distances from the front to the back of the stand, and occupying nearly two-thirds of its height. Then oblique braces from the upper shelf of the lower tier support the lower shelf of the upper tier very nearly in a line above the second shelf from the floor, thus giving room to the plants on the shelf forming the upper part of the lower story, to grow between this last shelf and the window. Above this are two more shelves, the upper one six inches wide, placed on the vertical supports at the back, and forming the top of the stand, which reaches within one foot of the upper casing to the window. The whole is painted a stone gray, and though made of wood, has a light, airy look, the sides being open consisting of two parts each, the front oblique, the back vertical, and the shelves kept in place by cleats fastened to the centre and outside supports. Reaching the upper shelves necessitates the use of a step ladder, which is the only inconvenience.

In the centre of the lower shelf, which is wider and stronger than the others, I keep my Calla, and on either side the plants requiring the largest pots. The shelves of the upper tier being designed for smaller pots and those plants which luxuriate in a warm atmosphere. The top shelf being specially devoted to Cacti, bottles of water containing cuttings, and the Hoya Carnosa, which roots sparingly and thrives with tropical vitality in the heated space, sending its ivy-like tendrils in every direction.

When preparing autumn leaves for room decoration, I am careful to leave them on the twigs or boughs as Nature placed them, where each leaf is ironed separately, and a thin coating of gum arabic spread over those naturally glossy. These, mingled with others, form bright hanging bouquets for walls and ceilings. Lambrequins of richly tinted leaves are tastefully made by taking glue prepared with whiskey for ready use, and lightly glueing the stem of each leaf, point downward, to the lower edge of thick paper cut any desired shape. Above this place successive rows, and finish with a border of pressed gray, brown or green moss. When the colors are arranged artistically, the effect is very pleasing.

Some autumn leaves, especially the Woodbine and Sumac, must be gathered after the first frost or as soon as their tints have deepened, as they drop early. The oak and maple will be found much later in perfection. The delicate creeping mosses with fern-like fronds, when separated carefully and picked free from tiny sticks, roots, and lumps of earth, and pressed, make wreaths more exquisite even than ferns.

June is usually considered the fern-gathering month, because then they press easily and retain their colors; but some of the loveliest I ever saw were gathered in Eastern woods in October. Going one day to get some

blossoms of the Hamamelis or Witch Hazel, I came upon a bed of maiden-hair Ferns bleached by the frost to the softest Naples yellow. When pressed they were formed into a wreath on black paper such as artists use for panel painting, and are the admiration of all who see them. Black velvet makes a rich background for a wreath of this description, and a nice frame can be made by cutting strips of stiff pasteboard about an inch wide the desired length, clipping the ends to a point, and covering with black broadcloth or fine casimere; then lap the ends at the corners of the frame and fasten with a white or gilt button, or with a convenient carpet tack, covering the head of the tack with a small sea shell.

Bind the wreath and glass together with strips of gummed paper and glue to the frame. Hang against a white wall. Similar strips of pasteboard can be covered with gilt or bronze paper, and are sometimes preferable to black frames. Another way is to take thin strips of smooth pine wood of any desired length and width, and after joining the corners neatly, spread a coating of putty over the whole upper side, on which designs in leaves, vines, tendrils, or geometrical figures can be stamped to imitate carving. When dry, paint the whole any shade of wood color desired.

The same frame is more effective when the wood alone is stained black or dark walnut, and the putty then moulded into graceful forms to please the taste, placed on the frame, dried, and covered with bronze. This is fine for engravings.

As all true lovers of the CABINET like to have it a floral and art journal, I will say a few words in regard to pictures. When making purchases do not select immediately one that is conspicuous with bright color, but wait until the eye becomes accustomed to the glare and is able to take in details without excitement. You may then discover it becomes tiresome after a few minutes' scrutiny, and turn with relief to one you had overlooked, where the subdued neutral tints of blending grays and browns combined with lively bits of color, produce a quieting, resting effect. We need something for our homes that can be seen often and studied without weariness. Something full of the charm of repose. When placed in position on the wall, let colored pictures hang by themselves, while engravings, photographs, and all black and white drawings can be hung separately or in groups.

AVIS FAY.

### CULTURE OF THE VERBENA.

The Verbena is a very popular bedding plant, and is of numberless colors and shades, among which is to be found the brightest colors, the most intense scarlet and deepest blue, with striped, variegated, etc. Auriculiflora is a most desirable variety, comprising various shades, with a large distinct eye of white or yellow. Lovers of this fine plant will be pleased to learn that it can be raised from seed with very little trouble; in fact, it requires very little more care to raise it from seed than it does from cuttings. Seedlings are more robust and healthy than cuttings, and are not as liable to rust.

A pleasing feature about seedlings is that they are for the most part fragrant, whereas old plants are not. Seed should be soaked in tepid water for twenty-four hours before planting. Sow in a hot-bed the first of March in drills four inches apart, and cover with a scant quarter of an inch of rich soil pulverized fine. (I use an old sifter to sift the soil through.) Keep the soil damp, but never wet, and never allow it to become dry; either case would result disastrously to the seeds. In about ten days they will begin to appear.

When the young plants have formed their third or fourth leaves, transplant to the garden. In removing the plants from the seed-bed, disturb the soil as little as possible, as the seed is very uneven in germinating, some not having sprouted when the first are large enough to transplant. In transplanting be sure to select a spot fully exposed to the sun; if anyways shaded they will produce an abundance of foliage, but not a single flower.

Set plants about a foot apart; if too close they will be apt to mildew. Make the soil as rich as possible, using well rotted cow manure. A light porous soil is best suited for Verbena culture. A good bed of Verbena is a sight that will dazzle the eye with its brilliancy, it being "a brilliant carpet of unnumbered dyes."

Some writers contend that a bed of Verbenas grown two or three years in the same place will be diseased with rust, but I have no trouble with it. In a bed of Verbenas from seed you will find new colors every spring. I have noticed in a bed of dark varieties only the first year, white and other new colors the succeeding spring, among which was a white one with a light green centre, a very novel color, and also very pretty.

The inexperienced are in the habit of thinking that this plant is more easily grown than it really is; no plant will sooner show neglect than this. It will succeed very poorly in a stiff soil that bakes. The plant is a half hardy perennial, blooming soon after sown. There is a variety called Montana that is perfectly hardy, surviving the coldest winters without harm and literally covers itself with its rose-colored flowers from the middle of April until winter sets in. It is altogether a most desirable variety, and one that I would advise all to have. If you have any doubts as to your ability to grow it from seed, I would say buy plants from the florists, some of whom sell as many as twenty plants for one dollar. If you possess not a hot-bed, seed may be sown in shallow boxes the latter part of March and placed in a sunny window on the south side of the house, and kept covered with a pane of glass or a board; the glass is best.

Seed do not require light to germinate, but it is absolutely necessary after germination takes place or the seedlings will be spindling and never will produce good flowers. Do not fall in the common error of sowing seed too thick, as besides drawing them up spindling, it interferes with transplanting. To all who have not tried this plant, I would say give it a trial. You will not be disappointed. Always buy mixed papers of seed, unless you wish a particular variety.

Hampton, Va.

W. G. JOY.

**Othonna.**—Has anybody tried Othonna as a water plant? I experimented a little last winter with it, and am much pleased with the result. The foliage is more graceful than our old standby, Tradescantia. Last December I put some short sprays in a hanging-basket made of a broken goblet covered with scarlet worsted and silver cardboard; filled it with soft water, and put in a little charcoal. It soon put out roots and grew and blossomed, and in April it hung down a foot, and the roots filled the goblet. I was so pleased with this, I filled a tall white vase with wet sand and put some in that on the mantle. This soon reached the mantle and lay on the mat on which the vase stood. Then I put some in a glass stand for cut flowers, in wet sand. It looks well all the time, and makes a pretty draping when the stand is filled with cut flowers.

M. J. P.

## Answers to Correspondents.

**Cyclamen from Seed.**—Will you tell me how to treat Cyclamen raised from seed, and how old they must be before they blossom?

Cornwall, Vt. MRS. E. A. WARREN.

*Answer.*—The little seedling bulbs as soon as large enough to handle, should be potted off and grown rapidly without drying off. If well tended they will soon form bulbs which will flower in from nine to eighteen months from the time the seed was sown. Under the old treatment of drying off and resting, it usually took three years to bring the bulb to a blooming state.

**Wax Plant Seeding.**—Can Hoya Carnosa (Wax Plant) be raised from seed? I have a large plant which has seeded several times. Do they often seed?

Guilford. MRS. H. N. DAVIS.

*Answer.*—The Wax Plant does not often seed with us. If planted in bottom heat the seed would vegetate, but it is not worth planting when increase is so easily effected by cuttings.

**Calla Lily leaves turning yellow.**—I have a Calla Lily which I keep well watered, but the leaves turn yellow as soon as half grown. What is the cause?

MRS. SALLIE J. HUNT.

Mayfield, Ky.

*Answer.*—Perhaps poor, sodden, sour soil; perhaps want of light, or both. Repot your plant in good light soil, and give it all the sun you can.

**Roses Sickly, etc.**—My Roses in pots grew well for two months then began to look sickly, and the leaves dropped off. How shall I treat Tritoma? Let me suggest the culture of the wild Collinsia; it makes a beautiful bed of blue. Can you name the enclosed Geranium?

MRS. M. F. BOOTH.

Bardolph, Ill.

*Answer.*—Your Roses were probably badly potted, the soil became sour and the roots died. Roses need a rich soil, but it should be open and well drained.

The Tritomas are bulbs from the Cape of Good Hope. Pot them in October in sandy loam, grow them in a sunny window and they will bloom about February; then diminish the supply of water, and when the foliage dies put the bulbs in the pots away to rest until the season for repotting.

The pretty blue flower you enclose as a Collinsia is Polemonium reptans. You probably have Collinsia verna, a very handsome plant with blue and white flowers, in the woods, and have confounded the names.

Your "Geranium" is Arbutum, the best of the low-growing varieties for bedding.

**Akebia quinata, etc.**—Please let me know when Akebia quinata blooms. What is the cause of Oleander buds falling off?

HATTIE SHERMAN.

Ohio.

*Answer.*—Akebia quinata blooms about the twentieth of May. The flowers are very curious, the male and female looking very unlike. Your Oleander has been kept too dry, or you have changed the temperature too rapidly. Either of these causes would make it drop the buds.

**Fernery doing Badly.**—Can you tell me what to do with my Fern case? I have bought Ferns and got them from the woods; they do well for a time and then rot.

Andulasia, Ill.

*Answer.*—You have kept them too wet, or if under a glass shade, given too little air. When ferneries are moist they need no water, and they should always be well drained.

**Variegated Ivy Geranium turning green.**

**—Passion Flowers.**—I have a beautiful Ivy-leaved Geranium. When it was small the green leaves were bordered with white, tinged with pink. How shall I restore the color? Where can I obtain a plant of Passion Flower?

F. E. HUSELTON.

Westford, Vt.

*Answer.*—You have grown your Geranium too well and in the shade. Variegated plants often revert to the green state. Let the plant become a little pot-bound and expose to full sun, and the colors will return.

You can procure plants of Passion Flowers from any greenhouse, but they are rather large for house plants. P. Empress Eugenie is the best purple.

**Names of Plants.**—Ipomeas.—How should Ipomeas be planted?

MRS. JENNIE MCKEE.

Chevanse, Ill.

*Answer.*—Sow Ipomeas in the garden, and treat like the common Morning Glory. Your Fuchsia is F. speciosa. The tall ever-blooming shrubby plant with bright red upright flowers is Aechania Malva-viscus, one of the best house plants.

**Ivy and Oak Leaved Geraniums not blooming.**—Can you tell me how to make my Ivy Geranium bloom? Does the Oak-leaved Geranium ever bloom?

MRS. L. L. PHILLIPS.

Seranton, Pa.

*Answer.*—Both the Ivy and Oak-leaved Geraniums usually flower when stunted in growth. Let your plants become pot-bound and you will get bloom, but the foliage is far better than the flowers.

**Double Zinnias coming single.**—How can my Zinnias be made to produce double bloom when seed is gathered from double flowers? The tendency is to come single and we lose many beautiful ones.

Accotank, Va.

JAMES HUNTER, JR.

*Answer.*—Your question would puzzle anyone to answer. The rules of the production of double flowers are yet a mystery, and we all take chances in trying. Save only the seeds on the outer rows of the flowers, and you may get better flowers.

**Cape Jasmine Culture.**—I have a Cape Jasmine two years old which I long to see bloom. Will you tell me how to treat it?

New London, Ct.

MRS. J. T. WILLIAMS.

*Answer.*—The Cape Jasmine is botanically a Gardenia. Grow it in a warm room. Give it plenty of sun and it should bloom from May into the summer. In summer set it on a piazza or plunge the pot in the garden. It grows in summer setting buds which open from February onward according to heat given.

**Roses in the Parlor.**—Heavy Dew on Ivy.—My Ivy grows well and looks thrifty, but there is a sticky substance on the leaves. I wash them but it comes again. What will make Roses bloom in the window in winter?

L. P.

Chicago, Ill.

*Answer.*—The sticky substance on your Ivy is "heavy dew;" its cause is yet a disputed question; it does no injury, and your treatment is correct.

Very few Roses do well as window plants. The old-fashioned Monthly Roses are the best for house culture. None of the newer varieties will give half

the satisfaction that one may get from a plant of the old. Sanguinea agrippina (red) usually does well. Adam (pink) and safrana (buff) will usually bloom, but the large double Roses are useless for house culture.

**Name of Plant.**—Can you tell me the name of the enclosed? It was given me as a wild flower from Massachusetts.

MYRA A. PRICE.

Mendola, Ill.

*Answer.*—The plant is Epigaea repens, called also New England May Flower, Ground Laurel, and Trailing Arbutus. It is found from Maine to Virginia, and is the first flower of spring. Its delicate beauty and delicious fragrance make it a universal favorite.

**Spots upon Foliage of House Plants.**—I am much troubled by a disease upon my plants. I enclose two leaves, an Ivy and Abutilon. It shows itself in large discolored spots upon the leaves, appearing in a few hours.

E. B. F.

Beloit, Wis.

*Answer.*—The leaves sent are evidently sun-burned, and you must look to the glass under which your plants are kept for the cause. You say it did not appear in winter nor until the sun grew strong. It is very common in greenhouses, and care has to be used in selecting glass. A minute dot in the glass may form a burning glass, and if the focus falls on a leaf it is burned. Your treatment of your plants is right in every respect. Your only remedy for burning is to find the lights of glass which do the mischief and replace them with others.

**Names of Clematis.**—Shape of Flower-bed.—Please give names and colors of four of the choicest varieties of Clematis. Please give me an idea for shape of a flower-bed.

MRS. DAVIS.

Upper Alton, Ill.

*Answer.*—Supposing you want hardy Clematis, we reply Azarea grandiflora, large, blue; Juehmani, deep purple; Sophia, light-blue; Standishii, whitish. The last is a little tender.

An oval flower-bed shows off plants to great advantage.

**Name of Plant.**—Enclosed I send root of a plant purchased of a Frenchman in Richmond five years ago. It comes up in the spring and every year there is added about ten new roots like the one sent. How can I make it bloom? What is it?

Wilson, N. C.

JAS. S. WIGGINS.

*Answer.*—It is very difficult to name a plant from a root, and the plants sold by Frenchmen in our cities every spring are generally not worth either planting or naming. The root appears to be a Dahlia or perhaps a Dioseorea if the plant is a vine? In either case it should have bloomed. Send us leaves and we will try to assist you further. It may also possibly be Erythrina herbaea.

**Lemon Geranium.**—Please tell me what Lemon Geranium needs. I have given mine all attention and have been unsuccessful.

L. P. H.

Austin.

*Answer.*—Do you mean Lemon Geranium or Lemon Verbena? If the former, pot in common garden soil and grow in a sunny window. Be careful not to over water. If the latter, plant out during the summer in any common garden soil, and store in a cellar free from frost in winter.

## A LITTLE WINDOW GARDEN.

A few years ago I had quite a pretty window garden, not many flowers, but green and growing all winter, under many disadvantages. The window I used faced nearly north; it had a little sunshine, however; no shutters to the window and only an ordinary white blind. It was a very cold winter, and we kept a fire in the room day and night.

We were living in a small town, and wire baskets were scarce and dear, so I went to a tinner's, bought some wire and borrowed a pair of pliers, and made a basket for myself at very trifling cost; I lined it with moss from the woods; filled it with ground from the same place; planted in it a German or parlor Ivy, a Kenilworth Ivy, and a Wandering Jew. They all grew very well; the parlor Ivy was inclined to be rather delicate, but by pinching it back, and only letting it grow up the handles, kept it in good condition, having to give it close attention, however, for it was much troubled with green bugs, which I had to pick off nearly every day.

The Kenilworth Ivy grew and bloomed nearly all the time without any trouble, except pinching off the ends when they grew too long, to keep it full on top. The Wandering Jew had such very fine leaves on it, threw out a great many of its pretty red threads and clusters of leaves, and in the spring, much to my surprise, a tall flower stalk, which remained in bloom for some weeks. But I must tell you how my window was arranged. It looked so pretty that I made a little sketch of it.

In the middle hung my canary bird on one side the basket I have just mentioned; on the other, a common cigar box, suspended with twine, completely filled with *Tradescantia zebrina*, so that no box was seen. It grew so fast and bloomed so freely its beautiful wee purple flowers were a delight the whole winter. As the ends grew too long, I pinched them off and put them in the box to keep it full, or any place where there was room for them.

In the fall I put a piece of *Nasturtium* into a jar of water; it sent out plenty of roots, and bloomed until nearly Christmas, when it looked so delicate I threw it away. I had also a white *Petunia* in a cigar box; it bloomed very late, then looked so green and pretty all winter and began to bloom again in April.

I found cigar boxes very good for planting in; they stand well close together, and do not dry out like crocks. On cold nights I put a newspaper between the plants and the glass, and if very cold pinned up my bird cage and each of my hanging-baskets in a separate paper, and they were never touched by the cold the whole winter. I had a *Rose Geranium* and a box of *Ground Ivy*, which delighted me by blooming early in February, and some Ferns which are always interesting, the different shaped leaves, and their curious way of coming up, like hairy caterpillars more than anything else.

In the fall I took in some pretty *Chrysanthemums*; after they were done blooming, cut them down and kept them on account of the pretty fresh shoots that came up. I had also a little Cactus, a thick, flat oval, leaf with clusters of prickles on it. The buds all came out of the edges; some were leaf-buds, and two or three were bright yellow flowers, lemon-scented. Through some carelessness it died, and I have never been able to get another, not knowing its name; had also a little orange tree, which I bought in bloom; about a dozen oranges formed, but they fell off one after another. I could not keep it warm enough; the rest by care in watering and turning them round, kept very pretty all winter. E. H. E.

[Written specially for the LADIES' FLORAL CABINET.]

## Winnifred's Will.

BY AUGUSTA LARNED.

## CHAPTER XII.

"When Pandora allowed unnumbered evils to escape into the world, she left hope at the bottom of the casket."

It was a sunny May-day at Halcourt Hall—a warm, bright, genial day for the season. The noble trees in the oak avenue were budding, and the waters of Glenmere shone blue and benignant under a soft spring haze. The gray stone of the old Hall was softened by a curtain of vines, and the whole place had been transformed as if by magic, since we first saw it five years ago. The borders were trimmed and neat, and glowing with blossomed shrubs and clusters of rich flowers. The turf was like three-ply velvet, and beautifully kept drives and gravel paths stretched in all directions where new vistas had been cut to afford glimpses of the mountains and lake. Two noble century plants in carved stone pots fronted the entrance, and there a fountain was tossing up its crystal jet in the sunshine.

A hound of noble size, but very old, and almost blind and toothless, lay stretched on a rug where the sun streaked across the threshold, and now and then he lifted his head to snap at an imaginary insect. The gardener was setting his green-house plants outside in the sun, while his assistant cut the thick sweet grass with a lawn-mower. The delicate scent of lilacs was in the air, mingled with odors of new-mown hay, and the garden and orchard were one broad sheet of blossoms. It was the same old orchard where five years before two young girls, one dark, the other sunny-haired, had sat together in loving confidence. Now the blue birds and robins were singing with distracting sweetness in among the fragrant branches, and the old place had renewed itself, and put on an air of stately, dignified age.

As the lawn-mower clicked over the greensward, laying down little swathes of odorous grass, a tall, erect young woman in a broad-brimmed black hat that shaded her face, and a close clinging black gown just relieved by a bit of white linen at the throat, came through the door. Old Hector gave a feeble whine of pleasure as he got upon his tottering feet to receive a pat from the hand of his mistress. For a moment she paused on the broad stone step looking out on the glorious blossomed earth, and drinking in the sweets of this incomparable morning.

From the first glance it was plain that Winnifred Braithwaite had grown older, had matured and ripened since we last saw her. Her form had lost the meagreness and angularity of girlhood, and was beautifully rounded. The noble head sat easily on fine shapely shoulders. The complexion, dark and warm, had a rich glow of health, and abundant glossy hair rippled over the low broad forehead. Her expression was no longer fitful and capricious, but the clear gray eyes looked out with calm, steady, decisive glances. She was a woman self-poised and complete.

As Winnie stood there, in graceful posture, looking out over her domain, a bath-chair was wheeled around an angle of the house by a colored lad who had his mouth made up to whistle, but refrained out of respect to the inmate. Though his slender legs and arms had elongated since we last saw him, the crisp locks under the velvet cap, the jaunty figure, the expression of light-hearted carelessness unmistakably belonged to the Steenie of old. The chair contained a large, inert woman with but a feeble gleam of intelligence in the dull face, but still with a look which seemed to indicate that the motion of the vehicle gave her a degree of pleasure.

"Are you going away again, Winnifred?" she asked in a dissatisfied tone. "I have scarcely seen anything of you for two whole days."

"No, mamma, I am not going away," and Winnie

stooped down and took the nerveless hand in hers and patted it. "I have been a bad girl to neglect you so long; but you must try and pardon me, because I have been overrun with business and company."

"You never tell me anything," said Mrs. Braithwaite, unwilling to show that she was appeased, though it did please her to let her hand rest in Winnie's, and be gently patted, "but I have a way of finding out things for myself, and I know who has been here."

"I am willing to tell you all that will interest you, mamma, except those little trifles that are of no consequence, and might fret your mind."

"There's a deal goes on," returned Mrs. Braithwaite in the tone of a peevish child, "that never comes to my knowledge, but I happened to spy Charles Fortescue going away from the house after he had been here a good three hours."

"He ought to have known better than to come," said Winnifred, with an amused smile, and the air of being used to her mother's little scenes, and bearing them with the utmost patience and good humor. "Wheel mamma down into the oak avenue, Steenie, and bring me a camp-chair from the house, and then you may leave us."

When they were seated under the great spreading boughs with patches of soft blue sky interspersed, Mrs. Braithwaite began again on her grievance.

"You are not frank with me, Winnifred, though for a long time you have tried to be good and considerate. But you are not frank. I don't 'spose it belongs to the Braithwaites to be frank, but I know what Charles Fortescue's errand was, and all about the doings of his mother, and those nasty, sly, designing girls."

Winnifred leaned forward and smoothed her mother's gray hair with a light soothing touch.

"He has gone away, mamma, on a long leave of absence. He has had his walking papers; now don't worry about him."

"But you are not frank, Winnifred, you know you are not," and the pathetic wrinkles deepened in Mrs. Braithwaite's forehead. "Some day, I suppose, I shall suddenly have it told me you are going to be married, and I don't know how in my feeble state, with this weakness in my knees, I shall bear the shock."

The amusement broke out more brightly than ever in Winnie's face and dimpled it all over.

"No," said she, printing a light kiss on the corrugated brow. "It is quite needless for you to borrow trouble about anything so very unlikely. I haven't the remotest idea of taking unto myself a husband, and if such an idea should ever seriously enter my head, I will tell you at once, as I am in duty bound. You shall not have a son-in-law sprung upon you, mamma."

Mrs. Braithwaite looked at her for a moment with a puzzled face, for nothing ever threw her into such mazes of perplexity as Winnie's light, bantering tone.

"Do you mean to say that you have made up your mind not to marry at all, that you are going to live and die single?"

"I couldn't positively affirm it if I were put upon oath," looking at her with a half roguish, half perverse expression. "We never know what folly we may be blindly led into, but at present I look upon myself as doomed to the awful fate of a spinster."

Mrs. Braithwaite heaved a great sigh and shook her head dismally. She was as little pleased with this alternative as the other.

"It's unnatural that a great heiress and a beauty like you, with dozens and dozens of offers, should dry away into an old maid. You don't confide in me, Winnifred, but I know who comes here. There's Colonel Peasley, and Judge Barber, and that young lawyer from New York, and Charles Fortescue."

"Don't take the trouble to name them over," cried Winnie, gaily, "they are all on the condemned list, and no hope of a reprieve."

Mrs. Braithwaite looked at her with a bewildered and disapproving face.

"I don't understand you," she said mournfully. "Per-

haps I haven't the wit to understand things. Your father often said so. But if you had married your Cousin Bradley—

"Don't," returned Winnie, in a low voice, while her whole manner changed. She rose to her feet, and half averted her face.

"I know you always try to turn me away from that subject," the mother resumed with the dull persistency which belongs to such a nature.

"Yes, I do, mamma, because it pains me, and I am sure you cannot wish to make me suffer needlessly."

"But if it pains you, Winnie, how can you pardon that sly, bad girl, and say you love her still? I always predicted that she would bring harm as soon as she was let into the house, and she did do mischief of the worst kind. She got Bradley away from you with her underhand maneuvering, and bewitched the poor boy nobody knows how. She contrived it so slyly that she carried him right off from under your very eyes, and though I'm naturally easy going, it does put me out to have you say you forgive her."

Winnie grew rigid, and her face showed that patience was taxed to its extreme limits, while her mother went maundering along with her head put back on the pillow of the Bath chair, and her eyes closed in remonstrance against her daughter's course.

"I know you can't understand it," returned Winnie, with a desperate sense of her own helplessness, in view of the opacity of her mother's mental perceptions, "but I am a very obstinate and self-willed girl, mamma. My feelings will never change, and if you love me, you will let this subject drop."

"Well, I shall always call that girl a sly trollop," sighed Mrs. Braithwaite, who took a certain pleasure in standing out against her daughter. "You have always been called high-strung, and how you could bear to have that pale-faced, hypocritical thing carry off your lover, and then persist in doting on her, is a mystery; and, to cap all, the impudent creature has gone and called her first baby after you, Winnie, Braithwaite Halcourt."

Winnie drew in her breath hard to prevent an impatient, perhaps violent outburst. For a long time she had tried to discipline herself in forbearance toward this mother, who was shut out from most of the interests and feelings of her life.

"Mamma," she said at last, with deliberate calmness, "Bradley never was my lover."

"But you were engaged to be married."

"I have explained that over and over."

"Yes, about the property. And then you would go and divide the estate, and settle half on that woman."

Winnie felt the tension slacken round her heart now that Mrs. Braithwaite had begun harping on the other string of her grievance.

"I did it, mamma, because it was just and right. My Uncle Harold was defrauded of his share of the property, and I only gave back what belonged to his family; but you know very well that Bradley has never touched one penny. He refused it absolutely, and it has been settled on Aunt Edith for life, and is then to go to Bradley's children."

"And they say she is living like a queen on the other side of the water. I wouldn't have minded if she had come down a good many pegs in the world. But she hasn't forgiven Bradley for marrying that chit, and I can't blame her. I never liked Edith Halcourt, for she did not appear to know when I was in the room; and the old Judge hated her like poison. But where did you say Bradley was living? In some dirty back street in the city?"

"Yes, mamma. They live, I am told, in a little, plain cheap house in not a very nice neighborhood, and Bradley works hard in his profession."

"And what do they call him?"

"A journalist. He has done himself great credit, and his name will one day be spoken with honor."

"Well, Winnie," heaving a deep, disapproving sigh, "I never had much opinion of them writers for newspapers. They say it ain't a respectable business, and no Halcourt has ever gone quite so low before."

"Note on poor Uncle Edwin," returned Winnie, sarcastically, "who broke his wife's heart, and ended his days in a gambling house. You are mistaken, mamma. Bradley has ennobled himself by marrying the woman he loved, and doing honest work. He has lifted himself infinitely above all the idle, spendthrift Halcourts that ever lived. If he had married me he would probably have gone to the bad like my great uncle, Edwin."

"Because you have such strange, independent notions, and such a strong will of your own. They say the husband ought always to be first, but you must rule wherever you are. Now, I suppose that poor little weak thing Bradley has married, would put her hand in the fire if he told her to. She ought to be ashamed to let him slave his life out to support her."

Winnie's impatience could not be restrained.

"Oh, mamma, how cruel, how unjust you are to her! Virginia is a perfect wife. All these years she has lived

with only one servant, and her house is a gem of neatness. She has trained her little children beautifully, and, oh, mamma" (the tears sprang into Winnie's eyes), "she has taught them to love me, and to lisps a little prayer for Aunt Winnie, as they call me, night and morning. My heart often yearns for those children. I must have them here when they are old enough to come in the care of a nurse."

"Well, now, that caps the climax!" exclaimed Mrs. Braithwaite, lifting her hands. "I'll warrant the boy is as artful as his mother, and he will worm himself into your good graces, and the next news will be that you are going to make him your heir. You are a strange girl, Winnie; anybody else would have got married long ago to spite Bradley after his shameful treatment."

The amused look came back into Winnie's face.

"I suppose I am a strange creature. You tell me so often, mamma, and I am bound to believe you. But now you have put it into my head about making little Bradley my heir, who knows but I may adopt the idea? There would then be Halcourts of Halcourt."

Mrs. Braithwaite gave her a really frightened glance.

"Oh, you couldn't be in earnest about that," she said, rousing herself with unusual energy. "It would just kill me, and if I could see your own children about you, I should die happy. Why don't you take that nice Colonel Peasley. I know I should always like him. He is so kind and attentive, and seems to enjoy my conversation."

Winnie laughed merrily, and again stooped down to pat her mother's hand.

"Have you never heard, mamma, of the mother being courted for the daughter's sake? I am sorry I cannot regard Colonel Peasley as warmly as you do, but I happen to know that he is a tyrannical, despotic man who hides a cruel, cold nature under a set smile, and who would find the addition of my fortune to his own small property a comfortable arrangement."

Mrs. Braithwaite sat still a moment with a hopelessly blank expression.

"You never like the people I like; you are always seeing something in them I can't make out. And now for three nights running I have had a bad dream, and I suppose you will be vexed if I tell you how it has worried me. I dreamed that you were married to Edgar Swayne, and I would rather be laid out cold in my coffin than have that happen."

A shade of annoyance passed quickly over Winnie's face.

"Why will you torment yourself, mamma, about things never likely to happen? It would be cruel to me if you were to drive away Mr. Swayne, who is my friend and helper, and who has worked nobly among our poor people for small reward."

"But he means to get his reward," broke forth Mrs. Braithwaite, for the spirit of prophecy was now upon her. "He is slow and sure and is doing it all for pay. He would wait twenty years and never give up the hope of winning you in the end. It makes me feel just ready to fly when I see him come and coax you off to the school, and to nurse those dirty miners and their children. I see what his aim is, if I am a poor, old, lame creature glued into my chair, and never to take a step again as long as I live. When that catching fever broke out on the mountain, wasn't you away for days tending the sick people; and I expected nothing but what you would bring it home in your clothes, and we should all come down. I lay awake nights and fretted the flesh off my bones for fear you would get sick yourself."

"Poor mamma," returned Winnie in a softened voice. "did you fret like that about your troublesome girl? You ought to have been thankful that I was able to help Mr. Swayne and poor old Father Dooley, who were real heroes. When I saw how self-sacrificing and tender and devoted that old priest could be to the sick, in spite of his dirty hands and disagreeable habits, I was ashamed of having disliked him all my life. Then he took the fever and died, and everybody was loud in his praises. I think if poor papa had lived until now he would have been sorry for his harshness toward the old priest. Now that the young priest from Clovernook comes to see you as often as you wish, I am sure you ought not to begrudge me the help and friendship of Mr. Swayne, who takes so many burdens off my shoulders. His advice is invaluable to me, and when I follow it I am pretty sure to go right, and when I stand out against it I find I have made a sad blunder. He is such a true friend, so utterly unselfish and good, I wish I could teach you to think kindly of him, and drop all foolish suspicions. I will never do anything, mamma, to make you unhappy. I have been hard, and unloving, and cruel, in times past, but now I will always think of you first, and if I am impatient sometimes you will try and forgive your girl, who is so imperfect, and so self-willed by nature that she can attain but slowly and painfully to the virtues that belong to gentle woman."

The tears came into the mother's faded eyes, and she took Winnie's hand that was resting on the chair, and pulled her down to kiss her face.

"Don't talk like that, Winnie. You are as good as ever you can be, and I know I fret you, being so bright and quick, because I am dull. Your father always was fretted by my dullness, but how could I help it, if it wasn't given me to understand quick? I won't fret any more about anything if it troubles you, dear. There, I am tired now. Let Steenie come and take me in."

Winnie still lingered in the avenue after her mother had been wheeled away. The invitations of the blue weather, the sweet scents, and bird songs of spring-time were irresistible. And yet she was not thinking of these, that May-day as she stood there under the budding boughs of her ancestral trees, but of the past, and of how deeply old memories and old loves were rooted within her. The breeze seemed to whisper the names of Virginia and Bradley, but the bitterness, the fever, the anguish were gone from her heart forever. Her eyes had cleared their vision, and were now steady and calm. She could dimly discern the meaning of her life discipline, and her great sorrow. As she stood there erect, and tall, and self-sustaining, with a certain majesty of form revealed by the clinging folds of her black dress, with her hat off, and the sunshine playing over her hair, she did not know that interested and curious eyes were watching her from the porch of Finster's cottage. Now there was a porch to the fisherman's abode very prettily embowered in vines and trees. A few gay flowers peeped out from the garden borders, and the whole place had put on an unwonted air of neatness and comfort. Mrs. Finster's children were "out of the way." The family prospects had brightened, and she was a better housewife, although her gown still showed an inclination to slip off her helpless form. At that moment the humpish baby, a flaxen-headed boy of six, was calmly fishing in the lake for gudgeons, with a pin hook, while his mother sat on the porch gossiping with black Nanna, who, old and unwieldy now, and long exempt from service, and a privileged member of the family at the Hall, would toddle down in sunny weather to wear away an hour with the "pore white trash," not bating, however, one jot of the grand air of condescension with which she conferred her favors. Her teeth were gone; the "rheumatiz" had racked her joints, but she was always "tanking de Lord" because she could "sense" things as good as she ever could. The high colored turban still kept its perch on top of her crown, and she was wagging it now impressively as she turned up the whites of her eyes, and said with great fervor:

"Dunno but ole Nanna's hars would had gone down in sorrier to de grave, ef dat dar chile had been sent to lock-up. But ef you b'leve it was little Missy as save him from dat. She talk and talk so solemn and awful, like de day of judgments, dat dar chile went down on his knees and cried fit to break his heart, and she forgave him den, and has nebbber flung it up agin him, and dat dar chile would be cut up into little pieces, ef his missus ordered, widout ever so much as winkin'. Some folks can only be kep' straight, in dis world, by lovin'. It's de same wid brack folks as wid white folks; and ef it hadn't been for little Missy holdin' on, and beleevin', and forgivin' wid all her might, dat boy would be a son of perdition, a by-word, and a hissin', as de Bible says."

The old creature stopped to wipe the grateful tears from her eyes.

"I used to think she was mighty high feelin' and stuck up," remarked Mrs. Finster, "and would as soon step on poor folks as not. But something come along to change her. I 'spose it was her disappointment. Some folks a disappointment kills, and some it cures. She never carried her head a bit lower, but her voice had a different ring, and she got ho'd of Finster, and showed him she was willing to help him if he would help himself; and she sent Malviny to school, and fixed up the place; and the two oldest boys has got good situations on a farm, and Jake is learning the printer's trade down in York. Finster is a changed man. He gives the rum-shop a wide berth, and we get along a sight better than we used to. He's that tender-hearted, Finster is, misfortune keels him right over, but there never was a better man when things go straight, and there's clear sailin'."

Mrs. Finster shut her eyes and rocked pensively to and fro in the sunshine.

"Bress her heart!" returned Nanna, "ef deso blin' ole eyes could see her married to a good husband, wid children growin' up like plants in de Lord's vineyard, deu would she say 'now let d'y servant 'part in peace.' But shore, honey, dar's plenty ob gemmens dat come a-ridin' and a-prancin' to de door; an', bress your heart, she's grau' and high as de Queen ob Sheby wid dem all. 'Twould do your eyes good to see her a-setting at de table in her brack velvets, a-helpin' out of de silver dishes to kimmel dis, and jedge dat. But she won't take none of 'em, and dey knows it, shore's you're alive, honey."

"Folks do say she was dreadfully cut up about her cousin," remarked Mrs. Finster. "Who'd a thought all the time he had his heart sot on Miss Jinny? And that day he came and took her out in the boat, I never mistrusted thero was anything underhand going on; and I

can't think no harm of Miss Jinny now, she was so good to my Jake, and most saved his life. He sees her every week in the city, and is always writing home about the baby and little Winnie, and is just ready to break his neck for them all. I can't think no harm of Miss Jinny; but folks did talk hard of him; and mebbe if she had married him, they'd have said he took her for her money, for it ain't easy suitin' all round."

"Folks had better hole deir tongues," responded Nanna, with withering scorn. "De Halcourts wouldn't wipe deir ole shoes on dem gabblers. I've nussed Halcourts, and brung up Halcourts, an' I can speak and tell folks dat my missis didn't marry Mass'r Bradley cause why she didn't want him; an' she was willin' he should have Miss Jinny, willin' as water."

This was a theory of the case which had that moment popped into the old woman's head, but having once pronounced it she was ready to swear to its truth on the lids of the Bible.

"Well," responded Mrs. Finster, shutting her eyes with a misunderstood air, "mebbe I had no call to speak, but folks will talk unless you cut their tongues out, and I guess the Halcourts couldn't go that length. It was all in the papers at the time, and now folks do say she's going to marry Mr. Swayne."

"Ef de debble keeps dem tongues runnin', old Nanna won't hearken. She'll stuff her ears wid cotton. Marry Mass'r Edgar! De Lord hab massy on us!" and the old creature arose in a high state of indignation and hobbled away homeward.

Winnie, meantime, had strayed down the avenue in meditative mood, and almost before she was aware had struck into the mossy wood path along the border of the lake, where shining glimpses of water were framed in the arching boughs of aromatic hemlocks and larches. The ground was starred with pale anemones, and the fragile wood sorrel, and clusters of the little smiling spring beauty. She stooped to gather a handful of the blossoms, and a footfall came behind her, so softly that she was unaware of its approach until by accident she turned and discovered Edgar Swayne, who had been watching her for a moment in silence. Winnie went forward and shook hands with frank friendliness.

Five years spent mainly in the open air, in that healthy hill country, had strengthened the slight, nervous, student form. He had left his books to deal with men and things, and his frame had expanded, his delicate forehead had browned, and the slightly consumptive bend of the shoulders had almost disappeared.

"You dropped down upon my path like a brownie," said Winnie, laughing, "and just at the moment, too, when I was thinking of you."

The young man, for Edgar Swayne was still young, looked at her with an air of pleased surprise.

"Were you, indeed, wasting any thoughts on me, Miss Braithwaite?"

"I will tell you my thoughts," she answered, looking down to fasten the cluster of wild geranium she held, in the front of her dress, "and I think you will say they were not idle or unprofitable, such as a woman's thoughts are usually supposed to be. I was reflecting upon the fact that I have been very selfish to wish you to remain in this place, where your work among the poor people has been noble but obscure; where, indeed, your fine talents have been hidden in a napkin. You now have it in your power to secure a congenial position where your ability and scholarship will at once be recognized. I feel that it is my duty to urge you to accept the professorship in the new college at Hillsdale, which I know has been offered you within the past week. Your success is assured, and no one will rejoice in it more heartily than I shall."

The glow died out of Edgar's face, and when he spoke his voice was constrained and unnatural.

"Miss Braithwaite, I will go away immediately if you wish it. Your will shall be my law. But I had come here to tell you that I have declined the professorship at Hillsdale, that I have no earthly ambition higher than to be called schoolmaster at the mines, and teacher and preacher at large among these scattered mountain villages. But if you have other views, Miss Braithwaite, of course I will retire at once."

There was some difficulty to be overcome in his speech, and he paused abruptly as if from inability to go on.

A generous flush overspread Winnie's face, and she spoke out with her usual impulsiveness.

"Mr. Swayne, you do me injustice, and it is not kind. My motives ought to be as clear to you as the noonday. You have no right to misunderstand me. For the sake of the poor people who love and honor you so religiously, I could wish you to remain here always. Without cant, or a show of superior virtue, you have by the weight of personal character gained an influence over these rude folk that is simply astonishing. I should not know where to turn for helper or friend," she added, her voice giving way a little, "if you were to leave us; but it has seemed too costly a sacrifice to ask you to remain."

"It is no sacrifice, Miss Braithwaite." Edgar had half

averted his face and was trying to maintain a cool, even tone of voice, but knowing nothing, seeing nothing but the beautiful woman before him. "You think better of me than I deserve, for my motives have not been lofty, my aims have not been noble. I am no hero and no saint, but a poor enough creature; and all the inspiration has come from you. You planned the new cottages, and built the school, and gathered the library. You instructed yourself in the rudiments of medical science that you might teach the women how to nurse their sick babies. I am willing to confess to you, Miss Braithwaite, that I have not had an eye single to God's glory. There has been much of human weakness and infirmity mingled with my work."

Winnie would have been glad to raise her eyes clearly and steadily to his, but somehow she could not.

"Mr. Swayne," said she, rather brusquely, "it is always your aim to underrate yourself and your doings, and that I consider almost as great a fault as an excess of egotism. I know how you have spent yourself to save the weak and help the needy—how nobly you have worked to reclaim the drunkard, how you have watched by sick beds night after night, and made your presence a joy and blessing in those poor cabins. Oh, Mr. Swayne, I have no thanks, for they are poor, meaningless phrases. Such a life as yours must be its own reward. I never loved philanthropy for its own sake. I can work by fits and starts, but am destitute of a steady aim. I am not disciplined to continued effort, for there are wild, untamed impulses within me, and at times a passionate spirit of rebellion against my lot in life, though it seems a favored one to the world. When the fever broke out in the cottages I desperately needed something to do, and if I hadn't worked hard in those days, tiring myself prodigiously, to put the past behind me, I should surely have done some evil. But unconsciously, almost to myself, you have led me to higher ground. I know now if I had gone unchecked through life, with full sway for my imperious will, I should have turned out a kind of monster, something abhorrent to nature. Though I curvet and rebel, and prance in the harness often enough, as it is, in my better moments I am willing to bend my neck to the yoke. If to any one, I shall owe it to you if those better impulses ever gain complete ascendancy."

A thousand emotions swept over Edgar, as he listened to this naive, frank confession, so characteristic of Winnie. He felt instinctively that he must put himself behind a barrier of reserve or his defences would be swept away.

"Miss Braithwaite," he said, coldly, "you honor me by your confidence, but you will excuse me from implicitly accepting your self-estimate. And, by the way, I had almost forgotten to tell you that the great event, the school festival, takes place to-morrow. Know then, as a profound secret, that you are to be crowned as lady patroness and presiding genius of the occasion. Polly Duff is to perform the ceremony of coronation, and little Lane Charley, Long Bill's boy, is to make a speech in your honor. Since Charley has turned out such a prodigy of learning, his father has grown ashamed of his ignorance, and now he comes sneaking into the night-school to learn to read. You would be amused to see the great giant, who could fell me with a blow of his fist, sitting with a primer before him puzzling over words of one syllable. Sharp Ben Harding, who is my right hand now in the night-school, is dressing the walls with greens, and Nancy Duff is so mollified by Polly's promotion that she has offered to scrub the school-room out gratis. Mary Smithers is to bake the tea cakes, and prepare the collation, for we are to have a little feast after the exercises, at which it is expected the lady patroness will preside; and I am sure it will do her heart good to see the many, many people she has made happier, and to be greeted on all sides with the good will and admiration and gratitude of those poor people, her faithful subjects and devoted friends."

"Oh, Mr. Swayne!" Winnie's voice choked and her eyes were full of tears, "how much I owe you! that I can never repay! It is needless to try and tell you how grateful I am, but I know I have wounded you often, and I can ask you to forgive me."

Edgar Swayne was still young, and the blood had not grown sluggish or old in his veins. It was spring-time, and the birds were singing to their mates, and the wild flowers blooming at his feet. Suddenly he found himself whirled along by an irresistible tide. Something of whose power he was unconscious had gained control, and before he knew what he was doing he had seized Winnie's hand and was covering it with impassioned kisses. So tumultuous was the feeling that had mastered him the words came forth broken and disjointed.

"Oh, you must know how I love you, Miss Braithwaite. I love you now as years ago, only more fervently and irrationally. I loved you the first moment I heard the tones of your voice, and I shall carry that deep, undying love to the grave."

Winnie drew her hand away not abruptly, but gently, with an air of mild remonstrance and surprise.

"I hoped," she said, half sobbing, "that the wild, impracticable dream of those early years had vanished and been forgotten. I had relied on your generosity and great-

ness of soul, and had trusted that a deeper acquaintance with my defects of character would break the fatal spell. If I had it in my power to love any man I am not worthy to be loved by you, who are the noblest and the best of men."

"Do not drive me to despair with those sad, hopeless words," he cried, as if he were pleading for his life. "You do not know me or the abysses that have at times opened within my nature. There have been moments when I would have committed a crime to win your love. I shudder at my own self-abandonment when I think how conscience and duty might have shrivelled in the flame of an earthly passion. What acceptance can my acts have with God when I have thought first of serving and pleasing you? When I would willingly have toiled as a menial in your house for the one glance a day which was to keep me from perishing?"

"These are wild words," said Winnie, plaintively. "You are excited and know not what you say."

"No, I am not excited," and his face was almost stern in its white misery. "I have lived this over too many times; too long I have been slowly eating my heart, and striving to break the very spring of my life. Adoring you day by day with a stronger and more irrational love, I have said to myself no hope, no hope; but at the bottom of my heart some faint gleam has lingered. Oh, Winnie!" he cried, lifting his eyes to her face with an imploring prayer in them, "I could wait years and years, and make no sign. I can be obedient and docile as a dog that comes when you call, and goes at your bidding. I can live on the smallest crumb of comfort and consolation, but do not tell me that your heart still fatally clings to its love for that man, who has wronged you so cruelly. Do not command me not to hope," and his voice fell to a low thrilling whisper, "for if you do it will kill me."

Winnie turned away silently with a deep shade of thought on her face. The romance of her life had seemed so long past, that she was startled and awed by this passionate outbreak from one whose daily walk had been calm and tranquil during long years of constant intercourse with the family at the Hall. She stood so long quite silent, communing with herself, that Edgar's impatience could not be controlled.

"Do you bid me not to hope, Winnie? Do you quench the last gleam and bid me go away and hide my grief in the grave?"

Slowly she turned around and put out her hand.

"No, I do not tell you not to hope, but the task I am obliged to impose is perhaps too great for your strength. That which you wish can never take place while my mother lives, but if you are infinitely patient, and infinitely self-sacrificing, I will not command you not to hope."

Edgar sank upon his knees at her feet and his eyes were blinded by grateful tears.

THE END.

### KEEP ON CHURNING.

After the battle of Long Island, which was fought Aug. 27, one hundred years ago, and after the capture of New York city by the British, Gen. Howe made his headquarters in New York, leaving Staten Island in command of Col. Dalrymple. The wounded from the bloody Brooklyn field were taken to the island and billeted upon the farm-houses. It was Howe's custom to visit the temporary hospitals regularly, in order to satisfy himself that his men were receiving proper care. On one occasion, during a heavy storm, he and his staff took shelter under a farmhouse shed. Farmer Cole, seeing the party outside, approached them with a hearty invitation to enter the house and rest till the storm should subside. Mrs. Cole was churning in the kitchen, and the guests occupied the sitting-room. "We are very hungry," said a member of the staff; "can you give us something to eat?"

"I can't leave my churn," said the practical housewife.

"I'll churn for you," said a splendidly-uniformed officer. Forthwith he was set to work, Mrs. Cole having taught him how to use the dasher.

As she proceeded with the culinary work, ever and anon she glanced at the toiling officer. "Well," said she to his brother officers, "if he can't use the sword better than the churn dasher, he must be a mighty poor soldier."

This sally raised a hearty laugh, in which the volunteer churner joined heartily. He kept on gallantly, the perspiration streaming from every pore. It was the hardest work he had ever done in his life.

"That's right," said Mrs. Cole, encouragingly; "keep on long enough and you'll fetch butter."

When the storm had ceased the military gentlemen took their leave, first offering to pay for their entertainment. "We don't keep tavern," said Mrs. Cole, with the short and decisive snap of the independent farmer's wife; and the officers rode away.

"Keep on long enough and you'll fetch butter," became a household expression in the British army, and was taken to the other side of the water, where it was uttered many a time to encourage those who were striving to accomplish results under difficulties.

Get the Genuine! Beware of Worthless Imitations! Ask for the Gossamer Waterproof Garments, and see for yourself that our trade mark, "GOSSAMER WATERPROOF, MANUFACTURED BY GOSSAMER RUBBER CLOTHING CO., BOSTON," is stamped on the loop of the garment. None are genuine without they are so stamped. Our garments never under any exposure to either cold or warm weather, adhere together, or grow soft and worthless. No Lady or Gentleman should be without one of our Rubber Garments. Weigh from 9 to 16 ounces, can be easily carried in the pocket. Send for Illustrated circular. GOSSAMER RUBBER CLOTHING CO., 289 Devonshire Street, Boston, Mass.

Mention Floral Cabinet.

How to make money easy. Just out; complete outfit 15 cents; none free.  
H. LEE & CO., Middleboro, Mass.

## Penmanship Taught by Mail

To ladies or gentlemen, in any style, at your own home, by Prof. Loveridge, of Yale Business College. Copies and instructions especially adapted sent every week. Specimens of practice required for correction, which will be returned with new copies. It affords excellent practice in correspondence and insures rapid improvement. Terms, 50 cts. for four lessons. Try one month. Read what is said by the Board of Education of the town of Westport, Conn.: "We unanimously approve your system of teaching penmanship by mail and recommend it to the teachers of the town.—A. N. LEWIS, Sec'y."

R. C. LOVERIDGE, NEW HAVEN, CONN.

HA I comic oil chromo, worth 25 cents, 1 pk. love cards, 1 pk. comic envelopes, 1 pk. comic cards, 1 pk. scroll, all for 15c. and stamp.  
NOVELTY CO., Middleboro, Mass.

## THE LANGUAGE OF FLOWERS.

BY UNCLE CHARLIE.

This elegant book, during the past year, has found many admirers, and is now sent out in its second edition, enlarged and improved. The Poetical Selections are from the best authors, and the section devoted to Floral Conversation, among other good things, contains a most fascinating story.

There is also a section devoted to the Sentiments of Flowers, which gives a list of all known flowers and their meaning, and another to Floral Decorations, in which the subject is treated in reference to special occasions, such as Thanksgiving Day, Christmas, Easter, Decoration Day, Birthday celebrations, Weddings, Funeral ceremonies, the Church, etc.; there is also a chapter on Cemetery Decorations, and others on preparing skeleton leaves, drying flowers with their natural colors, autumn leaves, sea mosses, etc.

It is issued in two different styles to suit purchasers—in neat, enameled paper, at 25 cents per copy; for those wishing a handsome gift-book or table ornament, it is beautifully bound in extra cloth, and sold at 50 cents. Will be sent by mail, postpaid, on receipt of price. Address,

HENRY T. WILLIAMS,

46 Beekman St., New York City.

BEATS ALL! 1 pair Gold Plated Sleeve Buttons, gent's chain, for 3 green stamps.  
L. SNOW, Middleboro, Mass.

ELEGANT PHOTOGRAPHS of Moody and Sankey; the two postpaid for 10c. POSTMASTER at Pomeroy, Pa.

6 New pieces Sheet Music, retails for \$1.75, sent for 10 cts. and stamp.  
Cheap Music Co., Middleboro, Mass.

25 Elegant Cards 20 styles, with name, 10c., post-paid. GEO. I. REED & Co., Nassau N. Y.

How is this! pk Silhouette, pk III. Caricature cards, 10c. and stamp. Fun for 6 mos.  
E. HUFF, Middleboro, Mass.

C THIS! 1 beautiful Photo, 1 Fountain Pen, 1 pk. Oriental Silver Polish, 1 set Gold Plated Shirt Studs, 10c. and stamp.  
STAR NOVELTY CO., Middleboro, Mass.

## "What will Tarrant's Seltzer Aperiient cure?"

Asks the sufferer from a multitude of diseases. We answer: It will remove from the system the active cause of most of the diseases that flesh is heir to. It won't mend a broken limb, nor close up a bullet hole; but it may be profitably used in stomachic diseases. It will do no one any harm, and may do much good. Try it, and see if it won't suit your case.

SOLD BY ALL DRUGGISTS.

## COLGATE & CO.'S VIOLET TOILET WATER.

Lowest yet. 1 Book mark, 50 Embossed Chromos, 40 curious pictures, 12 1c. stamps.

\$85

NEW YORK, SEPTEMBER, 1877.

## VARIOUS HOUSEHOLD SUBJECTS.

Flowers are always appropriate for house decoration. Within the reach of all, they never "go out of style," and are always beautiful. I say within the reach of all, because to make a pretty bouquet does not require a great variety of flowers, or the petted darlings of the green-house. A few violets and leaves in a tiny vase are lovely, and many other wild flowers not so well known as the violets, are as delicate and pretty as some of the rare exotics. A little search in the woods, or on the cliffs, will reveal hundreds of them. The children, if once shown how to find them, will keep the vase always full. Nature's great flower-garden is free to all.

I differ with many persons as to what is a "pretty bouquet;" not the stiff bunches of flowers of all colors we so often see, surely. Two kinds of flowers, one of them white, with plenty of delicate green leaves, will always make a pretty dish bouquet; and in every bouquet a good deal of white and green is necessary; they soften and harmonize the whole. White and variegated Balsams make a pretty saucer bouquet, using short moss or curled parsley for green. Geranium leaves are not a necessity either; small Rose leaves, Myrtle, any delicate leaf will do, and the mosses of the Lycopodium family are most beautiful of all. Small glass vases with a rosebud, a spray of Heliotrope and two or three Fern leaves in it, is "a thing of beauty," which, they tell us, "is a joy forever." A pretty jelly glass will answer equally as well. Scarlet Sage and Wild Parsley make an exquisite bunch. Wild Parsley is a treasure. Once planted, it "volunteers" to an amazing extent, and blooms from June to September. The flowers are white and lace-like in appearance, and give a refined look to any bouquet.

Flat shells, filled with sand, are pretty bouquet-holders; fringe the edge with green, fill with purple and pink Verbenas, with Wild Parsley between them. Don't laugh at the combination of purple, pink and white, till you try it.

The broken goblets, with scarlet covers, are pretty filled entirely with green; twine Geranium Ivy round the handle, fill up with Ferns, Dusty Miller and Coleus. If hung by a long cord in a window, twine long sprays of Madeira vine up the cord, putting in short ones to droop. German and English Ivy and Madeira vine keep fresh in water a long time. Fill a vase with them; put it on a bracket under a picture, and train them up the long cords. English Ivy in pots grows wonderfully if the top of the earth is sprinkled with bone-dust, and the cold coffee poured on it once a week.

When the vines are all gone, the ferns, leaves, and grasses are a pretty substitute. Ferns will grow in shady, damp corners where nothing else will. They should be cut when well matured; the young, tender ones are too juicy, if I may use the expression, to press well. They should be kept in a warm room; a sudden change of temperature will make them curl. Arrange them in graceful bunches on the wall in the space where something is needed to "fill up" over or under a picture; wire them like autumn leaves, and put them round the picture frames. A few grasses improve these Fern bunches. Fasten them up with small pins. Fasten Ivies to the wall with double-pointed stick.

My experience is in favor of waxed leaves; they retain their colors better, and are less apt to curl. Put a piece of wax the size of a pea on each leaf, and iron with a warm iron till the coating of wax is smooth and very thin. Common beeswax will do. The Lycopodium pressed retain their color better than Ferns and never curl.

Grasses should be gathered before they get dry; and, if possible, arranged as they are to remain; if not, hang them in their natural position, not heads downwards; they never recover their drooping spirits after such treatment. To crystallize them, dissolve alum in boiling water, a pound to a pint; take it off the fire and put the grasses in, a few at a time; the solution is so strong it begins to deposit the instant it stops boiling; leave the grasses in a few seconds. In this way the most delicate grasses will take a fine frosting of crystals that will not weigh them down. Leave coarse grass in longer. Another way is to wet them and dip them in flour.

Don't make grass bouquets too large and stiff; make the effect as airy as possible. Put in a few bright berries and leaves. Asparagus berries are pretty and stay fresh all winter. A few grasses dyed scarlet may be put in, but not many. Heads of wheat and other grains are pretty.

By exercising a little forethought all these things may be secured in their season, and the pleasure they give more than repays the trouble, if trouble it is considered. Let me conclude with an account of my Centennial bouquet. I bought a handsome bunch of grasses in the Florida department of Agricultural Hall. The tall plumes attracted much attention, and, before I left the grounds, eighteen ladies asked me where I got "those beautiful grasses." WILD PARSLEY.

## MOSESSES, LICHENS, AND FUNGI.

In this article I shall mainly treat of mosses, lichens and fungi, for the reason that, if prepared as they should be, in them lies a mine of floral wealth. They answer a purpose that flowers cannot reach, except everlastings. With them I shall combine some kind of grasses. They will make ornaments suitable to adorn a palace, or make the humblest cottage glad with beauty.

When at the Centennial, in the Horticultural Hall, I saw in some of the departments bouquets and bouquet-holders made up so pretty that you would almost imagine that you were in Paradise. The bouquets were of immortelles, that is, everlasting flowers, and grasses.

In the season of flowers I have a great variety, and make many bouquets for home, friends, church, and fairs. It is often remarked, "Your flower-stand is as pretty as your flowers." I will tell you first of the stand, then its making up. It was first made to hold water for flowers. I trimmed and filled it with flowers, and carried it to fairs. It was much admired, but it took so many, and they lasted so short a time, that I concluded to change the programme. I trimmed with moss not colored and running pine; it was quite pretty, but faded before the year was out.

In coloring fancy dyes, I experimented with mosses, fungi, and lichens. I brought out as nice colors as could be made on wool or silk; blue, black, green, orange, purple, scarlet, pink, all colors and shades of all colors that can be colored.

The stand is three or four inches higher than a common stand. The top is a good sized cheese-box cover. The standard is round; to the bottom is a square box about two inches high. If to hold water they should be puttied. It stands on four legs. I tacked on flour-sack paper to sew the moss on. From the top of the standard to the bottom of the legs I sewed on green twirl moss. I tied up the moss in bunches before sewing on. Then I made small bouquets, roses; the roses I made from the fungi; took yellow everlastings for the yellow in the centre of the rose; the colored mosses and lichens make beautiful bouquets. The paper from the rim of the top of the stand is nearly three-quarters of a yard long, cut at the bottom pointed, the points four inches. The first row is green; that is placed so it will stand up around the rim; then fill in as fancy dictates, but have the main body green.

I have five varieties of moss, besides a large leaf moss that grows on trees. I could hardly do without it for trimming. Have the top rounding. I first fill it with dry moss, the shape as I wish; make it quite high. At the end of each point make flowers that will hang from the point. I use grasses in the bouquets. The variety I use the most is Briza maxima. Don't forget the white. I use white everlasting; some fungi are white underside; those I turn the white side out; one kind of lichen is white, also one kind of moss.

If you wish to make your floral designs cheap, you can color annatto for orange, set with saleratus; also use soft soap; also aniline; then purchase a few of the fifteen cent fancy packages of dyes. I make crosses, wreaths, baskets, anything that fancy dictates. I have a fancy article I took to the fair and got a premium. I called it an ottoman. I have had it two years. It has not faded.

I will say here, next fall, if any one wishes samples of those fungi, mosses, and lichens, send a two cent stamp, and I will send them. While writing this, a lady came here. When she saw the stand she exclaimed, "Oh, how beautiful, how did you make it so pretty?"

One word for the moss stand. I am too choice of it to put it on exhibition. To make nice fall bouquets of flowers, get a good variety of Gladiolus. You will not want much more. I have three autumnus got the first premium on them over other bouquets of flowers.

MRS. C. MYERS.

FIXED.

## Household Topics.

## KITCHENS.

Out of the large number of housekeepers—I mean those who really do their own housekeeping, and not those who have an upper servant for that purpose—but few are the delighted possessors of a kitchen that realizes their wishes; a kitchen that is so large that extra work does not make it inconveniently small, and so small that cleaning it is not the bugbear of the whole week.

City houses, from those of moderate expense up, generally have excellent kitchens, finished with hard woods, all conveniences of faucets, sinks, ranges, and other desiderata.

Farmhouse kitchens are always supposed to be vast rooms that will permit an unlimited number of "hands" to dine therein, and still room for the necessary work of preparing the meals, cleaning the "milk dishes," and all the hard work that is incumbent on the occupier of a farmhouse and farm kitchen.

But it is to neither of these varieties that this sketch is addressed. No; it is to the large number of wives and mothers who live in villages and small cities that have not outgrown and outworn the houses that were built when the places were in their youth. A large proportion of these housekeepers live in ten to twenty year old houses that the head of the family has had a chance to buy much cheaper than they could possibly hope to build as good a one, and though the hall be narrow, the upper rooms with a sloping ceiling that barely permits one to stand erect, the spare bedroom opening from the parlor, the dining-room small and dingy, and last, though first to the door of her own housework, the kitchen, an abominably inconvenient little hole, the family move in and are thankful that, come what will, at least they have a home.

The whole family help to settle the house. Kate brightens up her own chamber with all sorts of crocheted and embroidered fancy things, because her particular girl friends will run up there to talk over the last dance or discuss dresses for the next one. She and the others feel an interest in parlor and dining-room, and while brother John is making brackets or a box for a window-garden, Kate is collecting slips from her floral friends, from which her imagination pictures untold wealth of clambering vines and fragrant flowers.

But at the kitchen door they all stop. All, did I say? There is one who feels that even that room might be brightened and still be in harmony with its purpose, so that the six to ten hours daily that she passes there—a large share of her lifetime—might not be spent in discomfort and vexation. Perhaps she has a husband who is handy with hammer and saw, and who is willing to try his skill at whatever will cheer and lighten the household labors. It is of this busy housekeeper and her impromptu carpenter that I will tell the story of the kitchen that I once saw—first, as the family were moving in, and then after they had tried to make it both pleasant and convenient. The room was small, with one window—the wood-work had been painted a very dark shade, which was badly worn; the whitewashed walls were dark with smoke, and badly bruised and crumbling; the floor was of soft wood, in which were sink-grease and stains, never to be eradicated, and in a jog, at one side of the room, stood a rough wooden sink with pumps for well and soft water.

This was the room from which the quick eye and

willing hand finally evolved a kitchen that was of necessity small, but bright, convenient and thoroughly homelike.

Of all the little improvements I could not find room to describe even in the whole of our prized CABINET, but I will try to give a few hints from which any one can work out their own ideas, for who wishes even a kitchen an exact copy of some other one. The rough sink was replaced with a neat frame of narrow matched boards, enclosing a handy closet for iron ware, and on this was put an iron sink, which has no crevices for grease and dirt to hide in, and back of which was fastened to the wall a wide one-inch board with the upper edge beveled.

This closet only partially filled the jog before alluded to, and as there was no convenient place for a wood-box elsewhere, the closet was apparently continued to the end of it, and formed a capital corner in which to store one or two days' stock of fire wood. From the baseboard up to the height of the closet, the wall was covered with thick boards to protect the plastering, and the wide board previously alluded to as back of the sink, was also carried around the back and side of the wood-box, so that the two formed a continuous whole. At the back of the box two thick cleats were nailed, one on each side, and a board sawed to just the right length for a shelf (which was only laid on, so it could be easily removed whenever one wished the whole of the top open), and so furnished a nice place for the two water-pails, where they would not be rotted by the water constantly in the sink from the dripping of the pumps or emptying of the hand-basin.

Back of the stove and above the sink, at convenient height, were put up nicely planed strips on which, after painting, were screwed japanned hooks for the numberless cloths and towels that are in constant requisition in a kitchen. A neat little shelf was put up, in a conspicuous place, on which to stand the clock, and to my mind there is no more necessary piece of kitchen furniture. After these preliminaries all the wood-work was painted a light tint of ochre, which is a much stronger color than the drabs and browns of common use, and unlike them looks clean when it is clean. The ceiling was then whitened, and after carefully washing the side walls with glue-water, the innumerable breaks were smoothly pasted over with old cotton cloth, and a neat cheap paper of a medium shade of brown put on. The floor was treated to three coats of a dark paint, each coat being mixed entirely with oil, put on thin, and allowed time to thoroughly dry.

Back of the kitchen table were tacked up two large sheets of manilla paper that could be easily replaced when soiled, and a couple of braided rag-mats were on the floor where wintry weather would make them very acceptable to cold feet.

The room, as metamorphosed, looked really inviting, and the patient Marthas of that household need never fear to take a morning caller in the kitchen while they finish kneading bread or watching the baking of a cake.

It is pleasant, and it is capable of standing hard usage, and best of all, carpentering, painting, papering and all were the handiwork of the dwellers therein, and, being well done, will last for many years.

Let us, my sisters, take an example from this, and in the settling of a house save enough from the furnishing of the front room that the kitchen may be made cheerful, and the work that we do therein be raised above the level of drudgery.

CHLOE.

## HOME CONVENIENCES.

A contributor to the CABINET would be informed how to furnish the "spare chamber," with only white-washed walls, a black walnut bedstead, two chairs, a basin, a pitcher, no washstand, no carpet, and only a few dimes in our pockets. For years the washstand in my own room has been a sewing machine crate, curtained and covered with old white muslin, which serves every purpose of a washstand, and a peep behind the curtain reveals a most cosy boot closet, with shelf above for rubbers, etc. I could not recommend an elaborate ornamental washstand, the materials for which would cost as much as the price of a plain stand at the furniture dealers.

Next, I would make a dressing-table by taking a barrel, preparing it with waste papers on the inside, so as to exclude insects, as this is to be a receptacle in summer for winter bedding and clothing, and *visa versa*. Then have a board cover, either semicircular or straight, extending two or three inches over the barrel. Perhaps you may find among your treasures some old thin white muslin which will be pretty over colored cambric, for curtains and cover.

Then, if the room is large, a box also covered and curtained with something bright, may serve to contain necessary articles in place of a bureau. A shoe-bag inside the closet or bedroom door, with several pockets for shoes and stockings, is also a convenience.

Next, the bed should be neat and inviting. If you have a feather bed, be sure the tick is clean. It may be washed by emptying out the feathers. The feathers also, if old, can be washed and much improved if you have a vacant room for drying them. If you have no feather bed, corn husks make a very good mattress. The pillows should be large, and in the event of your not having feathers, finely shred corn husks or chaff make a passable pillow. In summer I cannot do without my chaff pillow, as feathers cause the head to perspire. Make a comforter or two of the best parts of old sheets; make them a pure white and tie with scarlet or blue worsted. The skirts of worn light colored dresses make good comforters for those who are a little dainty about their bedding, and will wear for many years if carefully used, without looking soiled. A white spread is indispensable, though it be only plain cotton cloth, knotted with candlewicking in simple designs.

Then with regard to the "home-made sofa." I will describe a couch made entirely by a delicate woman with only a saw, hatchet and hammer. It was made and proportioned exactly like those at the furniture dealers. Slats running across, forming an elevation for the head; over these a tick was nailed, which, when stuffed with prairie hay, gave the desired form. The whole covered with some nice rep goods and finished with furniture gimp and fancy-headed nails.

The crown of an old straw hat can be made to form a basket, with a braid or two of straw for the handle, and another turned outward for the bottom. This, filled with sprigs of evergreen, autumn leaves and dry flowers, will be very pretty tacked against your white-washed walls. I make box frames for anything I wish to frame in a deep frame. For a small frame take a letter paper box that is lined with white paper. Cut the bottom of the box diagonally, from corner to corner, and turn the points outward. Place a picture mat over this, then a pane of glass the size of the mat, and bind with a strip of black cambric, using good glue. Then arrange your flowers, or whatever you wish to frame, in the corner of the box, put on the cover, and your picture is framed. AUNT MARY.

## Household Art.

## HOUSEHOLD ART.

Something very beautiful in this line are silk flowers. Procure various shades of silk, as nearly the color of the natural flowers you wish to imitate as possible, and some silver wire, about as fine as horse hair, and a very fine knitting needle.

Coil a piece of the wire by winding it around the needle, evenly and closely. Take it out and take hold of both ends and draw it out a little to separate the coils somewhat.

Take any flower you wish to imitate and bend the wire in the shape of the petals. Take silk the color of the flower and wind the end around the wire you have left on the petal for a stem. Then put it over the centre of the leaf, letting it fall in the coil at the end of the leaf, then back to the stem again and over, winding first on one side then on the other. When the petals are all made, proceed to put the flowers together, after the pattern furnished by the natural flowers, and wind the stem with silk the color of the natural stem. Make a spray of leaves as near the shape and color of the leaves of the plant that the flower has been taken from as possible, and twine it with the flower. Roses and Pansies, Eschscholtzias, and Dahlias, are all nice to imitate.

When it is necessary to have the color go only half way over the petal, work the inner color in with a needle. Pansies and many others have to be treated in this manner.

When the flowers are all made they may be formed in a wreath and framed, or a bouquet, and put in a vase under a bell glass.

Use saddler's silk, and split it, using only a strand at a time. They are very dainty and beautiful. The usual price for teaching this work is six dollars, but one can make it just as successfully by following these directions as if they had a teacher.

## MAKING HAIR WATCHGUARDS.

Many a lady desires to present her husband or some friend with a keepsake, which shall awake sentiments of love and recall her devotion whenever seen. Many of us have tresses of the hair of some dear departed friend, which we would be glad to preserve in some nice way, but the great expense of having hair watchguards made, have deterred many from procuring them.

The price of learning the secret of their manufacture has also been very high—\$15. But like many other things after we once know how, it seems very easy; indeed, only needing a little patience and perseverance for its accomplishment.

The first thing is to construct the apparatus which is needed. Procure a smooth circular board, eight or ten inches in diameter. Divide this by pencil marks into sixteen equal parts. Begin at any one of these divisions, and near the edge mark 1, in the next division 4, then 7—2—5—8—3—6—1, and repeat to 6, when all the spaces will be filled. Place this board on a support which is of less diameter than it is. If nothing better presents, a tall can or jar.

Procure seventeen equal weights; the little screws which can be found at any hardware store will do very well, and you can pass a coarse thread through them. Perhaps a large wooden needle, such as ladies sometimes use for worsted knitting, is as good as anything to use for weaving the hair around. Attach one of the

weights to the end of this needle, after first covering the needle with cloth.

Then take the hair and hold it tightly in one hand, while with the other you draw out a strand the size you need for weaving. You can count the hairs in the first strand, and guess at the rest. Put twelve in the first.

Tie a knot at each end of each strand, being careful to tie every hair in. Prepare sixteen of these strands, and tie the string attached to each weight to one of them, one for each. Then sew the other end of these strands to the cloth, near the weight, which has been attached to the needle, placing the ends towards the end of the needle.

The circular board must have a hole in the centre, and the end of the needle, and the weight must be put through that at this stage of the work, and the strands of hair, with the weights, are arranged to drop over the outside of the board. The weights should keep it so that the needle stands erect; perhaps it will have to be held, and the place where the strands of hair are sewed on, is just at the opening in the board.

Place the strands so that each one of them will come directly over one of the numbers on the board and the weights will swing clear of all obstructions. The strings attached to the weights should be five or six inches long.

When we have finished these preparations we are prepared to begin the chain. Take up the strands at each place marked No 1, and carefully raising them so the attached weights shall swing clear of all the others, exchange the two, dropping each in the other's place. Then take those at 2 and exchange in the same manner; then at 3 and so on, until you reach 8, after which you begin at 1 again. Keep on in this way until the hair is all used up; then tie the ends carefully while you clip the ends off; remove the weight and rip the sewing from the other part of the work.

Braid together three strands of rubber cord or tie them together with a thread of silk. Draw these in as you remove the needle.

The work must first be boiled in water for twenty minutes and thoroughly dried.

Fasten the ends of the hair and the elastic cord with a drop of wax. It is then ready to send to the jeweler's for the gold settings.

The pattern in this chain is spiral. Another kind has the appearance of links, and is made in the following way:

When the board is divided into sixteen divisions mark only every other one, beginning with first, then third, then second, then fourth, then first, third, second, and fourth. Arrange the strands so that one comes at each side of each number. Begin with the opposite strands at number one and exchange them; then take those on the other side of the same number, then proceed with figure two in the same manner, and so on.

## SPATTER WORK.

Almost all the directions for making spatter work say take a tooth-brush and comb, but a larger brush, such as are used for blacking brushes, and a fine sieve are much better. But very little ink should be put on the brush at a time, so the spatters will be smooth and uniform. The fern work is much nicer when fine ferns, arranged in a tasteful manner, are used than large ones.

A quite large picture can be made in this way in an hour. Common good black ink is as good as anything for it.

## A HANDKERCHIEF CASE.

Take a piece of velvet, black or dark brown or navy blue is very pretty, and ornament each corner with a pretty little bouquet in silk embroidery. Embroider an edge in small scallops; button-hole stitch around it. Cut a piece of enameled cloth eleven inches square, and a pale blue silk lining of the same size. This lining should be quilted with white silk upon wadding in some handsome pattern, then laid upon the enameled cloth, and the edges bound with blue ribbon.

The embroidered velvet should be just large enough so the edge will come beyond this binding. Fasten it on with blind stitches. Turn each corner down to the middle. Fasten two of them and sew white ribbon on the other two to tie them together. White ribbon less than an inch in width may be quilted and sewed around the edge instead of the button-hole embroidery. This makes a very pretty present for a friend, and is nice to hang up in a room. A loop of ribbon should be sewed on one corner for this purpose.

## DIRECTIONS FOR STAMPING.

Very pretty patterns, already perforated, come for using in this way, but if you happen to have a pretty pattern which you wish to use, perforate it with a pin, following the design. Place the cloth which is to be stamped beneath the pattern, and rub a mixture of powdered borax, starch, and Prussian blue, well mixed, over the pattern. It will penetrate the perforations and produce the pattern upon the cloth. The pattern must be carefully removed, and the cloth pressed with a hot iron. If the stamping seems to be wearing off at any time, iron it again and it will set it. This process has been kept secret, or sold at a great price, and probably has never been publicly published.

A beautiful table or piano spread may be made of the fashionable brown velvet embroidered with silk or a contrasting color or colors. A wreath of leaves, in shaded green and autumn colors, is about as lovely as anything. A large group or wreath in the centre, and a spray in each corner are required. Two wreaths united and each containing an initial of the owner's name, is very handsome.

The work can be done quite expeditiously, and they are so beautiful that it is very satisfactory to make them, and it is an excellent way of displaying one's artistic skill.

## WHAT-NOTS.

Very beautiful what-nots may be made, with hanging shelves and embroidered lambrequins. The shelves can be ordered of any carpenter, and are simply plain black walnut cut in the right shape and highly varnished.

The lambrequins may be made on a velvet foundation, or filled in on eavases. Beads in different colors make the handsomest embroidery.

A pattern should be chosen, such as can be obtained at any fancy store, and the work done after it. When beads of the right colors cannot be got, zephyr may be used with very good effect, and the two are often combined in the same work. The lower edge of the lambrequin should be cut in large scallops, say three or five, and a twisted fringe of beads put around it. Perhaps black beads are the most suitable for this part of the work. When the embroidery is finished the upper part of the lambrequin must be tacked to the board shelf, and a band heavily embroidered with beads put on the edge to cover it.

## Household Elegancies.

## WALL-BASKET.

This is a pretty wall-basket of cane-work, ornamented with drapes, which we illustrate herewith:

Drape No. 1 has a foundation of scarlet cloth, pinked at the edges and ornamented with blue silk braid, and an embroidered design in gold, green and blue purse silk.

Drape No. 2 may have its foundation of pale blue cloth or silk. The edge is straight, and is button-holed round with silk. The design may be worked in chain-stitch, or with braid in gold colors. A few gold or steel beads are needed, and the long stitches are in two shades of crimson silk. The edge is of fine lacet work. The basket is lined with bright-colored silk. When the drapes are worked and fixed in their places, a leaf-trimming of satin ribbon is put on. A silk tassel is placed between each drape, and bows of ribbon are put on as in the design.

## FANCY ARTICLES.

The little articles I am going to describe, are all inexpensive, and all who make use of their leisure moments can have them. Very pretty ornaments are made of straw, such as frames, baskets, brackets, etc. To make a bracket, take a piece of cardboard a foot square and cut it in half from one corner to the other. Cut large scallops on the bias edge of both pieces. Make small holes with an awl, about a half inch apart, around the edge of all the scallops. Select nice straws that are not broken and put them through the holes of both pieces; hold the two pieces about three inches apart; cut the ends of the straws in scallops size of those in the cardboard. Take narrow blue ribbon—skirt-braid can be substituted—and wind alternately between the straws until the space between the pieces of cardboard is filled. Three long pieces of the ribbon is required for sus-

NO. 1.—DRAPE: EMBROIDERY.

pending it. Fasten one on the lower piece of the bracket, next to the wall, and draw through a hole, which should previously be made in the upper piece. The other two ribbons are fastened on the corners of the upper piece and all brought together and tied in a bow. Suspend in a corner and fill with grasses and scarlet berries from the woods. You will be surprised at the beauty of this, and all the work of your own hands.

Straw makes beautiful little frames for small pictures. When well made, they look very much like gilt frames. Five straws is a pretty width; fasten the corners together carefully with fine thread. Make several and suspend them in clusters with blue cord. Nothing is prettier for photographs. To make a pretty card-basket, take a piece of cardboard and cut in a circle about seven inches in diameter; cover with blue silk; take a strip of the cardboard three inches wide, and long enough to go around the circle; cut long points in the strip and cover with silk and bind

WALL-BASKET.

the edges with silk or narrow ribbon a shade darker. Join this piece to the circle and bend the points downward. This gives it a pretty drooping look.

A very pretty lamp-mat is made by crocheting a centre with tidy cotton No. 10, then a round of blue zephyr, another of cotton, and so on until you get it the size you wish; finish it with a heavy blue fringe. Crochet a tidy for your rocking-chair to match. Of course, any other color can be used in making these ornaments that is preferred.

Now, I am going to tell of a nice and easy way to make mats for floors. Take small worsted pieces—the smaller the better—and cut them about two inches in length, and as narrow as you can cut them without pulling apart. Take a circular piece of old good-for-nothing-cloth, and begin tacking them on in the centre; arrange them in alternate rows of light and dark colors, each row about three inches wide; when done, it presents a motley, fuzzy appearance which is very pleasing to the eye. Save all the little scraps that cannot be used for anything else, and make these mats. They are both useful and ornamental.

Pretty toilet sets are made of netting and zephyr. Take a piece of netting ten inches long by eight wide; commence with blue zephyr and run a "fence row" through the piece lengthwise; then five rows of brown zephyr; then blue, until the piece of netting is filled. A mixed

fringe of brown and blue finishes them. You can vary the colors according to taste. Tidies made on this order look well.

The phantom-basket has been described before, but there are various ways of making them, and my way, I think, is the prettiest of all. Tear the cotton in strips an inch wide; ravel all out but three or four threads. Make the foundation of the basket to slope toward the bottom. Fasten the ends of the raveled strips all around the top of the basket, twist them,

and loop back. Tie them together about middle way with a colored ribbon. Suspend it by three long raveled strips in the centre of your room, and fill with grasses, ferns, and bright leaves. In the absence of these, artificial flowers make it look beautiful.

One of the prettiest ornaments I ever saw, was a feather cross. The foundation was cardboard; length of cross twelve inches, by three wide—arms in proportion. The feathers were of the pure white, downy kind, and sewed on in rows so that they lap over each preceding row, and these hide the stitches and bony part of the feathers. Fasten it in a gilt frame. To make a hanging-basket for leaves and dry flowers, gather a quantity of warhoo berries and string them; interlace them the same as you would beads; it closely resembles coral, and is very attractive. These berries can be used many ways; they look pretty strung and looped about pictures. They make beautiful crosses, anchors, etc.

Kind Nature furnishes us abundant means to decorate our rooms, if we will only gather the gifts that are lavished upon us.

VICKIE BLUE.

## A PRETTY WORK-BASKET.

Take coarse tidy cotton No. 8, and crochet a round mat, thick, that is, not to put over the thread; have the mat the size of a two-quart dish, or if you wish for a small basket, take a pint dish, which is a pretty size; then crochet six times round without widening, then crochet round three times the shell pattern, with which every one is familiar; one ball of cotton will make one basket over the pint dish, one over a two-quart dish; then make a handle of two shell rows long enough to go over it to look as you please; then make a stiff starch of flour, put in a lot of glue, say half a pound to a pint and a half of starch; put in the crochet basket while boiling hot; have it thoroughly wet; take and wring out a little; stretch it over the dish intended, and let them dry; the quicker the better; serve the handle in

NO. 2.—DRAPE: EMBROIDERY WITH LACET EDGE.

the same way. When dry, take a paint brush and varnish over with brown shellac, which you will find at any paint shop. Let it dry; when thoroughly dry they will be stiff like a board; then take and line them, and thread in bright colored ribbon in through the meshes of the shell-work, tying a bow now and then on the basket, and you will have a pretty basket at a trifling expense.

Fasten the handle to the basket with a bow of ribbon.

## Hireside Reading.

Olive Logan revives a pleasant little domestic story of Queen Victoria when she was at once one of the best sovereigns and devoted wives that ever graced the English throne: Long years ago—but this is a bit of exclusive reminiscence known only to a few—the Queen, in the early days of her wedded life, had one of those squabbles with her husband of the sort which will come about between the most loving married couples. Chagrined and vexed, the Prince retired to his room and locked the door. The Queen took the matter quietly for awhile, but after the lapse of an hour she went to the door and rapped. "Albert," said she, "come out." "No, I will not!" answered the Prince within. "Come, go away; leave me alone." The royal temper waxed hot at this. "Sir," she cried, "come out at once; the Queen, whose subject you are, commands you!" He obeyed immediately. Entering the room she designated, he sat down in silence. For a long time nothing was said. The Queen was first to break the silence. "Albert," she said, "speak to me." "Does the Queen command it?" he asked. "No," she answered, throwing her arms about his neck, "your wife begs it."

"Where's the refrigerator?" asked an old lady, after vainly trying to find the elevator to a store with all the modern improvements. "We've no refrigerator, but there's an ice cooler over in that corner," said one of the girls in attendance. "None of your impudence, young woman, or I'll report you to your employer and have you discharged," retorted the old lady in great wrath.

James Russell Lowell tells a good story about his butcher. One morning the man expatiated upon the loveliness of the moonlight of the night before, and just as the poet was thinking that he had done him an injustice in never having given him credit for refinement of soul, the butcher said, "Last night was so fine I just couldn't sleep, and had to get up and go to killin'."

A Pennsylvania Dutchman, who married his second wife soon after the funeral of the first, was visited with a two hours' serenade in token of disapproval. He expostulated pathetically thus: "I say, poys, you ought to be ashamed of yourselves to be making all dis nois ven dar vas a funeral here so soon."

An old hunter in Michigan, when the country was new, got lost in the woods several times. He was told to buy a pocket compass, which he did, and a friend explained its use. He soon got lost, and laid out as usual. When found he was asked why he did not travel by the compass. He stated that he did not dare to. He wished to go north, and he "tried hard

to make the thing go north, but 'twas no use; 'twould diddle, diddle, diddle right ronnd, and point southeast every time."

While the English excursionists were on the Capitol Square in Richmond, Va., the other day, a fine-looking Englishman pointed to a squirrel some distance off, and inquired of a citizen, "Can you tell me, sir, what 'hiusect' that is hover there?" Citizen: "That's a squirrel, sir." John Bull: "Oh! ah! Thauks."

An old pioneer, who believed that "what was to be would be," lived in a region infested by Indians. He always took his gun with him, and once, finding

weep?" was asked. "Alas, things are not as they used to be!" answered the devoted son. "The poor woman's arm grows feebler every day."

A gentleman had a board put up on a part of his land, on which was written, "I will give this field to any one who is really contented;" and when an applicant came, he asked, "Are you contented?" The general answer was, "I am;" and his reply invariably was, "Then what do you want with my field?"

A young clergyman seems to have compressed the whole body of his sermon on "deceit" into the following: "Oh! my brethren, the snowiest shirt-front may conceal an aching bosom and the stiffest of all-rounders encircle a throat that has many a bitter pill to swallow."

A fast youth asked at a San Francisco restaurant: "What have you got?" "Almost everything," was the reply. "Almost everything?" Well, give me a plate of that." "Certainly. One plate of hash!" yelled the waiter.

The laziest man is on a Western paper. He spells photograph "4-tograph." There has only been three worse than he. One lived out in Kansas, and dated his letters "11worth," another spelled Tennessee, "10aC," and the other wrote Wyandotte, "Y&."

An old Scotchwoman, whose favorite son was in the habit of swearing occasionally, was censured by her minister for not correcting him. "It's very wrong, minister," she admitted, "but ye maun aloo that it sets aff conversation mightily."

The Middletown (Conn.) cemetery contains this epitaph: Beautiful flowers of Middletown, How art thou cutted down! cutted down!

Charles Mathews, the comedian, was served by a greengrocer named Berry, and generally settled his bill once a quarter. At one time the account was sent in before it was due, and Mathews, laboring under an idea that his credit was doubted, said: "Here's a pretty mull, Berry. You have sent in your bill, Berry, before it was due, Berry. Your father, the elder Berry, would not have been such a goose, Berry. But you need not look so black, Berry, for I don't care a straw, Berry, and shan't pay you till Christmas, Berry."

An English clergyman was "turned down" at a fashionable spelling-bee for spelling drunkenness with one "n." Shortly afterward he returned to his parish, and found himself very coldly received by his parishioners. He sent for the parish clerk and asked him what was the cause. "Well, sir," replied the man, "a report has come down here that you was turned out of a great lady's honse in London for drunkenness."

A member of a country choir had his hair cut very closely, and when he had to sing on the following Sunday, "Cover my defenceless head," there was a general titter and a smiling from behind the fans.

THE TRUANT'S RETURN.

that some one of his family had borrowed it, he would not go without it. His friends rallied him, saying that there was no danger of the Indians, as, anyhow, he would not die till his time came. "Yes," said old Leather-stocking, "but suppose I was to meet an Indian, and his time was come, it wouldn't do not to have my gun."

The extensive authority of parents under the Chinese laws is well known. A Chinaman of forty years, whose aged mother flogged him every day, shed tears in the company of one of his friends. "Why do you

## Housekeeping.

## PRIZE RECEIPTS FOR COOKING.

*Virginia Mode of Curing Hams.*—Rub the fleshy side of each ham, long and well, with salt. To every ham allow an even tablespoonful of powdered saltpetre, which must next be rubbed on the meat; then add sugar and red pepper beaten small; lastly, rub on more salt mixed with a small quantity of molasses. Let the hams remain packed for about five or six weeks; then hang them up and smoke with hickory chips for a month. Take them down and rub with hickory ashes; sun them, after which hang them up in a dry place, occasionally smoking them on dry days. Never smoke bacon on rainy days.

*To Boil a Ham.*—Wash the ham, wipe dry, and put it to sun from ten to twelve hours. Soak it all night in cold water; next morning put it on the stove, in a pot of cold water, to simmer for four or five hours. Take it off the fire and let it remain in the same water in which it was boiled until the ham is perfectly cold. Take it out of the water, let it dry off and skin it. Sprinkle with black pepper and grated cracker, browned; garnish the dish with curled parsley.

*Waffles.*—Boil a cup of rice to consistency of soup; when properly boiled, especially for waffles, it should fill a quart cup. Add two teaspoonfuls salt and one large spoonful butter or lard. Fill a quart measure with flour, add to it two teaspoonfuls cream of tartar, two-thirds of a teaspoon of carbonate of soda. Beat up two eggs light; stir in the rice, then the flour, with sweet milk enough to make a tolerably stiff batter. Have the fire very bright and the waffle irons hot and well greased with lard. Bake to a tolerably dark brown.

*Yeast.*—Boil twelve large Irish potatoes, together with a small quantity of hops, tied up in a bag, in a gallon of water; when the potatoes are perfectly done, peel and mash them, and add to them one cup of sugar and one cup of salt; pour over the mixture the boiling water in which the potatoes were cooked. Let stand till it gets cool, when add one cup of good yeast. After keeping it open one night, bottle and cork lightly.

*Italian Soup, (Never Printed in America).*—Put into three pints of boiling water the remains of a cold fowl, or a piece of cold roast beef, or a ham bone; add one handful of Lima beans; half a gallon of tomatoes with the skins taken off; one teacup of rice; and two onions sliced and then fried a good brown; one large spoonful of butter; pepper and salt to the taste. Let the soup boil about twenty minutes, and then cut off corn from three ears and add to the soup. This soup requires about three-fourths of an hour to make, and is very nice. The fried onion is absolutely necessary. A few sliced Irish potatoes can be added to the other vegetables.

*Rich Beef Soup.*—Put in a beef shank before breakfast, so that the meat will have time to cook to pieces, in a kettle of water, with salt to taste. Add one-half gallon ripe tomatoes, peeled and chopped up, or, if in winter, one quart canned tomatoes. About twelve o'clock put into the soup half a small head of cabbage, one onion, one turnip, four or five large potatoes, one carrot, two pods oehra, all chopped fine, half a pint butter beans, cut off corn from two ears. Keep all boiling till dinner is ready to serve; make a thin paste of a small quantity of flour mixed with cold water, which must be put in half an hour before serving.

*Batter Bread, Virginia Mode.*—Beat up four eggs light, add meal to the proper consistency, about one and a half pints after it is sifted, one large teaspoonful salt, one tablespoonful melted butter, and sweet milk to make a tolerably thin batter. Bake in a batter bread skillet, or very small oval iron moulds well greased with lard so that a rich crust may be formed.

*Green Grape Jelly.*—Gather the grapes before they have turned, choosing only good sound ones; pick them from the stem, wash and put them into a stone jar. Set the jar in a kettle of cold water over a brisk fire; when the juice rises to the top, take them off the fire and squeeze through a coarse towel or jelly-bag, and to each pint of juice allow one pound best loaf sugar; put on the fire and boil twenty minutes. When a little cool pour into jelly-glasses or moulds and cover tightly.

*Crab Apple Jelly.*—Wait until after frost has touched the apples; pick, wash, and cut in half; put in a kettle, filling it with water if it is half full of fruit, using warm water. Boil until the apples are perfectly soft; then take off the fire and squeeze, and add one pound of loaf sugar to every pint of juice. The juice looks very cloudy when first squeezed, but clears beautifully after boiling ten minutes. Cook twenty minutes. Cover tightly after putting in glass.

*Sweet Meats of Watermelon Rind.*—Cut the rind in any shape fancied, grape and grape leaves and fish, also bunches of roses. Put it in brine to keep; when you wish to make the sweet meats, soak out the brine by putting it in fresh water and changing it every day. Put three or four tablespoonfuls pulverized alum in one gallon water; as soon as dissolved, lay in the rind and cover closely with cabbage leaves; simmer until the rind becomes a bright green. Soak out the alum water; while it is soaking pour boiling water to half a pound white ginger and let it stand long enough to soften sufficiently to slice easily in thin pieces (retaining the shape of the races as much as possible), then boil it in water an hour to extract the strength; add two or three dozen blades of mace and more water and two pounds of best white sugar; make a thin syrup and boil the rind gently for half an hour; then set it away for a day or two, when boil again as before, adding more water and sugar at each boiling till the syrup is thick and rich and sufficient to cover the rind. Repeat these boilings six or seven times at intervals of three or four days. The quantity of seasoning given is for three gallons rind, two pounds sugar for one pound rind. This sweet meats keeps indefinitely and never ferments.

*Blackberry Cordial.*—Let the fruit simmer awhile and then press out juice; to each pint of the same, put nearly equal quantities of white sugar; boil and skim and when a thick jelly, put in bottles, filling half way; when cold, fill up with good whiskey or French brandy. It tastes as if highly spiced, and is splendid for medicinal purposes.

*Lemon Sherbet.*—Dissolve one and a half pounds sugar (loaf is best) in one quart of water; add the juice of ten lemons, pressing the lemons so as to extract not only the juice, but the oil of the rind. Let the peel remain awhile in the oil and sugar. Strain through a sieve and freeze like ice cream.

*Hyden Salad.*—To one gallon cabbage finely chopped, add one and a half gallons green tomatoes; half a pint green peppers; one pint of onions, all chopped fine. Sprinkle salt on them to extract the

juice; next morning pour boiling water over it, then squeeze it dry. Put four tablespoonfuls ginger, one of cloves, two of turmeric, one of celery seed, two pounds sugar, and two spoonfuls salt. Mix all with half a gallon vinegar and boil a few minutes.

*Chicken Salad.*—One large chicken boiled; when cold, remove the skin and chop the flesh into a dish, over which throw a towel slightly dipped in cold water; one pint celery, chopped, put between cloths to dry; one tablespoonful best mustard; one yolk of raw egg, dropped into a dish large enough to hold all of the dressing, beat it well for ten minutes; slowly add the mustard and one teaspoonful vinegar; when this is well mixed add three-eighths of a bottle of oil, a drop at a time, always stirring the same way. Rub the yolks of six hard boiled eggs very smooth and stir in half a cup of vinegar. Pour this mixture slowly into the first, stirring them together as lightly as possible. Take the chopped chicken, half a loaf of stale bread crumbs, the celery, a little celery seed, yellow pickle, also chopped, pepper and salt to taste, also the oil from the chicken, skimmed from top of water in which it is boiled. Set this aside and pour on the dressing just before serving. It will curdle if kept too cool.

*Cabbage Pudding.*—Chop up a head of cabbage, scald in salt water until tender; drain off, add half a cup butter, four eggs, one pint bread crumbs, pepper, salt and mustard to taste; milk enough to make a stiff batter. Bake in a deep dish.

*Sultana Pudding.*—One pint bread crumbs, one quart milk, one cup sugar, the yolks of four eggs beaten; the grated rind of a lemon, a piece of butter the size of an egg. Mix up and bake till done, but not watery. Whip the whites of the eggs stiff, beat in one teacup white sugar, in which has been strained the juice of a lemon; spread over the pudding a layer of jelly; pour over this the whites and replace in the oven and bake a light brown. To be eaten cold with cream.

*Ginger Bread.*—Six cups flour; half a pound lard rubbed into two cups molasses, one cup buttermilk, two heaping spoonfuls pearl ash dissolved in the milk; six tablespoonfuls ginger, one teaspoonful alum dissolved in one teacup of boiling water and poured over hot.

*Icing for Cake.*—One pound sugar; whites of eight eggs; put the sugar into a bowl and pour the whites over it. Take half an ounce gum arabic, beat and sift it in; mix all together and beat it up.

*Cocoanut Drops.*—One pound grated cocoanut; one pound sifted white sugar, whites of six eggs. Drop them in buttered plates and bake at once.

*Mince Meat.*—Boil a beef heart very tender; take out the veins and gristle; shred it fine. Add three pounds suet cut very fine, one teaspoonful salt, three pounds currants, after they are washed; three pounds raisins shred and cut fine, three pounds brown sugar, twelve ounces citron, one tablespoonful mace, one of cloves, two of allspice, one nutmeg. Beat all fine and mix together, adding half a tumblerful lemon juice or vinegar, two tumblers French brandy and three of wine.

*Oil Mangoes.*—One quart mustard seed; one ounce mace, one ounce cloves, four ounces grated horse-radish, four ounces ground ginger, four ounces garlic, and a little turmeric. Beat them together in a mortar and make into a paste with oil, fill the mangoes and scald once in strong vinegar.

## PIANO MUSIC!

### Five Fine Collections!!!

#### PARLOR MUSIC

is in two large volumes, pages sheet music size. Vol. I has 242, and Vol. II has 222 pages, filled with the best and most popular Piano pieces, every one of medium difficulty.

#### PEARLS OF MELODY

has 224 pages (sheet music size) with choice pieces by Wilson, Tonel, La Hache, Allard, Ole Bull, Spindler, &c., &c.; a large number, and all of the best.

#### LA CRÈME DE LA CRÈME,

first issued in numbers, is here presented in two volumes of about 240 pages (sheet music size) each. Music is for advanced players, and carefully chosen.

#### FOUNTAIN OF GEMS

(224 pages, sheet music size) is a general collection of easy, popular pieces, that every one can play.

#### WELCOME HOME

(224 pages, sheet music size) will receive a welcome in every Home where it is used, having well chosen bright music, and nothing harder than the medium degree of difficulty.

Price of each Book—\$2.50 Bds.;  
\$3 Cloth; \$4 Gilt.

## Beautiful Books for Every Home.

THE HANDSOMEST LADIES' BOOKS PUBLISHED.

Every Lady should get them for her Work Basket or Parlor.

## HOUSEHOLD ELEGANCIES.

VOL. II. WILLIAMS' HOUSEHOLD SERIES.

A splendid new book on Household Art, de-  
voted to a multitude of topics, interesting to  
ladies everywhere. Among the most popular  
subjects are Transparencies on Glass, Leaf Work,  
Autumn Leaves, Wax Work, Painting, Leather  
Work, Fret Work, Picture Frames, Brackets,  
Wall Pockets, Work Boxes and Baskets, Straw  
Work, Skeleton Leaves, Hair Work, Shell Work,  
Mosaic, Crosses, Cardboard Work, Worsted Work,  
Spatter Work, Mosses, Cone Work, etc. Hun-  
dreds of exquisite illustrations decorate the pages,  
which are full of overflowing with hints and de-  
vices to every lady, how to ornament her home  
cheaply, tastefully, and delightfully with fancy  
articles of her own construction. By far the  
most popular and elegant gift-book of the year—  
300 pages, Price \$1.50. Sent postpaid by mail.

WILLIAMS' HOUSEHOLD SERIES.

Just published, a Charming New Book with above title. A Companion Volume to "HOUSEHOLD  
ELEGANCIES AND WINDOW GARDENING," issued in same size and style, profusely illus-  
trated with engravings of superior execution, and devoted to many topics of Household Taste, Fancy Work  
for the ladies, and containing hundreds of suggestions of Home Decorations.

CONTENTS.—Among the topics which "Ladies' Fancy Work" treats of, are:—Feather Work, Paper  
Flowers, Fire Screens, Shrines, Rustic Pictures, a charming series of designs for Easter Crosses, Straw Orna-  
ments, Shell Flowers and Shell Work, Bead Mosaic, and Fish Scale Embroidery, Hair Work, Card-board  
Ornaments, Fancy Rubber Work, Cottage Foot Rests, Window Garden Decorations, Crochet Work, designs  
in Embroidery, and an immense number of designs of other Fancy Work to delight all lovers of Household  
Art and recreation. Price, sent postpaid by mail, \$1.50.

## Window Gardening.

By HENRY T. WILLIAMS,

Editor Ladies' Floral Cabinet, N. Y.

RICHLY ILLUSTRATED WITH EXQUISITE ENGRAVINGS.

An Elegant Book, with 250 Fine Engravings and 300 Pages,

Containing a Descriptive List of all Plants Suitable for Window Culture.

A ready and invaluable aid to all who  
wish to adorn their houses in the easiest  
and most successful manner with plants  
or vines, or flowers. Instructions are  
given as to the best selection of plants for  
Baskets or Ferneries and Warden Cases.  
Several chapters are devoted to Hanging  
Baskets, Climbing Vines, Smilax, and the  
Ivy, for decorative purposes. Bulbs for  
House Culture are fully described; also  
ornamental Plants for Dinner Table  
Decoration. Other topics are well con-  
sidered, such as Balcony Gardens, House  
Top Gardening, Watering Plants, Home  
Conservatories, Fountains, Vases, Flower  
Stands, Soil, Air, Temperature, Propaga-  
tion, Floral Boxes, the Aquarium, Rustic  
Conveniences for Household Ornament,  
and directions in detail for the general  
management of in-door plants for the  
entire year throughout the winter, spring,  
summer and fall. The volume is pro-  
fusely illustrated with choice engravings,  
and pains have been taken to make it one  
of the most attractive books ever issued  
from the American Press. For sale or  
supplied by Bookstores everywhere, or  
sent postpaid by mail on receipt of price.

Price \$1.50.

Every Woman Her Own Flower  
Gardener.

By Daisy Eyebright (Mrs. S. O. Johnson.)

A delightful little volume, written by a  
lady fond of flowers, as a special help and  
assistance to others interested in out-door  
flower gardening. Simple directions are  
given, how to lay out and plant Flower Borders, Ribbon Beds, and arrange ornamental plants.  
Among the topics treated are Geraniums, Fuchsias, Bulbs, Ornamental Flowering Shrubs, Ever-  
lasting Flowers, Ornamental Grasses, Coleus, Paeonies, Shade Trees, Garden Vegetables, Old  
Fashioned Flowers, Annual Flowers, Perennials, Ornamental Vines, Lawns, Insects, Manures,  
Watering Soils, When and How to Plant, Dahlias, Lilies, Gladiolus, Verbenas, Cannas, Balsams,  
Portulacas, and nearly all the popular varieties of flowers and shrubs. The book contains 148  
pages, is charmingly written by one deeply in love with the subject, who appreciates the tastes of  
ladies and aims to do good with agreeable, kindly advice on home gardening. For sale or sup-  
plied by Bookstores everywhere.  
Price, in handsome Pamphlet Covers, 50 cents; bound in Cloth, \$1; postpaid by mail.

## SOMETHING NEW IN FRET SAWING

NOW READY.

## SILHOUETTES

For Scroll Sawing, Inlaid Work, Painting, and Fancy Work of all descriptions.

The above is the title of a new book  
of over 100 exquisite designs of Silhou-  
ettes and Fancy Scroll Work, containing  
patterns of Animals, Birds, Children  
Horses, Dogs, Crosses, Scenes of Poetry  
and Sentiment, Women, Soldiers, Deer,  
Flowers, Mottoes, and Fancy Orna-  
ments, all ready to saw out, and most  
beautiful for ornamental or inlaid work.  
They open a new field in this favorite  
work, and these are the only designs yet  
published in the United States. They  
are remarkably handsome, many very  
comical, and some perfectly superb.  
The page of Crosses is alone worth the  
price of the book.

Price of Book, 60 cents,  
postpaid.

Address HENRY T. WILLIAMS, Publisher, 46 Beekman St., New York.

# Gathering Autumn Leaves.

Words and Music by H. T. MARTIN.

1. Don't call them "mel - an - chol - y days, — The sad - dest of the year,"..... Tho' they may change the bright green woods To  
2. Down in the dell the moss - es grow, With fern - leaves o - ver - spread,..... Up - on the brown hill - side we found The  
2. 'Twas in those mel - low Au - tumn days, Down in the wood - y dell,..... Where our first tales of love were told, As

The piano accompaniment for the first verse is shown on two staves. It features a steady eighth-note accompaniment in the right hand and a more active left hand with chords and moving lines.

yel - low leaf and sere:..... To me those days pos - sess a charm Which mem' - ry round them weaves..... Re -  
dog - wood ber - ries red;..... The Spring may boast of blos - soms rare, The Sum - mer, gold - en sheaves..... But  
on - ly lov - ers tell;..... 'Twas there you gave your prom - ise true, Be - neath the Ma - ple trees,..... As

The piano accompaniment for the second verse continues on two staves, maintaining the same musical texture as the first verse.

## CHORUS.

call - ing hap - py days we spent, Gath - er - ing Au - tumn leaves. Gath - er - ing, gath - er - ing, gath - er - ing, gath - er - ing,  
bright - est days were those we spent, Gath - er - ing Au - tumn leaves. Gath - er - ing, gath - er - ing, gath - er - ing, gath - er - ing,  
hand in hand we wan - dered on, Gath - er - ing Au - tumn leaves. Gath - er - ing, gath - er - ing, gath - er - ing, gath - er - ing,

The piano accompaniment for the chorus is shown on two staves. It features a steady eighth-note accompaniment in the right hand and a more active left hand with chords and moving lines.

Gath - er - ing Au - tumn leaves, hur - rah! What hap - py days we used to spend, Gath - er - ing Au - tumn leaves!.....

The piano accompaniment for the final line of the chorus is shown on two staves, concluding the piece with a final chord.

## CHRISTMAS GREETING.

"A stern discipline pervades all nature which is a little cruel that it may be very kind."

—HERBERT SPENCER.

THE shadows of the closing year are gathering about us. Once more the circle of the months draws to its completeness, and the season of storms heralds its approach by days of gloom and nights of cold. The natural world is wrapped in silent trance, but not in the silence of death. "Nature knows no pause in progress and development," says the great master, who studied well her secrets. The winter storm is as necessary to the strength of the oak as the summer sunshine or the autumn rain, and softly and shelteringly the Christmas snow-

fall covers "the unrisen wheat" and secures the promise of the coming harvest. In every bough lies imprisoned, in "galleries dark," the living sap that with returning spring shall fashion into beauty leaf and bough and fragrant blossom. Mighty sleeping forces, unseen but eternal, remind us of the sublime expres-

sion of the Hebrew prophet, "the hidings of God's power." We are conscious of reserved force, in the cold and silent air. The tempests linger awhile in their northern caves, but we are sure that they remain couchant, ready for a spring. Are they checked by the echoes of seraph music, by the glory

and open wide the gates of gold that never more shall shut.

Where shall be found the heart, in all earth's struggling millions, that shall not beat with gladder throb that it is Christmas? Is there anywhere in any dark mine or cold prison one that shall not

catch a gleam of the holy light, or some distant echo of the angel's song? If there is such a spot, Christian faith and Christian charity should blush that it should be.

In our own land more and more, we are coming to feel the gentle and tender influences that will not suffer any soul to eat the Christmas feast alone. Everywhere gentle charities carry the bread of love to cheerless homes and hungry hearts. At Christmas, if ever, men and women feel that they are all akin, and put away

A CHRISTMAS IN ELFLAND.

of the light from upper skies that floods Judæa plains? Truly December needs not the cheer of summer flowers or autumn splendor; there is a warmth and light throbbing through all the pulses of the world. Hope and love beat back with shining wings the frigid darkness of wrong and woe,

from them "that abomination called condescension." The rich and the poor meet together, with some faint realization that the Lord is the maker of them all. The rich go among the poor with sympathies all awake, remembering the Babe of the manger, "who, though he was rich, for our

sakes became poor"; and the poor grow tenderer toward the rich, as they feel that the icy barrier of pride melts away in the warm rays of divine love.

It is not alone in material things that the world is moving, but in spiritual as well; and in nothing is this more apparent than in the nature of its charities. How absurd would it have appeared a century ago to offer to the destitute poor, the entertainments which are now provided upon Christmas day throughout the length and breadth of our land! the Christmas-tree, loaded with fairy gifts for the waifs of the street, the rich flowers and luscious fruit, carried to the bedsides of the sick in cellars and attics, the feast of dainties provided for criminals within prison walls, and, better still, the words of love and cheer that are as freely given to those who, guilty though they be, are brothers still to the Son of Mary.

How much of the tender character of many of our charities, is owing to the more general observance of Christmas day as a hallowed festival, it might not be possible to estimate, but we are sure that it has not been insignificant. There is a peculiar charm in the observance of the great Christian festival that thrills all hearts. Its merry-making is merrier than that of all the year, for its joy is genuine and pure; its worship rises higher, for it swells the rapture of heaven with the gladness of earth. It is good to observe it outwardly, to do it honor with every tribute we can bring of loving homage, to wreath garlands and make feasts, to give and to receive gifts. Above all it should be marked by gifts of love; and who so poor that he has none to offer, and who is rich that has it not to give?

"Love is a present for a mighty king."

God had no better thing to offer, and he gave it to the world on the first Christmas morning. Like the breath of the south wind it came, and a new spring was born. Cruel faiths and dark superstitions fled before the soft radiance of the Bethlehem Star that gilds our day with beauty and blesses our nights with peace.

In every land we find some gentle thought or tender strain of feeling running like a thread of gold through the Christmas customs. None are more beautiful than the remembrance of the animal creation in the universal rejoicing. In the far North the Norwegian peasant children tie together a sheaf of wheat and other grain, which they place upon a pole planted in the snow as a Christmas-tree for the birds; and in the far South the Italian housewife

makes white cakes for the stalled cattle. Even those superstitions are beautiful that still cling about the day—superstitions which Puritanism condemned so severely, and Romanism exalted so unduly. The old German legends weave it into the warp and woof of their strange stories, like that of our engraving, where the maiden, by the observance of certain rites on Christmas eve, is borne away to Elfland, where children that have been transformed into birds for offence given the fairies, await the coming of

being carried away, but casts her into so deep a sleep that she cannot be awakened to take the offered fruit, and the gnomes are obliged to return her to her home on Christmas morning at the rising of the sun. Like all the rest, the story has its thread of gold, and the tale is not for the Norse folk only, but for us.

Let us make the gold our own. For each of us there is some deed of kindness to perform, some ministry of tender affection, some unkindness to forgive and forget, some bruised heart to bind, some sinful soul to cheer with words of hope.

"Make channels for the streams of love

Where they may broadly run;  
And love has ever-flowing streams  
To fill them every one."

Kindle bright fires, wreath your houses with holly and mistletoe, spread your tables with good things, give to your friends, give to your enemies, give to your beloved ones, make your homes bright and your children happy, give to the poor, but take heed how you give:

"That is no true alms which the hand can hold:

He gives nothing but worthless gold

Who gives from a sense of duty;

But he who gives a slender mite,

And gives to that which is out of sight,

That thread of the all-sustaining Beauty

Which runs through all and doth all unite—

The hand cannot clasp the whole of his alms;

The heart outstretches its eager palms,

For a God goes with it, and makes it store

To the soul that was starving in darkness before."

Better to warm the heart than the body. Do not offend the one that you may benefit the other. It has often been made harder to the poor man to

accept a benefit than to go without it. Get him work and he can earn coals and blankets, but he can never buy a flower for his wife, though she loves them well; nor a toy for his child, though he looks into the toy-shop windows with longing eyes. Do not forget this when you would make him a present. And, kind readers, we wish you a Merry Christmas and a Happy New Year.

**Christmas Gifts.**—No Christmas gift is more universally acceptable than flowers. They are always elegant, and admit of such range in taste and cost as to satisfy the requirements of the most fastidious.

THE BIRDS' CHRISTMAS-TREE.

some beautiful maiden to restore them to their homes. If the fairies give her fruit, and she eats it, it confers on her the power to release the offenders from the power of the spell, and give them back to their beloved ones. But this is only on condition that the maid be fair, and will consent to remain herself in exile in place of those she releases. Sylva, the beloved of the whole hamlet where she lived, "as the rarer lily blossoms 'mid the green herbs of the field," resolved to adventure the spell for the sake of returning the child of her stepmother, who, by perverseness and enmity to Sylva, had offended the little people, with whom Sylva is an especial favorite. An earth fairy, who loves her, cannot prevent her

"Glory to God in the highest; on earth peace, good will to men."

AN ANCIENT CHRISTMAS CAROL.

WHEN Christ was born of Mary free  
In Bethlehem, in that fair citie  
Angels sang with mirth and glee:  
In excelsis gloria.

Herdsmen beheld their legions bright  
To them appearing with great light,  
Who said, God's Son is born this night:  
In excelsis gloria.

This King is come to save mankind,  
As in Scripture text we find,  
Therefore this song have we in mind:  
In excelsis gloria.

## Floral Gossip.

## THE MISTLETOE

THE Mistletoe (*Viscum album*) belongs to the natural order Loranthaceae and Diœcia-tetrandria of Linnaeus, it is a true parasitical plant, as at no period of its existence does it derive any nourishment from the soil or from decayed bark, like the fungi and allied vegetation. Of this genus there are several species; this is the only one of special interest, and is what is generally known as the English Mistletoe. It is an evergreen, pendent shrub, usually found growing on fruit-trees, but occasionally fixing itself on the thorn, oak, maple, and ash, very rarely on the pine. The stem, when full-grown, is an inch in diameter; it is very much branched or subdivided, forming a head from two to five feet in diameter. The bark is smooth, of a yellowish green color. The leaves are tongue-shaped, entire, in pairs on very short foot-stalks. The flowers are male and female in different plants, axillary, and in short, close spikes. Neither the male, nor female flowers have a corolla; the stamens and pistils spring from the calyx. The fruit is a globular white berry covered with a viscons substance; these berries appear in winter, and are in perfection about Christmas.

The Mistletoe may be made to grow on the apple or other trees, where the climate is not colder than that of England, by cutting a notch in the bark on the under surface of a branch, and carefully inserting the seed therein; the only precaution being necessary is to place the seed in such a position that the embryo shall be directed toward the trunk of the tree, and that the seed shall not be bruised. The growth of the Mistletoe is very slow, rarely more than two or three inches of the shoot and two or three pairs of leaves being produced in a season; the durability of the plant is proportionately great, for when once established on a tree it is seldom known to cease growing until it has exhausted the vitality of the tree, causing its death. Many old orchards in England have been completely destroyed by this beautiful parasite. The death of the trees is not, however, to be greatly regretted, as the Mistletoe brings a high price in the markets, more than the value of the tree. Hundreds of tons of it are sold annually for Christmas decoration; it is now regularly imported into this country for the same purpose. The Mistletoe was a special object of worship with the ancient Britons, and that many important rites were performed with it by the Druids or priests is certain. By them it was held sacred, and many virtues were attached to it. They sent round their attendant youths with this plant to announce the entrance of the New Year; and a somewhat similar custom is still continued in France. The popular custom in England of kissing under a branch of Mistletoe during the Christmas festivities is referred to

the supposition on the part of some that it was the forbidden tree in the garden of Eden. Mr. Loudon supposes this pleasant custom most likely came from our Saxon ancestors, and to have been commemorative of Balder, the son of Odin, who is one of the heroes of Icelandic romance. According to the story, it was prophesied that Balder would die, to avert which fate his mother exacted a vow from all things on earth that they would not injure him. One of his enemies, knowing the Mistletoe had not taken the vow, as it did not grow upon the earth but on trees, made a dart of its wood, and with it killed the hero.

The origin of the modern custom connected with the Mistletoe is not very clear, which is perhaps fortunate. If known, the innocent merriment now associated with the plant would be exchanged for a feeling of stern disappointment, and it would be banished from many firesides, where it is now a great source of joy and pleasure. The Mistletoe of the Southern and Western States is the *Phoradendron*

A CHRISTMAS GAME.

*flavescens*, which grows chiefly upon the branches of elms and hickories; it is a yellowish-green, woody-stemmed parasite, with a jointed stalk having opposite and whorled branches, fleshy, obovate-shaped leaves, small flowers in axillary spikes, which are shorter than the leaves; the fruit, though smaller, resembles that of the English varieties. This species is widely distributed from New Jersey, South and West. This species has none of the poetic associations that distinguish in so marked a degree its English namesake.

## AN ENCLOSED WINDOW-GARDEN.

A LADY correspondent of *Vick's Illustrated Magazine*, at Lynn, Mass., writes as follows:

I have no conservatory, or even a bay-window; only one south window in my sitting-room that I can use for plants. At this window, half way up, is a walnut shelf a foot wide, supported by iron

brackets, and on it is a zinc pan painted drab, with an inch of sand on the bottom to keep the pots moist. My idea was to enclose this window from the room, with the shelf inside, so as to exclude dust and include moist air. I communicated my idea to a carpenter, and his hands completed the practical part, and my window-garden stood completed. I am well pleased with it, and the plants are, judging from the way they grow. Now for details: I had a table made of black walnut, as long as the window is wide, including the casing, two feet wide and six inches deep. It is plain on the sides, has handsomely turned legs finished with casters. There is no top; at the bottom inside is a cleat, on which rest narrow slats of pine, and on this a zinc pan just the depth of the sides. An inch of damp sand supplies the moisture, and the warm air from the furnace comes in contact with the pan underneath and furnishes bottom heat. So much for the table. The sides are of walnut, and reach to the top of the window-casing. The front consists of two glass doors, opening in the centre, each one made of two panes of glass. The top is made of walnut and finished with a handsome moulding similar to a bookcase. The top is fastened to the table with four large screws, and to the top of the window with small brass hooks and screw-eyes. The whole can be removed from the window in a few minutes. An outside window in winter bids defiance to Jack Frost.

At different times I have had Hyacinths, Polyanthus, Narcissus, and Due Von Thol Tulips. I have noticed that the flowers hang on longer than when kept in the dry air of the sitting-room. The plants are not half the trouble they were before, and so I think my window-garden a success. When winter is gone its mission is not ended; while I am writing to-day, with the thermometer among the nineties, my garden is still a pleasure, and gives me a cooling sensation when I look through its glass doors. On a shelf in a large pot is a Japanese climbing fern, *Lygodium scandens*; it is trained on strings and covers the upper half of the window. In the lower part on one side is the Hoya, now full of lovely clusters of bloom; on the opposite side *Cissus discolor*, trained on a trellis like the Hoya. In the centre I have ferns, *Adiantum cuneatum*, in a ten-inch pot; it measures, outside the foliage, thirty inches. Besides this is *Cyrtomium falcatum* and another fern I do not know, and a lot of *Lycopodium Martensii*, green and white; *Begonia rex*, and silver-leaf *Begonia*. At ten o'clock in the morning I close the blind, open the window, and then open the blind when the sun has gone away. The ferns grow beautifully.

THE LADIES' FLORAL CABINET for August contains numerous valuable household hints for floral and ornamental adornment of the home. Ladies of taste and those desirous of cultivating a taste for embellishing their home, should subscribe for this handsome monthly.—*The Reporter, Savannah, Mo.*

## Gossip About Flowers.

### AMPELOPSIS VEITCHII.

MR. DONALD G. MITCHELL, in a recent essay on rural adornment, gives very high and just praise to *Ampelopsis Veitchii*, a lovely new vine which has come to us from Japan, and which is by no means so well known yet as its merits deserve. It is smaller and of finer habit than our own Virginia creeper, clinging with much greater tenacity to either wood, brick, or stone, and carrying the greenness of its foliage well into November. Even then it yields to the cold with great reluctance, its leaves changing through a rich brown to a dark maroon, and dropping at last in flakes of deepest crimson. Were it only an evergreen it would, Mr. Mitchell thinks, more than match the ivy. The same vigorous creeper is also prominent in the plant decoration of Wellesley, near Boston. In the latest volume of the Massachusetts Horticultural Society it is said that the unique and picturesque porter's lodge, at the entrance gateway to that magnificent estate, is completely overrun by *Ampelopsis Veitchii*, and the writer declares that "this hardy vine of rapid growth, fine foliage, and wonderfully adhesive power has perhaps no equal." He adds that "on some of the trees it has mounted to the highest branches." It is also used elsewhere on the grounds, and with noteworthy effect, especially in the draping of a Druidical arch of rude stone with rock-work connected.

### RELATIONS OF FLOWERS AND INSECTS.

FOR some years past—since the publication of Darwin's researches—we have been accustomed to look on the forms, colors, perfumes, and nectar-like secretions of flowers as so many adaptations and contrivances to secure the visits of insects, and the consequent fertilization of the flower. Recently, however, an observer has been found who is bold enough to challenge these opinions of Darwin, Delpino, Mueller, Lubbock, and others. M. Gaston Bonnier, after having observed during the last seven years some eight hundred plants in various parts of Europe, comes to the following conclusions, the details upon which he founds them being given in recent numbers of the *Annales des Sciences Naturelles* and of the *Bulletin* of the Botanical Society of France:

1. The development of colors in flowers has no relation to the development of nectar. In closely-allied species of the same genus the most conspicuous flowers are not those which are most visited by insects.

2. In dioecious flowers provided with nectar the insects do not visit first the male and afterwards the female flower.

3. Bees become much accustomed to colors, but as

much so to those which are inconspicuous as to those which are brilliant. For the same weight of honey a green surface is as freely visited as a green surface with a background of red.

4. The development of spots and stripes on the corolla has no relation to the production of nectar.

M. Bonnier, who has studied the anatomy and disposition of the nectar-secreting organs in a great number of plants, points out that these accumulations of saccharine material occur usually in parts of the plant where development is going on actively, as in young leaves or young ovaries. When the

HANGING BASKET OF FERNS.

emission of liquid ceases, the saccharine matters contained in the nectaries return into the plant, and are probably used up by the neighboring parts in the course of this development. In fact, the nectaries, whether floral or extra floral, whether they excrete liquid or not, act as reservoirs of nutriment which is in direct relation to the life of the plant.

### HOW PLANTS DEFEND THEMSELVES.

IN a recent lecture Mr. Francis Darwin gave some curious instances of the way plants are protected

from insects and other dangers. Opium, strychnine, and belladonna, he said, three of the most deadly poisons, were all formed by plants as a means of defence to preserve them from cattle, etc. A curious use was made of this poisonous property, as recorded by Livingstone, who states that at one place in South Africa the natives were in the habit of catching their zebras by mashing up some poison plant in their drinking places. Poppies are protected by poison from the attacks of goats, and probably of other cattle. The strychnine plant was a good example of the way in which poison was limited to the part of the plant where it was needed. Almonds were also protected by poison, cultivators generally sowing the bitter kind, as the sweet kind was eaten by mice. Other plants were protected, not by strong poisons, but by some aromatic substance. The fennel, anise, and caraway seeds were examples of this, which were not eaten by birds on that account. The lime, which was protected by this aroma, was able to grow wild and hold its own anywhere, whereas the orange, the citron, and olive required to be carefully preserved and watched. The mint was another example of a plant protected against cattle by this aromatic principle. Flowers are often

more aromatic than the leaves of the plant on which they grow, and owe to this principle their safety from attack, and caterpillars will starve to death sooner than eat the flower of a plant the leaves of which they readily devour. Water plants are unprotected, for the reason that water was protection enough. The most peculiar protection, perhaps, was that enjoyed by the common lettuce, which, when pricked, even by an ant's foot, spurted up a sticky juice and enveloped the intruder, who, biting the leaf from vexation, drew down upon himself a fresh shower of cabbage wrath, in which the unfortunate ant was drowned.

### A Botanical Usurper.—

A curious instance of the invasion of a country by a plant of foreign origin is seen in the history of the mango in Jamaica. In 1782 specimens of the cinnamon, jack-fruit, and mango were sent to the Botanic Garden of the island. There the cinnamon was carefully fostered, but proved to be difficult of culture in the island; while the mango, which was neglected, became in eleven years as common as the orange, spreading over lowlands and mountains, from the sea-level to 5,000 feet elevation. On the abolition of slavery, immense tracts of land, especially coffee plantations, relapsed into a state of nature, and the mango being a favorite fruit with the blacks, its stones were flung everywhere, giving rise to groves along the roadside and around the settlements; and the fruit of these again, rolling down hill, gave rise to forests in the valleys. The effect of this spread of the mango has been to cover hundreds of thousands of acres, and to ameliorate the climate of what were dry and barren districts.

## ORCHIDS.

WE well remember, when a little child, the first time we saw a plant growing without earth, in which to fix its roots. It was on a visit to the wife of a naval officer who had been long absent in tropical countries, and had brought home with him the strange root which I saw hanging up in a southern piazza, attached to a block of wood by a little fine wire. When told that in its native land it grew upon the branches of trees, and bore beautiful flowers, I remember feeling a sort of awe creep over me as though the thing were what the Scotch call "uncanny"—much the same feeling as I had when listening to tales of gnomes and fairies in the gloaming. Something of the same feeling clings to me still in studying the strange habits and weird, grotesque aspect of the singular plants called Orchids. Unlike all other plants in their appearance, structure, and modes of growth, they display a delight in contradictions and a prankish caprice in their choice of their abiding-places that would justify the idea that they took delight in surprising the unsuspecting botanist with some anomaly of growth or structure just as he had his ideas all settled, and was quite satisfied that he knew all about them, and prepared to enlighten the world upon their erratic habits. Charles Kingsley says that any one who has read Darwin's book on the fertilization of Orchids will be very wary how he says anything about this mysterious race. The caution is a wise one, any general assertion with regard to them, being liable to be flatly contradicted in some particular instance, often in very many.

They afford a study upon which a life-time might be easily expended without reaching all, or even a large proportion, of the singular facts with regard to their nature, or anything like an accurate knowledge of their various species.

Orchids are generally divided into two classes, the terrestrial and the epiphytal, the former growing in the earth, the latter upon trees.

Like all general statements with regard to them, it has to be qualified, as there are exceptions to the rule. The terrestrial, are found more especially in temperate regions, though they also extend into the tropics. The epiphytes are chiefly confined to the tropics, and to situations where the rain-falls are heavy, and the neighborhood of rivers and waterfalls. Heat and moisture seem to be the almost invariable conditions of flourishing growth. The two classes extend over nearly the whole world, the only places where they are not found being those where heat exists without moisture, or moisture without heat, as in the deserts of Africa and the extreme northern limits of the temperate zone. To give even a glance at the various species would require a volume. Epiphytal Orchids are the true aristocrats of the floral tribes. They resemble an order of Oriental grandees. They know no such motto of Western chivalry as that of the Black Prince, "I serve"; they do not own any allegiance to utilitarian ideas. Only a single plant of the race may be called actually useful, and to that the appellation applies only by courtesy, since the vanilla is valued for its delicate aroma and rich flavor; both merely luxurious additions to enjoy-

ment rather than the supply of a real need. No, with the Orchids, beauty seems to be its own excuse for being; and certainly, in whatever way we regard them, we must acknowledge that for grace of form, elegance of foliage, and magnificence of coloring, no race of plants can compare with them. The rose is the queen of flowers, but she displays only a limited number of colors; but in the Orchids we find every color of the rainbow. Even blue, the rarest of hues among flowers, is represented, and many individual plants display a number of colors in the most vivid contrast. Some are pure white, like the *Peristeria elater*, the Holy Spirit Plant of Mexico, whose column closely resembles a dove descending with wings outspread; others wear Tyrian dyes, and seem to flash with gold and jewels. The union of their strange forms with color, produces, as every one knows, the most singular simulations of animal life. Some of these are perhaps rather fanciful, but many are real and striking. Among these last, one of the most perfect is *Cynoches ventricosum*, which as its name imports, imitates a swan, the gracefully-arched column forming the head and neck.

In the figure, size, structure, and habits of these plants there is nearly as much variety as in the blossom. Some are Lilliputian, others by their height belong to Brobdingnag. The *Oncidium altissimum* has panicles nine or ten feet in length, and some of the *Dendrobies* grow to equal length, while the *Sobralias* sometimes exceed twenty feet in height. In the accompanying cut, we have endeavored to show something of their various contrasting qualities. On the right hand at the head of the page will be seen the *Oncidium papilio*, or Butterfly Orchid, with spotted leaves. Just below is the drooping, vine-like plant, *Dendrodium macranthum*, whose large panicles of flowers we had no room to figure; near it the blossom of the *Peristeria elater*. Beneath, showing the creeping habit of the root-like stem, from which the pseudo-bulbs are produced, is a *Sophrontitis*. On the extreme left at the bottom of the page is the *Orchis aranifera*, or Spider Orchid, which, when seen with the addition of color, is very striking. Next is *Habenaria orbiculata*, with its strangely elongated lip. The central figure is *Cypripedium japonica*, a Japanese plant, easily grown, it is said, in pots. The *Cypripediums* are popularly known as mooseasin flowers. Several varieties are native to our Northern woods and Western prairies.

Next is a dwarf specimen of the same genus, *C. Concolor*. Above, is the graceful vine of the *Vanilla aromatica*, trailing among the numerous clusters of pseudo-bulbs of the *Tilandsia*, common as a weed in Mexico and Central America. These singular bodies are really only the enlarged and thickened base of the leaf-stem, and are produced annually with the growth of the leaf; when the leaf withers the bulb still remains; and as the years pass clusters are formed such as are seen in the engraving. The bulbs are regarded by botanists as receptacles where nourishment is stored up for the support of the plant. They are common to very many Orchids.

Orchids, as a rule, are of slow growth and long life. The same plant produces new flower-stems some-

times annually, sometimes at longer intervals, but the plant itself lives to great age; it has been asserted that there is evidence of their living one hundred years. In this long life is found the safety of investing money in their culture, for the continued production of rare flowers will bring to the florist ample remuneration for both the cost of purchase and that of cultivation.

It is impossible to succeed with Orchids without a thorough knowledge of their habits of life at home. An amusing illustration of this fact was given in the case of a gentleman who, having vainly endeavored to grow a species of *Stanhopia*, found one morning, to his astonishment, that it was sending a green stem through the bottom of the pot. Finding from this hint that it preferred to grow upside down, he concluded to let it have its own way, and was rewarded by abundant blooms. The central plant figured in the engraving shows how the epiphyte is cultivated upon wood suspended by wires. Those that need more protection for the roots are placed in baskets, filled with sphagnum moss, placed over potsherds and pieces of charcoal; others are potted. Any one who has a greenhouse can grow some Orchids, but they thrive best in a house by themselves, their aristocratic proclivities demanding select society and luxurions surroundings. It is only necessary for this purpose to divide off a small portion of the greenhouse, where they will condescend to admit a few choice exotic ferns. Stove-heat has been considered hitherto almost indispensable to most epiphytes. Of late, however, new ideas have been introduced with regard to culture which will, if they can be carried out, greatly facilitate Orchid culture. It is claimed that very many of the plants now under cultivation may be grown in a grapery where the temperature never falls below 40° Fahrenheit. This is a contradiction of all received notions, but in a number of cases the experiment has been successfully tried, and it is greatly to be desired that the matter be thoroughly tested; for if it can be proved successful it will greatly reduce the expense of Orchid culture, and encourage many to engage in it that now look upon it as beyond their means.

As the facilities of intercourse with South America become more rapid and frequent, we shall doubtless learn more about these "beautiful things without foundation," as the Spaniards name them, and increase the number which can be successfully grown with care, even without the greenhouse. Already there is a considerable list for parlor culture, so that ladies who love beauty can adorn their rooms with ornaments more elegant than the finest work of art, and enjoy at the same time the delight of studying the curious secrets of plant-life; for it is only to the patient watcher that plants impart their strange confidences.

"Silence is vocal if we listen well,"

and listening is well repaid. Let us learn to listen, and we shall hear strange stories of forest and mountain, of river and vale, where these gipsy creatures have dwelt for centuries, reflecting the splendor of the sunset, and filling the air with rich perfumes, waiting for the acknowledgment and appreciation of man.

C. S. N.

ORCHIDS AT HOME.

NEW YORK, DECEMBER, 1879.

## WILLIAMS' HOUSEHOLD SERIES.

THE Publishers would call attention to the extremely favorable terms upon which they offer the charming and popular volumes of WILLIAMS' HOUSEHOLD SERIES. These books have met with so favorable a reception hitherto that their merits need hardly be pressed upon the readers of the CABINET, to many of whom they are already familiar. The following premiums are offered upon orders for books:

## PREMIUMS.

For \$5 order: One year's subscription to CABINET.  
 For \$10 " \$4 Periodical.  
 For \$15 " \$4 Periodical and others according to price.  
 For \$20 " Several Periodicals will be furnished, selected according to the price of the periodicals and the choice of the purchaser.

The Series embraces the following works, all abundantly illustrated:

Household Elegancies.	Beautiful Homes.
Every Woman Her Own Gardener.	Evening Amusements.
Ladies' Guide to Needlework.	Window Gardening.
26 Designs for Fret Saw.	Ladies' Fancy Work.
7 vols. Ornamental Designs for Fret Sawing.	

All of these volumes will be found invaluable in the home. The instructions given are full and clear, and exceedingly practical. The Fret Saw designs are especially useful for making pretty holiday gifts.

ADAMS & BISHOP, Publishers,  
 46 Beekman Street, New York.

## TO SUBSCRIBERS AND CORRESPONDENTS.

THE Publishers of the CABINET feel that an apology is due to readers and correspondents of the paper for the neglect and delay which has occurred in the past in answering letters and queries. Under the new arrangements now completed, the editor will give prompt attention to all queries, and publish the replies as rapidly as possible. If the reply does not appear as soon as expected, our correspondents may rest assured that the delay has been unavoidable. Those who send plants for name, will find it much the safest plan to send a small branch or twig, with leaf and flower. Many leaves resemble each other so closely as to render identification impossible. Delicate blossoms may be secured between two cards wrapped in a little raw cotton. In the mail bags specimens are often so crushed as to be unrecognizable. Care in mailing is absolutely indispensable. Ferns are often entirely destroyed when enclosed in an envelope.

**A Beautiful Christmas Present.**—The \$1 Magic Lantern advertised in this issue will make a suitable Christmas present for every boy and girl. Don't fail to read the advertisement.

WE willingly recommend to our readers "The Bowker Fertilizer" advertised on another page, as the Company's references and testimonials are all that can be asked.

## Floral Hints.

## KEEPING FLOWER-SLIPS.

By inverting a tumbler or a glass over a slip when first set out, and keeping it over a few days, it will almost surely take root and thrive. If a handful of well-pulverized charcoal is put in the earth when you plant a geranium, it will have a much richer growth and color.

I have kept scarlet Japonicas fresh a very long time by putting their stems in a saucer of white sand: if the flower has its under surface touching the sand, it will keep bright a very long time. By placing the stems of holly berries, or almost any kind of scarlet berries, in the sand a few days, the berries will retain their brilliancy thereafter for months without being shrivelled. Autumn leaves laid in sand and carefully covered over with a layer of sand, for sometimes only four days, will preserve their color perfectly and not have the flat, stiff look of preserved leaves. The scarlet dogwood and the yellow leaves of the birch are beautiful preserved in this way. Lay them in with three or four leaves on a stem, and they will keep their graceful curves and waves as if just gathered; and one, by a little trouble, can have a more beautiful group of leaves to grace a winter bouquet than oil or wax or varnish can make them.

## THE HYACINTH.

THE Hyacinth is a universal favorite in the most extended application of the word. The number of its varieties is now fully equal to that of any other florist's flower. They are not only desirable for planting in beds in the flower-garden, but for forcing into flower in the dull, cheerless months of winter and early spring, when their bright-colored blossoms and rich fragrance lend a charm not otherwise to be found. For growing in the conservatory or drawing-room the bulbs should be potted, as early as they can be obtained, in small pots of rich, light earth, and placed in a cold-frame, or some protected place in the garden where they may be secure from heavy rains; cover them with at least foot of newly-fallen leaves, and being once well watered soon after being potted, they may remain for a month at least, to form their roots, when they may be uncovered, and the most forward brought out and repotted into larger pots, and placed in a moderately warm room. The size of the pot will depend much upon the size of the bulb; as a rule, the first potting should be in four and the second in six-inch pots. Some care is necessary in the application and increase of heat, or the flowers will be abortive. For the first three weeks it should not be above fifty degrees at any time of the day; after that the heat may be increased to whatever degree is desirable in the room where they are to bloom. Water should be slightly warm when applied, and given in proportion to the development of foliage and flower; in no case should the earth in the pots become dry, neither soddened, an excess of water being as injurious as drought.

Hyacinths succeed best in a humid atmosphere,

which is not easily obtained in the drawing-room; and they are particularly sensitive to cold draughts of air, which may and should be avoided.

Hyacinths in glasses are an elegant and appropriate ornament to the drawing-room, and for this purpose occasion but little trouble. To those contemplating this interesting branch of floriculture we make the following suggestions:

1. If you choose your own bulbs, pay more attention to weight than size, and be sure that the bulb is sound at the base as well as at the top.
2. Use the single kinds only, because they are earlier, more hardy, and as a rule perfect their flowers in water better than the double varieties.
3. Use rain or soft spring water.
4. Set the bulb in the glass so that the lower end is almost but not quite in contact with the water.
5. When the bulb is placed, put the glass in a cool, dark closet, or any convenient place where light is excluded, there to remain for about six weeks, or until the roots fill the glass, which they will do sooner than in the light, as they feed more freely in the dark.
6. Fill up the glasses with water as the level sinks by the feeding of the roots or by evaporation.
7. It is not necessary to change the water if a few pieces of charcoal are placed in the bottom of the glasses.
8. When the roots are freely developed, and the flower-spike is pushing into life, remove by degrees to full light and air.
9. The more light and air given, from the time the flowers show color, the shorter will be the leaves and spike, and the brighter the colors of the flowers.

10. Do not place the glasses where the direct rays of the sun will strike upon them, as that will raise the temperature of the water sufficiently high to cook the bulbs, which is by no means an unfrequent cause of failure.

11. Hyacinth bulbs for forcing either in glasses or in pots should be of the very best quality; common mixtures will do very well for the open border, but named varieties should always be selected for house culture—not that the names are essential, but because all poor and undeveloped bulbs are culled out from named sorts and sold as mixtures.

## CUTTINGS BEFORE PLANTING.

CUTTINGS of Geraniums and many other plants will be found to start with more certainty if wrapped in slightly damp moss for a few days before inserting in sand. This will allow the cut end to partly heal or become calloused, and thus not be so liable to rot or damp off. The propagator must be the judge as to the time the cutting ought to be so kept. Verbenas and similar woody cuttings can be kept but a day or two, while some hard-wooded cuttings may be kept for two weeks to advantage. Never allow cuttings to become wilted before insertion, and always allow several leaves to remain on each to elaborate the sap and assist in forming roots. Do not crowd your cuttings, as this will often cause them to damp off.

Correspondence.

LETTERS FROM CORRESPONDENTS.

MODENA.

EDITOR OF CABINET: I have taken the CABINET for five years and like it extremely, but have never until now ventured on a question. Will you tell me how to treat Ivy Geranium? I have been very unsuccessful in making them bloom in winter. K. E. GEORGE.

Answer.—Perhaps you have not sufficiently considered the preparation the plants need for winter blooming. They should have through the summer abundant sunshine, air, and water. Place them in a rich, loamy soil, and after they are well grown give them a season of rest. Early in September the plants should be taken up, the earth shaken from the roots, and the tops pruned back closely and in such a manner as to give symmetry to the form, and then repotted. The plants should be shaded for a week or so, then water or sunshine may be allowed. Such a course of treatment ought to give you thrifty plants all winter.

NORTH COHOCTON, STEUBEN CO., N. Y.

Does Amaryllis need peculiar treatment to have it bloom? as I have been much disappointed in mine bearing no flowers. H. M. MOULTON.

Answer.—Amaryllis requires careful management. Plant in large pots, in loam mixed with rotted manure. When placed in the earth press the bulb firmly in, so as to settle the earth about its roots, leaving the neck uncovered; water thoroughly and give moderate heat until it shows signs of growth, which, if the bulb is in good condition, will be very rapid when it commences. Water about once a week with warm water, and give abundant light. Sometimes a single bulb will throw up several spikes, and the time of flowering will last five or six weeks. When done flowering let them rest for a month or two, withholding water; keep them in a cool place where there is a free circulation of air, but which is secure from frost. A Johnsonii has been known to bloom twice a year.

DANVILLE, MICH.

In reading the pleasant and instructive columns of the CABINET I have seen the questions of other correspondents kindly answered, and would like to ask the following: 1. How old Cinerarias and Gloxinias must be before blooming; also Amaryllis Johnsonii and Allamandas. SUBSCRIBER.

Answer.—1. The two first are propagated from seed sown in the spring; plants kept in shady situations during the summer should bloom the following winter and spring. 2. We refer you to answer given above. 3. Allamanda is easily grown, if a thorough understanding be had of their needs. They are capable of producing flowers of large size and substance; for eight months of the year they require a great deal of light, but should be protected from the direct rays of the sun at midday. When done blooming they should rest for about two months. Water should be gradually withheld, and during the rest-period only sufficient given to prevent the leaves from drooping. They do best when well established in large pots. Plant young plants in light turfy, loam with a little sand. Delicate kinds are best grafted on stronger varieties.

ANSWERS TO CORRESPONDENTS.

E. W. Hyde.—“No” to all of your queries. The Rubber Plant is Ficus elastica, an evergreen, large-growing tree. Crassula is an herbaceous plant, sometimes assuming a shrubby form. The House-leeks belong to the same order. We do not know a plant that has been christened “Roman candle.” Feverfew should be planted in the open ground; it will flower in a pot, but is apt to draw up too long, unless in a large pot, with plenty of light, and in a cool room.

Mrs. E. A. Warner.—Your enemy is the scale. Your remedy is to take a smooth stick, dip in strong soapsuds, and scrape the plants until clean, then rinse with clear water. Cacti are liable to attack from insects, particularly scale.

Amateur.—The rose vase for the centre of your bed is General Jacqueminot. For the next row, La France or Paul Neron; for the outer circle, Caroline Manais. The best moss rose is Princesse Adelaide. Mad Falcot, a fine apricot-yellow, orange bud, is nearest to an ever-blooming orange rose of any to be had. Amie Vibert is the best pure white ever-blooming rose. “The Rose,” by Parsons, is probably the best book for you.

Hattie Farrar.—Hen and chickens is a popular name applied to Bellis perennis (Double Daisy); also, with as much propriety, to Sempervivum soboliferum, the House-leek of the cottage garden.

Nina Smith.—The Justicias are not hardy; there are many species and varieties. The greenhouse varieties are best grown from cuttings of young wood; they will root freely in sand. They will grow in almost any soil or situation, preferring a light, rich loam and a rather high temperature with liberal watering. Old plants do not bloom well; young ones should be started annually.

Dora B. Foreman.—The tuberous rooted Begonias require a long period of rest: the proper time is manifested by their leaves drying up and drooping, which follows immediately after flowering. At that time cease watering and put them away, in the pots, in some dry place entirely free from frost, where they should remain until the first of April, unless they show signs of growth sooner, when they should be repotted in a light, rich soil, and grown in as warm and moist atmosphere as possible. There are so many species of Ornithogalum that it is difficult to give cultural instruction without knowing which yours is. They are, as a class, of the easiest culture; some of them will flower if the bulbs are hung up dry in a warm room. If your bulb is large and healthy, give it a rest by keeping it perfectly dry for a month or two. Many kinds of bulbs are induced to bloom by a period of rest that have been sterile for years.

O. B.—Your plant is Oxalis tetraphylla, a winter-blooming species. The bulbs should be planted any time from September until January, in rich, fibrous soil; they will flower during the winter and spring, and require rest during summer. Plant your Lily of the Valley out of doors in partial shade; it will surely bloom soon as it gets established. It is an early spring flower.

A. R. R.—It is a simple affair to make a vaporizer, as H. P. S. says, but more difficult to tell how; you must be shown instead of being told. A very useful one can be bought for twenty cents, which is the cheaper plan, unless exercise for ingenuity is wanted. We cannot give you the correct name of your Trumpet

Fuchsia without a branch in flower. It is a local name given to some plant not at all allied to the Fuchsia. It is very interesting floriculture to grow Coleus from seed; if the seed you have saved is from hybrid sorts you will be likely to get some very good ones, and no two alike. Sow the seed in boxes about the first of February. The plant enclosed is Lamium maculatum, popularly known as Dead-Nettle.

An Old Subscriber's plants came so badly broken that it is impossible to name them correctly. No. 1. is undoubtedly a Pentstemon. Var.-leaved Chrysanthemum can be had from the leading florists, whose catalogues please consult.

Mrs. John Willis.—The plant is Lychnis coronaria.

Mrs. M. C. Allen.—The plant is Ponciana Gilliesii, a native of Mendoza, South America; it is a very beautiful shrub, highly esteemed for greenhouse culture.

Mary Weed.—The leaf and flower sent is from one of the Morndas (Horse-balm), probably M. didyma. The Coleus are all difficult to carry through the winter, especially in an ordinary drawing-room. The only way to treat them properly is to take cuttings in the fall and grown on the young plants. They require the warm, moist air of the greenhouse. “Wandering Jew,” is a popular name applied to several plants, most commonly to the several varieties of Tradescantia.

Mrs. Asa Turner.—The specimen sent is from the Eleagnus Argenta, a shrub or low-growing tree, rarely more than fifteen feet high. Its popular names are Pursh or Silver-Berry. It is propagated by seeds or by layering the young shoots in September. The Cactus family is so large that it is impossible to give a correct name from your description; it probably belongs to the section Cereus.

Miss M. C. Blaine.—The specimen sent is Lycopodium Carolinianum.

E. A. Claypool.—The specimens sent are so badly bruised that we cannot give the names correctly. Do not know the popular names of either of them. No. 2 is one of the Solanums; cannot say which without the fruit.

Maria Herbert.—The name of plant is Bryophyllum Calycinum, a native of the East Indies.

A PLAIN ANSWER.

A GENTLEMAN of large scholarship, and well known for his fine reasoning powers, but of rather rough manners, was inexpressibly bored by an acquaintance, whose intense self-conceit sometimes rendered him intolerable to his friends. One day, after the latter had been displaying his peculiarity in a very provoking manner, our professor turned to him very gravely and said: “Yes; what you say is true; in fact, you and I know everything there is to know. You know everything in the universe, except that you are a fool, and I know that.”

Did the prophet Isaiah ever eat at a railroad station? It certainly looks so, for how could he have described it so literally if he had not? “And they shall snatch on the right hand, and be hungry; and he shall eat on the left hand, and they shall not be satisfied.” —Congregationalist.

Vanderbilt controls 3,620 miles of railway and employs 27,706 men.

## New Things in Science and the Arts.

## THE ARTOTYPE.

WE live in an age so full of new thoughts that we have hardly time to draw breath between the announcements of new discoveries in science and art, and few are able to appreciate and understand the rapidity with which the civilized world is moving.

Among the late improvements in what for want of a better term may be called mechanical art, is the Artotype, a recently-introduced combination of photography and lithography, the object being first photographed and afterwards printed upon a printing-press with printer's ink.

During a visit to the establishment of Messrs. Harroff & Bierstadt, 58 Reade Street, we were favored with an opportunity of seeing the pictures printed and examining them in various stages of development, and we have no hesitation in saying that the delicacy and finish, far surpass the finest photograph, while the clearness and permanency of the print equals the best steel engraving.

If the mention of printer's ink suggests the idea of coarseness to the reader, he may be assured that it is an altogether mistaken one. There is a softness of tone, and a gradation in the shadows which persuade one, in spite of evidence, that there must have been touches from the skilful brush of an artist in india-ink.

No better evidence of the refinement and elegant delicacy possible to the process, can be given, than that it has been selected by experienced publishers, to illustrate Ruskin's "Modern Painters." John Wiley & Sons have ventured upon the rather hazardous enterprise, of giving a beautiful edition to the public at one-fifth of the old one. When we say hazardous, we do not mean with regard to the public, but to the distinguished author, whose wrath spares neither friend nor foe in what he believes to be the interest of art.

Certainly the new process answers to one of his favorite axioms, "All true art is delicate."

It is not alone in black and white that the process is available, but in color also; we understood, however, from what was told us, that this part of the work had not yet been entirely perfected, though, if we might judge from what we saw in a certain private drawer into which we were permitted to peep, of a cluster of Eglantine and other wild flowers, that looked as though the dew had hardly dried from off their petals, we should think perfection was not far off.

The advantage is also possessed of being applicable to a great variety of different substances. We saw prints upon white satin, brown leather, and pine shingle, all clear, bright, and perfectly finished. Upon the pure and even surface of white holly the effect is very fine; upon leather it is quaint, and suggests the adaptation to many uses in the industrial arts.

The photograph has always, when good, given an exquisite refinement of shading; but the very tints which give its greatest beauty are the most evanescent, and every one knows how frequently a photograph is marred or ruined by change of color, by fading, and by unsightly spots; but the artotype is sub-

ject to none of these objections. Its exquisite gradations of shadow are entirely permanent, and it is subject to no uncertainty of effect from the varying skill of the manipulation or the changeful quality of chemicals, the process being wholly mechanical.

That its adaptation to the illustration of medical and scientific subjects is especially great, cannot be doubted; for the delicate pencil of the sun can delineate what no mortal hand would dare attempt, and all that can be desired is attained, when the sketch from nature is fixed in enduring tints. When scientific works and valuable books on art, can be illustrated in a style which is equal to the finest steel engraving, at a cost which will place them within the reach of the many, a great advance will be made toward the education of the public taste, and invaluable aid will be afforded to the study of natural science.

## NEW FABRIC.

PATENT rights have recently been secured in this country, says an English journal, for an invention which consists in the creation of a type of novel textile fabrics termed "diamantés." It consists in sprinkling upon any kind of textile fabric glittering or sparkling particles of crystalline or metallic materials, with spaces reserved, if desired, for producing patterns. This process embellishes the fabric, and gives it an appearance which it is proposed to term "diamanté."

But beyond the creation of what may be termed an article of fashion there is in this invention a patentable novelty, which results from the actual process by which this result is attained. It consists in the use of matters designated as crystalline—that is to say, transparent and sparkling. They may be either gelatinous, like purified isinglass, or non-gelatinous, like glass, or metallic, like gold and silver. These matters may be variously colored. The materials pulverized fall upon the fabric, which is stretched and arranged to travel over rollers. A jet of steam is directed upon the fabric, the effect of which is to render the surface of the gelatinous grains or particles moist and sticky, so that the dissolved particles seize the particles of crystalline matter which may be in contact with them, and the passage of the piece upon the hot cylinder then brings about the sticking and drying. The use of steam is important, as steam does not affect the shades of color of the fabric like water, which might otherwise be used to damp the fabric before sprinkling.

## NOVELTIES IN DECORATION.

CUP AND SAUCER.—A cup and saucer (contributor 1601) that has just received the seal of the Society of Decorative Art is decorated with a Japanese design in pale tints of chocolate brown upon an ivory-colored ground. Besides the particularly graceful finish and execution of the work, it has the novel feature of having some of its lines ornamented with small white beads of enamel.

SAUCER.—A curious shape for a saucer has been tried with much success. It is flat, the edge turned up at right angles, to which a corrugated appearance is given, the decoration being in contrasted colors.

## INDUSTRIAL ART IN NEW YORK.

HITHERTO there has been no museum in this city which has given any special attention to the applications of industry to art and art to industry. This want the trustees of the Metropolitan Museum have determined to supply, and have devoted a portion of the new art building, in Central Park, to collections illustrating industrial art. They propose to begin with the applications of metals. Valuable gifts have already been received, others are promised, and more are earnestly solicited. Professor Thomas Egleston, of the School of Mines, Columbia College, has been authorized to receive such donations. Communications relating to the matter may be sent to him or to the Director of the Museum, Gen. Di Cesnola. The department is an important and useful one, and it is to be hoped that contributions will be liberal.

## THE PHONOGRAPHIC PIANO.

THE phonographic piano is among the late applications of the principle of the phonograph. A music-box which may cost a large sum of money and be of the best construction, can only produce a limited number of tunes, but the phonographic piano can play any tune for which the music is furnished. The bars are struck by strikers as in a piano. A strip of prepared paper, upon which the tune is perforated, about ten inches wide, passes through rollers and over the keys, the strikers springing through the perforations in the paper and striking the right note, the operator taking no more part in the production of the music than the organ-grinder in turning the rollers. Of course automatic music can never be more than a body without a soul, any more than a chromo can be a painting, but there are many persons who have a certain fondness for music which never develops into a passion, and often exists without the least musical ability. To such persons the phonographic piano will be a boon, for it will allow them to choose their own tunes, and to execute them in such a manner as will give them great pleasure. It is claimed that the music is really good, and as the price is within the reach of very moderate means, it will, doubtless, be popular.

The Introduction of the Telephone.—The rapidity attending the introduction of the telephone as a means of business communication is shown by the fact that though thirteen months ago the first one was used in Chicago, the American District Telegraph Company now has over fifteen hundred patrons—that is to say, it has put up that number of telephones, with the corresponding number of wires. The carbon telephone constructed by Edison is used. The company has a central office and nine branch-offices, which take in nearly every portion of the city. At its central office and branches the number of messages per day average twenty thousand. The demand for the telephone may be inferred when we say that the company has forty-seven men and five teams constantly employed in putting up new lines and instruments, and twelve others who are constantly engaged in keeping the lines in repair.—*Christian Union*.

WINTER WREATH OF GRASSES AND LEAVES FOR WALL.

**A Gigantic Garden.**—China has the largest population of any country in the world. It has the longest and greatest wall ever built, and it has also the largest and most fertile garden ever cultivated. The Chinamen, who walk over bridges built two thousand

years ago, have 50,000 square miles around Shanghai, which area is called the Garden of China. This area is as large as New York and Pennsylvania combined; it is all meadow-land, raised but a few feet above the lakes, rivers, canals—a complete net-

work of water communication—the land under the highest tillage; three crops a year harvested; population so dense that wherever you look you see men and women in blue pants and blouse, so numerous that you fancy some fair or coming off.

## General Reading.

## TWO WAYS TO HELP THE POOR.

BY MISS SCHUYLER.

[From a paper read before the State Charities Aid Association Conference on "The Importance of Uniting Individual and Associated Volunteer Effort in Behalf of the Poor." No. 18 of the State Charities Aid Association pamphlets.]

ON other occasions I have repeatedly said that three or four poor families were as many as any one visitor might better undertake—a visitor, I mean, having other duties, as most of us have, and able to give comparatively little time to visiting the poor. And why so few? Surely, says some young and generous spirit, longing to give something of the brightness and freshness of youth to gladden the lives of those who have never had any youth, surely I can do more than this. Should my four families live in the same neighborhood, it would take only one hour to visit them all once a week, and I have more time than this to give to the poor. Yes, I answer, fifteen minutes to each family is quite enough, is far too much, if it means that you stop merely to enquire: "How they are getting on?" "Not ill, I hope?" "What! an accident? I am very sorry. Of course not able to work. Nothing to eat? Horrible! Here, take this dollar, and I will look in again next week!" And so, hastily retreating, to escape the thanks which follow, on from one poor family to another, and so home, with a glow of satisfaction that at least those people have a dinner to-day—only "I might just as well have given my whole morning, and have visited a dozen families as those four." And with this the thought is dismissed; and the next day, and the next bring their round of home duties and social engagements, until "my morning for visiting the poor" comes in its turn again, when the visits and the dollars are repeated. What permanent good has been done? If your family are worthless, if the man is shamming illness, they take the gift as the fair spoil of your credulity, and ask themselves what other dupes, be they churches, societies, or soft-hearted individuals, will listen to the same or another story and supply the dollars for the other days, until you come again. All you have done in this case is to have helped to pauperize a family. On the other hand, suppose the story to have been a true one, suppose the man to have been a respectable, hard-working mechanic, temporarily disabled, how much have you helped him? Was it being a friend, was it helping him in time of need, to go off and leave him, without knowing what was to become of him and his family during your absence? And in either case, true or false, has your dollar helped to benefit that family permanently?

My friends, it will take all the time you can spare, all the thought you can give, to understand and to help as you might a very few of the many who need your help so sorely. Suppose you give of your best

thought and best effort to *one* of these poor families, and see what this may mean. Let us take one of the cases usually considered discouraging—a widow with partly grown up children, boys and girls, where not one of the family knows how to do anything towards his own support, where all have lived along in some mysterious way, partly by picking up odd jobs, partly by alms, with no future before them beyond a continuance of this same hand-to-mouth existence. What can be done for these people? I think you must begin by seeing enough of them to know all

and what have you received? God's gifts are many and come to us in various ways, and the word spoken to one differs from that spoken to another. But is there, can there be, anything more satisfactory in our intercourse with the poor than to have those who first came to us as beggars come at last as friends, wanting our sympathy in their joys and sorrows, but not wanting our money?

And your poor mechanic, temporarily disabled? Could you not have seen his doctor, and spoken a good word for him to his employer, and arranged to help him until well again by a loan, for which he would have given security—as such men can—and repaid you later in small instalments? Why break down his honest pride and self-respect by making him, for the first time, a recipient of alms? Why let him toss in fevered anxiety with care for the morrow, when the sleep of to-day is so important for his recovery? Your one dollar given can do but little for him; your one hundred dollars loaned can do much.

A FERNERY FOR WINDOW.

about them, by studying the character and natural abilities of each member of the family, before you can know what you can try to do for each. If they know nothing, this must first be made apparent to them; for it is not in human nature to acknowledge willingly that we cannot do some *one* thing well. All women think they can sew and wash, all men will sooner break our necks than acknowledge they cannot drive, and so our poor woman undertakes washing or sewing, or house-cleaning—knows how to do everything, but can't get any work. Suppose we begin by giving her some of our own clothes to wash, and when she brings them home torn to pieces, instead of being annoyed, ask her, very gently, if she would not like to take a few lessons in washing, offer to arrange to have her taught, and tell her you will give her another trial with your own clothes later, and will try to find work for her. If that woman has a spark of ambition and good feeling she will accept your offer, and the next time your washing will be well done. I think the few dollars spent in replacing what that first lesson cost you will have done better service than if they had been given outright in several of your fifteen-minute visits. And the eldest daughter wishes to learn to work upon the sewing-machine; and the son is willing to take a trade; and the little children might better go to school. You see that they are taught, and at first help to find work for them, and stay by them, and encourage them to let you know of their successes or failures; at last they stand on their own feet and make their own way, and when they come to see you it is to tell you how well they are getting on, or to seek your sympathy when in affliction. But then that family, for the case is not a fictitious one, required more time than fifteen minutes a week; more time, much thought, some effort, more money perhaps that first year. This you have given;

and what have you received? God's gifts are many and come to us in various ways, and the word spoken to one differs from that spoken to another. But is there, can there be, anything more satisfactory in our intercourse with the poor than to have those who first came to us as beggars come at last as friends, wanting our sympathy in their joys and sorrows, but not wanting our money?

As the water in the phial evaporates it will be necessary to add fresh to it. By adding salt water it is evident the whole would soon become too salt to sustain life.

## SATIN-COVERED FAN.

A FAN that has just received the seal of excellence of the Society of Decorative Art for harmonious coloring and simplicity of arrangement is an ordinary Japanese fan, cut square, and covered with heavy blue and yellow bronze satin, with jessamines painted in water-color on the satin. The handle is gilded with a rich dead gold, and tied round with a large satin bow of the same color as the blue covering.

## Hints to Young Housekeepers.

### HOUSECLEANING.

To clean house properly, begin in the attic, take one room at a time and clean thoroughly; inspect every corner, trunk, box, and drawer, and dispose of all useless rubbish. Bury old shoes around the roots of the grapevines, and they will serve you years longer by retaining moisture, and thereby increasing the fruitfulness of the vines.

Brush the walls, dust carefully, and wash the floors in ammonia-water. See that the stoves used downstairs are well cleaned and carried up to one of the attic spare rooms, and they will be free from rust when wanted in the fall. Oil the pipe with warm linseed oil, and it will retain a good polish.

Proceed with the bedrooms, one only at a time; examine the bedsteads, and, if afraid of bugs, wash them in a solution of corrosive sublimate, and your slumbers will be undisturbed. Wash varnished woodwork with cold tea made from grounds previously used and boiled over. It removes dirt, fly-specks, and leaves a beautiful gloss. Plain painted surfaces require a little ammonia in the water, about a tablespoonful to the gallon; use laundry soap, a sponge; *rinse quickly* with warm water, and wipe dry with a soft muslin cloth. Whiting applied with a cloth dipped in warm water, and carefully rubbed off with a dry cloth, cleanses white paint without injuring it.

To clean the metal plates, key-holes, etc., of doors, also brass stair-rod, use sapolio, or, if brass, rotten-stone.

The semi-annual oiling of furniture tends to give walnut-wood a darker and richer look, and renews its freshness. Any housekeeper who has never tried this simple process is advised to do so, and note how quickly all white spots and blemishes disappear. No matter how old and much abused chairs and tables are, try it upon them. Ten cents' worth of oil, mixed with a little rotten-stone, which may be had at any druggist's, will be sufficient to polish the furniture of a large dwelling. Apply a little at a time with a small flannel cloth and rub until dry, and smooth with a larger piece of flannel, and finish with dry rotten-stone.

To clean marble mantels, take one part of finely powdered chalk, one part pulverized pumice-stone, and two parts of common soda, mix with water and rub well the whole surface, then wash with soap and water, and you will find every stain has been removed.

The gilded frames of mirrors and pictures are beautifully cleaned by applying the white of eggs with a soft camel's-hair brush. To prevent flies settling upon them, wash in garlic or onion water. Do not fear the odor, as it soon dies away and brightens the gilt. Accidents *will happen* even in the best-regulated households, and oil or grease sometimes gets spilled upon carpets. To clean such spots, use fuller's-earth and water, spread thickly, cover with paper, and let it remain two days; brush off, and if not removed make another application. If haste is required, use refined benzine.

The following are good and tried directions for kalsomining: Clean the walls from dust, fill all crevices and nail-holes with plaster-of-Paris and white sand, and coat the walls with a thin sizing of glue-water. Then mix eight pounds of zinc-white to a thick cream with warm water, and add half a pound of dissolved glue. (Some use common whiting instead of zinc-white; it is cheaper, but not near so good.) Apply with the largest size paint-brush or small whitewash-brush. If the mixture becomes too thick to spread evenly, add warm water. If the kalsomine is wanted tinted, a few cents' worth of dry colors will be sufficient. This is cheaper than paper or paint, and is more quickly put on the walls. A pretty border for a room, in imitation of inlaid-wood, is made by pasting cloth smoothly around the floor the desired width, then over that paste wall-paper of wood colors and geometrical designs. When perfectly dry brush over with thin glue-water, then apply two coats of copal varnish.

Wash the shelves of closets, pantry, and store-room with strong alum-water and they will never be troubled with red or black ants. Put in every mouse-hole little paper parcels of fine corn-meal and arsenic mixed, and the obnoxious little creatures will be effectually exterminated. But this should be done in very cold weather only. Plaster-of-Paris mixed with gall is good to fill mouse-holes.

Experienced housekeepers recommend paper bags for keeping dried small fruit, corn, etc., etc. We have used instead for years the Mason quart and half-gallon self-sealing jars. They are the very thing for dried and soft yeast. The latter should never be put in a jug unless under your own immediate supervision. If the housekeepers throughout our land could only look into these jugs they would either banish or clean them with their own hands.

The color and durability of our kitchen floor is most satisfactory, and the cost was only \$2 50. It was first oiled with boiled linseed-oil, then varnished with shellac varnish, and again oiled. It is kept beautifully clean by merely wiping up with cold water. Three times a year it is given a coat of oil.

We use white oil-cloth, bound with red, for wall-protectors back of the kitchen table, and under the hooks where pans, etc., are hung. It is easily kept fresh by washing in soap and warm water.

SYDNEY A. FAIRFAX.

### ENTREES.

MR. DELMONICO, talking about entrees, says that Americans ought to copy "the French method of utilizing small bits of raw meats and fowls, and of re-cooking all kinds of cold joints and pieces of cooked meats which remain, day after day, from every dinner in almost every family." The success of such dishes depends mainly on the sauce, which is best made from broth. The following is his recipe for a favorite sauce: "Take an ounce of ham or bacon; cut it up in small pieces, and fry it in hot fat. Add an onion and carrot, cut up, thicken with flour, then add a pint or quart of broth, according to the quantity desired, season with pepper and salt, and any spice or herb that is relished (better though without

the spice), and let simmer for an hour, skim carefully and strain. A wineglass of any wine may be added, if liked." Cold roast, or broiled beef or mutton, may be cut into small squares, fried brown in butter, and then gently stewed in the sauce above described. Mr. Delmonico describes croquettes as the attractive French substitute for American hash, and tells how to make them: "Veal, mutton, lamb, sweetbreads, almost any of the lighter meats, besides cold chicken and turkey, can be most judiciously turned into croquettes. Chop the meat very fine. Chop up an onion, fry it in an ounce of butter; add a tablespoonful of flour. Stir well, and then add the chopped meat and a little broth, salt, pepper, little nutmeg. Stir for two or three minutes; then add the yolks of two eggs, and turn the whole mixture into a dish to cool. When cool mix well together again. Divide up into parts for the croquettes; roll into the desired shape in bread crumbs. Dip in beaten eggs, then into bread crumbs again, and fry crisp, a bright golden color. Any of these croquettes may be served plain or with tomato sauce or garniture of vegetables."

### RICE DISHES OF ITALY.

THE rice dishes of Italy are popular and delicious, so unlike our own well-known ones that we urge a trial of their excellence upon our readers. Chief among them rank the *risotto* of Milan and the cream of rice and chicken. The *risotto* is made by par-boiling well-washed rice in boiling water for five minutes, draining and drying it on a cloth, frying it light brown with a little chopped onion and butter, and then stewing it until tender in enough highly-seasoned broth to well cover it; it has to be watched closely, and the saucepan shaken as the rice absorbs the broth, so that it shall not burn; when the rice is done it is put into a buttered mould with shreds of cold chicken, tongue, or ham, well shaken down, dusted with grated cheese, and browned in the oven. Slices of mushroom or a little tomato sauce are used as variations from the chicken or tongue.

The cream of rice is made by boiling the breast of a fowl and a cup of rice in chicken broth until soft enough to rub through a fine sieve; the paste thus formed is used to thicken boiling milk, seasoned with salt, pepper, and nutmeg, to the consistency of thick cream; it is one of the most delicious and nutritious of all soups.

Risotto is prepared with sausages in the north of Italy in a very appetizing dish; the sausages are twisted without breaking the skin in inch pieces, and fried brown; the rice is washed, boiled for five minutes in boiling water, drained and dried, and then browned in the sausage-fat with a chopped onion; last of all, these ingredients are stewed in highly-seasoned broth until the rice is tender and has absorbed all the broth, enough being used to well cover it when it is set to stew.

One person abusing another in the presence of Churchill, the poet, said, "He was so extremely stupid, that if you said a good thing he could not understand it." "Pray, sir," said Churchill, "did you ever try him?"

# O, Lovely Star that shone so Bright.

Words by GEO. COOPER.

Music by H. MILLARD.

By permission.

1. O, love - ly Star, that shone so bright, While Shep - herds watched their flocks by night,  
2. O, Star that shone in bright - ness there, A - bove the Babe so sweet and fair,

*sf* *sf*

To lead the wise - men on their way, Where Christ our Lord and Sav - iour lay.  
A - gain you beam a - bove the earth, And tell the Sav - iour's end - less worth.

*sf* *sf*

## CHORUS.

Hark! hark! the cho - rus sound - ing still, From snow - y vale and dis - tant hill! The An - gels

breathe to earth a - gain, Peace on earth, good - will to men, Good will to men.

*pp* *ppp* *mf* *pp*

3.

O, Lovely Star, each cloud of gloom  
Thy beaming rays of joy illumine!  
And all our sorrow dies away,  
When thou hast brought our Christmas day!

CHO.—Hark! Hark!

4.

Hosanna! to the Lord our King!  
In cheerful voices we will sing,  
Good Angels answer us again;  
Peace! Peace! on earth, good will to men.

CHO.—Hark! Hark!

# The Home of Washington!!

A SUPERB WORK OF ART!

BEAUTIFUL SCENE OF AMERICAN SOCIETY!

ONE OF THE GRANDEST OF HISTORICAL ENGRAVINGS!

This magnificent Work of Art is a Steel-Plate Engraving of the largest size, nearly three feet by four, and the very choicest production of American Art and Skill. The painting from which it is taken was painted by the celebrated T. P. Rossiter, and obtained a National Reputation. Its value was over \$5,000. The Steel-Plate Engraving made from it cost over \$3,000 to produce.

The Scene depicted in the Engraving is a charming one. It represents the Home of George Washington and his Family at Mount Vernon. Upon the wide, spacious piazza is gathered a group in social conversation. Here are Washington and General Lafayette, who, in his visit to America, hastens to meet him and spend happy days of friendship. Near at hand, on the piazza, is Martha Washington, with a graceful little girl and niece, enjoying the pleasant scene, with their work, and listening to the reading of a letter. Upon the floor of the piazza are strewn the playthings of the little girl, while in front of the porch is a little nephew, with black Nannie, engaged in children's sports.

The grassy lawn spreads smoothly all around the house, and upon it graze a flock of sheep. In most picturesque position, at the farther edge, is a snug little summer-arbor, sheltered amid the trees. From between their leafy canopies is seen the spreading bosom of the broad and placid Potomac, and far down its course are seen many sails and lovely vistas of scenery of the other shore.

The scene is one made memorable by the visit of General Lafayette to America in 1784, when he was the guest of Washington and shared the hospitalities and social enjoyment which have made the home of Washington and Mount Vernon of real delightful reputation.

Here they cemented the friendship which had begun between them, which resulted in such cordial good feeling from France toward America, and made them life-long friends.

This Engraving is one of such splendid Social and Historical character that there is no home but would be proud to possess it. It is rich in its scenery and sentiment. Patriotic, a grand remembrance of the old social days of our Republic, it will recall to every American with pride the Home Pleasures and Social Days of "The Father of the Republic."

For the parlor no engraving can possibly be more beautiful. Ladies will find it far beyond their expectations, and children will look upon it with delight. The beauty of execution of this Engraving must be seen to be appreciated. Price \$5.

## SPECIAL TERMS TO SUBSCRIBERS.

A copy of this engraving will be either sold for \$5 or presented on the following terms:

1. To any one sending an order for \$5 worth of books, at retail prices, by mail, as described on page 4 of cover, above engraving will be given free.
2. To any one remitting club of 6 subscribers to FLORAL CABINET, at \$1 25 each, this engraving will be presented free. Address

ADAMS &amp; BISHOP, Publishers,

P. O. Box 2456.

46 Beekman St., New York City.

# Two Papers for the Price of One.

## 100 PAPERS AT CLUB RATES.

SEE HOW CHEAP!

**A SPECIAL PREMIUM.**—To any one remitting us the publishers' price (first column price) of any journal in the following list we will give either—

1. Book—LADIES' GUIDE TO NEEDLE-WORK. Price 50 Cents.
2. Book—EVERY WOMAN HER OWN FLOWER-GARDENER. Price 50 Cents.
3. Book—HOUSEHOLD HINTS AND RECIPES. Price 50 Cents.
4. ONE SILK BOOK-MARK. Price 50 to 75 Cents.

By the above offer you may obtain the choice of these four desirable presents, and it will cost you absolutely nothing.

Club Price of THE LADIES' FLORAL CABINET is 32 per cent. less than the regular price.

## LIST OF JOURNALS.

Many publishers have two prices, one for a renewed subscription, and one for a new one, the former being the highest. Please state distinctly whether you are a new subscriber, thus securing promptness in the execution of your order.

## NOTICE TO CORRESPONDENTS.

1. Subscribers desiring any of the above journals, at Club Prices, without premiums, can select such as they choose, and remit adding the usual price for our journals.

2. These prices include postage prepaid for one year.

3. As we remit subscriptions directly to each publisher enquiries for missing copies must be directed to them, not to us. The receipt by subscriber of first copy of journal is evidence of receipt of money by the publisher.

4. Allowance of at least two weeks must be made for correspondence and transmission of subscription orders to publishers.

5. By clubbing all your journals together you not only save trouble of remitting to each paper

and all possible loss by mails, but also from 25 to 50 cents in the price of each. You can, therefore, often afford to increase your list, and take some which you have never taken before.

6. Money may be sent safely by Registered Letters (cost 10 cents), a Money Order (10 cents), Bank Draft on New York, or Express. Do not send checks on local banks. All risks of safety are assumed by subscribers, and expenses of sending money prepaid by them.

7. In receiving and forwarding money for club subscriptions to other journals we act only as intermediate agents, not being responsible either for losses of papers, premiums, or failure of other publishers to keep promises. Our responsibility is limited only to faithful distribution of money which actually reaches us. Address

ADAMS &amp; BISHOP, 46 Beekman Street, New York.
